In domestic policy, the favour which Ibn Killis enjoyed suffered only one eclipse of some months (373-4), the reasons for which were perhaps the caliph's anger after the poisoning of Alptakīn, or disturbances caused by a famine in Egypt. He soon recovered all his offices and his immense riches. Moreover Ibn Killis did not fail to flatter his master, as witness the episode of the cherries which he had brought for him by pigeons from Syria (al-Ķalķashandī, *Ṣubḥ*, xiv, 391 and ii, 93; Gaudefroy-Demombynes, *La Syrie*, 252), and the flattering verses in which Ibn Killis explained how it had come about that one of his pigeons had outstripped that of the caliph in a race, a fact of which the vizier's enemies had made use to slander him.

Ibn Killis was noted for the magnificence of the life he led in his palace, his liberality to scholars, jurists, physicians, men of letters and poets, and his concern to promote learning: he was the first to have the idea of making al-Azhar into a university, and he maintained thirty-five jurists. He was a sincere supporter of Fāṭimism; he imprisoned an ʿAlid of Damascus who had mocked at the genealogy of the Fāṭimids. He was a specialist in Ismāʿīlī *fiķh*: all his biographers emphasize the fact that he composed, on the basis of traditions received from al-Muʿizz and al-ʿAzīz, a legal treatise known as *al-Risāla al-wazīriyya*, that he taught it in lectures which he gave personally, and that *fatwā*s were given on the authority of his teaching. He had a mosque built in his palace, supervised the building of the mosque known as that of al-Ḥākim, and added in 378 a *fawwāra* (fountain) in the mosque of ʿAmr (Yāķūt, iii, 899). He appears to have contributed to the development of Fāṭimid ceremonial by instituting at the caliph's court a corps of picked troops (the *ķuwwād*) who paraded in processions, and by founding the regiment which bore his name, *al-ṭāʾifa al-wazīriyya*.

Ibn Killis's biographers praise him highly, although they do not conceal the questionable means which he used to achieve success or to rid himself of his own enemies and those of the dynasty. On his death, at the end of 380/February 991, al-ʿAzīz, who led the funeral prayer for him, wept and showed great grief. The Christian Yaḥyā b. Saʿīd states that Ibn Killis was worthy of this; but the Egyptian populace accused him of showing too great favour to the Christians and to the Jews.

IBN AL-ĶIRRIYYA, ABŪ SULAYMĀN AYYŪB B. ZAYD, of the Zayd Manāt (al-Ķirriyya was probably the name of his mother or of one of his grandmothers), is presented as an illiterate Bedouin whose eloquence, however, became proverbial to the extent of eclipsing the fame of Saḥbān Wāʾil [*q.v.*]. Tradition relates that he lived in the entourage of al-Ḥadjdjādj [*q.v.*], and *adab* books contain discourses, generally rhymed, which he is said to have given on various occasions or in reply to questions from his master. He is reported however to have joined the party of Ibn al-Ashʿath [*q.v.*], drawing up his letters and preparing his speeches; he is even credited with the famous sentence, usually attributed to al-Ghaḍbān b. al-Ķabaʿtharā: "Lunch off al-Ḥadjdjādj before he dines off you". He was imprisoned with other supporters of Ibn al-Ashʿath and was either beheaded by the public executioner or killed with a lance by al-Ḥadjdjādj himself in 84/703.

The *Aghānī* (Beirut ed., ii, 6) however, records a statement by al-Aṣmaʿī [*q.v.*] which throws doubt on the historical existence of Ibn al-Ķirriyya: "Two men have always been known only by the name of Madjnūn: the Madjnūn of the Banū ʿĀmir [see MADJNŪN LAYLĀ] and Ibn al-Ķirriyya, but both were invented by the *ruwāt*."

IBN AL-ḲIṬṬ, by-name of the Umayyad prince AḤMAD B. MUʿĀWIYA B. MUḤĀMMAD B. HISHĀM B. MUʿĀWIYA B. HISHĀM I, famous for his attack on Zamora in 288/901.

At the end of the reign of *amīr* Muḥammad I and throughout that of his successor ʿAbd Allāh, the unity of the Umayyad emirate of Cordova was on the point of being destroyed. The disloyalty and incessant revolts of the Arab and Berber lords in the provinces made it possible for Alfonso III of Léon to extend his conquests from strategic bases at Coïmbra, Astorga, León and Amaya; in 280/893 he rebuilt the fortress of Zamora, and the garrison made continual raids on the Berbers in the vicinity. Moreover, the Banū Ḳasī in Aragon, Ibn Marwān in Extremadura and above all Ibn Ḥafṣūn [*q.v.*] in the mountainous region near Ronda were striving to break away from the central authority. At the same time, towards the borders of León, where the Berbers were more numerous, there came a stream of mystics and fanatics, while the doctrines of the Muʿtazilīs were being introduced from the East and the philosopher Ibn Masarra [*q.v.*] was expounding his metaphysical ideas in the Sierra of Cordova. Amidst such disturbances in both the spiritual and political spheres, various adventurers, either zealots or impostors, made their appearance, declaring themselves the enemies of the régime; they found enthusiastic support among the Berbers of the mountainous zone in the centre of the peninsula. One of these figures, who, in the traditional manner, prepared to censure social behaviour and morality at the very time when the Fāṭimid *daʿwa* was spreading the Ismāʿīlī doctrine in North Africa, was the Andalusian missionary Abū ʿAlī al-Sarrādj who, under pretext of preaching the holy war, worked against the régime, cunningly disguised as a Muslim ascetic. Dressed in coarse homespun, wearing rope sandals and riding a donkey, he travelled all over the country. In this disguise, "he worked actively to bring to fruition a projected alliance which had been planned in 285/898 between the Banū Ḳasī of Aragon and ʿUmar b. Ḥafṣūn"; he did not succeed in carrying through his plan, but three years later he was able to persuade the Umayyad prince Aḥmad b. Muʿāwiya, a devotee of astrology who did not conceal his aspirations to the throne, to come out in open revolt. Ibn Sarrādj presented him as the reforming Mahdī, and the two of them traversed the district of Los Pedroches (Faḥṣ al-Ballūṭ) and the Sierra of Almadén (Djabal al-Barānis), where they were received with enthusiasm by the Berbers to whom they preached the holy war against Zamora. Ibn al-Ḳiṭṭ's displays of conjuring increased the number of his supporters (whom the Arab sources put at over 60,000), and this fanatical horde, before whom he had promised the seven walls of Zamora would crumble, approached the fortress. While al-Sarrādj prudently withdrew, Ibn al-Ḳiṭṭ invited Alfonso III to embrace Islam if he did not wish to be exterminated with all his men; Alfonso indignantly took up his position on the right bank of the Duero and, after a combat which according to Arab sources was favourable to Ibn al-Ḳiṭṭ, siege was laid to Zamora. But the Berber leader Nafza, being disillusioned, left Ibn al-Ḳiṭṭ together with all his troops, and his departure provoked new desertions. After some indecisive skirmishes, Ibn al-Ḳiṭṭ, finding himself abandoned by almost all his followers, launched a desperate attack on the enemy and was killed, on 20 Radjab 288/10 July 901. For a long time his head remained hanging from the top of one of the gates of Zamora. "This tragi-comical expedition was no more than an isolated episode in the annals of the lower and central Marches" at the end of the 3rd/9th century and at the beginning of the 4th/10th, and its only repercussion is the expedition said to have been undertaken in the same year by the future Ordoño III, son of Alfonso III, who, setting out from Viseo, crossed the Tagus and then the Guadiana to reach the region of Seville, where he sacked and burnt one of the villages".

IBN ḲUBṬŪRNA [see IBN ḲABṬŪRNU].

IBN ḲUDĀMA AL-MAḲDISĪ, MUWAFFAḲ AL-DĪN ABŪ MUḤAMMAD ʿABD ALLĀH B. AḤMAD B. MUḤAMMAD, Ḥanbalī ascetic, jurisconsult and traditionalist theologian. He was born in Djammāʿīl, near Jerusalem (Bayt al-Maḳdis, whence his ethnic name) in Shaʿbān 541/Jan.-Feb. 1147, and died in Damascus on 5 or 6 Djumādā II 620/6 or 7 July 1223.

In 551/1156, the Banū Ḳudāma moved from Djammāʿīl to take up residence in Damascus. The chroniclers explain this exodus as caused by the bad treatment the Muslims were receiving at the hands of the Franks.

From the sources available to us at the present time it is possible to reconstruct two main branches of this large family from the 5th/11th to the 10th/16th centuries. At the head of one branch is Muwaffaḳ al-Dīn's father, the Shaykh Aḥmad b. Muḥammad b. Ḳudāma (491-558/1097-1162), the preacher (*khaṭīb*) of Djammāʿīl, a man known for his asceticism, for whom a mosque was built in Damascus (Nuʿaymī, *Dāris*, ii, 354). On his brother Yūsuf, who stands at the head of the other branch, the sources seem to be silent; but he is the ancestor of Yūsuf b. ʿAbd al-Hādī (840-909/1436-1503), whose autograph certificates of audition (*samāʿ*) are to be seen on the margins and in the colophons of many of the manuscripts of the Ẓāhiriyya library in Damascus. The most numerous sub-branch of this family is by far that of Muwaffaḳ al-Dīn's brother, the ascetic Shaykh Abū ʿUmar (528-607/1133-1210). Regarding the other brother, ʿUbayd Allāh, our sources are silent, though other members of this sub-branch are known: the son Aḥmad (573-613/1177-1216), the latter's two grandsons Aḥmad (614-687/1217-1288) and ʿUbayd Allāh (635-684/1237-1285), and the latter's grandson ʿAbd Allāh (d. 803/1400).

The smallest sub-branch of all is that of Muwaffaḳ al-Dīn Ibn Ḳudāma, whose three sons died in his lifetime and who was survived by his grandson Aḥmad (605-643/1208-1245).

Muwaffaḳ al-Dīn received the first phase of his education in Damascus where he studied the Ḳurʾān and *ḥadīth*. He made his first visit to Baghdād in 561 in the company of his maternal cousin, a well-known Ḥanbalī traditionist, ʿAbd al-Ghanī al-Maḳdisī (541-600/1146-1203), also originally from Djammāʿīl, a member of a numerous family tracing their origin back to a certain Surūr b. Rāfiʿ. Arriving at Baghdād they were received by the leading Ḥanbalī of the day, the celebrated mystic ʿAbd al-Ḳādir al-Djīlī [*q.v.*]. Their discipleship was cut short by the latter's death.

Brief though it may have been, this experience must have had its influence on the young Muwaffaḳ al-Dīn, who was to reserve a special place in his heart for mystics and mysticism. This is attested by what the present author regards as his condoning of Ibn ʿAḳīl's [*q.v.*] veneration for the great mystic al-Ḥallādj [*q.v.*]; and in a *silsila* preserved in a manuscript in the Ẓāhiriyya library of Damascus (see Madjmūʿ 18, fol. 254b), Muwaffaḳ al-Dīn figures as having received the *khirḳa* from ʿAbd al-Ḳādir al-Djīlī and passed it on to another Ḥanbalī, his cousin Ibrāhīm b. ʿAbd al-Wāḥid (543-614/1148-1217), brother of the above mentioned ʿAbd al-Ghanī. On the other hand, Muwaffaḳ al-Dīn did not condone what he believed to be the excessive rationalism of Ibn ʿAḳīl, against whom he wrote *Taḥrīm al-naẓar fī kutub ahl al-kalām* (see G. Makdisi, *Ibn Qudāma's censure of speculative theology*, London 1962).

Muwaffaḳ al-Dīn's first sojourn in Baghdād lasted four years. He is known to have visited it again in 567 and 574, making his pilgrimage to Mecca in the previous year 573, and finally settling in Damascus in 575. He left Damascus once again in 583 to take part in Saladin's expedition against the Franks, particularly in the conquest of Jerusalem, which occurred that year.

Muwaffaḳ al-Dīn is known especially for his works on Ḥanbalī law: *al-Mughnī* and *al-ʿUmda* on positive law, and *Rawḍat al-nāẓir*, on the methodology of law, all of which have been published.

Bibliography: For further details on his life, works and ideas, see Brockelmann, I, 398, S I, 688-9; H. Laoust, *Le Précis de Droit d'Ibn Qudāma*, Beirut 1950; H. Laoust, *Le Ḥanbalisme sous le califat de Baghdad*, in *REI*, xxvii (1959), 125-6; G. (G. Makdisi)

IBN KUNĀSA, Abū Yaḥyā Muḥammad b. ʿAbd Allāh (= Kunāsa) b. ʿAbd al-Aʿlā al-Māzinī al-Asadī, poet, philologist and *rāwī* of the ʿAbbāsid period. Born at Kūfa in 123/741, he studied in his native town poetry, *ḥadīth* and the other traditional sciences under the most distinguished members of the Banū Asad and became the transmitter of the works of several poets, among whom the most famous was al-Kumayt [*q.v.*]. He also transmitted a certain number of *ḥadīth*s to such important traditionists as al-Aʿmash [*q.v.*] and Sufyān al-Thawrī [*q.v.*]. Although he lived at Baghdād he does not seem to have tried to gain admittance to the court. He died at Kūfa on 3 Shawwāl 207/19 February 823, or in 209/824.

So far as can be judged by the few verses which have survived, Ibn Kunāsa was not a great poet, but his poetry, of great simplicity, reflects a morality and a serenity which are worthy of note. Nephew of Ibrāhīm b. al-Adham [*q.v.*] and brought up in a milieu of extreme piety, Ibn Kunāsa nevertheless was the owner of a well-known slave singing-girl, Danānīr, whose death he lamented. His descriptions of Kūfa are also worthy of mention.

He wrote in addition several works, among which the *Fihrist* mentions a *Kitāb Maʿānī 'l-shiʿr*, a *K. Sariḳāt al-Kumayt min al-Ḳur'ān* and a *K. al-Anwā'*, which was much used by later writers and is probably the earliest work of this type (see Ch. Pellat in *Arabica*, 1955/1, 36).

Bibliography: Djāḥiẓ, *Bayān* and *Ḥayawān*, index; *Fihrist*, Cairo ed., 105, 225; Ibn Ḳutayba, *Anwā'*, index; idem, *Maʿārif*, 543; *Aghānī*, xii, 105-10 (Beirut ed., xiii, 338-47); Bīrūnī, *Āthār*, 336; Ibn al-Djarrāḥ, *Waraḳa*, 81-3; Khaṭīb Baghdādī, *Ta'rīkh Baghdād*, v, 404-8; Ibn Khallikān, tr. de Slane, i, 473; ʿAmrūsī, *al-Djawārī al-mughanniyāt*, Cairo n.d., 155-62; F. Bustānī, *Dā'irat al-maʿārif*, iii, 482-3.

(Ch. Pellat)

IBN ḲUNFUDH, Abu 'l-ʿAbbās Aḥmad b. Ḥasan (incorrect var. Ḥusayn) b. ʿAlī b. Ḥasan al-Khaṭīb b. ʿAlī b. Maymūn b. Ḳunfudh (var. al-Ḳunfudh), Algerian jurist, traditionist and historian born in 731/1330 or, more probably, in 741/1340, died in 809/1406 or 810/1407, in Constantine, a member of a family of teachers and jurists from that town and its environs. His ancestor, Ḥasan b. ʿAlī al-Khaṭīb, who taught *ḥadīth* in Constantine and claimed to belong to the confraternity of the Shādhiliyya, died in 664/1265 (cf. *Wafayāt*, 51); his grandfather ʿAlī b. Ḥasan, also *khaṭīb* in Constantine for half a century and *ḳāḍī* for many years, died in 733/1332 (cf. *Wafayāt*, 54). His maternal grandfather Yūsuf b. Yaʿḳūb al-Mallārī, a disciple of Abū Madyan [*q.v.*] the mystic, was director of a *zāwiya*, "two stages to the west of Constantine", where he taught; he died in 680/1281 (cf. *Wafayāt*, 58). Finally, his father Ḥasan b. ʿAlī, also *khaṭīb* in Constantine, was a jurist of repute and author of a work entitled *al-Masnūn fī aḥkām al-ṭāʿūn*; he died in 750/1350 (cf. *Wafayāt*, 56).

It is therefore probable that, in the first instance, it was from such relatives as these that he received the essential part of his cultural education. But we know that he left his native town as early as 759/1357, at the age of eighteen, on travels which lasted for eighteen years and which took him first to Fās and later to Marrākush. In 763/1361-2 he was with the Hintāta, one of the principal tribes of the Moroccan Atlas and renowned for its piety, and he went to Tinmellel to meditate at the tomb of the *mahdī* Ibn Tumart. Next he was in Salā (Salé), where he had the signal privilege of approaching the aged theologian and mystic Ibn ʿĀshir [*q.v.*]. In 776/ 1374 he was in Tlemcen, where he met the Ḥafṣid prince Abu 'l-ʿAbbās Aḥmad (770-96/1368-93), and after that in Tunis where, together with another Ḥafṣid prince, Abū Fāris ʿAbd al-ʿAzīz (797-834/1393-1434), he attended the lectures of the scholar Abū Mahdī ʿĪsā b. Aḥmad b. Muḥammad b. Muḥammad al-Ghubrīnī (d. 816/1412). Finally he returned to Constantine, at an unknown date, and there assumed the offices of *muftī* and *ḳāḍī*. In 804/ 1401 he was dismissed, and he lived in disgrace until his death.

During his travels, he endeavoured to perfect his knowledge of *tafsīr*, *ḥadīth*, *fiḳh*, *manṭiḳ*, *naḥw*, *ḳirā'āt*, mathematics, etc. and to obtain diplomas (*idjāza*) from his various masters, whose names he subsequently recorded with care in his *Wafayāt*, in chronological order according to the date of death. They are: (a) in Fās: 1. Abū Zayd ʿAbd al-Raḥmān b. Sulaymān al-Ladjā'ī, d. 773/1371, a pupil of the mathematician Ibn al-Bannā'; 2. Abū ʿImran Mūsā b. Muḥammad b. Muʿṭī al-ʿAbdūsī, d. 776/1374, a native of Meknès; 3. Abu 'l-ʿAbbās Aḥmad al-Ḳabbāb, d. 779/1378; 4. Abū Muḥammad ʿAbd Allāh al-Wānaghīlī, the blind, d. 779/1378; 5. Abū ʿAbd Allāh Muḥammad b. Ḥayātī, d. 781/1379; 6. Abū Muḥammad ʿAbd al-Ḥaḳḳ al-Haskūrī; (b) in Salé: 7. Ibn ʿĀshir Abu 'l-ʿAbbās Aḥmad, d. 765/ 1353; 8. Lisān al-Dīn Ibn al-Khaṭīb, d. 776/1374; (c) in Marrākush: 9. Abū Muḥammad ʿAbd Allāh al-Zukandarī, d. 768/1367; (d) in Tlemcen: 10. Abū

ʿAbd Allāh Muḥammad b. Yaḥyā, d. 771/1369; 11. Abū ʿAbd Allāh Muḥammad b. Aḥmad b. Marzūḳ, d. 780/1379; (e) in Constantine: 12. Abū ʿAlī Ḥasan b. Abi 'l-Ḳāsim b. Bādīs, d. 787/1385; 13. Ḥasan b. Khalaf Allāh b. Ḥasan b. Abi 'l-Ḳāsim b. Maymūn b. Bādīs, cousin of the last-named, d. 784/1382; (f) in Tunis: 14. Abu 'l-Ḥasan Muḥammad b. Aḥmad al-Baṭarnī (var. al-Batrūnī and al-Baṭṭiwī), d. 793/1390; 15. Abū ʿAbd Allāh Muḥammad b. Muḥammad b. ʿArafa, d. 803/1400; 16. Abū Mahdī ʿĪsā al-Ghubrīnī, named above; 17. Abu 'l-Ḳāsim Muḥammad b. Aḥmad ... al-Sabtī, ḳāḍī of Granada, d. 761/1359, who gave him a general idjāza after admitting him to the "pleasure of being present at his lectures" (cf. *Wafayāt*, 58); 18. Abū Ḥafṣ ʿUmar al-Radjrādjī (probably al-Ragrāgī), d. 810/1407, after the writing of the *Wafayāt*; 19. Abū ʿAbd Allāh Muḥammad b. Abī Isḥāḳ Ibrāhīm b. Abī Bakr... b. ʿAbbād al-Rundī [*q.v.*], died in Fās in 792/1390. The last two are not named in the *Wafayāt*.

Ibn Ḳunfudh was equally scrupulous, at the end of the same work, in compiling a list of his own writings. Of the 26 titles contained in this list, at the present time, roughly speaking, we know only the following: (1) *Bughyat al-fāriḍ min al-ḥisāb wa 'l-farāʾiḍ*, which is probably the same as the *Muʿāwanat al-rāʾiḍ fī mabādī 'l-farāʾiḍ* or again the *Sharḥ al-urdjūza* (var. *al-manẓūma*) *al-tilimsāniyya fi 'l-farāʾiḍ* and which, according to M. Ben Cheneb, is said to exist in a private(?) library; (2) *al-Fārisiyya fī mabādiʾ al-dawla al-ḥafṣiyya*, ed. M. Nayfar and ʿA. Turkī, Tunis 1968, with an important introd. (3) *al-Masāfa al-saniyya fi 'khtisār al-riḥla al-ʿabdariyya*, the source of Aḥmad Bābā, *Nayl al-ibtihādj*, Fās ed., 394, Cairo ed., 70 and passim; (4) *Sharaf al-ṭālib fī asnā al-maṭālib* (see mss. in *al-Fārisiyya*, 74-7). (5) *Taysīr al-maṭālib fī taʿdīl al-kawākib*, ms. Rabat 512 bis; (6) *Uns al-faḳīr wa-ʿizz al-ḥaḳīr*, a biography of the Andalusian mystic Abū Madyan and his followers; ms. Rabat, 385; Cairo, vii, 344 v. 45; ed. M. al-Fāsī and A. Faure, Rabat 1965; (7) *Ḥaṭṭ al-niḳāb ʿan wudjūh aʿmāl al-ḥisāb*, a commentary on the *Talkhīṣ aʿmāl al-ḥisāb* of Ibn al-Bannāʾ [*q.v.*], ms. Rabat 531.

M. Ben Cheneb attributes to him other works whose titles do not appear on his own list; (8) *Taḥṣīl al-manāḳib fī takmīl al-maʾārib*, a commentary on (5) above; ms. Rabat 512 bis. (9) *Sharḥ urdjūzat Ibn Abi 'l-Ridjāl* [*q.v.*], ms. Rabat 466, 467, 512 bis (I); Br. Mus. 977a

On the other hand, a number of mss have been discovered (see Introd. to *al-Fārisiyya*), in particular: (10) *Urdjūba fi'l-ṭibb*; (11) *Tuḥfat al-wārid fi 'khtiṣāṣ al-sharaf min ḳibāl al-wālid*; (12) *Tashīl al-maṭālib fī taʿdīl al-kawākib*; (13) *Sirādj al-thiḳāt fī ʿilm al-awḳāt*.

The remainder are now considered to be lost: (a) *ʿAlāmat al-nadjāḥ fī mabādīʾ al-iṣṭilāḥ*; (b) *Anwār al-saʿāda fī uṣūl al-ʿibāda*; (c) *Basṭ al-rumūz al-khafiyya fī sharḥ ʿarūḍ al-Khazradjiyya*; (d) *Hidāyat al-sālik fī bayān Alfiyyat Ibn Mālik*; (e) *Īḍāḥ al-maʿānī fī bayān al-mabānī*; (f) *al-Ibrāhīmiyya fī mabādiʾ ʿilm al-ʿarabiyya*; (g) *al-Ḳunfudhiyya fī ibṭāl al-dilāla al-falakiyya*; (h) *al-Lubāb fi 'khtiṣār al-Djallāb*; (i) *Tafhīm al-ṭālib li-masāʾil uṣūl* (var. *aṣlay*) *Ibn al-Ḥādjib*; (j) *al-Takhlīṣ fī sharḥ al-talkhīṣ*; (k) *Taḳrīb al-dilāla fī sharḥ al-risāla*; (l) *Talkhīṣ al-ʿamal fī sharḥ al-Djumal* of al-Khūnadjī (cf. Brockelmann, I, 463); (m) *Tashīl al-ʿibāra fī taʿdīl al-ishāra*; (n) *Wasīlat al-Islām bi 'l-nabī ʿalayh al-ṣalāt wa 'l-salām*; (o) *Wiḳāyat al-muwaḳḳit wanikāyat al-munakkit*.

(M. HADJ-SADOK)

IBN ḲUTAYBA, ABŪ MUḤAMMAD ʿABD ALLĀH B. MUSLIM AL-DĪNAWARĪ (some add AL-KŪFĪ, which refers to his place of birth, and AL-MARWAZĪ, which is probably the ethnic name of his father), one of the great Sunnī polygraphs of the 3rd/9th century, being both a theologian and a writer of *adab*. He seems to have been descended, in the second or third generation, from an Arabicized Iranian family from Khurāsān which was connected on the female side with the Bāhilīs of Baṣra and may have come to ʿIrāḳ in the wake of the ʿAbbāsid armies during the second half of the 2nd/8th century.

He was born at Kūfa in 213/828, but little is known of his childhood and adolescence. At the most we are able to compile a list of his teachers which, on careful examination, provides much information on his education. Among the most important of them we find men who owe their reputations generally to their attachment to the *Sunna*, either as theologians, traditionists or philologists, or usually as all three. The biographers and critics have produced long lists of them, but a few names should be mentioned here. The three persons who had the greatest influence on the young Ibn Ḳutayba are undoubtedly Isḥāḳ b. Ibrāhīm b. Rāhawayh al-Ḥanẓalī (d. *ca.* 237/851), a Sunnī theologian, a disciple of Ibn Ḥanbal and protégé of the Ṭāhirids of Nīsābūr, where he appears to have spent most of his life, Abū Ḥātim Sahl b. Muḥammad al-Sidjistānī (d. *ca.* 250/864), Sunnī philologist and traditionist and a master of everybody who in ʿIrāḳ was interested in philology and tradition, and finally al-ʿAbbās b. al-Faradj al-Riyāshī (d. 257/871), one of the leaders of philological studies in ʿIrāḳ, transmitter of the works of al-Aṣmaʿī, Abū ʿUbayda and other pioneers of the 2nd/8th century.

Very few details are available of Ibn Ḳutayba's career, but a comparison of information from different sources allows the following tentative reconstruction: after the change in ideology accepted by al-Mutawakkil and his chief henchmen from 232/846 onwards, Ibn Ḳutayba found himself favoured because of his literary works, the ideas of which tallied pretty well with the new trend. It was perhaps writings of the type of his introduction to the *Adab al-kātib* which caused him to be noticed and given an appointment by the vizier Abu 'l-Ḥasan ʿUbayd Allāh b. Yaḥyā b. Khāḳān, one of those chiefly responsible for the new policy, who may well have continued to be his patron until his disappearance in 263/877. There is no doubt that he owed to him his appointment as *ḳāḍī* of Dīnawar in about

236/851. He seems to have remained in this office until 256/870, when he may have stayed for a short time as inspector of *maẓālim* of Baṣra until the sacking of this town by the Zandj in Shawwāl 257/ November 871. It is not impossible, however, that he owed the latter appointment to the favour of another powerful official of the ʿAbbāsid administration, possibly the Nestorian convert Ṣāʿid b. Makhlad. Mention should also be made of his relations, perhaps only occasional, with the Ṭāhirid governors of Baghdād (*ʿUyūn*, ii, 222).

After 257/871, Ibn Ḳutayba devoted himself to the teaching of his works in a district of Baghdād, where he remained until his death in 276/889.

Ibn Ḳutayba's son, Aḥmad, appears to have been his chief disciple. He is certainly responsible, as is his son ʿAbd al-Wāḥid, for the transmission to Egypt, and indirectly to the West—especially through the intermediary of Abū ʿAlī al-Ḳālī—of the greater part of the works of Abū Muḥammad. In al-Andalus, the direct transmission of Ibn Ḳutayba's work was ensured by the famous Ḳāsim b. Aṣbagh, who had come to study in Baghdād in 274/887. Among the eastern disciples, ʿUbayd Allāh b. ʿAbd al-Raḥmān al-Sukkarī (d. 323/935) seems to have played a particularly important part, his name being found at the head of numerous *isnād*s. But there should also be mentioned Abū Muḥammad ʿAbd Allāh b. Djaʿfar Ibn Durustawayh [*q.v.*], and Ibrāhīm b. Muḥammad b. Ayyūb al-Ṣāʾigh (d. 313/925), in addition to other minor disciples.

It can be stated that, with the exception of two titles, all the authentic works of Ibn Ḳutayba as at present known have been published. We list them here, giving for each the most useful edition and a brief description of the contents:

(1) *K. Adab al-kātib* (ed. Grünert, Leiden 1900), manual of philology for the use of secretaries, with a famous introduction which may be regarded as a politico-cultural profession of faith.

(2) *K. al-Anwāʾ* (ed. Pellat-Hamidullah, Ḥaydarābād 1375/1956), treatise on practical astronomy and meteorology.

(3) *K. al-ʿArab* (ed. Kurd ʿAlī, in *Rasāʾil al-Bulaghāʾ*, ³Cairo 1325/1946, 344-77), treatise in the anti-Shuʿūbī tradition on the relative merits of the Arabs, the Persians, and the inhabitants of Khurāsān.

(4) *K. al-Ashriba* (ed. Kurd ʿAlī, Damascus 1366/ 1947), *fatwā* on drinks written in *adab* style.

(5) *K. al-Ikhtilāf fi 'l-lafẓ wa 'l-radd ʿala 'l-Djahmiyya wa 'l-Mushabbiha* (ed. Muḥammad Ẓāhid al-Kawtharī, Cairo 1349), a theological pamphlet refuting the position of the Mushabbiha on attributes and that of the Muʿtazilīs with Djahmiyya tendencies on the pronunciation of the Ḳurʾān.

(6) *K. Maʿānī 'l-shiʿr* (2 vols., Ḥaydarābād 1368/ 1949), long work on the themes of poetry.

(7) *K. al-Maʿārif* (ed. ʿUkāsha, Cairo 1960), a historical manual with encyclopaedic appendices on very varied subjects.

(8) *K. al-Masāʾil wa 'l-adjwiba* (Cairo 1349 H.), a theological work.

(9) *K. al-Maysir wa 'l-ḳidāh* (ed. Muḥibb al-Dīn al-Khaṭīb, Cairo 1343), a juridico-philological study on games of chance, as the *K. al-Ashriba* was on fermented drinks.

(10) *K. al-Shiʿr wa 'l-shuʿarāʾ* (ed. Aḥmad Shākir, 2 vols., Cairo 1364-69/1945-50), poetical anthology arranged chronologically, devoting a large section to the "modern" poets. The introduction, somewhat overrated, is often considered as a manifesto of neo-classicism (ed. and tr. Gaudefroy-Demombynes under the title *Introduction au Livre de la Poésie et des Poètes*, Paris 1947).

(11) *K. Tafsīr gharīb al-Ḳurʾān* (ed. Aḥmad Ṣaḳr, Cairo 1378/1958), philological commentary on the difficult passages of the text of the Ḳurʾān.

(12) *K. Taʾwīl mukhtalif al-ḥadīth* (ed. Faradj Allāh Zakī al-Kurdī, Maḥmūd Shukrī al-Alūsī, Maḥmūd Shābandār-zāde, Cairo 1326), Ibn Ḳutayba's most important "theological" work, in which are clearly set out his religious, heresiographical and political ideas (Fr. tr. by G. Lecomte, Damascus 1962).

(13) *K. Taʾwīl mushkil al-Ḳurʾān* (ed. Aḥmad Ṣaḳr, Cairo 1373/1954), treatise on Ḳurʾānic rhetoric and on *iʿdjāz al-Ḳurʾān*.

(14) *K. ʿUyūn al-akhbār* (ed. Aḥmad Zakī al-ʿAdawī, Cairo 1343-8/1925-30), a large compendium of *adab*, on a number of apparently secular subjects; important introduction.

The only two authentic texts which are unpublished are:

(15) *K. Gharīb al-ḥadīth*, an incomplete manuscript of which exists in the Ẓāhiriyya at Damascus (*lugha*, 34-5), a philological commentary on *ḥadīth*, in the broadest sense, from the Prophet to Muʿāwiya.

(16) *K. Iṣlāḥ al-ghalaṭ fī gharīb al-ḥadīth li-Abī ʿUbayd al-Ḳāsim b. Sallām* (Aya Sofya, 457; Ẓāhiriyya, 7899), a separate fascicule of no. 15 concerning Abū ʿUbayd's errors of interpretation.

The other titles of works attributed to Ibn Ḳutayba are for the present doubtful. Among those whose existence seems the least problematical may however be mentioned: (17) a *K. Dalāʾil al-nubuwwa*; (18) a *K. al-Fiḳh*; (19) a *K. Iʿrāb al-Ḳurʾān*; (20) a *K. al-Naḥw*; and perhaps: (21) a *K. al-Ḳalam*; (22) a *K. Taʿbīr al-ruʾyā*; (23) a *K. al-Ḳirāʾāt*.

All the other titles found in the biographies are of works of dubious authenticity. Several of them probably represent the whole or part of the known works mentioned above.

Finally there should be mentioned the apocryphal works, of which up to now the following are known: (1) *K. al-Alfāẓ al-mughraba bi 'l-alḳāb al-muʿraba* (Fās, Ḳarawiyyīn, *lugha*, 1262); (2) *K. al-Djarāthīm*, an artificial philological collection published in fragments; (3) *K. al-Imāma wa 'l-siyāsa* (Cairo 1322, 1327, 1377) which it has been suggested might be attributed to Ibn al-Ḳūṭiyya; (4) *K. Talḳīn al-mutaʿallim fi 'l-naḥw*, Paris, Bibl. Nat. 4715.

In addition to showing the influence of Ibn Ḳutayba's teachers briefly listed above, these works bear traces of the main cultural ideas current in ʿAbbāsid society in the 3rd/9th century, which means that they drew their inspiration also from a very wide range of written sources.

First, the essential ideas found in the work of Ibn al-Muḳaffaʿ [*q.v.*] certainly seem to have passed into that of Ibn Ḳutayba, and particularly in the *ʿUyūn al-akhbār* and in *Maʿārif*: *K. Kalīla wa-Dimna*, *K. al-Adab al-kabīr*, *K. al-Āyīn* and *K. Siyar mulūk al-ʿAdjam* (translated from the history of the kings of Persia entitled *Khudhaynāma*). Next, a fair proportion of the Aristotelian or pseudo-Aristotelian works translated into Arabic at the beginning of the 3rd/9th century, mainly under the titles of *K. al-Ḥayawān* and *K. al-Filāḥa*. Although borrowings from the *K. al-Ḥayawān* of al-Djāḥiẓ cannot be excluded, it seems that the *K. al-Filāḥa* (which is in fact the *Geoponica* of Cassianus) constitutes an original source. Ibn Ḳutayba knew the works of al-Djāḥiẓ remarkably well. Nevertheless his only acknowledged borrowings from this author concern the *K. al-*

Buk͟halāʾ. About the remainder one can only guess. Finally, it is not without interest to note that Ibn Ḳutayba borrowed extensively from existing, and remarkably faithful, translations of the Torah and of the Gospels (in *Maʿārif*, *Muk͟htalif al-ḥadīt͟h* and *ʿUyūn al-ak͟hbār*).

Interested mainly in his work on *adab*, which in fact was until recently the only example of his literary output in their libraries, western critics have often tended to overlook Ibn Ḳutayba's "theological" work and to pass in silence over his religious ideas.

It seems clear however that at some stage Ibn Ḳutayba put his literary talents at the service of the enterprise of the restoration of Sunnism which was undertaken by al-Mutawakkil and his chief helpers. This meant that a number of his works were intended to expound a politico-religious doctrine which we might expect would take its place in the ideological line of the Sunna then coming into being, and particularly that represented by Ibn Ḥanbal and Isḥāḳ b. Rāhawayh.

Nevertheless, Ibn Ḳutayba, who admits to having been tempted in his youth by the quasi-rationalist ideologies which were in vogue at the time, was at times somewhat troubled by the dogmatic intransigeance of the upholders of Tradition.

Although his theodicy is fairly clearly "Ḥanbalī", his attitude on *ḳadar* has nevertheless some strange nuances; although his attitude concerning the Ḳurʾān is orthodox, he is much less categorical on the problem of *lafẓ* [*q.v.*], which he states does not prevent membership of the Sunnī community; although his attitude concerning the Companions is that which remained in later times the touchstone of the Sunna, he nevertheless retained a deep and reverent respect for the family and descendants of the Prophet, so far as they were politically neutral. Even his opinions about the "national groups" (*S͟huʿūbiyya*) seem much more subtle than has hitherto been admitted: whether he is writing of ethnic or of religious groups, one is led to think that he tends to gather together peaceably around the reigning dynasty those among them whom he considers it possible to win over politically.

On the other hand Ibn Ḳutayba's methodology —of which he nowhere gives a systematic definition —certainly seems steadfastly to despise the rational or intellectual criteria held for example among the S͟hāfiʿīs and the Ḥanafīs. The Ḳurʾān and the Sunna remain for him the two fundamental bases of doctrine; the third is *id͟jmāʿ*, of which his conception is perhaps nearer to that of Mālik than of Ibn Ḥanbal. The Ḥanafī *raʾy* and the S͟hāfiʿī *ḳiyās* are fiercely demolished in the *Muk͟htalif*, as are all their equivalents (*naẓar*, *ʿaḳl*, *istiḥsān*, etc.).

Thus all the religious, political and literary work of Ibn Ḳutayba combines to make him an eminent representative, if not the exclusive spokesman, of the *ahl al-Sunna wa 'l-D͟jamāʿa*, who in fact from this period were the party of the ʿAbbāsid dynasty after it abandoned the Muʿtazilī ideology.

Critics from Ibn al-Nadīm onwards all reproduce the same ready-made opinion concerning Ibn Ḳutayba's place in the "philological schools". It is admitted without hesitation that he was the chief creator of a "Bag͟hdādī synthesis" between the philological doctrines of Kūfa and of Baṣra. On close inspection this opinion is shown to be open to doubt. In fact, in addition to the point already emphasized by G. Weil (introd. to the ed. of the *K. al-Inṣāf fī masāʾil al-k͟hilāf*... of Ibn al-Anbārī, Leiden 1913) that the schools of Baṣra and of Kūfa can scarcely have assumed their distinctive characteristics before the end of the 3rd/9th century, nothing has been found in Ibn Ḳutayba's philological work, or at least in what now survives, which could really justify this point of view. Although he in effect contrasts them with the "Baṣrans", he regularly refers to those who were later to be attached to the "School of Kūfa" as "Bag͟hdādīs", and the synthesis of which so much has been made is no more than a genuine eclecticism which never claimed to form a school.

All that can be said is that Ibn Ḳutayba in fact joins certain reputedly Kūfī tendencies to others considered to be Baṣran. His position may be summarized by stating that in grammar he remains on the whole a supporter of the norm, *i.e.*, "Baṣran", in spite of his attachment to the teaching of al-Kisāʾī and of al-Farrāʾ, whereas in a more general way, in philology and especially in poetry, he does not hesitate to depart from the usually accepted views, an attitude considered to be "Kūfī".

Ibn Ḳutayba's writing on poetry is found mainly in two works: the *K. Maʿānī 'l-s͟hiʿr*, a long anthology of poetic themes, and the *K. al-S͟hiʿr wa 'l-s͟huʿarāʾ*, a mainly chronologically arranged anthology. It is possible that other works, now lost, were also on poetry. Thus there is frequently mentioned a *K. ʿUyūn al-s͟hiʿr* of which nothing is known. It is usual (see Gaudefroy-Demombynes, *op. cit.*) to attribute great importance to the introduction to the *K. al-S͟hiʿr wa 'l-s͟huʿarāʾ*. It is true that it appears as a "veritable manuel du néo-classicisme" (R. Blachère, *HLA*, i, 140) in the sense that it exhorts writers to "create antique verses on new thoughts" and contributes some original ideas on the ideal poetic technique. But one has no hesitation in saying that this text, though of some interest for the evidence it contains, is nevertheless grossly overrated as a treatise on style. Close inspection reveals that its few main ideas have nothing at all to do with poetic style. They concern in fact a great problem of cultural ethos, that of the quarrel of Ancients and Moderns, and in addition an important problem of historical method, that of the documentary value of a literary work in the strict sense. There is nothing in this which truly concerns poetics. As Ibn Ḳutayba composed no poetry at all himself, he continues to be regarded as a writer of prose.

Nevertheless, he must be regarded as an innovator, in the sense that he devotes in his anthologies, and particularly in the *S͟hiʿr*, at least as much space to the "modern" as to the "ancient" poets. Thus he professes a great admiration for writers such as Bas͟hs͟hār and Abū Nuwās, to mention only the greatest. In addition he has the merit of mentioning poets of whom otherwise almost nothing is known.

Ibn Ḳutayba's reputation, especially in the West, is based mainly on his ability as a writer of *adab*. His *adab*, which comprises an ethos and a culture in which are united all the intellectual currents of ʿAbbāsid society at the beginning of the 3rd/9th century, and which displays an intent to popularize, at least for a certain literate public, is in this sense a kind of humanism. But it would be wrong, in the light of the eclectic professions of faith in the introductions of the *ʿUyūn* and the *Adab al-kātib*, to regard it as a secularist or even simply as a secular humanism, as some have tended to do in the West. What has been said above on his religious position and his attitude as defender of the *Sunna* clearly proves that in his mind there is no difference in kind but simply one of degree between the religious and the secular aspect of his educational work.

Ibn Ḳutayba's culture amalgamates in several

ways the four great cultural trends of his period: the Arabic trend proper, which consists of the "Arabic" sciences, *i.e.*, the religious sciences properly so-called, to which must be added the philological and "historical" sciences; the Indo-Iranian current, which contributes a certain administrative culture and a certain conception of the social relations in a developed society; the Judaeo-Christian trend, which adds a certain spiritual ferment; and, in a lesser degree, the Hellenistic trend which contributes the taste for logic and experimental knowledge.

Similarly Ibn Ḳutayba's ethic brings together the great ethical systems conveyed by these different cultures: the proud and pitiless ethic of the desert, that of the virile and sober qualities of the pre-Islamic *muruwwa*, the civilized and opportunist ethic of the Persian tradition, the spiritual and mystic ethic of the three revealed religions. Nevertheless, one seeks in vain in the resulting synthesis for any influence of Aristotelian or Platonic ethics, they being too clearly incompatible with the developing Sunnī ideal.

It is usual to consider the style of a compiler as a myth. Certainly it must be admitted that the great mass of Ibn Ḳutayba's work cannot be directly attributed to him. The data of *adab* and *ḥadīth* are obviously not written by him. Nevertheless it must not be forgotten that all his works are preceded by introductions, usually long, and apparently on the whole original, consisting of several hundred pages in all. Furthermore it cannot be denied that his works of polemical ideology such as the *Mukhtalif*, the *Ikhtilāf fi 'l-lafẓ* and the *Masāʾil* are entirely original. Thus, paradoxically, it is in the works or parts of works of the most technical nature that we must expect to find passages which demonstrate Ibn Ḳutayba's qualities as a writer.

Ibn Ḳutayba is, so far as is known at present, the third great writer of Arabic prose chronologically after Ibn al-Muḳaffaʿ and al-Djāḥiẓ. After the bombastic and often obscure literary prose of the middle of the 2nd/8th century, and after the brilliant but difficult style of al-Djāḥiẓ, Ibn Ḳutayba introduced a prose whose dominant characteristic was ease and facility. Far from the oratorical periods of the *kuttāb* of the 2nd century and from the faceted style of al-Djāḥiẓ, his sentences are simple, short and without artifice; his language is that in current use, with no concession to *gharīb* and not bound by an exaggerated respect for the norms of grammatical theory. It is already "modern Arabic".

The two aspects of Ibn Ḳutayba, the "secular" and the "religious", which are however distinguished only for the purpose of explanation, reflect a double personality: with a mind open to all the current intellectual ideas, which he attempted to spread among the responsible people of his time, Ibn Ḳutayba, requested at a certain time to give the support of his literary authority to al-Mutawakkil's reform, found himself, as was said by Ibn Taymiyya, spokesman of the nascent Sunna. It is not surprising if, after this, this eclectic man of letters felt himself constrained to stifle certain of his syncretist tendencies. This explains the reticence concerning him which was maintained in later years, in the East as well as in the West, though generally for opposite reasons; and this explains why none of the great ideological schools of Islam has ever dared to claim him.

Bibliography: (1) Principal bio-bibliographical references: Dhahabi, *Mīzān*, Cairo 1325, ii, 77; Khaṭīb Baghdādī, *Taʾrīkh*, Cairo 1349/1931, x, 170 (no. 5309); Ibn al-Athīr, *Lubāb*, Cairo 1356, ii, 242; Ibn Ḥadjar, *Lisān al-Mīzān*, Ḥaydarābād 1329-31, iii, 357-9; Ibn Khallikān, *Wafayāt*, Cairo 1948, ii, 246 (no. 304); Ibn al-ʿImād, *Shadharāt*, Cairo 1350, ii, 169-70; Ibn al-Nadīm, *Fihrist*, Cairo 1348, 121; Ḳifṭī, *Inbāh*, Cairo 1371/1952, ii, 143 and note; Samʿānī, *Ansāb*, Leiden 1912, fol. 443a; Suyūṭī, *Bughya*, Cairo 1326, 291; Yāfiʿī, *Mirʾāt al-djanān*, Ḥaydarābād 1337, ii, 191; Yāḳūt, *Irshād*, Leiden 1907-31, i, 160-1. For Ibn Ḳutayba's place in the development of rhetoric, see BALĀGHA and AL-MAʿĀNĪ WA'L-BAYĀN.

(G. LECOMTE)

IBN AL-ḲŪṬIYYA, ABŪ BAKR B. ʿUMAR B. ʿABD AL-ʿAZĪZ B. IBRĀHĪM B. ʿĪSĀ B. MUZĀḤIM, a grammarian and, in particular, historian of Muslim Spain, who owes his appellation "son of the Gothic woman" to the fact that one of his ancestors, ʿĪsā b. Muzāḥim, a freedman of ʿUmar b. ʿAbd al-ʿAzīz, had married Sara, daughter of Olmundo and granddaughter of the penultimate Visigothic king, Vitiza. Leaving Seville where her family was living, Sara had gone to Damascus to complain to the caliph Hishām b. ʿAbd al-Malik of the losses she had suffered at the hands of her uncle Ardabasto who, on the death of his brother, had seized his possessions in the East of al-Andalus. ʿĪsā and Sara returned to al-Andalus, and their descendants lived in Seville.

Ibn al-Ḳūṭiyya was thus a *mawlā* of the Umayyads and a descendant of the Visigothic nobility. Born in Seville, he settled in Cordova after studying in his native town and in the capital of al-Andalus, under such famous teachers as Ḥasan b. ʿAbd Allāh al-Zubayrī, Muḥammad b. ʿAbd al-Malik b. Aymān, Muḥammad b. ʿUmar b. Lubāba and Ḳāsim b. Aṣbagh. He lectured in Cordova and had several pupils, some of them well-known, especially the *ḳāḍī* Abu 'l-Ḥazm Khalaf b. ʿĪsā al-Washḳī and the historian Ibn al-Faraḍī, his principal biographer. He won distinction as a poet, but even more through his knowledge of grammar and lexicography, on which subjects he wrote works highly esteemed by later generations. He also gained a reputation as a jurisconsult and traditionist and, though criticized, he was none the less consulted as to the meaning or idea of such and such a phrase from the grammatical or lexicological point of view. His fame led to his being presented to al-Ḥakam II as the greatest philologist of his time; he held the office of *ḳāḍī* and enjoyed great prestige during his lifetime. He died in Cordova, in old age, on Tuesday 23 Rabīʿ I 367/6 November 977.

Of his various works, among which was his *Kitāb al-Maḳṣūr wa 'l-mamdūd*, the only ones to have survived are: (1) *Kitāb Taṣārīf al-afʿāl*, published by I. Guidi (*Il libro dei verbi di ... Ibn al-Qūṭiyya*, Leiden 1894) and re-edited recently by ʿAlī Fawda under the title *al-Afʿāl*, Cairo 1953. (2) *Taʾrīkh iftitāḥ* (var. *fatḥ*) *al-Andalus*, a history of the conquest of the Iberian peninsula and of the emirate to the end of the reign of the *amīr* ʿAbd Allāh; the Arabic text, prepared from ms. Paris 706 by Gayangos, Saavedra and Codera, was printed in 1868, but it was published only by J. Ribera, with a Spanish trans. and a helpful introduction, under the title *Historia de la conquista de España de Abenalcotía el cordobés* (vol. ii of the *Colección de obras arábigos de historia y geografía que publica la Real Academia de la Historia*), Madrid 1926. Earlier, A. Cherbonneau had brought out an incomplete French trans. (*Histoire de la conquête de l'Espagne par les Musulmans*, in *JA*, i (1853), 458-85 and viii (1856), 428-527); O. Houdas published the first part of the Arabic text with a French trans. (*Histoire de la conquête de l'Andalousie*, in *Recueil de textes ...*, published by the staff of the École des Langues Orientales, i, Paris 1889, 219-80); E. Fagnan also published a trans. of some fragments in his *Extraits*, 195 ff. The *Taʾrīkh* was re-edited recently by ʿAbd Allāh Anīs al-Ṭabbāʿ, Beirut n.d. [?1957].

The chronicle of Ibn al-Ḳūṭiyya was dictated in the second half of the 4th/10th century and was written down by one of his pupils; it consists of a series of detached notes taken down from dictation, and it is possible that there existed various recensions or copies made by other pupils; a hypothesis of this kind is supported by the fact that the incomplete edition of the *Taʾrīkh fatḥ al-Andalus* published in Cairo contains many variants (see Muḥ. Ibn ʿAzzūz, *Una edicion parcial poco conocida de la "Historia de Ibn al-Qūṭiyya"*, in *al-Andalus*, xvii (1952), 233-7). This chronicle, which could not have been disseminated before the 5th/11th century, has a special value for the history of al-Andalus in the 3rd/9th century, since it contains traditions, anecdotes, observations and personal impressions, not to be found in any other authors, on specific aspects of life at the Cordovan court and of certain personages. However, it provides, in its first part particularly, only somewhat scanty, imprecise and uncertain information.

(J. Bosch-Vilá)

IBN ḲUṬLŪBUGHĀ, Ḳāsim b. Ḳuṭlūbughā al-Ḥanafī, Egyptian scholar in *ḥadīth* and religious law. He was born in Muḥarram 802/September 1399. His father, Ḳuṭlūbughā, a freedman of Sūdūn al-Shaykhūnī (d. 798/1396), died while he was still young. He supported himself in his youth as an accomplished tailor (needleworker) but embarked early upon his religious studies, which he pursued all his life. An early teacher of his was ʿIzz al-Dīn Ibn Djamāʿa (d. 819/1416). His principal *shaykh* was Ibn al-Humām (d. 861/1457). Like all the aspiring young scholars of the time, he also studied with Ibn Ḥadjar. His travels, not very extensive ones, brought him to Damascus, Jerusalem, Alexandria, and Mecca. His professional career was not outstanding. He held only shortlived teaching appointments, for instance, in the Baybarsiyya and in the *madrasa* of Djānibak al-Djiddāwī. Equally shortlived stipends from influential friends, consisting in one instance of a monthly allowance of 800, and in another of 2000 *dirhams*, helped him to support his large family. But his scholarly prestige was great, and it seems that his writings and his legal advisory work yielded enough income for his needs. He had close Ṣūfī connexions and, in the great debate about mysticism, took a stand favorable to Ibn al-ʿArabī and Ibn al-Fāriḍ. Death came to him on the night of Wednesday-Thursday, 4 Rabīʿ II 879/17-18 August 1474.

His literary production, begun in his nineteenth year, was voluminous, approaching, it would seem, about a hundred titles. Among them, there are some works of historical interest and even a treatise on Avicennan logic. However, practically all he did was in the fields of *ḥadīth* and law. His works were the usual commentaries on legal school texts, compilations of traditions, glosses, additions, indexes of legal works, compilations of biographies of religious scholars, studies on Abū Ḥanīfa and his *Musnad*, discussions of individual legal problems, *fatwās*, and the like. Manuscripts of his more popular works have been preserved in great profusion. The catalogue of the Süleymaniye Library in Istanbul, for instance, lists about seventy manuscripts, among them some twenty of his *Tādj al-tarādjim*. This compilation of brief biographies of Ḥanafī authors was first published by G. Flügel and made Ibn Ḳuṭlūbughā's name known in the West (*Abh. K. M.*, ii/3, 1862, also Baghdād 1962; a manuscript dated 866 in Chester Beatty 3572[3]). Another of his biographical compilations, the large collection of brief biographies of reliable transmitters entitled *al-Thiḳāt min al-ruwāt*, is largely preserved in the Mss. Istanbul Köprülü, i, 264 and 1060. An inventory of his surviving writings, let alone a census of autograph copies and important old manuscripts, has

not yet been compiled. The same works are often listed under different titles, and some of the legal problems and *fatwās* found in collections are also listed separately. At present, it is not possible to say whether any of his works possesses originality and independent value. Among titles apparently not listed in Brockelmann, mention may be made of his *Takhrīdj aḥādīth* (of the recently published) *al-Ikhtiyār li-taʿlīl al-mukhtār* of Ibn al-Buldadjī (d. 683/1284) (Ms. Istanbul Feyzullah 292, draft copy?); *Ḥāshiya ʿalā Sharḥ Madjmaʿ al-baḥrayn* of Ibn Firishta, unless this work is identical with the commentary on the *farāʾiḍ* listed in Brockelmann, S I, 658 (Feyzullah 707, Beşir Ağa 228); *Nuzhat al-rāʾiḍ fī takhrīdj aḥādīth al-farāʾiḍ* of the *Hidāya* (Yeni Cami 301, fols. 1-20a, copied by ʿAlī b. Sūdūn al-Ibrāhīmī in 853); *Risāla fī djawāz idjārat al-iḳṭāʿ* (Ms. Chester Beatty 3202[3], copied by the same Ibrāhīmī, also Laleli 951); the legal problems (cf. *Ḍawʾ*, vi, 187, ll. 18 f.) *al-Ḳawl al-mutbaʿ fī aḥkām al-kanāʾis wa-'l-biyaʿ* (Chester Beatty 3724), *Taḥrīr* (*Ḍawʾ*: *Takhrīdj*) *al-aḳwāl fī masʾalat al-istibdāl*, and *al-Ḳawl al-ḳāsim fī bayān* (*taʾthīr*) *ḥukm al-ḥākim* (Chester Beatty 5276 [1-2]), which, however, might also have been included in the collections of legal problems. An autograph copy of his *Taṣḥīḥ al-Ḳudūrī* dated 868 is contained in Ms. Chester Beatty 5040, pl. 181.

Bibliography: al-Biḳāʿī, *ʿUnwān al-zamān*, as quoted in Ibn al-ʿImād, *Shadharāt*, vii, 326; al-Maḳrīzī, *ʿUḳūd* (not seen); al-Sakhāwī, *Ḍawʾ*, vi, 184-90, 223; Brockelmann, II, 99 f., S II, 93, as well as Brockelmann, I, 469, II, 224, S. I, 296, 362, 611 f., 635, 638, 658, II, 90, 92, 264, III, 1253.

(F. ROSENTHAL)

IBN ḲUZMĀN, name of a Cordovan family, of which five members are, for various reasons, worthy of mention. The genealogy of the family is given in Ibn al-Abbār, no. 1517.

I. ABU 'L-AṢBAGH ʿĪSĀ B. ʿABD AL-MALIK IBN ḲUZMĀN, poet and man of letters of the 4th/10th century. The chamberlain al-Manṣūr Ibn Abī ʿĀmir chose him as one of the tutors of the young caliph Hishām II al-Muʾayyad, who succeeded to the throne at the age of eleven in 366/976. Thus, in spite of the opinion of E. Lévi-Provençal (*Du nouveau* ... 13), it is impossible that he should have been the father of the famous writer of *zadjals* (no. V), who had the same name. This information is supplied by Ibn Saʿīd (*Mughrib*, ed. Shawḳī Ḍayf, i, 210), who adds that he was a member of the same family and quotes four verses by him. Other verses, without any biographical information, are given by al-Thaʿālibī (*Yatīmat al-dahr*, Cairo 1947, ii, 34-5) and by al-Ḍabbī, no. 1149.

II. ABŪ BAKR MUḤAMMAD B. ʿABD AL-MALIK B. ʿUBAYD ALLĀH, called al-Akbar (the Elder) to distinguish him from his nephew of the same name. A famous stylist and poet, he became secretary and minister of the last Afṭasid ruler of Badajoz, al-Mutawakkil; he was thus the col eague of ʿAbd al-Madjīd Ibn ʿAbdūn [*q.v.*] and of ʿAbd al-ʿAzīz b. Saʿīd al-Baṭalyawsī, known as Ibn Ḳabṭūrnu [*q.v.*], whose reputation was in fact greater than his. After the extinction of this dynasty (487/1094), he lived in obscurity. His unpleasant character and his bitter tongue earned him many enemies, among them Muḥammad Ibn Ḥamdīn, chief *ḳāḍī* of Cordova, who persecuted him. He died in 508/1114 (cf. Ibn Bashkuwāl, *Ṣila*, ed . Codera, no. 1139; *Mughrib*, i, 99, which reproduces the text of the *Dhakhīra* of Ibn Bassām; Ibn Khāḳān, *Ḳalāʾid*, Būlāḳ 1283, 187; Ibn Saʿīd, *ʿUnwān al-murḳiṣāt*, ed. Maḥdād, Algiers 1949, 45, in which the poet is referred to as Ibn Ḳurbān).

III. ABŪ MARWĀN ʿABD AL-RAḤMĀN, son of the above. He was a great scholar, a most distinguished man of letters, a jurist taught by the chief *ḳāḍī* of Cordova, Abu 'l-Walīd Ibn Rushd, the grandfather of Averroes. He was the last of the great traditionists of Muslim Spain and died a *ḳāḍī*, in 564/1169, at the age of eighty-five, at Osuna (Ushūna), a small town 70 kilometres south-east of Seville (cf. Ibn Bashkuwāl, no. 752; al-Ḍabbī, no. 989).

IV. ABU 'L-ḤUSAYN ʿUBAYD ALLĀH, son of the above. A jurist and a poet, he served as *ḳāḍī* in several regions of the province of Cordova. He died at Osuna in 593/1196-7 or 594/1197-8 (Ibn al-Abbār, no. 1517).

V. ABŪ BAKR MUḤAMMAD (called al-Aṣghar (the Younger) to distinguish him from No. II, who appears to have been his paternal uncle) B. ʿĪSĀ B. ʿABD AL-MALIK ... IBN ḲUZMĀN, the famous *zadjal*-poet. He at first tried writing poetry of the traditional type, in classical language (*muʿrab*). Then, realizing that he could not rival in this field the great poets of his time, such as Ibn Khafādja, he turned to the popular genre known as *zadjal* [*q.v.*], which is written only in the Arabic dialect of Spain. In this his success was so brilliant that he earned the undisputed title of "leader of the zadjalists" (*imām al-zadjdjālīn*).

Very little is known of the life of Ibn Ḳuzmān. He himself merely mentions (*zadjal* no. 38, stanza 9) that he was not yet born at the time of the famous battle of al-Zallāḳa (479/1086). The only certain fact is that he died at Cordova on the penultimate day of Ramaḍān 555/3 October 1160 (see Ibn al-Khaṭīb, *Iḥāṭa*, MS Escorial, fol. 54).

Ibn Ḳuzmān lived in a difficult time for poets. From 489/1096, the Almoravid Yūsuf b. Tāshfīn had done away with the last "party kings" (*mulūk al-ṭawāʾif*) with their luxurious courts and their entourages of paid poets. Only the Hūdids, in distant Saragossa, succeeded in maintaining precariously the tradition of the patron princes until 503/1110. The new masters of the country, sultans, viceroys, and governors, were Berber-speakers from the Sahara, who must have been unable to understand the subtleties of Arabic poetry (cf. Dozy, *Hist. Mus. Esp.*², iii, 127, 135). It is doubtful, for example, how far the governor of eastern Spain, Ibn Tīfalwīt, of the Saharan tribe of the Massūfa (d. 510/1116-7), was able to appreciate the panegyrics which were addressed to him at Valencia by Ibn Khafādja [*q.v.*], considered as the finest poet of the time, and then at Saragossa by the famous philosopher, physician and musicologist, Ibn Bādjdja [*q.v.*].

Thus the only remaining persons to whom poets could turn for patronage were the members of the Hispano-Arab urban aristocracy, rich and powerful noblemen who held in rotation the office of chief magistrate (*ḳāḍī al-djamāʿa*). Their liberality, however, did not always match their wealth. One of them, Muḥammad Ibn Ḥamdīn, was so miserly as to be the subject of satires (cf. Dozy, *Hist. Mus. Esp.*², iii, 156). Hence Ibn Ḳuzmān, always in search of money, dedicated his works to the various representatives of the great families of Cordova: the Banū Ḥamdīn, B. Rushd, B. Sirādj, B. Abi 'l-Khiṣāl, B. Rabīʿ, B. Shuhayd, B. Mughīth, B. al-Munāṣif, B. Yannaḳ, etc. Although he was not really a wandering poet, his habitual lack of money obliged him to seek the patronage of other wealthy men than those of his native town. From there he made many journeys

(*zadjal* no. 84, stanza 1) to Seville, where there lived two of his chief patrons: Abu 'l-ʿAlā' Ibn Zuhr (d. 525/1131), the father of "Avenzoar", and Ibn al-Ḳura͟shī al-Zuhrī. It was while in this town that he learned of the death of his Cordovan patron, Abu 'l-Ḳāsim Ibn Ḥamdīn in 521/1127 (*zadjal* no. 38, stanza 2).

For the same reason, he went often to Granada to address panegyrics there to ʿAlī b. Aḍḥā al-Hamdānī, *ḳāḍī* of the town, to ʿAlī Ibn Hānī and especially to Abū Bakr Muḥammad Ibn Saʿīd, who was intendant of finance there. It was at the house of the latter that he met the poetess Nazhūn with whom he had a famous altercation (see al-Maḳḳarī, *Analectes*, ii, 636). He may also have travelled to Jaen (no. 21, stanza 14). Thus the area of his travels in Muslim Spain was relatively restricted. He himself admits that he had never seen the sea (no. 145, stanza 10) but it is not clear from which period of his life this poem dates. He certainly mentions, in a comparison, the Gibralfaro which dominates Malaga (no. 142, stanza 2), but he may have known of it only by hearsay.

According to his own description, Ibn Ḳuzmān was tall, with blue eyes and a red beard. Other sources describe him as having a squint and being very ugly; in this connexion there is related a comic anecdote which had already been told as applying to al-Djāḥiẓ (cf. Ch. Pellat, *Le milieu baṣrien et la formation de Ǧāḥiẓ*, 57).

Like those to whom he dedicated his *zadjals*, he must have had a good knowledge of the Romance dialect current in the south of Muslim Spain. He quotes from it not only isolated words, but also short phrases. Nor was he entirely ignorant of the Berber spoken by the immigrants from the Sahara: certain poems dedicated to Almoravid dignitaries have words from this language inserted in them—these words moreover are those which conquered peoples most readily borrow from their conquerors.

Ibn Ḳuzmān was in no sense a troubadour singing of courtly love, that *ʿishḳ al-muruwwa* which he in fact derides. Like Abū Nuwās and François Villon, he led the life of a needy bohemian, a reckless toper, and an epicene rake (*khalīʿ*, *zānī*, *lawwāṭ*). His licentious conduct caused him to be continually censured by his great enemies the *faḳīhs*, who were particularly powerful under the Almoravids; thus in his writings, the word *faḳīh* often acquired the meaning of "hypocrite". More to be feared were the punishments of the chief of police. Ibn Ḳuzmān's delinquencies and his incorrigible passion for wine led to his being accused of impiety and irreligion and thrown into prison. He was even condemned to be flogged to death and was saved only by the intervention of an Almoravid dignitary, Muḥammad b. Sīr (nos. 39 and 41). It also seems that some of his journeys from one town to another were flights from justice after some escapade.

On the title-page of the unique manuscript of his *Dīwān* he is described as *wazīr*. It is well-known that at this period this title had lost much of its original significance: it had become purely honorific and was given to everyone of a certain social level, and in particular to court poets (cf. its debasement in the Spanish *alguacil*, "police sergeant"). However, as in the title of this manuscript the author is referred to as ʿAbū Bakr ibn ʿAbd al-Malik, this may be a further confusion with no. II, who was indeed a *wazīr*.

On the other hand there is certainly no foundation for Brockelmann's opinion (S I, 481) that Ibn Ḳuzmān was a travelling entertainer with a monkey: this arises from an error in translation. In two poems (no. 7, st. 2 and no. 121, st. 2) the poet does indeed refer to his *ḳird*, but this word is used here in the sense of "evil spirit, misfortune", and appears each time in contrast with *saʿd*.

The last sixteen years of Ibn Ḳuzmān's life passed in a difficult time of rebellions and wars. In 539/1145, the defeated Almoravid sultan Tā͟shfīn was killed near Oran; his empire, which had for long been eroded by the Almohads, collapsed finally two years later, when the Muslim towns of western Spain revolted against the Almoravid governor, Yaḥyā Ibn Ghāniya. The Almohads occupied the country and made their capital at Cordova in 543/1148; then once again the towns revolted against them. The situation was further aggravated by the intervention of the King of Castile, Alfonso VII, sometimes directly and sometimes through the intermediary of his Muslim satellites, Ibn Mardanī͟sh and Ibn Hamu͟shku. Unfortunately for Ibn Ḳuzmān, one of his chief protectors, Abū Djaʿfar Ḥamdīn, the chief *ḳāḍī* of Cordova, was among the most active fomentors of disorder. In revolt against the Almoravids, he had himself proclaimed *amīr al-muslimīn* in 539/1145, but his reign was brief. In spite of the support of the king of Castile, he was unable to resist either the Almoravids or the Almohads. He died in misery in 548/1153.

Ibn Ḳuzmān died in 555/1160, while Cordova was being besieged by Muḥammad b. Saʿd Ibn Mardanī͟sh, who was attempting to take the town from the Almohads.

In spite of his dissolute life, Ibn Ḳuzmān seems to have reached a relatively advanced age. His first *zadjal* to which a definite date can be given (no. 83, an elegy on the death of Abu 'l-Ḳāsim Ibn Ḥamdīn) was written in 521/1127. In verses in classical Arabic, he depicts himself as walking in a bent position "as if he were searching for his youth in the dust" (*Analectes*, ii, 431). If we are to take seriously what he says in his *zadjal* no. 147, the poet, towards the end of a not very exemplary life, reformed to the extent of holding the office of *imām* and of muezzin in a local mosque. This theory of a belated conversion may be supported by the fact that he died at the end of Ramaḍān, as did many elderly people, exhausted by the rigours of a month of strict fasting. Nevertheless, his "Testament" (no. 90) is that of a libertine and a toper; but this may perhaps be a work of his youth, and the desire he expresses in it to be buried in a vineyard may be merely the reflection of the work of another bacchic poet, Abū Miḥdjan [*q.v.*] al-Thaḳafī (cf. Nöldeke, *Delectus*, 26). From an unhappy marriage of which he bitterly repented (nos. 18 and 21), he appears to have had several sons (no. 143: *aṭfālī*; no. 11, st. 9: *awlādī*). Only one is known: Aḥmad, a traditionist who died at Malaga shortly after 600/1204.

Works. Ibn Ḳuzmān describes himself as a prose writer and a poet in the classical style as well as a composer of *muwa͟sh͟shaḥs* [*q.v.*] and of *zadjals*. Of his prose there is known only the preface to the *Dīwān*, in rhyming prose. Very few of his classical verses have survived and these do not show any remarkable talent. Only one of his *muwa͟sh͟shaḥs* has been preserved (cf. Hoenerbach, 94).

Thus the important part of his work consists of his *zadjals*. There existed at one time a large collection (*dīwān kabīr*) of these, possessed and used by al-Ḥillī (cf. Hoenerbach, 68), but now apparently lost. Another (abridged?) *dīwān*, entitled *Iṣābat al-aghrāḍ fī waṣf al-aʿrāḍ*, was put together by the

author for an obscure friend of his, Ibrāhīm al-Wa͟shkī, the only existing manuscript of which is unfortunately imperfect. By chance a certain number of the missing poems have been preserved by various anthologists. One has even been discovered in the Geniza of Fusṭāṭ. The 149 *zad͟jals* which are preserved in the *Dīwān* in its present form may be divided into two categories: those with a dedication and those without. Those without are fewer (27) and in general shorter: 5 or 6 stanzas, and, in this detail, are close to the norm of the *muwa͟sh͟shaḥ*. They are the poems which S. M. Stern (*Studies* ..., 385) rightly calls "*muwa͟sh-͟shaḥ*-like *zad͟jals*"; their themes are solely drinking or love.

The poems with dedications are of greatly varying length, most of them having from 5 to 9 stanzas. But they include some very long ones: 42 stanzas (no. 9), 40 stanzas (no. 38), and also some very short ones: 3 stanzas (no. 47), dedicated to the governor Tā͟shfīn "since the Almoravids did not like prolixity". These poems with dedications are of bipartite structure, like the classical *ḳaṣīda*, but are divided into stanzas with varying rhymes and written in dialectical Arabic in metres which are often non-classical. Thus they have been described as "ballades". The first part is a light introduction (*g͟hazal*, *tag͟hazzul*) which replaces the old *nasīb*. The favourite themes for these are wine and love, also their common provider: money. The second is a panegyric (*madḥ*, *madīḥ*) of the person to whom the poem is dedicated and from whom the poet expects a generous reward. Between these two essential sections there is a brief "transition" (*duk͟hūl*, *k͟hurūd͟j*, *tak͟halluṣ*); it is in his ingenious choice of this link-passage that the poet's talent appears.

The panegyrics, often exaggerated, are not of great interest; they contain praise of beauty, of learning and above all of the generosity of the persons to whom they are dedicated. Sometimes the author adds to them a personal *fak͟hr* in which he describes himself as the prince, and even the father, of the genre of the *zad͟jal*, and complains of his plagiarizers.

On the other hand, the humorous introductions form the most original and interesting part of Ibn Ḳuzmān's work. They amount to vignettes describing scenes from the public and private lives of the inhabitants of the city, abounding in valuable details on houses, furniture, costume, food, etc. These vivid and often comic scenes are full of vivacity, variety and realism, interspersed with racy and amusing details which reveal extraordinary powers of observation and expression: drunken quarrels, preparations for a feast day (which provides the poet with the opportunity to complain of his chronic penury), rejoicing at a carnival, the consultation of a fortune-teller, romantic adventures and altercations with deceived husbands. The poet himself often appears on the scene, in a humorous part, without always trying to give himself a favourable role. Licentiousness is freely mingled with burlesque, but very rarely descends to real obscenity.

Unfortunately these sociological documents are not always very easy to understand, for the poet's impetuous and lively style, the incisive brevity of his phrases, the vivacity of his narration and the abruptness with which he jumps from one theme to another, all combine to make accurate translation difficult. Furthermore, allusions are made in these passages to popular characters of the time and to beliefs and customs of which no mention is found elsewhere. Also, it is in these "jests" that there appear most of the terms peculiar to the local dialects, either not to be found in dictionaries or deformed by Eastern copyists. It should also be mentioned that the Eastern anthologists who have included fragments or whole poems by Ibn Ḳuzmān have limited these to passages on drinking or love, *i.e.*, to the parts which contain the most clichés and the vocabulary of which belongs to the common stock of Arabic, with even a classical tendency. The reason for their neglect of the descriptive sections, which are nevertheless those more representative of the poet's talent, is probably their inability to understand the really local vocabulary used in them.

Ibn Ḳuzmān, being essentially a townsman, provides no description of nature in its wild state. He had only unpleasant memories of his journeys from Cordova to Granada, accomplished in precarious and sometimes perilous conditions across the sierras and their ravines where he saw more bramble-bushes and oleanders than sweet-basil (no. 73, st. 5). As with the other poets of Spain (with the exception of his contemporary Ibn K͟hafād͟ja), the nature which he likes and describes is that which he had the opportunity to enjoy during pleasure trips to the country (*nazāyih*), in the pleasure gardens (*manāzih*) which his patrons owned on the outskirts of the large towns and where they went to relax in spring and in autumn. The poet likes to describe the happy frolics of gay young drinkers and pretty girls, singing, dancing and swimming in an enchanting setting beside a fresh stream or a pool among flowers or in the shade of elm-trees full of singing birds. Poem no. 79, in which he reveals his knowledge of astronomy in a detailed description of the night sky of Andalusia, is exceptional.

His descriptions of battles against the Christians (nos. 38, 40, 47, 86, 102) are very vivid, but they seem to be based solely on imagination, since it is almost certain that he was not present at any but merely formed a part of the crowd at the triumphal reception (*burūz*) of the victorious troops.

This essentially humorous poet wrote also a rather touching elegy (no. 83, repeated in part in no. 38, stanzas 36, 37 and 38) written on the occasion of the death of one of his chief Cordovan patrons, Abu 'l-Ḳāsim Aḥmad Ibn Ḥamdīn, in 521/1127. One curious thing is that Ibn Ḳuzmān does not appear to have used the genre of satire, for which he would appear to have been so well-fitted; and his attacks on the *faḳīhs*, his relentless critics, were always discreet and prudent.

The importance attached by writers of *muwa͟sh-͟shaḥs* to the apposite selection of the cadence (or refrain) on which they subsequently constructed their poem is well known. This cadence became the poem's finale, its "sally" (Sp. *salida*), its "going-out" (Ar. *k͟hard͟ja*) and at the same time its "pivot" or centre (*markaz*), providing, as it did, both the metrical pattern for the whole poem and the rhyme which was repeated at the end of every verse. In this matter, Ibn Ḳuzmān did not attempt to be original. None of his "finales" is in the Romance language; some of them consist of a popular proverb. On three occasions, and without always mentioning his source, he has merely borrowed "finales" in dialect from his contemporary and compatriot Ibn Baḳī, the famous author of *muwa͟sh͟shaḥs* (d. 540/1145).

It certainly seems, however, that the re-use of famous "finales", written in dialectical Arabic or in Romance, was a current practice among the poets of Spain, Jewish as well as Muslim. To borrow a

"finale" from a famous poet and reconstruct on it a new *muwashshaḥ* or *zadjal* was regarded as an exercise in virtuosity and has nothing to do with plagiarism: it was a *muʿāraḍa*. The structure and the metre of the *zadjals* of Ibn Ḳuzmān will be studied in the article ZADJAL.

The language used by Ibn Ḳuzmān in his *zadjals* is the Arabic dialect of southern Spain as it was spoken by the educated people of his time, that is to say with a vocabulary much enriched with borrowings from the classical language, but always deprived of grammatical inflections (*iʿrāb*). In *al-ʿĀṭil al-ḥālī*, Ṣafī al-Dīn al-Ḥillī accused Ibn Ḳuzmān of straying too often from the pure Spanish dialect. But this Mesopotamian critic, living two centuries after Ibn Ḳuzmān, cannot have had any serious knowledge of the peculiarities of that idiom. The writer of this article has demonstrated elsewhere that practically all of these criticisms were unjustified. It is true that Ibn Ḳuzmān may be accused of having misused some initial *hamzas* (*hamzat al-ḳaṭʿ*) in order to suit the metre, but this is a poetic licence used also by poets writing in the classical language. He may also have made more frequent use of the conjunction *fa-* and the particle *ḳad* than the common people did. It should be remembered, however, that his *zadjals* were intended primarily for literate persons.

Ibn Ḳuzmān's own estimate of his talent has been ratified by posterity. Both Eastern and Western Arabic-speaking peoples have pronounced him unsurpassed as a writer of *zadjals*. His works have become accepted as models of perfection in this genre, to such an extent that, for centuries, the Eastern composers of *zadjals* made it a rule to write in an approximation of the Spanish dialect.

Ibn Ḳuzmān's powerful originality has never been equalled. No other poet has covered such a rich range of metrical combinations. Only his successor and compatriot, Madghalīs, has been compared to him by the critics, and this was in order to put Ibn Ḳuzmān on a level with al-Mutanabbī in his choice of themes (*maʿnā*) and to raise Madghalīs to that of Abū Tammām in matters of expression (*lafẓ*) (al-Maḳḳarī, *Analectes*, ii, 262). But Ibn Ḳuzmān is regarded today as being in the tradition of the eastern poets writing in the classical language: Abū Nuwās, Ibn al-Muʿtazz, Ibn al-Ḥadjdjādj, Ibn Sukkara, etc., who had the ability to shine even when not using well-worn themes.

Just as there are two strong points of view on the question of whether strophic poems (*muwashshaḥ* and *zadjal*) originated in the east or the west, so there are two conflicting opinions on the origin of the name of the eponymous ancestor, Ḳuzmān.

Some have regarded it as a transcription of the Spanish proper name *Guzman* (the Arabic *ḳāf* being here merely the current form of transcription of the phoneme *g*), itself of Germanic origin. Ibn Ḳuzmān might, therefore, have been of Germanic ancestry (Visigothic perhaps), and the portrait which he had provided of himself would seem to confirm this hypothesis: tall, with blue eyes and red beard. Furthermore, the proper name Ḳuzmān is extremely rare in Arabic onomastic; it was, however, borne by a character in history, an *anṣārī*, who died from wounds received at the battle of Uḥud (al-Ṭabarī, i, 1423; Ibn Hishām, ii, 578; *TA*, under the radicals *ḲZM*). It is not clear why Lerchundi and Simonet suggest that Ibn Ḳuzmān was of Jewish descent (*Crestomatía arabigo-española*, 336). The question is not, however, of great interest. In the time of Ibn Ḳuzmān the old "Arab" families of Muslim Spain had interbred extensively with Iberian, Latin, Germanic, Berber, Jewish, and even Negro elements.

Ibn ʿAbd al-Malik al-Marrākushī, in his *Kitāb al-Dhayl wa 'l-takmila*, adds to the poet's name the ethnic name of al-Zuhrī, which is that of many Spanish Muslims. This ethnic name is derived from the name of one of the main clans of the tribe of Ḳuraysh: the Zuhra. But we would perhaps not be justified in assuming a Ḳurayshī origin from this single piece of evidence. It is in fact very uncertain, since the *nisba* may not be a real one but merely a fictitious one, transmitted by a master to his freedman (*walāʾ*). It may be that there is a connection between this ethnic name and that of the famous Seville family of the Banū Zuhr. Certainly of the four persons to whom the *Dīwān* is dedicated, two are the Sevillians Abu 'l-ʿAlāʾ Zuhr and Ibn al-Ḳurashī al-Zuhrī.

In his *Ṭawḳ al-ḥamāma* (cf. ed. Bercher, Algiers 1949, 300-1, in which the translation is incorrect), Ibn Ḥazm mentions an Ibn Ḳuzmān, a *kātib* who died from his unrequited passion for a beautiful young man of Cordova, Aslam b. ʿAbd al-ʿAzīz. This Aslam was the second of the chief *ḳāḍīs* of ʿAbd al-Raḥmān III al-Nāṣir, who succeeded in 300/912. In 314/926, Aslam was dismissed from office because of illness and died in 319/931 (cf. al-Ḍabbī, no. 571; Ibn ʿIdhārī, ii, 193). This Ibn Ḳuzmān, who died of love, might be an ancestor of ʿĪsā (I).

Ibn Bashkuwāl (no. 149) mentions an Aḥmad b. Ibrāhīm Ibn Ḳuzmān, of Toledo, who died *circa* 490/1097. He does not seem to have been a member of the Cordovan family.

Bibliography: The article by E. Lévi-Provençal, *Du nouveau sur Ibn Ḳuzmān*, in *BIFAO*, xliv (1944) (Eng. tr. in *JRAS*, 1944, 105; Sp. tr. in *And.*, ix (1944), 347), provides a bibliography more or less exhaustive for the period anterior to this article. (G. S. COLIN)

IBN AL-LABBĀD [see ʿABD AL-LAṬĪF AL-BAGHDĀDĪ].

IBN AL-LABBĀNA, ABŪ BAKR MUḤAMMAD B. ʿĪSĀ AL-LAKHMĪ, Andalusian poet of the 5th/11th century, born in Denia, whence his *nisba* al-Dānī, by which he is often called; but he is much better known under the name of Ibn al-Labbāna "son of the dairy-woman", his mother having been, as is stated by Ibn Bassām (*Dhakhīra*, iii, *apud* Ibn Saʿīd, *Mughrib*, ed. Sh. Ḍayf, ii, 409), a seller of milk. It is known that one of his brothers, ʿAbd al-ʿAzīz, was also a poet, but he gave up this career to devote himself to commerce.

Little is known of the life of Ibn al-Labbāna; it probably however resembled that of many poets of the time, who sought an important personage to whom they might address poetic eulogies. He tried his fortune at the court of al-Muʿtaṣim of Almería, the refuge of many poets, and at those of al-Maʾmūn of Toledo and al-Mutawakkil of Badajoz, and addressed panegyrics to these princelings; the sources contain literary anecdotes on his (probably brief) sojourns in these towns, but his chief patron, to whom he was to remain attached for the rest of his life, was al-Muʿtamid Ibn ʿAbbād [*q.v.*], ruler of Seville. Fairly numerous accounts of Ibn al-Labbāna's stay at this court show that he was treated with familiarity by the ruler and his sons, for whom he felt a loyal affection and to whom he dedicated eulogistic poems which have the mark of sincerity. In 484/1091, when al-Muʿtamid was deposed by the Almoravids, Ibn al-Labbanā—"one of the few Arabic poets possessing the 'gift of tears' ", as García Gómez has put it—spoke, with a deep and moving sadness, of the departure of the ship which took the ruler and his family into exile. Ibn Labbāna's devotion to his former master did not end with this event: he continued to write in praise of the poet-king and went to visit him in his African exile in Aghmāt.

After the death of al-Muʿtamid, Ibn al-Labbāna went to Bougie, where he visited ʿIzz al-Dawla, a son of al-Muʿtaṣim, and described his visit in a pathetic way (al-Makkarī, *Analectes*, ii, 250). He next went, in 489/1096, to Majorca, where he wrote in praise of the ruler, Mubashshir b. Sulaymān, but these poems do not bear comparison with those which he had dedicated to al-Muʿtamid, as is stated by al-Makkarī (*op. cit.*, ii, 609). A series of intrigues troubled the final years of his life, and he died in Majorca in 507/1113.

Although according to Ibn al-Abbār (*Takmila*, no. 511) his work was collected in a *dīwān*, no copy of this has survived and his poems now survive only dispersed in anthologies. Of his other works, all that is known are the titles and the subjects, all relating to the Banū ʿAbbād.

All the critics and the anthologists agree in praising the excellent poetic gifts of Ibn al-Labbāna and the beauty of his poems, but his universal fame in Arabic literature is due to his loyalty to the ruler of Seville, which he retained until his death; Ibn al-Imām, the author of *Simṭ al-djumān*, calls him for this reason "the Samawʾal of the poets" (*apud* Ibn Saʿīd, *Mughrib*, ii, 411) and all who write of him praise this quality.

Ibn al-Labbāna was also the author of *muwashshaḥāt*; one of those which have survived ends with a very fine *khardja* in Romance.

Bibliography: Further to the sources mentioned above, see the bibl. to AL-MUʿTAMID and ʿABBĀDIDS; see also Ḍabbī, *Bughya*, no. 213; Ibn Diḥya, *Muṭrib*, Cairo ed. 1954, 178-9; Ibn Khākān, *Kalāʾid*, Būlāḳ 1283, 245-52; Pons Boigues, *Ensayo*, 172-5; E. García Gómez, *Qasidas ed Andalucía*, Madrid 1940, 83-95. On Ibn Labbāna as a writer of *muwashshaḥāt*, see E. García Gómez, *Las Jarchas romances de la serie árabe en su marco*, Madrid 1965, 283-8; idem, in *al-Andalus*, xxvii (1962), 72-3, 75-9; S. M. Stern, in *Arabica*, ii (1955), 60. (F. DE LA GRANJA)

IBN LADJAʾ, ʿUMAR B. LADJAʾ B. ḤUDAYR AL-TAYMĪ, of the Taym b. ʿAbd Manāt, an Arab poet of the 1st/7th century. Al-Djāḥiẓ emphasizes his skill in composing poems in *radjaz* and *ḳaṣīdas*, and Ibn Sallām places him in the fourth "class" of Islamic poets, but he has escaped oblivion chiefly owing to the invectives that he exchanged with Djarīr [*q.v.*]; these fragments of *hidjāʾ* are in part preserved in the *Naḳāʾiḍ* and in various anthologies, which for the most part ignore his other compositions; his rivalry with Djarīr appears basically to have been of a literary character, indeed simply a quarrel between poets each convinced of his own talent, but it soon degenerated and passed from the individual to the tribal level. Ibn Ladjaʾ is said to have died at al-Ahwāz, the date being unknown.

Bibliography: Djāḥiẓ, *Bayān* and *Hayawān*, indexes; Ibn Ḳutayba, *Shiʿr*, ed. De Goeje, 428-9; Ibn Sallām, *Ṭabaḳāt*, 363-72, 499-504 and index; *Aghānī*, index; *Naḳāʾiḍ*, 487-91, 907; *Fihrist*, 225; Marzubānī, *Muwashshah*, 127; idem, *Muʿdjam*, 478; Baghdādī, *Khizāna*, Cairo ed., ii, 259-62; Ibn Rashīḳ, *ʿUmda*, i, 123; Yāḳūt, vi, 60; Nallino, *Letteratura*, 92, 97. (CH. PELLAT)

IBN LAHĪʿA, ʿABD ALLĀH B. LAHĪʿA B. ʿUḲBA, Egyptian traditionist and judge (b. *ca.* 96/688-69, d. Sunday, 15 Rabīʿ I 174/1 August 790, or 23 Djumādā II 174/6 November 790). The few known facts about his life are that he was appointed judge in 155/772 with a monthly salary of thirty *dīnārs*, the appointment being the first direct appointment of a chief judge of Egypt by a caliph instead of the provincial governor; that he held the judgeship for over nine years; and that his "books"—that is, primarily, his scholarly notebooks and materials—perished all or to a large part in a conflagration that destroyed his house in 169 or rather in 170/786. We are told that he considered unbelievers those who professed the createdness of the Ḳurʾān, and that he was ardently pro-Shīʿa. His father, Lahīʿa, is said to have died in 100/718-19, and his brother, ʿĪsā b. Lahīʿa, on whose authority he transmitted traditions, in Shawwāl 145/December 762-January 763. ʿĪsā's son, Lahīʿa, was acting governor *ʿala ʾl-ṣalāt* for some time in 189/805 and judge of Egypt from the beginning of Shaʿbān 196/April 812 to his death in Dhu ʾl-Ḳaʿda 204/April-May 820, with an interruption lasting about one year in 198-99/November 813-August or September 814.

ʿAbd Allāh b. Lahīʿa is believed to have been the author of published (written) works. He transmitted the history of the Prophet's raids. He may have been the author of some traditional and historical texts preserved on papyrus. Much of the material of Ibn ʿAbd al-Ḥakam's [*q.v.*] "Conquest of Egypt", especially the Prophetical traditions cited there, and of al-Kindī's "Governors and judges of Egypt" as well as other Egyptian local histories has passed through him. For many authorities, his reliability as a transmitter of traditions was dubious.

Bibliography: al-Bukhārī, *Taʾrīkh*, iii/1, 182 f.; Ibn ʿAbd al-Ḥakam, *Futūḥ*, ed. C. C. Torrey, 244, 246, index 334 f.; Ibn Ḳutayba, *Maʿārif*, ed. Th. ʿUkāsha, 505, 624; Yaʿḳūb b. Sufyān, *Taʾrīkh*,

(F. Rosenthal)

IBN LANKAK (the son of the little lame man), Abu 'l-Ḥasan Muḥammad b. Muḥammad b. Djaʿfar al-Baṣrī, minor poet of Baṣra who died *ca.* 360/970. Very little is known of his life except that he went to Baghdād, where he was the transmitter of a poem by Diʿbil [*q.v.*] and lived for some time in the circle of al-Muhallabī [*q.v.*]; it was probably at the vizier's suggestion that he addressed a number of epigrams to al-Mutanabbī at the time of the latter's visit in 351/962. His poems were collected in a *Dīwān*, and al-Ṣāḥib Ibn ʿAbbād was still able to appreciate them, but there now survive only a few examples, mostly short, which show him to have had a tendency to be pessimistic and critical: he complains of contemporary poets who deprive him of the glory which he considered his right, of his native town, and above all of fate in general, although he admits in a famous verse that human beings are responsible for their own misfortunes.

Bibliography: Thaʿālibī, *Yatīma*, i, 86, ii, 116-26, 132; Yāḳūt, *Udabā'*, xix, 6-11; Suyūṭī, *Bughya*, 94; Ḳalḳashandī, *Ṣubḥ*, i, 177 ff.; A. Mez, *Renaissance*, 257 (Sp. tr., 330; Eng. tr., 268); R. Blachère, *Motanabbî*, 224-5, 228; F. Bustānī, *Dā'irat al-maʿārif*, iii, 491. (Ch. Pellat)

IBN LISĀN AL-ḤUMMARA, usual by-name of a Bedouin of the 1st/7th century, who became proverbial for his knowledge of the genealogies of the Arabs. His name was Abū Kilāb ʿUbayd Allāh b. al-Ḥuṣayn (ʿAbd Allāh b. Ḥiṣn) or Warḳā' b. al-Ashʿar, and he belonged to the Banū Taym al-Lāt b. Thaʿlaba. *Ḥummara* means a red-headed sparrow, the ammomanes or "Isabelline lark" (*Ammomanes deserti*), of the family of the *alaudidae*, but the origin of his father's by-name (and of his own, for he is sometimes called simply Lisān al-Ḥummara) is unknown. Practically nothing is known of his life apart from some traditions which show him at Kūfa with al-Mughīra b. Shuʿba [*q.v.*] and with Muʿāwiya, and which speak of his wisdom, his eloquence, his gift for lively repartee and his profound knowledge of men and women; his cutting judgements on the different tribes derive, however, from folklore. He was considered as one of the best Arab genealogists of the time, and there was a proverb: *ansab min Ibn Lisān al-Ḥummara* (al-Maydānī, *Amthāl*, Cairo 1352-3, ii, 309); another proverb, *aʿmar min Ibn Lisān al-Ḥummara* (*op. cit.*, i, 516) would seem to suggest that he was very long-lived, but there is here probably a deformation of the more likely form: *aʿlam min Ibn Lisān al-Ḥummara* (cf. Freytag, *Ar. prov.*, iii/1, 163, no. 268); such a corruption could arise from a false reading of *kibar* for *kibr*, for, according to the *Fihrist* (Cairo 1348, 132), Ibn Lisān al-Ḥummara was very proud.

Bibliography: Djāḥiẓ, *Ḥayawān*, ii, 200, 206; iii, 209; idem, *Bayān*, iii, 162; idem, *Tarbīʿ*, 63; Ibn Ḳutayba, *Maʿārif*, 535; Ibn Durayd, *Ishtiḳāḳ*, 213; *Aghānī*, xiv, 138 (Beirut ed., xvi, 50); Ibn Ḥazm, *Djamhara*, 296; Damīrī, s.v. *ḥummar*; *Ḳāmūs*, s.v. *ḥummar*; *Zapiski* of the Oriental Section of the Imp. (Ch. Pellat)

IBN LIZZA, by-name usually given (al-Suyūṭī, *Bughya*, 208) to Abū ʿAmr Bundār b. ʿAbd al-Ḥamīd al-Karkhī al-Iṣbahānī, Arabic philologist. There is much uncertainty over this name: according to the *Fihrist* (83) it is Abū ʿUmar Mindād b. ʿAbd al-Ḥamīd al-Karkhī Ibn Lazza (a *laḳab*); it is read as Ibn Lazza by Flügel, who reproduced the name in *Die Gr. Schulen der Araber*, Leipzig 1862, 223. A manuscript of the *Fihrist*, Codex P, has *r* instead of *z* in this *laḳab*. This *r* is found also in the *Inbāh al-ruwāt*, i, 257, of al-Ḳifṭī (Cairo 1369/1950); in the *Talkhīṣ* of Ibn Maktūm (according to the editor of *Inbāh*, *ibid.*, n. 1); and in the *Muʿdjam* of Yāḳūt: Bundār b. ʿAbd al-Ḥamīd al-Karkhī al-Iṣbahānī, called Ibn Lirra. A very short notice is found in the *Ṭabaḳāt al-naḥwiyyīn* of al-Zubaydī, Cairo 1373/1954, 288, under the name Bundār al-Iṣbahānī, but the above-mentioned *Inbāh* has two entries for the same person: one (no. 157) for Bundār al-Iṣbahānī, and another (no. 159) for Bundār b. ʿAbd al-Ḥamīd b. Lirra. In the *Amālī* of al-Ḳālī (2nd ed. Cairo 1344/1926), iii (Dhayl), 102, he becomes Bundār b. Ludda al-Karkhī. From these references the personal name (*ism*) Bundār at least seems well established, the best testimony to his identity being the citations from Ibn Kaysān (see below).

Bundār was an Iranian, a scholar from the region of the Djabal, who was a pupil of Abū ʿUbayd al-Ḳāsim b. Sallām. He came to Baghdād. His fame and importance arose mainly from his wide knowledge of Arabic poetry and of the *akhbār* and *ansāb* of the Arabs. Ibn Kaysān [*q.v.*] was his pupil and it is significant that in his commentary on the *Muʿallaḳa* of Imru' al-Ḳays, he cites Bundār eleven times (and al-Aṣmaʿī only twice); in particular, one of the two traditions on the genealogy of the poet is given according to Bundār (see *ZA*, xxix (1914), 2 and 9, line 17 f.; similarly *ZA*, xvi (1902), 16). Al-Mutawakkil (232-46/847-61) often gave audience to this scholar of Arab matters; al-Mubarrad, who had only recently left Baṣra, was introduced by him to this caliph, which (if the account is authentic) greatly contributed to his advancement.

According to Yāḳūt (*Muʿdjam*, vii, 143), Bundār lived to a great age, but the dates of his birth and death are unknown. Nevertheless, what has been said here suffices to establish his place in literary history. The *Fihrist* (83) mentions four works by Bundār; there may be mentioned the *K. Maʿānī 'l-shuʿarā'* and the *K. Djāmiʿ al-lugha* for lexicography. None has survived.

Bibliography: in the text. The *Fihrist* (83) and Yāḳūt, *Muʿdjam al-udabāʾ*, vii, 128-34 (= *Irshād*, ii, 390-3) are the two important sources; Suyūṭī (*Bughya*, 208) quotes the latter but only in part, for the name. (H. Fleisch)

IBN LUYŪN [Spanish León ?], Abū ʿUthmān Saʿd b. Abī Djaʿfar Aḥmad b. Ibrāhīm al-Tudjībī, Andalusian scholar, poet and mystic, born in Almeria in 681/1282 in a family from Lorca. He was one of the most learned men of his time and acquired a mastery of all branches of learning, although he hardly ever left his native town, where he died during a plague epidemic in 750/1349. Deeply religious, he remained celibate, practised asceticism and, being naturally shy, he avoided people and saw only a few friends and pupils, among whom should be mentioned two important persons: Ibn Khātima [*q.v.*] and Ibn al-Khaṭīb [*q.v.*]. He succeeded in forming a splendid library, the best in Almeria in his time, and, not content with merely acquiring manuscripts, he sought to compare them and to make emendations in order to establish a correct text.

His production was very large, but the greater part of it was not original since it consists of compilations on *ḥadīth*, medicine, the sharing of inheritances, prosody, agriculture, etc. He was fond of writing summaries of important works, which he often wrote in verse. Almost all his work, which consisted of more than a hundred titles, is lost, and the part of it which has survived is practically all unpublished. Of especial interest is the *urdjūza* entitled *Kitāb Ibdāʾ al-malāḥa wa-inhāʾ al-radjāḥa fī uṣūl ṣināʿat al-filāḥa* (cf. art. filāḥa, ii, 902a) of which an edition and translation was promised some years ago by J. Eguaras.

Ibn Luyūn was an expert on poetical matters, but himself a mediocre poet, as one of his pupils, al-Ḥaḍramī, admits. A large part of one of his poetic works, the *Kitāb Naṣāʾiḥ al-aḥbāb wa-ṣaḥāʾiḥ al-ādāb*, was included in a collection by al-Maḳḳarī (*Nafḥ*, Cairo ed. 1367/1949, viii, 58-89), who also reproduces (viii, 89-108) extracts from two other works, all in a sententious style and comparable to the famous moral proverbs of his contemporary Sem Tob de Carrión. He is also the author of *muwashshaḥāt*, one of them containing a *khardja* in Romance, and is thus "a backward-looking archaizer" (García Gómez).

Bibliography: Brockelmann, S I, 598; S II, 380; Ibn al-Ḳāḍī, *Durrat al-ḥidjāl*, Rabat 1934-6, ii, 467-70; Aḥmad Bābā, *Nayl al-ibtihādj* (in the margins of Ibn Farḥūn, *Dībādj*, Cairo 1351), 123-4; Maḳḳarī, *Nafḥ*, Cairo ed., viii, 58-114; E. García Gómez, *Silla del Moro y nuevas escenas andaluzas*, Madrid 1948, 111-2; idem, *Las Jarchas romances de la serie árabe en su marco*, Madrid 1965, 197-203 and 405; J. Bermúdez Pareja, *El Generalife después del incendio de 1958*, in *Cuadernos de la Alhambra*, Granada, i (1965), 9-39, *passim*.

(F. de la Granja)

IBN MĀʾ al-SAMĀʾ, Abū Bakr ʿUbāda, Andalusian poet born in the second half of the 4th/10th century and famous chiefly as the author of *muwashshaḥāt*. His full name was ʿUbāda b. ʿAbd Allāh b. Muḥammad b. ʿUbāda b. Aflaḥ b. al-Ḥusayn b. Yaḥyā b. Saʿīd b. Ḳays b. Saʿd b. ʿUbāda al-Anṣārī, and he was known by the by-name of Ibn Māʾ al-Samāʾ, which some biographers consider to be the name of one of his ancestors. He was a descendant of the famous Companion of the Prophet Saʿd b. ʿUbāda [*q.v.*]. Born, according to some sources, in Malaga (*apud* al-Maḳḳarī, *Azhār al-riyāḍ*, ii, 253-4), or according to others in Cordova (Ibn Bashkuwāl, *Ṣila*, no. 963), he was the pupil of the famous grammarian al-Zubaydī, received a sound education in poetry, and wrote a book, now lost, on the Andalusian poets, which is praised by Ibn Ḥazm in his *Risāla fī faḍl al-Andalus* (*apud* al-Maḳḳarī, *Analectes*, ii, 118); all that survive are some fragments included in other works (*e.g.*, in *al-Mughrib* by Ibn Saʿīd, Cairo ed. 1954, i, 125). Some writers refer to his Shīʿī tendencies (Ibn Bassām, *Dhakhīra*, i/2, 9). He composed panegyrics on the ʿĀmirids and the Ḥammūdids and wrote pleasing poems in the traditional style, but distinguished himself especially in the *muwashshaḥa*, of which, according to Ibn Bassām, he was a consummate master (*shaykh al-ṣināʿa*), bringing new life to this genre and carrying it to perfection. He died at Malaga, probably shortly after 421/1030. Some *muwashshaḥāt* which are attributed to him are in fact by Muḥammad b. ʿUbāda al-Ḳazzāz, with whom he has often been confused both by Arabic anthologists and by various modern orientalists (on this question, see S. M. Stern, *Muḥammad ibn ʿUbāda al-Qazzāz*, in *al-Andalus*, xv (1950), 79 ff.).

Bibliography: In addition to the sources given in the article: Ḥumaydī, *Djadhwat al-muḳtabis*, no. 662; Ḍabbī, *Bughya*, no. 1123; Ibn Bassām, *Dhakhīra*, i/2, 2-12; Abu 'l-Walīd al-Ḥimyarī, *al-Badīʿ fī waṣf al-rabīʿ*, ed. H. Pérès, Rabat 1940, index; Ibn Khāḳān, *Maṭmaḥ al-anfus*, Cairo 1320, 95; Pons Boigues, *Ensayo*, 110-1; H. Pérès, *Poésie andalouse*, Paris 1963, index. On his Shīʿī tendencies, see M. ʿAlī Makkī, *al-Tashayyuʿ fi 'l-Andalus*, in *Revista del Instituto Egipcio de Estudios Islámicos en Madrid*, ii (1954), 141-2. As a writer of *muwashshaḥāt* he appears in all the works and studies on this genre.

(F. de la Granja)

IBN MAḌĀʾ, Aḥmad b. ʿAbd al-Raḥmān b. Muḥammad b. Saʿd b. Ḥārith b. ʿĀṣim al-Lakhmī, Andalusian *faḳīh* and grammarian of the 6th/12th century, who is given indiscriminately the *kunyas* of Abu 'l-ʿAbbās, Abū Djaʿfar and Abu 'l-Ḳāsim. Born into a famous Cordovan family in 513/1119, he studied grammar at Seville with Ibn al-Rammāk and *ḥadīth* at Ceuta with the *ḳāḍī* ʿIyāḍ. He was *ḳāḍī* at Fez and at Bougie, until the Almohad caliph Yūsuf b. ʿAbd al-Muʾmin appointed him *ḳāḍī 'l-djamāʿa*, an office which he retained under his son and successor Yaʿḳūb b. Yūsuf.

In spite of his wide education in all branches of learning, he limited his scholarly activity to the study of Arabic grammar, a subject on which he composed three works, only one of which has survived, the *Kitāb al-Radd ʿala 'l-nuḥāt*, published in 1947. This book illustrates the clarity of thought and independence of judgement of Ibn Maḍāʾ, who truly deserves the title of *imām fi 'l-naḥw*, which was given to him by his biographer al-Ḍabbī (*Bughya*, no. 465), or of *imām al-naḥwiyyīn*, which was twice applied to him by Ibn Diḥya (*Muṭrib*, Cairo 1954, 91, 185). This work, written by Ibn Maḍāʾ towards the end of his life (he died in 592/1195 at Seville), "is a violent, reasoned and eloquent attack on the complicated, obscure, casuistic and artificial theories of traditional Arabic grammar as it had been formulated by the great schools of the East" (E. García Gómez). At the same time it calls for the building up of a new grammar, simpler and more clear, and based on the true facts of the language. Ibn Maḍāʾ's work, until recently not known to survive, has aroused a great interest in scholarly

circles in the East because of the problems it poses and the solutions which it indicates, at a time when each scholar is engaged in seeking a method of simplifying the Arabic language (*taysīr al-lugha*).

Bibliography: Besides the works mentioned in the article, see Suyūṭī, *Bughya*, Cairo 1326, 139; Shawḳī Ḍayf, introduction to his edition of the *Kitāb al-Radd ʿala ʾl-nuḥāt*, Cairo 1366/1947 (important review by E. García Gómez in *al-Andalus*, xiii (1948), 238-40); E. García Gómez, *La gramática y la Giralda*, in *Silla del Moro y Nuevas Escenas Andaluzas*, Madrid 1948, 243-6.

(F. DE LA GRANJA)

IBN MĀDJA, ABŪ ʿABD ALLĀH MUḤAMMAD B. YAZĪD AL-RABAʿĪ AL-ḲAZWĪNĪ, author of the *Kitāb al-Sunan*, the last of the six canonical collections of tradition, was born according to his pupil Djaʿfar b. Idrīs (*apud* Yāḳūt, iv, 91) in 209/824-5 and died on Saturday 20 Ramaḍān 273/18 February 887 in Ḳazwīn. Mādja was the (Persian?) byname of his father, a client of the Banū Rabīʿa. Ibn Mādja travelled in search of traditions and learned them from many authorities in ʿIrāḳ, Syria, Ḥidjāz and Egypt. His *Kitāb al-Sunan* contains some 4000 traditions in about 150 chapters. It was criticized, because it contains many weak (*ḍaʿīf*) traditions; it was even said that all traditions in it which do not occur in the five earlier collections are not authentic. These *zawāʾid Ibn Mādja ʿala ʾl-kutub al-khamsa* were later collected by Ibn Ḥadjar al-Haythamī [*q.v.*] (d. 807/1405) and by Abu ʾl-ʿAbbās al-Būṣīrī (d. 870/1436). Other scholars, especially those of Ḳazwīn, *e.g.*, the *ḳāḍī* al-Khalīlī (d. 446/1054-5; see Brockelmann, I, 352; S I, 618), considered Ibn Mādja an authority of the highest rank (Ibn Ḥadjar, *Tahdhīb*, ix, 531); gradually his fame increased, until his *Sunan* were included in the "six books", *e.g.*, by al-Ḳaysarānī (d 507/1113) in his *Aṭrāf al-Kutub al-sitta*, by al-Djammāʾīlī (d. 600/1204) in his *Kitāb al-Ikmāl*, which forms the basis of al-Mizzī's *Tahdhīb* and Ibn Ḥadjar's *Tahdhīb al-Tahdhīb*; but it was always considered inferior even to the *Sunan* of al-Nasāʾī. Few commentaries were devoted to it (see Brockelmann, S I, 270). In the Maghrib it was never recognized.

Ibn Mādja wrote also a *Taʾrīkh* (obviously dealing with the scholars of Ḳazwīn, see Ḥādjdji Khalīfa, s.v. *Tawārīkh Ḳazwīn*) and a *Tafsīr*, both of which seem to be lost.

Bibliography: Yāḳūt, iv, 90; Ibn Khallikān, no. 625; Dhahabī, *Ḥuffāẓ*[2], ii, 189 f.; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, ix, 530-2; in his *Fatḥ al-Bārī*ʾ, vii, 29 he quotes from a manuscript of the *Sunan* written in 370/980-1; for manuscripts, editions and commentaries see Brockelmann I, 163 and S I, 270. For the transmission of Ibn Mādja's *Sunan* and the different versions (chains of authorities) see the following treatises published in Ḥaydarābād in 1328: al-Kūrānī, *al-Amam*, 13; al-Nakhlī, *Bughyat al-ṭālibīn*, 17; Sālim b. ʿAbd Allāh al-Baṣrī, *al-Imdād*, 8; al-Fullānī, *Ḳaṭf al-thamar*, 21; al-Shawkānī, *Itḥāf al-akābir*, 46 f. The Cairo edition of 1349 contains the glosses (*ḥāshiya*) of Abu ʾl-Ḥasan al-Sindī (d. 1138/1726).

(J. W. FÜCK)

IBN MĀDJID, SHIHĀB AL-DĪN AḤMAD B. MĀDJID B. MUḤAMMAD B. ʿAMR B. DUWAYK B. YŪSUF B. ḤASAN B. ḤUSAYN B. ABĪ MAʿLAḲ AL-SAʿDĪ B. ABĪ ʾL-RAKĀʾIB AL-NADJDĪ, was one of the greatest Arab navigators of the Middle Ages. He lived in the second half of the 9th/15th century; the exact dates of his birth or death are not known. Ibn Mādjid belonged to an illustrious family of navigators. His father and grandfather were both *muʿallims* ("master of navigation", see G. Ferrand, *Instructions nautiques*, iii, 182-3) by profession and were well-known as experts of the Red Sea. They wrote treatises on navigation. Ibn Mādjid improved and made additions to the *urdjūza* (piece of poetry in the *radjaz* metre) entitled *al-Ḥidjāziyya* written by his father (*al-Fawāʾid*, fol. 78a-b). This family tradition of navigational activity was kept up by the grandson, who seems to have surpassed both his father and his grandfather in this field. It was during his lifetime that Ibn Mādjid acquired the reputation of an expert navigator of the Indian Ocean. Sīdī ʿAlī Reʾīs [*q.v.*], the Turkish navigator (d. 970/1562), in the Preface to his work "The Ocean" (*al-Muḥīṭ*), says that during his sojourn at Baṣra, he had collected the works of Ibn Mādjid, namely *Kitāb al-Fawāʾid* and *Ḥāwiyat al-ikhtiṣār*, and some works of Sulaymān al-Mahrī (written in the first half of the 10th/16th century) and had studied them thoroughly for, in his opinion, it was exceedingly difficult to navigate the Indian Ocean without them (see G. Ferrand in *EI*[1], iv, 363). No wonder that Ibn Mādjid gave himself the proud title of "the Fourth after the Three" (*i.e.*, Muḥammad b. Shādān, Sahl b. Abān and Layth b. Kahlān, see below) (*al-Fawāʾid*, f. 4b), or "the Successor of the Lions", or "the Lion of the Sea in fury" (*Ḥāwiya*, f. 88b).

Ibn Mādjid was an author of great merit, who wrote both in prose and verse. Of his known works those that have been published by G. Ferrand in the series *Instructions nautiques et Routières arabes et portugais des xv[e] et xvi[e] siècles*, in vols. i and ii, Paris 1921-3 and 1925, are as follows:

(1) *Kitāb al-Fawāʾid fī uṣūl ʿilm al-baḥr wa ʾl-ḳawāʿid* (dated 895/1490). This prose work covers, among other subjects, the twenty-eight lunar mansions, the stars corresponding to the thirty-eight rhumbs (*khanns*) of the compass, the sea-routes of the Indian Ocean, the latitudes of a number of harbours, the landmarks (*ʿalāmāt*) formed by birds and the outlines of coasts, the landfalls of the west coast of India, the ten large islands of the Indian Ocean (the "island" of Arabia, Madagascar, Sumatra, Java, Taiwan, Ceylon, Zandjbār, al-Baḥrayn, Ibn Gāwān and Socotra), a survey of the coastal regions of Asia and Africa, monsoons favourable for the voyage and a description of the Red Sea with details of anchorages, shallows and reefs.

(2) *Ḥāwiyat al-ikhtiṣār fī uṣūl ʿilm al-biḥār* (dated 866/1462). The work deals with the signs of proximity of land, the lunar mansions and rhumbs, Arabian, Coptic, Byzantine and Persian years, *bāshī* (the elevation of the polar star in relation to its minimal height above the horizon, see Shumovsky, *op. cit.* in *bibl.*, 154), the monsoons of the *bāshī*, the months in which the stars appear, the fixed character of their latitudes and their disappearance, the sea-routes along the coast of India up to Sumatra, China and Taiwan and those along the coasts of various islands of the Indian Ocean, the latitudes of the harbours of the encircling ocean (*al-Muḥīṭ*), currents of the deep seas and nautical astronomy.

(3) *al-Urdjūza* called *al-Muʿarraba* (dated 890/1485) deals with the navigation of the Gulf of Aden. (4) *Ḳiblat al-Islām fī djamīʿ al-dunyā* (dated 893/1488) is dedicated to the *ḳāḍīs* and deals with the direction of the Kaʿba for the purposes of prayer. (5) *Urdjūzat Barr al-ʿArab fī Khalīdj Fārs* (not dated) deals with navigation along the Arabian coast and the islands. (6) *Urdjūza fī ḳismat al-djamma ʿalā*

Banāt Naʿsh (dated 900/1494-5) deals with the constellation *Ursa.* (7) *Urdjūza* called *Kanz al-maʿālima wa dhakhīratihim fī ʿilm al-madjhūlāt fi 'l-baḥr wa 'l-nudjūm wa 'l-burūdj* (undated, but from the context it appears that it was written before 894/1489) deals with the celestial sphere, the signs of the zodiac, the stars, etc. (8) *Urdjūza fi 'l-natakhāt li-Barr al-Hind wa Barr al-ʿArab* (not dated) deals with the landfalls on the western coast of India and the coast of Arabia from 25° N. to 60° N. (9) *Urdjūza* called *Mīmiyyāt al-abdāl,* dealing with certain northern stars. (10) *Urdjūza Mukhammasa,* dealing with certain northern stars. (11) *Urdjūza* on the Byzantine months, rhyming in *nūn.* It is undated, but from the context it seems that it was written before 1475 or 1489. (12) *Urdjūza* called *Ḍarībat al-ḍarāʾib,* undated, deals with the use of certain stars in navigation and with general instructions for navigators. (13) *Urdjūza* dedicated to the caliph ʿAlī b. Abī Ṭālib. It was written before 1475 or 1489, and deals with the lunar mansions, their exact positions in the sky, forms and numbers, etc. (14) *al-Ḳaṣīda al-Makkiyya,* not dated, deals with the sea-routes from Djidda to Cape Fartak, Calicut, Dābul, Konkan, Gudjarāt, al-Aṭwāḥ, Hormuz and other places. (15) *Urdjūza* called *Nādirat al-abdāl* on *al-wāḳiʿ, dhubbān* and *al-ʿayyūḳ.* (16) *al-Ḳaṣīda al-Bāʾiyya* called *al-Dhahabiyya* (dated 16 Dhu 'l-Ḥidjdja 882/21 March 1478), deals with the investigation of the reefs, great depths, signs indicating land such as birds and winds, landfalls on capes during monsoons, etc. (17) *Urdjūza* called *al-Fāʾiḳa,* not dated but written before 880/1475, deals with the observation of the Frog. (18) *al-Balīgha,* not dated, deals with the observation of the constellation Canopus and the star Arcturus. (19) Nine short sections (*faṣl*) in prose, not dated: (a) and (b) deal with the *māriza;* (c) with the landings by 10 *iṣbaʿ* (one *iṣbaʿ* = 1° 36′ 25″) of the *djāh* (the Pole Star) on the coast of Gudjarāt; (d) with the soundings of Gudjarāt; (e) with the soundings by 10 *iṣbaʿ* of the *djāh;* (f) with landings; (g) with the soundings around Bāb al-Mandab; (h) with the soundings of Gudjarāt by 10¼ *iṣbaʿ*s of the *djāh;* (i) with knowing the revolution of the Pole Star on leaving the capes of Arabia. (20) *Urdjūza* called *al-Sabʿiyya,* divided into seven sections because it deals with seven branches of nautical lore. (21) *Ḳaṣīda* without title or date, written before 1475, 1478 or 1489. (22) *al-Ḳaṣīda* called *al-Hādiya,* not dated but written before 1475, 1478, or 1489. It deals with the stars that are useful for landfalls, with a description of the landfall points and with the coast from Div to Daybal.

In his *Kitāb al-Fawāʾid,* Ibn Mādjid mentions the titles and cites verses from thirteen of his other works, which are not known to survive (for further details, see G. Ferrand, *Instructions nautiques,* iii, 198-221; cf. *EI*[1], iv, 363-5).

Three *urdjūzas* of Ibn Mādjid were published by T. A. Shumovsky under the title *Thalāth Rāhmānadjāt al-madjhūla* [sic], Oriental Institute of the Academy of Sciences, U.S.S.R., Moscow-Leningrad 1957. They are based on the unique manuscript in the Library of the Oriental Institute. The texts are accompanied by Russian translations and valuable notes and commentaries by Shumovsky. There is a map showing the ports and harbours mentioned by Ibn Mādjid in his works. Of the three *urdjūzas*, the first is called *al-Sufāliyya* (ff. 83a-96a) (on Sofala, on the east coast of Africa) and deals with the knowledge of the *madjrās* (day's journey by sea) and astronomical calculations from Malabar, Konkan, Gudjarāt, Sind, al-Aṭwāḥ up to Somaliland, and from there to the regions of al-Sawāḥil (east coast of Africa), Zandjbār, Sofala, Madagascar and its islands. It also deals with various other aspects of navigation and with the inhabitants, kings, monsoons, etc. of those regions. This *urdjūza* also devotes some pages towards the end to the Franks and the Portuguese navigators of the Indian Ocean. It is undated. The second *urdjūza,* entitled *al-Maʿlaḳiyya* (ff. 97b-104a, on Malacca), deals with the islands and ports of Ceylon, the Andaman and Nicobars, Java and Sumatra, Siam, Malacca, and other gulfs and islands of these regions, up to Formosa, China and the Pacific Ocean. The third is called *al-Tāʾiyya.* It describes the sea-routes and calculations from Djidda to Aden (ff. 104b-105b).

Sources of his knowledge. Ibn Mādjid was as much interested in the theoretical aspects of navigation as he was in its practical side. The knowledge and experience that he inherited from his forefathers was enriched by his own personal experience of forty years or so. Furthermore, there is little doubt that he was a well-read man and was familiar with ancient Arabic poetry and literature and with works on history and other subjects. He made a particular study and use of the existing works on navigation, astronomy and geography. He considered the study of astronomy and geography as a pre-requisite for anyone who wished to become efficient in navigation, and hence recommended the following works to navigators and sea-captains who wished to become masters of the subject: *Kitāb al-Mabādī wa 'l-ghāyāt* (*Kitāb al-Mabādī wa 'l-ghāyāt fī ʿilm al-miḳāt*) by Abū ʿAlī al-Ḥasan b. ʿUmar al-Marrākushī al-Maghribī (d. 660/1262); *Kitāb al-Taṣāwīr* (*Ṣuwar al-kawākib al-thābita*) by ʿAbd al-Raḥmān al-Ṣūfī (d. 376/986); *al-Ikhtiṣār al-Shahbatiyya* (?); the book of (Aḥmad b. Dāʾūd) Abū Ḥanīfa al-Dīnawarī (d. 282/895); the book of (Abū Djaʿfar Muḥammad b. Muḥammad b. al-Ḥasan Naṣīr al-Dīn) al-Ṭūsī (d. 672/1274), the author of the famous Īlkhānī Tables. Then, *Muzīl al-ithbāt ʿan mushtabih al-intisāb* by Abu 'l-Madjd Ismāʿīl b. Ibrāhīm al-Mawṣilī (d. 344/955); *Kitāb al-Mushtarik* by Yāḳūt al-Ḥamawī (d. 626/1229); the book of Ibn Saʿīd (d. 672/1274) (Abu 'l-Ḥasan ʿAlī b. Saʿīd al-Maghribī, the author of *Kitāb Djughrāfiyā fi 'l-aḳālīm al-sabʿa*); Ibn Ḥawḳal's *Kitāb Ṣūrat al-arḍ* (*ca.* 365/975). See al-*Fawāʾid,* ff. 43b-44a; for further comments on sources, see G. Ferrand, *Instructions nautiques,* iii, 229-33.

Ibn Mādjid had studied the works of the three Arab navigators of the ʿAbbāsid period, namely, Muḥammad b. Shādān, Sahl b. Abān and Layth b. Kahlān, even though he was doubtful about the value of their writings and considered them mere compilers and not authors (*al-Fawāʾid,* 3b-4a, 31a). He was equally critical of contemporary Arab navigators and considered himself the most experienced and knowledgeable in the field. Considering the vast amount of his experience and his numerous writings on the subject, he was, probably, not unjustified in this claim.

His contributions and concepts: In Arabic geographical writings of the Middle Ages, the description of the east coast of Africa usually stopped at Sofala or a little further south. The reason was that Arab ships did not sail beyond this point for fear of being wrecked or destroyed by the strong currents and winds there. Moreover, theoretically speaking, according to the Ptolemaic concept the

east coast of Africa, to the south of Sofala, turned towards the east instead of the west, and extended latitudinally as far east as China, leaving only a channel that connected the Indian Ocean with the Pacific, thus giving the Indian Ocean the shape of a lake. So, the Arab geographers and cartographers who mainly followed Ptolemy drew maps which covered the whole of the southern hemisphere with land. For centuries, this theory was accepted and hindered the progress of navigation in southern Africa. Again the *terra incognita* was supposed to be barren and hence commercially unattractive. Al-Bīrūnī (d. *ca.* 442/1050) was the first to propound a theory that there might exist a channel between the Indian Ocean and the Atlantic, south of the Mountains of the Moon. This fairly long channel, according to him, lay between Sofala and the cape called "al-Ra'sūn" (*Ṣūrat al-Maʿmūra ʿalā 'l-Bīrūnī*, 62-3; this cape could be no other than the region of the Agulhas currents of modern maps). Ibn Saʿīd (d. 672/1274) placed the conjunction of the two seas (the Indian Ocean and the Atlantic) at Long. 117° 30′ and Lat. 16° 00′ where the sea was called "Sea of Ruin" or "Sea of Suhayl" and it also marked the end of the Mountain of Regret (*Nadāma*) stretching between Long. 109° 00′ and 117° 30′ along the coast of Africa (this place, according to M. Reinaud, was the Cape of Good Hope, *Géographie d'Aboulféda*, i, p. cccxvi). However, Ibn Mād͟jid was the first Arab navigator to describe in more positive terms the coast of Africa south of Sofala. He seems to have acquired the information about the existence of a *madk͟hal* (place of entry, from the Atlantic into the Indian Ocean) from the Portuguese (*al-Sufāliyya*, ff. 93a, 94a), but he must also have been acquainted with al-Bīrūnī's ideas on the subject through Abu 'l-Fidā's *Taḳwīm al-buldān*, which he had consulted. Thus, Ibn Mād͟jid believed that there existed a *madk͟hal* which separated the African continent from the *terra incognita* in the southern hemisphere. Describing the coast of Africa, he says that when you reach the land of Sofala and the "gulfs", the island of al-Ḳumr (Madagascar) "passes by" to your left, and the land to your right (*i.e.*, the coast of Africa as the ship sailed south) turns away towards the west and the north. This is the place where the "Darkness" (the Atlantic Ocean) begins. From there, the land turns to the "land of al-Kātim" (Kanem). When you pass Kanem, you come to "the land of al-Wāḥāt" (Oases) near al-Mag͟hāriba (Mag͟hrib) which begins at al-Masā. Leaving this behind, you arrive at Asifi and finally Ceuta, at the entrance of the Mediterranean Sea (*al-Fawā'id*, f. 64). It is obvious that Ibn Mād͟jid conceived of Africa as being much smaller than it actually is, for according to his account the east coast of Africa turns sharply westward and emerges at Kanem (south of the land of the "Black People", *i.e.*, Ghana, etc.) and from there it reaches Morocco.

Ibn Mād͟jid surveys the coastal regions of the earth (*dawrat al-arḍ*, actually the landmass of Asia and Africa) systematically, beginning from southern Arabia. His survey of the sea-coasts of the Indian Ocean is much more detailed than those of the Mediterranean or the Caspian regions, for he did not have personal knowledge of the latter. He then describes the ten large islands of the Indian Ocean (see above) (*al-Fawā'id*, ff. 67a-70b).

He does not refer to the *terra incognita* of the southern hemisphere, which indicates that he did not believe in it. His knowledge of astronomy was mainly derived from the works and astronomical tables of Ptolemy, al-Battānī, Ulūg͟h Beg, ʿAbd al-Raḥmān al-Ṣūfī and others, and he incorporates their theories and astronomical concepts in his works. Ibn Mād͟jid's contribution lies mainly in the field of navigation. G. Ferrand rightly describes the *Kitāb al-Fawā'id* as a "compendium of the known knowledge of theoretical and practical navigation". "We must regard it", he says, "as a kind of synthesis of nautical science of the latter years of the Middle Ages. Ibn Mād͟jid is at the same time the earliest of modern writers on nautical science. The description of the Red Sea, for example, has never been surpassed or even equalled, apart from the inevitable errors in latitude, by any of the writers of nautical guides for sailing boats. The information given on the monsoons, local winds, routes and latitudes for crossing the whole Indian Ocean is as precise and detailed as could be expected at this period" (*EI*[1], iv, 365). Most of the place-names given by Ibn Mād͟jid in his works have almost their modern forms and hence are easily identifiable.

There is little doubt that Ibn Mād͟jid used sea-charts and several instruments of navigation. But it is doubtful if he was the inventor of the compass (according to Nafis Ahmad, the Arabs were the inventors of this instrument, *Muslim contribution to geography*, 64). However, Ibn Mād͟jid claims to have fixed the needle (*al-mag͟hnāṭīs*) itself on the case (*al-Fawā'id*, f. 46b). He considered the compass used by the Arabs for navigation in the Indian Ocean much superior to the one used by the Egyptians and the Mag͟hribīs (North Africans) for the compass of the former was divided into thirty-two sections, whereas that of the latter was divided into only sixteen. Moreover, the latter only knew the use of the compass and were not capable of using the Arab boats whereas "we could easily navigate their boats" (*al-Fawā'id*, f. 27). The Arab and the Portuguese instruments were probably equal in quality and accuracy but Ibn Mād͟jid had shown the Portuguese an instrument which they had not seen before (G. Ferrand, *EI*[1], iv, 365 f.). Ibn Mād͟jid's name however became legendary in later centuries and entered navigational lore. Sailors remembered him as S͟hayk͟h Mād͟jid, the inventor of the mariners' compass, and recited the *Fātiḥa* in his memory when they embarked on certain seas (G. Ferrand, *Instructions nautiques*, iii, 227-8).

Ibn Mād͟jid and the Portuguese. Ibn Mād͟jid was fully aware of the several attempts made by the Portuguese to enter the Indian Ocean through what he calls the *madk͟hal* (*i.e.*, *via* the Cape of Good Hope) and also of their raids along the east coast of Africa. He says that in 900/1495 the Franks (*i.e.*, the Europeans) arrived at the coast of Sofala, passing through the *madk͟hal* that lies between it and al-Mag͟hārib (North Africa) and the existence of which was proved by "the experienced ones" (the Portuguese). The Portuguese, he says, then went to India. Later, they returned to al-Zand͟j (Zand͟jbār) and then went back *via* the same "passage of the Franks". In 906/1501, they again went to India, purchasing houses there, and settled down, making friends with the "Sāmrī" kings (the Zamorins of Kerala) (*al-Sufāliyya*, f. 94a). In his extant works, Ibn Mād͟jid does not record the fact of his having guided Vasco da Gama from Malindi (east coast of Africa) to Calicut (Kerala). This fact is, however, proved by the contemporary Arabic and Portuguese sources. The Portuguese sources refer to him as "Malemo Canaqua" (Castanheda and Goes) or "Malemo Cana" (Barros), both representing *Muʿallim Kanaka* (*i.e.*,

Master of astrological navigation) (G. Ferrand, in *EI*[1], iv, 362; cf. idem, *Instructions nautiques*, iii, 191; and L. Bagrow, *The Vasco Gama's pilot*, 105). But it is the historian Ḳuṭb al-Dīn al-Nahrwālī (d. 990/1582), the author of *al-Barḳ al-Yamānī fi 'l-fatḥ al-ʿUthmānī*, who mentions Ibn Mādjid by name in this context. Referring to Vasco da Gama as the chief of the Franks called "*al-amilandī*" (= "admiral"), he describes the entry of the "cursed Portuguese, a group of the cursed Franks" into the Indian Ocean in the beginning of the 10th century A.H. (A.D. 1495-1591) as "one of the most exceptional and terrorizing events" of the period. He says that a band of them, starting from the Strait of Ceuta, sailed across the Atlantic ("the Sea of Darkness") and, turning eastwards, passed south of the Mountains of the Moon through a "narrow passage near the coast which has mountain on one side and the Sea of Darkness on the other and is full of high waves". Their boats were unable to bear the rigours of this place and were wrecked. They continued in this manner [attempting to pass through] for some time, perishing at this place and none of them surviving to reach India, till "a crow from amongst them" survived and reached India. But [before this], they had gathered information about the Indian Ocean until a sailor called Aḥmad b. Mādjid guided them. The chief of the Franks called *al-amilandī* became friendly with him and they drank together until the latter gave him the necessary information about the route [to India] when in a state of intoxication. Ibn Mādjid instructed them not to sail close to the coast of Malindi but to go straight across the high seas and then turn [towards the coast of India]. If they did so, they would be able to avoid the strong waves. So they followed these instructions and their boats were safe. Thus, as time passed, the number of Portuguese in these regions grew larger. They then built a fort in Kuwwa (Goa) and took Hormuz and began plundering and capturing the Muslim boats on the high seas (translated from the Arabic text cited in *Instructions nautiques*, iii, 185-6).

(S. Maqbul Ahmad)

IBN MĀHĀN, ʿAlī b. ʿĪsā b. Māhān, governor and military leader of the ʿAbbāsid period, who appears first as commander of the caliph's guard and secretary to the army during the caliphate of al-Mahdī [*q.v.*]. He remained commander of the guard under Hārūn al-Rashīd, who, in 180/796, appointed him as governor of Khurāsān, in spite of opposition from Yaḥyā al-Barmakī. It is said that he then followed a policy of oppressing the people, which was probably the cause of the revolt of Rāfiʿ b. al-Layth; this obliged the caliph to lead an expedition himself into this province in 192/808. On the death of Hārūn al-Rashīd, ʿAlī b. ʿĪsā [*q.v.*] gave his support to al-Amīn [*q.v.*], and was put in charge of the army which was sent against the troops of al-Maʾmūn in 196/812: his army was routed, and ʿAlī himself was killed in the battle.

His son al-Ḥusayn b. ʿAlī attempted, in 196/812, to get the inhabitants of Baghdād to recognize al-Maʾmūn, but failed, and the attempt finally cost him his life.

Bibliography: D. Sourdel, *Vizirat*, index.

(D. Sourdel)

IBN al-MĀḤŪZ [see ʿubayd allāh b. bashīr].

IBN MAKHLAD, name of several secretaries or viziers of the ʿAbbāsid period, who did not however all belong to the same family.

Al-Ḥasan b. Makhlad b. al-Djarrāḥ was a secretary of Christian origin and recently converted to Islam, who served the caliph al-Mutawakkil and became vizier under al-Muʿtamid, for the first time in 263/877, then in 264-5/878-9, and was dismissed from the government on the insistence of the regent al-Muwaffaḳ. He seems to have been exiled to Egypt, where he was at first welcomed by Ibn Ṭūlūn, then sent to Antioch, where he seems to have died in 269/882 in obscure circumstances.

Sulaymān b. al-Ḥasan, son of the above, was twice vizier under the caliph al-Muḳtadir, in 318-9/930-1 and 324/936, then during the amīrate of Badjkam in 328-9/940-1, but was remarkable mainly for his ineptitude.

Ṣāʿid b. Makhlad, secretary and vizier of Christian origin and recently converted to Islam, has sometimes been considered, without adequate proof, as the brother of al-Ḥasan b. Makhlad. He belonged in fact to a different and quite inconspicuous family. He distinguished himself in the service of the regent al-Muwaffaḳ between 265/878 and 272/885, playing the role of vizier, even though he did not hold the title, and providing efficient support for the prince in his military undertakings. He received, in 269/882, the honorific title of *Dhu 'l-wizāratayn*, and his name appears on coins minted in ʿIrāḳ. His sudden disgrace seems to have been connected with the activities of his brother ʿAbdūn, who, having remained a Christian, tried to obtain certain privileges for his fellow-Christians. He died in 276/889.

(D. Sourdel)

IBN MAKKĪ, Abū Ḥafṣ ʿUmar b. Khalaf al-Ṣiḳillī (var. al-Māzarī, al-Ḳurṭubī) Arab *faḳīh* and lexicographer, on whose life one searches in vain in the various biographical sources for any details beyond his emigration to Tunis and his appointment there to the office of *ḳāḍī*. Before going to Tunis he lived in Sicily where he remained probably until the beginning of the Norman occupation in 452/1060. This can be deduced first from his *nisba*, then from the fact that he had as his *shaykh* Ibn al-Birr [*q.v.*], who lived in Sicily at this time, and finally from an even more convincing circumstance, the inclusion of some poetical fragments of Ibn Makki in *al-Durra al-khaṭīra*, the well-known anthology of the poetry of the Arabs of Sicily compiled by Ibn al-Ḳaṭṭāʿ [*q.v.*].

The only work attributed to Ibn Makkī is the unpublished *Tat͟hḳīf al-lisān wa-talḳīḥ al-d͟janān*, which must be classed with the long series of treatises produced by the specialists in the *laḥn al-ʿāmma*, the study of which might perhaps reveal traces of the *mag͟hribī* dialect spoken in Sicily at the time of the author, *i.e.*, the first half of the 5th/11th century. The *muḳaddima*, which contains the reflexions of a philologist aware of the precarious situation of the Arabic language threatened as it was with corruption and adulteration through the constant effects of the *alḥān*, is followed by the 50 chapters of the text, which has been the subject of three refutations and a commentary. On these, and for everything else concerning the author, the *Tat͟hḳīf*, the sources, etc. there may be consulted U. Rizzitano, *Il "Taṯqīf al-lisān wa talqīḥ al-ǧanān" di Abū Ḥafṣ ʿUmar b. Makkī*, in *Studia Orientalia*, Cairo 1956, 193-213 (to the two manuscripts mentioned on p. 207 should be added a third preserved in a library in Saudi Arabia of which only the title and the author are given in *RIMA*, i/1 (1955), 154, n. 23).

(U. Rizzitano)

IBN MĀKŪLĀ, name of a family of Bag͟hdādī jurists and traditionists of the 5th/11th century.

(1) The earliest was al-Ḥasan b. ʿAlī b. D͟jaʿfar al-ʿId͟jlī, the vizier of the Būyid D͟jalāl al-Dawla (416-35/1035-44). He himself bore the honorific titles of Saʿd al-Dawla and Yamīn al-Dawla. They were not however sufficient to ensure his authority, and still less that of his master. The power of both was sapped by the raids of the Bedouins, both Arab and Kurdish, whose camps were outside the gates of the capital, by the turbulence of the Turkish guard, and by the continual intrigues which the caliph al-Ḳādir (381-422/991-1031), with the support of a large group of jurisconsults and of men of letters of traditional outlook (among them the famous al-Māwardī), pursued on behalf of the Sunnī party. Al-Ḥasan was the unfortunate hero of an expedition against Baṣra, which he was unable to take from the ruler of Fārs, Abū Kālid͟jār, the nephew of D͟jalāl al-Dawla, and was in fact killed there (421/1030). At this time there was so little interest in the Būyids that, according to Ibn al-D͟jawzī (*Muntaẓam*, viii, 60), it was not known whether D͟jalāl al-Dawla still had a vizier in office. This may be the reason that certain historians [see bibl.] have confused al-Ḥasan with his brother Hibat Allāh, who appears to have succeeded him in his office of vizier.

(2) The career of Abu 'l-Ḳāsim Hibat Allāh was hardly more fortunate than that of his brother. Although the chronology of his vizierate is not very certain because of the contradictions between Ibn al-D͟jawzī and Ibn al-At͟hīr, at least its chief events are known. Born in 365/976, he was appointed vizier in 423/1032, but was dismissed in the following year in favour of his rival, a convinced S͟hīʿī, Abū Saʿd b. Muḥammad al-Ḥusayn b. ʿAbd al-Raḥīm. Restored to office shortly afterwards, he appears to have been vizier intermittently until 426/1035. Ibn al-At͟hīr moreover considers that the vizierate of 424 was his fifth, while noting, in connexion with a mutiny of the Turkish militia, that the same office was held in 423/1031 by a certain Abū Isḥāḳ al-Sahlī. Hibat Allāh's career ended in 430/1038, after more than two years in captivity at Hīt in the hands of the ʿUḳaylid Ḳarwās͟h b. al-Muḳallad, the faithful ally of D͟jalāl al-Dawla (Ibn K͟haldūn, *ʿIbar*, iii, 450), who had become his gaoler on the latter's orders and whose family always maintained S͟hīʿī sympathies (Ibn K͟haldūn, *ibid.*, 161) [see al-basāsīrī, ḳarwās͟h, ḳurays͟h, ʿukaylids].

The family policy of the Banū Mākūlā seems to have been to pledge loyalty in turn to both the rival parties, the S͟hīʿī and the Sunnī, though inclining more and more towards the latter. This policy began by neglecting the *sunna* on fundamental points of economic life (illegal taxation of markets, measures contrary to the Ḳurʾānic prohibition of usury, *ribāʾ*) and it worked in favour of the Jewish element, which lived very amicably with the S͟hīʿī artisans of the Kark͟h quarter (Ibn al-At͟hīr, ix, 285).

However, the final disgrace of Hibat Allāh seems to have been due to a sudden access of energy on the part of D͟jalāl al-Dawla, who from then on, through dynastic interests, became reconciled with Abū Kālid͟jār and had decided to ally himself with the ʿUḳaylid and Mazyadī Bedouin *amīr*s rather than suffer the pretensions and insolence of the Sunnī party (Ibn Kat͟hīr, *Bidāya, sub anno* 428). It should be added that Hibat Allāh brought up his son ʿAlī in the best Sunnī traditions and the latter very soon became famous in the science of traditions (Ibn al-At͟hīr, ix, 281).

Bibliography: on the vizierate of the Banū Mākūlā, see Ibn al-D͟jawzī, *Muntaẓam*, viii, 21, 60 (mentions al-Ḥasan but not Hibat Allāh), followed in part by Kaḥḥāla, *Muʿd͟jam*, iv, 28; Ibn al-At͟hīr, ix, 287, 293-4, 298, 302, 307; Ibn K͟haldūn, *ʿIbar*, iii, 446, 447, is in general based on Ibn al-At͟hīr; Ibn Kat͟hīr, *Bidāya*, ed. Saʿāda, xii, 40, merely mentions D͟jalāl al-Dawla's change of policy in 428/1037.

(3) Hibat Allāh's son, ʿAlī, was one of the most famous exponents of *ḥadīt͟h* and of *ʿilm al-rid͟jāl*. He was born in 422/1032 at ʿUkbarā. His teachers included such famous traditionists as Ibn Bis͟hrān (Brockelmann, S I, 281; Ibn al-D͟jawzī, *Muntaẓam*, viii, 18), the informant of the Ḥanbalī al-K͟harāʾiṭī (Brockelmann, S I, 250), Abu 'l-Ṭayyib al-Ṭabarī (Ibn al-ʿImād, *S͟hadharāt*, ii, 283), one of the masters of the famous S͟hāfiʿī mystic al-Ḳus͟hayrī. He was on excellent terms with Ibrāhīm b. Isḥāḳ al-Ḥabbāl (al-D͟hahabī, *Tad͟hkira*, iii, 382) to whom al-Sarrād͟j al-Ḳāriʾ (Brockelmann, S I, 594) owed a large part of his collection of mystico-profane love tales. He was also connected with the great master of Ḥanbalī *ḥadīt͟h*, Muḥammad b. Nāṣir, with al-ʿAtīḳī, the informant of al-K͟haṭīb al-Bag͟hdādī [*q.v.*], not to mention the latter himself, who was to make such a remarkable contribution to the science of Traditions in the 5th/11th century. It is very probable that this Ibn Mākūlā had close relations with half-Ḥanbalī and half-S͟hāfiʿī circles, who were much attached to tradition and grouped around the vizier Ibn al-Muslima [*q.v.*] and the caliph al-Ḳāʾim [*q.v.*]. All of these were in favour of a restoration of the authority of the caliph at the same time as they were working for the final dispossession of the heretic Būyids, to whom paradoxically the family of Ibn Mākūlā owed its fortune. ʿAlī gained fame by the production of a *Kitāb Ikmāl al-muk͟htalif wa 'l-muʾtalif min asmāʾ al-rid͟jāl*, on the onomastic of *ḥadīt͟h*. In it he used the works of ʿAbd al-G͟hanī al-Azdī (Brockelmann, S I, 281) and of al-Dāraḳuṭnī (*ibid.*, I, 165), greatly esteemed in Ḥanbalī and mystic circles. This work was used by al-Nawawī, one of the greatest authorities of the S͟hāfiʿī school, in his famous biographical dictionary (Brockelmann, S I, 680). The example of Ibn Mākūlā would seem to indicate that the descendants of the most illustrious families found the best refuge, in the troubled period of the 5th/11th

century, in the practice and the study of the traditional disciplines of Islam. It was through them, at least in the eyes of the rigorists of the entourage of the caliph, that the real power seemed to be maintained.

Bibliography: in addition to the sources mentioned, see Brockelmann, S I, 602; F. Bustānī, *DM*, iv, 15. (J.-C. VADET)

IBN MALAK [see FIRISHTE-OGHLU].

IBN MĀLIK, ABŪ ʿABD ALLĀH DJAMĀL AL-DĪN MUḤAMMAD B. ʿABD ALLĀH B. MĀLIK AL-ṬĀʾĪ AL-DJAYYĀNĪ (the name given by al-Maḳḳarī, ii, 421; for his reasons see 427, lines 13-6), Arab grammarian. He was born in Jaen in 600 or 601/1203-4 or 1204-5, according to the most generally accepted date, and was at first a Mālikī. Al-Maḳḳarī (ii, 421) gives the names of four of his teachers in his native town; to them may be added that of Abū ʿAlī ʿUmar al-Shalawbīnī, in Seville. Very soon he left for the Near East (where he became a Shāfiʿī), and we find him in Aleppo, Ḥamāt and Damascus. According to Ibn al-Djazarī (ii, 180), he went first to Damascus where he studied, then stayed in Aleppo and afterwards in Ḥamāt, and returned to Damascus where he settled. His journey to Cairo, which is not mentioned by Ibn al-Djazarī, perhaps occurred some time before his death, which took place in Damascus on 12 Shaʿbān 672/22 February 1274.

In Damascus, Ibn Mālik was the pupil of Abu 'l-Ḥasan al-Sakhāwī and other masters (see Ibn al-Djazarī, ii, 180); in Aleppo, he studied under Ibn Yaʿīsh and his disciple Ibn ʿAmrūn, and for a time taught *ʿarabiyya*; he composed a *Sharḥ* to *al-Muḳaddima al-Djazūliyya* (al-Ḳifṭī, *Inbāh al-ruwāt*, Cairo 1371/1952, ii, 333). In Ḥamāt also he taught *ʿarabiyya* for a time. But it is not clear whether he was a pupil of Ibn al-Ḥādjib in Damascus. The sources consulted record only his remark about Ibn al-Ḥādjib: "He took his *naḥw* from the author of the *Mufaṣṣal* [al-Zamakhsharī], and the author of the *Mufaṣṣal* and his *naḥw* are of very small account" (al-Ṣafadī, iii, 363; cf. al-Maḳḳarī, ii, 424). This appraisal is evidently very unjust; it is the only discordant note related about his life, which seems to have been a worthy and industrious one.

On settling in Damascus, Ibn Mālik appears to have entered the most productive period of his life, and it is difficult to believe Ibn al-Djazarī when he states (ii, 181) that he put into verse *al-Kāfiya al-shāfiya* in Aleppo and the *Khulāṣa* [*al-alfiyya*] in Ḥamāt. In Damascus, Ibn Mālik demonstrated his mastery of several Islamic sciences: Ibn Ḳāḍī Shuhba (54) gives him the titles of *al-naḥwī*, *al-lughawī*, *al-muḳriʾ*, *al-muḥaddith* and *al-faḳīh al-shāfiʿī*. Ibn Khallikān held him in high regard (al-Ṣafadī, iii, 359). He taught and was senior master at the ʿĀdiliyya *madrasa*. He had many pupils—his son Badr al-Dīn Muḥammad, Bahāʾ al-Dīn Ibn al-Naḥḥās al-Ḥalabī (a *shaykh* of Abū Ḥayyān), Abū Zakariyyāʾ al-Nawawī, etc. (see al-Ṣafadī, iii, 362); but it was in grammar that he earned an immense reputation. This he owed to his philological knowledge, which was certainly very great, but also in large measure to a fact which in itself remains of secondary importance, his versification of Arabic grammar in the *Alfiyya*; rhyme was indeed an aid to memorization in those Arab countries where learning by heart was the usual method of instruction; furthermore the verses of his *Alfiyya*, "always obscure and often unintelligible" (Howell, *Ar. Gr.*, Preface XXVI), offered a choice of material to a host of commentators. Interest in grammar was revived.

From the point of view of grammatical method, Ibn Mālik represents a new state of mind: from the start, Arab grammarians had sought for *shawāhid*, witnesses, to establish the authentic *ʿarabiyya*, in ancient poetry and Ḳurʾānic prose and not in *ḥadīth*. Now Ibn Mālik regarded *ḥadīth* as conclusive, and made use of it, as did his contemporary Raḍī al-Dīn al-Astarābādhī. The initator of this practice seems to have been Ibn Kharūf, who died in Aleppo at the beginning of the 7th/13th century (on this whole question, see ʿAbd al-Ḳādir al-Baghdādī, *Khizānat al-adab*, Būlāḳ 1299, i, 3-8 and J. Fück, *ʿArabiya*, 123-4, French tr. 189-90). One can understand the great interest Ibn Mālik took in *ḥadīth*: he collaborated with Sharaf al-Dīn Abu 'l-Ḥasan ʿAlī al-Yūnīnī (d. 701/1301-2), for his edition of the *Ṣaḥīḥ* of al-Bukhārī (Fück, in *ZDMG*, xcii (1938), 81-2), which led him to deal with difficult passages in a special work, number 7 in the following list (see also Brockelmann, I², 359-63 and S I, 522-7).

1. *Tashīl al-fawāʾid wa-takmīl al-maḳāṣid* (Fās 1323), a résumé of an earlier work no longer surviving, *al-Fawāʾid fi 'l-naḥw*, "a manual of grammar, the conciseness of which verges on obscurity" (Ben Cheneb, in *EI*¹, s.v. Ibn Mālik). The *Tashīl* had a great reputation; there are at least 29 commentaries, by the author, by Abū Ḥayyān and by Ibn ʿAḳīl, among others, in manuscript.

2. *al-Kāfiya al-shāfiya*, a treatise on grammar in 2757 verses (*radjaz*), according to Brockelmann (I², 363), with a commentary by the author, *al-Wāfiya*, in manuscript.

3. *al-Khulāṣa al-alfiyya* or simply *al-Alfiyya*, a résumé of the preceding work in about a thousand verses (*radjaz*), in imitation of *al-Durra al-alfiyya* of Abū Zakariyyāʾ Yaḥyā b. Muʿṭī according to al-Maḳḳarī (ii, 431) (cf. *Alfiyya*, verse 5). Al-ʿAdjīsī (quoted *ibid.*) denies that he wrote it for his son Taḳī al-Dīn Muḥammad known as al-Asad, as al-Ṣafadī related, following al-Dhahabī (cf. *al-Wāfī*, i, 206); he says that it was written for the *ḳāḍī* Sharaf al-Dīn Hibat Allāh b. ʿAbd al-Raḥīm known as Ibn al-Bārizī (cf. Ibn al-Djazarī, ii, 181). The famous *Alfiyya* exists in manuscript in a great many libraries and has been printed frequently. S. de Sacy published an edition with a commentary (Paris-London 1833) and reproduced and translated eight chapters from it in his *Anthologie grammaticale*, Paris 1829, 134-44 and 315-47; Arabic text and French translation by L. Pinto (Constantine 1887), by A. Goguyer (Beirut 1888) who adds the *Lāmiyyat al-afʿāl*; Italian translation and commentary by E. Vitto (Beirut 1898). The *Alfiyya* has been the subject of at least 43 commentaries; it will be sufficient to list the following:—that of Ibn Mālik's son, Badr al-Dīn Muḥammad, *al-Durra al-muḍīʾa*, Beirut 1312, Cairo 1342; that of Abū Ḥayyān al-Andalusī, *Manhadj al-sālik*, published by S. Glazer, New Haven 1947; that of Ibn ʿAḳīl, which can be said to be a classic, ed. Fr. Dieterici, Leipzig 1851, German tr., Berlin 1852, and in the East in the very convenient ed. of Muḥyī al-Dīn Muḥ. ʿAbd al-Ḥamīd (6th. ed., Cairo 1370/1951); for the commentaries of Djamāl al-Dīn Ibn Hishām, al-Makkūdī, al-Ushmūnī, al-Suyūṭī and Daḥlān, see nos. 3, 10, 12, 15 and 35 of Brockelmann (S I, 523-5).

4. *Lāmiyyat al-afʿāl* or *al-Miftāḥ fī abniyat al-afʿāl*, in 114 verses (*basīṭ*), a complement on morphology to the *Alfiyya*, published by A. Goguyer as a sequel to that work, with translation, notes and

glossary of technical terms for both works; the Commentary of Badr al-Dīn Muḥ. was published by Kellgren (Helsingfors 1854), by Kellgren and Volck (St. Petersburg 1864) and by Volck (Leipzig 1866); the *Lāmiyya* has been printed several times in the East in collections; moreover other commentaries exist (see Brockelmann, I², 362 and S I 526).

5. *Tuḥfat al-mawdūd fi 'l-maḳṣūr wa 'l-mamdūd*, a versification in 162 verses (*ṭawīl*) of almost all the words of the same form terminating with *alif maḳṣūra* or *alif mamdūda* and of different meaning, with a short commentary; ed. Cairo 1897 by Ibrāhīm al-Yāzidjī, then in 1329.

6. *al-Iʿlām bi-thalāth* (*muthallath*) *al-kalām*, a versification (in *radjaz*) of the words with triple vocalization and of different meaning, a work dedicated to al-Malik al-Nāṣir, grandson of Ṣalāḥ al-Dīn (ed. Cairo 1329, together with the preceding work). See Brockelmann's no. XII for other similar works.

7. *Shawāhid al-tawḍīḥ wa 'l-taṣḥīḥ li-mushkilāt al-Ṣaḥīḥ*, a grammatical discussion of difficult passages from the *Ṣaḥīḥ* of al-Bukhārī (Allāhābād 1319); in manuscript in Damascus under the title *al-Tawḍīḥ fī iʿrāb al-Bukhārī* (Brockelmann, S I, 262, emend to *ʿUm*. 17 no. 101).—The following works exist only in manuscript:

8. *ʿUmdat al-ḥāfiẓ wa-ʿuddat al-lāfiẓ*, a résumé of syntax, with a fairly long commentary by the author (Brockelmann, I², 363, IV, should read: Berlin 6631 and 6632).

9. *al-Alfāẓ al-mukhtalifa*, a collection of synonyms (25 fols. in MS Berlin 7041).

10. *al-Iʿtiḍād fi 'l-farḳ bayn al-ẓāʾ wa 'l-ḍāḍ*, a versification in 62 verses (*basīṭ*) of words pronounced with *ẓāʾ* or *ḍād*, with a short commentary by the author (an extract from this work appears in the *Muzhir*³, ii, 283-6), followed by two appendices, one *fīmā yuḳāl bi-ḍād wa-ẓāʾ*, the other *fīmā yuḳāl bi-ṭāʾ wa-ẓāʾ*.

11. *K. al-ʿArūḍ*, on Arabic prosody; only one MS, Escur.² 330, 6°.

12. A summary of grammar, the *Sabk al-manẓūm*, of morphology (*taṣrīf*), the *Īdjāz al-taʿrīf* (Brockelmann, nos. V, VI), and different short works, placed by Brockelmann under nos. XIV to XX (S I, 527). Versifications of words with grammatical or lexicographical peculiarities have been included by al-Suyūṭī in the *Muzhir*³, ii, 113, 114, 115, 224; note 279-82, the 49 verses (*kāmil*) containing the verbs having a *wāw* or a *yāʾ* without distinction as the 3rd radical consonant (printed in a *Madjmūʿa*, Cairo 1306).

Several works of Ibn Mālik, mentioned by his biographers, have not yet been reported in manuscript, in particular *al-Muḳaddima al-asadiyya* (composed for his son known as al-Asad).

Bibliography: Maḳḳarī, *Nafḥ al-ṭīb*, Cairo 1369/1949, ii, 421-33, has brought together almost all the items of information; Ṣafadī, *al-Wāfī bi 'l-wafayāt* [Bibl. Isl. 6c], iii, 359-64, important; Shams al-Dīn Ibn al-Djazarī, *Ghāyat al-nihāya fī ṭabaḳāt al-ḳurrāʾ*, ii, 180-1, ed. Bergsträsser 1352/1933 (anastatic reprint, Baghdād, ii, 180-1), important for chronological data; Suyūṭī, *Bughya*, 53-7, repeats, adds little; the others mostly repeat or are useful for the date of Ibn Mālik's birth or his genealogy: Ibn Shākir al-Kutubī, *Fawāt al-wafayāt*, Cairo 1951, ii, 452-4; Subkī, *Ṭabaḳāt al-shāfiʿiyya al-kubrā*, Cairo 1324, v, 28-9; Ibn Ḳāḍī Shuhba, *Ṭabaḳāt al-nuḥāt wa 'l-lughawiyyīn*, Damascus (Ẓāhiriyya Taʾrīkh 438), 54-6; Ibn al-ʿImād, *Shadharāt al-dhahab*, Cairo 1351, v, 339; other references will also be found in ʿU. R. Kaḥḥāla, *Muʿdjam al-muʾallifīn*, Damascus 1379/1960, x, 234.

European works: Brockelmann, I², 359-63, S I, 521-7; in the short biographical notice, emend *Baʿalbakk*, substitute *Aleppo*, on the subject of Ibn Yaʿīsh; M. S. Howell, *Arabic Grammar*, Preface, XIX-XXI (Allahabad 1883). (H. FLEISCH)

IBN MĀLIK B. ABI 'L-FAḌĀʾIL AL-YAMANĪ, MUḤAMMAD, a Sunnī jurisconsult and minor historian of Yemen, best known for his derogatory tract against the Ismāʿīlīs, entitled *Kashf asrār al-Bāṭiniyya wa akhbār al-Ḳarāmiṭa*. Neither the date of his birth nor that of his death is known with certainty. In the introduction to this tract he states that he was converted to the Ismāʿīlī sect during the rule of ʿAlī b. Muḥammad al-Ṣulayḥ (d. 473/1080), founder of the Shīʿī Ṣulayḥid [*q.v.*] dynasty, but that towards the end of his life, sickened by the depravity of the sect's local leaders, he abjured and wrote this history of the Ismāʿīlīs in Yemen so as to warn others about them. The *Kashf* became the primary source concerning the history of the sect for all later Sunnī historians of Yemen, including al-Khazradjī. The pamphlet has been printed twice (1939 and 1955) in Cairo from the manuscript preserved in the library of the small Egyptian town of Sawhādj. Another copy, with the title *Risāla*, is to be found in the University of Leiden library (Or. 6349(1)). Neither the author nor the book is mentioned by Brockelmann. All the information concerning Ibn Mālik contained in al-Djanadī's *Sulūk* and al-Khazradjī's *Kifāya*, the two greatest biographical dictionaries of Yemen, is derived exclusively from the *Kashf*. (C. L. GEDDES)

IBN MALKA [see ABU 'L-BARAKĀT].

IBN MAMMĀTĪ, name of three highly-placed officials of the same Coptic family from Asyūṭ who flourished under the later Fāṭimids and early Ayyūbids. The first of the line was ABU 'L-MALĪḤ, who became secretary and general intendent of the *Dīwān* under Badr al-Djamālī during the reign of the Fāṭimid caliph al-Mustanṣir (427-87/1035-94). He was a popular administrator, and was eulogized by the poets of his time. He managed to retain his faith and his position until his death at an unknown date towards the turn of the century.

The second was his son, AL-MUHADHDHAB ABU 'L-MALĪḤ ZAKARIYYĀʾ, who succeeded his father as secretary of the *Dīwān al-Djaysh* during the decline of Fāṭimid rule in Egypt. He apparently remained in office until the reign of the last caliph al-ʿĀḍid (555-67/1160-71), during the critical transition between Fāṭimid and Ayyūbid rule when the Sunnī Shīrkūh assumed the vizierate of Shīʿī Egypt and brought his nephew Ṣalāḥ al-Dīn (Saladin) in his train. The ascent of Shīrkūh to power was precipitated by the imminent danger of an invasion of Egypt by the crusaders under Amalric, the Latin king of Jerusalem. At that time, the situation of the Copts was worsened by the growing hatred shown by Muslims towards Christians as a result of the Crusades. Under Shīrkūh, the Christians suffered a new wave of persecution and al-Muhadhdhab, finding his position in jeopardy, embraced Islam and remained in power until his death, probably in the year 578/1182.

His son, the third and most famous of the line, took his place as head of the *Dīwān al-Djaysh* and was later promoted to the secretaryship of all the other *Dīwān*s during the sultanates of both Saladin (564-89/1169-93) and al-ʿAzīz (589-95/1193-8). His

full name, according to al-Maḳrīzī, was AL-ASʿAD B. MUHADHDHAB B. ZAKARIYYĀʾ B. ḲUDĀMA B. MĪNĀ SHARAF AL-DĪN ABU 'L-MAKĀRIM B. SAʿĪD B. ABI 'L-MALĪḤ B. MAMMĀTĪ. His fame was based not only on the fact that he took charge of all the *dīwāns* but also on his literary productivity, both as a writer and as a poet. At least twenty-three books are listed under his name, though most of them are lost. He versified the life of Saladin and *Kalīla wa-Dimna* [*q.v.*]. He remained close to al-Ḳāḍī al-Fāḍil ʿAbd al-Raḥīm al-Baysānī, who called him the "nightingale of councils" owing to his eloquence and his persuasive style. After al-Ḳāḍī al-Fāḍil, his own colleague and rival Ṣafī al-Dīn ʿAbd Allāh b. ʿAlī b. Shukr, of the *Dīwān al-Djaysh*, was elevated to the vizierate with disastrous consequences to Ibn Mammātī, whom he humiliated, in the end confiscating all his property. Then Ibn Mammātī fled to Aleppo, where he found refuge at the court of al-Ẓāhir (582-613/1186-1216), a son of Saladin. He remained there until his death in 606/1209 at the age of sixty-two.

The surname Mammātī is explained in the sources by Abu 'l-Malīḥ's gifts of food to the poor during a period of famine. However, it is possible that it is merely a corruption of the Coptic "Mahometi", *i.e.*, "Muḥammadan", since the family embraced Islam; this implies that the name must have appeared only in the lifetime of the second of the line.

Perhaps the most enduring contribution of al-Asʿad b. Mammātī was his work entitled *Kitāb Ḳawānīn al-Dawāwīn*, which, on al-Maḳrīzī's authority, is said to have been composed for the sultan al-ʿAzīz in four volumes. Amongst other items, he included in it a complete record of all Egyptian townships with their taxable acreage for the *kharādj*. The portions of the work including that confidential information have been lost, but the list of all inhabited towns and villages survives in numerous manuscripts. The value of the work is enhanced by other rare information on agricultural and irrigation systems, the mint and the weights and measures services, the Ṭirāz ([*q.v.*] weaving centres), shipbuilding for the Ayyūbid arsenal, alum and nitre, forests and animals, the science of surveying, together with some mathematics and geometry, and a whole host of interesting data. Yet perhaps the most valuable part of the book remains in the first and fullest mediaeval cadaster (*rōk*) of all the inhabited sites of Egypt [see RAWK]. Al-Asʿad's self-inflicted exile with his family and his death in relative poverty ended the glory of his dynasty, of which we hear no more in subsequent ages.

IBN MANDA, a famous Iṣfahānī family of *ḥadīth* scholars and historians which was active for nearly three centuries. Descended from a Sassanian official, Djahārbukht, said to have become a Muslim at the time of the Conquest, the man after whom the family was named was Ibrāhīm (Manda) b. al-Walīd b. Sanda b. Buṭṭa b. *ustandār* al-Fērōzān b. Djahārbukht. His death is placed during the caliphate of al-Muʿtaṣim (Abū Nuʿaym, *History of Iṣfahan*, ed. S. Dedering, i, 178; al-Dhahabī, *Tadhkirat al-ḥuffāẓ*, Ḥaydarābād 1333-4, iii, 221). His son, Abū Zakariyyāʾ Yaḥyā, is counted the first prominent scholar in the family (Abū Nuʿaym, ii, 359). Two sons of Yaḥyā are known, ʿAbd al-Raḥmān (d. 320/932) (Abū Nuʿaym, ii, 117) and Muḥammad (d. 301/913-4, or 300, according to his great-great-grandson's biography of al-Ṭabarānī) (Abū Nuʿaym, ii, 222-4; al-Dhahabī, *Tadhkirat al-ḥuffāẓ*, ii, 276-8; idem, *Taʾrīkh al-Islām*, Ms. Istanbul Topkapısarayı, Ahmet III 2917, vol. ix, fol. 7a). Muḥammad's son Isḥāḳ (d. Ramaḍān 341/January-February 953) (Abū Nuʿaym, i, 221 f.) was the father of the most renowned member of the family,

Abū ʿAbd Allāh Muḥammad b. Isḥāḳ, who was born in 310/922. His travels are said to have spanned a period of thirty years. They took him to such places as Marw, Bukhārā, Egypt, Ṭarābulus, and Mecca. He visited Nīsābūr for the first time in 339/950-1, and again in 354 or 355/965-6. He married late in life and had four sons, ʿAbd Allāh, ʿAbd al-Raḥmān, ʿAbd al-Wahhāb, and the little known ʿAbd al-Raḥīm. He died on 30 Dhu 'l-Ḳaʿda 395/7 September 1005 (rather than in 396). His publications concerned history, biography, and *ḥadīth*. He wrote on the history of the Prophet and, like his grandson, Yaḥyā b. ʿAbd al-Wahhāb, composed a History of Iṣfahān. Of his works there survive his comments on certain verses of the Ḳurʾān and some Prophetical traditions, under the title of *al-Radd ʿala 'l-Djahmi(yya)* (Ms. Istanbul Topkapısarayı, Revan Köşk 510, fols. 56b-66b), but it may be noted that his son, ʿAbd al-Raḥmān, is credited with a similar if, apparently, different work. Further, *al-Tawḥīd wa-maʿrifat asmāʾ Allāh*, preserved in Damascus; parts of his *Maʿrifat al-ṣaḥāba*, also in Damascus (cf. Y. al-ʿIshsh, *Fihris makhṭūṭāt Dār al-Kutub al-Ẓāhiriyya*, Damascus 1366/1947, 171 f.), whose relationship to the *Taʾrīkh al-mustakhradj* of his son, ʿAbd al-Raḥmān, remains to be investigated; a treatise on "The men around Muḥammad who lived 120 years" (Cairo, Taymūr, *taʾrīkh* 677, 695), but a work of the same title is ascribed to his grandson; *Fatḥ al-bāb fi 'l-kunā wa-'l-alḳāb* (Berlin 9917), which may be identical with *al-Asmāʾ wa-'l-kunā* cited repeatedly in the *Taʾrīkh Baghdād*, although the few excerpts from the *Fatḥ* published by S. Dedering (dissertation, Upsala 1927) do not suffice to establish the identity; *al-Asāmī wa-'l-kunā*, on the names and surnames of Ibn Ḥanbal (Ms. Chester Beatty 5165 [2]); *Tasmiyat al-mashāyikh*, on the authorities of al-Bukhārī's *Ṣaḥīḥ* (Ms. Chester Beatty 4411, 5165 [1]); and a list of transmitters on the authority of Shuʿba b. al-Ḥadjdjādj, incorporated by al-Dhahabī in his *Taʾrīkh al-Islām*, Cairo 1367- , vi, 195-200. For his role in the transmission of al-Ḥārithī's recension of Abū Ḥanīfa's *Musnad*, cf. the MS in Djakarta described by P. S. van Ronkel, *Suppl. to the Catalogue of the Arabic Manuscripts in the Museum of the Batavia Society of Arts and Sciences*, Batavia-The Hague 1913, 41-4.

Muḥammad's son ʿAbd Allāh (occasionally but wrongly ʿUbayd Allāh) died in Djīruft on 10 Rabīʿ I 462/27 December 1070 (ʿAbd al-Ghāfir's continuation of al-Ḥākim's history of Nīsābūr, ed. R. N. Frye, *The Histories of Nishapur*, Cambridge, Mass., 1965, fol. 37b; al-Dhahabī, *Taʾrīkh al-Islām*, Ahmet III 2017, Vol. xi, fol. 209b).

Muḥammad's son Abu 'l-Ḳāsim ʿAbd al-Raḥmān, was born in 381/991-2, or in 383. He travelled to Baghdād in 406/1015-6, and he visited Wāsiṭ, Mecca, Nīsābūr, Hamadhān, and so on. He started teaching

in 407/1016-7 and was the author of many works, among them, it seems, a *History of Mecca*. The only work of his traced so far is *al-Ta'rīkh al-mustakhradj min kutub al-nās li 'l-tadhkira wa-'l-mustaṭraf min aḳwāl al-ridjāl li-'l-ma'rifa*, ascribed to him in the Ms. Istanbul Köprülü, i, 242 and referred to by later scholars. For the time of the Prophet, the work contains alphabetical lists of the men who, for instance, attended Badr or were engaged in other noteworthy events. Thereafter, it is annalistically arranged. Under each year, the leader of the pilgrimage and those who died in that particular year are mentioned; occasionally, also those born in a given year and some important historical events are listed. ʿAbd al-Raḥmān, praised for his staunch orthodoxy and his uncompromising stand against "innovators", died on 16 Shawwāl 470/2 May 1078.

Muḥammad's third son, ʿAbd al-Wahhāb (d. in the night of 29 Djumādā II 475/23-4 November 1082) had a son with whom the scholarly activity and renown of the family appear to have come to an end, Abū Zakariyyā' Yaḥyā. Born in Shawwāl 434/May-June 1043, Yaḥyā b. ʿAbd al-Wahhāb died between 10-12 Dhu 'l-Ḥidjdja 511/4-6 April 1118. He enjoyed a lasting reputation as an historian. His *History of Iṣfahān* may have been based upon that of his grandfather, and the latter's list of *ṣaḥāba* who lived 120 years may have been remade by him. A substantial biography of al-Ṭabarānī, together with a list of al-Ṭabarānī's writings, is preserved in Ms. Istanbul Esat Ef. 2431 (cf. M. Weisweiler, *Istanbuler Handschriftenstudien*, Istanbul 1937, 64, n. 1). His *Maʿrifat asāmī ardāf al-nabī* is to be found in Ms. Istanbul Halet Ef. 403, fols. 106a-116a. Excerpts from his *Manāḳib al-Imām* (Ibn Ḥanbal) are quoted in Ibn Radjab, *al-Dhayl ʿalā Ṭabaḳāt al-Ḥanābila*, ed. H. Laoust and S. Dahan, Damascus 1951, 56, 150 ff.

Later members of the family, for whom little information is available, were a certain Abū Muḥammad Sufyān b. Ibrāhīm al-Tikakī, mentioned by Samʿānī, 4b, as one of his authorities, and (his grandson?) Abu 'l-Wafā' Maḥmūd b. Ibrāhīm b. Sufyān, who was killed by the Mongols in Iṣfahān in 632/1234-5 (cf. al-Dhahabī, *Duwal*, ii, 103, and *ʿIbar*, v, 131; Ibn al-ʿImād, *Shadharāt*, v, 155 f., also vi, 31).

Bibliography, further to that given in the text: For Muḥammad b. Isḥāḳ: Abū Nuʿaym, ii, 306; al-Dhahabī, *Tadhkirat al-ḥuffāẓ*, iii, 220-24; idem, *Ta'rīkh al-Islām*, MS Ahmet III 2917, vol. x, fols. 217a-218b; al-Ṣafadī, *Wāfī*, ed. S. For Yaḥyā b. ʿAbd al-Wahhāb: Ibn al-Djawzī, *Muntaẓam*, ix, 204; al-Dhahabī, *Tadhkirat al-ḥuffāẓ*, iv, 45-47; idem, *Ta'rīkh al-Islām*, Ahmet III 2917, vol. xii, fols. 208b-209a; Ibn Radjab, *Dhayl*, 56, 154-66; Ibn Shākir al-Kutubī, *ʿUyūn al-tawārīkh*, Ahmet III 2922, vol. xvi, fol. 33a; Brockelmann, I, 279, 949; F. Rosenthal, *op. cit.*, 283, 406, 459; G. Vajda, *op. cit.*, 390, no. 122. Much of the information on him and the preceding generation comes from al-Samʿānī, apparently his *Muʿdjam*. (F. Rosenthal)

IBN MANẒŪR, Muḥammad b. Mukarram b. ʿAlī b. Aḥmad al-Anṣārī al-Ifrīḳī al-Miṣrī Djamāl al-Dīn Abu 'l-Faḍl, author of the famous dictionary *Lisān al-ʿArab*, in the East known as Ibn Mukarram, was born in Ramaḍān 630/June-July 1233 and died in Shaʿbān 711/December 1311-January 1312. He claimed descent from Ruwayfiʿ b. Thābit who had been after 48/668 governor of Tripolis in North Africa. According to Ibn Ḥadjar, Ibn Mukarram was *ḳāḍī* of Tripolis and "all his life" employed in the *dīwān al-inshā'*; so he is perhaps identical with Muḥammad b. Mukarram, one of the *kuttāb al-inshā'* under Ḳalāwūn (reigned 678-89/1279-90) whose *Tadhkirat al-labīb wa nuzhat al-adīb* is one of the sources of Ḳalḳashandī (see W. Björkman, *Beiträge zur Geschichte der Staatskanzlei im mittelalterlichen Ägypten*, Hamburg 1926, index). Ibn Mukarram was fond of epitomizing voluminous works of earlier authors, *e.g.*, the *Aghānī* (Brockelmann, S I, 226), Ibn ʿAsākir's *Ta'rīkh Dimashḳ* (Brockelmann, I, 331; S I, 567), Samʿānī's *Dhayl Ta'rīkh Baghdād* (part XI is preserved in Ibn Mukarram's autograph in Leiden, MS arab. no. 1023), the *Djāmiʿ al-mufradāt* of Ibn Bayṭār (see A. Taimur, in *RAAD*, iii, 361). His *Lisān al-ʿArab* too (completed in 689/1290; printed Būlāḳ 1300-8 and 1349-) is based on five earlier dictionaries, *viz.* Azharī's *Tahdhīb al-lugha*, Ibn Sīda's *Muḥkam*, Djawharī's *Ḳāmūs* (whom he followed in arranging the roots according to the third radical), Ibn Barrī's glosses to the *Ḳāmūs*, and Dhahabī's *Nihāya*. He is on the whole exact in copying these works, but often omits the authorities mentioned therein, whilst Ibn Murtaḍā, who in his *Tādj al-ʿArūs* draws frequently upon the *Lisān*, often supplements the authorities omitted by Ibn Mukarram.

His *Nithār al-azhār fi 'l-layl wa 'l-nahār*, a short treatise on day and night, the stars and the zodiac, was printed in Istanbul 1298.

Thābit, see Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, etc., and Wüstenfeld, *Genealogische Tabellen*, 20, 32.

(J. W. Fück)

IBN MARDANĪSH, Abū ʿAbd Allāh Muḥammad b. Saʿd b. Muḥammad b. Aḥmad al-Djudhāmī or al-Tudjībī, mentioned in the Christian chronicles under the name *Rey Lobo* or *Lope*, was a Spanish Muslim leader who was active in political and military affairs in the Sharḳ al-Andalus on the fall of the Almoravid empire, made himself master of Valencia and Murcia, and for 25 years contended with the new North African rulers, the Almohads, for the territories in the centre of al-Andalus. In regard to his name Ibn Mardanīsh, various theories have been advanced concerning his origin, which is evidently neither Arab nor Berber. According to Dozy, this name is a corruption of Martínez, whilst

Codera supposes that it derives from Mardonius, one of his Byzantine ancestors. Both theories are improbable, as also is that proposed by Ibn Khallikān (de Slane, iv, 473). While a more fully documented and convincing philological study remains to be made, it is certain that, despite his *nisba*, Ibn Mardanīsh was a *muladí* (*muwallad*) descended from a Spanish Christian family. He was born at Peñíscola, in the modern province of Castellón de la Plana, in 518/1124-5; his father Saʿd was governor of Fraga and its district in the Almoravid period and resisted the attacks of Alfonso I of Aragon in 528/1134; one of his uncles, ʿAbd Allāh b. Muḥammad, a lieutenant of Ibn ʿIyāḍ, died at Zafadola, in 540/1146, in the battle against the Christians. On the death of Ibn ʿIyāḍ and after ʿAbd Allāh al-Thaghrī had contested his authority in Murcia, compelling him to withdraw, he was welcomed by the townsfolk of Valencia and soon succeeded in dominating the whole Eastern part of al-Andalus. In character energetic, cruel and irreligious, he oppressed his subjects and compelled them to pay higher taxes, while he resorted to gifts to secure the loyalty of the mercenaries whom he hired from the kings of Castile and Aragon and from the count of Barcelona, to whom he paid tribute. He signed a treaty with the republic of Pisa and with Genoa and, according to one tradition, he administered Alméria in the name of Alfonso VII from the time of its conquest in 542/1147. With the able collaboration of his father-in-law, Ibrāhīm b. Hamushk, the Hemochico of the Christian chronicles, he extended his possessions as far as Jaén, Baeza, Cadix, and Carmona, surrounded Cordova and Seville and occupied Granada for a short time. In Ramaḍān 564/June 1169 Ibn Hamushk embraced the Almohad cause and collaborated with the North Africans in the conquest of the Eastern territories, thus bringing the power of Ibn Mardanīsh to an end. Although there are certain divergencies regarding the date of his death, it seems to be generally accepted that it took place on the last day of Radjab 567/28 March 1172. Ibn Mardanīsh had previously recommended his son Hilāl to submit to the superior power of the Almohads.

IBN MARYAM, Muḥammad b. Muḥammad b. Aḥmad, North African hagiographer of the 10th/16th century (d. 1014/1605). Less is known of his life than of his work. He compiled a catalogue of local saints, ***al-Bustān fī dhikr al-awliyāʾ wa 'l-ʿulamāʾ***, which deals mainly with those who had lived or studied at Tlemcen, the ancient citadel of the Zanāta. He was interested also in the neighbouring towns of Oran and Nedroma, as well as the basically Berber cantons of the Djabal Tessāla and the Trara, and, further towards Eastern Morocco, in the country of the Ghumāra, the valley of the Sūs, and, in a general way, in the Moroccan Atlas. The chronological details scattered through the work (*e.g.*, at p. 45) do not permit its subject-matter to be traced to an earlier date than the 9th/15th century. Tlemcen was then the intellectual and religious metropolis of Barbary, whose influence reached as far as Fez (224) and Meknès (65). Tunisians (75) and even scholars from the Orient (190) were also drawn to Tlemcen. Because of the persistent struggle against the infidel, the Islamization and Arabization of the country were intensified. All races contributed to this and by the most diverse methods. The saints of Ibn Maryam, fierce and determined fighters, presented an idea of Islam well adapted to the mentality of the masses. Their devotion was intense (nights of prayer accompanied by conversions and various wonders), their frequent and marvellous miracles are reminiscent of the *Fioretti*: thus, *e.g.*, the saints understood the language of animals. Their charity, reserved for Believers only, was inexhaustible. They practised unceasing internal prayer (*dhikr*). They had naturally the gift of being present everywhere, especially for the Pilgrimage, and they communicated with spirits, evil as well as good. When necessary, they made amulets (*ḥizr*), coming to the help of their co-religionists by means of white magic. Always ready to protect the oppressed and to redress wrong, they were nevertheless prejudiced against the Bedouin invaders of Arab origin, who had been settled for three centuries on their soil (the term "Arab" is used only for the Bedouins, 75).

These men of miracles did not, however, neglect the learning and the practice of pious works which were inseparable from Māliki orthodoxy, and they studied devotedly the works of Abū Zayd al-Ḳayrawānī. They often excelled in the science of law and in the apportioning of inheritance (*farāʾiḍ*). The most scholarly of them were theoreticians in law (*uṣūlī*), rhetoricians and logicians (38, 44). They knew the works of Ibn al-Ḥādjib and the early transmitters of Mālik, Ibn al-Ḳāsim and al-Aṣbagh. They thought highly also of oriental scholars such as al-Damīrī (Brockelmann, S II, 401) or even the Shāfiʿī al-Bulḳīnī, or, later, ʿAbd al-Wahhāb al-Shaʿrānī (confirmed by al-Nabhānī, *Karāmāt al-awliyāʾ*, Cairo ed., ii, 420). These simple men, of whom Ibn Maryam gives a moving description, were both missionaries and visionaries, passing effortlessly from ordinary daily tasks to the most exalted piety.

Bibliography: *al-Bustān fī dhikr al-awliyāʾ wa 'l-ʿulamāʾ*, ed. Ben Cheneb, Algiers 1326/1907; F. Bustānī, *DM*, iv, 33; Brockelmann, S II, 680.

IBN AL-MARZUBĀN [see muḥammad b. khalaf b. al-marzubān].

IBN MARZŪḲ, Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Aḥmad b. Muḥammad b. Muḥammad b. Abī Bakr b. Marzūḳ al-ʿAdjīsī al-Tilimsānī, known as *al-djadd* (the grandfather), *al-raʾīs* (the

Genealogical table of the principal Marāziḳa

- Marzūḳ (end of 5th/11th century)
  - Abū Bakr, servant of Abū Madyan
    - Muḥammad I
      - Muḥammad II (629-81/1231-82)
        - Aḥmad I (668-741/1282-1340)
          - Muḥammad IV = *al-Djadd, al-Ra'īs, al-Khaṭīb* (711-81/1311-79)
            - Aḥmad II
              - Muḥammad VI = *al-Ḥafīd* (766-842/1364-1438)
                - Ḥafṣa
                  - Muḥammad VIII (d. 918/1511)
                - Muḥammad VII = *al-Kafīf* (824-901/1420-95)
                  - Aḥmad III = *Ḥafīd al-Ḥafīd*
            - Muḥammad V
        - Muḥammad III (first *khaṭīb* of al-ʿUbbād)

leader) and *al-khaṭīb* (the preacher), traditionist, preacher and statesman, born at Tlemcen in 710/1310 or 711/1311, died in Cairo in 781/1379. He belonged to a family originally from the south of Ifrīḳiya which had emigrated to Tlemcen on the arrival of the Hilālīs. From then onwards the family produced about ten clerics, all of whom in varying degrees made their mark in the religious, political and literary life of the Maghrib.

It was Marzūḳ, the eponymous ancestor of the Marāziḳa, who first settled in Tlemcen at the end of the 5th/11th century, in the reign of the Lamtūna. He was a man of religion and a landowner.

Abū Bakr was a zealous servant of the famous Andalusian mystic, Abū Madyan [*q.v.*], in the suburb of al-ʿUbbād, and his post became a quasi-hereditary office held of right by his descendants.

Muḥammad II, born 629/1231 and died 681/1282, honoured as a saint, was buried by Yaghmurāsan [*q.v.*] at Dār al-Rāḥa near to al-Ḳaṣr al-Ḳadīm at Tlemcen, among the members of the royal family; a tomb, claimed to be his, has been identified by modern archaeologists.

Aḥmad I, born 681/1282, studied at Fās; he was remembered as an ascetic who, having suffered grievously during the memorable siege of Tlemcen by the sultan Abū Yaʿḳūb (685-706/1252-1307), went on the Pilgrimage in 717/1317, stayed for a time in Egypt and died at Mecca as a *mudjāwir* in 741/1340. His tomb at Bāb al-Maʿlā, between the ramparts and the Adjyād gate, for long attracted crowds of pilgrims.

Muḥammad III was the first *khaṭīb* of the mosque built by the Marīnid sultan Abu 'l-Ḥasan (710-32/1310-31) over the tomb of Abū Madyan [*q.v.*]. He was succeeded by his nephew Muḥammad IV, the main subject of this article, who was thus the second *khaṭīb* of the mosque.

Muḥammad VI, known as *al-Ḥafīd* (766-842/1364-1438), is at least as famous as his grandfather Muḥammad IV. All his biographers, including al-Maḳḳarī (*Nafḥ*, vii, 339), consider him as indisputably the master in the Maghrib of the Arabo-Islamic sciences in his day and emphasize his learning and his virtue.

Muḥammad VII (824-901/1420-95) was known as *al-Kafīf* (the blind). He too is remembered as a traditionist and a famous preacher. Al-Maḳḳarī was proud to have him as his maternal grandfather.

Aḥmad III, son of the above, who died shortly after him, was also a famous *khaṭīb*; he is known as *Ḥafīd al-Ḥafīd*.

Muḥammad VIII, another grandson of the *Ḥafīd*, but through his daughter Ḥafṣa, died in 918/1511. He is the last representative of this family of scholars on which any information is available.

The best known of the Marāziḳa is, without question, Shams al-Dīn Muḥammad IV. A contemporary of Ibn al-Khaṭīb [*q.v.*], who refers to himself as his disciple and who always showed him great respect, of the two brothers Ibn Khaldūn [*q.v.*], who disliked him, of al-Maḳḳarī (the ancestor of the famous scholar of that name), of Sharīf al-Tilimsānī [*q.v.*] and of many others, he was certainly the member of this family who, by his strong personality, the rôles he played and the positions he occupied, brought it fame and drew to it from this period on the attention of the biographers and historians. His career, like those of several of his contemporaries, was full of incident: travels throughout the Muslim world in search of knowledge and of honours, intrigues among the great, high politico-religious responsibilities, repeated spells in prison, favour and disgrace, etc.

At the age of two according to some, seven according to others, he was taken by his father Aḥmad I to the East where he received, during periods spent at Mecca, Medina, Jerusalem, Hebron, Alexandria and Cairo, the basis of his education. He was given the title *khaṭīb* early, at the age of nineteen, when, in 729/1329 or 730/1330, he delivered, without preparation, his first sermon in the mosque at Alexandria. In 733/1332 or 735/1334, his father suggested that he return to the Maghrib. After stopping at Alexandria, Tripoli, Djarīd, Tunis and Bougie, he arrived at Tlemcen to find the town besieged by Abu 'l-Ḥasan. He lived with his uncle, Muḥammad III, and, on the latter's death, was appointed in his place as *khaṭīb* of the mosque of al-ʿUbbād and private secretary of Abu 'l-Ḥasan. In the company

of the latter he was present notably at the disaster of Ṭarīfa (741/1340); after this he travelled to obtain the signature of Alfonso XI of Castile to the peace treaty and the liberation of the prisoners of war, among whom was the prince Abū ʿUmar Tās͟hfīn, Abu 'l-Ḥasan's own son.

On returning from this mission, he went to Constantine, where news reached him of another disaster suffered by the unfortunate Abu 'l-Ḥasan, that of al-Ḳayrawān. He then returned to Fās in a convoy of important persons, high officials and foreign diplomats, accompanying Abu 'l-Ḥasan's wife, who was rejoining her son Abū ʿInān [*q.v.*], who had just deposed his father and placed himself on his throne. Ibn Marzūḳ did not stay for long at the court of the young sultan. He returned to Tlemcen, then in the hands of the Zayyānid, Abū Saʿīd ʿUt͟hmān b. ʿAbd al-Raḥmān, supported by his brother Abū T͟hābit as *zaʿīm*. Soon he was charged by Abū Saʿīd to go and make contact with Abu 'l-Ḥasan, who was in Algiers and preparing to lay siege to Tlemcen. Abū T͟hābit and the notables of the Banū Zayyān, disapproving of the principle of this mission, had him arrested en route. He was brought back to Tlemcen and imprisoned in a *muṭbaḳ* (underground prison). His sentence was later commuted to exile in Andalusia; this brought him into contact with Abu 'l-Ḥad̲j̲d̲j̲ād̲j̲ at Granada, who had known him personally since the Ṭarifa incident, and who appointed him *k͟haṭīb* of the al-Ḥamrā' (Alhambra) mosque. There he formed a friendship with another exile, Abū Sālim, brother of the sultan Abū ʿInān.

In 754/1353, Abū ʿInān recalled him to Fās and made him a court official. He sent him in 758/1357 to Tunis to ask on his behalf for the hand of the daughter of Abū Yaḥyā. This mission ended in failure, which, added to other grounds for his ill-humour, aroused the sultan's wrath, and for the second time Ibn Marzūḳ found himself in a *muṭbaḳ*. He remained there for six months, being released, thanks to the intercessions of many people, only when he was near to death.

The death of Abū ʿInān in 759/1358 produced a crisis which finally destroyed the dynasty. His throne was disputed by several claimants, sons and brothers of the sultan, one of them being none other than Abū Sālim, the friend of Ibn Marzūḳ's exile. The latter unhesitatingly did all he could to help him to seize power and after a year of manoeuvres they gained the throne, the one to reign and the other to govern. Ibn Marzūḳ was now at the summit of his career, and immediately he was surrounded by envy. The courtiers watched for an opportunity to act and, in 762/1361, Abū Sālim was murdered and Ibn Marzūḳ was consigned to the *muṭbaḳ* for the third time. He regained his liberty only after two years, in 764/1363. He then hastened to embark for Tunis, where the sultan Abū Isḥāḳ (751-70/1350-68) and his vizier Ibn Tafrāgīn appointed him *k͟haṭīb* of the al-S͟hammāʿīn mosque. He remained there for seven years.

In 771/1370, following a palace revolution, he was removed from this office. He hesitated for two years and then in 773/1372 decided to set sail for Alexandria; thence he went to Cairo, where the sultan S͟haʿbān b. Ḥusayn (764-78/1363-76) gave him employment as a judge and a teacher. He was simultaneously *ḳāḍī*, *k͟haṭīb* and teacher in the three mosques of Ṣalāḥ al-Dīn: S͟hayk͟hūniyya, Ṣarg͟hatmis͟hiyya and Ḳamḥiyya. Thus the end of his life was spent in an atmosphere of calm and respect, and sheltered from want, after he had "preached on forty-eight pulpits of the *Dār al-Islām*". On his death, he was buried (a supreme honour) between Ibn al-Ḳāsim and As͟hhab in the cemetery at Cairo.

He himself compiled the list of his masters, who were many (more than 250), in his book *ʿUd̲j̲ālat al-mustawfiz*. They included judges, preachers, imāms, genealogists, traditionists, historians, men of letters, mystics and at least three women, whose lessons he had attended in mosques or with whom he had only had meetings at Medina, Mecca, Cairo, Alexandria, Balbīs, Jerusalem, Hebron, Damascus, Tripoli, D̲j̲arīd, Tunis, Zāb, Bougie, Tlemcen, and in Andalusia, etc. His disciples were even more numerous, and include such famous names as Ibn al-K͟haṭīb, Ibn Zamrak, Ibn Ḳunfud͟h, al-S͟hāṭibī [*qq.v.*], etc.

Of those of his works which survive, none is today printed in its entirety. They exist either as very rare manuscripts dispersed among various libraries or are to be found as extracts published in studies and editions of other writers. His known works are:

(1) *al-Musnad al-ṣaḥīḥ al-ḥasan fī ma'āt͟hir mawlānā Abī Ḥasan*, MS Escorial 1666; extracts published with Fr. tr. by E. Lévi-Provençal in *Hespéris*, v (1925); chapter tr. by R. Blachère in *Memorial Henri Basset*; source of Nāṣirī, *Istiḳṣā'*.

(2) *S͟harḥ K. al-S͟hifā'* of the *ḳāḍī* ʿIyāḍ, in five *mud̲j̲allads*; MS Gotha 2, 83.

(3) *S͟harḥ ʿUmdat al-aḥkām* of Taḳī al-Dīn al-D̲j̲ammāʿīlī, a synthesis in five volumes of the two commentaries by Muḥammad b. Daḳīḳ al-ʿĪd (625-702/1227-1302) and ʿUmar al-Fākihānī (654-734/1256-1333) with additions; MS Aya Sofya, 1331; Cairo, i, 292.

(4) *ʿUd̲j̲ālat al-mustawfiz* (var. *al-mustawfī*) *al-mustad̲j̲āz fī d͟hikr man samiʿa dūna man ad̲j̲āz min a'immat al-Mag͟hrib wa 'l-S͟hām wa'l-Ḥid̲j̲āz*, extracts in Ibn Farḥūn, *Dībād̲j̲*, 305; Ibn Ḥad̲j̲ar, *Durar*, iii, 360; al-Maḳḳarī, *Nafḥ*, vii, 320 ff.; Ibn ʿAmmār, *Niḥla*, 147.

(5) *D̲j̲anī al-d̲j̲annatāyn fī faḍl al-laylatayn*, extracts in Ibn ʿAmmār, *op.cit.*, 103-11.

(6) *Izālat al-ḥād̲j̲ib ʿan furūʿ Ibn al-Ḥād̲j̲ib*, commentary of *al-Muk͟htaṣar fi 'l-furūʿ* or *D̲j̲āmiʿ al-ummahāt* of Ibn al-Ḥad̲j̲ib (Brockelmann, I, 303).

(7) *S͟harḥ al-Aḥkām al-ṣug͟hrā*, of ʿAbd al-Ḥaḳḳ b. ʿArabī al-Is͟hbīlī (cf. Brockelmann, S I, 634).

(8) A quatrain and a *mawlidiyya* of 117 verses recited at Granada before the sultan in 763/1362 and reproduced by al-Maḳḳarī, *Nafḥ*, vii, 314 ff.

(9) Various extracts in prose and verse in al-Maḳḳarī, *Nafḥ*, *passim* and vii, 173 ff., and in Aḥmad Bābā, *Nayl*, 40, 250 and *passim*.

Thus Ibn Marzūḳ wrote with equal facility on history, apologetics, religious morals, and law, passing easily from the style of the *fuḳahā'* to that of the *udabā'*, "the Arabic language and its most elegant and most delicate turns of phrase holding for him no secret".

Bibliography: Ibn al-K͟haṭīb, *al-Iḥāṭa fī ak͟hbār G͟harnāṭa*, in the part not yet printed but reproduced by Maḳḳarī, *Nafḥ* (see below). The reference by Brockelmann and by E. Lévi-Provençal (see below) to the ed. of 1319, ii, 223 and 236, refers only to some very short notices which are of little importance; Yaḥyā Ibn K͟haldūn, *Bug͟hyat al-ruwwād fī d͟hikr al-mulūk min Banī ʿAbd al-Wād*, Algiers 1321/1903, i, 50, no. 39 (tr. A. Bel, 63); Ibn Farḥūn, *al-Dībād̲j̲ al-mud͟hahhab fī maʿrifat aʿyān al-madhhab*, Cairo 1351/1932, 305; Ibn K͟haldūn, *ʿIbar*, vii, 313; idem, *Hist. des Berb.*, ii, 462 (tr. de Slane, iv, 1956 ed , 347 ff.); *al-Taʿrīf*

IBN MARZŪḲ [see ʿUTHMĀN B. MARZŪḲ].

IBN MAṢĀL, Nadjm al-Dīn Abu 'l-Fatḥ Salīm (or Sulaymān) b. Muḥammad al-Lukkī al-Maghribī, Fāṭimid *amīr*, a native of Lukk near Barḳa (Yāḳūt, iv, 364), probably a Berber, as is indicated by the name Maṣāl and the *nisba* Maghribī. Both he and his father practised falconry and veterinary science, and it was his knowledge of these matters which enabled him to enter a military career in Cairo, no details of which are known. According to Ibn al-Dawādārī, from 539/1144-5, during the reign of al-Ḥāfiẓ, he was entrusted with the direction of affairs without being given the title of vizier (*nāẓir fi 'l-umūr, nāẓir fi 'l-maṣāliḥ*), this caliph having appointed no vizier since 533/1139. After the death of al-Ḥāfiẓ, in 544/1149, his successor al-Ẓāfir chose Ibn Maṣāl as vizier (this was the last time that a vizier was appointed in this manner by a Fāṭimid caliph), and gave him the titles of *al-sayyid al-adjall, al-mufaḍḍal* (or *al-afḍal*) and *amīr al-djuyūsh*, that is of commander-in-chief. According to Usāma he was then an old man. He restored order after the quarrels between the Blacks and the Rayḥānīs in the army. But the governor of Alexandria, Sayf al-Dīn ʿAlī b. al-Salār [see AL-ʿĀDIL B. AL-SALĀR], marched on Cairo in order to seize power. The caliph commissioned Ibn Maṣāl to go into the Ḥawf (Yāḳūt, ii, 365) to recruit troops while Ibn al-Salār was entering Cairo. Ibn Maṣāl left in Shaʿbān 544/December 1149; he assembled an army composed of Lawāta Berbers, of Blacks, of Bedouin Arabs and of Egyptians. Although he had gained an initial success, he was obliged to go to Upper Egypt to increase the number of his forces. Pursued by the troops of Ibn al-Salār, he was overtaken at Dalāṣ in the province of Bahnasā (Yāḳūt, ii, 581) and was defeated and killed on 19 Shawwāl 544/19 February 1150, his head being taken to Cairo. He had been vizier for only about fifty days.

It is not clear what connexion there was between him and Maḥmūd b. Maṣāl al-Lukkī who, at the beginning of the reign of al-Mustaʿlī, gave his support to Nizār and, after the defeat of Nizār's party, fled to the Maghrib; there is also an Ibn Maṣāl the diploma for whose appointment as governor of Alexandria was drawn up, at a date not given, by al-Ḳāḍī al-Fāḍil (al-Ḳalḳashandī, *Ṣubḥ*, x, 374-80).

Canard)

IBN MASARRA, Muḥammad b. ʿAbd Allāh b. Masarra al-Djabalī, Andalusian philosopher and mystic, born at Cordova in 269/883 and died in 319/931 in a hermitage on the Sierra near this town, to which he had retired long before. He lived during a period in which Muslim Spain suffered a veritable inquisition conducted by the Mālikī *fuḳahāʾ*. His father, ʿAbd Allāh, who may have been of Christian descent, was a Muʿtazilī and in order to teach his doctrines had to take many precautions. The young Muḥammad became his pupil and received from him a theological education as well as training in asceticism. It can easily be imagined that in these circumstances Ibn Masarra acquired at quite an early age the habit of leading a secret life, withdrawn from the world, among initiates with whom he conversed by allusions and symbols.

In 286/899, ʿAbd Allāh died in Mecca, where he had taken refuge from his creditors. Little is known of Ibn Masarra's life between this date and about 300/912, when his biographers show him surrounded by disciples, probably on his return from the East. But already some time before this he had been suspected of heterodoxy. A famous *faḳīh*, Aḥmad b. Khālid al-Ḥabbāb, had written a short work denouncing his errors, and Ibn Masarra had thought it prudent to leave for the East. Asín Palacios thinks that the famous mystic and ascetic Dhu 'l-Nūn al-Miṣrī (d. 245/860) was still remembered as an example. Ibn Masarra could also have met in Mecca his contemporary Nahradjūrī, a mystic with pantheistic tendencies who died there in 330/941; and he must have known a disciple of Djunayd, Abū Saʿīd Aḥmad b. Muḥammad b. Ziyād b. al-ʿArabī (died at Mecca in 341/952). This orthodox mystic, who preached a much less esoteric doctrine than Ibn Masarra, wrote a book against him refuting his ideas.

The exact date of Ibn Masarra's return to Spain is not known; it may have been at the time when, on his accession, ʿAbd al-Raḥmān III introduced a more tolerant policy in order to pacify the people (300/912). In his place of retreat on the mountain of Cordova, he seems to have taught a fairly large public, insisting on the importance of the ascetic life and disguising his thought on matters where his doctrine might have proved disturbing. He reserved initiation into the use of symbols for a more intimate group of disciples.

Ibn Masarra was attacked particularly after the promulgation of his works. The titles of two of them are known: the *Kitāb al-Tabṣira* and the *Kitāb al-Ḥurūf*, but none of them have survived. He died, worn out by work and by the austerity of his life, without having had to undergo any physical suffering for his doctrine.

(1) The doctrine of the pseudo-Empedocles. Ṣāʿid al-Andalusī, in his *Ṭabaḳāt al-umam*, reproduced by al-Ḳifṭī in his *Taʾrīkh al-ḥukamāʾ*, connects Ibn Masarra's thought with that of the pseudo-Empedocles. It was probably for having devoted too much attention to this philosophy that he was suspected of *zandaḳa*, and it may be considered as the core of his thinking. Although he was a Muʿtazilī, it should not be forgotten that one essential argument of this theology was attributed to Empedocles: "He was the first to apprehend the union between the meanings of the attributes of God: all lead to a unique reality" (al-Ḳifṭī, 16).

From these statements it is possible to form an idea of what Ibn Masarra's doctrine was. The philosophy of the pseudo-Empedocles has been set out by al-Shahrastānī, al-Shahrazūrī (*Rawḍa*, Leiden MS 1888, 13r-14r; extracts given by Asín Palacios), Ibn Abī Uṣaybiʿa (*Ṭabaḳāt al-aṭibbāʾ*, i, 36 and 37), and al-Ḳifṭī (15-16).

The mind which inquires into philosophy is illuminated by it with a divine light. It contains a mystic conception of the truth: it comes itself to the aid of whoever seeks to acquire it. Indeed, philosophy produces in the soul the desire to depart from this world, in a spiritual *riḥla*; for the soul does not belong here but is imprisoned in the body; being a spiritual thing, it comes under the influence of the principle of pure love, whereas the body, like all corporeal things, is subject to the action of discord (here we find the two opposing principles which are the two poles of the philosophy of the authentic Empedocles). But, joined as it is to the body, the soul is in an intermediate (*mutawassiṭ*) position; using it as a starting point, it is possible to understand the two extreme limits of reality. But in order to understand the soul itself, it is necessary for man himself to have a pure soul (*ṭāhira* = καθαρά, without blemish), without admixture (*zakiyya* = εἰλικρινής), capable of dominating the body (*mustawliya ʿala ʾl-badan* = ἡγεμονίς). The knowledge of truth is the result not only of the use of the appropriate faculty, it is the expression of the ontological level attained by the being of the person who knows it: it is in fact the old idea that like is known by like. Hence the need for a principle of asceticism. The order of being is parallel to that of knowing and even penetrates it. This is a theme of Plotinus: the soul is simple, with an absolute simplicity which is comparable to that of light (*nūr*) opposed to fire (*nār*), or to *lux* (*ḍiyāʾ*) opposed to *lumen* (*ḍawʾ*).

The individual soul is a part of the universal soul (cf. Plotinus, *Enneads*, iv, 3, 1). It is derived from a fairly complex system of "processions". At the summit is the Prime Being (*al-Awwal*), the Creator (*al-Bāriʾ*), who is eternally his own Being-Himself (*lam yazal huwiyyatahu*): he is pure Knowledge, pure Will, Generosity, etc. He is the absolute Cause (*ʿilla faḳaṭ*), but not through a sort of pre-existing will; the effect is subordinated to the cause and comes after it (*taḥt al-ʿilla wa baʿdahā*); it has no essential co-existence with it (*maʿiyya bi ʾl-dhāt*). The Creator is the cause of all causes. His first effect (*maʿlūl*) is the *ʿUnṣur*, which Asín Palacios translates as primary Matter: it is the Source of the potential being and of the multiplication of beings, although itself simple and intelligible (cf. the system of the Ikhwān al-Ṣafāʾ, in which primary Matter is also placed among the intelligible emanations, but on the last degree after the Soul). The second effect of the prime Cause, produced through the intermediary of the *ʿUnṣur*, is the Intellect (*ʿAḳl*); the third, through the intermediary of the first two, is the Soul. All these emanations are simple (*basāʾiṭ*). After them come Universal Nature (*al-Ṭabīʿa al-kulliyya*) and secondary Matter, which are composite (*murakkabāt*). On this process, which gives rise to the five emanations, there is superimposed another. Al-Shahrastānī states, in fact, that on the one hand the Creator brought forth (*abdaʿa*) "reality (*shayʾ*) which is the first simple (*basīṭ*) intelligible". This is the *ʿUnṣur* from which there are next reproduced the realities known as *mabsūṭāt*, which are, by comparison with the *basāʾiṭ*, realities of an inferior degree of simplicity (for example the Intellect compared with the prime Cause; cf. Plotinus, *En.*, v, 3, 16: καὶ τὸ πρὸ τούτου (the Intellect)... τὸ γεννῆσαν αὐτὸ... ἁπλούστερον δὲ νοῦ καὶ ἁπλούστερον κόσμου νοητοῦ—and the Soul compared with the Intellect). Then the *murakkabāt* are derived from the *mabsūṭāt*. But on the other hand, the *ʿUnṣur* gives form (*ṣawwara*) in the Intellect "to such forms as exist in it", that is to the forms which are potentially in it (cf. Plotinus, *En.*, v, 3, 15, concerning the One, which Asín Palacios makes exactly to correspond on this point to the *ʿUnṣur*: the prime Cause is δύναμις πάντων, not in the sense in which one refers to the passive or receptive power of matter, but through its productive action (τῷ ποιεῖν) without having within itself the multiplicity which it creates); the Intellect acts in the same way on the Soul, and the Soul on Universal Nature. In the nature manifested in this world there then emerge, by a process which is not defined, "rinds" or bodies (*fa-ḥaṣalat ḳushūr*), which resemble neither the Soul nor the Intellect, but which enclose a "pulp" (*lubb*) or spirit. Here al-Shahrastānī's exposition is far from clear. In a first text he seems to mean that the "pulps" are formed by the last generation of the forms in the lowest degree of nature: these would be the corporeal forms. The Intellect "looks at" the "rinds" (*naẓara ilayhā*) and perceives in them (*abṣara*) the "pulps". As a result of this "look", there spread on the bodies (*ʿalayhā*) noble, beautiful and brilliant forms which are the individual souls, parts of the Universal Soul and not effects emanating from it, that is to say ontologically distinct from the forms which are effects of *taṣwīr*. They are directed by the Intellect and, through them, it sorts out (*tamyīz*) the pulps, separating them from the rinds and raising them into the spiritual world to which they belong. We have therefore a sort of recovery by the Intellect of all the realities of a spiritual and intelligible nature which inhabit the body of the lower nature. The instruments of this recovery are the individual souls, which in this way receive a mission to rescue the forms. The corporeal forms or pulps are enclosed within the bodies; the purely spiritual souls are *on* the bodies. But in a second text it is stated that the vegetative soul is the rind of the animal soul, which is in its turn the rind of the dianoetic soul (*al-nafs al-manṭiḳiyya*), and the rind of the noetic soul (*ʿaḳliyya*); conversely, that which is above is the pulp of what is immediately below it, so that pulp and rind have a relative value and the intermediate souls (animal, dianoetic) may be considered as rinds or as pulps according to the relationship in which they are

considered. There is thus a hierarchy of souls which fit inside one another so as to enclose themselves all within the prison of the material body (secondary matter). Only the noetic soul has the possibility of emerging. Finally, according to a third text, the Universal Soul, seeing the individual noetic soul led astray (*mughtarra*) by the rebellion (*tamarrud*) of animal and vegetative souls (a rebellion due to their "alienation" (*buʿd*) with regard to its universality), sends down (*ahbaṭat*) towards them one of its parts, subtler and purer than the rebel souls and the souls led astray: this is the Prophet (*Nabī*), sent (*mabʿūth*) into each of the revolutions of the Sphere. Thus the Prophet-Soul is sent by the Universal Soul, not by the Intellect as stated in the first text; it is purer than the rational souls which it comes to save; finally, it is unique in its time whereas they are multiple. It appears that al-Shahrastānī juxtaposes several traditions. That of the first text is derived from the neo-Platonic gnosis, tainted by Iranian dualism: the function of the noetic soul is to gather together all the luminous elements or forms, imprisoned by darkness or matter; here it is not a question of either rebellion or of the seduction of the souls, but of a cosmic salvation. The tradition in the second text is that of the philosophers of nature and of the physicians. The third tradition is connected with the religious gnoses, perhaps with the Manichean gnosis, and is better adapted to Islam: the conception of the prophet and of his role presages the doctrine of al-Fārābī. The rational soul is misled by the lower souls and, in spite of its spirituality, is unable to escape by its own efforts. Thus texts 2 and 3 are complementary. Text 1 retains a separate character. But another difficulty arises: the theology of the pseudo-Aristotle (Dieterici, p. 10 of the Arabic text) attributes to Empedocles the idea that souls fell in this world as the result of a sin committed during their first stay. It is true that Empedocles referred to himself as an inspired prophet who had come down to earth to escape the divine wrath (*Katharmoi*, fragment 115), who had become here a Master, capable by his learning of extricating souls from the "earthly envelope" (ἐπικάλυμμα, fragment 148 = *ḳishr*?). In al-Shahrastānī, on the other hand, it seems that the fault is that of rational souls already bound to the animal and vegetative, that is corporeal, powers. The incarnation is considered here as the reason for the sin, but there as the punishment of a sin, in a sense which recalls certain Hindu points of view.

Finally, the authentic Empedoclean doctrine of Love (*maḥabba*) which unites (*iʾtilāf*) and Hate (*ghalaba*) which separates (*ikhtilāf*) is joined to this system. These are the two principles which go to make up the primary Matter, which marks spiritual beings with the seal of pure Love and corporeal beings with that of Hate. In the composite beings, the proportion of Love and of Hate illustrates their degree of spirituality or of materiality. It should be pointed out that the cyclic rhythm of the cosmos which in Empedocles results from the interaction of these two principles is absent in the pseudo-Empedocles. Here *ghalaba*, in spite of its name, is less a factor of war and hostility, which appears wrongly placed at the level of the first emanation, than the simple fact of the multiplication and division issuing from the One in a Plotinan perspective.

As for Empedocles, E. Brehier had already pointed out that the connexion between the *Phusika* and the *Katharmoi* is not very clear. But in the pseudo-Empedocles, a completely unorganized compilation, the incoherence is still greater if one is to believe the presentation of al-Shahrastānī. It is not known whether Ibn Masarra was equally incoherent, or whether he attempted to produce a more harmonious synthesis. He may have made use of this many-faceted system in order not to arouse the suspicions of the orthodox. From the extent to which he inspired Ibn al-ʿArabī, it may be supposed that he produced at least the beginnings of an organized system. Nevertheless prudence is necessary when attempting to reconstruct, as Asín Palacios has done, Ibn Masarra's thought by reading the doctrine of a not very coherent pseudo-Empedocles into the brief passages in which Ibn Ḥazm and Ibn al-ʿArabī refer to this thought.

(2) Passages from Ibn Ḥazm. (a) *Fiṣal* (iv, 198): "Ibn Masarra was in agreement with the Muʿtazila on *ḳadar*. He stated that the knowledge of God and His power are two created temporal productions (*muḥdathatāni makhlūḳatāni*) and that God has two types of knowledge: the one which He created long ago as a whole and by one single act, the knowledge of the universal realities which cannot be grasped by the perception of the senses (= *ghayb*), for example the fact that there will exist infidels and believers . . .; the second type of knowledge is that of individual truths, the knowledge of vision (*shahāda*), for example that which God has of the unfaithfulness of Zayd and of the faith of ʿAmr . . . Ibn Masarra recalls the Word of God: *ʿĀlim al-ghayb wa ʾl-shahāda* (Ḳurʾān VI, 73; XIII, 9; XXXII, 6). But this does not mean what he thinks. In fact, the obvious meaning of this text is that God knows what you do even if you hide it from Him. He knows that which you cannot perceive of what was, is or shall be. The reason which led Ibn Masarra to support this thesis is that he really pushed the principles of the Muʿtazilis to their extreme conclusions. For there existed among them those who say that God knows continually that a certain person will never believe and that another will never be unfaithful; and who then give man the power to make the Word of their Lord lie, and to make null and cancelled that which has never ceased to exist. This is an abominable contradiction!"

(b) *Fiṣal* (ii, 126): "Djahm b. Ṣafwān, Hishām b. al-Ḥakam and Ibn Masarra . . . state that God's knowledge is something other than God, that it is produced in time and created".

The first of these texts is centred on the idea of *ḳadar*, and of human freedom: in order to safeguard it, it is necessary that man's acts should not be the object of an eternal knowledge which would determine them right down to each individual detail. The ascetic life demands the liberty of the faithful, at least at the beginning, and even although the ecstacy of the mystic must one day reveal that it is God Who does all. The problem of God's knowledge of individual and contingent facts occupied Muʿtazilī thinking (cf. al-Ashʿarī, *Maḳālāt al-Islāmiyyīn*). The majority of these theologians admitted, with various shades of opinion, that God never ceased to know things before they existed. An exception should perhaps be made for Hishām b. ʿAmr al-Fuwāṭī al-Shaybānī. It is thus easy to understand why Ibn Ḥazm points out that Ibn Masarra pushed the Ḳadarī doctrine of the Muʿtazila to its ultimate conclusions, by removing its contradiction. Thus we cannot support Asín Palacios when he attributes to Ibn Masarra on this point the thesis which was later to be that of Avicenna. He writes: "Avicenna, like Ibn Masarra . . ., states that God knows individual

beings as such, *intentione secunda*, that is to say in so far as they are included in their universal causes" (78, n. 1). Ibn Masarra's thought seems rather to be related to that of Christian theologians such as Fonseca and Molina: the knowledge of which he speaks here is the *scientia media*, or *scientia visionis* that Leibnitz, taking the same attitude as Avicenna and those Muʿtazilīs whose inconsequentiality Ibn Masarra intended to point out, was to describe as *scientia pure empirica*, which it is impossible to imagine in God.

The second text is entirely in the tradition of Plotinus and of the pseudo-Empedocles. God, the first principle, cannot possess knowledge, for this would introduce in Him multiplicity. It is the Intellect which knows, with an intelligible and universal knowledge (the knowledge of the *ghayb* in the first text). It is not clear whether the *scientia media* is added simply as a necessary element in order to safeguard freedom, or whether it is an integral part of Ibn Masarra's pseudo-Empedoclean system. It may be that the first knowledge derives from the *ʿAḳl* and the second from the universal Soul. In Ibn al-ʿArabī, the divine *aḥadiyya* does not recognize the individual believer who prays; he must therefore address himself to the *Rubūbiyya*. The *Rubūbiyya* could be considered as corresponding to the universal Soul which sends the prophets, and, through them, the Law addressed to individual men, in which God reveals himself as Lord.

(c) In a third text, Ibn Ḥazm states that he obtained from a disciple of Ibn Masarra, Ismāʿīl b. ʿAbd Allāh al-Ruʿaynī, the following opinion of his master: "The Throne is what rules the world (*al-mudabbir li 'l-ʿālam*), and God is too great for there to be attributed to Him the act of actually doing something". By "thing" (*shayʾ*) should be understood a reality of the material world. Asín Palacios attempted to identify the Throne, in this context, as the first emanation, the *ʿUnṣur* of the pseudo-Empedocles. All the same, for Ibn al-ʿArabī from whom he quotes, the Throne is the universal body. The matter remains doubtful.

(3) Passages from *al-Futūḥāt al-Makkiyya* of Ibn al-ʿArabī. (a) On the *ʿArsh*. After a quotation from the Ḳurʾān (LXIX, 17) and from a *ḥadīth* of the Prophet on the bearers of the Throne, he writes: "It has been reported to us as coming from Ibn Masarra, one of the greatest masters of the mystic way in knowledge, states and revelation, that the Throne which is carried is in fact the divine Kingship (*Mulk*)". That which follows may also be considered as the opinion of Ibn Masarra: "The *Mulk* is reduced to the following: Body, Spirit, Nourishment (*ghidhāʾ*), Degree (*martaba*). Adam and Isrāfīl are in charge of the Forms (*ṣuwar*); Gabriel and Muḥammad of the Spirits; Michael and Ibrāhīm of the means of subsistence (*arzāḳ*); Mālik and Riḍwān of the Promise and of the Threat (*Waʿd* and *Waʿīd*) . . . The bearers of the Throne are those who are in charge of its government. They thus govern an elemental form (*ṣūra ʿunṣuriyya*) or a luminous form (*nūriyya*), and a Spirit which rules the elemental form and a spirit which rules the luminous form, and a nourishment for the elemental form and the nourishment of the sciences and of the knowledge for the Spirits, and a palpable degree (the felicity of entering Paradise or the pain of entering Hell) and a spiritual degree which is made from learning". The reason why everything is doubled is that, according to *ḥadīth*, there are four "bearers" for the life here below and four for the life after the Resurrection. It seems that in Ibn al-ʿArabī it is a case not of two worlds, ontologically separate, but of two aspects of human life, the life of the body and the life of the spirit in the mystic light. This having been said, the developments which follow, even though they are inspired by some of Ibn Masarra's ideas, derive entirely from Ibn al-ʿArabī's thought, and it is almost impossible to find in them anything which indicates the doctrine of his predecessor. It would be equally arbitrary to look for similarities with the philosophy of the pseudo-Empedocles. Ibn al-ʿArabī's system is much more complex: he gives an important place to angelology; he gives a meaning to the Pen (*ḳalam*) and to the Tablet (*lawḥ*), also to the *Kursī*. Nevertheless, at least in order to show side by side both the possibilities of concordance and their weaknesses the following table is (see p. 872) inserted.

It may therefore be considered, without having actual proof, that Ibn Masarra's doctrine belonged somewhere between the theories of the pseudo-Empedocles and those of Ibn al-ʿArabī, modifying the still very metaphysical and speculative cosmology of the former in the direction of the mystical cosmology of the latter.

(b) The second text mentions Ibn Masarra only in connexion with an image, a "visualization" as H. Corbin puts it (*L'Imagination créatrice dans le Soufisme d'Ibn ʿArabī*, 175). Ibn al-ʿArabī writes: ". . . like the temple which is built on five columns there is a raised roof which covers the temple, and walls in which there is no door. Thus there is absolutely no means of entry for anyone. But on the outside stands a column attached to the wall. The intuitive mystics touch it as they kiss and touch the Black Stone . . .". The rest of the passage is certainly an amplification by Ibn al-ʿArabī. Asín Palacios considered that the five columns might be the five emanations of the pseudo-Empedocles. But this is impossible to accept, since this image is the symbol, visualized mystically, of the absolute divine Unity, the *Aḥadiyya*: it is evoked in the chapter of the *Futūḥāt* devoted to the *tanzīh al-Tawḥīd* which is expressed in God by this formula: *tanazzaha ʿan tanzīh kull munazzih*. The temple cannot therefore signify the emanations. Moreover, the description is clear: the five columns which support the roof form part of this closed building; they do not support it from the outside. The roof, and probably also the wall, covers them entirely. This is the divine mystery. It is therefore not surprising that we are not told what the five columns mean. It may be that the only significance of the number five is the fact that it is an odd number: "God loves the uneven", says a *ḥadīth*, and Ibn al-ʿArabī recalls that this is the expression of his *Fardiyya* and of his *Aḥadiyya*, providing a further commentary on verse 7 of Sūra LVIII: God comes to add Himself to every odd number of creatures, as a fourth or sixth, in order to make it even, for He jealously guards His own unevenness as a unique and incommunicable attribute. H. Corbin in fact, and rightly, is interested only in the exterior column which "alone is able to *translate* to us the Invisible". It is a matter of mysticism, not of cosmology.

After the description of the *Bayt*, Ibn al-ʿArabī writes: "*wa-ḳad nabbaha ʿalā dhālika 'bnu Masarra*". The demonstrative *dhālika* could refer to the Temple, to the image, or to the general fact of visualization, of the visualizing intuition (*kashf ṣuwarī*). The expression *nabbaha ʿalā*, which means "draw attention to", points rather to the second hypothesis. Ibn Masarra

Pseudo-Empedocles	Ibn al-ʿArabī
Prime Cause	God
taṣwīr ↓ ʿ*Unṣur* (forms) ↓	*tadjallī* ↓ ʿ*Amā*ʾ (Cloud) ? (World of pure light)
ʿ*Aḳl* (forms) ↓	ʿ*Aḳl, Ḳalam, Lawḥ* (luminous forms and angels) (World of pure light)
Nafs kulliyya (forms) ↓	*Nafs kulliyya* (luminous forms and angels) (World of pure light)
Universal nature (forms)	Universal nature (luminous forms and angels) (World of pure light)
?	Throne (Universal body) (Mingled light)
	Kursī (in the hollow of the Throne) (Mingled light)
	Spheres (in the hollow of the *Kursī*) (Mingled light)
	(corporeal forms and angels surrounding the Throne) (Mingled light)
taṣwīr ↓ Individual redeeming souls, parts of the Universal Soul sent by the ʿ*Aḳl*	Nourishment
Redeeming souls of the Prophets, sent by the Universal Soul	
'Pulps' (spirits); souls led astray ↕	Spirits (*arwāḥ*)
'Rinds' (material bodies or the most material elements of beings)	Material bodies (mingled light) or elementary forms
Secondary matter	Darkness ↑

would therefore be quoted solely in support of "the noetic validity of the visions of the active Imagination" (H. Corbin, *op. cit.*, 176). The image itself may not come from Ibn Masarra.

(4) Ibn Masarra as ascetic and mystic. In referring, on the information provided by Ibn al-Faraḍī, to other mystics of this period, in particular to Dhu 'l-Nūn al-Miṣrī and to al-Nahradjūrī, Asín Palacios has isolated what might be the main features of the teaching and the ascetic practices of Ibn Masarra. The goal is the purification and the liberation of the soul through mortification, voluntary poverty, and the observance of silence; then by the practice of the virtues: humility, patience, the forgiving of wrongs, love of one's enemies. The daily examination of the conscience gradually raises the soul to the mystic station of Sincerity.

(5) The school of Ibn Masarra. Asín Palacios has studied the progress of Ibn Masarra's ideas, not only in Islam, but also in Jewish and in Christian thought. We have already mentioned his first disciple, al-Ruʿaynī. The most famous heir of Ibn Masarra is Ibn al-ʿArabī who, through the intermediary of the movement of the *murīdūn* of Ibn al-Ḳasī, and through Ibn al-ʿĀrif, can be considered a member of his school.

IBN MĀSAWAYH, Abū Zakariyyāʾ Yuḥannā, famous physician of the 3rd/9th century, died in 243/857. His career was begun under al-Rashīd and lasted until the reign of al-Mutawakkil. He contributed to the translation of Greek scientific works which provided material for the famous *bayt al-ḥikma* [*q.v.*]. But Ibn Māsawayh was known particularly in his capacity as court physician, attending the high society which surrounded the caliph. His patients regarded him in particular as a specialist on diet. He lacked neither patrons nor wealth: he approached Ibrāhīm b. al-Mahdī, the unsuccessful claimant to the caliphate, who was interested in Greek science as well as in Arabic poetry. He was introduced also to the sons of al-Rashīd, among them Abu 'l-ʿAbbās Muḥammad. The extent and the rapidity of his rise to fame did not go without criticism. It seems probable that he owed it to the powerful family of the Bukhtyashūʿ, which supplied four generations of physicians to the court of the caliphs (Ibn Māsawayh's father was said to have been an assistant to Bukhtyashūʿ at Djundaysābūr). The career of Ibn Māsawayh, who became the friend and counsellor of the great as well as their physician; showed striking similarities to those of his influential protectors: all of them were convinced Nestorians, who did not abandon their religion when they were at the caliph's court. These Nestorians, in spite of the differences of creed which separated them from Byzantium, could easily keep in touch with Greek learning; they possessed the "16" treatises of Galen as put together by the Alexandrians, and even show a desire to penetrate beyond the commentators to the original teaching of the master (perhaps because of the disputes between the Jacobites of Alexandria and the Nestorians of the former Persian empire). Also, in addition to the Hellenic origins of their science and to its Christian contributions, they came under the influence also of the school of Djundaysābūr [*q.v.*], an outpost of Hellenism in the Persian empire and one of the centres of that eastern syncretism which united the practical prescriptions of the East with the mystical speculation of ancient Greek paganism. This syncretism also aimed to unite, in one single group, disciplines as different as astrology, alchemy and medicine, in the name of the supremacy attributed to the pseudo-Plato, derived from the *Timaeus* or from the false Democritus of Abdera, under which masqueraded the lucubrations of Bolus

of Mendes (cf. maxims quoted at the beginning of *De complexionibus*; see Thorndike). In this science, as full of fantasy as it was of empiricism and practical observation, of which Ibn Māsawayh became the acknowledged representative, pharmacy tends to take precedence over purely medical research. The remedy, like the malady, is ordained by providence, in the very order of nature. The knowledge of the four "qualities", to which is added that of the properties and the natures as well as the procedures prescribed by the art, enables the physician to penetrate the secret of universal harmony. This harmony acts on the human body through the medium of the humours, which themselves derive from the qualities. Pharmacy takes into account not only the temperaments but also the "seasons" which, thanks to the qualities, have a clearly perceptible affinity with the humours. The somewhat superstitious idea of an "art", which alone is capable of directing the behaviour of the properties, and that of a cosmic development, of which man is merely a reflexion, was that which inspired the two Arabic works of Ibn Māsawayh which have survived under his name: *al-Nawādir al-ṭibbiyya*, a collection of medical aphorisms, and the *Kitāb al-Azmina*, a sort of description of the various seasons of the year, based on the twin theories of the humours and the "qualities". His Latin works are much longer, and it seems that "Mesue" was held in high esteem in the West. As late as the 9th/15th century, one Petrus Gulosius, a physician of Amalfi, stated that to read him was as instructive as it was pleasant (1474). Although Leclerc and others have sometimes hesitated on the ground of the testimony of Leo Africanus (in an unidentified passage; this may be a confusion with Constantine Africanus) to identify Ibn Māsawayh with the Mesue of the Latin texts, and although, in spite of similarities, it has sometimes been considered that there was an elder and a younger Mesue, it may be said that on the whole the Arabic texts preserve what may be called the philosophical part of the author's production, whereas the Western readers were interested mainly in the teaching of Ibn Māsawayh as an eminent medical practitioner. Before them, al-Rāzī, in his *Continens*, had already extolled the merits of Ibn Māsawayh whom he quotes in many passages, especially for practical details (Indian ed., i, 143, 147; ii, 91; iii, 88, 90). Al-Rāzī had used the *Book of fevers*, produced probably in imitation of Hippocrates (*Kitāb al-Ḥummayyāt*) and the *Book of purifying remedies* (*Kitāb al-Adwiya al-munaḳḳiya*). In spite of the fact that his works are not well-known, Ibn Māsawayh is nevertheless one of the great names of Arab medicine and one of the most typical representatives of the science of his period, being at the same time both conservative and of a markedly speculative nature.

IBN AL-MĀSHIṬA, Abu 'l-Ḥasan ʿAlī b. al-Ḥasan, secretary of the ʿAbbāsid period, who was director of the Treasury during the vizierate of Ḥāmid b. al-ʿAbbās [*q.v.*] from 306/918 to 311/923. He wrote a "Book of the Viziers", which has not survived but which is referred to by various authors, notably al-Masʿūdī.

(D. Sourdel)

IBN MASʿŪD, ʿAbd Allāh b. Ghāfil b. Ḥabīb ... b. Hudhayl, famous Companion of the Prophet, and reader of the Ḳur'ān. Of Bedouin origin, Ibn Masʿūd was of humble birth. On his father's side he was a client of the Banū Zuhra, a branch of Ḳuraysh, which enabled him, later, to rely on the occasional protection of important Zuhrīs such as al-Zubayr b. al-ʿAwwām and Saʿd b. Abī Waḳḳās. He was one of the earliest Muslims: some sources even assert (al-Sakhāwī, 333, a Kūfan source) that he was the third person to embrace Islam, after Khadīdja and ʿAlī; the *Iṣāba* merely gives him the sixth place (information obtained from a descendant of Abū Bakr, Ḳāsim b. Muḥammad). Legend soon attributed his conversion to a miracle by the Prophet (Abū Nuʿaym, *Ḥilya*, i, 125).

Ibn Masʿūd was hardly in a position, either physically or socially, to contribute much to the worldly power of the new religion, exposed as it was to the hostility of the pagan inhabitants of Mecca; his zeal was nevertheless always valued by the Prophet and rewarded by modest employment. He carried Muḥammad's sandals, and it was also his duty to gather the plant from which his tooth-picks were made. His duties led to his being daily on close terms with the founder of Islam; he is cited as source for some details on the Prophet's nocturnal ascension (*miʿrādj*) and on his miraculous journey to Jerusalem (*isrā'*; Wüstenfeld, *Muḥammad*, 263; Ibn Ḥanbal, no. 4011) and on the date of the Night of Power (al-Ṭabarī, i, 1282).

Most important, he received the Ḳur'ān directly from the mouth of the Prophet himself. He is thought to have been the first to have attempted reading it in public in Mecca, a daring action which earned him insults and persecution from some of the pagans.

He naturally was one of the small group of Muslims who emigrated to Abyssinia, together with Miḳdād b. ʿAmr, who was later to become his friend and companion in arms. He returned in time to follow the Prophet to Medina. He was present at the battles of Badr (in the year 2 of the Hidjra) and of Uḥud (year 3), where he was unsparing in his criticism of those fighters who were too greedy for plunder (al-Ṭabarī, i, 1330 and 1395). After these two battles and until the death of the Prophet very little is heard of him among the triumphs of life in Medina and the large numbers of new converts to Islam. It is likely that Ibn Masʿūd built up at that time, through his personal influence, a number of firm friendships. They were probably made among the Anṣār, the converts from distant provinces or the zealots of humble origin. Tradition names an important Anṣārī, Saʿd b. Muʿādh, the leader of the Aws who had joined the Prophet, the Yemenī Abū Mūsā al-Ashʿarī, and his constant companions Miḳdād, ʿAmmār b. Yāsir, Hudhayfa b. al-Yamān, Abū Dharr, Abu 'l-Dardā' and Salmān al-Fārisī (al-Sakhāwī, 345; *Iṣāba*, s.v.). On the Prophet's death, Ibn Masʿūd came more into the foreground. His help was needed during the revolt of the Arab tribes encamped around Medina (al-Ṭabarī, i, 1878). He took part, during the reign of Abū Bakr, in the battle of the Yarmūk (in the year 13 A.H.) where he was entrusted with guarding the booty (*ibid.*,

2090). After the conquest of ʿIrāḳ, he received, according to Sayf b. ʿUmar, some land in the district (16/637, *ibid.*, 2376). He was present at the founding of Kūfa by his patron Saʿd b. Abī Waḳḳās, but returned shortly afterwards to Syria, where he was entrusted with a military and diplomatic mission to Ḥimṣ (*ibid.*, 2392). When he returned to ʿIrāḳ, following the armies which were fighting on the two fronts, he very soon ensured the link between the new Arab colony of Kūfa and the central government at Medina (*ibid.*, 2393). In 21/642 he settled permanently at Kūfa, in the quarter of the Hudhaylīs (Ramāda) in which, for reasons unknown, he chose to live in preference to that of the Ḳurayshīs (al-Ṭabarī, i, 2842) to which his Zuhrī patrons could perhaps have gained him admittance. He nevertheless served as lieutenant to his companion ʿAmmār b. Yāsir (*ibid.*, 2637, 2645 and 2647).

Throughout this phase of his life, which marked the zenith of his political career, his duties were those of an administrator, an ambassador, and a missionary, which is quite in accordance with the high opinion which was held of his shrewdness, his learning and above all of his integrity. But once the important conquests were over he became less necessary. In particular he was the object of the scorn of the Muhādjirūn, Ḳurayshīs of noble birth who had formerly emigrated, like him, from Mecca to Medina. Saʿd b. Abī Waḳḳās publicly criticized his financial administration, because of his parsimony (*ibid.*, 2811). In the year 29, he criticized the new governor of Kūfa, al-Walīd b. ʿUḳba, whose scandalously pagan behaviour shocked him and led him to protest (*ibid.*, 2842). In the year 30 there appeared the first signs of a break with the caliph ʿUthmān (*ibid.*, 2835). He then fell into disgrace, in circumstances of which little is known. A public scene ensued between Ibn Masʿūd and the caliph, who had him ill-treated. It is not known whether he died in Medina, under a sort of house arrest, or at Kūfa (Ibn Ḥanbal, no. 4432), where his teaching was highly esteemed (in the year 32/652-3); al-Ṭabarī favours the first report, while the Ḥanbalī Ibn Kathīr, the mystic Munāwī and the *Iṣāba* favour the second. It is difficult to reconstruct Ibn Masʿūd's teaching because of the unreliability and the tendentious nature of the sources. Traces of it, corrupt and yet very numerous, are found in *ḥadīth*, in a system of Ḳurʾānic reading which is peculiar to him, and finally in his exegesis of the Ḳurʾān.

(1) *Ḥadīth*. The Kūfan traditionists remained faithful to him, always ready to expatiate on his merits (*manāḳib*; al-Bukhārī, v, 34; Muslim, vii, 147). Ibn Masʿūd always found Kūfan transmitters, whereas the traditionists of the other cities scarcely thought of making use of his name, which, in the eyes of the orthodox, was already suspect. There start from Ibn Masʿūd *isnād*s in which there figure the well-known names of Ibrāhīm al-Nakhaʿī, al-Aswad b. Yazīd, and ʿAlḳama al-Kūfī, with whom is associated a small circle of intimates, such as Ḥārith b. Suwayd, Wahb b. Zayd, Wāʾil b. Mahāna, and of course Ibn Masʿūd's own son, Abū ʿUbayda. To these should be added the more disputed authorities: Masrūḳ, Abū Wāʾil, Shaḳīḳ, Abu 'l-Ḍuḥā, and Ḥabīb b. Abī Thābit. Later in the *isnād* are reached the great practitioners of *ḥadīth*: the two Sufyāns, and their master al-Aʿmash, whose liking for edifying stories and beautiful legends is well-known. To Ibn Masʿūd are often attributed *ḥadīth*s of eschatological or admonitory content (*ḥadīth* on Islam, which is to end in exile, as it began, al-Tirmidhī, ii, 104: accepted by the mystics, rejected by Ibn Ḥanbal; *ḥadīth* on the duty to maintain intact the unity of the Community, *ibid.*, 105; there is another, more Shīʿī, version of this in al-Munāwī). Al-Sakhāwī very aptly points out that al-Tirmidhī is, among the authors of canonical compilations, the one who most frequently quotes Ibn Masʿūd. The *ḥadīth*s of Ibn Masʿūd thus grew in popularity with the growth of Shīʿī influence, during the 3rd/9th century (see al-Tirmidhī, the chapters on morals: learning, future life, Ḳurʾānic exegesis, good manners, ii, 67, 75, 98, 105, 110, 112, 120, 131, 135, 156). The name of Ibn Masʿūd was also, as is demonstrated by J. Schacht, one of the favourite "labels" of the juridical school of Kūfa (*The origins of Muhammadan jurisprudence*, 231). His is also one of the names to which the *isnād*s of the *Iḥyāʾ* of al-Ghazālī tend to be attached, which does not, however, put them beyond the reach of criticism.

(2) Ḳurʾānic reading. There are two points, though not well established and subject to controversy, on which Ibn Masʿūd's version appears to differ from the norm of ʿUthmān's text: the order of the *sūra*s and some variants in the readings. On the first point, which would be by far the more important if sufficient details were available, information is found in the *Fihrist*. Th. Nöldeke (*Geschichte d. Q.*, ii, 38, 48, 113, 114, 163) and R. Blachère (*Introduction au Coran*, 174-5) reached the same conclusions: there is nothing, or very little, in these variants which has been systematically introduced or which could be of great importance for the study of the religious ideas of the 1st century. In particular, the order adopted by Ibn Masʿūd is far from being a historical one since, if the details in the *Fihrist* are correct and if the recension we possess of Ibn Masʿūd is authentic, he neglected to make use of the close knowledge which he as a faithful Companion possessed of the biography of Muḥammad and of the particular circumstances accompanying each revelation (cf. the chronological list of al-Yaʿḳūbī, which may be based on Shīʿī reminiscences, i, 24). This may have been due to a lack of a sense of sequence, to negligence, to literary prejudice or to the intentional falsification of a document which had a Shīʿī bias, to the advantage of Sunnism. The question, for lack of datable documents, is of course insoluble; and until now it has not been possible to reconstruct with any certainty, in its external form, the Ḳurʾānic corpus of Ibn Masʿūd (cf. A. Jeffery, *Materials for the history of the text of the Qurʾān*, 20-113; E. Beck, in *Orientalia*, xxv (1956), 353-83, xxviii (1959), 186-205, 230-56). The variant readings preserved by Ibn Khālawayh (*Mukhtaṣar fī shawādhdh al-ḳirāʾāt*, see as examples, II, verses 24, 48, 91, 102, 108, 126, 177, 220, 222; III, 7, 105, 157, etc.) concern only points of detail. At the most, on reading this work, we may credit Ibn Masʿūd with a sort of prosiness, a fairly free use of the grammatical forms of Arabic, and a certain taste for juridical definitions, which sometimes lead him to seek for supplementary statements of meaning. But nothing of all this, if political opinions were not involved, could cause any very serious harm to the received text of ʿUthmān, or even justify the fanatical attachment which Ibn Masʿūd's supporters had to his system. Nöldeke goes so far as to doubt, for chronological reasons, whether Ibn Masʿūd was really as opposed to the promulgation of ʿUthmān's text as is stated in the sources. But even if we assume Ibn Masʿūd to have been in agreement with ʿUthman on the essentials of the Ḳurʾānic message, it is not certain that he was so on the commentary which should be given on it.

(3) Ḳur'ānic exegesis. It is particularly in this field that there can be attributed to Ibn Masʿūd some cautious Shīʿī tendencies. There is no doubt that Ibn Masʿūd's way of thinking must have been more closely related to that which prevailed among the *Ahl al-bayt* than to the aristocratic mentality of ʿUthmān's entourage. Reference is made to Ibn Masʿūd's favourite passages, those which he probably developed most fully in his teaching: for example, verse 40 of *sūra* V, which is regarded by the Shīʿīs as confirming the dignity of the *imāms* as supreme "witnesses" and lieutenants of God (al-Kulīnī, *Tawḥīd*, 190) and *sūra* LVI (Blachère, no. 23, cf. n. 10 at p. 52 and the commentary of al-Kulīnī, 271). It goes without saying that Ibn Masʿūd, as an exegete, was fairly strongly criticized by al-Ṭabarī, who faithfully reflected the attitude of the Meccan school. He often classes Ibn Masʿūd with Murra al-Hamdānī and Abū Malik al-Ashʿarī in an indeterminate category to which *tafsīr* gives the broad name of "Companions of the Prophet". In reality, this is a Kūfan *isnād* in which Ibn ʿAbbās was artificially included. Even more cautiously, Ibn Masʿūd is separated from his pupil Masrūḳ, who, like him, was often questioned on the realities of the next world. Naturally, Ibn Masʿūd's witness is indispensable for commentary on the *sūrat al-Kahf* (XVIII), with its account of the Seven Sleepers, the most important eschatological passage (*Tafsīr*, xvi, 23, 98). From these few details it may be seen fairly clearly what was the basis for Ibn Masʿūd's reputation among those who, during his lifetime, were his pupils and followers in exegesis. As a specialist in *ta'wīl* (allegorical or interpretative commentary) he foresaw (and even the Sunnīs admit this) the dissensions which were to rend the Muslim community (*Iṣāba*). Having been a witness of the occasions when the Prophet had been inspired and of the immediate consequences of this inspiration, he was in possession of important secrets on the latter end of things and of mankind (cf. a popular form of exegesis with a magical use of *sūras* in Ibn Ḥanbal, no. 4004).

Thus there emerges, from sources which may fairly be regarded as impartial concerning him, a clear picture of Ibn Masʿūd's personality. Unshakeable in his loyalty to the Prophet and his family, he found it difficult to suffer the intrigues of the Meccan aristocracy, including those who seemed to have admitted him completely into their tribe. By nature the friend of the lowly and the humble, he was probably the supporter of a more inward, mystical and more Shīʿī type of Islam, as seems to be indicated by the surprising harmony which is apparent between the texts which appeared under his name and the vicissitudes of his life. His conduct, his *ḥadīth* and his exegesis are certainly those of a man who, as al-Munāwī has said, placed more hope on the next world than on that which he saw reflected in his contemporaries.

(J.-C. Vadet)

IBN MAṬRŪḤ, Abu 'l-Ḥasan Yaḥyā b. ʿĪsā b. Ibrāhīm b. al-Ḥusayn Djamāl al-Dīn Ibn Maṭrūḥ, was born on 8 Radjab 592/7 June 1196 at Asyūṭ, which he left while still young for Ḳūṣ. This town was at that time one of the most important cultural centres of Egypt, and it was probably there that Ibn Maṭrūḥ continued, or began, his education. It was there also that he met the poet Bahā' al-Dīn Zuhayr [*q.v.*], who became his friend, and that he wrote his first attempts at poetry. He also became known to Madjd al-Dīn al-Lamṭī, the governor of the town, to whom he dedicated two poems which show his lack of experience. It is said that Madjd al-Dīn appointed the young poet to an administrative post but that he did not remain in it for long.

Seeking a more propitious atmosphere, Ibn Maṭrūḥ set out for Cairo in about 626/1229 and was presented to al-Ṣāliḥ Ayyūb, who was representing his father al-Malik al-Kāmil in Egypt. In 629/1231, Ibn Maṭrūḥ accompanied al-Ṣāliḥ Ayyūb when he was appointed by his father commander-in-chief of the army which was to conquer Mesopotamia and fight against the Mongols and the Khwārazmīs. He remained continually with him, taking part in the military and political struggles and travelling between the conquered towns of Syria and Mesopotamia.

After the death of al-Malik al-Kāmil (635/1238), the rivalry between the Ayyūbid rulers increased and Ibn Maṭrūḥ could not avoid taking part in the struggles. It was to uphold the point of view of al-Ṣāliḥ Ayyūb, under whom he was inspector-general of the army, that he returned to Cairo in 637/1239 with Ibn al-Djawzī, the envoy of the ʿAbbāsid caliph, to restore agreement between the Ayyūbid princes. His stay there was brief and he very soon returned to Syria.

In 639/1241, Ibn Maṭrūḥ was again in Egypt. Al-Ṣāliḥ Ayyūb, who had become sultan of Cairo, appointed him treasurer of the city. This appointment was the beginning of a series of high official posts at the sultan's court.

In 643/1245, when al-Ṣāliḥ Ayyūb gained control of Damascus, he appointed Ibn Maṭrūḥ as vizier of the town. During this period Ibn Maṭrūḥ enjoyed great prosperity and the esteem of his entourage. But when al-Ṣāliḥ Ayyūb went to Damascus in 646/1248, he relieved Ibn Maṭrūḥ of the office which he held and sent him with the troops to Ḥimṣ. At this time Ibn Maṭrūḥ fell from favour. Scarcely had these troops arrived in Ḥimṣ when they received orders from the sultan to return to Egypt to defend it against the Crusaders who were preparing to attack Damietta. Al-Ṣāliḥ Ayyūb, now seriously ill, also returned to Egypt and Ibn Maṭrūḥ followed him.

After the death of al-Ṣāliḥ Ayyūb (15 Shaʿbān 647/23 November 1249), Ibn Maṭrūḥ retired to his own home, where he composed a number of short penitential poems. He died in Cairo at the beginning of Shaʿbān 649/end of October 1251. Ibn Khallikān was present at his burial.

The *dīwān* of Ibn Maṭrūḥ was published in Istanbul in 1298; the edition, a mediocre one, contains about 806 lines.

His work consists mainly of eulogistic and of erotic poems, which do not generally reach the level of exalted poetry. His political and official duties prevented his devoting himself entirely to his art. Nevertheless, in some of his best poems his abilities as a poet are apparent.

IBN AL-MAWLĀ, Muḥammad b. ʿAbd Allāh b. Muslim, poet, who lived into the reign of the caliph al-Mahdī, although the exact date of his death is not known. Of humble origins, he came from a typically Medinan background: he was a dependant of the tribe of ʿAmr b. ʿAwf; he studied with the Mālikī jurist and traditionist Ibn al-Mādjishūn. He was of a melancholy and sensitive temperament, and seems, according to the extracts preserved in the *Aghānī*, to have enjoyed reciting vague poetic compositions. The state of mind revealed in them is that of a sort of resigned heroism mixed with some fear at the sadness of love, of the times and of life. By an odd paradox, this writer of imprecise and rather delicate poetry had a gift for panegyric. He sang the praises, often at a distance and without knowing them (by a sort of mirage which always entices the Arab poet), of such powerful patrons as Yazīd b. Ḥātim (d. 170/788), governor of Egypt and at one time the patron of Bashshār b. Burd, the ʿAbbāsid princes Djaʿfar b. Sulaymān (*Nasab Ḳuraysh*, 29, 31), and Ḳutham b. al-ʿAbbās (*ibid.*, 33). He soon obtained the privilege of becoming the poet of the caliph al-Mahdī. It is known that this caliph had a great admiration for the past and the culture of South Arabia and that he sincerely wished to gain the goodwill of the Medinans, who had remained faithful to the memory of the ʿAlid rebel Muḥammad b. ʿAbd Allāh b. al-Ḥasan (*Nasab Ḳuraysh*, 53). Ibn al-Mawlā, like many of his fellow citizens, combined a great respect for the memory of the Prophet and of the Hāshimite family, "the guardian of the Faith", with fervent South Arabian sympathies. Therefore, reciting or improvising to these conservative and nostalgic Medinans, who were often stubborn visionaries, he was able to be a powerful propagandist in favour of the new ʿAbbāsid prince and his court and administration.

Bibliography: *Aghānī*, iii, 88-96, iv, 115; *Dāʾirat al-maʿārif*, iv, 32. (J.-C. Vadet)

IBN MAYMŪN, Abū ʿImrān Mūsā b. ʿUbayd Allāh [Maymūn] al-Ḳurṭubī, usually called Moses Maimonides in English and German, Moïse Maïmonide in French, Jewish theologian and physician, born in Cordova in 1135, died in Fusṭāṭ in 1204. A member of a scholarly Jewish family long established in Muslim Spain, Moses Maimonides received his earliest education in his native town which, however, he was compelled to leave with his family in about 1149 on account of the Almohad invasion and the policy of hostility adopted by the new dynasty [see al-muwaḥḥidūn] towards the religious minorities. After staying some ten years in the Maghrib, notably in Fās (perhaps in the guise of converts to Islam, though the matter is far from certain), the family moved to the East. In any case, it was in the Muslim West that Moses Maimonides acquired the essence of his learning, both religious and secular, and it seems clear that his literary activity also started there. After 1166 the Ibn Maymūn family were in Egypt At first, Moses earned his living in that country by entering the trade with India in precious stones, but when the family business was jeopardized by a shipwreck in which his brother lost his life, he was obliged, in order to make a living, to work as a physician, at first as a protégé of the ḳāḍī al-Fāḍil [*q.v.*]; later he became court physician to al-Malik al-Afḍal ([see ayyūbids]; it is to be noted that he was never physician to Saladin, and that the invitation which he is alleged to have received from Richard Coeur de Lion is a legend), and was also invested with the office of head and representative spokesman of his religious community (in Hebrew *nāgīd*, a dignity which remained in his family until the 14th century).

Of the writings, in Hebrew and Arabic, of Maimonides, doctor of Jewish law, speculative theologian and physician, we shall consider only those which concern Islamic studies and the history of Arabic literature—his précis of logic, his medical treatises and opuscula (his mathematical and astronomical works are no longer extant), his "Guide of the Perplexed", and his attitude towards Islam, as expressed in his different writings.

Of the précis of logic, *Maḳāla fī ṣināʿat al-manṭiḳ*, which apparently he wrote at the age of sixteen, the Arabic original was, until recently, known only from a unique, and incomplete, manuscript in Hebrew characters. Mübahat Türker discovered two complete copies of the work in Arabic characters (the Istanbul manuscript probably being merely a transcription of the Ankara one), and established its close relationship to al-Fārābī.

In medicine, Moses Maimonides wrote about twelve works (listed in Brockelmann), either of a general nature and dependent on Galen, as was the whole art of healing in his time, with only a few divergences on minor points ("Aphorisms"), or brief monographs on certain illnesses (asthma, haemorrhoids) or instructions on hygiene, such as a short work on sexual intercourse, and finally pharmacology. In the opinion of experts, these writings guarantee him an honourable place in the medicine of his age; indeed, he was much sought after as a medical practitioner, and his medical works were transmitted not only in the Hebrew script but also in the Arabic script by non-Jewish copyists.

It was, however, for the exclusive use of a certain category of his co-religionists that, in about 1190, he wrote his great treatise *Dalālat al-ḥāʾirīn* ("Guide of the Perplexed"). He wrote it for the benefit of those Jewish intellectuals who, by reason of their scientific and philosophical culture, might find themselves perplexed as to the meaning and value of biblical and rabbinical teachings concerning God, the origin of the world, and the validity and significance of religious law. To calm these troubled minds, Moses Maimonides therefore elaborated a system of interpretation (*taʾwīl*) of those scriptural passages that are apparently anthropomorphic; then he endeavoured to show, after an incisive examination of the postulates and methods of *kalām* [*q.v.*], that, despite the importance which it was proper to allow to Aristotle's physics in respect of the sublunary world, neither the eternity of the world nor the law of necessity constraining God Himself were philosophical certainties in face of which belief in a creative, free God could not be reasonably professed; finally, following a Platonic tradition repeated in particular by al-Fārābī, his chief source of inspiration among Muslim philosophers, he justified the concept of the prophet-legislator, the perfect example of whom in his eyes was Moses; the Law revealed to Moses, though initially adapted to the needs of a people

still barely freed from the surrounding paganism, is nevertheless the most perfect that can exist and must remain in force eternally. Such, without any doubt, are the main themes reduced to their simplest expression in the "Guide". It must be emphasized, however, that, by the method of composition of this book and the contradictions in it that he has deliberately allowed to remain, as well as by various allusions, Maimonides sought to make the enlightened reader understand that his own true opinions were far from coinciding with what a superficial reading would suggest. There are thus strong reasons for believing that he did not reject the thesis of the eternity of the world (indeed he openly maintains its perpetuity) and that, in the final count, God was identified, in his belief, with the law of nature, and therefore with a certain necessity (but, it is true, an intelligent and not a blind necessity). The strictly negative attitude from which he never departed in regard to astrology, the occult sciences and non-philosophic mysticism equally testify to his basic rationalism. It is certain, moreover, as can be seen from his "Code of Laws" and his "Treatise on the resurrection", that he tended to minimize the traditional eschatology of Judaism and that he taught unequivocally the eternal survival of the soul alone and the wholly spiritual character of punishment in the after-life; incidentally, it is very probable that, somewhat like Ibn Rus̲h̲d [*q.v.*], his contemporary and in several respects his counterpart among Muslim thinkers, he thought that intellective souls, separated from their bodies and justified here below by the constant exercise of practical and dianoetic values, would be united in the after-life with the Active Intellect; this is tantamount to a denial, with varying qualifications, of the individual immortality of the soul professed in common by the three great monotheistic religions. In both these philosophers, however, these radical views co-existed, without any sign of internal conflict, along with a sincere adherence to their respective religious laws, which they regarded as the best conceivable formula for regulating men's social lives and creating the climate in which the common man could live in peace, under a collective discipline, and in which the philosopher, co-operating in the maintenance of this discipline and himself submitting to it in the scrupulous observance of its rites, could harmoniously unite the life of contemplation with the life of action. But it is not surprising that these views should have seemed too bold, or even scandalously heterodox, and we know that the Muslim scholar ʿAbd al-Laṭīf al-Bag̲h̲dādī [*q.v.*], who knew Maimonides in Cairo, stated bluntly that the latter had written an heretical book for his co-religionists. Despite the precautions taken to prevent the "Guide" being circulated outside the Jewish community, there were at least partial and abridged transcriptions of it in Arabic script which, at the very least, were circulated among Christian intellectual circles in Egypt. On the other hand, there are almost no traces of any use of the "Guide" by Muslim scholars, and nothing is known as to the identity of the "Tibrīzī" who commented on the twenty-five propositions taken from Aristotle and placed at the beginning of the second part; this commentary has incidentally survived only in the Hebrew version.

As we have said, Moses Maimonides drew his greatest inspiration from al-Fārābī, but one can also detect signs of the influence of Ibn Sīnā, al-G̲h̲azālī (*Tahāfut*) and Ibn Bād̲j̲d̲j̲a. His knowledge of the work of Ibn Rus̲h̲d (whom he held in great esteem) was incomplete, and for the most part was acquired too late to be utilised in the writing of the "Guide".—One final point: in regard to Islam, Moses Maimonides adopted (and this is in no way original) an attitude at once of total refusal to admit the prophetic inspiration of that religion's founder, and also of a certain subtly qualified sympathy for the strict monotheism which characterizes it; evidently he rejected the attempts to discover passages in the Bible announcing the coming of the Prophet of the Arabs, just as he bitterly reproached the Muslims for suspecting the integrity of the scriptural text [see AHL AL-KITĀB and TAḤRĪF].

Bibliography: Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ*, ii, 117; Ibn al-Ḳifṭī, *Taʾrīk̲h̲ al-ḥukamāʾ*, 317-9; M. Steinschneider, *Die arabische Literatur der Juden*, Berlin 1902, 199-221 (for the Hebrew versions, idem, *Die Hebräischen Übersetzungen des Mittelalters . . .*, Berlin 1893, passages indicated in the index, p. 1060, s.v. Maimonides); Brockelmann I², 644-66, S I, 893-4; add *S̲h̲arḥ asmāʾ al-ʿuḳḳar* (Explanation of the names of drugs), edited with translation and commentary by M. Meyerhof, in *MIE*, xli (1940); the main part of the bibliography down to 1950 is given in G. Vajda, *Jüdische Philosophie* (*Bibliographische Einführungen in das Studium der Philosophie*, 19), Berne 1950, 20-4; the principal manuals of Jewish philosophy, in particular those of I. Husik, *A history of mediaeval Jewish philosophy*, Philadelphia 1916 (reprinted several times), J. Guttmann, *Die Philosophie des Judentums*, Munich 1933 (English trans., *Philosophies of Judaism*, London 1964) and G. Vajda, *Introduction à la pensée juive du moyen âge*, Paris 1947, include a chapter on Moses Maimonides; of a complete bibliography arranged according to subjects, by Jacob I. Dienstag, the only part to have appeared is *Moses Maimonides, A topical bibliography*, in *Studies in Bibliography and Folklore*, v, Cincinatti 1961, 12-29 of the Hebrew part of the fascicule.—Texts published since 1950: *Moses Maimonides' Epistle to Yemen*. The Arabic Original and the Three Hebrew Versions edited . . . by Abraham S. Halkin and an English Translation by Boaz Cohen, New York 1952; Mübahat Türker, *Mûsâ Ibn-i Meymûn'un* Al-Maḳāla fī Ṣināʿat al-Manṭiq'*ının arapça asli*, in *AÜDTCFD*, xviii (1960), 9-64; a new English translation of the *Guide* by S. Pines, *The Guide of the Perplexed*, Chicago University Press 1963, is preceded by an "Introductory Essay" by L. Strauss and an introduction (particularly important for the relationship of Maimonides' thought with Greek philosophy and Arab philosophy) by the translator. Of recent articles on Maimonides' thought, we mention only A. Altmann, *Essence and Existence in Maimonides*, in *Bull. of the John Rylands Library*, xxxv (1953), 294-315; M. Fakhry, *The antinomy of the eternity of the world in Averroes, Maimonides and Aquinas*, in *Le Muséon*, lxvi (1953), 139-55; some points of detail on Maimonides' biography: B. Lewis, *Maimonides, Lionheart and Saladin*, in *Eretz-Israel*, vii (1963), 70-5; on the circulation of the *Guide*: G. Vajda, *Un abrégé chrétien du "Guide des Egarés"*, in *JA*, 1960, 115-36; idem, in *JA*, 1965, 43-50; finally, see S. W. Baron, *A social and religious History of the Jews*², viii, New York 1958, 249-52 and 259-62; M. Mohaghegh, *Maimonides against Galen/Radd-i Ibn Maymūn bar D̲j̲ālīnūs*, in *Mad̲j̲alla-i Dānis̲h̲kada-i adabiyyāt wa-ʿulūm-i insānī*, xv/1 (1967).

Maimonides' Arabic has been the subject, among

others, of studies by I. Friedlaender, *Der Sprachgebrauch des Maimonides ... I. Lexicalischer Teil Arabisch-Deutsches Lexicon*, Frankfurt a/M. 1902 (short grammatical sketch by the same author, in *Selections from the Arabic writings of Maimonides*, Leiden 1909), and J. Blau, in *R. Moses b. Maimon Responsa*, iii, Jerusalem 1961, 59-116 (in Hebrew); see, by the same author, *A grammar of mediaeval Judeo-Arabic* (in Hebrew), Jerusalem 1961.

(G. Vajda)

IBN MAYYĀDA, Abū Sharāḥīl (or Shuraḥbīl) al-Rammāḥ b. Abrad (Yazīd in Ibn Ḳutayba) b. Thawbān al-Murrī, of the Banū Murra b. ʿAwf, Bedouin poet who lived in the Ḥidjāz and in Nadjd from the reign of Hishām b. ʿAbd al-Malik (105-25/724-43) to the period of the early ʿAbbāsids; he died during the caliphate of al-Manṣūr, about 136/754 according to al-Baghdādī, in 149/766 according to Yāḳūt. His mother Mayyāda (= one who swings) was a slave, said to have been of Berber or Slav origin, whom the poet however claimed to have been Persian, boasting of belonging both to the line of the Chosroes and to the Arabs, his father being a descendant, through his grandmother, of Zuhayr b. Abī Sulmā [*q.v.*]. The *Kitāb Akhbār Ibn Mayyāda* (*Fihrist*, Cairo ed., 161) of al-Zubayr b. Bakkār, of which much use was made in the *Aghānī*, does not seem to have survived, so that very little is known of Ibn Mayyāda's life and work. From the brief description of his appearance it can be deduced that he was fair (*aḥmar*), slender, with a long beard and that he was well-groomed. His poetry consists chiefly of *nasīb*, *hidjāʾ* and *madīḥ*. His love poetry, of the Bedouin type and considered by Ibn Sharaf (ed. and tr. Pellat, 27) as superior to that of al-Kumayt, Nuṣayb or al-Ṭirimmāḥ, is addressed to several women, both free and slave, but especially to one called Umm Djaḥdar, who was finally married by her father to a Syrian. It was she who was the cause of an exchange of epigrams, *naḳāʾiḍ* [*q.v.*], between Ibn Mayyāda and another poet, Ḥakam b. Maʿmar al-Khuḍrī, but the *hidjāʾ* of al-Rammāḥ alludes also to other persons; it is said, moreover, that he was inclined to malice and enjoyed exchanging insults with those with whom he came into contact, without however descending to scurrilities.

Ibn Mayyāda's panegyrics were addressed first to the Umayyad governor of Mecca, ʿAbd al-Wāḥid b. Sulaymān b. ʿAbd al-Malik, and especially to al-Walīd b. Yazīd (125-6/743-4), to whom he paid several visits; a poem much praised by the critics is a *bāʾiyya* in which he lauds the generosity of the caliph, who had rewarded him with a hundred camels and a slave to look after them, a *djāriya* and a horse. On the death of al-Walīd, he wrote his funeral eulogy in a *marthiya* of which a few verses survive. His relations with the Umayyads did not at all prevent him from addressing his praises to the ʿAbbāsids, particularly since under the former he had been beaten for having in one verse given the family of the Prophet precedence over the Banū Marwān; thus he produced a eulogy of the ʿAbbāsid governor of Medina, Djaʿfar b. Sulaymān, and even attempted to gain the favour of al-Manṣūr, but he did not renew the attempt, since the caliph had not the same interest in poetry as al-Walīd b. Yazīd.

He is accused of frequent lapses (*saḳaṭ*) in his poetry, but it is in general praised by the critics; several poems have been set to music, and the philologists cite a number of his verses as *shawāhid*, Ibn Mayyāda being considered as one of the last of the classical poets, of those who "set the seal on" poetry.

Bibliography: Djāḥiẓ, *Bayān*, index; idem, *Ḥayawān*, index; Ibn Sallām does not mention Ibn Mayyāda in the *Ṭabaḳāt* although the *Aghānī* states that he places him in the seventh class; Ibn Ḳutayba, *Shiʿr*, 747-9 and index; idem, *Adab al-kātib*, 44; idem, *ʿUyūn*, iv, 141; Mubarrad, *Kāmil*, index; Ibn al-Muʿtazz, *Ṭabaḳāt*, 43-5; Ibn Durayd, *Ishtiḳāḳ*, 175; Ibn ʿAbd Rabbih, *ʿIḳd*, ii, 225; *Aghānī*, ii, 85-116 (Beirut ed., ii, 226-300); Tawḥīdī, *Imtāʿ*, 193; Ibn Sharaf, *Masāʾil*, index; Ibn ʿAsākir, *Taʾrīkh Dimashḳ*, v, 328-31, 343; ʿAskarī, *Dīwān al-maʿānī*, 123; idem, *Ṣināʿatayn*, index; Āmidī, *Muʾtalif*, 124; Thaʿālibī, *Thimār al-ḳulūb*, 56-7; Baghdādī, *Khizāna*, Cairo ed., i, 152, ii, 195-7; Yāḳūt, ii, 260, s.v. Ḥarrat Laylā; idem, *Udabāʾ*, xi, 143-8; Marzubānī, *Muwashshaḥ*, 228; idem, *Muʿdjam*, 319; Ibn Abī ʿAwn, *Tashbīhāt*, 211; Nuwayrī, *Nihāya*, ii, 56; Ibn al-Shadjarī, *Ḥamāsa*, 237-8; Goldziher, *Muh. St.*, ii, 99; O. Rescher, *Abriss*, i, 184-6; R. Blachère, in *Mél. Gaudefroy-Demombynes*, 110, 114; C. A. Nallino, *Letteratura*, 150 (Fr. tr., 230-1); Brockelmann, S I, 91, 96; F. Bustānī, *Dāʾirat al-maʿārif*, iv, 98.

(Ch. Pellat)

IBN MISDJAḤ, Saʿīd Abū ʿĪsā or Abū ʿUthmān, one of the great singers of the early Ḥidjāzī school of Arabic music, was born in Mecca and died there in the reign of Walīd I (86-96/705-15). He was a half-breed of African descent (*muwallad aswad*), his mother being a slave-girl of a Hāshimite. It is said that he sang Arabic verses to Persian melodies which he had learned from Persian workers who repaired the mosque (in 64/683) or, according to others, who built a house for Muʿāwiya in Mecca; but this adaptation of Arabic texts to Persian tunes had been effected already in Medina by Ṭuways [*q.v.*], by Sāʾib Khāthir and Nashīṭ, both of Persian origin (*Aghānī*[3], viii, 321), and by other singers. According to Abu 'l-Faradj (*Aghānī*[3], iii, 276), Ibn Misdjaḥ blended the song of the Arabs with Persian and Byzantine music in a perfect manner and set by his compositions the model for his successors. The assertion, however, that he went to Syria and thence to Persia to study the music of the Byzantines and the Persians is not supported by earlier authorities. Some of his melodies are given in the *Aghānī*. Pupils of his were Ibn Muḥriz, Ibn Suraydj, al-Gharīḍ, Maʿbad and Yūnus al-Kātib [*qq.v.*].

Bibliography: *Aghānī*, index and especially [3]iii, 276-84 (based mainly on the *Akhbār Saʿīd b. Misdjaḥ* by Isḥāḳ al-Mawṣilī, see *Aghānī*[1], xiv, 11, 26 and *Fihrist*, 141, 3); a *Kitāb Ibn Misdjaḥ* by Abū Ayyūb al-Madīnī is mentioned in *Fihrist*, 148, 6. H. G. Farmer, *A history of Arabian music*, 69 f., 77 f.

(J. W. Fück)

IBN MISKAWAYH [see miskawayh].

IBN AL-MUʿADHDHAL, Abu 'l-Ḳāsim ʿAbd al-Ṣamad b. al-Muʿadhdhal b. Ghaylān b. al-Ḥakam al-ʿAbdī, an Arab satirical poet of Baṣra (d. 240/854-5) who belonged to a family of the ʿAbd al-Ḳays, many members of which wrote poetry. His grandfather Ghaylān is mentioned in the sources as a poet, and his father al-Muʿadhdhal exchanged epigrams with Abān al-Lāḥiḳī [*q.v.*] in particular, one of which was considered sufficiently original to be included in the *Dīwān* of Abū Nuwās (1277 ed., 79; 1332 ed., 151; the Cairo ed. 1953 omits it; metre *ramal*, rhyme *-ānā*). Ibn al-Nadīm (*Fihrist*, Cairo, 234) attributes fifty leaves of verses to al-Muʿadhdhal, but only a very small number of these survive (see al-Ṣūlī, *Awrāḳ*, section on the poets, 6-8; *Aghānī*, xii, 57-8 = Beirut ed., xiii, 228-30; Ch. Pellat, *Milieu*, 167-8).

ʿAbd al-Ṣamad's brothers Aḥmad, ʿĪsā and ʿAbd Allāh also rank as poets, but their output was very scanty, according to Ibn al-Nadīm (*ibid.*); the first-named, Abu 'l-Faḍl Aḥmad b. al-Muʿa<u>dh</u><u>dh</u>al, followed the classical tradition, and some of his poems have been preserved, but he impresses mainly by his eloquence and his piety, which was in contrast to the moral laxity of ʿAbd al-Ṣamad; he appears to have enjoyed a certain renown in a milieu that was far-removed from poetry: indeed, while the *A<u>gh</u>ānī* (xii, 57 = Beirut ed., xiii, 228) makes him a Muʿtazilī, al-<u>Dj</u>āḥiẓ (*Bayān*, i, 103, ii, 306) seems to reproach him with being a Mālikī; indeed the *Fihrist* (282) places him among the members of the school of Mālik, names Ibn al-Mā<u>dj</u>i<u>sh</u>ūn as one of his teachers and Ismāʿīl b. Isḥāḳ al-Ḳāḍī as his pupil, and, although the account is mutilated, attributes certain books to him, the most important being a *Kitāb al-ʿIlla* (al-Kutubī, *Fawāt*, s.v.). According to certain statements, Aḥmad was regarded as an eminent Baṣran who was present at some battles against the Byzantines and even had access to the caliph at Sāmarrā (Ibn al-Muʿtazz, *Ṭabaḳāt*, 175; al-Ḥuṣrī, *Zahr*, 651 ff.).

The most celebrated member of the family, however, was ʿAbd al-Ṣamad, whom al-Marzubānī (*Muwa<u>shsh</u>aḥ*, 9) had judged worthy of a monograph of about 200 leaves (*Fihrist*, 191) entitled *A<u>kh</u>bār ʿAbd al-Ṣamad b. al-Muʿa<u>dh</u><u>dh</u>al*; according to the same Ibn al-Nadīm (234), his *dīwān* filled 150 leaves. Al-Ḥuṣrī (*Zahr*, 654) considered him as the poet *par excellence* of the Baṣra of his period, thus following the legend echoed by al-<u>Th</u>aʿālibī (*<u>Kh</u>āṣṣ al-<u>kh</u>āṣṣ*, Tunis 1293, 100), but he hardly seems to merit such an honour, although a critic such as Abū Hilāl al-ʿAskarī held certain of his verses to be superior to those which he inspired in al-Buḥturī (*Ṣināʿatayn*, 234). Despite the long account which the *A<u>gh</u>ānī* (xii, 57-72 = Beirut ed., xiii, 228-59) devotes to him, we know little about his life, and from the *<u>kh</u>abar*s which concern him it is just possible to extract certain details about his relations with al-Aṣmaʿī, as well as with the governors of Baṣra and members of the local aristocracy. Unlike most of his colleagues, he does not appear to have tried his fortune in the capital, although before 226/841 he was in Sāmarrā, where the sight of the young Af<u>sh</u>īn [*q.v.*] filled him with ignoble thoughts, his taste for young men being a normal feature of his depraved character. The description of a garden or an entertainment is not without freshness, but the greater part of his surviving poems testify at once to his moral laxity, his pride, his claims to surpass other poets and his propensity in some degree to take everyone as the target for his virulent invectives; no-one escaped, neither his friends nor his neighbours, nor even his brother Aḥmad, of whose reputation in his native town he was no doubt jealous. Among the victims of his epigrams—who often replied in kind—were well-known personages such as Ḥamdān b. Abān al-Lāḥiḳī, al-<u>Dj</u>ammāz [*q.v.*], Yaḥyā b. Ak<u>th</u>am [*q.v.*], and Abū Tammām himself who, according to al-<u>Th</u>aʿālibī (*op. cit.*) is said to have renounced the idea of coming to Baṣra as the result of an attack made on him by ʿAbd al-Ṣamad (but the *A<u>gh</u>ānī* presents the matter quite differently and gives the leading rôle to Abū Tammām). His malicious gossip—which had won him the nickname of Abu 'l-Summ—was no less feared, and it is even related that some satirical verses had brought such discredit to a *ḳayna* and a male singer that they were compelled to leave Baṣra to earn their living. Thus, from the notices and fragments that have survived, Ibn al-Muʿa<u>dh</u><u>dh</u>al appears as one of the most typical representatives of that group of poets in Baṣra in the 2nd-3rd/8th-9th centuries who, themselves debauched and malicious, took pleasure in defiling the good name of other people, in causing scandals, and in singing of wine and love in verses in which obscenity went hand in hand with undeniable satirical talent.

IBN AL-MUʿALLIM [see AL-MUFĪD].

IBN AL-MUBĀRAK, ʿABD ALLĀH B. ʿABD AL-RAḤMĀN AL-ḤANẒALĪ (118 or 119/736 or 737-181/797), a merchant who combined with his business a love of learning. He travelled widely, studying under many authorities, including Abū Ḥanīfa. Besides his large collection of traditions (20,000 according to Ibn Muʿīn), his interests included matters legal, religious and literary. He said that he heard traditions from 4,000 *<u>sh</u>ay<u>kh</u>*s and transmitted from 1,000. Muslim has some of his traditions in his *Ṣaḥīḥ*. Ibn al-Mubārak studied *fiḳh* with Sufyān al-<u>Th</u>awrī and Mālik b. Anas, whose *Muwaṭṭaʾ* he transmitted. He was a pious man, devoted to ascetic practices. He made the Pilgrimage and engaged in *<u>dj</u>ihād* in alternate years. He died at Hīt on the Euphrates after an expedition.

Bibliography: Muḥammad b. Ḥibbān al-Bustī, *Ma<u>sh</u>āhīr ʿulamāʾ al-amṣār* (Bibl. Isl., xxii), 194 f.; Ibn al-Ḳaysarānī, *Kitāb al-<u>Dj</u>amʿ*, 259 f.; al-Samʿānī, 179a; al-<u>Dh</u>ahabī, *Ta<u>dh</u>kirat al-ḥuffāẓ*, i, 253-7; Ibn Ḥa<u>dj</u>ar al-ʿAsḳalānī, *Tah<u>dh</u>īb*, v, 382-7; Ibn al-ʿImād, *<u>Sh</u>a<u>dh</u>arāt*, year 181; Brockelmann, S I, 256. (J. ROBSON)

IBN AL-MUDABBIR, the name of two brothers, Abu 'l-Ḥasan Aḥmad and Abū Isḥāḳ (Abū Yusr) Ibrāhīm b. Muḥammad b. ʿAbd Allāh b. al-Mudabbir, who played an important part as high officials, courtiers and men of letters as well as poets at Sāmarrā and in Egypt and Syria during the middle of the 3rd/9th century. The family seems to have been of Persian origin; it is not mentioned which of the two brothers was the elder.

(1) ABU 'L-ḤASAN (d. 270/883 or 271/884) directed the *dīwān al-<u>dj</u>ay<u>sh</u>* in the reign of the caliph al-Wā<u>th</u>iḳ (227/842-232/847); during the first years of al-Mutawakkil (232/847-247/861) he took over the control of seven *dīwān*s, probably as a kind of deputy *wazīr*. Al-Mutawakkil esteemed him as a poet, and Aḥmad became an influential courtier. The suspicious *wazīr* ʿUbayd Allāh b. <u>Kh</u>āḳān removed him from his post and threw him into prison in 240/854. But

shortly afterwards he was created Director of Finance (*ʿāmil al-kharādj*) for Damascus and Urdunn and went to Damascus (for a poem of his in praise of that city, see Yāḳūt, iii, 243). In 247/861 he took over the same office in Egypt; he introduced a number of new taxes (*mukūs*) such as one on cattle fodder (*al-maʿārī*) as well as a monopoly on caustic soda (C. H. Becker, *Beiträge*, 144 ff.; cf. A. Grohmann, *Aperçu* . . ., 74 f., discussing the papyrological evidence). Hence he became the most hated director of finances for centuries, but the most powerful man of his time in Egypt. When in Ramaḍān 254/September-October 868 Aḥmad b. Ṭūlūn entered al-Fusṭāṭ as the newly appointed governor, Aḥmad b. al-Mudabbir attempted to win him over by bribing him with valuable gifts, but in vain as Ibn Ṭūlūn rejected them. The struggle for power that now began between the two rivals was fought out in Egypt as well as at the court of Sāmarrā. Aḥmad b. Ṭūlūn emerged triumphant; he was able to overthrow Aḥmad b. al-Mudabbir, to imprison him, and to confiscate his wealth. In 258/872, at the latest, he was set free and transferred back to Syria as director of finances for Damascus, Urdunn and Palestine. When Aḥmad b. Ṭūlūn occupied Damascus, in 264/877, Ibn al-Mudabbir was after a short time again arrested (Ibn ʿAsākir, ii, 62), sentenced to pay a *muṣādara* of 600,000 *dirhams*, sent to Egypt and kept in prison until his death. According to the *Fihrist* Aḥmad b. al-Mudabbir was the author of an apparently lost *K. al-Mudjālasa wa 'l-mudhākara*; some of his poems and anecdotes concerning him have been preserved in the *Aghānī*, the *Murūdj*, the *Taʾrīkh Dimashḳ*, etc.

(2) Abū Isḥāḳ (Abū Yusr) Ibrāhīm (d. Shawwāl 279/December 892-January 893) was in favour with the caliph al-Mutawakkil and numbered among his boon companions (*nudamāʾ*), so that he exercised great influence over the caliph and the affairs of state. The *wazīr* ʿUbayd Allāh b. Khāḳān overthrew him, probably together with his brother Aḥmad, in about 240/855. Ibrāhīm was thrown into prison, where he remained for the next years; the circumstances of his liberation are not known. Some time later he was appointed tax-collector of the province of Akhwās, and it was probably while holding that appointment that he came into contact with the rebellious Zandj (255/868-270/883), was taken prisoner, brought to Baṣra, and put into prison there. He escaped by breaking through the prison wall, an exploit mentioned by al-Masʿūdī, *Murūdj*, viii, 13, and Ibn Khallikān, 615, tr. de Slane, iii, 56-7. He accompanied the caliph al-Muʿtamid (256/870-279/892) on his journey to Syria in 269/882 and became for a short period one of his *wazīrs*. He died as director of the *dīwān al-ḍiyāʿ*. Ibrāhīm b. al-Mudabbir is probably the author of *al-ʿAdhrāʾ fī mawāzīn al-balāgha wa adawāt al-kitāba*, one of the earliest treatises on administration and the civil service (W. Björkman, *Staatskanzlei*, 8 and note, but not mentioned by either *al-Fihrist* or Ḥādjdjī Khalīfa; see bayān, 1115a). Many of his poems, some of which are dedicated to the singer ʿArīb, as well as many anecdotes, have been preserved in the *Kitāb al-Aghānī*, the *Irshād* of Yāḳūt, the *Nishwār* of al-Tanūkhī, etc.

(H. L. Gottschalk)

IBN MUDJĀHID, Aḥmad b. Mūsā b. al-ʿAbbās Abū Bakr al-Tamīmī (245/859-324/936), was born in Baghdād and seems to have spent his life there. He is noted for his study of the various Ḳurʾān readings, for the large number of pupils who attended his classes, and for writing the first book on the seven Ḳurʾān readings. Al-Khaṭīb al-Baghdādī calls him a reliable authority (*thiḳa maʾmūn*), and quotes a statement made in 286/899 by the grammarian Aḥmad b. Yaḥyā to the effect that at that time no one knew more about the Ḳurʾān than Abū Bakr Ibn Mudjāhid. Commentaries on his book about the seven readings were written by Abū ʿAlī al-Fārisī (d. 377/987) in three volumes, and by Ibn Khālawayh (d. 370/980). Ḥādjdjī Khalīfa (d. 1067/1657) says he possessed both of these and the text. The *Fihrist* ends its short notice by naming a number of books written by Ibn Mudjāhid. As a result of his representations he was influential in persuading the authorities to proscribe the Ḳurʾān versions of Ibn Masʿūd, Ubayy b. Kaʿb and ʿAlī b. Abī Ṭālib.

Flügel, no. 2004; Ibn al-ʿImād, *Shadharāt*, year 324; L. Massignon, *La passion d'al-Ḥallāj*, i, 240-45; G. Bergsträsser and O. Pretzl, *Geschichte des Qorans*, iii, 210-13; Brockelmann, I, 203, S I, 328. (J. Robson)

IBN AL-MUDJĀWIR, Djamāl (Nadjm) al-Dīn Abu 'l-Fatḥ Yūsuf b. Yaʿḳūb b. Muḥammad al-Shaybānī al-Dimashḳī, reputed author of *Taʾrīkh al-Mustabṣir* (or *al-Mustanṣir*), an important source for the geography, history, and customs of western and southern Arabia in the early part of the 7th/13th century.

Yūsuf b. Yaʿḳūb, a native of Damascus said to have been of Persian descent, was born in 601/1204-5 and died in 690/1291. The brief biographical notices of him give little information on his career.

The author of *Taʾrīkh al-Mustabṣir* does not tell enough about himself to satisfy our curiosity. He was in India in 618, but he does not say how he got there or what he was doing there. At the end of 618/1222 he sailed from India to Aden. He visited Zabid at least three times, in 619, 624, and 626; he was in Mecca in 621 and in Djudda both before and after the destruction of the tomb of Eve in that year. The only other place in Arabia he mentions having been in is the port of Ghulāfiḳa in the Yaman. At no point does the author say what his business or pleasure in Arabia was. The latest date in the

narrative is Dhu 'l-Ḥidjdja 626/1229. Internal evidence indicates that the work was composed not long thereafter.

The usually accepted identification of Yūsuf b. Yaʿḳūb b. Muḥammad Ibn al-Mudjāwir al-Dimashḳī as the author of the book would appear routine, were it not for a single sentence, on page 252 of O. Löfgren's edition (1951-4), in which the author speaks of "my father Muḥammad b. Masʿūd b. ʿAlī b. Aḥmad Ibn al-Mudjāwir al-Baghdādī al-Naysabūrī". A number of years before this edition came out, M. Jawād, who had noticed this sentence in the Paris MS of the work, disputed the attribution of authorship to Yūsuf b. Yaʿḳūb. Jawād also remarked that it was hard to believe that such a book could have been written by a man in his early twenties, who for the remaining sixty-odd years of his life had nothing more to set forth on the subject. To Jawād's reservations may be added the fact that Ibn al-ʿImād in his obituary of Yūsuf b. Yaʿḳūb says that he had a special interest in the history of Baghdād, but makes no reference to a corresponding interest in Arabia. Ibn Taghrībirdī describes Yūsuf b. Yaʿḳūb simply as a transmitter of *ḥadīth*s.

Abū (Bā) Makhrama (d. 947/1540), whose writings on southern Arabia have also been edited by Löfgren, cites *Taʾrīkh al-Mustabṣir* a number of times, but he never names Ibn al-Mudjāwir as the author; his standard reference is to "al-Mustabṣir in his history". (There is no information on the life of Ibn al-Mudjāwir in Löfgren's 260 pages of biographies for southern Arabia by Abū Makhrama, al-Djanadī (d. 732/1332), and al-Ahdal (d. 855/1451)).

Taʾrīkh al-Mustabṣir, despite its title, is not so much a history as a collection of itineraries and a potpourri of miscellaneous information on the towns and tribes of western and southern Arabia and the life of the people there. Fragmentary historical data of some value are given on the later Ayyūbids in Arabia, the early Rasūlids of the Yaman, and the Ḳatādid Sharīfs, who had established themselves in Mecca just before the author's appearance on the scene. Much more space is allotted to routes between cities, with the length of each stage given in parasangs (*farsakh*s). The geographical material begins in the north with the environs of Medina, though there is no description of the Prophet's city itself. Details on Djudda, Zabīd, and Aden are particularly copious, and stylized maps of all three, as well as similar maps of various other places, are provided. The southern coast of Arabia is treated more extensively than in most Arab geographers, as far around as Ḳalhāt, Musḳaṭ (Maskat), and Ṣuḥār on the Gulf of ʿUmān. The only site in the Persian Gulf dealt with in great detail is the island of Ḳays (Kīsh). The book closes with a short paragraph on al-Baḥrayn, which was said to have 360 villages, with all but one being Imāmī (Twelver Shīʿī). The figure 360 for this small island is manifestly absurd.

The book contains an abundance of fascinating lore on Islamic sects, marriage customs, slavery, weights and measures, coins, cloth, wine, agriculture, shipping, and customs duties. Legends about the Hindu monkey-god Hanuman seem to put Aden in the place of Ceylon. Some of the stories are no doubt apocryphal, but many have an air of authenticity. The author derived much of his information from informants on the spot, both Bedouins and townspeople. He drew to a considerable extent on the works of earlier writers, such as al-Fākihī, the historian of Mecca, ʿUmāra, the historian of Zabīd, and the geographer Ibn Ḥawḳal, who are sometimes quoted without acknowledgement.

The author of *Taʾrīkh al-Mustabṣir* obviously knew a great deal about western and southern Arabia. At the same time, his ignorance of the rest of the Arabian Peninsula was abysmal, as is indicated by his repeating the report he heard from a Jewish goldsmith in Aden about the Saturday River (Nahr al-Sabt) just beyond the Ḥidjāz, a river of sand that flowed strongly for one day out of each week, on the other side of which lived a hundred million Jews descended from those who had fled from Khaybar and Wādī al-Ḳurā in the time of the Prophet. The author also retails with a straight face in half a dozen places information of a historical or geographical nature revealed to him in dreams (he is more precise in dating his dreams than in dating almost anything else in the book). The author demonstrates his accomplishments as a poet by quoting snatches of his own verses in Arabic and Persian.

The work was first brought to the attention of the Western world by A. Sprenger, who relied on it heavily for his exposition of routes in Arabia. F. Hunter in his book on Aden included a translation by S. B. Miles of a long passage in *Taʾrīkh al-Mustabṣir*. C. de Landberg printed a number of excerpts from the Arabic text with translations in French. G. Ferrand made a French translation of material on Aden. Before editing the complete work, Löfgren published the section devoted to Aden in his *Arabische Texte* (1936), which should still be consulted for its elaborate notes.

The two candidates for the authorship of *Taʾrīkh al-Mustabṣir* are not the only men on record bearing the name Ibn al-Mudjāwir. Another was Nadjm al-Dīn Abu 'l-Fatḥ Yūsuf b. al-Ḥusayn Ibn al-Mudjāwir al-Shīrāzī, whose father had come to Damascus from Shīrāz. As a teacher of boys in Damascus, Yūsuf attracted the attention of Saladin, who appointed him tutor to his son al-ʿAzīz ʿUthmān. When al-ʿAzīz became sovereign of Egypt, he made Yūsuf his vizier. This Yūsuf died in 601, the year of the birth of Yūsuf b. Yaʿḳūb Ibn al-Mudjāwir. The family of Banu 'l-Mudjāwir in Damascus was said to have received its name from an ancestor who preferred residing in Mecca (*al-mudjāwara*) to the earthly paradise of the Syrian capital.

IBN MUFARRIGH, Abū ʿUthmān Yazīd b. Ziyād b. Rabīʿa b. Mufarrigh al-Ḥimyarī, minor poet of Baṣra in the 1st/7th century. There are doubts about his Ḥimyarī origin, and it is possible that his ancestor Mufarrigh was a slave. Ibn Mufar-

righ's date of birth is not known, and the earliest traditions about him tell of his romantic attachment to a Persian woman of Ahwāz in approximately the years 36-40/657-60. Later he was attached to ʿUbayd Allāh b. Abī Bakra [*q.v.*] and Saʿīd b. ʿUthmān b. ʿAffān, but his career took a completely different direction from the time when he decided to follow ʿAbbād b. Ziyād [*q.v.*] to Sidjistān, in 54/674; their relations very soon became embittered, and the poet spent some time in prison; after his release he fled but was forced to wander from town to town, hurling invectives against the family of Ziyād. He was hunted down at Baṣra and arrested by ʿUbayd Allāh b. Ziyād [*q.v.*], who found an original way of punishing him: after forcing him to swallow a purgative, he had him mounted on a donkey to which he had tied a sow and a cat, and this grotesque procession was made to proceed through the streets of the town. Ibn Mufarrigh was then sent back to ʿAbbād, who put him into prison again, and was released only on the intervention of the Yemenīs of Damascus. Yazīd b. Muʿāwiya finally granted him his favour and, after obtaining the pardon of ʿUbayd Allāh b. Ziyād, he was permitted to retire to Kirmān. In 64/684, on the death of Yazīd, Ibn Mufarrigh returned to his native town, from which ʿUbayd Allāh had been driven out, thus taking an easy revenge. He died in 69/689, during the epidemic of plague.

Although the adventures of Ibn Mufarrigh have been somewhat embroidered by legend, his life was nevertheless full of incident and this is reflected in the poems which have survived. Although he was probably originally destined to lead the uneventful existence of a provincial poet, whose chief preoccupation would be to secure for himself the bounty of the local aristocracy, he became, through the pressure of unforeseen circumstances, a sort of polemical poet whose works, more valuable for their content than for their form, owe their partial preservation to the attacks which they contain against the family of Ziyād and, indirectly, against the Umayyads. This opposition, which was the result of the bad treatment he received rather than of a systematic hostility, is nevertheless the sign of a belligerent temperament, which was to cause the poet's descendants to take sides in an even more definite fashion; in fact his son Muḥammad was to be a Khāridjī, and his grandson, Ismāʿīl, became notorious as a Shīʿī poet under the name of al-Sayyid al-Ḥimyarī [*q.v.*].

The *Dīwān* of Ibn Mufarrigh does not seem to have been assembled, and there remain of his work only about 300 verses scattered in works of *adab*, grammar and lexicography (for he is cited as an authority, particularly on the use of *hādhā* for *al-ladhī*, in fragment xxxi, 1, and on the name of his mule, ʿAdas). The love poems of his youth and the panegyrics of his benefactors are devoid of any originality, but the invectives launched against his enemies on the other hand contain some original expressions which delighted the population of Baṣra, which was hostile to ʿUbayd Allāh b. Ziyād; they contain also three hemistichs in Persian, which prove that this language was well known in Baṣra. Finally it should be mentioned that al-Aṣmaʿī is said to have accused him of having invented the biography and the poems attributed to the Tubbaʿ [*q.v.*]; but nothing certain is known about this.

IBN MUFLIḤ, Shams al-Dīn Abū ʿAbd Allāh Muḥammad b. Mufliḥ al-Maḳdisī, Ḥanbalī jurisconsult who stands at the head of a large family of jurisconsults, the last of whom died in the first half of the 11th/17th century. Shams al-Dīn married the daughter of the Ḥanbalī *Ḳāḍi 'l-ḳuḍāt* Djamāl al-Dīn al-Mardāwī (700-769/1300-1367) and, according to his biographers, had seven children from this marriage, both boys and girls. The genealogy which emerges from the biographical sources available to us shows that he had five sons and that the family died out in 1038/1628 (or 1035) with Shihāb al-Dīn Aḥmad, who lived to be 99 years of age and whose son ʿAbd al-Laṭīf (d. 1036/1626, or 1035) died during the lifetime of the father. (For father and son, see Shaṭṭī, *Mukhtaṣar ṭabaḳāt al-ḥanābila*, Damascus 1339/1921, 101-3).

Shams al-Dīn is one of the most prolific writers of the Ḥanbalī school of his period. His extant works have preserved for us much that has been lost of earlier Ḥanbalī works, notably his *Ādāb sharʿiyya* (3 vols., Cairo 1348/1930) which contains many excerpts of *Kitāb al-Funūn* of Ibn ʿAḳīl [*q.v.*], to mention only one important instance. His work on legal methodology, *Kitāb Uṣūl al-fiḳh*, has been preserved in manuscript (Berlin 4399) and his *Kitāb al-Furūʿ* (3 vols., 1339/1921) is one of the most important Ḥanbalī works for the establishment of the true legal doctrine of Aḥmad b. Ḥanbal. After a life of writing and teaching in Damascus in three Ḥanbalī *madrasas*, al-Djawziyya, al-Ṣāḥibiyya and al-ʿUmariyya, he died in 763/1362.

The similarity of some of the names among the descendants of Shams al-Dīn is liable to lead to confusion, especially as regards those named Burhān al-Dīn Ibrāhīm, of whom there are five.

Burhān al-Dīn Ibrāhīm, who died in 803/1400, is the son of Shams al-Dīn and has the additional *laḳab* of Taḳī al-Dīn. He held the post of *ḳāḍi 'l-ḳuḍāt* and wrote a history of the Ḥanbalī school, *Ṭabaḳāt aṣḥāb al-Imām Aḥmad*, the greater part of which is said to have been destroyed in a fire. This is not the work used extensively by Nuʿaymī in his *Dāris fī taʾrīkh al-madāris*. (On him, see Ibn al-ʿImād, *Shadharāt*, vii, 22-3). This Burhān al-Dīn had a grandson (great-grandson of Shams al-Dīn) of the same name, who died in 917/1511 (see *Shadharāt*, viii, 77). A third Burhān al-Dīn was the grandson of Shams al-Dīn and died in 876/1471 (see *Shadharāt*, vii, 321). Another great-grandson of Shams al-Dīn was also a *ḳāḍī 'l-ḳuḍāt* like his ancestor, the first Burhān al-Dīn, and like him he wrote a history of the Ḥanbalī school, entitled *al-Maḳṣad al-arshad fī tardjamat aṣḥāb Aḥmad*, used extensively by Nuʿaymī in his *Dāris* (see *Shadharāt*, vii, 338-9; for Nuʿaymī, see *Bibl.*). The latter's grandson is the last known Burhān al-Dīn Ibrāhīm and died in 969/1561.

One of the last Ibn Mufliḥs, Akmal al-Dīn Muḥammad (930-1011/1523-1602), wrote a number of historical tracts dealing with Damascus and Cairo,

including an abridgment of Abū Shāma's *Akhbār al-dawlatayn* (see Shaṭṭī, *Mukhtaṣar*, 93-5).

Bibliography: For Shams al-Dīn Ibn Mufliḥ see Brockelmann, I, 107, S II, 129, and the bibliography cited there, to which should be added: Muḥammad Djamīl al-Shaṭṭī, *Mukhtaṣar ṭabaḳāt al-ḥanābila*, 62-3; Nuʿaymī, *al-Dāris fī taʾrīkh al-madāris*, 2 vols., Damascus 1948-51, index, s.v. On the place of Shams al-Dīn Ibn Mufliḥ in the history of the Ḥanbalī school, see H. Laoust, *Le Ḥanbalisme sous les Mamlouks Bahrides*, in *REI*, xxviii (1960), 68-9, and notes 369-70. On the place of the *ṭabaḳāt*-works of the two Burhān al-Dīns in the history of such works by the Ḥanbalīs, see G. Makdisi, *Ibn ʿAqīl et la résurgence de l'islam traditionaliste au XIe siècle* (PIFD, 1963), 55 ff. (nos. 7 and 8). For additional information on various members of the family, see Nuʿaymī, *Dāris*, index, s.v. Mufliḥ. (G. Makdisi)

IBN MUḤRIZ, Abu 'l-Khaṭṭāb Muslim (or Salm, or ʿAbd Allāh) b. Muḥriz, famous musician and singer of Mecca, who lived in the 1st-2nd/7th-8th centuries. A *mawlā* of Persian origin of the ʿAbd al-Dār b. Ḳuṣayy and the son of a *sādin* of the Kaʿba, he was first the pupil of Ibn Misdjaḥ [*q.v.*], and then of ʿAzzat al-Maylāʾ [*q.v.*], going to Medina to receive lessons from her; he then completed his musical education in Persia and Syria, where he studied Greek music. He is said to have later chosen what seemed best to him from these different musical traditions and it is on this eclecticism that his fame rests. He is credited with the invention of the rhythmic mode known as *ramal* [*q.v.*]. He was known as Ṣannādj al-ʿArab (from *ṣandj*, a kind of Persian harp) and is classed immediately after Ibn Suraydj [*q.v.*]; he does not, however, seem to have appeared much in public, because of the leprosy with which he was afflicted, and seems to have been content to have his compositions performed by a slave-girl musician. It is probable therefore that he never attended the court at Damascus, although a passage of al-Masʿūdī (*Murūdj*, vi, 4) might imply that he was one of the musicians in the entourage of al-Walīd b. Yazīd. The date of his death is unknown, but F. Bustānī puts it at about 140/757.

Bibliography: H. G. Farmer, *A history of Arabian music*, London 1929, 78-9 and index; *Aghānī*, Beirut ed., i, 352-6; F. Bustānī, *Dāʾirat al-maʿārif*, iv, 23. (Ed.)

IBN AL-MUḲAFFAʿ, Arabic author of Persian origin, one of the first translators into Arabic of literary works of the Indian and Iranian civilizations, and one of the creators of Arabic literary prose. He was born in about 102/720, probably at Djūr, in Fārs (later Fīrūzābād), of a noble Iranian family: his father Dādōe, also known by the Muslim name of al-Mubārak, was a tax-collector under al-Ḥadjdjādj or Khālid al-Ḳasrī; having been put to torture on account of his misappropriations, he was as a result given the surname al-Muḳaffaʿ "the crippled", which passed into the name of his son. The latter was called Rōzbih and, on embracing Islam (which he seems to have done at quite a mature age), he took the name ʿAbd Allāh b. al-Muḳaffaʿ by which he is known to posterity. At first he was secretary to Umayyad governors and officers in Kirmān, where he appears to have amassed a considerable fortune, and on the coming of the ʿAbbāsids he attached himself to the service of ʿĪsā b. ʿAlī, uncle of al-Manṣūr, whose brother Sulaymān was, under al-Saffāḥ, governor of Baṣra. Ibn al-Muḳaffaʿ divided the best years of his life between that town and Kūfa, the *miṣrān*[1] of ʿIrāḳ before the founding of Baghdād, frequented the society of men of letters and wits such as Muṭīʿ b. Iyās, Wāliba b. Ḥubāb, Ḥammād ʿAdjrad, Bashshār b. Burd and still others, all persons of loose morals and suspected of *zandaḳa*. His premature and tragic end, which probably occurred in 139/756 or soon after that date, seems, however, to have been brought about not by religious but by political and personal causes. Ibn al-Muḳaffaʿ is said to have been ordered by his patrons to draft the text of the *amān* which the caliph al-Manṣūr had consented to grant to their brother ʿAbd Allāh b. ʿAlī, who had revolted; and the secretary had performed this task with such zeal, hemming in with such binding commitments and such solemn oaths the promise of pardon to the rebel which the caliph himself was to sign, that it aroused the resentment of the suspicious al-Manṣūr. He gave orders for the removal of this presumptuous secretary, and the new governor of Baṣra, Sufyān b. Muʿāwiya al-Muhallabī, who himself had long-standing personal grievances against Ibn al-Muḳaffaʿ, took this opportunity to exact the most cruel vengeance: Ibn al-Muḳaffaʿ was taken to the governor's palace and put to death under appalling torture, his patrons ʿĪsā and Sulaymān protesting in vain to the caliph at the murder of their *mawlā*. It seems that a son of his, Muḥammad, was later one of al-Manṣūr's secretaries, and it is to him that should be attributed the versions (from Greek or Syriac into Arabic) of certain books of logic of Aristotle (or rather of ancient commentaries on these books) traditionally connected with the more famous name of his father.

Though he died at the age of thirty-six, Ibn al-Muḳaffaʿ left behind him a considerable quantity of translations and original works, only part of which has survived, and even that in a form that is somewhat uncertain. We consider first his version of the *Kalīla wa-Dimna* [*q.v.*], the celebrated collection of Indian fables going back to the *Pančatantra* and the *Tantrākhyāyka*, which this writer turned into Arabic from the Pahlavi version made in the time of Chosroes Anōsharwān. Without dwelling on the history of this well-known work, of which the Arabic version of Ibn al-Muḳaffaʿ is the principal link in its migration to the West, we merely recall that we possess no reliable and authentic text of this version, such as it must have been when fresh from the pen of this its first translator, and it appears to be impossible that it can ever be successfully reconstructed: the earliest manuscripts available (that of Aya Sofya of the 7th/13th century, reproduced by the ʿAzzām edition, and the Syrian of the 8th/14th century, followed by Cheikho), and the quotations by other authors, in fact present us with a tradition so varied and so much re-written, both in regard to the form and even the substance of the work, that there is perhaps not a single page where one may be certain of finding the original version of Ibn al-Muḳaffaʿ in its entirety. Attempts have been made to discover at least what part was the work of the translator in his treatment of the material, and in the additions and modifications that he may have introduced into the Pahlavi text (of which we can form some idea, thanks to the ancient Syriac version of the 6th century A.D. which has been preserved); it has been claimed that the hand of Ibn al-Muḳaffaʿ may be seen particularly in the celebrated autobiography of Burzōē (the translator from Sanscrit into Pahlavi) placed at the beginning of the work, with its criticism of religions and its defence of

human reason. A passage from al-Bīrūnī (*India*, 76) indeed leads one to attribute to the Arabic translator the addition of this sceptical chapter, which contrasts with the Indian basis of *Kalīla wa-Dimna* (a basis which otherwise is faithfully maintained in the version, and is hardly at all Islamized), confirming the supposition of Nöldeke, who saw in it the hand of our *zindīḳ*; but the same freedom of spirit and the same criticism of the revealed religions has been noticed by P. Kraus in other writings of the period and environment of Chosroes Anōs͟harwān, such as the *Logic* in Syriac of Paulus Persa, which, while not excluding that Ibn al-Muḳaffaᶜ may have developed these ideas independently, would reduce the originality of his contribution on this subject. To the translator is also attributed the addition *ex novo* of the chapter on *The trial of Dimna*, the expression of a moral conscience shocked by the cynism of the story of the Lion and the Bull, and perhaps also of the last four chapters of the Arabic text, which are missing from the Syriac version but which incidentally possess features that are quite certainly Indian. To sum up, the translator's own personal share in this his most celebrated work remains somewhat indefinite and requires caution, but this in no way detracts from his unrivalled cultural achievement in having been the first to present this literary jewel from India to Arabo-Islamic civilization, and through it to the Byzantine and Latin West.

If it is difficult to recognize with any certainly the style and spirit of Ibn al-Muḳaffaᶜ in the Arabic translation of the *Kalīla wa-Dimna*, it is no less difficult to identify these features in the group of works representing the ancient history, culture and civilization of Iran which he is believed to have similarly translated from Pahlavi into Arabic: we refer to the *K͟hudāynāma*, the royal chronicle composed under the Sāsānids and gathering together the fabulous and historical traditions of pre-Muslim Iran; the *Āʾin-nāma*, a picture of the institutions, customs and hierarchy of the Court in the same period; and a *Tād͟jnāma*, the translation of which, as of the other two works, is attributed in the *Fihrist* to Ibn al-Muḳaffaᶜ, the third work being concerned with the life of Anōs͟harwān (though the extracts from it which survive are concerned rather with Parwīz). From all these translations only a few fragments have survived, and it is not even entirely certain, although it is very probable, that these are indeed the versions made by Ibn al-Muḳaffaᶜ. It was primarily Ibn Ḳutayba, in his two works *ᶜUyūn al-ak͟hbār* and *Maᶜārif*, who preserved extracts of varying length from what he calls the *Siyar mulūk al-ᶜAd͟jam* (that is to say, the *K͟hudāynāma*), the *Āʾin* and the *Tād͟j*, without ever expressly mentioning the name of their translator. These passages deal with the dynastic, military and social history of ancient Iran, and recur in almost identical form in other historians such as Eutychius (Saᶜīd b. al-Biṭrīḳ) and al-Ṭabarī who, together with Ibn Ḳutayba, drew from a common source. This source, in all probability the versions of Ibn al-Muḳaffaᶜ, thus reveals itself as the principal means of transmission to the Arabs of the epic, history and institutions of Iran which were subsequently to be the subject of many elaborations and developments, all more or less the work of the imagination, in later authors (al-Masᶜūdī, al-T͟haᶜālibī, etc.); while the same material passed directly from these ancient works in Pahlavi, through versions in neo-Persian, to Firdawsī's epic. As with the Indian fables of Bidpai, the part taken by Ibn al-Muḳaffaᶜ in transmitting to Arabo-Islamic culture this ancient Iranian tradition (to which also belong a *Kitāb Mazdak* and the famous letter of Tansar which too is attributed to him) is of the very greatest importance, although the personal and stylistic nature of his contribution is very difficult to evaluate.

A more direct and well-founded verdict on this very celebrated author, whose works of translation, having been revised or lost, seem to conceal his exact physiognomy from us, can, however, be based on certain original writings: the *Adab kabīr* (excluding the *Adab ṣag͟hīr* which, as Richter and Gabrieli have shown, is merely a pseudepigraphic cento of *ḥikam*, drawn partly from *Kalīla wa-Dimna*) and the *Risāla* or *Kitāb fi 'l-Ṣaḥāba*, the historical importance of which has recently been recognized. The *Adab kabīr* is a treatise offering advice to the prince (and in this sense it is one of the earliest Arabic *Fürstenspiegel*), to the courtier and to the worldly man of fashion, drawing its wisdom from literary sources, of the type of the Iranian *andarz*, but also from direct experience from the author's life. Its morality is entirely practical, its counsels seldom attain a high ethical level and are restricted to the sphere of *savoir vivre*, shrewdness and the exploitation of the human passions for one's own advantage. Pity and religious unction are wholly absent from it, and its view of the world would be more fitting to a man of the Renaissance than to one of the mediaeval Muslim world. While the *Adab kabīr* is free from any reference to a definite historical milieu, the *Risāla fi 'l-Ṣaḥāba* (included by Ibn Ṭayfūr (d. 280/893) in his anthology *Kitāb al-Mant͟hūr wa 'l-manẓūm*) is a topical political pamphlet of the highest importance. Ibn al-Muḳaffaᶜ here addresses himself to a caliph who is not named but who without doubt is al-Manṣūr, submitting to him a whole series of reflections on certain political religious and social problems arising from his time and milieu, and examined by the writer with a breadth and originality of mind that are very remarkable. The treatment of the military elite of K͟hurāsānīs and their relations with the caliph, the choice of high officials and courtiers, the position of the ᶜIrāḳīs and Syrians at the start of the ᶜAbbāsid dynasty, juridical and administrative discrepancies —all these give rise to remarks and suggestions that are doubly interesting, both for the writer's own ideas and for the light which his proposals throw on the situation. Particular interest has been aroused, amongst others, by the suggestion of Ibn al-Muḳaffaᶜ to the caliph that he should undertake a codification of the laws and juridical decrees, thus unifying under his own authority the divergencies between the schools and the different milieus of Muslim society. This subordination of the s͟harīᶜa to the political authority, advocated by Ibn al-Muḳaffaᶜ, was not to be realized, and the development of Muslim law followed the opposite path of *id͟jmāᶜ*, in theory shielded from any intervention by the *sulṭān*, which in practice led to *fiḳh* being fixed, out of touch with living reality. But even so, it is very remarkable that a contrary process should have been envisaged by this isolated voice, whether it be through the personal convictions of Ibn al-Muḳaffaᶜ, or whether, as has been supposed, he lent his pen to the programmes of others. The fact remains that these proposals so boldly advanced must have impressed themselves on the caliph's attention, and perhaps may even have offended his autocratic susceptibilities. It has even been suggested (Sourdel) that this pamphlet, although conceived and presented in a spirit of profound loyalty, may have contributed to the

disgrace and lamentable end of the writer. However that may be, the *Adab kabīr* and the *Risāla fi 'l-Ṣaḥāba* are the most reliable items of evidence to enable us to form a judgement about the style of Ibn al-Muḳaffaʿ—a supple and elegant style, although still marked by a certain archaic dryness: these two texts remain among the most fascinating innovations in Arabic prose *adab*, in the classical period, along with the *rasāʾil* of ʿAbd al-Ḥamīd b. Yaḥyā and other earlier *kuttāb*.

One highly individual aspect of the spiritual interests of this great writer is, finally, revealed by the fragments (if they are authentic, as we believe) of a religious work, a Manichaean apologia, preserved in the refutation made a century later by the Zaydī *imām* al-Ḳāsim b. Ibrāhīm, in a treatise published by M. Guidi. We were already familiar with the charges brought against Ibn al-Muḳaffaʿ of having attempted to make an "imitation" of the sacred Book of Islam: the work refuted by al-Ḳāsim appears rather, in our view, to be an attack on Muḥammad, the Ḳurʾān and Islam in the name of another faith, namely the Manichaean faith which several of the friends of Ibn al-Muḳaffaʿ had adopted and of which the writer himself was suspected. The cosmogony and mythology of the religion of Mani were indeed expatiated upon in this work, but what above all is characteristic of it is the rationalistic criticism of fideism in general, such as emerges in one of the longer passages quoted by al-Ḳāsim (26-7 of the text) and presents a striking analogy with certain passages from the autobiography of Burzōē in *Kalīla wa-Dimna*. The contradiction between this rationalism and adherence to the Manichaean faith can be resolved by regarding the rational and philosophical basis of the latter, beneath its colourful mythology, as a powerful gnostic effort to provide a satisfactory solution to the mystery of the human condition and the universe. Yet we are aware of the problems that remain unanswered in this respect, in view of the obscurity that cloaks the spiritual evolution of Ibn al-Muḳaffaʿ, the uncertain chronology of his writings, and even the authenticity of certain of them.

Although surrounded by these various reservations necessitated by the state of our knowledge, the figure of this writer appears before us as one of the most brilliant at the opening of the classical age of Arabic literature. Himself of non-Arab blood, Ibn al-Muḳaffaʿ must have profoundly appreciated the cultural values of the Iranian civilization from which he sprang, and have endeavoured to make them known to the Arab world which had conquered his native land and relegated the religion of his fathers to a subsidiary position. In this sense, he can be regarded as a precursor of the Shuʿūbiyya [*q.v.*], although no polemical writing of his has survived on the subject of the superiority of the *shuʿūb*, or, more specifically, of the Iranians and Indians, over the Arabs. He did in fact demonstrate this superiority, by revealing to the Arabs the treasures of India and Persia, and by himself following a refined and cultivated way of life (as several anecdotes relate), which incidentally characterized the whole new pro-Iranian élite of the early ʿAbbāsid period. But what sets him apart from the real Shuʿūbiyya is his love for the conquerors' language, which the Shuʿūbiyya themselves used in their anti-Arab polemics, but without making any impassioned study of it and without achieving the mastery over it that this *mawlā* from Fārs displayed so successfully. His works, both as translator and original writer, soon became classic in the great ʿAbbāsid civilization and, by their form as well as their subject-matter, exerted an influence that cannot be exaggerated on the cultural interests and ideals of the succeeding generations. Today, it is even possible to speak of an Ibn al-Muḳaffaʿ myth which has dominated the renaissance of neo-Arabic literature. Even when stripped of this myth, the figure of this Persian, the master and almost the Demiurge of the language of the Ḳurʾān on the eve of its most astonishing flowering, retains a position of the very highest eminence in the literary history of Arabism.

Bibliography: The best modern editions of the text of *Kalīla wa-Dimna* are those of Cheikho, Beirut 1905 (2nd ed. 1923), and of ʿA. ʿAzzām, Cairo 1941. French translation by A. Miquel, Paris 1957, Russian by Kračkovskij and Kuzmin, Moscow-Leningrad 1934, Italian by M. M. Moreno, San Remo 1910. The surviving translations of Iranian material have been studied by Th. Nöldeke (*Das iranische Nationalepos* in *Gr. Ir. Ph.*, ii, 130 ff., and in *Geschichte der Perser und Araber*) and by K. Inostrantsev, *Persidskaya literaturnaya traditsia v pervie veka Islama*, in *Mémoires de l'Acad. des Sciences de St. Pétersbourg*, 8th ser., viii (reprinted in the volume *Sasanidskie Etiudi*, St. Petersburg 1909) (see further ḤAMĀSA ii). The *Adab kabīr* has been published by M. Kurd ʿAlī in his *Rasāʾil al-bulaghāʾ*, Cairo 1913, by A. Zeki, Alexandria 1912, and in other modern editions of no critical value (tr. Rescher, in *MSOS As.* (1917), 35-82). The *Risāla fi 'l-Ṣaḥāba* is published by Kurd ʿAlī in the *Rasāʾil* mentioned above. The anti-Manichaean refutation of al-Ḳāsim, with the fragments of the apologia of Ibn al-Muḳaffaʿ, is published by M. Guidi, *La lotta fra l'Islam e il Manicheismo*, Rome 1927.

On Ibn al-Muḳaffaʿ and his work, ʿAbbās Iḳbāl, *Sharḥ-i ḥāl-i ʿAbd Allāh Ibn al-Muḳaffaʿ*, Berlin 1926 (the best of the numerous modern works by Orientals on this subject); F. Gabrieli, *L'opera di Ibn al-Muḳaffaʿ*, in *RSO*, xiii (1932), 197-247; P. Kraus, *Zu Ibn al-Muḳaffaʿ*, *ibid.*, xiv (1934), 1-20; C. A. Nallino, *Noterelle su Ibn al-Muḳaffaʿ e suo figlio*, *ibid.*, 130-4; G. Richter, *Studien zur Geschichte der älteren arabischen Fürstenspiegel*, Leipzig 1932, 4-32; idem, *Über das kleine Adab-buch des Ibn al-Muqaffaʿ*, in *Isl.*, xix (1931), 278-81; S. D. Goitein, *A turning point in the History of the Islamic state* (*apropos of Ibn al-M.'s Kitāb aṣ-Ṣaḥāba*), in *IC*, xxiii (1949), 120-35, repr. in *Studies in Islamic history and institutions*, Leiden 1966, 149-67; D. Sourdel, *La biographie d'Ibn al-Muqaffaʿ d'après les sources anciennes*, in *Arabica*, i (1954), 307-23; P. Charles-Dominique, *Le système éthique d'Ibn al-Muqaffaʿ d'après ses deux épîtres dites "al-Ṣaghīr" et "al-Kabīr"*, in *Arabica*, xii (1965), 45-66; M'hamed Ben Ghazi, *Un humaniste du IIe/VIIIe siècle, ʿAbd Allāh ibn al-Muqaffaʿ*, thesis Paris 1957 (about 550 pp. of typescript). (F. GABRIELI)

IBN AL-MUḲAFFAʿ, SEVERUS (SĀWĪRIS), his name before he became a monk being Abu ('l-)Bishr. It is not known why he was called Ibn al-Muḳaffaʿ ("son of the cripple"). He gave up his occupation as a clerk (*kātib*), which for a Copt was an important step towards promotion in a career in the administration, in order to become a monk. No biography of him exists. It is however known that he was appointed by the patriarch Anbā Maḳḳāra (932-52 A.D.) to be bishop of Ashmunayn, most probably before he had reached his fiftieth year (the age

legally fixed in the Coptic church for promotion to a bishopric), since he was outstanding in wisdom and merit and in his life and his deeds. From his own works it can be deduced that he lived for 80 years, which would mean that he was a bishop for about 30 years and that he died during the patriarchate of Philotheus (979-1003 A.D.).

In addition to his native Coptic, Severus also knew Greek, and he was the first Copt to adopt the Arabic language in ecclesiastical literature, as Coptic was gradually superseded by Arabic as the official language of Egypt. His literary activities promoted the religious education of the people: the exposition of the Bible, of everyday morality and of the liturgy. He commented on the special practices of the Copts, and condemned them if they were contrary to the true faith. Severus holds an important place as defender of his church and its teachings. This is to be attributed not only to his tracts and polemical treatises, but still more to his confrontations with Christians of other denominations, and with Muslims and Jews. There is a tradition that he was chosen by the patriarch Aphrām to attend an audience with the Fāṭimid caliph al-Muʿizz, in order to debate in his presence on questions of dogma with a clever Jew, Moses, who was a friend of the vizier Ibn Killis [*q.v.*] (on this episode, see *BSOAS*, xxx/1 (1967), 180, and MŪSĀ B. ALʿĀZĀR). On many other occasions Severus, on the orders of the caliph al-Muʿizz, held discussions on religious questions with Muslim scholars. Especially worthy of mention is the controversy between the Syrian bishop Yuʾannis b. al-Shammāʿ and the caliph al-Muʿizz himself, in the presence of the bishop of Ashmunayn. Severus defended his beliefs also against the Nestorians, in particular against Elias (Iliya) ʿAlī b. ʿUbayd, bishop of Damascus. In 955 he repudiated the polemical arguments raised by the Melkite Saʿīd b. al-Biṭrīḳ (Eutychius) in his history.

The Copts were not unaffected by the great spiritual and religious currents of Islam. From a reference to a lost work of Severus it is known that in one of his books, in a chapter on the attributes of God, he opposed the view ascribed to the Jews and the Muslim Muʿtazilīs concerning the material reality of the Word of God.

Severus's theological treatises were known outside Egypt. Graf refers to an examination and commentary by the Nestorian bishop of Nisibis (Naṣībīn) Īliyā b. Shīnā (975-1045 A.D.) on the ideas of Cyrillus, Severus b. al-Muḳaffaʿ and Saʿīd b. al-Biṭrīḳ.

Severus is best known however for his history of the patriarchs (*Siyar al-bayʿa al-muḳaddasa*), a chronicle which bears his name. During eight years he collected in the monasteries of Wādī al-Naṭrūn and Upper Egypt and in the town of Alexandria (as well as from material in private hands) information about former patriarchs, which was to be found written partly in Greek but mainly in Coptic. It may be presumed that Severus collected the necessary material for the biographies of the patriarchs, beginning with Saint Mark and going up to the fifty-fifth occupant of the see of Alexandria, the patriarch Shenute (859-80 A.D.), without however reducing the work to a unified whole and giving it a formal conclusion. Various Coptic writers occupied themselves with the continuation of the book, taking the biographies up to the patriarch Cyrillus b. Laḳlaḳ (1236-41). There follow a few brief statements taken from manuscripts concerning the patriarchs up to the 9th/15th century; this material however is already known from various other works, such as those of Abu 'l-Barakāt and of al-Maḳrīzī [*qq.v.*]. Severus's History of the Patriarchs is an indispensable source for the history of Egypt, of the Egyptian national church, of the Abyssinian church and of Christianity in Nubia. This chronicle also adds many details and precise data to the source material for the political, social and economic history of Egypt. Some sections of the book have been many times published or used (*e.g.*, by Renaudot, Seybold, and Evett). The latest and most careful edition of the book, with English translation, is being undertaken by A. S. Atiya, Jassa ʿAbd al-Masīḥ and O. H. E. Burmester.

Severus's works consist of 20 or 26 titles, which are listed by Brockelmann and, in more detail, by Graf, see *Bibl.*; it should however be noted that neither was able to take account of all the manuscripts existing in Egypt.

IBN MUKARRAM [see IBN MANẒŪR].

IBN MUḲLA, ABŪ ʿALĪ MUḤAMMAD B. ʿALĪ, vizier of the ʿAbbāsid period. Born in Baghdād in 272/885-6, he began his career as a collector of land-taxes in Fārs, then was given an important post as secretary in the central administration when Ibn al-Furāt [*q.v.*] became vizier in 296/908; he was in fact in charge of the opening and the despatch of official letters. He also collaborated closely with Ibn al-Furāt during the latter's second vizierate (from 304/917 to 306/919), but had no compunction about working against the interests of his master, which explains why he did not re-appear among the administrative staff during Ibn al-Furāt's third vizierate. However ʿAlī b. ʿĪsā [*q.v.*], during his second vizierate (305-16/917-28), appointed him to take charge of the *dīwān* of public estates. It was then that, having succeeded in attaching himself to the chamberlain Naṣr and in gaining his good opinion, he managed in 316/928 to get himself appointed to the vizierate, which he retained until 318/930. Although he was capable of dealing well enough with the financial difficulties which arose at this time, he was nevertheless unable to put an end to the rivalries between military leaders, and his vizierate saw the abortive palace revolution of 317/929, in the course of which al-Muḳtadir was temporarily replaced by his brother. Ibn Muḳla continued as vizier, but was obliged to act on the advice of ʿAlī b. ʿĪsā, who was moreover put specially in charge of the jurisdiction of the *maẓālim* court, and his inability to free himself from the tutelage of the commander-in-chief Muʾnis led to his fall.

Ibn Muḳla was re-appointed to the vizierate by al-Ḳāhir and was in charge of the government again for about six months (320-1/932-3). But the situation was very unsettled, and he encountered the opposition of the caliph; his intrigues, aimed at deposing al-Ḳāhir, failed, and he was obliged to flee. Some months later however, he succeeded in getting the caliph imprisoned and deposed; this was his third vizierate, which lasted from 322/934 to 324/936 during the reign of the new caliph al-Rāḍī. In spite of his cunning, the vizier did not succeed in imposing his authority on the Ḥamdānid *amīrs* of al-Mawṣil, or on the governor of Wāsiṭ, Ibn Rāʾiḳ, and was unable to arrest the economic and financial crisis. His disgrace really marked the end of the independent

rule of the caliphs: some months afterwards there was appointed the first *amīr al-umarā'* [*q.v.*]. Ibn Muḳla's efforts had produced no result, unless it was in the field of religion, where he gave effective support to the Sunnī reaction which took place after the end of the caliphate of al-Muḳtadir.

When Ibn Rā'iḳ was appointed as *amīr al-umarā'*, Ibn Muḳla's possessions had been confiscated, together with those of his son, who had worked efficiently as his assistant during his second vizierate. As a protest, he intrigued against the new *amīr al-umarā'* to such an extent that the caliph had him imprisoned and Ibn Rā'iḳ had his right hand cut off. Some time later, when the *amīr* Badjkam was approaching Baghdād, Ibn Muḳla's tongue was cut out, and he died, neglected, in prison on 10 Shawwāl 328/20 July 940.

In addition to his political activities, Ibn Muḳla was a famous calligrapher. There is attributed to him, or to his brother, the invention of a special kind of writing, the "proportioned script" (*al-khaṭṭ al-mansūb*), which was later improved by Ibn al-Bawwāb [*q.v.*].

(D. Sourdel)

IBN MULDJAM, ʿAbd al-Raḥmān al-Murādī, murderer of the caliph ʿAlī in 40/661. Three Khāridjīs, ʿAbd al-Raḥmān b. Muldjam, considered as belonging to Kinda, al-Burak b. ʿAbd Allāh and ʿAmr b. Bakr al-Tamīmī, having met at Mecca, had long discussions, after the end of the Pilgrimage ceremonies, on the deplorable situation into which the Muslims had fallen because of ʿAlī, Muʿāwiya and ʿAmr b. al-ʿĀṣ, whom they regarded as being in error; spurred by an ardent desire to avenge their companions massacred at al-Nahrawān [*q.v.*], they swore an oath to kill these three persons. Each of them having chosen his future victim and agreed on the same day (17 Ramaḍān) on which to act, they went to Kūfa, Damascus and Egypt respectively. At Kūfa, Ibn Muldjam mixed with his fellow tribesmen of Kinda, but took care not to let them know of his plan for fear that his secret might become known. One day he met some members of the tribe of Taym al-Ribāb (who were mourning the ten of their members who had been killed at al-Nahrawān) and in particular a woman, Ḳaṭāmi bint al-Shidjna. Impressed by her great beauty, he asked for her hand in marriage; she accepted, but on condition that his wedding gift should consist of three thousand *dirhams*, a slave, a woman servant and the murder of ʿAlī; she had lost her father and brother at al-Nahrawān and wished for vengeance; she therefore not only persisted in her request, but herself helped in the accomplishment of the murder by arranging for one of her tribe, Wardān, to help Ibn Muldjam; on his side the latter persuaded a man of the Banū Ashdjaʿ, named Shabīb b. Badjara, to take part in his enterprise. The night before the attempt, Ḳaṭāmi received a visit from the conspirators in a tent inside the Great Mosque, where she had retreated to perform her devotions, and bound their chests with a silken band (a strange detail for which no explanation has been found). Armed with swords dipped in poison, the three men stationed themselves before dawn opposite the door from which ʿAlī would come out in order to perform the morning prayer in the Great Mosque. As soon as the caliph appeared, Shabīb attacked him, but, his sword having hit the jamb or the architrave of the door and missed its target, he fled and was lost among the crowd. Wardān also slipped away, but, returning to his house, he was killed there by a cousin who had become suspicious on seeing him untie his silken band. Thus it was Ibn Muldjam only who, with the words "Judgement belongs to God, O ʿAlī, and not to thee and thy companions", succeeded in wounding ʿAlī on the crown of his head, after which he attempted to flee, but was soon thrown to the ground by a Hamdānī, Abū Admā'. Led into the presence of ʿAlī, who had meanwhile returned to his house, he declared that he had been sharpening his sword for forty days and had asked God to kill the most evil of men. ʿAlī replied that he saw Ibn Muldjam himself being killed with this sword and that he judged him to be the most evil of men.

The details given so far are a summary of the traditions related by al-Ṭabarī; in the other sources are found other details and variants from which interesting observations may be made.

The conspiracy and the names of the conspirators. According to the *Istīʿāb* (481) only, the plan to kill ʿAlī was conceived by a Khāridjī survivor of al-Nahrawān. Some verses by the poet al-Nadjāshī (al-Balādhurī, 585v.) praise Muʿāwiya for inciting Ibn Muldjam to commit this crime. The murderer of ʿAlī, known under the patronymic of Ibn Muldjam, was in fact called ʿAbd al-Raḥmān b. ʿAmr b. Muldjam (al-Ṭabarī, 3468; al-Balādhurī, 576v; Ibn Kathīr, 325); several *nisba*s are attributed to him: al-Ḥimyarī, al-Murādī, and al-Kindī since he was a connexion (*ḥalīf*) of the Banū Djabala of Kinda (Ibn Saʿd, 23; al-Balādhurī, 577v; Ibn al-Athīr, *Usd*, 36) or perhaps of the Banū Ḥanīfa of Kinda (Ibn Kathīr, 325), and even al-Miṣrī (Ibn Kathīr only, *ibid.*); al-Masʿūdī (426) adds al-Tudjībī (the Tudjīb being a clan of Murād), a *nisba* which the *Istīʿāb* (481, followed by Ibn Shahrāshūb, 93) transforms into al-Tadjūbī, explaining that Tadjūb were a branch of Ḥimyar which had been absorbed by Murād; this source adds a further *nisba*: al-Sakūnī. Al-Burak was a nickname: the real name of the conspirator who offered to kill Muʿāwiya was al-Ḥadjdjādj b. ʿAbd Allāh b. ʿUbayd Allāh, or b. Bakr (according to al-Balādhurī, 576v and 577v) and his *nisba*s were al-Ṣarīmī (al-Balādhurī, 577v; al-Mubarrad, 544, 549, 552; al-Masʿūdī, 427), al-Tamīmī al-Ṣarīmī (Ibn Kathīr, 325); al-Dīnawarī (227) alone refers to this conspirator by the name of al-Nazzāl b. ʿĀmir. The third conspirator, the one who wished to kill ʿAmr b. al-ʿĀṣ, according to Ibn Saʿd (23) was the son of Bukayr (instead of Bakr) and, according to the *Usd* (36), he was called ʿUmar b. Bukayr; his second *nisba* was al-Saʿdī. According to other sources he was a Persian, since they refer to him as Zādawayh or Zādhawayh (al-Mubarrad, 553; al-Balādhurī, 576v, to "Dhādhawayh" adds ʿAmr), a *mawlā* of the Banu 'l-ʿAnbar b. ʿAmr b. Tamīm (al-Balādhurī, 578 r-v, specifies: *mawlā* of the Banū Ḥāritha b. Kaʿb Ibn al-ʿAnbar); al-Dīnawarī differs from all the other sources in calling him ʿAbd Allāh Mālik al-Ṣaydāwī. A tradition of al-Madā'inī widespread among the Khāridjīs (al-Balādhurī, fol. 584v), but which is certainly false (al-Mubarrad, 549), states that all three of the conspirators were sons of Muldjam and were called ʿAbd al-Raḥmān, Ḳays and Yazīd, that their father Muldjam had forbidden them to commit the crime, but that their mother had encouraged them to do it. The conclusion to be drawn from all these variants

is that in general the differences are very slight and may often be explained as variant readings in Arabic; there may therefore be recognized the existence of a fairly precise historical tradition with regard to these fanatics.

ʿAlī's foreknowledge of his fate. ʿAlī had known for a long time that he would be killed, since the Prophet had told him this, or he had himself had a premonition of it (Ibn Saʿd, 22; al-Balāḏhurī, 582r). Several authors, on the basis of numerous traditions, state that Muḥammad (or ʿAlī) had revealed that the latter's beard would be stained with blood flowing from his head (Ibn Saʿd, 21, 22, 23; al-Balāḏhurī, 582 r and v; al-Mubarrad, 544, 579f.; al-Masʿūdī, 440; al-Iṣfahānī, *Maḳātil*, 31; Ibn Shahrāshūb, 93, etc.). Another tradition with several variants explains that, according to Muḥammad, the most evil man among the ancients was he who had killed the camel of the prophet Ṣāliḥ (cf. Ḳurʾān, XCI, 11-12 and XXVI, 155-7) and among his contemporaries, he who would kill ʿAlī; in general it is the latter who speaks of the "most evil of men" (Ibn Saʿd, 22, 23 etc.). The characteristic themes of these two types of traditions (the blood-stained beard and the most evil of men) are sometimes fused into one single account (*e.g.*, Ibn Saʿd, 21; al-Mufīd, 13; Ibn Abi 'l-Ḥadīd, 42). The night preceding the attempt, ʿAlī declared that his destiny was about to be fulfilled, and when he left his house in the morning, geese followed him, cackling; he then said that they were the weepers for his funeral (al-Masʿūdī, 431; al-Yaʿḳūbī, 252; al-Mufīd, 15). It is chiefly the Shīʿī authors who stress the fact that ʿAlī knew of his approaching fate but did not wish to send another Muslim to lead the prayer at the mosque as he was advised to do, and that he finally went to meet his destiny reciting verses on how death is not to be feared (al-Mufīd, 15; Ibn Shahrāshūb, 93).

He was able to predict even more: he guessed Ibn Muldjam's attitude to him and knew in advance that he would be his murderer (al-Yaʿḳūbī, 251; al-Mufīd, 13) or "the most evil of men"; twice or thrice he repulsed Ibn Muldjam, who wished to pay him homage on the occasion of his accession to the caliphate (Ibn Saʿd, 22; al-Balāḏhurī, 582r; *Maḳātil*, 31; al-Mufīd, 13); he and his son Ibn al-Ḥanafiyya shuddered one day when Ibn Muldjam entered the *ḥammām* where they happened to be (Ibn Saʿd, 23; al-Balāḏhurī, 582v; *Usd*, 35); he complained in a poem that the Murādī planned to kill him, whereas he wished to give him gifts (Ibn Saʿd, 22; al-Balāḏhurī, 583v; *Maḳātil*, 31) and indeed did so (*Istīʿāb*, 481). Thus relations between ʿAlī and Ibn Muldjam were strained; nevertheless the caliph took no measures against his enemy (Ibn Saʿd, 22: "Would you kill one who has not yet killed me?"), not even when he was warned of the plot by a member of the Murād (Ibn Saʿd, 22) or by someone who had heard a reference to it from Ibn Muldjam himself (al-Balāḏhurī, 579v; al-Ṭabarī, 3459-60; al-Mubarrad, 549, 552; cf. al-Dīnawarī, 228); he merely replied that every man was guarded by two angels until the moment of his death, which was decided by destiny (al-Balāḏhurī, 582r.).

Ḳaṭāmi. Given the number of sources which mention her, there seems no doubt of the existence of this woman and her belonging to the Taym al-Ribāb; the variants concern mainly the name of her father and some secondary details. Instead of al-Shidjna (or Shidjna, as in Ibn Saʿd, 23, and in a tradition collected by al-Balāḏhurī, 578r), we find ʿAlḳama in al-Balāḏhurī (576 v) and al-Mubarrad (549; to be read perhaps ʿUllafa, since Ibn Durayd, *al-Ishtiḳāḳ*, ed. Wüstenfeld, 114 f., states that she is the sister of Hilāl and al-Mustawrid, the future Khāridjī rebels); or al-Akhḍar (but according to al-Balāḏhurī, 578r, al-Akhḍar was her brother who was killed at al-Nahrawān) b. Shidjna in the *Maḳātil* (32), in al-Mufīd (16), Ibn Shahrāshūb (94); or Sabkha (*sic*) b. ʿAlī b. ʿĀmir b. ʿAwf b. Thaʿlaba b. Saʿd b. Ḏhahl b. Taym al-Ribāb (*Usd*, 36; Ibn Saʿd, 23: ʿAdī instead of ʿAlī). Only al-Masʿūdī (427) states that Ḳaṭāmi was a cousin of Ibn Muldjam and does not mention her belonging to Taym al-Ribāb. The *Istīʿāb* (482) states that her tribe was that of the Banū ʿIdjl b. Lakhīm. Her brother had been killed at al-Nahrawān (al-Balāḏhurī, 576v; *Imāma*, 254), and this brother was called al-Aṣbagh (Ibn Shahrāshūb, 94). Ibn Muldjam married her and, as he was neglecting his plan, it was she who encouraged him to carry it out (al-Balāḏhurī, 576v; *Imāma*, 254; al-Mubarrad, 549; Ibn Kathīr, 326, 328). In Ibn Kathīr (328) there is a variant not found elsewhere: Ḳaṭāmi went with Ibn Muldjam to the mosque and put up a tent for him there. The Shīʿīs, who have to find an explanation for the crime committed against ʿAlī, relate that Ḳaṭāmi prepared special food (drugged?) for the conspirators and that Wardān received a sum of money from an agent of ʿAmr b. al-ʿĀṣ (Ibn Shahrāshūb, 95).

Al-Ashʿath b. Ḳays [*q.v.*] and the conspiracy. Several sources imply that this man was aware of the plot; Ibn Muldjam is said to have spent the preceding night in consultation with him in a corner of the Great Mosque; when dawn approached, he spoke to Ibn Muldjam a phrase which Ḥudjr b. ʿAdī [*q.v.*] interpreted as an allusion to a plot; he then intended to warn the caliph, but he arrived too late. The majority of the sources give the ambiguous phrase "The dawn has risen for thee" but the Shīʿī authors or those of Shīʿī sympathies give it as a clear encouragement to Ibn Muldjam: "Deliverance, deliverance! The dawn has risen for thee" (*Maḳātil*, 33; al-Mufīd, 17; Ibn Abi 'l-Ḥadīd, 43). Variants are that the conversation between Ibn Muldjam and al-Ashʿath took place in the mosque of the latter (Ibn Saʿd, 24; *Usd*, 37), or in his house, and Ḥudjr accused al-Ashʿath: "It is thou who hast killed him" after the murder (al-Balāḏhurī, 579r; al-Mubarrad, 581); Ibn Muldjam stayed for a month with al-Ashʿath sharpening his sword (al-Yaʿḳūbī, 251). Al-Masʿūdī (431) differs from the other authors; according to him, Ibn al-Ashʿath was informed of the plot, but he put the blame for it on Ibn Muldjam. According to another version (al-Mubarrad, 550), he warned ʿAlī, who replied that Ibn Muldjam had not killed him yet. There is thus a whole range of information which varies from outright accusation to a suspicion of complicity and even to an act of loyalty.

Details on the murder. Names of Ibn Muldjam's accomplices and their fates. Instead of 17 Ramaḍān, various dates are given as that fixed for the murder of ʿAlī: *Imāma* (254 f.) gives 20 Ramaḍān, al-Mubarrad (549) 21 Ramaḍān, al-Masʿūdī (427) 17 or 21, the *Maḳātil* (33) 19 or 17 (cf. also al-Balāḏhurī, 578 v), but according to al-Mufīd (16) the latter date is to be preferred. Ibn Abi 'l-Ḥadīd (43) adds that, since the conspirators believed that their deed was an offering to God and that God prefers an offering made at a time which is blessed, the 19 was chosen (the night of the 19th being that of *al-ḳadar* [see RAMAḌĀN]). Furthermore,

the day of ʿAlī's death is not precisely known either, varying between 11 and 21 Ramaḍān (see Caetani, §§ 97-8). He died two or three days after the attack (al-Mubarrad, 551, etc.). Shabīb was the son of Nadjda (instead of Badjara) and his *nisba*s were al-Ashdjaʿī al-Ḥarūrī (al-Masʿūdī, 428; Ibn Kathīr, 326). One tradition states that it was Ibn Badjara who wounded ʿAlī, but this is false (al-Balādhurī, 584r); in fact his sword missed its mark, after which he fled. It was only later that the governor al-Mughīra [*q.v.*] arrested him and killed him, because he had become a seditious element operating in the district of Kūfa; he terrorized people, questioning them about their religious opinions in the manner of the Azraḳīs (al-Balādhurī, 579 r). Wardān was the son of Mudjālid (*Maḳātil*, 32; al-Mufīd, 16; Ibn Abi 'l-Ḥadīd, 43); according to al-Masʿūdī (427), he was called Mudjāshiʿ b. Wardān. Al-Dīnawarī mentions neither Shabīb nor Wardān. Al-Balādhurī relates a tradition in which Wardān is not mentioned (578 v) and another in which he is mentioned, together with the episode of the cousin who killed him (579 r). According to some sources (al-Masʿūdī, 433; *Maḳātil*, 35 and the Shīʿī authors who in general follow it: al-Mufīd, 17, etc.), it was Shabīb and not Wardān who, returning home, was killed by a cousin or a brother, whereas Wardān escaped. There are divergent versions on the question of who seized Ibn Muldjam after the attempt: according to al-Mubarrad (549, 550 and cf. al-Balādhurī, 579 r, al-Masʿūdī, 431, *Maḳātil*, 35, etc.), it was al-Mughīra b. Nawfal b. al-Ḥārith b. ʿAbd al-Muṭṭalib (and not the Ḥaḍramawtī Abū Admāʾ) and, according to al-Yaʿḳūbī (252), Ḳutham b. al-ʿAbbās; Ibn Muldjam is said then to have shouted: "O ʿAlī, deliver me from thy dog!".

The punishment of Ibn Muldjam. The sources describe ʿAlī as always scrupulous in the application of the holy law, and, in the case of Ibn Muldjam, they are more or less unanimous in insisting on the fact that he ordered the strict observance of the *lex talionis*; nevertheless, some of them are at pains to stress his magnanimity. The different versions are: (1) ʿAlī commanded his followers to wait and see the effect of the wound before punishing Ibn Muldjam; if he survived he himself would decide his fate (al-Ṭabarī, 3464; *Maḳātil*, 35 f.; al-Mufīd, 18; Ibn Kathīr, 327; al-Mufīd gives also another decision of ʿAlī: Ibn Muldjam was to be treated as the murderer of a prophet: he was to be killed and then his body burned); (2) ʿAlī advised al-Ḥasan not to expose any criminal to public ridicule and counselled the Banu 'l-Muṭṭalib not to shed Muslim blood because of his murder; the murderer was to be killed in the same manner as he had killed ʿAlī (al-Ṭabarī, 3464); (3) according to al-Mubarrad (551), ʿAlī stated that the best thing would be to pardon him; (4) ʿAlī commanded that Ibn Muldjam be given good meals and a good bed (Ibn Saʿd, 24); if he, ʿAlī, died of his wound, Ibn Muldjam was to join him immediately in the next world, since he wished to be his accuser before God (Ibn Saʿd, 23; al-Balādhurī, 580r, 582v-583r). Ibn Taghrībirdī (i, 119) and others (*e.g.*, *Usd*, 35) add that ʿAlī recommended that the punishment should not be excessive. Umm Kulthūm, the daughter of ʿAlī, plays a certain role after the murder: she quarrelled with Ibn Muldjam; for example, she reproached him for having killed the Commander of the Faithful and Ibn Muldjam replied: "No, thy father!" (al-Balādhurī, 580r, 583v; al-Mubarrad, 551; *Maḳātil*, 36; al-Mufīd 18; Ibn Abi 'l-Ḥadīd, 44, etc.). After the discussion with ʿAlī, Ibn Muldjam was taken to prison; the people followed him, biting him like wild beasts and heaping reproaches on him; he did not reply (*Maḳātil*, 36 f.; al-Mufīd, 18; Ibn Abi 'l-Ḥadīd on the other hand reports the verses which he recited, on leaving ʿAlī, boasting of his action). The accounts of Ibn Muldjam's death, which according to al-Mubarrad (551) were fairly numerous, may in fact be reduced to two: Ibn Muldjam proposed to al-Ḥasan that when he became caliph he should set him free to go to Syria and there kill Muʿāwiya, if his accomplice had not already done so, then to return and give himself up to the caliph. Al-Ḥasan refused and killed Ibn Muldjam; the corpse was burned (in al-Ṭabarī, 3464, a brief account; in the *Maḳātil*, 41, with more details; see also al-Mufīd, 18; Ibn Kathīr, 330; Ibn Abi 'l-Ḥadīd, 46; Yaʿḳūbī, 254, states that al-Ḥasan killed Ibn Muldjam with his own hand; cf. also al-Balādhurī, 584r). The second version is that al-Ḥusayn, Ibn al-Ḥanafiyya [*q.v.*] and ʿAbd Allāh b. Djaʿfar [*q.v.*] asked al-Ḥasan for permission to take their revenge and, having obtained it, it was this ʿAbd Allād, the nephew of ʿAlī, who subjected Ibn Muldjam to a series of mutilations and tortures. The unfortunate Ibn Muldjam bore these sufferings with great courage and only complained when they prepared to cut out his tongue because, though remaining still alive, he would no longer be able to mention God (Ibn Saʿd, 26; al-Dīnawarī, 229; al-Mubarrad, 551 f.; al-Masʿūdī, 434 f.; *Usd*, 37 f.; Ibn Kathīr, 330, doubts the authenticity of the information on the torture, evidently because it contradicts the recommendations given by ʿAlī). None of the sources casts doubt on Ibn Muldjam's religious fervour; on the contrary, those which describe his physical aspect do not omit to add that his forehead showed the marks of frequent prostrations for prayer (*e.g.* al-Balādhurī, 583v; Ibn Kathīr, 326, etc.).

Verses inserted in the narrative. These verses are sometimes anonymous, sometimes attributed to Ibn Muldjam, and sometimes to well-known poets. They appear in the sources with variants and additions and even different attributions. There should be noted those of the Khāridjī Ibn Abī Mayyās which praise the murder of ʿAlī and Ḳaṭāmi's request for the wedding gift, and those of the poet ʿImrān b. Ḥiṭṭān, also a Khāridjī. The latter have been altered by other poets in order to change praise for the crime into blame and curses (al-Mubarrad, 531 f.). A long poem by Bakr b. Ḥassād al-Bāhirī (Ibn al-Athīr, 332 f.; Bakr b. Ḥammād al-Ḳāhirī, according to the *Istīʿāb*, 484) condemns Ibn Muldjam's deed.

The attempts on the lives of Muʿāwiya and ʿAmr b. al-ʿĀṣ. The other conspirators kept their word, but one of them succeeded only in wounding Muʿāwiya, and the other killed in error, instead of the governor of Egypt, one of his officials. Without entering into details, we mention here the opinion of Caetani (*Annali*, 40 A.H., § 96; cf. Lammens, *Études sur le règne du calife Omaiyade Moʿāwiya Ier*, Beirut 1906-8, 140-2) on the triple attempt by the Khāridjīs: he considers that this is a legend created by tradition to prevent people thinking that, in the opinion of contemporary observers, ʿAlī was the worst of the Muslim leaders, and to suggest that Muʿāwiya and ʿAmr b. al-ʿĀṣ also deserved to be killed; thus there were grouped together several independent incidents which occurred at different dates. It may be objected to this idea, while retaining Caetani's line of argument, that the authors of the

crime were merely some fanatical Khāridjīs and that the traditionists were eventually interested in presenting the Khāridjīs as persons to be despised for their "opinion" concerning one as worthy of admiration as ʿAlī, and thus not to diminish their culpability in making Muʿāwiya and ʿAmr their victims as well. It may moreover be observed that a conspiracy like that of the three Khāridjīs should not be considered absurd, and, although they did not carry out their attempts on the same day, it is possible that when they met at Mecca they fixed the date for them, at least approximately, realizing that if they did not rid the Muslims of all three persons simultaneously, they would open the way for the ambitions of the one, or ones, who survived and who would be masters of the situation—as did in fact happen with Muʿāwiya after the death of ʿAlī.

IBN MUNĀDHIR, Muḥammad, satirical poet, a native of ʿAdan, who went to Baṣra for his education, settled there and posed as a *mawlā* of the Banū Ṣubayr b. Yarbūʿ (Tamīm). He spent a devout and studious youth, following the courses of the best teachers of Baṣra, from whom he learnt grammar, Ḳurʾānic "readings", lexicography, *ḥadīth*, etc., but on the death of his friend ʿAbd al-Madjīd b. ʿAbd al-Wahhāb al-Thaḳafī (for whom he wrote a much-admired funeral oration), his attitude changed completely; applying their point of doctrine concerning the *taghyīr al-munkar*, the Muʿtazilīs were obliged to forbid him entry to the mosque, into which he threw scorpions and put ink in the water reserved for ablutions. His invectives against the philologists, the fundamental spitefulness which led him to attack the honour of his fellow-citizens, and his impious conduct caused him to be accused of *zandaḳa* and expelled from Baṣra; he took refuge in Mecca, where he died in poverty, probably in 198/813.

The praises which he addressed to al-Mahdī and to Hārūn al-Rashīd earned him some rewards, but his panegyrics of the Barmakids brought him severe reproaches after they fell into disgrace. According to Abu 'l-ʿAtāhiya [*q.v.*], his poetry was of little value, while Abān al-Lāḥiḳī [*q.v.*] admitted that he had a certain talent for funeral orations, but his success was chiefly in satire, thanks to his lively and malicious wit. He attempted to imitate ʿAdī b. Zayd [*q.v.*] and, on his own admission, wrote very slowly.

Goldziher, *Muh. Stud.*, ii, 134; G. Vajda, *Zindiqs*, 215; Ch. Pellat, *Milieu*, 169 and index. (Ch. Pellat)

IBN AL-MUNDHIR, Abū Bakr b. Badr, with the by-name al-Bayṭār al-Nāṣirī, was grand master and chief veterinary surgeon of the stables of the Mamlūk sultan of Egypt al-Nāṣir, Nāṣir al-Dīn Muḥammad b. Ḳalāwūn (who ruled in 693/1294, from 698/1299 to 708/1309-10 and from 709/1310 to 741/1341). It was at this ruler's request that Ibn al-Mundhir wrote, in about 740/1339-40, his treatise on hippology entitled *Kāshif hamm al-wayl fī maʿrifat amrāḍ al-khayl*, a compilation from earlier sources and in particular from the *Kāmil al-ṣināʿatayn* (*al-bayṭara wa 'l-zarṭafa*) of a certain Ibn Akhī Ḥizām or Ibn Abī Khazzām of the 3rd/9th or 4th/10th century; the copyists very soon gave the second title to the work of the Mamlūk veterinary surgeon. It is found also called, more simply, *Kitāb al-Nāṣirī* (MSS Paris, Bibl. Nat. 2813-14 and Vienna, Flügel 1481). A. Perron published a translation of this treatise, in three volumes, with a detailed introduction, under the title *Le Nâcéri: la perfection des deux arts ou traité complet d'hippologie et d'hippiatrie arabes, trad. de l'arabe d'Abou Bekr Ibn Bedr*. The first volume, which appeared in 1852, contains as an introduction much information on the Arab horse and the breeding of horses [see faras and furūsiyya], stressing the special efforts made by the sultan al-Nāṣir to develop stud farms in Egypt; it contains in addition a large collection of verses selected from the abundant classical poetry on the horse. The introduction to this first volume received from J. von Hammer-Purgstall (in *Das Pferd bei den Arabern, Denkschr. d. K. Akad. d. Wiss. zu Wien*, vi, 1855-6) a rather condescending criticism, which he would surely have modified if he had lived long enough to see the rest of the publication. The second volume (1859) contains the translation of the section on hippology and the third (1860) that on hippiatry. Although it is a good source richly documented, A. Perron's *Le Nâcéri* is no longer a basic work for

the knowledge of early Arab hippology, in view of the number of works devoted to this subject which have been published during the last century; one need mention only, for example, the *K. Ḥilyat al-fursān* ... by the Andalusian Ibn Hudhayl [*q.v.*], a contemporary of Ibn al-Mundhir.

IBN AL-MUNḲIDH [see USĀMA; MUNḲIDH, BANŪ].

IBN MUNĪR [see AL-ṬARĀBULUSĪ AL-RAFFĀʾ].

IBN AL-MURĀBIʿ, ABŪ MUḤAMMAD ʿABD ALLĀH B. IBRĀHĪM B. ʿABD ALLĀH AL-AZDĪ, Andalusian writer and poet of the 8th/14th century, born at Velez-Malaga (Ballish). According to Ibn al-Khaṭīb, he was a provincial man of letters of mediocre talent, feared as a satirist, and distinguished as being the main representative of the *ṭarīḳa adabiyya* (=*ṭarīḳa sāsāniyya* [see SĀSĀN]). Throughout his life he tried to support himself by his pen and his talents, endeavouring to gain the favour of those in power. He travelled to North Africa, but had no more success there than in his own country, to which he was obliged to return. Some of his poems are known, and lack any special merits except for a graceful elegy in which he mourns the death of a cockerel. His most noteworthy work is a *maḳāma* dedicated to the prince Abū Saʿīd Faradj, in which he describes the adventures and misadventures he endured in order to obtain a sheep with which to celebrate the *ʿīd al-aḍḥā*; this slight text has a certain interest, since it is one of the rare examples of this genre in al-Andalus; in it he depicts in a masterly fashion the *picaro* which he himself was, and produces the curious mixture of a popular theme developed in a complicated and difficult style, entirely according to the taste of the period. Ibn Murābiʿ died in his native town in 750/1350, during the Black Death which was then ravaging Europe.

IBN AL-MURTAḌĀ [see MUḤAMMAD B. YAḤYĀ AL-MURTAḌĀ].

IBN AL-MUSLIMA, by-name first given to Aḥmad b. ʿUmar (d. 415/1024), of the family of the Āl al-Raḳīl, and name by which his descendants were known until the 6th/12th century. The most important member of the family was his grandson, Abu 'l-Ḳāsim ʿAlī b. al-Ḥusayn, known also by the honorific title of *raʾīs al-ruʾasāʾ*, vizier to the caliphate from 437 to 450/1045-58, concerning whom there have arisen a number of important questions which have not yet been satisfactorily answered. The conquest of Baghdād by the Būyids in 334/945 had led to the suppression of the office of vizier to the caliphate, and it was only the decadence of the dynasty and the rivalry among its later members which enabled the caliph al-Ḳāsim to re-appoint one officially, and thus to recover a certain measure of real authority. But little is known either of the conditions under which this office was restored, or through what qualifications or services the caliph was led to choose Abu 'l-Ḳāsim, a lawyer sprung from a family of merchants, as the first holder of the new vizierate. An unbigoted Ḥanbalī, who probably changed to Shāfiʿism while remaining Ḥallādjī and anti-Ashʿarī, Ibn al-Muslima certainly played an important rôle in the movement which arose at that time among the Sunnīs in Baghdād towards a rebirth of Tradition in opposition to the *mutakallimūn* of Shīʿī tendency and towards a political and at first doctrinal stand against Ismāʿīlism made by the caliphate and supported by the Būyid "protectors". It would have been interesting to know what was the relationship between Ibn al-Muslima and the great jurist al-Māwardī, to whom we owe one of the clearest expressions of the viewpoint of the caliphs at this period. But primarily, and certainly in part because of this politico-religious position, Ibn al-Muslima was regarded by his contemporaries as the man who introduced to Baghdād the Saldjūḳid sultan and his Turks. There is no doubt that he was the active agent and perhaps the initiator of this policy, even though later his interpretation of it or the inferences he drew from it did not exactly coincide with those of the new and powerful "protector"; but it is not clear what were the precise reasons which led him to do this or whether and, if so, to what extent he exceeded the instructions, if any, given by the caliph al-Ḳāʾim. It is certain that the years immediately prior to the entry of Toghrïl-Beg into Baghdād (447/1044) saw a conflict between Ibn al-Muslima and the leader of the Turkish Būrid mercenaries, al-Basāsīrī [*q.v.*], who was continually in a state of semi-revolt; the latter finally recognized the Fāṭimids against the Saldjūḳids, but it is not clear whether, or how far, he had originally been inclined in this direction. It is certain, however, that, from the time of his arrival on the political scene, Toghrïl-Beg had been careful to emphasize his loyalty to the caliphate and its doctrine and thus to deserve the titles which Ibn al-Muslima had sent him long before and which set the seal on this loyalty.

When the Turks had established their power in Baghdād, Ibn al-Muslima seized the family and the possessions of al-Basāsīrī (who had fled) with a severity accentuated by the financial demands of the new rulers. When, therefore, Toghrïl was obliged by his brother's revolt to return hastily to Iran, and al-Basāsīrī, supported by the Arabs of Mesopotamia and by Fāṭimid money, had returned to Baghdād, al-Basāsīrī avenged himself on Ibn al-Muslima with a cruelty which was very different from the personal immunity which the ʿAbbāsid caliph had enjoyed at the hands of an Arab prince. The vizier died under torture (450/1058) before he could be saved by the restoration of the Saldjūḳid sultan.

His son Abu 'l-Fatḥ al-Muẓaffar was for some time vizier to the caliph, in 476/1083. His great-great-grandson, ʿAḍud al-Dīn Muḥammad b. ʿAbd Allāh b. Hibat Allāh b. al-Muẓaffar, also held this post for quite a long time under al-Mustaḍīʾ, from 566 to 573/1171-8. It is true that the caliph was obliged by the Turk Ḳaymāz to dismiss him, the Turks taking advantage of this to sack the vizier's house; it was not until Ḳaymāz was forced to leave Baghdād (570/1174) that ʿAḍud al-Dīn regained his post. A few years later, just as he was preparing to make the Pilgrimage to Mecca, he was murdered by a Bāṭinī (573/1178). Like other members of his family (to which ʿImād al-Dīn devotes a special chapter in his *Kharīda*) he had been a man of great learning, and the poet Sibṭ b. al-Taʿāwīdhī wrote various poems in praise of him.

Bibliography: For Ibn al-Muslima (*raʾīs al-*

ruʾasāʾ), the chief sources are the *Muntaẓam* of Ibn al-Djawzī, viii, the *Kāmil* of Ibn al-Athīr, viii-ix, and especially the *Mirʾāt al-zamān* of Sibṭ Ibn al-Djawzī (unpublished); see also, for the Fāṭimid point of view, the *Sīra* of the missionary al-Muʾayyad al-Shīrāzī, ed. Kāmil Ḥusayn, Cairo 1949 (index). For a discussion of his rôle, see G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionaliste*, 1963, who seems, however, to have made too categorical an affirmation of Ibn al-Muslima's difference of opinion with the caliph who kept him in power. See also the article AL-BASĀSĪRĪ. For later members of the family see the *Muntaẓam*, ix and x (index) and the *Kāmil*, ix-xi (index). (CL. CAHEN)

IBN MUṬAYR, AL-ḤUSAYN B. MUṬAYR B. MUKAMMIL AL-ASADĪ, Arabic poet of the 2nd/8th century. A *mawlā* of the Banū Asad (following the manumission or the *mukātaba* [*q.v.*] of his grandfather Mukammil), he was a native of al-Thaʿlabiyya [*q.v.*]; from there he seems to have travelled around in the Arabian peninsula and to have gone in particular to Medina, where he appears on one occasion with the governor of the town; he may even have had the opportunity of reciting poems before al-Walīd b. Yazīd; but his fortune dates from his stay in the Yemen, where he entered the entourage of Maʿn b. Zāʾida [*q.v.*], governor of this province from 141 to 151/758-68, whose funeral eulogy he later composed (the sources vary on the date of Maʿn's death, but it was probably about 152/769). This *marthiya* had become so famous that the caliph al-Mahdī had taken offence; but the poet was able to address himself to the ʿAbbāsid ruler so skilfully while he was on a pilgrimage as to win his favour and follow him to the capital, where he addressed to him a number of panegyrics. Very little is known, however, of the poet's life, there being available only a few *akhbār* from which the broad outline of his life may be sketched.

Ibn Muṭayr had maintained Bedouin customs, and his poetry, being of the Bedouin type, is highly thought of by the most exacting critics, who stress the quality of its language and the richness of its background. The examples of it which have survived include, in addition to the panegyrics, some descriptive poems and some with amorous or bacchic themes in the manner of the ancient writers.

Bibliography: Djāḥiẓ, *Bayān*, index; Ibn al-Muʿtazz, *Ṭabaḳāt*, 47-9; Ibn Ḳutayba, *Shiʿr*, 37-9; Mubarrad, *Kāmil*, index; Ḥuṣrī, *Zahr*, 794, 980, 981; *Aghānī*, xiv, 110-4 (= Beirut ed., xv, 331-8): Yāḳūt, *Udabāʾ*, x, 166-78; Ibn Khallikān, i, 185, ii, 112; Ibn Shākir, *Fawāt*, i, 284; Marzubānī, *Muwashshaḥ*, 231; Baghdādī, *Khizāna*, Būlāḳ ed., ii, 485; Ibn ʿAsākir, *Taʾrīkh Dimashḳ*, iv, 362-4; ʿAskarī, *Ṣināʿatayn*, index; G. Rothstein, *Laḥmiden*, index; F. Bustānī, *Dāʾirat al-maʿārif*, iv, 45. (CH. PELLAT)

IBN AL-MUʿTAZZ, ABU 'L-ʿABBĀS ʿABD ALLĀH, prince and poet, son of the 13th caliph of the ʿAbbāsid dynasty, was born in Sāmarrā on 23 Shaʿbān 247/1 November 861 (*Taʾrīkh Baghdād*, x, 95). The name of his mother is not known with certainty, only that she was a *djāriya* of his grandmother Ḳabīḥa and, like her, probably of Byzantine origin. His grandfather al-Mutawakkil was killed in Shawwāl 247/December 861 and in 255/869 his father was deposed and put in prison where he was left to die. After the death of his father, Ḳabīḥa seems to have taken care of the education of the young prince and to have chosen his teachers: Aḥmad ibn Saʿīd al-Dimashḳī who has handed down what is probably the first attempt of the highly gifted boy to write poetry (al-Marzubānī, *Die Gelehrtenbiographien*, ed. R. Sellheim, i, 340-1, cf. Yāḳūt, *Udabāʾ*, i, 133-4), and the famous philologists al-Mubarrad and Thaʿlab. When his grandmother died in 264, Ibn al-Muʿtazz settled in Maṭīra near Sāmarrā. Like many other young princes of the house of the ʿAbbāsids who had to give up political aspirations, Ibn al-Muʿtazz devoted himself, in these years, to the pleasures described by him in his rich poetry of *sharāb* and *ghazal*. Little is known about his relations with his uncles al-Muʿtamid and al-Muwaffaḳ except the conventional elegies by which he lamented the death of the latter (*Dīwān*, ed. Lewin, iv, 220, 222, 237, 255). In a more personal tone he lamented the death of his uncle Muḥammad b. al-Mutawakkil (iv, 219, 221, 224, 250, 263), and of members of the al-Munaddjim family, particularly the learned ʿAlī b. Yaḥyā (d. 275/888, Yāḳūt, *Udabāʾ*, v, 459-77, *Dīwān*, iv, 213, 215, 232, 249, 271). After the death of al-Muʿtamid in 279/892, he accepted an invitation of the new caliph al-Muʿtaḍid to settle in Baghdād. This invitation was probably suggested to the caliph by the *wazīr* ʿUbayd Allāh b. Sulaymān b. Wahb, who was a friend of the poet (iv, 244, 256, 266, 268, 279), as was also his son and successor al-Ḳāsim (iv, 246, 265, 267, 275-6, 281). The new and magnificent palace *al-Thurayyā* built by al-Muʿtaḍid (see BAGHDĀD, 897-8) and its gardens were described by Ibn al-Muʿtazz in a poem (*Dīwān*, Cairo 1891, i, 115; Beirut 1913, 138-9; Yāḳūt, i, 924). In his *Tabāshīr al-surūr*, a collection of subjects discussed at the literary assemblies held at the court, he gives expression to his aristocratic attitude and to his personal experiences, often alluded to in his *muʿātabāt*-poems, of an epoch in which the natural order of the noble and the vulgar had been disturbed. This epoch of disorder and humiliation had come to an end, according to the poet, with the glorious reign of al-Muʿtaḍid. The restoration of the ʿAbbāsid empire and the defeat of its enemies are the themes of numerous *fakhr*- and *madīḥ*-poems by the prince. His poetic attacks on the Shīʿa and other dissidents were remembered long afterwards (see, *e.g.*, Yāḳūt, *Udabāʾ*, v, 341-2). The obvious silence he preserves in his historical books about the poet Ibn al-Rūmī [*q.v.*] is probably due to his dislike of the Shīʿī sympathies of his great contemporary. Besides the score of eulogies in which Ibn al-Muʿtazz praised the achievements of his royal cousin, he composed also a historical poem containing, in its present form, 417 *radjaz* couplets celebrating his life and work (ed. C. Lang in *ZDMG*, xi (1886), 563-611, xii (1887), 232-79). When the caliph died in 289/902 and was succeeded by his son al-Muktafī, Ibn al-Muʿtazz seems to have left public life to lead again a life of retirement. In the political emergencies, however, that followed upon the illness and death of al-Muktafī in 295/908, he was involved in the intrigues of those who desired to secure an influence over the new caliph. In Dhu 'l-Ḳaʿda 295/August 908, a brother of al-Muktafī, Djaʿfar, was proclaimed caliph as al-Muḳtadir. Already during the illness of al-Muktafī, a group of officers, secretaries and judges, who were not satisfied with the young Djaʿfar, had formed a plot to proclaim Ibn al-Muʿtazz, and had won his acceptance provided that there should be no bloodshed. The *wazīr* al-ʿAbbās b. al-Ḥasan, who had opposed the dethronement of al-Muḳtadir, was murdered and, on 20 Rabīʿ I 296/17 December 908, Ibn al-Muʿtazz was proclaimed caliph and took the

regnal name al-Muntaṣif bi'llāh. But things changed rapidly as the guards of the caliph made a resolute resistance to attacks on the palace and set out to attack Ibn al-Muʿtazz and those who were with him in his house. These supporters abandoned him, and "the caliph of one day", who had taken refuge in the house of a jeweller, was found and strangled.

Ibn al-Muʿtazz's poetry did not fail to impress his contemporaries and later generations, who particularly admired his *tashbīhāt* for their striking and persuasive power and visuality (cf., *e.g.*, al-Djurdjānī, *Asrār al-balāgha*, ed. Ritter, 85-6). In his *awṣāf*-verses, he displayed an ability to see and enjoy what is beautiful that developed into an artistry much admired by imitators who, like him, tried to describe details of things that escape the ordinary eye, but who, lacking the master's naïvety and sincerity, seldom reached the height of his unpretending genuineness. In spite of its "modernism", Ibn al-Muʿtazz's poetry remains within the traditional scope of Arab poetry, of which he had a profound knowledge.

The surviving specimens of his prose are in the strain of the fluent, simple and natural style that is known to have its earliest representatives in the famous *risāla* of ʿAbd al-Ḥamīd [*q.v.*] to the Secretaries and in the writings of Ibn al-Mukaffaʿ [*q.v.*].

The verses of Ibn al-Muʿtazz were collected by his friend Abū Bakr Muḥammad ibn Yaḥyā al-Ṣūlī [see AL-ṢŪLĪ], who edited them twice: (1) in a *dīwān* divided into chapters in which the poems were arranged in an alphabetical order (parts iii-iv ed. B. Lewin, Istanbul 1943-50. Bibliotheca Islamica 17c-d); (2) in an anthology containing specimens of poems of ʿAbbāsid princes and forming one part of his *Kitāb al-Awrāḳ* (ed. J. Heyworth-Dunne, London 1936). There are traces also of another edition made by the philologist and historian Ḥamza al-Iṣfahānī [*q.v.*]. For a copy of the poems that reached Iṣfahān in the early years of the 4th/10th century, see Yāḳūt, *Udabā'*, vi, 285.

The rhetorical figures intentionally sought for and occurring with great frequency in the poetry of the ʿAbbāsid period, as represented for instance by Abū Tammām, were highly valued and looked upon as "the new style". In his *Kitāb al-Badīʿ* (ed. I. Kratchkovsky, London 1935, GMS, n.s., x), Ibn al-Muʿtazz took up the problem of the figures from a historical point of view and set out to show that what is called *badīʿ* by "the newer ones" did not in fact begin with poets like Bashshār b. Burd but is to be found already in the Ḳur'ān, *ḥadīth* and the language of the Bedouins. To support his thesis, he gives examples, collected by himself, of five figures, probably analysed already by the philologists, in ancient and new poetry. To these five chapters, he added twelve treating of other "embellishments" of style (*maḥāsin al-kalām*). Being a pioneer in the field, Ibn al-Muʿtazz did not aim at presenting a systematic treatment of the subject, but his *Kitāb al-Badīʿ* inaugurated the study of poetics in Islam. See also BADĪʿ; BALĀGHA; BAYĀN; and AL-MAʿĀNĪ WA'L-BAYĀN.

In the book just mentioned, the author quotes another written by him called *al-Fuṣūl al-ḳiṣār*. This title of a book by Ibn al-Muʿtazz is mentioned also by later authors. Some of the moral sentences and aphorisms quoted by them from this book are to be found also in the *Kitāb al-Ādāb* of Ibn al-Muʿtazz (ed. I. Krachkovsky in *MO*, xviii (1924), 56-121), which is probably a compilation of the *Fuṣūl* and other similar collections of the author's made by his friends and disciples. Its content is clearly different from that of *adab*-books of the type of *adab al-kātib*, *adab al-nadīm* etc.; it is a collection of anonymous sayings illustrating the moral qualities and behaviour of an educated man.

In the field of the history of poetry, the subject of a vast literature of which only two specimens now remain, namely those of Ibn Ḳutayba [*q.v.*] and of Ibn Sallām al-Djumaḥī [*q.v.*], both dealing with poets of pre-Islamic and early Islamic times, Ibn al-Muʿtazz, in his last years, wrote *Ṭabaḳāt al-shuʿarā' al-muḥdathīn* (facsimile of the unique and incomplete Escorial MS, ed. A. Eghbal, London 1939, GMS, n.s., xiii; ed. A. A. Farrādj, Cairo 1956), in which he collected anecdotes concerning poets of the ʿAbbāsid period with extensive quotations particularly of their lesser known works; the book, therefore, contains *inter alia* long poems which are not to be found in any other source.

Bibliography: In addition to the references given in the text and in Brockelmann, I, 79-80, S I, 128-130: Hilāl al-Sābi', *Kitāb al-Wuzarā'*, i, ed. H. F. Amedroz, Leiden 1904 (index); ʿArīb, *Tabari continuatus*, ed. M. J. de Goeje, Leiden 1897 (index); Miskawayh, *The eclipse of the ʿAbbasid caliphate*, ed. H. F. Amedroz and D. S. Margoliouth, i-vii, Oxford 1920-21 (index). The titles of numerous papers by I. Krachkovsky on the subject are quoted in the Introduction to his edition of *Kitāb al-Badīʿ*; cf. I. Yu. Kračkovskiy, *Iz. Soč.*, vi, 9-330; Muḥammad ʿAbd al-Munʿim Khawādji, *Ibn al-Muʿtazz wa-turāthuh fi 'l-adab wa'l-naḳd wa'l-bayān*, Cairo 1368/1949; Aḥmad Kamāl Zakī, *Ibn al-Muʿtazz al-ʿAbbāsī*, Cairo 1965; the *Dīwān* was printed also in Beirut 1961 (ed. Karam al-Bustānī). (B. LEWIN)

IBN MUʿṬĪ, ABU 'L-ḤUSAYN YAḤYĀ B. ʿABD AL-NŪR ZAYN AL-DĪN AL-ZAWĀWĪ, grammarian of Maghribī origin, b. 564/1168-9, d. in Cairo 628/1231. After studying in the west under al-Djuzūlī, he went to the east, where he taught grammar, first at Damascus and then in Cairo. Ibn Muʿṭī wrote commentaries on grammatical treatises and turned lexicographic works into verse; he seems to have been the first writer to compose a grammatical treatise in one thousand verses (*alfiyya*). This treatise, *al-Durra al-alfiyya fī ʿilm al-ʿarabiyya*, was finished in 595/1198-9 and has been the subject of numerous commentaries and of a critical edition, by K. V. Zetterstéen (Leipzig 1900). Ibn Muʿṭī wrote also a grammatical treatise in prose, the *Kitāb al-Fuṣūl*, the first two chapters of which have been published by E. Sjögren (Leipzig 1899).

Bibliography: Brockelmann, I, 366-7, S I, 530-1. (G. TROUPEAU)

IBN AL-MUWAKKIT, MUḤAMMAD B. MUḤAMMAD B. ʿABD ALLĀH AL-MARRĀKUSHĪ, born in Marrākush in 1894, where he died on 30 November 1949. His father held the office of *muwaḳḳit* in the Ibn Yūsuf mosque at Marrākush. Hence the son, at the start of his career as a writer, bore the surname Ibn al-Muwaḳḳit, but when he came to hold the same position he was himself called al-Muwaḳḳit.

From 1917, he became known to scholars interested in Morocco through the publication of four biographical works, the principal and most useful of which is entitled *al-Saʿāda al-abadiyya fi 'l-taʿrīf bi-mashāhīr al-ḥaḍra al-Marrākushiyya* (lith. Fās 1917-8, 2 vols.); the second work, *Taʿṭīr al-anfās fi 'l-taʿrīf bi 'l-shaykh Abi 'l-ʿAbbās*, is a monograph devoted to the saint Abu 'l-ʿAbbās al-Sabtī, one of the seven patron saints of Marrākush; the author added, in the margin, the biography of his own father, Muḥammad b. ʿAbd Allāh al-Mubārak, under the title

Iẓhār al-maḥāmid fi 'l-ta'rīf bi-mawlānā al-wālid (lith. Fās 1336/1918); the fourth and last of these works, *al-Inbisāṭ bi-talkhīṣ al-Ighṭibāṭ*, is a résumé of the *Kitāb al-Ighṭibāṭ bi-tarādjim a'lām al-Ribāṭ* of Sīdī Muḥammad Bū Djandār (see Allouche and Regragui, *Cat. des mss. arabes de Rabat*, ii, 226).

Ibn al-Muwaḳḳit was brought up in the school of those *'ulamā'* who, influenced by Ṣūfī doctrines, were not reluctant to adhere to a religious confraternity. His father, a devoted reader of the *Dalā'il* of al-Djazūlī, had inspired him with a taste for study and, by his own extreme piety, had furnished him with an example; he had therefore endeavoured, in his writings, to honour the famous precept so highly esteemed by Moroccan hagiographers: *bi-dhikr al-ṣulaḥā' tanzilu 'l-raḥma* through mention of the saints, the divine mercy descends.

Ibn al-Muwaḳḳit was contentedly following the saintly tradition of the biographers and hagiographers of his country as exemplified by Ibn 'Askar, Ibn al-Ḳāḍī and Aḥmad Bābā, when suddenly he discovered the writings of the great orthodox reformers of Cairo, Muḥammad 'Abduh and Muḥammad Rashīd Riḍā, and the satirical novels of Muḥammad Ḥāfiẓ Ibrāhīm and Muḥammad al-Muwayliḥī. At once he rallied to the viewpoint of the *Muṣliḥūn* and, with the ardour of the convert, hurled himself into the battle then being waged by the orthodox reformers against the upholders of religious conservatism.

He started his new career with the publication of a short treatise on *bida'*, *al-Kashf wa 'l-tibyān 'an ḥāl ahl al-zamān* (Cairo 1932), followed almost immediately by *al-Riḥla al-Marrākushiyya* (Cairo 1933), in which, by means of a simple fable with a moral, he drew a pessimistic picture in the darkest colours of the Muslim society of his time. From then onwards, until his death, he kept up a relentless struggle, within his own country, against the confraternities, the marabouts, the *ḳāḍīs* and the *ḳā'ids*, all of whom he considered to be deeply corrupted, castigating modern customs, challenging the ordinary *'ulamā'*, exhorting the people to return to the *sunna* of their virtuous ancestors, *al-salaf al-ṣāliḥ*, and publishing violent pamphlets against his adversaries.

Holding fast to his moral inflexibility, a passionate devotee of justice impelled by a fervent fundamentalism, in the last years of his life and in a milieu that was well suited to such a development, Ibn al-Muwaḳḳit was a strange incarnation of the spirit of the ancient Hebrew prophets. Before his death he circulated a tract, a copy of which he is said to have delivered in person to the sultan Sīdī Muḥammad b. Yūsuf, in which, among other extraordinary and prodigious events, he foretold the coming of the Antichrist, at the beginning of the year 1980.

Bibliography: E. Lévi-Provençal, *Chorfa* (particularly 45 and 46); A. Faure, *Un réformateur marocain, Muḥammad b. Muḥammad b. 'Abd Allāh al-Muwaqqit al-Marrākušī*, in *Hespéris*, 1952, 1-2, with the bibliography of most of his works.

(A. FAURE)

IBN MUYASSAR (not Mīsar) TĀDJ AL-DĪN MUḤAMMAD B. YŪSUF .... B. DJALAB RĀGHIB, 628-77/1231-78, Egyptian historian. He was descended, hence his by-name, from a Tunisian "imported" at the beginning of the 6th/12th century by an Egyptian *amīr* named Rāghib; under Saladin, the family, being excluded from the military career by the formation of the new army, had entered civilian life. Ibn Muyassar owed his name to a maternal ancestor who had apparently himself been an *amīr* under the Fāṭimids. His *Annales d'Égypte* (ed. H. Massé, Cairo 1919; cf. G. Wiet, in *JA*, 1921) have survived in a unique manuscript, which is incomplete and which derives from a copy made by al-Maḳrīzī; the latter itself may not have been complete or free from error. The text as it survives, after the correct order of the leaves is restored, provides (apart from a lacuna covering the years 502-14) a consecutive account of the history of the years 439 to 553/1047-1158, together with two extracts covering the years 362-5/973-6 and 381-7/991-7; however the large extent to which al-Nuwayrī, *Nihāya*, borrows from him for Fāṭimid history enables us to fill the lacuna from 502-14 and to confirm that the chronicle reached as far as the Ayyūbid period, although perhaps not covering it in full. It is more difficult to decide what exactly the two fragments on the 4th/10th century represent: later writers in general attribute to Ibn Muyassar a continuation of al-Muṣabbiḥī, though certainly in a style less developed than the latter's history; but, if the two fragments in question really do belong to Ibn Muyassar, it must be assumed that he also covered, in a more summary fashion, the period which al-Muṣabbiḥī had already dealt with. Direct comparison with al-Muṣabbiḥī is not possible, since the only section of his work which has survived does not cover the years found in Ibn Muyassar; nevertheless the comparison which is now possible with the *Itti'āẓ* of al-Maḳrīzī proves that the 381-7 fragment certainly is a summary of al-Muṣabbiḥī; in the other fragment, belonging to an earlier period than that of al-Muṣabbiḥī, he copies Ibn Zūlāḳ, without mentioning him in it. The "History of the *ḳāḍīs* of Egypt" of Ibn Ḥadjar (ed. R. Guest) even quotes passages of Ibn Muyassar earlier than the Fāṭimids, but these probably belong to another work, one devoted specially to the Egyptian *ḳāḍīs*. In any case the essential part of the Chronicle, that which deals with the Fāṭimids of the 5th/11th and 6th/12th centuries, is based mainly on a lost work of a certain al-Muhannak, which was used also by Ibn Ẓāfir. It contains much valuable and original information on a history whose direct sources have disappeared.

Bibliography: H. Massé's introduction to his ed.; Cl. Cahen, *Quelques chroniques anciennes relatives aux derniers Fatimides*, in *BIFAO*, xxxvii (1937), which contains further references; Fr. Rosenthal, *A history of Muslim historiography*, index.

IBN MUZĀḤIM [see NAṢR B. MUZĀḤIM].

IBN AL-MUZAWWIḲ [see IBN AL-SADĪD].

IBN AL-NABĪH, ABU 'L-ḤASAN 'ALĪ B. MUḤAMMAD B. YŪSUF B. YAḤYĀ KAMĀL AL-DĪN IBN AL-NABĪH, well-known poet of the Ayyūbid period (d. 619/1222). The exact place of his birth is not known, but it was in Egypt, near Cairo, probably in about 560/1164. Nor is anything known of his family, his early education or his teachers.

Preferring pleasure to politics, Ibn al-Nabīh lived in Cairo simply, peacefully and happily. He formed many deep friendships there: among his best friends is mentioned the *ḳāḍī* al-As'ad b. al-Khaṭīr Ibn Mammātī, in whose honour he composed a fine *ḳaṣīda*. His biographers state that he wrote panegyrics on a number of Ayyūbid princes, notably al-Malik al-'Ādil and al-Malik al-Muẓaffar Ghāzī.

Failing to find in Cairo the patronage he desired, he left for the Upper Djazīra and settled at Niṣībīn, probably in about 600/1204, at the court of the prince al-Ashraf Mūsā, on whom he wrote panegyrics

while occupying the office of royal letter-writer in the *dīwān al-inshā'*. Ibn al-Nabīh lived the carefree and frivolous life which characterized the court of his patron. He dedicated to him thirty-five poems, which are literary masterpieces. The amorous prologues to these panegyrics show him to be a great love poet. He died at Niṣībīn in 619/1222.

His *Dīwān*, the contents of which he is said to have chosen himself, was published in Beirut in 1299/1881 and in Cairo in 1315/1895 with notes by ʿAlī Pasha Fikrī; the latter edition consists, in addition to two *muwashshaḥ*s and one quatrain, of about 1590 verses. Although in the prologues to the panegyrics and in certain fragments the erotic genre has an important place, Ibn al-Nabīh's work is mainly laudatory in character.

(J. RIKABI)

IBN AL-NADĪM, ABU 'L-FARADJ MUḤAMMAD B. ABĪ YAʿḲŪB ISḤĀḲ AL-WARRĀḲ AL-BAGHDĀDĪ, author of the well-known *Kitāb al-Fihrist*, an "Index" of Arabic books, completed according to the author's own statement (p. 2, line 12; 38, 28; 87, 19; cf. also 132, 7 and 219, 7) in 377/987-8. Of his life very little is known. He died on 20 Shaʿbān 385/17 September 995 according to Ibn al-Nadjdjār, *Dhayl Taʾrīkh Baghdād* (see Flügel's edition, i, XII, n. 2) or according to others in 388/998 (see Ibn Ḥadjar, *Lisān al-Mīzān*, v, 72, where 38 is apparently a misprint); dates later than 385 (*e.g.*, 87, 6; 169, 13, both lacking in codex B) are additions made by copyists; cf. 193, 17, where the author invites his readers to fill in the lacunae in his lists of books. At 237, 6 he mentions that in 340/951-2 he made the acquaintance of a certain scholar, so we may infer that he was born in 325/936-7 at the latest. Of his family nothing is known; there is no reason to connect him with Isḥāḳ [*q.v.*] b. Ibrāhīm al-Mawṣilī al-Nadīm or with Yaḥyā b. al-Nadīm, a pupil of al-Balādhurī; nor do we known to whom the byname *al-nadīm* (*i.e.*, the companion of a grandee of the realm or even of the caliph) refers. He was a bookseller (*warrāḳ*, one who copies manuscripts and sells them, see Dozy) like his father (see p. 303, 24; 318, 7; 351, 14). He lived in Baghdād (see *e.g.*, p. 337, 26 f.; 349, 7 where *dār al-Rūm* means the quarter of the Byzantines in Baghdād). Sometimes he mentions a stay in Mosul (p. 86, 12; 190, 2; 265, 25 and probably 197, 4, because al-Ṣafwānī was, according to Ṭūsī, 271, a judge of Mosul). Of his teachers he mentions al-Sīrāfī ([*q.v.*] d. 368/978-9), ʿAlī b. Hārūn b. al-Munadjdjim (d. 352/963) (p. 144, 11), and the philosopher Abū Sulaymān al-Manṭiḳī [*q.v.*] (p. 241, 13); he also heard traditions (p. 24, 14, etc.). He belonged to the circle of ʿĪsā b. ʿAlī (b. 302/914-5, d. 391/1000-1, a son of ʿAlī b. ʿĪsā [*q.v.*] the "Good Vizier" of the Banu 'l-Djarrāḥ), whom he praises (p. 129) for his profound knowledge of the logic and the sciences of the Greeks, Persians and Indians (*al-ʿulūm al-ḳadīma*). Ibn al-Nadīm met in his house the Christian philosopher Ibn al-Khammār (p. 245, 12). With these men, none of whom was an orthodox Sunnī, he shared an admiration for philosophy and especially for Aristotle (see p. 247, 4-14) and the sciences generally, the broadness of their outlook and their tolerance in religious matters. It did not escape his biographers that he was a Shīʿī (Ibn Ḥadjar, *l.c.*); he uses *khāṣṣī* instead of *shīʿī*, *ʿāmmī* instead of *sunnī* (p. 233, 2), *al-ḥashwiyya* for the "Sunnīs" (p. 21, 16; 179, 10; 231, 22), *ahl al-ḥadīth* instead of *ahl al-sunna* (p. 225, 1). He puts the eulogy for prophets (*taslīm*) after the names of the Shīʿī Imāms and the *ahl al-bayt* (p. 173, 3; 220, 16; 222, 6; 235, 12). He calls the Imām al-Riḍā *mawlānā* (p. 221, 6). He asserts that al-Wāḳidī [*q.v.*] was a Shīʿī but concealed this fact by *taḳiyya* (p. 98, 21). He claims most of the (orthodox) "traditionists" for the Zaydiyya (pp. 178 f.; 194, 15). He speaks of the Muʿtazila as *ahl al-ʿadl* (p. 180, 22), calls the Ashʿarīs *al-mudjbira* (p. 179, 10; 180, 7; 181, lines 2, 5, 22; cf. *al-idjbār* p. 181, 6). That he belonged to the Imāmiyya (Twelver Shīʿa) is shown by his distaste for the doctrines of the Sabʿiyya (p. 189, 10) and by his criticisms in dealing with their history (p. 186, 25 and 188, 30). He remarks (p. 197, 3 and 214, 13) that a certain Shāfiʿī scholar was secretly an Imāmī. He mentions Shīʿīs among his acquaintances, *e.g.*, Ibn al-Muʿallim [see AL-MUFĪD], the *dāʿī* Ibn Ḥamdan (p. 190, 2) and the author Khushkunānadj (sic!) (p. 139, 24). To the same circle belonged the Jacobite Yaḥyā b. ʿAdī (d. 363/973) who instructed ʿĪsā b. ʿAlī in philosophy and who was, like Ibn al-Nadīm, a copyist and bookseller (p. 264, 8).

The *Fihrist*, which, according to the short preface, is intended to be an index of all books written in Arabic either by Arabs or non-Arabs, exists in two editions or recensions, both of the year 377/938: the larger edition contains ten "discourses" (*maḳālāt*). The first six of them deal with books on Islamic subjects: 1. the Holy Scriptures of Muslims, Jews, and Christians, with emphasis on the Ḳurʾān and Ḳurʾānic sciences; 2. grammar and philology; 3. history, biography, genealogy and kindred subjects; 4. poetry; 5. scholastic theology (*kalām*); 6. law (*fiḳh*) and tradition. The last four discourses deal with non-Islamic subjects, *viz.* 7. philosophy and the "ancient sciences"; 8. legends, fables, magic, conjuring etc.; 9. the doctrines (*maḳālāt*) of the non-monotheistic creeds (Ṣābiʾans, Manicheans, and other dualists, the Hindus, Buddhists and Chinese); 10. alchemy. The shorter edition contains (besides the preface and the first section of the first discourse on the scripts and the different alphabets) only the last four discourses, in other words, the Arabic translations from Greek, Syriac and other languages, together with Arabic books composed on the model of these translations. Of the larger edition the first half (pp. 2-172, 7, Flügel) is extant in the manuscripts P = Paris (de Slane no. 4457) written in 617/1220-1, and B = Chester Beatty, described by A. J. Arberry, in *Islamic Research Association Miscellany*, i (I.R.A. Series no. 12, 1948, 19-45); B contains not only the text of pp. 2-172 (Flügel), with the exception of pp. 14,22-29,13 owing to the loss of some leaves, but also the beginning of the fifth discourse giving the text of the first section up to the article on al-Nāshiʾ al-Kabīr (see bibl.). The second half of the larger edition (pp. 172,11-360, Flügel) is extant in the manuscript S = Istanbul, Şehit Ali Paşa 1934 (see H. Ritter in *Isl.*, xvii, 15-23). The shorter edition (pp. 2-21,23 and 238,5-360, Flügel) is preserved in codex K = Istanbul, Köprülü 1135, written in 600/1203-4 (see Ritter, *l.c.*, who shows that Flügel's manuscripts H, V, and C are also directly or indirectly derived from the Istanbul

manuscripts. In the larger edition the preface and the list of contents correspond with pages 2-4,6, Flügel. In the preface of the shorter edition, however, we read instead of Flügel's text 2,9: "This is the register of the books of the old sciences composed by Greeks, Persians, and Indians of which there exist (translations) in the Arabic language and script", and the list of contents is shortened accordingly. Both prefaces have the same date, 377/987-8, yet the shorter one may have been, as suggested by Ritter, the first edition and the printed text an enlargement, especially as manuscript S, by its many blanks left vacant for later additions of dates, names, book-titles and even whole articles, gives the impression of being an unfinished draft. Both prefaces have also after the word *al-nufūs* (p. 2,5) the following dedication (omitted by Flügel on purpose, see vol. ii, 1): *aṭāla 'llāhu baḳā'a 'l-sayyidi 'l-fāḍil*, which may refer to ʿĪsā b. ʿAlī (cf. p. 244, 6) or else to some other influential person belonging to the circle of the philosophers. Ḥādjdjī Khalīfa (ii, 211) lists the shorter edition under the title *fawz al-ʿulūm*, which promises the reader the "attainment of success" in these sciences, and is more suitable than the unpretentious "index". There is also a marked difference between the two editions. The last five discourses are much more elaborate than the preceding ones; they contain sections on the beginning of philosophy, on the lives of Plato and Aristotle, the origin of the Arabian Nights, the pyramids etc. The sections on the Manichaeans, the Ṣābi'ans and other religious communities give unique information about their beliefs and doctrines. He also occasionally expresses his opinion about, *e.g.*, white and black magic, sorcery, superstition, and alchemy. The first five sections, on the other hand, are comparable to a bibliography, giving the list of the works of the writer or poet in question and adding as a rule only the briefest information about his life. Being himself a bookseller, he is interested first and foremost in the books and not in the authors, especially as there existed already books (*ṭabaḳāt*) dealing with the biographies of poets, etc. He gives the titles only of those books which he had seen himself or whose existence was vouchsafed by a trustworthy person. Often he mentions the size of a book, especially in the section of the modern poets, where he adds to the name of each of them the numbers of pages (of a given size and a fixed number of lines) of his *dīwān*; this he does because often a copyist cheated his customer by selling him an incomplete copy (p. 159, 17 ff.). He refers often to copies written by famous calligraphers, *e.g.*, Ibn al-Kūfī, Ibn Muḳla, Abu 'l-Ṭayyib akhu 'l-Shāfiʿī, al-Tirmidhī (p. 61, 5), Ibn ʿAmmār, who specialized in copying modern poetry (p. 160, 3), and others; he mentions bibliophiles and their libraries (p. 40, 18 f.; 265, 23) and speaks of an auction (p. 252, 27 f.) and of the trade in books (p. 70, 5 and 8; 77, 14; 79, 23; 271, 5; 359, 20). In the opening section of his work (p. 4,7-21,24) he deals with the alphabets of 14 peoples (Arabs and non-Arabs) and their manner of writing, and also with the writing-pen, paper and its different varieties.

Being the work of an Imāmī author, the *Fihrist* contains statements offensive to an orthodox reader, *e.g.*, the claim that the Prophet received the Muʿtazilī doctrine through divine revelation (see Arberry, *l.c.*, p. 29). No wonder, therefore, that the earliest quotations are to be found in the *Fihrist kutub al-Shīʿa* by al-Ṭūsī [*q.v.*]. A generation before al-Ṭūsī a new edition of the *Fihrist* had been made by al-Wazīr al-Ḥusayn b. ʿAlī al-Maghribī ([*q.v.*] d. 418/1027), who had strong Shīʿī leanings, being the son of one of al-Ḥākim's viziers. The first to make an extensive use of the first four discourses is Yāḳūt (d. 626/1228); he quotes from al-Maghribī's edition in his *Irshād al-arīb* (see Bergsträsser, in *ZS*, ii, 185); but he also used Ibn al-Nadīm's autograph, which may simply mean that he used a manuscript which, like the manuscripts B and S and Flügel's edition (see i, XV f. and Ritter, *l.c.*, 22 f.) purported to be a reproduction (*ḥikāya*) of the author's autograph. The same claim is made by the lexicographer al-Ṣaghānī (d. 650/1252) in his *ʿUbāb* (see *Khizānat al-adab*, iii, 83). The *Fihrist* is used also by Ibn al-Ḳifṭī, Ibn Abī Uṣaybiʿa, Ibn Ḥadjar, Ḥādjdjī Khalīfa, and others. Ibn al-Nadīm wrote also a *Kitāb al-Awṣāf wa 'l-tashbīhāt* (*Fihrist*, p. 12, 2) which has not survived.

IBN AL-NADJDJĀR, Muḥibb Allāh b. Maḥāsin al-Baghdādī, historian and leading Shāfiʿī *muḥaddith* of his age, was born in Baghdād in 578/1183. His father, a paper-maker by profession, started him in the study of *uṣūl* and *ḥadīth*, which studies were continued by Abu 'l-Yumn al-Kindī, Ibn al-Kulayb, Ibn al-Ḥaṣīn, Ibn al-Djawzī and others. After a journey that lasted twenty-seven years and carried him throughout the eastern lands of Islam, Arabia and Egypt, Ibn al-Nadjdjār returned to Baghdād and received an appointment to the newly opened al-Mustanṣiriyya as principal Shāfiʿī lecturer on *ḥadīth* and director of the school. He occupied this position until his death in 643/1245.

He is the author of twenty-one known works on history, biography, *ḥadīth* literature, poetry, medicine, travel, love and the etiquette of companionship. Of these, only his history of Medina (*al-Durra al-thamīna fī akhbār al-Madīna*) has survived in full. Two other works, *al-Kamāl fī maʿrifat al-ridjāl* and *Ta'rīkh li-Madīnat al-Salām*, survive only in fragments.

Both his associate Yāḳūt al-Ḥamawī and his disciple Ibn al-Sāʿī praised his scholarship. Yāḳūt describes Ibn al-Nadjdjār as "cultured; a connoisseur of history and polite literature; an excellent discourser and lecturer, and a composer of fine poetry"

(*Irshād*, vii, 103). The esteem accorded to his erudition is attested by his having a following (*mashyakha*) of three thousand men and four hundred women (Dhahabī, *Ḥuffāẓ*, iv, 213). In securing data for his histories, Ibn al-Nadjdjār relied on works in the authors' own handwriting; he carried on extensive correspondence with the authorities of his day and travelled widely to effect personal contact with his informants.

Ibn al-Nadjdjār's history of Baghdād, itself a *dhayl* to that of al-Khaṭīb, was continued by Ibn al-Sāʿī (d. 674/1275-6), Ibn al-Fuwaṭī (d. 723/1323), and Ibn Rāfiʿ (d. 774/1372-3). His work on the *Ridjāl* was carried on by Ibn Ḳilič (d. 762/1360-1), al-Dhahabī (d. 748/1347-8) and Ibn Ḥadjar (d. 852/1448-9)

Bibliography: In addition to the works mentioned in the text: Ibn al-ʿImād, *Shadharāt*, ii, 226; Ibn al-Fuwaṭī, *Ḥawādith*, 205; Ibn Khallikān, *Wafayāt*, Cairo 1949, vi, 28-9; Kutubī, *Fawāt*, Cairo 1951, ii, 522; Wüstenfeld, *Geschichtschreiber*, 122-3; Brockelmann, S I, 360; Hammer-Purgstall, *Literaturgeschichte*, vii, 357; Cl. Huart, *Histoire*, Paris 1901, 229. For a broader treatment see C. E. Farah, *Ibn al-Najjār: a neglected Arabic historian*, in *JAOS*, 1964, 220-30. (C. E. FARAH)

IBN AL-NAFĪS, ʿALĀʾ AL-DĪN ABU 'L-ʿALĀʾ ʿALĪ B. ABI 'L-ḤARAM AL-ḲURASHĪ AL-DIMASHḲĪ, a distinguished physician and many-sided author of the 7th/13th century. Except for the date of his death, only few facts of his life have been recorded, because Ibn Abī Uṣaybiʿa, although his contemporary, does not mention Ibn al-Nafīs in his history of physicians; but al-ʿUmarī and al-Ṣafadī give detailed though anecdotal accounts of him and his personal habits. Born in or near Damascus (presumably in the village of al-Ḳurashiyya), he studied medicine there under Muhadhdhib al-Dīn ʿAbd al-Raḥīm b. ʿAlī known as al-Dakhwār (d. 628/1230; Ibn Abī Uṣaybiʿa, ii, 239-46), who came from the school of Ibn al-Tilmīdh [*q.v.*], who in his turn had formed many disciples several of whom came from Baghdād to Damascus. Besides medicine, Ibn al-Nafīs studied grammar, logic, and Islamic religious sciences. At an unknown date he moved to Cairo, where he was given the important post of Chief Physician of Egypt and became the personal physician of sultan Baybars I [*q.v.*]. He presumably worked at the Nāṣirī hospital and trained a number of pupils. The best known among them was Ibn al-Ḳuff (Brockelmann, I, 649; S I, 899), author of a work on surgery [see AL-DJARRĀḤ]. He lectured on Shāfiʿī law at the Masrūriyya *madrasa*. The famous grammarian, Abū Ḥayyān al-Gharnāṭī [*q.v.*], was his disciple in logic and praised his teaching. His contemporary, the philologist Ibn al-Naḥḥās [*q.v.*], praised his style in grammar. He became rich and had a luxurious house built for himself in Cairo. He died in Cairo on 21 Dhu 'l-Ḳaʿda 687/18 December 1288 at the age of about 80 (lunar) years, and left his house, his fortune and his books to the Manṣūrī hospital there, founded by sultan Ḳalāwūn and only recently completed (683/1284). In prescribing, "he never departed from the method to which he was accustomed; he did not prescribe a remedy as long as he could prescribe a diet, and he did not prescribe a compound remedy as long as he could content himself with a simple drug" (al-ʿUmarī). Notwithstanding these modern ideas on treatment, and although Ibn al-Nafīs was exalted by his admirers as a second Avicenna, he seems to have been a learned theorist rather than a practical physician, but the range and depth of his general culture are impressive.

The literary activity of Ibn al-Nafīs was important and extensive. He was mainly a commentator but one of independent mind and very extensive knowledge. He is said to have written most of his works out of his head without reference to books, which seems to be confirmed by the fact that as a rule they contain, as far as they are not commentaries, very few references to earlier works. His main writings are: (1) the *Kitāb al-Shāmil fi 'l-ṭibb*, an encyclopaedia of medicine which was to have consisted of three hundred volumes (this word to be taken in the conventional meaning of some ninety folios), of which only eighty volumes were completed; several volumes exist, partly in the autograph of the author (see N. Heer, in *RIMA*, vi (1960), 203-10); (2) the *Kitāb al-Muhadhdhab fi 'l-kuḥl*, a comprehensive but not very original record of the whole knowledge of the Arabs in ophthalmology; it was used by several later authors; (3) the *Mūdjiz al-Ḳānūn*, an extract from all parts of the *Ḳānūn* of Ibn Sīnā [*q.v.*], but omitting anatomy and physiology; it is a concise manual of the whole of medicine, particularly useful for the practitioner, and among the works of Ibn al-Nafīs it has met with the greatest success in the Oriental medical world; it exists in numerous manuscripts, was printed or lithographed a number of times, was the subject of a series of commentaries and glosses, the most reputed of which, by Nafīs b. ʿIwaḍ al-Kirmānī (completed 841/1437), was lithographed in India for the last time as recently as 1328/1910; it was also translated into Turkish and into Hebrew. (4) Among the medical commentaries written by Ibn al-Nafīs the most widely disseminated one is on the Aphorisms (*Fuṣūl*) of Hippocrates; he also wrote commentaries on Hippocrates's Prognostics, Epidemics, and *De natura hominis*; (5) he further commented upon the *Masāʾil fi 'l-ṭibb* of Ḥunayn b. Isḥāḳ, (6) and he wrote an extensive commentary on the *Ḳānūn* of Ibn Sīnā which exists in numerous manuscripts, improving the arrangement of the subject-matter and, in particular, collecting the passages relating to anatomy from the first three sections of the *Ḳānūn* and commenting on them in a separate section, which was often copied as an independent book; in this section, Ibn al-Nafīs sets out his theory of the lesser circulation of the blood (see below); his commentary on the fifth section of the *Ḳānūn* was translated into Latin by the Renaissance physician and scholar Andrea Alpago and posthumously printed in Venice 1547 (see M.-T. d'Alverny, in *Medioevo e Rinascimento, studi in onore di Bruno Nardi*, i, Florence 1955, 195 f.). (7) Of the writings of Ibn al-Nafīs on logic, there exists his commentary on his own *Kitāb al-Wurayḳāt*, a summary of the contents of Aristotle's *Organon* and *Rhetoric*; the section summarizing the *Analytica Priora* includes a discussion of the legal proofs in Islamic law and of the limited value of *ḳiyās* [*q.v.*] from the point of view of logic. His writings on grammar and rhetoric, and his commentary on the *Tanbīh* of al-Shīrāzī [*q.v.*] (if the mention of this last work by al-Subkī is not merely the result of an error) do not seem to have survived, but the *Mukhtaṣar fī ʿilm uṣūl al-ḥadīth*, on the science of tradition, has been preserved. (8) There is, finally, *al-Risāla al-Kāmiliyya fi 'l-sīra al-nabawiyya*, which can be freely translated as *The Theologus Autodidactus*.

In this intellectual tour de force, which was already admired by his contemporaries, Ibn al-Nafīs set out to show, by abstract reasoning which he put into the mouth of a solitary person, called Kāmil, on a desert island, that the events in the life of the

Prophet and in the history of the community of Muslims, including the incursion of the Mongols in his own lifetime and even the physical appearance of the Muslim ruler, no doubt sultan Baybars, were the best things that could possibly have happened and therefore, under divine providence, unavoidable. He ends with a naturalistic explanation of the Last Things.

The most important achievement of Ibn al-Nafīs in the field of medicine is his theory of the lesser or pulmonary circulation of the blood, from the right ventricle of the heart through the pulmonary artery (*vena arteriosa*) to the lung and from there through the pulmonary vein (*arteria venosa*) to the left ventricle of the heart, boldly contradicting the accepted ideas of Galen and of Ibn Sīnā and anticipating part of William Harvey's fundamental discovery; in contrast with Harvey, who started from experiment, Ibn al-Nafīs derived his theory from the same kind of abstract reasoning as in the *Theologus Autodidactus*. This remarkable theory, perhaps because of its unorthodox character, was almost completely ignored by the later Arab medical authors, excepting only an anonymous commentator of the *Ḳānūn* (Bibliothèque Nationale, Arabe 5776) who agrees with it, and an otherwise unknown al-Fāḍil al-Baghdādī in his commentary on the *Ḳānūnd̲j̲a*, an extract from the *Ḳānūn* by Maḥmūd b. Muḥammad al-Čaghmīnī (d. 745/1344), who made it his object to refute Ibn al-Nafīs's criticisms of Ibn Sīnā (Berlin, Ahlwardt 6294). A theory of the lesser circulation, identical in all essential respects with that of Ibn al-Nafīs and expressed in terms strangely reminiscent of those used by him, was formulated by Michael Servetus in his *Christianismi restitutio* (Vienne 1553), and an exposition of the same doctrine by Realdus Columbus (Realdo Colombo) in his *De re anatomica libri XV* (Venice 1559) forms a close parallel to this. Detailed philological analysis has made it probable that Servetus (and perhaps Colombo, too) had direct knowledge of the theory of Ibn al-Nafīs, and it is likely that this knowledge was transmitted by Andrea Alpago, who spent more than 30 years in Syria, travelled widely in search of Arabic manuscripts, and is known to have translated from the Arabic numerous medical texts not all of which were printed posthumously (he died about 1520).

Bibliography: al-ʿUmarī, *Masālik al-abṣār*, and al-Ṣafadī, *al-Wāfī bi-'l-wafayāt*, see texts and translations in *The Theologus Autodidactus*, below; al-Subkī, *Ṭabaḳāt al-S̲h̲āfiʿiyya*, Cairo 1324, v, 129; F. (MAX MEYERHOF-[J. SCHACHT])

IBN AL-NAḤḤĀS, AḤMAD B. MUḤAMMAD B. ISMĀʿĪL (d. 338/950), Egyptian grammarian, expert in early poetry, and especially in the Ḳur'ān. He was content with a limited and provincial sphere of influence; he did not take part in the quarrel between the Baṣrans and the Kūfans which was taking place in his time, but occupied himself more and more with scholarship and even with speculations about the Ḳur'ān. Thus he wrote a *Kitāb Maʿānī al-Ḳur'ān*, and a *Kitāb al-Nāsik̲h̲ wa 'l-mansūk̲h̲* (published in Cairo by Zakī Mud̲j̲āhid). To produce this little book required wide reading and repeated contacts with scholars in other disciplines. For a grammarian, albeit the pupil of al-Zad̲j̲d̲j̲ād̲j̲, of al-Ak̲h̲fas̲h̲ and of Mubarrad (all three specialists in the Ḳur'ān, *Fihrist*, 34), he showed great daring and uncommon intellectual ambition. In fact we learn that, for matters which were not his speciality, Ibn al-Naḥḥās often consulted the S̲h̲āfiʿī *ḳāḍī* Ibn al-Ḥaddād (cf. *Ak̲h̲bār al-Ḥallād̲j̲*, ed. Massignon, Paris 1957, 78) and that he did not hesitate even to ask for information from those who professed dialectic (*ahl al-naẓar*). It must have been in this milieu that he gained the habit of forming a personal opinion on all the questions which he raised, opinions which he had no hesitation in stating with the stubbornness of an idealist. This grammarian, vaguely inclined towards the abstractions of the Baṣra school (he possessed a copy of al-K̲h̲alīl and accused the Kūfan exegesis of being false), thus became involved in the petty quarrels between rites, in the problems peculiar to each of them, and in the statements of the traditional exegesis. In general, Ibn al-Naḥḥās had a definite repugnance for *nas̲k̲h̲* [*q.v.*], *i.e.*, for the "abrogation" pure and simple which declared invalid whole verses of the Ḳur'ān, but he disliked equally *mad̲j̲āz* [*q.v.*], the metaphorical meaning which scholars were tempted to ascribe to certain verses in order to make them compatible with preceding verses. The typically S̲h̲āfiʿī solution which he prefers is to refer to *nadb*; in this way the abrogated verses retain the value of a moral exhortation. If however the subject matter is too serious to allow the slightest compromise (*e.g.*, the Pilgrimage or the Holy War), then abrogation is the only course. Ibn al-Naḥḥās was continually preoccupied with religious problems: he wrote a book on the meaning of the names of God. A taciturn and retiring man, he thus acquired a reputation for avarice and austerity. He never enjoyed the favour of the public and disagreeable or humorous stories circulated concerning the incidents which accompanied his death. Although cut off from the world and very different from the traditional or even contemporary type of grammarian, Ibn al-Naḥḥās followed, with an unusual singleness of mind if without much immediate success, a path which led him to consider such burning questions as the value of the Sunna and of the different rites, and the question of the divine attributes to be seen reflected in the names of God.

Bibliography: Brockelmann, I, 132, S I, 201; Zubaydī, *Ṭabaḳāt*, 1954 ed., 239; Ḳifṭī, i, 101; Suyūṭī, *Bughya*, 1326 ed., 32. (J.-C. VADET)

IBN NĀḲIYĀ, ʿABD ALLĀH B. MUḤAMMAD B. AL-ḤUSAYN B. DĀWŪD (410-85/1020-92), poet and man of letters who was famous for his literary knowledge, for an important *dīwān*, now lost, and primarily for a collection of *maḳāmāt*. He was born in Baghdād, where his childhood was spent in the quarter which had earlier been occupied by the palaces of the Ṭāhirids and their out-buildings; he does not seem to have travelled much, his only patron being a certain Muḥammad b. Muḥammad al-Shahrazūrī. His character oddly combined a very strong religious devotion with a taste for debauchery. He was accused of carrying his faith so far as to deny the divine attributes, but there were also doubts as to whether he would find salvation. He was very well read, and wrote a *Kitāb al-Tashbīhāt*, preserved in the Escurial (no. 1378). He wrote also a résumé of the *Aghānī*.

Ibn Nāḳiyā appears to have followed the teaching of the Shāfiʿī scholar Abū Isḥāḳ al-Shīrāzī (Brockelmann, S I, 669), on whose death he wrote an elegy (Ibn Khallikān). A cynic, he went so far as to thank God for the littleness of man and for the faults which made him so despise the human species (cf. *Dībādja* of the *Maḳāmāt*). This attitude explains the curious and lugubrious trick which led him to write *maḳāmāt* which he intended to be entertaining, and which are in fact full of both physical and moral miseries: the hideousness of promiscuity, the meanness of great men and of scholars, various ironies of fortune, burlesque panegyrics which please nobody—not even their author, the grotesqueness of uninspired poets, lewd old men, preachers who themselves are haunted by the idea of sin and describe it in great detail. This incoherent, lax and mad universe contains one hero, named Fāris b. Bassām al-Miṣrī. This trivial hero wanders across the whole Muslim world from Arabia as far as Khurāsān. In it he meets periodically a certain Abū ʿAmr, as much of a vagabond and as little of a scholar as he is himself, and cast to play the secondary roles (according to a convention of the genre).

The *maḳāmāt* of Ibn Nāḳiyā, much more than those of al-Hamadhānī and of al-Ḥarīrī and, naturally, of al-Zamakhsharī, reflect an attitude of denigration and sarcasm, the controlled and systematic violence of which surprises the reader. It may be that in the licence and disorder of Ibn Nāḳiyā is to be seen the influence of the *malāmatiyya*, a sort of Muslim Jansenism which places no value on deeds and attaches importance only to sincere faith. Thus Ibn Nāḳiyā's work would seem to be deeply rooted in his own personality and to be, in its deliberate ugliness, the paradoxical expression of a type of doctrine of "justification by faith". In addition to being successful literary works, his *maḳāmāt* are of psychological interest, being perhaps a baroque form of self-criticism, revealing curious and sometimes unsuspected "depths" within the Islamic mentality.

Bibliography: Kaḥḥāla, *Muʿdjam*, vi, 116; Brockelmann, S I, 486; texts of *Maḳāmāt* in O. Rescher, *Beiträge zur Maqamenlitteratur*, iv, 123-52; Fr. tr. by Cl. Huart, in *JA*, 10th series, xii, 435-54. (J.-C. VADET)

IBN AL-NAṬṬĀḤ, ABŪ ʿABD ALLĀH MUḤAMMAD B. ṢĀLIḤ B. MIHRĀN AL-NAṬṬĀḤ, traditionist, genealogist and historian (d. 252/866). Little is known about his life except that, as his *nisba* (al-Baṣrī) shows, he was born in Baṣra and lived there for the greater part of his life. He used to visit Baghdād in order to hear and relate traditions.

The field in which Ibn al-Naṭṭāḥ excelled was history. Among his authorities were al-Wāḳidī, al-Madāʾinī and Abū ʿUbayda Maʿmar b. al-Muthanna. Thanks to his (lost) work *Kitāb* (or *Akhbār*) *al-dawla al-ʿAbbāsiyya*, later biographers consider him one of the pioneer writers of the dynastic history of the ʿAbbāsids. Whether this work was original or, as F. Rosenthal suggests, a revision of an earlier work written by his teacher, it is clear that Ibn al-Naṭṭāḥ provided the outline and the framework for an ʿAbbāsid dynastic history and that his work served as the starting-point for his successors. Ibn al-Naṭṭāḥ was also the author of various historical, biographical and genealogical monographs, which are listed in Ibn al-Nadīm's *Fihrist*. He may also be the author of a work on the excellences and monuments of Medina. However, none of his works is extant and it is remarkable that later historians seldom quote him or his works (see, *e.g.*, Ṭabarī, iii, 276; *al-ʿIḳd al-farīd*, Cairo 1948, i, 278). It has, however, been suggested by ʿA. al-Dūrī that Ibn al-Naṭṭāḥ may have been the author of an important extant work on the ʿAbbāsids known as *Akhbār al-ʿAbbās ... wa wildihi*, preserved in manuscript in the library of the Institute of Higher Islamic Studies in Baghdād. The first pages are missing (204 fols. survive); the name of the author is not given. The work is an annalistic account in biographical form dealing with al-ʿAbbās and his descendants, the ʿAbbāsids. The abrupt manner in which the manuscript ends shows that it is incomplete. A confident attribution of the work to Ibn al-Naṭṭāḥ would appear, however, to be rash, in view of the paucity both of the available information on Ibn al-Naṭṭāḥ's works and of the deductions which may be drawn from this manuscript.

As a traditionist Ibn al-Naṭṭāḥ was also known among the circle of the *Muḥaddithūn*, who thought highly of him and regarded him as trustworthy (*thiḳa*). This judgement enhances his importance as an early historian.

Bibliography: In view of the important place held by Ibn al-Naṭṭāḥ in Muslim historiography, the lack of information on him is surprising. Few references are to be found to his life: nevertheless, he is mentioned in Masʿūdī's list of authors (*Murūdj*, ed.-tr. Pellat, § 8) and he figures also among the historians in Sakhāwī's list (mainly derived from Masʿūdī's list, except for its alphabetical arrangement; see F. Rosenthal, *History*, 430 (Arabic tr., 686)); see also *Fihrist*, 107; Ḥādjdjī Khalīfa, i, 283; al-Khaṭīb al-Baghdādī, *Taʾrīkh Baghdād*, v, 357-8; al-Dhahabī, *Mīzān al-iʿtidāl*, iii, 74; idem, *al-Mushtabah*, Cairo 1962, i, 644; Ibn Ḥadjar al-ʿAsḳalānī, *Tahdhīb al-Tahdhīb*, Ḥaydarābād 1326, ix, 227; idem, *Lisān al-Mīzān*, Ḥaydarābād, vi, 693; idem, *Taḳrīb al-Tahdhīb*, Madīna 1960, ii, 170-1.

Rosenthal, *A history of Muslim historiography*, Leiden 1952, 79, 337, 399 (?), 430 (Arabic tr. by Ṣ. al-ʿAlī with valuable additions, 127, 548, 642, 697); A. Dūrī, *Ḍawʾ djadīd* ..., in *Bull. Coll. Arts and Science*, ii (1957), 65; A. ʿAzzāwī, *al-Taʿrīf bi 'l-muʾarrikhīn fī ʿaṣr al-Mughūl wa'l-Turkmān*, Baghdād 1957, 238-9. (F. OMAR)

IBN AL-NAẒAR, Abū Bakr Aḥmad b. Sulaymān al-ʿUmānī, Ibāḍī scholar of ʿUmān who lived in the 6th/12th century (he was killed by Khardala b. Samāʿa). He was the author of the *Kitāb al-Daʿāʾim*, a collection of poems on *fiḳh* of which two editions have been published (one of them in Cairo in 1351). Among his other works there should be mentioned an important *Kitāb Silk al-djumān fī siyar ahl ʿUmān.*

IBN NUBĀTA, Abū Yaḥyā ʿAbd al-Raḥīm b. Muḥammad b. Ismāʿīl al-Ḥudhaḳī al-Fāriḳī, born at Mayyāfāriḳīn at a date not known, that of 335/946 given by his biographers being probably incorrect (cf. Amedroz, *The Marwanid dynasty at Mayyāfāriḳīn*, in *JRAS*, 1903, 125, n.; idem, *Notes on two articles on Mayyāfāriḳīn*, in *JRAS*, 1909, 175), was preacher (*khaṭīb*) at the court of Sayf al-Dawla at Mayyāfāriḳīn and Aleppo. He died in 374/984-5 in his native town. His sermons (*khuṭab*) in rhyming prose and a very elaborate style can be divided into three sections: (1) praise of God and prayer for the Prophet; (2) exhortation to fear God and the Last Judgement and to observe the moral and religious laws, in particular the obligation of the *djihād*; (3) petition for God's help and blessing, ending in a verse of the Ḳurʾān. In addition to the sermons which he preached on ordinary occasions of worship and for religious festivals, Ibn Nubāta, from 348/959 on, often composed sermons for political occasions. His most famous sermons, the *khuṭab djihādiyya*, were written to exhort the population to support Sayf al-Dawla in the war against the Byzantines, and they aroused great enthusiasm. They contain references to contemporary events, for example the taking of Aleppo by the Byzantines in 351/962, the measures taken for the defence of Mayyāfāriḳīn, the arrival in that town of volunteers from Khurāsān, the assassination of Nicephorus Phocas in 969, etc.

Ibn Nubāta's sermons were collected and arranged together with some sermons by his son Abū Ṭāhir Muḥammad (*ca.* 390/999) and by his grandson Abu 'l-Faradj (*ca.* 420/1029); collected in about 629/1223, they have been printed in various editions, of which one of the best known is the Beirut edition of 1311.

Bibliography: Ibn Khallikān, Būlāḳ ed., i, 350-7; Ibn al-Azraḳ al-Fāriḳī, *Taʾrīkh* ..., MS Brit. Mus. Or. 5803, fol. 114 v. (part not yet printed); Ibn al-ʿImād, *Shadharāt al-dhahab*, iii, 83; M. Canard, *Sayf al-Daula, Recueil de textes* ..., Algiers 1934, 129-34, 142-4, 155-64, 167-73, 415-6 (annotated extracts), 283-4; Muḥammad Ṣadruddin, *Saifuddaulah and his time*, Lahore 1930, 168; Zakī Mubārak, *al-Nathr al-fannī*, ii, 159-65; Mez, *Die Renaissance des Islams*, 307-13, = Eng. tr., 319-25 (translated extracts). See also the translation by de Slane, in *JA*, 3rd series, ix, 66 ff., of the famous sermon on the vision of the Prophet; Brockelmann, I, 92, S I, 149-50. (M. Canard)

IBN NUBĀTA, Abū Bakr Djamāl al-Dīn Muḥammad b. Shams al-Dīn Muḥammad b. Sharaf al-Dīn Muḥammad b. al-Ḥasan b. Ṣāliḥ b. Yaḥyā b. Ṭāhir b. Muḥammad b. al-Khaṭīb ʿAbd al-Raḥīm b. Nubāta, a poet and prose writer who was famous in his own day. He traced his descent from the tribe of the Djudhām (Ḳaḥṭān) which had migrated to Syria to settle in the neighbourhood of Mayyāfāriḳīn, the town in which his ancestor al-Khaṭīb ʿAbd al-Raḥīm had lived.

Ibn Nubāta however was born in Cairo, in Rabīʿ I 686/April 1287. His father Shams al-Dīn (b. 666/1268, d. 750/1349; see Brockelmann, S II, 47) was a scholar in *ḥadīth*, so that the young Muḥammad grew up in a religious and scholarly atmosphere. From his youth he distinguished himself by his lively intelligence. His father introduced him to the eminent scholars of the time, in particular to Ibn Daḳīḳ al-ʿĪd.

Early in his career, Ibn Nubāta wrote a number of panegyrics addressed to the dignitaries of Cairo. Having failed to obtain the success for which he had hoped, he set off at the beginning of 716/1316 for Syria, and settled at Damascus. Thence he would visit Aleppo and go fairly often to Ḥamāt, to the court of the scholarly Ayyūbid ruler al-Malik al-Muʾayyad Abu 'l-Fidāʾ, who ruled Ḥamāt from 710 to 732/1311-32, and whose favourite poet he became. To him he addressed his best panegyrics, known as *al-Muʾayyadiyyāt*. Al-Malik al-Muʾayyad paid him an annual allowance, which he sent to him at Damascus. Ibn Nubāta led at this period a happy life and wrote a number of literary treatises commissioned by al-Malik al-Muʾayyad. When the latter died in 732/1332, the poet wrote moving threnodies lamenting his death. Al-Afḍal, who succeeded his father and ruled Ḥamāt from 732 to 742/1332-41, continued for a time to patronize Ibn Nubāta, but then he devoted himself to a life of mysticism and lost interest in all poets; this put an end to the happy period of Ibn Nubāta's life. From then on he wandered from town to town in Syria, earning his livelihood by writing panegyrics. It was during this period that he was made superintendant of the Church of the Holy Sepulchre at Jerusalem. To fulfil this duty he went there every year and then returned to Damascus. After al-Afḍal's fall and death at Damascus, Ibn Nubāta dedicated to him a threnody which was in fact a lament for the whole of the Ayyūbid dynasty.

In 743/1342, Ibn Nubāta was appointed secretary to the Chancellery (*Dīwān al-inshāʾ*) at Damascus. His misfortunes at this time led him to write poems soliciting the help of the sultan al-Nāṣir Ḥasan in Cairo, who took pity on him and summoned him to Egypt; but the now elderly poet, who left Damascus in Rabīʿ I 761/January-February 1360, worked only a very short time at the sultan's court, in the *Dīwān al-tawḳīʿ*. After the assassination of the sultan (762/1361), Ibn Nubāta spent his last days in poverty; he died on 8 Ṣafar 768/14 October 1366 and was buried in the cemetery of the mystics.

Ibn Nubāta's poetry, of rather conformist type, is full of rhetorical figures and particularly of *tawriyas*; it does not greatly reflect the events of his time. Ibn Nubāta was a conservative poet, and made use of the traditional genres of poetry: laudatory, amorous, elegiac; he also wrote poems in praise of the Prophet, a genre much in vogue at the time.

His *Dīwān*, assembled by Muḥammad Badr al-Dīn al-Bashtakī (d. 830/1426-7), is based on the main collection made by the poet, and on other small *dīwān*s with various titles, the majority of which were compiled by the author himself. This great *dīwān*, which does not however contain all his works, was edited in Alexandria and in Cairo in 1323/1905 (on the manuscripts, see Brockelmann; a further manuscript is in al-Ẓāhiriyya library at Damascus, no. 7681). In addition to this *dīwān*, Ibn

Nubāta wrote many prose works mentioned in the *idjāza* which he gave to his pupil Ṣalāḥ al-Dīn al-Ṣafadī, and listed also by Brockelmann. In accordance with the fashion of the period, Ibn Nubāta's prose is characterized by mannerisms of style. The most important of these works were written at the request of the ruler of Ḥamāt, al-Malik al-Muʾayyad, when the poet was in Syria; among them are: *Maṭlaʿ al-fawāʾid*, a work of *adab* praised by some men of letters of the period; *Sadjʿ al-muṭawwaḳ*, biographies of the scholars of the period; *Sarḥ al-ʿuyūn*, a commentary on the epistle of Ibn Zaydūn, which reflects the author's linguistic, literary and historical erudition; *al-Fāḍil min inshāʾ al-Fāḍil*, a selection of letters by al-Ḳāḍī al-Fāḍil; *Zahr al-manthūr*, a treatise on the art of letterwriting.

Bibliography: Suyūṭī, *Ḥusn al-muḥāḍara*, i, 329; Ibn Iyās, *Badāʾiʿ al-zuhūr*, Būlāḳ 1311, i, 221; Ibn Kathīr, *Bidāya*, xiv, 322; Ibn Ḥadjar, *al-Durar al-kāmina*, Ḥaydarābād 1350, iv, 216-23; Ibn Taghrībirdī, *Nudjūm*, Cairo 1950, xi, 95; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, Cairo 1324, vi, 31; Ibn Ḥidjdja al-Ḥamawī, *Khizāna*, Cairo 1304, 290-2; Zuruklī, *Aʿlām*, vii, 268; Kaḥḥāla, *Muʿdjam al-muʾallifīn*, xi, 273; Aḥmad al-Iskandarī, Aḥmad Amīn and others, *al-Mufaṣṣal fi 'l-adab al-ʿarabī*, Cairo 1936, ii, 206-34; ʿUmar Mūsā Pāshā, *Ibn Nubāta al-miṣrī*, Cairo 1963; Brockelmann, II, 11-2 (10-12). The introduction by Muḥ. al-Faḍl Ibrāhīm to his edition of the *Sarḥ al-ʿuyūn* (Cairo 1964) contains further bibliographical references and a list of Ibn Nubāta's works.

(J. Rikabi)

IBN NUDJAYM (so called after a remote ancestor), Zayn al-Dīn (or al-ʿĀbidīn), or simply Zayn b. Ibrāhīm b. Muḥammad b. Muḥammad b. Muḥammad al-Miṣrī, a distinguished Ḥanafī scholar. Little is known of the events of his life, except that he was born in Cairo in 926/1520, studied the usual subjects of Islamic and Arabic learning, started to teach and to give *fatwā*s at an early age while his teachers were still alive, performed the *ḥadjdj* in 953/1547, taught at the *madrasa* of the *amīr* Ṣarghitmish, and died in 970/1563, when he had not yet reached the limit of his intellectual development; he was buried near the sanctuary of Sayyida Sukayna. His main activity was in the field of *fiḳh* but he was also inclined towards ṣūfism; he was close to ʿAbd al-Wahhāb al-Shaʿrānī [*q.v.*] for ten years and undertook the *ḥadjdj* in his company; he asked al-Shaʿrānī whether he should embrace the *ṣūfī* way of life, but al-Shaʿrānī dissuaded him from doing so before he had gained full mastery of the *sharīʿa*. Ibn Nudjaym was particularly interested in the systematic structure of *fiḳh*, and this interest shows itself in his literary activity, which was very extensive.

(1) His *Kitāb al-Ashbāh wa 'l-naẓāʾir* (printed in Calcutta 1240/1825 and repeatedly in Cairo) is partly based on a work of al-Suyūṭī [*q.v.*] with the same title; it treats in seven sections of general rules (*ḳawāʿid kulliyya*), difficult details (*fawāʾid*) chapter by chapter, similar and dissimilar cases (*al-djamʿ wa 'l-farḳ*), puzzles (*alghāz*), subterfuges or legal devices (*ḥiyal*), distinctions (*furūḳ*), and finally some anecdotes. (2) Of systematic character, too, is Ibn Nudjaym's *al-Fawāʾid al-Zayniyya* (printed in Calcutta 1244) in which he established more than one thousand rules or norms (*ḳawāʿid*) in *fiḳh*, presumably following the example of Ibn Radjab [*q.v.*]. (3) His smaller treatises and *fatwā*s are very numerous; forty of them were collected after his death by his son Aḥmad under the title *al-Rasāʾil al-Zayniyya fī madhhab al-Ḥanafiyya* (printed Calcutta 1244 and Būlāḳ 1323, see Brockelmann). (4) Ibn Nudjaym also wrote commentaries on several handbooks of Ḥanafī *fiḳh*, not all of which have been preserved; the most famous of them is *al-Baḥr al-rāʾiḳ*, a commentary on the *Kanz al-daḳāʾiḳ* of al-Nasafī [*q.v.*]; he only wrote as far as the beginning of the *kitāb al-idjāra*, and the work was completed, with a *Takmila*, by Muḥammad b. ʿAlī al-Ṭūrī (d. 1004/1595); it was first printed in Cairo, 1311, in eight volumes, seven of which contain *al-Baḥr al-rāʾik* and the eighth the *Takmila*, and several times afterwards; it is one of the great handbooks of the Ḥanafī *madhhab*.

Zayn al-Dīn's younger brother ʿUmar, also called Ibn Nudjaym, studied under him and wrote another commentary on the *Kanz al-daḳāʾik*, called *al-Nahr al-fāʾiḳ*; he died suddenly, presumably poisoned by a jealous wife of his, in 1005/1596 and was buried near his brother (al-Muḥibbī, *Khulāṣat al-athar*, iii, 206).

Bibliography: Nadjm al-Dīn al-Ghazzī, *al-Kawākib al-sāʾira*, iii, 154; Ibn al-ʿImād, *Shadharāt al-dhahab*, viii, 358; Muḥammad ʿAbd al-Ḥayy al-Laknawī, *al-Taʿlīḳāt al-saniyya* (notes on *al-Fawāʾid al-bahiyya*), 134; ʿAlī Pasha Mubārak, *al-Khiṭaṭ al-djadīda*, v, 17; Ahlwardt, Catalogue Berlin, iv, nos. 4616, 4831; Catalogue Bankipore, xix/2, no. 1699; Sarkīs, *Muʿdjam al-maṭbūʿāt*, i, 265; Brockelmann, II, 401, 252, S II, 425, 266; there is also a useful biography at the beginning of the editio princeps of *al-Baḥr al-rāʾiḳ*.

(J. Schacht)

IBN RABBAN [see al-Ṭabarī].

IBN al-RABĪB, Abū ʿAlī Ḥasan b. Muḥammad b. Aḥmad al-Tamīmī, known also under the name of al-Ḳāḍī al-Tāhartī (because he was for some time *ḳāḍī* of Tāhart), philologist, poet and man of letters of Ḳayrawān, where he died in 430/1038-9. He is remembered only for a *risāla* addressed to Abu 'l-Mughīra Ibn Ḥazm [see ibn ḥazm] in which he criticizes the Andalusians (text in Ibn Bassām, *Dhakhīra*, i, 111-3; al-Maḳḳarī, *Analectes*, ii, 108-9; H. Ḥ. ʿAbd al-Wahhāb, *al-Muntakhab al-madrasī*, Cairo 1944, 64-6; Eng. tr. P. de Gayangos, *The history of the Mohammedan dynasties in Spain*, London 1840, i, 168-70). This *risāla* produced two answers: the first, from Abu 'l-Mughīra Ibn Ḥazm (partial text in Ibn Bassām, *Dhakhīra*, i/1, 113-6), the second from the latter's cousin, ʿAlī Ibn Ḥazm (text in al-Maḳḳarī, *Analectes*, ii, 109-21; Eng. tr. P. de Gayangos, *op. cit.*, i, 170-90; Fr. tr. Ch. Pellat, in *al-Andalus*, xix/1 (1954), 61-103).

Bibliography: in the article. (Ed.)

IBN RADJAB, Zayn al-Dīn (and Djamāl al-Dīn) Abu 'l-Faradj ʿAbd al-Raḥmān b. Aḥmad b. Radjab al-Baghdādī al-Dimashḳī, Ḥanbalī traditionist and jurisconsult, author of a *ṭabaḳāt*-work on the Ḥanbalī school, *Dhayl ʿalā Ṭabaḳāt al-ḥanābila*, a continuation of the work of Ibn Abī Yaʿlā [see ibn al-farrāʾ]. Originally from Baghdād, where he was born in 736/1335, he came to Damascus with his father in 744/1343. His father saw to his education, especially in the field of *ḥadīth*, and travelled with him to the Ḥidjāz and Jerusalem for this purpose. Ibn Radjab studied *ḥadīth* also in Cairo. He received *idjāza*s from the traditionists Shihāb al-Dīn Ibn al-Naḳīb (694-764/1294-1362), and Saʿd al-Dīn al-Nawawī (729-805/1328-1402). Several of his works have come down to us, of which, in addition to the above mentioned *ṭabaḳāt*-work, the most important is *al-Ḳawāʿid* (Cairo 1352/1933), on Ḥanbalī *fiḳh*. He

taught in Damascus in the madrasas al-Ḥanbaliyya al-Sharīfiyya, and al-ʿUmariyya al-Shaykhiyya, as well as in al-Turba al-ʿIzziyya, and died in 795/1392.

Bibliography: Nuʿaymī, *al-Dāris fī taʾrīkh al-madāris*, 2 vols., Damascus 1951, index, s.v. (ii, 76-7, for biographical notice); H. Laoust, *Le Ḥanbalisme sous les Mamlouks Baḥrides*, in *REI*, xxviii (1960), 70-71, and notes 375-8; G. Makdisi, *Ibn ʿAqīl et la résurgence de l'Islam traditionaliste au XIe siècle* (Damascus 1963), index, s.v.; on *ṭabaḳāt*-works of the Ḥanbalīs and other schools of law, see G. Makdisi, *op. cit.*, 46-67. For a list of Ibn Radjab's works, see Brockelmann, I, 107, S I, 129-30; Nuʿaymī, *Dāris*, ii, 77; Ibn al-ʿImād, *Shadharāt*, vi, 339. (G. Makdisi)

IBN RĀHWAYH, i.e., Abū Yaʿḳūb Isḥāḳ b. Ibrāhīm b. Makhlad b. Ibrāhīm al-Ḥanẓalī al-Marwazī, a prominent traditionist. His father was called Rāhwayh because he had been born on a road. Ibn Rāhwayh himself was born in Marw in 161/778 or 166/782-3, travelled in ʿIrāḳ, Ḥidjāz, Yemen and Syria, visited Baghdād more than once and finally settled in Nīsābūr where he died in 238/853; his tomb became a place of pilgrimage. He heard traditions from ʿAbd Allāh b. al-Mubārak (Brockelmann, S I, 256), Sufyān b. ʿUyayna [*q.v.*], Wakīʿ b. al-Djarrāḥ, an authority of al-Bukhārī, and Djarīr b. ʿAbd al-Ḥamīd (*Tahdhīb al-tahdhīb*, ii, no. 116); later sources increase the number of his teachers almost indefinitely. He was the teacher of Ibn Ḳutayba and of Muslim [*qq.v.*]; also the authors of the other classical collections (with the exception of Ibn Mādja) as well as Yaḥyā b. Ādam [*q.v.*] and his contemporary Aḥmad b. Ḥanbal [*q.v.*] transmitted traditions from him. As a traditionist, he was naturally hostile to the *aṣḥāb al-raʾy* [*q.v.*], and Ibn Ḳutayba quotes a number of statements of his to this effect (*Taʾwīl mukhtalif al-ḥadīth*, 65-67, Lecomte §§ 63-7). Incredible stories are related of his astounding memory, but it is also said that he became confused five months before he died, and in contrast with his deep knowledge of religious subjects he was incompetent in worldly matters. According to the *Fihrist*, he wrote a *Kitāb al-Sunan fi 'l-fiḳh* (a typical "traditionist" title), a *Kitāb al-Musnad*, and a *Kitāb al-Tafsīr*; one part of his *Musnad* has been preserved (Catalogue Cairo[1], 419) and is to be printed in Ḥaydarābād.

A grandson of Ibn Rāhwayh, Abu 'l-Ṭayyib Muḥammad b. Muḥammad, was a traditionist and Mālikī scholar, widely travelled; he was killed by the Ḳarmaṭīs [*q.v.*] on his return from the *ḥadjdj* in 294/906-7 (Ibn Farḥūn, *Dībādj*, Cairo 1330, 244).

The son of this last, also called Muḥammad, was a prominent Mālikī scholar and also a traditionist; he lived in Baghdād and finally became *ḳāḍī* of Ramla, where he died in 336 or 337/947-949 (*Dībādj*, *ibid.*; *Taʾrīkh Baghdād*, iii, no. 1262, where these two persons seem to be confounded).

Bibliography: al-Bukhārī, *al-Taʾrīkh al-kabīr*, i, no. 1209; Ibn Ḳutayba, *Taʾwīl mukhtalif al-ḥadīth*; G. Lecomte, *Ibn Qutayba*, index; idem, *Le Traité des divergences du ḥadīṯ d'Ibn Qutayba*, index; Ibn Abī Ḥātim, *Kitāb al-Djarḥ wa 'l-taʿdīl*, i, no. 714; *Fihrist*, 230; Abū Nuʿaym, *Ḥilyat al-awliyāʾ*, ix, no. 446 (contains only verses in praise of him and traditions related by him); al-Khaṭīb al-Baghdādī, vi, no. 3381 (an extensive article, contains a long genealogy); Ibn Abī Yaʿlā, *Ṭabaḳāt al-Ḥanābila*, i, 109 (a short notice); idem, *Ikhtiṣār al-Nābulusī*, 68-70 (the same notice, supplemented with material from other sources); Ibn Ḥadjar al-ʿAsḳalānī, *Tahdhīb al-tahdhīb*, i, no. 408; Brockelmann, S I, 257 (read 419 instead of 305). (J. Schacht)

IBN RĀʾIḲ, or Muḥammad b. Rāʾiḳ, first *amīr al-umarāʾ* [*q.v.*] of the ʿAbbāsid caliphate. The son of an officer of the caliph al-Muʿtaḍid, and of Khazar origin, Ibn Rāʾiḳ had been chief of police, and then chamberlain during the reign of al-Muḳtadir. On the accession of al-Ḳāhir, at first in disgrace for having supported the former caliph and having fled from Baghdād, he succeeded in being made governor of Baṣra. When, on the accession of al-Rāḍī, he was made governor also of Wāsiṭ, he became one of the most powerful governors, and had no scruples about withholding the payments which were due from him in order to make difficulties for the caliph and the vizier. He obtained, through his appointment as *amīr al-umarāʾ* ([*q.v.*] "commander of the commanders"), the chief command of the army, together with responsibility for the financial administration and for maintaining order throughout the empire (324/936). During the two years of his amīrate, Ibn Rāʾiḳ concerned himself mainly with depriving the caliph of every means of defence, and ordered for this reason the massacre of the Ḥudjariyya [*q.v.*] guards, who had proved intractable. He also entered into conflict with the governors of the Ahwāz, the Banu 'l-Barīdī, from whom he attempted to take their province, and treated in a particularly cruel manner the former vizier Ibn Muḳla [*q.v.*], who was intriguing against him. In spite of all this, he was removed from office in 326/938 by his own subordinate, Badjkam, who appointed him as governor of the Diyār Muḍar. After Badjkam's death, he seized the power from the new *amīr* Kurānkidj and succeeded in getting himself appointed again as *amīr al-umarāʾ* in Dhu 'l-Ḥidjdja 329/September 941. But he was not long in office, as he was assassinated in Radjab 330/April 942 by the Ḥamdānid al-Ḥasan b. ʿAbd Allāh, who felt himself to be threatened by him.

Canard, *Histoire de la dynastie des H'amdânides*, i, Algiers 1951, 411-4, 420-4; Defrémery, *Mémoire sur les émirs al-oméra*, in *Mémoires prés. à l'Académie des Inscr. et Belles-Lettres*, 1st series, ii, Paris 1852, 105-96; Ṣūlī, *Akhbâr ar-Râdî billâh* . . ., tr. M. Canard, Algiers 1946-50, index. (D. Sourdel)

IBN AL-RAḲĪḲ (d. after 418/1027-8), or al-Raḳīḳ Abū Isḥāḳ Ibrāhīm b. al-Ḳāsim al-Kātib al-Ḳayrawānī, who had been secretary of the Zīrids for about a quarter of a century at the time when Ibn Rashīḳ wrote his *ʿUmda*, was a talented man of letters and chronicler. Ibn Rashīḳ acknowledges that he had a certain poetic gift, although his style was rather that of a secretary, and Yāḳūt (*Muʿdjam*, i, 217-26) has preserved some long fragments from his poems. There also survives his *Ḳuṭb al-surūr* (MS Paris B.N. nos. 4829, 4830 and 4831; for the other MSS, see Brockelmann) devoted to the Bacchic genre in the form in which it was cultivated in the East.

But Ibn al-Raḳīḳ was considered by his contemporaries (see Ibn Rashīḳ, quoted by Yāḳūt, *Muʿdjam*, i, 216) and by posterity as an outstanding historian. Ibn Khaldūn regarded him (*Muḳaddima*, Beirut ed. 1956, 4) as "the best specialist on the history of Ifrīḳiya and of the states whose capital was Ḳayrawān". This reputation was fully justified. His *Kitāb Taʾrīkh Ifrīḳiya wa 'l-Maghrib*, in several volumes, was the basis for the works of Ibn Shaddād, of Ibn al-Athīr (d. 630/1233), of Ibn al-Abbār (d. 658/1260),

of al-Tidjānī (d. after 708/1308) and especially of Ibn ʿIdhārī (ca. 706/1306-7), al-Nuwayrī (d. 732/1331-2), Ibn Khaldūn (d. 808/1405-6) and al-Maḳrīzī (d. 846/1442-3). Al-Sakhāwī (*Iʿlān*, 122; d. 902/1496-7), al-Shammākhī, and even al-Wazīr al-Sarrādj (*Ḥulal*, p. 289 ff.), who was writing in 1137/1724-5, appear to quote directly from him. Today, however, the *Taʾrīkh* of Ibn al-Raḳīḳ, although it is constantly referred to as surviving in certain private libraries in Tunisia, cannot in fact be traced. An anonymous fragment, defective at the beginning and lacking a colophon, on the history of the Maghrib from the governorship of ʿUḳba b. Nāfiʿ to the reign of Ibrāhīm I, which was discovered at Rabat by M. al-Mannūnī, has been published (Tunis 1968) by M. al-Kaʿbī, who attributes it to Ibn al-Raḳīḳ; but this attribution is in fact very dubious. It should be noted finally, if the passages borrowed from Ibn al-Raḳīḳ's work are to be correctly interpreted, that although compiled or written with scrupulous care it is coloured by the Shīʿī sympathies of its author, a fact which seems to have been forgotten or overlooked by the historians who have included long fragments from it.

Ibn al-Raḳīḳ, who in 388/998 was sent by the Zīrid Bādīs on a diplomatic mission to al-Ḥākim of Egypt, seems, to judge from a poem reproduced by Yāḳūt (*Muʿdjam*, i, 222-4), to have stayed for a long time in Cairo, of whose delights he writes poignantly and nostalgically. Among his other works not yet traced, there are mentioned: *Kitāb al-Nisāʾ* (on women); *al-Rāḥ wa 'l-irtiyāḥ* (on pleasures); *al-Aghānī* (on songs); and *Naẓm al-sulūk fī musāmarāt al-mulūk* (a manual for the perfect courtier).

Bibliography: the sources are given by Brockelmann, I, 161, S I, 252; Amari, *Storia*, ed. Nallino, 1933, i, 39; Ziriklī, *Aʿlām*, 2nd ed., i, 51-2; H. R. Idris, *Zīrides*, i, XIV and ii, 81-2. The best biographical notice on Ibn al-Raḳīḳ is that by Yāḳūt, *Muʿdjam al-udabāʾ*, Cairo ed. 1936, i, 216-26. (M Talbi)

IBN RASHĪD [see RASHĪD, ĀL].

IBN RASHĪĶ, Abū ʿAlī Ḥasan b. Rashīḳ al-Ḳayrawānī, and also al-Azdī, al-Masīlī, one of the most illustrious men of letters of Ifrīḳiya, born in 390/1000 at M'sila (Masīla = Muḥammadiyya) in the region of Constantine. His father, known by the single name Rashīḳ, was probably a freed slave of Byzantine origin (*rūmī*), who had become a client of the Azd. He followed the trade of goldsmith in M'sila, where the young Ḥasan, after his first studies, soon revealed his poetic talents, as well as a taste for literature. Wishing to perfect his knowledge and to take advantage of his poetic gifts, Ibn Rashīḳ went to Ḳayrawān, then the capital of Ifrīḳiya and a flourishing centre of culture, in 406/1015-6, the year of the accession of the Zīrid al-Muʿizz. His two-fold ambition was amply realized since he was able to profit from the teaching and instruction of the famous masters of the literary school of Ḳayrawān, such as al-Khushanī, al-Ḳazzāz and Ibrāhīm al-Ḥuṣrī, perhaps after becoming acquainted with al-Nahshalī in M'sila, of which they were both natives; moreover, as early as 410/1019, he became a protégé of the great patron Ibn Abi 'l-Ridjāl [*q.v.*], tutor to al-Muʿizz, a poet, man of letters and astronomer (well-known in mediaeval Europe by the names Abenragel, Albohazen and Alboacen) and head of the Zīrid chancellery, where he found a post for the young Ibn Rashīḳ. In the same year, he became court poet to al-Muʿizz and one of the sovereign's intimates. From then onwards his reputation continued to increase, as did his favour with the prince, thanks to his moral qualities, his charming character and his boundless energy: witty, jovial, high-spirited, and indeed a convivial fellow and devotee of the pleasures offered by the Zīrid capital, he was admired for his poetry which enjoyed an exceptional vogue, even in his lifetime, as far afield as Sicily and Spain. He had to face the envy or hostility of many, the most tenacious adversary being his emulator Ibn Sharaf [*q.v.*]; their rivalry, inflamed by al-Muʿizz, who often provoked what amounted to poetic jousts between his two greatest poets, was to end only in exile in Sicily, at the intervention of the Sicilian admirers of the "two Ḳayrawānī masters". On the fall of Ḳayrawān, when it was devastated by the Banū Hilāl in 449/1057, Ibn Rashīḳ followed al-Muʿizz to al-Mahdiyya where, from then onwards, he simultaneously praised both the monarch and his son Tamīm, the governor of that town, although at times he had to suffer from the violent ill-temper of al-Muʿizz, who had been rendered irascible by his defeats. It was as a result of one of these scenes, more probably than after the prince's death (which occurred in 454/1062), that he went to Sicily, where he became reconciled with Ibn Sharaf, who had already preceded him there. But he did not follow his old compatriot to Spain, where they had been invited by the ʿAbbādid of Seville, al-Muʿtaḍid: he died in Mazara in 456/1063-4 or 463/1070-1.

It was principally to his poetry that Ibn Rashīḳ owed his rise and fame. Ibn Khallikān is alone, so far as we know, in describing his *Dīwān* (in the account of Ibn Yaʿīsh, vi, 50, and not in the account of Ibn Rashīḳ, as various studies say), which incidentally was incomplete. The known recensions of his poems, all recent (*Bisāṭ*; *Nutaf*; *Dīwān* ed. Yāghī; see *Bibl.*), do not, however, reproduce everything that has survived from these poems. In them Ibn Rashīḳ handles all the traditional themes of Arab poetry; his panegyrics and occasional verse prove him chiefly a court poet, and his poem on the Ḳayrawān disaster was to serve as a model for many celebrated elegies: this masterpiece of the genre, in which the expression of severe and dignified grief was allied to a vigorous, taut style of remarkable clarity, is not lacking in epic inspiration, like his threnody (rhyme *-kū*) on al-Muʿizz.

But his poetry is characterized above all by its conscious artistic elegance, in which the poet's exertions, although evident, nevertheless achieve real beauty. In this sense, Ibn Rashīḳ is a classical poet. He is above all the poet most skilled in felicitously applying the theories and rules of Arabic poetry, so expertly expounded in his major work, *al-ʿUmda fī ṣināʿat al-shiʿr wa naḳdih* (published successively in Tunis—vol. i only—in about 1285/1868, then, in its entirety, in Cairo 1325/1907, 1344/1925, 1934 and 1955; abridged several times, particularly by Ibn al-Ḳaṭṭāʿ al-Ṣiḳillī, Muwaffaḳ al-Dīn al-Baghdādī and Abū Nakr Ibn Sarrādj al-Shantarīnī; taught, especially by the author himself in Sicily), which remains the "basic" work for this kind of poetics. This derives from an essential principle which seems to be that of poetry as an "art", as the Arabs have always conceived it—either achieved by effort, *maṣnūʿ*, or spontaneous, *maṭbūʿ*, rather than an "inspiration": poetry, whose importance to the Arabs is primordial and in which the "Moderns" are just as successful as the "Ancients", is superior to prose through its meaning and form; its value—just as for Ḳudāma—varies with that of its components—vocabulary (*al-lafẓ*),

metre (*al-wazn*), meaning (*al-maʿnā*), rhyme (*al-ḳāfiya*), and the culture, intelligence and dexterity of the poet who must be able to handle all types with the same ease and to adapt his poetry according to the subject, the circumstances and the public. The work concludes with some particulars about the life of the Arabs, their language and the knowledge required in order to develop poetic talent. The quotations, which are varied and accompanied by comments, give this work on poetics a quality of *adab* which appreciably enhances it; the reasoned and well-founded judgements which accompany the exposition throughout *al-ʿUmda* in themselves allow Ibn Ras͟hīḳ to be ranked as one of the greatest Arab literary critics. Making use of the various currents of literary criticism which, from Ibn Sallām to al-ʿAskarī, through Ḳudāma, al-Āmidī and al-Ḏjurdjānī, reached its final but incomplete form in the East, Ibn Ras͟hīḳ, who devoted himself to the criticism of poetry, composed a work of synthesis that was at once rational, systematic and original, in which he did not confine himself to a theoretical exposé or to the study of one aspect of poetry or of a single poet, but dealt with poetry in its entirety and as a man of letters, since this criticism flows from the complete and copiously illustrated exposition of poetics, while giving a place, along with the classical criteria, to taste and the "literary sense". The favourite problem of the Arab literary critic, plagiarism (*al-sariḳa*)—already considered at the end of *al-ʿUmda*—became with him, in a remarkable work, *Ḳurāḍat al-ḏhahab fī naḳd as͟hʿār al-ʿArab* (ed. K͟hāndjī, Cairo 1926; ed. Ch. Bouyahia, forthcoming), a study of poetic creation, and more precisely of the particular use made by each poet of poetic themes and the art of expressing them, and, to some extent, of the evolution of Arab poetry. Ibn Ras͟hīḳ's method of literary criticism finds its application in his admirable *Unmūḏhadj al-zamān fī s͟huʿarāʾ al-Ḳayrawān* (a lost work, the substance of which has, however, mostly been preserved in later biographical dictionaries, which often adopted it as a model, closely imitated but never equalled; Ibn al-Abbār makes no secret of this fact for his *Tuḥfat al-ḳādim*, incomplete ed. under the title *al-Muḳtaḍab min K. Tuḥfat al-ḳādim*, Cairo 1957, introd.), in which, concentrating upon the writings rather than the lives of the Ifrīḳiyan poets of his period, in each notice he sketched a true literary portrait with the help of objective and methodical criticism, infallible acuteness of judgement, a graphic style and pure, sober and closely knit language, whose magnificence is, however, brought to an end as soon as the writer turns from the portrait to narrative. This trilogy forms the crowning achievement of Arab literary criticism. With the genre discussed in *al-Unmūḏhadj* may be linked a book on the poets of al-Mahdiyya, *al-Rawḍa al-maws͟hiyya fī s͟huʿarāʾ al-Mahdiyya*, of which we have no exact knowledge. All the other works of Ibn Ras͟hīḳ (about thirty in number, mostly *risālas*; see their titles in the authors listed in the *Bibl.*; some, perhaps, are merely chapter headings or a mutilated repetition of other titles already listed) are today lost. For the most part, they are connected with his work as literary critic, whether they are concerned with the science of language (such as *al-S͟huḏhūḏh fi 'l-lug͟ha*, on words rarely employed) or whether they belong to his long polemic with his rival Ibn S͟haraf. For Ibn Ras͟hīḳ's place in the development of rhetoric, see also BADĪʿ, BAYĀN and AL-MAʿĀNĪ WA'L-BAYĀN.

Ibn Ras͟hīḳ is also regarded by all his biographers, both ancient and modern, as an historian. But nothing is less certain; the only historical work that they attribute to him with any precision, *Mīzān al-ʿamal* (a chronicle regarded as mediocre by Ibn K͟haldūn, *Prolègomenes*, i, 8; Rosenthal, i, 10—in terms incompatible with the esteem he felt for the author of *al-ʿUmda*, see *Prolègomenes*, iii, 378, 380-1; Rosenthal, iii, 338, 405), in reality belongs to an Andalusian homonym of his, Abū ʿAlī al-Ḥusayn b. ʿAtīḳ b. al-Ḥusayn b. Ras͟hīḳ al-Tag͟hlabī, d. after 674/1275 (see Lisān al-Dīn Ibn al-K͟haṭīb, *al-Iḥāṭa*, Cairo 1375/1955, 484). The same must be true of the Commentary on the *Muwaṭṭaʾ* which is attributed to him, the homonyms of this author in both East and West being numerous, with writings on various subjects.

Bibliography: In addition to the works listed in the text: Ibn Diḥya, *Muṭrib*, Cairo 1954, 53, 57-65; Ḳifṭī, *Inbāh*, Cairo 1950-5, i, 298-304; Yāḳūt, *Irs͟hād*, Cairo 1936-8, viii, 110-21; Ibn K͟hallikān, Cairo 1948, i, 366-8 (no. 157); Ibn Faḍl Allāh al-ʿUmarī, *Masālik*, xvii, MS Paris 2327, 37v.-41v., which mainly uses Ibn Bassām; Ibn S͟hākir al-Kutubī, *Fawāt al-Wafayāt*, Būlāḳ 1299/1881-2, *passim* and ii, 204 ff.; Suyūṭī, *Bug͟hya*, Cairo 1326/1908, 220; al-Wazīr al-Sarrādj, *al-Ḥulal al-sundusiyya*, Tunis 1287/1870-1, 99-102; Ḥādjdjī K͟halīfa, Istanbul ed., 185, 301, 973, 1029, 1169, 1907, 1918; Brockelmann, I, 307, S I, 539-40; Ḥ. Ḥ. ʿAbd al-Wahhāb, *Bisāṭ al-ʿaḳīḳ fī ḥaḍārat al-Ḳayrawān wa-s͟hāʿirihā Ibn Ras͟hīḳ*, Tunis 1330/1911-2; idem, *al-Muntak͟hab al-madrasī*[2], Cairo 1944, 75-8; ʿAbd al-ʿAzīz al-Maymanī, *Ibn Ras͟hīḳ*, Cairo 1343/1924-5; idem, *al-Nutaf min s͟hiʿr Ibn Ras͟hīḳ*, Cairo 1343/1924-5; Muḥ. al-Nayfar, *ʿUnwān al-arīb*, Tunis 1351/1932-3, i, 52-4; M. IBN RAS͟HĪḲ, ABŪ MUḤAMMAD ʿABD AL-RAḤMĀN AL-ḲUS͟HAYRĪ, ruler of Murcia, 474/1081-481/1088. He is first heard of as *ʿāmil* of Ḥiṣn Baldj, the modern Vilches, in 474/1081. In this year Ibn ʿAmmār [*q.v.*] stayed with Ibn Ras͟hīḳ on his way from Seville to take Murcia from Ibn Ṭāhir for his master al-Muʿtamid Ibn ʿAbbād. Ibn ʿAmmār and Ibn Ras͟hīḳ formed an association, as a result of which, and by a process of which the accounts differ, Ibn Ras͟hīḳ became the independent ruler of Murcia. Ibn Ras͟hīḳ's position, like that of his neighbours at Valencia and Almería, was precarious, being threatened both by internal strife and continual pressure from the Christians. Indeed the Christians possessed an outpost in the very heart of Ibn Ras͟hīḳ's territory at Aledo, 45 km south-west of Murcia.

The advent of the Almoravids and the great defeat suffered by the Christians at Zallāḳa (479/1086) had but slight immediate effect on the Levante. Ibn Ras͟hīḳ was obliged to pay a token tribute to Muʿtamid and Aledo remained in Christian hands. Yūsuf b. Tas͟hfīn's second expedition put an end to this situation. Yūsuf made directly for Aledo

and laid siege to it with the help of his Andalusian allies (481/1088). He had already made a pact with Muʿtamid that Murcia should be restored to him and, though it seems that Ibn Rashīḳ contrived to postpone the evil hour for a time, he was finally deposed under suspicion of actually helping the Christians besieged at Aledo and was delivered as a prisoner to Muʿtamid. ʿAbd Allāh the Zīrī says that Muʿtamid had him put to death but according to Ibn al-Khaṭīb he was kept prisoner at Seville until released by the Almoravids when they took possession of the city in 484/1091. His subsequent fate is unrecorded.

Bibliography: Ibn al-ʿAbbār, *al-Ḥulla al-siyarāʾ*, Cairo 1963, ii, 123-4, 134-5, 140-6, 175; Ibn al-Khaṭīb, *Aʿmāl al-aʿlām*, Beirut 1956, 160, 201, 257; ʿAbd Allāh the Zīrī, *Mémoires*, in *And.*, iii (1935), 324-5, 340-3 (text), and iv (1936-9), 45-7, 79-84 (trs.); ʿAbd al-Wāḥid al Marrākushī, *Muʿdjib*[2], Leiden 1885, 85, 92; A Huici Miranda, *Las grandes batallas de la Reconquista*, Madrid 1956, 94-6. (J. F. P. Hopkins)

IBN RAWĀḤA [see ʿABD ALLĀH B. RAWĀḤA].

IBN AL-RĀWANDĪ or **AL-RĒWENDĪ**, ABU 'L-ḤUSAYN AḤMAD B. YAḤYĀ B. ISḤĀḲ, Muʿtazilī and heretic, born at the beginning of the 3rd/9th century. The unsolved problem of the date of his death (the middle or the end of the 4th/10th century) should probably be decided, in spite of certain indications to the contrary, in favour of the earlier date, given that his work on the supposed criticism of prophecy by the Brahmans (see AL-BARĀHIMA but the article omits to mention this point) is already mentioned in an unpublished fragment by the Jewish *mutakallim* Dāwūd b. Marwān al-Raḳḳī, known as al-Muḳammiṣ, whose literary activity was not later than the last third of the 3rd/9th century (cf. G. Vajda, in *Oriens*, xv (1962), 61, n. 1).

Ibn al-Rāwandī's intellectual development is difficult to trace. At first an adherent of Muʿtazilism, he then left his friends and attacked them mercilessly, emphasizing their real or apparent inconsistencies, deducing heretical conclusions from their speculations, and provoking from them, but probably after he had left them, refutations no less violent. His attachment, at least temporarily, to Shīʿism seems undeniable, but it is even more certain that he turned after this to free thought (*zandaḳa*), perhaps under the influence of Abū ʿĪsā al-Warrāḳ [*q.v.*], as stormy a figure as himself. It is not clear whether he ended as a sceptic or whether there is some truth in the Muʿtazilīs' claim that he finally repented. Whatever the facts may have been, a discerning scholar like al-Tawḥīdī [*q.v.*] pays homage to his percipience and his perfect mastery of language.

There are also several obscure points in the bibliography of Ibn al-Rāwandī. The *Fihrist* gives two lists of works which were attributed to him: one consists of eight titles, the other, incompletely transmitted, thirty-seven, the first seven of which are considered to date from his Muʿtazilī period; the second list contains none of the titles enumerated in the first (*Tādj*, *Zumurrudh*, *Naʿt al-ḥikma*, *Dāmigh*, *Ḳaḍīb*, *Farīd* (or *Firind*?), *Murdjān*, *Luʾluʾa*); on the other hand it lists, under numbers 34, 35 and 36, some refutations supposedly composed by Ibn al-Rāwandī himself (see J. Fück, *Texts ... from Ibn al-Nadīm's Kitab al-Fihrist*, in *Professor Muhammad Shafiʿ Presentation Volume*, Lahore 1955, 72 f.). H.S. Nyberg has compiled (Arabic introduction to his ed. of the *K. al-Intiṣār*, Cairo 1925, 32 f., in French in A. N. Nader, *Kitāb al-Intiṣār*, *Le Livre du Triomphe*..., Beirut 1957, xxviii-xxx) a list of nineteen works to which should be added a *Kitāb al-Khāṭir* and perhaps a *Kitāb al-Maʿrifa*, refuted by al-Djubbāʾī (see A. Borisov, in *SO*, iv (1947), 81 f.).

Fragments of three of his works are preserved in works written by those who refuted his ideas: (1) the *Kitāb Faḍīḥat al-Muʿtazila* is contained, divided up but the major part of it reproduced, in the *Kitāb al-Intiṣār* of al-Khayyāṭ. Ibn al-Rāwandī's attack was in its first part a reply to an apologia, or rather a panegyric, of the Muʿtazilī school (*Faḍīlat al-Muʿtazila*) by al-Djāḥiẓ, while the second part consisted of a defence of the Shīʿa. Nyberg's ed. has been reproduced, with a French translation (to be used with caution) by A. N. Nader, Beirut 1957. (2) Fragments of his *Kitāb al-Dāmigh*, written against the Ḳurʾān, were reproduced by the *ḳāḍī* ʿAbd al-Djabbār [*q.v.*] in the course of his refutation (also lost) of Abū ʿAlī al-Djubbāʾī [*q.v.*]. These fragments are not the same as those reproduced later by Ibn al-Djawzī in his *Muntaẓam* (see *al-Mughnī*, xvi, Cairo 1380/1960, 389-94, and also 156 and 416. The purely dialectical refutation of the *Barāhima* in vol. xv of *al-Mughnī*, Cairo 1915, 109-46, does not mention Ibn al-Rāwandī at all, but see pp. 73 and 127; see also by the same, *Tathbīt dalāʾil al-nubuwwa*, ed. ʿAbd al-Karīm ʿUthmān, Beirut 1966, 51 f., 63, 90 f., 128 f., 222, 224 f., 232, where the use of Ibn al-Rāwandī's works by Shīʿī propagandists is stressed). (3) Some fragments of the *Kitāb al-Zumurrudh* are preserved in the *Madjālis* of the Ismaʿīlī al-Muʾayyad fi 'l-Dīn [*q.v.*], ed. and tr. by P. Kraus in *Beiträge* (see bibl.).

The quotations, whose verbatim accuracy is not certain, which are found in the *Kitāb al-Tawḥīd* of al-Māturīdī [*q.v.*], MS Cambridge Add. 3651, 96 v., 101 v. (particularly against al-Warrāḳ) and in Nāṣir-i Khusraw [*q.v.*], *Kitāb-i Djāmiʿ al-Ḥikmatayn*, ed. Corbin-Moin, Tehrān 1953, 232 ff. (against the "*Ḥashwiyya*", but it does not deal with those who are usually referred to by this name in the Sunnī sources) have still to be investigated.

The plentiful extracts from the *K. al-Zumurrudh* provide a fairly clear indication of the most heterodox doctrine of Ibn al-Rāwandī, that for which posterity has been least willing to forgive him: a biting criticism of prophecy in general and of the prophecy of Muḥammad in particular; he maintains in addition that religious dogmas are not acceptable to reason and must, therefore, be rejected; the miracles attributed to the prophets, persons who may reasonably be compared to sorcerers and magicians, are pure invention, and the greatest of the miracles in the eyes of orthodox Muslims, the Ḳurʾān, gets no better treatment: it is neither a revealed book nor even an inimitable literary masterpiece. In order to cloak his theses, which attack the roots of all types of religion, Ibn al-Rāwandī used the fiction that they were uttered by the Brahmans. His reputation as an irreligious iconoclast spread in the 4th/10th century beyond the borders of Muslim literature: his name is mentioned on several occasions by the Ḳaraite Jewish writers Salmon b. Yeruḥam and Yefet b. ʿAlī as that of a particularly dangerous and virulent heretic.

Several generations of Muslim theologians devoted themselves to refuting the attacks of Ibn al-Rāwandī: al-Khayyāṭ, al-Djubbāʾī, Abū Sahl al-Nawbakhtī, Abū Hāshim, al-Ashʿarī, al-Māturīdī, al-Kaʿbī, to mention only a few of the earliest of them.

Bibliography: The basic work by P. Kraus, *Beiträge zur islamischen Ketzergeschichte*, in *RSO*, xiv (1934), 93-129, 335-79 (with his article Ibn al-Rāwandī in *EI*[1], Supplement) gives almost all

the bibliography prior to its publication; there should be added (what follows is a selection only): for the references to Ibn al-Rāwandī in Judaeo-Arabic literature, S. Poznański, in *MGWJ*, li (1907), 731 f.; other details of this (and in particular of the affinity between Ibn al-Rāwandī and the slightly later Jewish heretic Ḥayyawayh al-Balkhī) in the work in Hebrew by M. Zucker, *Rav Saadya Gaon's Translation of the Torah*, New York 1959, 13-5, 29-33; see also G. Vajda, in *REJ*, xcix (1935), 88 f. A. Badawi has translated into Arabic the monograph by Kraus: *Min taʾrīkh al-ilḥād fi 'l-Islām*, Cairo 1945, 77-188. Passages from Tawḥīdī: *al-Imtāʿ wa 'l-muʾānasa*, Cairo 1373/1953, ii, 14 and *al-Baṣāʾir wa 'l-dhakhāʾir*, same date and place, 183. The notice by Ibn Murtaḍā on Ibn al-Rāwandī may be read in the ed. by S. Diwald-Wilzer, *Die Klassen der Muʿtaziliten*, Wiesbaden 1961, 92, lines 1-15. The passage from Ibn al-Anbārī, *Nuzhat al-alibbāʾ*, quoted by Kraus, *Beiträge*, 379, is found in the most recent ed. by I. Sāmarrāʾī, Baghdād 1959, 150. See also the notices in Brockelmann, S I, 340 f., in F. Sezgin, *GAS*, i, 1967, 620 f. and in Ziriklī, *Aʿlām*², i, 252 f.; further, H. S. Nyberg, *ʿAmr Ibn Ubaid et Ibn al-Rawendi, deux reprouvés*, in *Classicisme et déclin culturel dans l'histoire de l'Islam*, Paris 1957, 125-36. A preliminary sketch, so far only fragmentary, of a doctrinal study (premature in view of the state of the documentation but excellent so far as it goes) is J. van Ess, in *Archiv für Geschichte der Philosophie*, xlv (1963), 79-85 and *Die Erkenntnislehre des ʿAḍudaddīn al-Īcī*, Wiesbaden 1966, passages indicated in the analytical index, p. 495. (P. Kraus-[G. Vajda])

IBN RIḌWĀN, Abu 'l-Ḥasan ʿAlī b. Riḍwān b. ʿAlī b. Djaʿfar al-Miṣrī, a renowned physician and medical author and polemist of Egypt. We are well informed about his life and personal circumstances because he composed an autobiography, the essence of which has been preserved by Ibn Abī Uṣaybiʿa, when he was approaching sixty. It is pervaded by a strong feeling of complacency which is, perhaps, explained by his experiences and explains, in its turn, his addiction to polemics. He was born in 388/998, the son of a baker in Giza (Djīza) near Cairo. He was very poor, had a hard youth, and had to earn his living and the money for his instruction by astrological forecasting in the streets and by similar means. He never had a teacher in medicine, which became a matter of reproach to him later, and he studied exclusively from books. He says himself that he did not possess the means to pay the apprentice's fee demanded by medical practitioners. He also was unable to marry until he was thirty. But after his thirtieth year he began to acquire a good medical reputation, and when he was appointed Chief Physician of Egypt by the Fāṭimid Caliph of Cairo (it cannot have been al-Ḥākim who disappeared in 411/1021, when Ibn Riḍwān was only twenty-three years old, but was probably al-Mustanṣir, 427/1036-487/1094), he acquired prosperity and wealth. Abu 'l-Muʿaskar al-Ḥusayn b. Maʿdān, the ruler of Makrān [*q.v.*], consulted him when he was stricken by hemiplegia. Ibn Riḍwān never left Egypt and perhaps not even the immediate neighbourhood of Cairo, where he became "one of the foremost to give information about the branches of knowledge in which he claimed authority" (Ibn al-Ḳifṭī). The site of his house remained known for a long time. According to Ibn Abī Uṣaybiʿa, he adopted an orphan girl in the period of famine and plague which started in 445/1053, and he educated her and she grew up in his house; but once when he left her alone, she took gold to the amount of 20,000 dīnārs and valuables and fled, and nothing more was heard of her; thereafter, his mind became deranged. Ibn Riḍwān was inclined to acrimonious polemics against his predecessors and contemporaries, including Ḥunayn b. Isḥāḳ, al-Rāzī, Ibn al-Djazzār, Ibn al-Ṭayyib, Ibn Buṭlān [*qq.v.*] and others. Whereas he is unanimously praised as a medical practitioner, and Ibn Abī Uṣaybiʿa calls him "a better medical man (than Ibn Buṭlān) and better trained in the philosophical and associated sciences", he seems to have been unhappy in his personal relationships. According to Ibn al-Ḳifṭī, "he was a man of narrow mind and not of sound judgment. He was, moreover, not of good looks and appearance. Nevertheless, many pupils followed his lectures and studied under him, and his fame spread abroad"; but "his pupils used to relate about him ridiculous things concerning his medical argumentations, astrological sayings and logical assertions, if those who have related them are right." Among his disciples were the Fāṭimid prince, philosopher, author and bibliophile al-Mubashshir b. Fātik [*q.v.*] (Brockelmann, I, 600; S I, 829), and the Jewish physician and bibliophile Afrāʾīm (Ephraim) b. al-Zaffān; he was also in friendly relations with an otherwise unknown Jewish physician, Yahūdā b. Saʿāda, to whom he addressed two treatises. Ibn Riḍwān died, according to Ibn Abī Uṣaybiʿa, in 453/1061 (or, according to Ibn al-Ḳifṭī, in the sixties of that century).

Ibn Riḍwān's literary output was very extensive; the list of titles given by Ibn Abī Uṣaybiʿa, if duplicates are eliminated, comes near to one hundred, though many of them no doubt represent short treatises, unfinished notes, and the like. Some twenty have been preserved in manuscripts. A few are concerned with astronomy, logic, philosophy and theology but the great majority are medical and in substance follow closely the works of Galen. Ibn Riḍwān possessed a wide knowledge of ancient medicine but he was not an original thinker, being a mere exponent of Hippocrates's and Galen's thought, without adding anything of his own; this was clearly seen by Ibn al-Ḳifṭī, who called his works not very important, derivative, but well arranged. This lack of originality becomes almost a positive quality in the thought of Ibn Riḍwān, to such a degree that he did not allow an original thinker such as al-Rāzī to deviate in the least from the thought of Galen, and indeed most of his polemics have their starting-point in this contention of his. In addition, as Ibn Abī Uṣaybiʿa observes, Ibn Riḍwān "was insolent in what he said, and he abused those with whom he had an argument". This is amply borne out by the contents of his treatises against Ibn Buṭlān (see below).

Among his more important and better known works are: (1) a Commentary on the *Quadripartitum* of Ptolemy (*Sharḥ al-maḳālāt al-arbaʿ li-Baṭlūmiyūs*); it was translated into Latin and into Turkish, and the Latin translation was printed, together with the *Quadripartitum*, among the incunabula of Venice (and later) several times; (2) a Commentary on Galen's *Ars parva* (*Sharḥ al-ṣināʿa al-ṣaghīra li-Djālīnūs*); this, too, was translated into Latin, and the translation was repeatedly printed, together with the text of Galen, before and after 1500 (Brockelmann, I, 637, no. 14, and S. I, 886, no. 24 are to be combined); it was also translated into Hebrew; (3) *Kitāb al-Uṣūl fi 'l-ṭibb*, a compendium (*kunnāsh*),

another of Ibn Riḍwān's books to have been translated into Hebrew; (4) *al-Kitāb al-Nāfiʿ fī taʿlīm ṣināʿat al-ṭibb*; in this book Ibn Riḍwān, displaying a remarkable knowledge of Greek medical writers, tries to show that learning medicine from books is preferable to learning it from teachers, turning the necessity of his own study into a virtue; the work contains important information on the transmission of Greek science to the Arabs; summary of the existing part in Schacht-Meyerhof, *Controversy*, 20-8; (5) *Risalā fī dafʿ maḍārr al-abdān bi-arḍ Miṣr*, a treatise dealing with the conditions of health and disease in Egypt and Cairo, the plague and its causes, preventive measures and hygienic rules for the inhabitants of Egypt, including a medical topography of Cairo and its suburbs in the 5th/11th century; translation of this last section by M. Meyerhof in *Sitzungsber. d. Physikalisch-medizinischen Sozietät*, liv, Erlangen 1923, 197-214, and in *Comptes Rendus du Congrès International de Médecine Tropicale et d'Hygiène*, ii, Cairo 1929, 211-35; see also K. Vollers, *ZDMG*, xliv (1890), 386 f.; (6) finally, his controversy with Ibn Buṭlān of which three treatises of his have been preserved (edited and translated in Schacht-Meyerhof, *Controversy*), whereas two and perhaps three more have been lost; the controversy started from a disputed point of physiology, and finished with Ibn Riḍwān calling upon the practitioners of Cairo to boycott Ibn Buṭlān.

(J. Schacht)

IBN RŪḤ, Abu 'l-Ḳāsim Ḥusayn b. Rūḥ b. Abī Baḥr al-Nawbakhtī, third *safīr* or *wakīl* (305/917-326/938) of the absent twelfth *imām* of the Twelver Shīʿīs, during the lesser *Ghayba* [*q.v.*]. Of the Nawbakhtī family only on the mother's side, he was from Ḳumm. He held the title *bāb* already under Ḥasan ʿAskarī [*q.v.*], and transmitted *ḥadīths* from earlier *imāms*. Appointed successor by the second *safīr*, Abū Djaʿfar al-ʿUmarī, despite some opposition, he made himself the unquestioned centre of Twelver Shīʿism at Baghdād under al-Muḳtadir. During a time in hiding, he appointed al-Shalmaghānī [*q.v.*] his deputy, but then denounced him as a heretic. Along with his adherents, the Banū Furāt, Ibn Rūḥ was accused of correspondence with the Ḳarāmiṭa rebels. For five years (312/924-317/929) he was imprisoned, allegedly on a fiscal complaint. Freed by Muʾnis, under al-Rāḍī he was favoured by the court. Ibn Rūḥ calmed disputes among Shīʿī courtiers and suavely avoided giving offence to Sunnīs. Before his death, he appointed Abu 'l-Ḥasan al-Sāmarrī his successor.

Bibliography: ʿAbbās Iḳbāl, *Khānadān-e Nawbakhtī*, Teheran 1311 s., 2nd impression 1345, 212-24, gives bibliography. In Western languages, see D. Donaldson, *The Shīʿite religion*, London 1933, 253-5, and Ibn Khallikān, tr. De Slane, i, 439.

(M. G. S. Hodgson)

IBN AL-RŪMĪ, Abu 'l-Ḥasan ʿAlī b. al-ʿAbbās b. Djurayдj (or Djurdjis or Djurdjīs), poet of the 3rd/9th century, was born at Baghdād on 2 Radjab 221/21 June 836 and died there in 283/896 (some sources give the date of his death as 276/889 or 284/897). His father, al-ʿAbbās, a Byzantine freedman and a client of ʿUbayd Allāh b. ʿĪsā b. Djaʿfar, was probably the first member of the family to embrace Islam. His mother Ḥasana, the daughter of ʿAbd Allāh al-Sidjzī, was of Persian origin.

Little is known of his studies. It is known, however, that he went to a school attended by upper-class children and that he was the pupil of Muḥammad b. Ḥabīb, the friend of his father and like him the son of a freedman and a client of the Banu 'l-ʿAbbās. At various times he was in contact with Thaʿlab, al-Mubarrad, al-Zadjdjādj, al-Akhfash III, Ibn al-Sarrādj and many other men of letters of the period, which provided him with a solid cultural background, the evidence of which is found in his work.

Al-Masʿūdī comments that "poetry was only the least of his talents", and al-Maʿarrī describes him as being primarily a philosopher. During his lifetime his fame as a "scholar" seems to have weighed heavily upon him; some spiteful critics considered that it accorded ill with the bouts of drinking from which he was unable to refrain.

His poetic talent showed itself at an early age. There exist poems which he is said to have composed while at school, and at the age of twenty he had already made his name as a poet. His poems were the subject of study and commentary, and he no longer paid any attention to malicious criticism. Convinced of his own worth and of the poet's sacred right to receive due reward, he preferred a career as a composer of panegyric to an appointment at the chancery which had been offered to him and which later he was to seek in vain.

His violent Shīʿism and his Muʿtazilism inevitably closed to him the doors of the court, to which he gained access only towards the end of his life. The branch of the ʿAbbāsids of which he was the client was unable to be of any help to him. ʿĪsā b. Djaʿfar, the father of his patron ʿUbayd Allāh, was the brother of Zubayda, the mother of al-Amīn; he had succeeded, in spite of the opposition of the Hāshimī majority, in having his nephew proclaimed heir presumptive and, in the conflict which arose soon after between al-Amīn and al-Maʾmūn, he had openly taken the side of the former. Al-Maʾmūn's victory banished him and his descendants from the court, and no further mention of the latter is found.

In 250/864, Ibn al-Rūmī, who until then had

maintained a certain *taḳiyya*, openly gave his support to the Zaydī revolt begun at Kūfa by the Ṭālibī Yaḥyā b. ʿUmar. Each of the two lamentations which he dedicated to Yaḥyā was a S̲h̲īʿī manifesto, a call to revolt and a violent and insulting threat directed at the ʿAbbāsids. This same hostility to the dynasty is found in other poems preserved in the *Dīwān*.

But the poet seems to have regained the favour of his patrons under the regency of al-Muwaffaḳ, the brother of al-Muʿtamid, who adopted a conciliatory policy towards the ʿAlids. He is even said to have been in the entourage of al-Muʿtaḍid, the son of al-Muwaffaḳ, who continued the policy of his father and who, himself a poet, brought back the vanished tradition of the *Bayt al-Ḥikma* by establishing in his palace various scholars and men of letters.

As the result of his long opposition to the party in power, Ibn al-Rūmī must have been obliged to seek for wealthy patrons outside the court. His *Dīwān* gives evidence of his relationship with the Banū Ṭāhir and in particular with ʿUbayd Allāh b. ʿAbd Allāh, Aḥmad b. al-K̲h̲aṣīb, ʿAbd Allāh b. Muḥammad b. Yazdād, Aḥmad b. Isrāʾīl, Ismāʿīl b. Bulbul, Ṣāʿid b. Mak̲h̲lad and his son al-ʿAlāʾ, the Banū Wahb and especially al-Ḳāsim b. ʿUbayd Allāh, Aḥmad b. T̲h̲awāba, Ibrāhīm b. al-Mudabbir, the Banu ʾl-Ḏj̲arrāḥ, the Banu ʾl-Furāt, the Banū Nawbak̲h̲t and a great number of minor secretaries too many to enumerate. Many of them showed him favour and gave him presents. But he was extravagant, thriftless and difficult to please, and his praise almost always turned to invective against those who had not fulfilled all his wishes. It must also be recognized that the attitude he had adopted towards the authorities earlier in his life discouraged some high officials from compromising themselves by rewarding him. Others were unable to forget his Byzantine and Christian origin, in spite of his being a Muslim and in spite of the fanatical anti-Christian attitude which, as a new convert, he adopted. Yet others were offended by his arrogance and aggressiveness, and by the proud and threatening manner which he sometimes adopted when reminding them of a promise or trying to hasten a gift. His bitter and sometimes even scurrilous epigrams caused a fair number of patrons to rebuff him.

It is, however, difficult to believe that these epigrams were the direct cause of his death, as is stated, though with many reservations, in some S̲h̲īʿī and Muʿtazilī sources. Al-Ḳāsim, who is accused of having had him poisoned at his table (it is the caliph who is accused in MS Paris 3594), had at this time not yet become vizier; he was engaged in avoiding any scandal and in trying to gain the good opinion of all in order to ensure that he would be appointed to succeed his father. His hatred of the S̲h̲īʿīs and his bloodthirsty disposition did not become apparent until later. But the poet's death aroused suspicion because of the way in which al-Ḳāsim's followers had intentionally spread rumours in order to frighten the poet, who had become old, sick and nervous. Nevertheless, the various details given of his final illness seem rather to be the signs of diabetes.

Popular rumour is also probably responsible for the fictional statements of the poet's pathological superstition and tendency to hypochondria. There seems nothing in his general life to justify them. Any truth which may lie behind these allegations may perhaps be sought in the last years of his life, when he lost one after the other the four (at least) children of his late marriage, as well as his wife, and found himself banished and threatened by his chief patron al-Ḳāsim.

Ibn al-Rūmī did not have the leisure to collect his poems into a *dīwān* himself. The first to undertake this was a certain al-Musayyabī, probably ʿAlī b. ʿAbd Allāh b. al-Musayyab, a friend of the poet and the author of a biography of him which has not survived. They were then collected by al-Ṣūlī, who produced another recension of the *Dīwān* in which the poems were arranged alphabetically. His work was continued and completed by Abu ʾl-Ṭayyib, the *warrāḳ* of Ibn ʿAbdūs al-Ḏj̲ahs̲h̲iyārī, who is said to have added a thousand verses collected from the various existing recensions. The manuscripts of these recensions which have survived total nearly seventeen thousand verses.

Only a small part of this enormous *Dīwān* has been published. In 1917, Muḥammad S̲h̲arīf Salīm had the first two letters printed; five years later there appeared five other letters published by the same editor, who died without seeing his work in print. This was the only attempt at a critical edition of the *Dīwān*; and in fact Salīm had used only one manuscript (MS Cairo 139), so that his work could profitably be done again, this time with a comparison of all the existing manuscripts.

In addition to this, there have been published some extracts, among which may be mentioned the anthology made by al-Bārūdī (Cairo 1909), the selection by Kāmil Kīlānī (Cairo 1924) and that by al-ʿAḳḳād (Cairo, *circa* 1930).

In the greater part of his work Ibn al-Rūmī shows himself to be a neo-classicist; but his production was so varied that it is difficult to class him with one specific school of poets. Indeed, side by side with formal poems, which in their thought, their art and their studied elegance foreshadow Mutanabbī, are found a great number of poems whose spontaneity, sensitivity, naturalness and clarity prefigure the expressive poetry of the *Rūmiyyāt* of Abū Firās and the nature-poems of which al-Ṣanawbarī was to be the master. In addition there exist, in his *Dīwān*, hundreds of poems, mainly short, in which he shows himself to be, more than anyone else among his contemporaries, a society poet, able to make rhymes at command and seeking to dazzle with his learning, his affectedness, his fondness for artificiality and his search for things witty and unusual. He was above all an example of the Bag̲h̲dādī tradition which was to distinguish court poetry in the following century.

IBN RUSHAYD, full name Muḥibb al-Dīn Abū ʿAbd Allāh Muḥammad b. ʿUmar b. Rushayd al-Fihrī al-Sabtī, jurist and man of letters, a native, as indicated by his *nisba*, of Ceuta. He was born there in 657/1259 and studied there the sciences of tradition and of grammar. In 683/1284, he decided to travel to the east in order to perform the Pilgrimage and to complete his studies. At Alméria, where he embarked, he met the poet Ibn al-Ḥakīm al-Lakhmī al-Rundī, then a minister of the Naṣrid dynasty, formed a friendship with him and travelled with him in Ifrīḳiya, Egypt, Syria and the Ḥidjāz for three years. In Spain, in North Africa and in the east, he studied under famous teachers. On his return to Ceuta he lived for several years in obscurity, then, at the invitation of Ibn al-Ḥakīm al-Rundī, he went in 692/1292-3 to the Naṣrid kingdom and assumed the offices of *imām* and *khaṭīb* in the great mosque of Granada, where he gave a commentary every day on two *ḥadīth*s of al-Bukhārī. He was next apppointed *ḳāḍī al-manākiḥ*. After the assassination of his patron (Shawwāl 708/March 1309), Ibn Rushayd went to the court of the Marīnid ruler ʿUthmān b. Abī Yūsuf, who appointed him to lead the prayers in the old mosque at Marrākush. He was held by all in high esteem, and at the end of his life became one of the intimates of the Marīnid sultan. He died at Fez on 23 Muḥarram 721/22 February 1321.

The sources are unanimous in praising the extent of his learning, his competence in the science of *ḥadīth*, his austerity and his modesty. A Mālikī jurist, he was also an eloquent orator. Al-Maḳḳarī lists about ten titles of works by Ibn Rushayd. They cover the science of *ḥadīth* in all its aspects; mathematics; and Arabic language, literature and metrics. Four works have survived in manuscript. The greatest part of his *riḥla*, entitled *Māl al-ʿayba fī mā djumiʿa bi-ṭūl al-ghayba fi ʾl-riḥla ilā Makka wa Ṭayba*, exists in the form of still unpublished fragments preserved in the Escurial (MSS nos. 1680, 1735, 1736, 1737—autographs—, 1739; cf. H. Derenbourg, *Les manuscrits arabes de l'Escurial*, iii). Recounting the author's visits to Tunis, Damascus and Cairo, they contain very little geographical information and consist of a series of biographical notices on men of letters, interspersed with poetical quotations. Of the works on *fiḳh* there are preserved only the *Kitāb Ifādat al-naṣīḥ bi ʾl-taʿrīf bi-isnād al-djāmiʿ al-ṣaḥīḥ*, written in 689/1290 (MSS Escurial², 1732/1 and 1785/1), a collection of biographies of Andalusian jurists, and the *Kitāb al-Sanan al-abyan wa ʾl-mawrid al-amʿan fi ʾl-muḥākama bayna ʾl-imāmayn fi ʾl-sanad al-muʿanʿan* (MS Escurial², 1806), a biography of the traditionists al-Bukhārī and Muslim. A short fragment (40 fols.) of the treatise on metrics by Ibn Rushayd, *Djuzʾ mukhtaṣar fi ʾl-ʿarūḍ*, also exists in the Escurial at the beginning of manuscript 1737.

Bibliography: Ibn al-Khaṭīb, *Iḥāṭa*, Escur.², 1673, fols. 132-5; Ibn Khaldūn, *Taʿrīf*, Cairo ed. 1370/1951, 310; Ibn Farḥūn, *Dībādj*, Cairo ed. 1351/1932-3, biogr. 310; Ibn Ḥadjar al-ʿAsḳalānī, *al-Durar al-kāmina*, Ḥaydarābād ed. 1350/1931, biogr. 308, 111; Ibn Fahd, *Laḥẓ*, Damascus ed. 1347/1928-9, 97; Suyūṭī, *Bughya*, 85; idem, *Dhayl*, Damascus ed. 1347/1928-9, 355; Ibn al-Ḳāḍī, *Durrat al-ḥidjāl*, ed. The notices of M. Casiri, *Bibl. Ar. hisp. escur.*, ii, 86, 156, 165; of Ḥādjdjī Khalīfa, ed. Flügel, i, 507, ii, 533, iv, 473, vi, 102, vii, 634; of Reinaud, *Introduction à la géographie d'Aboulféda*, CXXVII; of Wüstenfeld, *Geschichtschreiber*, 375 and of Pons Boigues, *Ensayo*, biogr. 270, are now superseded. See Brockelmann, II, 245, S II, 344. Modern works: M. M. Antuña, *El tradicionista Aben Roxaid de Ceuta en la Real Biblioteca del Escorial*, in *La Ciudad de Dios*, cxliii (1925), 51-60; R. Brunschvig, *La Berbérie Orientale sous les Ḥafṣides*, Paris 1940, intro. XXXII; J. Sánchez Pérez, *La Ciencia árabe en la Edad Media*, Madrid 1954, 32.

(R. Arié)

IBN RUSHD, Abu ʾl-Walīd Muḥammad b. Aḥmad b. Muḥammad b. Rushd, al-Ḥafīd (the grandson), the "Commentator of Aristotle", famous in the Mediaeval West under the name of Averroes, scholar of the Ḳurʾānic sciences and the natural sciences (physics, medicine, biology, astronomy), theologian and philosopher.

I. *Life*. He was born at Cordova in 520/1126 and died at Marrākush in 595/1198. The Arabic biographical sources are: Ibn al-Abbār, *Takmila*, *BAH*, vi, no. 853; Ibn Abī Uṣaybiʿa, *ʿUyūn*; al-Anṣārī, supplement to the dictionaries of Ibn Bashkuwāl and of Ibn al-Abbār (notice published in the complete works of Renan, iii, 329); al-Dhahabī, *Annales* (*ibid.*, 345); ʿAbd al-Wāḥid al-Marrākushī, *Muʿdjib*.

Ibn Rushd belonged to an important Spanish family. His grandfather (d. 520/1126), a Mālikī jurisconsult, had been *ḳāḍī* and *imām* of the Great Mosque of Cordova. His father was also a *ḳāḍī*. The biographers stress the excellent juridical education of the future Commentator; his teacher was al-Ḥāfiẓ Abū

Muḥammad ibn Rizḳ and he became very competent in the science of *khilāf* (controversies and contradictions in the legal sciences). He learned by heart the *Muwaṭṭa'*. Ibn al-Abbār mentions that he studied "a little" with Ibn Bashkuwāl, which implies that he touched on the science of the traditions of the Prophet; but the same author says that the science of law and of the principles (*uṣūl*), *dirāya*, interested him more than the science of traditions, *riwāya*. He worked also on Ashʿarī *kalām* which he was later to criticize. In medicine, he was the pupil of Abū Djaʿfar Hārūn al-Tadjālī (of Trujillo), who was in addition a teacher of *ḥadīth* (cf. *ʿUyūn*). Ibn al-Abbār mentions another of his teachers, Abū Marwān ibn Djurrayūl (notice no. 1714), who (he says) was one of the foremost practitioners of his art. The biographers do not mention philosophic studies. Ibn Abī Uṣaybiʿa limits himself to reporting, following al-Bādjī, that Averroes studied "philosophical sciences" (*al-ʿulūm al-ḥikmiyya*) with the physician Abū Djaʿfar. Ibn al-Abbār mentions in passing that he "inclined towards the sciences of the Ancients (*ʿulūm al-awā'il*)", probably an allusion to his knowledge of Greek thought.

In 548/1153, Averroes was at Marrākush. Renan supposes that he was occupied there in carrying out the intentions of the Almohad ʿAbd al-Mu'min "in the building of colleges which he was founding at this time". It is known, through the Commentary of the *De Caelo*, that he was engaged there in astronomical observations. It is perhaps to this period of his life that he is referring in the Commentary of book Λ of the *Metaphysics*, when he speaks of the researches which must be done on the movements of the planets in order to found an astronomy which would be physical and not only mathematical: "I hoped in my youth that it would be possible for me to carry out this research successfully; but now that I am old, I have lost this hope . . .". It is possible that he met at this time Ibn Ṭufayl, who was to play an important part in his career as a philosopher by presenting him to Abū Yaʿḳūb Yūsuf, the successor of ʿAbd al-Mu'min. Al-Marrākushī (*Muʿdjib*, ed. Dozy, 174-5) obtained the account of this interview from a pupil of Ibn Rushd, who reported the actual words of his teacher. The prince questioned Averroes on the sky: is it a substance which has existed from all eternity, or did it have a beginning? (It is known that, ever since Plato's *Timaeus* and the *De Caelo* and the *Metaphysics* of Aristotle down to Proclus and Johannes Philoponus (Yaḥyā al-Naḥwī), this problem had been fiercely debated). Ibn Rushd was worried by this dangerous question, but Yūsuf understood this and began a discussion with Ibn Ṭufayl, displaying a wide knowledge of the ancient philosophers and of the theologians. Put thus at ease, Ibn Rushd in his turn began to speak and was able to show the extent of his learning. He received rewards and thenceforth enjoyed the prince's favour. This event may be dated to 1169 or slightly earlier. Al-Marrākushī also tells us that the Commander of the Faithful complained to Ibn Ṭufayl of the obscurity of the texts of Aristotle and of their translations. He wished them to be clearly explained. It is said that Ibn Ṭufayl, considering himself to be too old and too busy, asked Averroes to undertake the work.

Averroes remained in favour throughout the reign of Abū Yaʿḳūb Yūsuf (558-80/1163-84). In 565/1169, he was *ḳāḍī* of Seville (*Muʿdjib*, 222). In a passage in the fourth book of the *De partibus animalium*, completed in that year, he points out the duties of his post, and the fact that he was separated from his books which remained in Cordova, all things which made difficult the writing of his paraphrase (Munk, 422). In 567/1171, he was back at Cordova, still as *ḳāḍī*. During this period he increased his rate of production of commentaries in spite of his numerous obligations: he travelled to various towns of the Almohad empire, in particular to Seville, from which he dates several of his works between 1169 and 1179.

In 578/1182, at Marrākush, he succeeded Ibn Ṭufayl as chief physician to Abū Yaʿḳūb Yūsuf (Tornberg, *Annales Regum Mauritaniae*, 182). Then he received the office of chief *ḳāḍī* of Cordova.

During the reign of Yaʿḳūb al-Manṣūr (580-95/1184-99), Ibn Rushd still enjoyed the prince's favour. It was only during the last years (from 1195) that he fell into disgrace. Several stories exist on this matter. It seems that the caliph, at that time engaged in Spain in a war against the Christians, thought it advisable to gain the support of the *fuḳahā'*, who had long imposed on the people their rigorous orthodoxy (cf. D. Macdonald, *Development of Muslim theology*, New York 1903, 255). Indeed, not only was Averroes banished to Lucena, near Cordova, and his doctrine pronounced anathema following his appearance before a tribunal consisting of the chief men of Cordova, but edicts were issued ordering that philosophical works be burned and forbidding these studies, which were considered dangerous to religion. Those who were jealous of Ibn Rushd or doctrinally opposed to him took advantage of the occasion to criticize him in vulgar epigrams, which have been published and translated by Munk (427-8 and 517).

But once he had returned to Marrākush, to a Berber milieu which was less sensitive on matters of doctrine, the caliph repealed all these edicts and summoned the philosopher again to his court. Ibn Rushd did not have long to enjoy this return to favour, since he died in Marrākush on 9 Ṣafar 595/11 December 1198. He was buried there outside the gate of Taghzut. Later his body was taken to Cordova, where the mystic Ibn al-ʿArabī, still a young man, was present at his funeral (cf. H. Corbin, *L'imagination créatrice dans le soufisme d'Ibn ʿArabī*, 32-8).

II. *Works*. The chronology of the works of Averroes has been established by M. Alonso (*La cronología en las obras de Averroes*, in *Miscelanea Camillas*, i (1943), 411-60). When Ibn Rushd was presented to the caliph Yūsuf, he had already written some paraphrases or short commentaries (*djawāmiʿ*) on the *Organon*, the *Physics* and the *Metaphysics*, as well as the first redaction of his great medical work, the *Colliget* (*al-Kulliyyāt*, the Book of Generalities), requesting his friend Abū Marwān Ibn Zuhr to write a book on the "particularities" (*al-umūr al-djuz'iyya*, therapeutics), "so that their two works together should form a complete treatise on the art of medicine" (Ibn Abī Uṣaybiʿa). He continued to write the short or middle commentaries (*talkhīṣ*) between 1169 and 1178. But from 1174 to 1180 was the period in which his original works were produced: "Treatises on the intellect", *De substantia orbis*, *Faṣl al-maḳāl*, *Kashf al-manāhidj*, *Tahāfut al-Tahāfut*. The great commentaries (*tafsīr*) did not begin until later. M. Cruz Hernandez (*La filosofía árabe*, Madrid 1963, 253) has produced a clear outline of the various tendencies which have governed the study of Averroes's work. Whereas for the Latin schoolmen Averroes is essentially the Commentator: *Averroes, che'l gran comento feo* (Dante, *Inferno*, iv, 144), Renan points out the differences which can exist between the ideas contained in the commentaries and often presented as those of Aristotle, and the personal ideas of the philosopher.

Nevertheless, even where Ibn Rus͟hd marks this distinction, Renan's attitude is "this may have been only a precaution to allow him to express his philosophical ideas more freely under the cover of someone else" (*Oeuvres complètes*, iii, 61). A little later (67), on the subject of the *Tahāfut*, he claims that "the doctrine set out in it is, on several points, in flagrant contradiction with that of Ibn Rus͟hd". It is true that he bases his judgement on the Latin version, in which he suspects there are interpolations. For him, as for the followers of Averroes in the Middle Ages, the Arab thinker is the one who revealed in Aristotle a rationalist method and doctrine, which as such were opposed to religious dogmas. This being so, Renan, following his preconceptions, considers the theological writings as artifices intended to deceive or to provide a challenge to the inquisition of the Māliki *fuḳahā'*. An examination of the biography and the work of Averroes shows that this assessment is entirely without foundation. Munk, on his side, has attempted to extract from the commentaries Ibn Rus͟hd's own ideas. Asín Palacios, studying the theological Averroism of St. Thomas Aquinas, considers that the philosopher's personal ideas are to be found in the *Tahāfut*, the *Faṣl* and the *Kas͟hf*. Gauthier takes a middle line; he himself has produced a summing up of the question (*La théorie d'Ibn Rochd*, 1-18) and, demonstrating the importance of the theory of prophethood, he ends (180-1) by attributing to Ibn Rus͟hd a doctrine fundamentally analogous to that of al-Fārābī on the philosopher and the prophet: "The double expression of one and the same truth, in terms which are abstract and clear on the one hand, in sensitive and symbolic terms on the other, philosophy and religion will thus exist side by side, without ever clashing, since, addressing themselves to two different categories of mind, their fields will remain entirely separate". Cruz Hernandez concludes his investigation by showing the absurdity of making *a priori* a choice between the philosopher and the theologian. Since Averroes was never forced to dissimulate his ideas, he considers that one must admit the sincerity of the whole work and the fundamental unity of the thought it expresses.

Only a small number of works in Arabic survive. The majority have been preserved only in Latin or Hebrew translations. Some manuscripts give the Arabic text in Hebrew characters. Brockelmann gives (I, 461 f., S I, 833-6, I², 604 f.) a list of the manuscripts, editions and translations. M. Bouyges, *Note sur les philosophes arabes connus des latins*, v, a list of the Arabic texts of Averroes, in *MFO*, viii/1 (1922), may also be consulted. Among the work^ in Arabic which are known so far to have survived are: short or middle commentaries on the *Physics* (*al-Samā' al-ṭabī'ī*); on the *De Caelo et mundo* (*al-Samā' wa 'l-'ālam*); on the *De Generatione et corruptione* (*al-Kawn wa 'l-fasād*); on the *Meteorologica* (*al-Āt͟hār al-'ulwiyya*); on the *De Anima* (*al-Nafs*); on metaphysical questions (*Mā ba'd al-ṭabī'a*); on the *De Sensu et Sensibilibus* (*al-'Aḳl wa 'l-ma'ḳūl*), the great Commentary on the *Metaphysics* (*Tafsīr* . . ., ed. M. Bouyges, Beirut 1938-48), the *Faṣl al-maḳāl* and the *Ḍamīma* (ed. with Fr. tr. L. Gauthier, *Traité décisif*, Algiers 1948, ed. G. F. Hourani, Leiden 1959), the *Kas͟hf 'an manāhid͟j al-adilla* (ed. with German tr., with the *Faṣl*, by M. J. Müller, *Philosophie und Theologie von Averroës*, Münich, text 1859, tr. 1875). There should also be mentioned the research and publications of 'Abd al-Raḥmān Badawī in Cairo.

III. *The thought of Averroes.* It seems certain that Ibn Rus͟hd approached philosophy through the theoretical sciences. As a jurist, he was interested in the *uṣūl* (on this question, see R. Brunschvig, *Averroès juriste*, in *Etudes . . . Lévi-Provençal*, i, Paris 1962, 35-68). Ibn al-Abbār mentions the important *Kitāb Bidāyat al-mud͟jtahid wa-nihāyat al-muḳtaṣid fi 'l-fiḳh*, and adds: "In it he gives the reasons for divergences, demonstrates their motivations and justifies them". What interested him in law was a strictness of thought which, without going as far as that of philosophical syllogism, entailed a well-defined method of reasoning and a logic. On the other hand, it is known that he received his first education in philosophy from a physician. At the end of his book on the Generalities (*Colliget*), he stresses the method followed and writes: "We have assembled, in our propositions, the individual facts and the general questions ... Whoever has grasped the generalities which we have written is capable of understanding what is correct and what is erroneous in the therapeutics of the writers of *kunnās͟h*" ('*Uyūn*). At the time when he was writing the *Colliget*, Averroes was studying the *Organon* and the *Physics*, which naturally led him to formulate the metaphysical problem. He thus saw in Aristotle mainly the logician who follows a strict method of demonstration, the scholar who starts from the concrete in order to explain it by linking it with general propositions. He was to grasp even better the theory of knowledge when writing a commentary on the *Posterior Analytics* (1170). This approach led him to discover the true Aristotle, and he thus learned to distinguish it from the image of him given by the Greek commentators such as Alexander of Aphrodisias and the Muslim *falāsifa* such as Ibn Sīnā. This is why he criticized so vigorously the philosophy of Ibn Sīnā, while respecting the medical work of his predecessor (he wrote a commentary on his medical poem *al-Urd͟jūza fi 'l-ṭibb*). Among the other philosophers, he was interested in the ideas of al-Fārābī on logic and was inspired by his moral and political doctrines in the commentary which he wrote on Plato's *Republic*. But he was chiefly in the tradition of Ibn Bād͟jd͟ja, and wrote a commentary on his *Risāla* on union with the Intellect and on his book on the "Régime of the solitary". His relations with Ibn Ṭufayl are well known: Ibn Rus͟hd wrote a commentary on *Ḥayy b. Yaḳẓān* [*q.v.*]. There are definite similarities between the two philosophers, but although both recognize the convergence of the two independent attitudes inherent in philosophy and revealed faith, in Ibn Ṭufayl the duality of the persons Ḥayy and Absāl who represent them (this is resolved, at the end of the myth, in a common life devoted to contemplation far from human society) leads to a mystic vision of knowledge, which is not at all to be found in Ibn Rus͟hd, as Renan has clearly pointed out.

A. The theologico-philosophic treatises. It may be considered that they were written in the following order: *Faṣl al-maḳāl* and its appendix the *Ḍamīma*, *Kas͟hf al-manāhid͟j* (575/1179, which mentions the *Faṣl*), *Tahāfut al-Tahāfut* (which does not mention either of the two preceding works and which, according to Bouyges, was not written before 1180).

(a) The *Faṣl al-maḳāl wa-taḳrīb mā bayn al-s͟harī'a wa 'l-ḥikma min al-ittiṣāl* ("An authoritative treatise and exposition of the convergence which exists between the religious law and philosophy"). Ibn Rus͟hd begins by giving a definition of philosophy entirely in accordance with the Ḳur'ānic recommendations. He himself quotes verses LIX, 2 and VII, 184, among others. It is a rational view of creation which leads to the knowledge of the Creator. These sacred texts are

interpreted as a recommendation to use either purely rational inferences (*ḳiyās ʿaḳlī*), or to use them together with inferences based on the Law (*ḳiyās s̲h̲arʿī*). Thus the Law establishes the legitimacy of rational speculation (*naẓar*), whose method reaches perfection with demonstrative syllogism (*burhān*). Here Averroes was involved in a quarrel among the theologians about the definition of faith and what part it should play in intellectual knowledge. His reply is clear: "The Law imposes an obligation on the believer, since it must be obeyed when it commands rational speculation about beings: that is, before undertaking rational speculation, to proceed by degrees and to take account of what plays the same part in relation to speculation as instruments do in relation to action". This is less a *fides quaerens intellectum* than a perfect faith which embraces rational knowledge. It demands the knowledge of the *ḳiyās ʿaḳlī*, which is indispensable to the true knowledge of God, as it demands also that of the *ḳiyās fiḳhī*, thanks to which, in matters of law, it is possible to know exactly the Divine commandments. Nevertheless this obligation is bounded by the intellectual capacity of each person, since God never imposes more than an individual soul is able to carry out.

But Ibn Rus̲h̲d states that a study of this magnitude cannot be made without taking previous research into account. Thus the pursuit of the above reasoning involves the obligation to examine the works of the ancients (cf. a similar idea developed by Fak̲h̲r al-Dīn al-Rāzī in his *Mafātīḥ al-g̲h̲ayb*, introduction). It is therefore contrary to the Law to forbid such an examination, provided that the person carrying it out possesses *d̲h̲akāʾ al-fiṭra* (a technical term, derived from a Ḳurʾānic root, to indicate a gift which is given to man of remembering things and recognizing the truth, which may be translated by "a keen sense of the truth"), and *al-ʿadāla al-s̲h̲arʿiyya* accompanied by ethical virtue, that is a religious and moral qualification defined by the Law. But not all men accept proof by demonstration: some give their assent (*taṣdīḳ*) only to dialectical discourses (*al-aḳāwīl al-d̲j̲adaliyya*), others only to rhetorical discourses (*k̲h̲iṭābiyya*). God speaks to men through these three types of discourse in order to reach them all (cf. Ḳurʾān, XVI, 126). If rational research ends in a truth which is not mentioned in the Ḳurʾān, there is no problem; it is the same as in law (this new comparison with *fiḳh* deserves to be noted), when there are inferred by a juridical syllogism *aḥkām* which are not to be found in the text of the revealed Law. In cases where the Ḳurʾān does not employ rational demonstration, either it is, in its manifest meaning, in agreement with the conclusion of the syllogism, and there is no difficulty, or else it is in apparent disagreement, and it is then necessary to make an interpretation (*taʾwīl*) of the literal meaning in a figurative (*mad̲j̲āzī*) meaning, in accordance with the usual practice of the Arabic language. In all this Ibn Rus̲h̲d's thought follows the best established categories of Muslim hermeneutics. This, he points out, is what the jurists do; for them it is simply a case of making a text agree with the conclusion of a syllogism of opinion (*ḳiyās ẓannī*); the *taʾwīl* of the philosopher has a much stronger title to legitimacy, since it produces an agreement between a text and a syllogism which is certain (*ḳiyās yaḳīnī*). Thus there takes place a union between what derives from reason and what derives from tradition (*al-d̲j̲amʿ bayn al-maʿḳūl wa 'l-manḳūl*), and this is the aim of Ibn Rus̲h̲d. The Ḳurʾān itself distinguishes the passages which need interpretation from those which are to be accepted as they stand: on the one hand, the *āyāt mutas̲h̲ābihāt*, on the other, the *āyāt muḥkamāt* (Ḳurʾān, III, 7), the verses which have several meanings and those which have a clear and precise meaning. The *taʾwīl* of these ambiguous verses is known only to God Himself and to those who have a solid grounding in scholarship. Ibn Rus̲h̲d reads this text as a justification of *taʾwīl* for men of true scholarship (cf. L. Gauthier, *La théorie*, 59 f., on the two possible readings). To determine what should be interpreted and what should be understood literally, Averroes does not have recourse to consensus (*id̲j̲māʿ* [*q.v.*]), which he criticizes with arguments curiously reminiscent of those of Ibn Ḥazm on the impossibility of establishing concrete proof of its existence (cf. R. Brunschvig, *Averroès juriste*, 47). On this subject Averroes deals briefly with a question disputed among the jurists: that of *takfīr*, an accusation of infidelity; he considers that the excommunications launched against the philosophers should not be regarded as *takfīr ḳaṭʿan* (or *ʿalā ṭarīḳ al-ḳaṭʿ*, i.e., a decisive condemnation against which there is no appeal). It is known that more tolerant persons practised the *takfīr ʿalā ṭarīḳ al-tag̲h̲līẓ* as a severe measure. But in the case of the philosophers, they cannot be accused of infidelity on the strength of the consensus, since God restricts the use of *taʾwīl* to scholars in particular. It cannot be a question of a *consensus communis* (*id̲j̲māʿ mustafīd*) accessible to all. Here Ibn Rus̲h̲d uses the technicality of the law to support the cause of the philosophers whom he is defending. Thus he attacks the *takfīr* that al-G̲h̲azālī launched against the *falāsifa*. Then he reverses the positions and shows that it is often the *mutakallimūn*, the theologians, who make undue use of *taʾwīl*, for example over the verses (XI, 9) concerning the Creation: the Ḳurʾān manifestly teaches that the Throne and the Water existed before this world, and that before the six days there existed a period which is the number of the sphere. It is not, of course, impossible that the philosopher may be wrong on such difficult questions (*fī 'l-as̲h̲yāʾ al-ʿawīṣa*). But he may be excused and he will nevertheless have his reward, like the judge who blunders when performing *id̲j̲tihād*, since in this case his error is an involuntary one (*k̲h̲aṭāʾ*) which may creep in even when a duty is being performed.

Thus there are in the Law texts which are to be taken in their *ẓāhir* and to interpret which would be to lapse into unbelief (*kufr*) or heretical innovation (*bidʿa*); there are also texts which it is obligatory for scholars to interpret, but concerning which, for those who are not scholars, on the other hand, *taʾwīl* is a *kufr* or a *bidʿa* (this is what happens to theologians who do not make use of rational demonstration); finally, there are texts concerning which there is doubt: thus the verses on the future life are to be understood literally so far as regards the affirmation of its existence but they admit of different opinions as regards the qualification (*ṣifa*) given to them by scholars, whereas the common man must adhere to the literal meaning. The scholars, for their part, must not "popularize" their learning in the form of dialectical, rhetorical or poetic writings; they must write only works of demonstration (*kutub al-barāhīn*) so that they will be accessible only to those who are capable of following such demonstration. Al-G̲h̲azālī did not follow this rule and was therefore in error, though his intentions were good. The books written by scholars must be forbidden to the ordinary man by the leaders of the community.

Faith involves an assent (*taṣdīḳ*) to a representation (*taṣawwur*). This assent is in response, accord-

ing to temperament, to a demonstrative, dialectical or rhetorical argument. The representation leads to a grasp of either the thing itself or its image (*mit̲h̲āl*). Revelation, being addressed to a larger number, makes very little use of demonstration. It can happen that premises based on opinion may also be certain (*yaḳīna*). In this case, and if no term used in the conclusion is understood in a figurative sense (representing the image of the thing), the text must be understood literally. But if the conclusion is in figurative terms, then interpretation is necessary. If the premises are based entirely on opinion and if the conclusion affects the things themselves, the premises may be interpreted, but not the conclusion. Finally, if the premises consist only of opinion and the conclusion is figurative, scholars have an obligation to interpret, but the ordinary man may not go beyond the literal meaning. Otherwise, in this case, it would be turning away from the letter a mind which had access to nothing else, and since the text contains only opinions and figurative meanings, it would no longer offer any support to a person unable to find other support elsewhere. Thus his faith would be destroyed.

There is therefore only one truth, and strictly speaking there cannot be two different expressions of one single truth as though it were spoken in two languages, that of reason and that of imagination, for that would only introduce different types of *taṣawwur*. Ibn Rus̲h̲d's original contribution is to stress thus the importance of adherence to the truth. Men understand it through the ways (*ṭuruḳ*) which gain their assent; the majority consent to something because of what they themselves are, rather than because of what the thing itself is. Their truth is subjective. Incapable of adopting a rational objective attitude which would govern their personal reactions, they have to have their personal sensibility affected in order to accept what is proposed to them. Consequently it is necessary that the dialectical or rhetorical approaches which they follow should lead them to a representation of the truth, either actual or figurative, which they can accept and adopt, so that their subjective attitude does not lead them into erroneous representations. This is realized in the Ḳurʾān. But going beyond this, scholars, through *taʾwīl*, find the way of reason which leads to the understanding of the truth itself. They verify at the same time the agreement of Law and Reason, of religion and philosophy, while the common man profits from this agreement without knowing that it exists. But it is necessary to respect the situation of the ordinary man and not to reveal to him anything of the interpretations. To act in any other way is to give rise to sects, and this was the error in particular of the Muʿtazila and the As̲h̲ʿarīs. The majority of people should be taught only the general methods which the Ḳurʾān has revealed and used for them. The special method which the Holy Book suggests for those who are capable of it should be reserved for scholars. To conclude, the agreement of the *maʿḳūl* and the *manḳūl* is not that of two formulations, of two expressions, of two equivalent types of representation. It is the fact that different types of mind can arrive at the same truth; it is the practical agreement of two methods in order to arrive at a single practical conclusion, one of them being no more than this, the other based also on a theoretical demonstration and a speculative knowledge. It is thus that, to take an example which is not in Ibn Rus̲h̲d, the same problem may be solved and the same result arrived at by arithmetic or by algebra, although the arithmetical method, remaining at the level of real intuition, produces a better understanding of the concrete relations between facts than does the algebraic method, consisting of the manipulation of conventional signs.

The *Faṣl al-maḳāl* is therefore a treatise on methodology. The problematical element is that of all Muslim thinking: that of the jurisconsults, the grammarians and the Ḳurʾānic commentators, and indeed the theologians. Averroes employs the technical vocabulary in use among these scholars. But he very skilfully manipulates all these ideas within a logical framework borrowed from the Greeks, which can later easily be applied to the problems of philosophy: it is the framework of Aristotle's *Organon*, rational demonstration (*Analytics*), dialectical reasoning (*Topics*), rhetorical argument (*Rhetoric* and to a lesser degree *Poetics*), with, discernible at times in the background, allusions to sophistics.

(b) The *Kitāb al-Kas̲h̲f ʿan manāhid̲j̲ al-adilla fī ʿaḳāʾid al-milla wa taʿrīf mā waḳaʿa fīhā bi ḥasb al-taʾwīl min al-s̲h̲ubah al-muzayyifa waʾl-bidaʿ al-muḍilla* ("Exposition of the methods of demonstration relative to the dogmas of religion, and definition of the equivocations and innovations which appear in them as methods of interpretation and which distort truth or lead into error"). This treatise foreshadows the *Tahāfut* still more clearly than the preceding one, whose general conclusions it evokes in its introduction. Its aim is to show that the theories of the sects satisfy neither the demands of scholarship nor the needs of the common man. It consists of five chapters. The first is devoted to the existence of God; in it the author examines the opinions of the Ḥas̲h̲wiyya, the As̲h̲ʿarīs, the Ṣūfīs and the Muʿtazila. For the first, faith is based entirely on the authority of the Book and owes nothing to reason: a question already dealt with in the *Faṣl*. The As̲h̲ʿarīs allow the use of reason but their methods are open to criticism. They prove the existence of God by the contingency of the world, which has come into existence (*muḥdat̲h̲*). But the agent which brings it into existence (*muḥdit̲h̲*) must have an eternal existence. Consequently its action is eternal and the effects of it also eternal. In order to escape this consequence, it is not possible to say with these theologians that the action of an eternal being has a beginning in time, since this would presuppose a cause which at first prevented this action from coming about, and then a cause which precipitated it. This cause, in its turn, is either eternal or situated within time. And so the reasoning continues, reminiscent of a similar argument of Fak̲h̲r al-Dīn al-Rāzī on *tark* and the *murad̲j̲d̲j̲iḥ*. There follows a criticism based more particularly on the atomism of this school. Averroes disagrees with a thesis which, in order to retain the absolute freedom of God, destroys His wisdom and the regular order of His providence. In addition, the As̲h̲ʿarī argument supposes that the universe, in its entirety, is formed in exactly the same way as the sublunary world which surrounds us, which is not proved (Aristotle gives to heaven and the heavenly bodies a separate situation). Ibn Rus̲h̲d also considers time—whether it is created or eternal. This recalls very early discussions which go back to Plato, Aristotle, to middle Platonism (Calvisius Taurus), Philo of Alexandria, Johannes Philoponus (Yaḥyā al-Naḥwī; cf. Ernst Behler, *Die Ewigkeit der Welt*; J. Pouilloux and R. Arnaldez, *Philon d'Alexandrie, De Aeternitate*, Introduction, translation and notes). He examines critically the argument that the infinite cannot be crossed, which demands a point of first departure if one is to arrive at the present event. This is true for sequences in a straight line, but not for cyclic

sequences where an initial point of departure is not apparent. Thus, evaporation is not the first origin of the clouds at any given moment in the sky, since in order to produce evaporation rain is necessary, itself produced by clouds. These clouds therefore stem from other clouds; the very nature of clouds does not permit the idea of any definitely first clouds. In rectilinear causality on the other hand (man gives birth to man), a point of departure is necessary. Nevertheless, if, in such a line, each cause were merely the instrument of an eternal agent, the present effect would result from the present action of this eternal agent, and it would exist even if this agent had made use of such instruments an infinity of times (cf. the double causality of Spinoza).

Ibn Ru<u>sh</u>d devotes a special criticism to al-<u>D</u>juwaynī, accusing him of being unaware of the necessity of that which exists, which leads him to oppose Avicenna's doctrine of the necessary by itself and the possible by itself (which is necessary by another). That which is possible by itself can never become necessary by means of its agent. Another argument of al-<u>D</u>juwaynī is that the world was created at a certain place within the infinite void; but any one part of the void is the same as another (cf. Leibnitz), therefore a free will is necessary to decide between one place and another. But, Averroes objects, it is essential to prove first that the void exists and that it is infinite and eternal, otherwise another void would be necessary to contain it.

Against the theory of the Ṣūfīs Ibn Ru<u>sh</u>d admits that mystic training may help in the attainment of rational knowledge, but that it cannot replace it. Regarding the Muʿtazila, he states that he has found none of their books in Spain; he says nothing of them, and passes on to the Ḳurʾānic proofs. This is argument by means of Providence and by means of the creation of substances (animals, vegetables, heaven). Averroes underlines the generation of the organic starting from the inorganic; there is therefore an agent which gives life (this was to be stated in the *Tafsīr* of book Λ of the *Metaphysics*, see below). As for the heavens, they are commanded; it is the Ḳurʾānic idea of *tas<u>kh</u>īr* (*sa<u>kh</u><u>kh</u>ar Allāh*, in many verses). The idea of the divine *amr* expressing the act of the unmoved Mover which commands without having to move itself was to be taken up again in the *Tahāfut*. These two types of proof concern the ordinary man, but the scholars give them demonstrative value, and they have a deeper and wider knowledge of the realities on which they base their demonstrations.

In the second chapter he studies the unity of God. The Ḳurʾān proves it by the unity of the government of the world, a proof which the scholars, and Averroes in particular, take up and go into deeply. The criticism of the A<u>sh</u>ʿarī reasoning is subtle and technical. It is enough merely to mention it.

The third chapter deals with the attributes of God: knowledge, life, power, will, hearing, sight, speech. Ibn Ru<u>sh</u>d distinguishes clearly between the Ḳurʾānic doctrine and the theories of the theologians who raise problems on which the Ḳurʾān is silent. Thus on knowledge: God knows what He has created, for there exist in creation an order and a wisdom which show that the Creator has knowledge. He must therefore know what will exist, what exists and what will perish. But although the Ḳurʾān presents God's knowledge in this way, it is related only to man's own experience of knowledge. But for man, the knowledge possessed by the subject who knows is, as has already been mentioned in the *Faṣl*, the effect of the object known (*maʿlūl li 'l-maʿlūm*). For the eternal knowledge which is creative, the reverse is true. Thus it is not possible, philosophically speaking, to raise the problem of the knowledge of future contingents in the same way for both God and man; however, in order to be understood, they have to be discussed in the same terms. There appears in this chapter a certain agnosticism, very Islamic, in particular in the matter of knowing whether the attributes may be reduced to the essence or whether they are added to it, whether they are *nafsiyya* (essential) or *maʿnawiyya* (qualificative). Ibn Ru<u>sh</u>d dismisses as irrelevant both A<u>sh</u>ʿarīs and Muʿtazila, and criticizes in passing the Christian doctrine of the Trinity (since it is with regard to the attributes that *kalām* attacks Christianity; cf. al-Bāḳillānī, *Tamhīd*, and Averroes himself, even in the *Tafsīr* of the *Metaphysics*, iii, 1620, 1623). This attitude becomes more firmly established as the treatise proceeds, for example in chapter 4, in the discussion on the corporeality of God, in which, in a surprising way, Ibn Ru<u>sh</u>d condemns the Muʿtazila for their denial of any corporeality, and the A<u>sh</u>ʿarīs for having sought a compromise solution. In fact the ordinary man has no idea at all of an incorporeal being, and these doctrines do not give it to him; he needs to address his prayers to a Being who exists somewhere, and the Ḳurʾān states that He is in heaven. Therefore it should be taught, with the Revelation, that God is Light, which solves the problem of the vision of God (*ruʾya*) in the next life. Furthermore, in the same way that light enables colours to be seen but is itself difficult to see, so is God the principle of all sensible experience but nevertheless Himself enveloped in veils of light. But in order to conceive of an incorporeal being, it is necessary first to have an exact knowledge of the soul, which is not possessed by the ordinary man and which is not easy to acquire. The problem of the "direction" (*<u>d</u>jiha*) in which God is found is solved by Ibn Ru<u>sh</u>d by a skilful use of the Aristotelian theory of place: "The limit of the enveloping body" (τὸ πέρας τοῦ περιέχοντος σώματος, *Physics*, IV, 212a6). God, not being enveloped by anything, has no place. But He is in a direction, since direction is indicated by the surfaces of bodies. Thus the enveloping sphere is not in any place, since there is no body outside it, any more than there is a void. Thus the Being which exists in the direction marked by the exterior surface of this sphere will be incorporeal. That is the true demonstration.

The fifth chapter deals with divine actions: creation, the sending of prophets, predestination and divine decree, justice and injustice, the future life. On the creation, in addition to what he has already said about it, Averroes states against the A<u>sh</u>ʿarīs that although the world contains contingency, it cannot be contingent as a whole. The liberty of God cannot be that of indifference. Finally the term *ḥudū<u>th</u>* (coming into existence) is not Ḳurʾānic and constitutes in itself a *bidʿa*. On the prophetic mission, Ibn Ru<u>sh</u>d makes a critical examination of the probative value of miracles and of the *iʿ<u>d</u>jāz al-Ḳurʾān*. He regards the problem of predestination as "one of the most difficult". The Ḳurʾān contains on this verses for and against, and these contradictions are found also in *ḥadī<u>th</u>*. Both series of texts must be retained: on the one hand human action obviously depends, both for its cause and its execution, on external and internal conditions created by God; but on the other hand, we are the authors of our own acts since "it is evident that God has created in us faculties by means of which we can acquire things which are opposed by nature", which proves that freedom of choice exists.

Here there is involved the question of secondary causes. All causes other than God Himself have no existence, neither they nor their effects, other than through God. The word "agent" may not be used indiscriminately of God and of other causes. But causes operate, not only because God uses them as instruments, but also because He created them as causes. Furthermore, it can be said that substances and essences have for their cause only God, whereas accidents have other causes. On divine justice, Ibn Rus̲h̲d agrees with As̲h̲ʿarism: it is necessary to believe at the same time both that God is just and that He is the creator of good and evil, in order to avoid any dualism. God created evil with good ends in view: it is *by accident* that fire, which is good, does harm. On this delicate problem, Averroes does not hesitate to reproduce all the sophistries which creep into the theodicy of all periods. It is true that this is a point on which it is necessary to convince both the ordinary man and the philosophers themselves. This does not mean that God is above the just and the unjust: He is just, but in Himself, and not as a judge is, in the service of others. Finally the future life exists; that is not contrary to reason. It is left to each person to imagine the modalities of it for himself.

This treatise is directed against the doctrines that the theologians, going beyond all sound demonstration, construct upon the Book; against the problems which they raise. The feeling behind it is not, basically, very different from that of al-As̲h̲ʿarī and al-G̲h̲azālī at the beginning of their careers, they having become theologians rather in spite of themselves, in order to refute the errors which were threatening Islam. But they were wrong; Ibn Rus̲h̲d considers that the only recourse is to demonstrative knowledge. He condemns theology; the literal meaning of the sacred text seems to him on the whole wiser, even more acceptable to reason, than the theological lucubrations. One would expect that, in distinguishing thus clearly between the common man and the scholars, he would maintain that the arguments and the representations which are in the Ḳur'ān form a bad diet for the uneducated masses who are incapable of teaching themselves (the doctrine of the double truth of the western Averroists: that which is true for religion is false for philosophy). But this is not so: there exists a religious truth which is true for all men whoever they are. The worst misfortune which could befall them would be to lose their faith. Now philosophy, particularly when dealing with obscure questions, shakes the faith of many men and should be reserved for scholars. But theology, with its uncertain or sophistic arguments, while giving the appearance of adhering to the texts, is still more dangerous, especially because its intention is to elaborate the authentic doctrine in which everyone must believe. Philosophers, in all cases where the system of rational demonstration is not followed, are in the same situation as the ordinary man; they also must adhere to the literal meaning of the Ḳur'ān and beware of the false explanations of theology.

(c) The *Tahāfut al-Tahāfut*. In the *Faṣl* and the *Kas̲h̲f*, al-G̲h̲azālī had been very severely handled. In the *Tahāfut*, the battle against him grows, becomes more definite and leads Ibn Rus̲h̲d to embrace all the great problems of philosophy. This work combines the results of the paraphrases and of the middle commentaries, as well as all his basic personal ideas on religious questions, the development of which may be traced in the preceding treatises. But in the attack on the *Tahāfut al-falāsifa* al-G̲h̲azālī is not the only target. Many of the criticisms in his work directed against Avicenna are accepted by Averroes, if not in the form of argument used by al-G̲h̲azālī, at least for the correctness of their conclusions. The *Tahāfut al-Tahāfut* is thus a reconstruction of the true philosophy, that of Aristotle himself, against the false, that of the neo-Platonic *falāsifa*, which distorted the thinking of Aristotle, and against the theological systems. In this sense, it can be said that Ibn Rus̲h̲d's original philosophical doctrine is to be found in this book.

There is a very precise study of this work in the introduction written by S. van den Bergh to his English translation. The two Muslim thinkers are separated on a fundamental point: in the tradition of his master al-D̲j̲uwaynī, al-G̲h̲azālī does not consider that philosophical reasoning has the strictness of mathematical reasoning, and in the *Maḳāṣid*, he points out that there exists there a source of error which misleads the unthinking supporters of logic. Aristotle, on the other hand, believes in the value of demonstration, and shows, as he did for the theologians, that it is the neo-Platonic philosophers who lack strictness, but that sound logic should not be accused of this.

A large part of the work of al-G̲h̲azālī, and thus that of Ibn Rus̲h̲d which follows it, is devoted to the problem of the creation of the world. Averroes' solution is that of an eternal creation. There cannot have existed an empty time which preceded the appearance of the world at a certain moment in it. Time is, according to Aristotle, the numbered number (τὸ ἀριθμούμενον) of movement (*Physics*, IV, 219 b 8). It measures movements only within the limits that movement measures time itself since they are mutual definitions of each other (οὐ μόνον δέ τὴν κίνησιν τῷ χρόνῳ μετροῦμεν, ἀλλὰ καὶ τῃ κινήσει τὸν χρονὸν διὰ τὸ ὁρίζεσθαι ‘υπ’ ἀλλήλων, *Physics*, IV, 220 b 14-16). But although the time of the movement of the sphere measures the movements within the world, there is no movement outside the sphere which enables time to measure the movement of the sphere. The illusion is therefore one of "aligning": the revolutions of the sphere in a sort of empty, rectilinear time, which, if it is infinite, cannot be crossed, so that an actual revolution cannot take place. But in reality, each revolution is independent of the others. Each of them depends immediately on the actions of the first agent: "Their sequence is accidental" (para. 20). In the sequences of causes it is necessary that the present effect is the result of all these causes. If they are all infinite, it cannot exist. But it is not necessary for all the past revolutions of the sphere to be added together in order for the present revolution to take place. Thus it can be said that "The circular movements of the past and the future are non-existent" (para. 23). This example shows that in the *Tahāfut* the ideas already outlined in the earlier treatises are analysed philosophically in a much deeper fashion. He maintains that the creative will in God should not be conceived in relation to our own; it is founded in the excellence of God, separate from the world; the world does not emanate from Him, in continuity with Him; God is not an agent in the way that it is said, at least as an image, that a person "makes" a shadow, his own shadow. The term "will" expresses the method of this action of a perfectly transcendental being. This is why Ibn Rus̲h̲d sees no incongruity in the fact that such a creator produces a multiplicity of beings as the effect of his act; he thus rejects the principle which is the basis of the emanatist doctrines, that the One can give birth only to one.

In ontology, Averroes criticizes with al-G̲h̲azālī

Avicenna's conception of the Being necessary in itself (*wādjib al wudjūd bi-dhātih*). But he goes further: being is that "which is predicated of the ten categories analogically, and it is in this sense that we say of the substance that it exists by itself and of the accident that it exists through its existing in the existent which subsists by itself. As to the existent which has the meaning of the 'true', all the categories participate in it in the same way, and the existent which has the meaning of the 'true' is something in the mind, namely that a thing is outside the soul in conformity with what it is inside the soul" (303-4). A quiddity, in thought, is only the explanation (*sharḥ*) of the meaning of a name; and it is only when one knows that this meaning exists outside the soul that one knows that it is a quiddity. It is thus not possible really to separate essence and existence; the distinction is made only in thought. In this lies Avicenna's error. If the being which is possible of itself is pure essence, it exists only in thought. Outside it, it is either an essence which exists, or it is nothing. If it exists, to "add" to it existence so that it shall be has no meaning. If it does not exist, it is obviously not possible to add something to nothing. Thus when Avicenna defines the possible as that which has a cause, it must first be specified what cause is referred to, since apart from the fiction of a cause which would give an existence added to a pure essence, if the idea of the cause enters that of the possible, then either the possible becomes necessary (*ḍarūrī*) (since the cause which makes it necessary forms part of its definition), or else one becomes involved in a tautology: that which has a cause is possible, that is, it has a cause (277), and this line can be followed to infinity. In short, Avicenna destroys the idea of the possible as such, since he makes of it either the necessary, or a simple verbal idea in thought. Averroes admits the existence of the true possible (*mumkin ḥaḳīḳī*), which leads to the necessary possible (*mumkin ḍarūrī*), by which he implies a necessary reality based on a true possibility, that is on a potentiality. The cause is the agent which translates the potentiality into the actuality. There is no other action than this. God makes actual the potentialities which are in the world. The world in its totality (*bi-asrih*) is not a pure possible which receives existence. It is an organized whole necessary through the interplay of the causes which are its laws, a commandment (*amr*) of God; but everything in it, even the heavens, is organized starting from potentialities (even if only the potentiality of place), and the proof of this is that everything in it is subjected to movement. God is thus really an agent and it is known in what His action consists. Thus it is legitimate to call him Creator, which is not the case with Avicenna's God. The division of being into actuality and potentiality is much more realistic than Avicenna's division into necessary and possible. It follows being itself, since it can claim to belong to the ten categories and explains movements according to these categories. It makes heaven enter into the physical, since it is moved in a circular direction, and it eliminates from it any "intermediary" character, in the mystic sense of the word. The necessary and the possible of Ibn Sīnā are vague ideas which set on the one side God and on the other the world, and which can no longer explain, except by imprecise images, the relations between them. They limit the action of God to that which is scarcely action: the unique procession of the first Intellect in its perfect unity of essence. The God of Averroes, a true agent, acts on all beings. E. Gilson, comparing the two Muslim thinkers, writes: "For Averroes, God forms part of the universe. In such a universe, divinity is the metaphysical cause of the physical order; it is therefore natural that physical science demonstrates in it the existence of God ... Thus conceived, God is included in the world, and the science of God, or metaphysics, is necessarily the supreme science beyond which no other exists. The universe of Avicenna is quite different. Avicenna's God is transcendent and situated beyond the moving Intelligences ... the highest of which is his first and only emanation" (*Jean Duns Scot*, 77). Certainly the God of Averroes is not the object of a mystic knowledge. He is present in the physical world and He is the keystone of the arch of the universe. But He is nonetheless transcendent and intelligence cannot reach to Him in Himself, but simply as creator (the first prime mover). In this sense, Averroes' thinking conforms completely to Muslim orthodoxy. This God is not quite that of Aristotle although he is reached by an entirely Aristotelian method. He is not the νόησις νοησέως which thinks in and to itself and draws the world to it without being aware of it. Ibn Rushd considers that although the unmoved mover remains mover and unmoved, it moves by its own command, as does a king seated on his throne. It has all the Ḳur'ānic attributes. The attributes are essential and express the richness of the essence: "To suggest ... that the essence cannot be formed by attributes is not correct, since all essence perfects itself (*istakmalat*) thanks to the attributes through which it becomes more perfect (*akmal*) and more eminent" (328). But these attributes in God are not separated; it is our thinking which distinguishes them according to what we consider to be one or another of the infinite divine perfections.

On the knowledge which God has of the universe, Ibn Rushd repeats what he has said in his other treatises. It does not resemble the knowledge which we have of the universal, which is abstractive and potential. Nor does it resemble the knowledge we have of the particular, which is perceptible, material and pluralist. But being in action and not potential, it resembles more closely our knowledge of the particular than our knowledge of the universal. Similarly God's will does not resemble ours (see above).

There remains the question of the last things. Demonstrative proof can establish spirituality and immortality only as regards the intellect, since it alone among the faculties of the soul is indivisible and operates without the need of physical organs. It has been deduced from this that Averroes did not believe in personal immortality. But this is merely the doctrine which he extracts from Aristotle in his commentaries. In fact, he says, there is nothing to prove that the faculties which make use of the physical organs do really weaken at the same time as the organs do. Although this is not a demonstrative proof, it is at least an open door. Since the knowledge of the soul remains obscure, it is reasonable to have recourse to revelation. As for the resurrection of the body, this is not demonstrable. But the speculative virtues cannot do without the moral virtues. Although the soul is immortal, it will not survive by contemplation alone but will need those moral virtues which imply the presence of the body. However the resurrection is not conceived of as the return of life to the earthly body. It is, as the Ḳur'ān says, a second creation.

B. The *Tafsīr* of the *Metaphysics*. Averroes' work ended with the great commentaries. We therefore now examine the main ideas which, towards the end of his life, he drew from Aristotle's

Metaphysics. Understanding well his thought and his method, he elucidates the Aristotelian doctrine while expressing his own point of view on it. Among the possible interpretations he chooses that which suits his own ideas. This commentary is a major work. The Arabic translations were bad. Often Ibn Rus͟hd consulted two or three of them. He studied the writers of antiquity: Alexander of Aphrodisias, Themistius, Nicholas of Damascus, Johannes Philiponus. He discusses them and often, by his own inspiration, he improves an accepted version. Even where the incomprehensibility of a text causes him to stray from the original thought of Aristotle, Averroes never strays very far.

The object of metaphysics. This science is concerned with the study of certain words: "His aim in this book is to distinguish the meanings contained in words. In this science a speculative examination is made of them, and these meanings have in it the place which in any art is held by the object (*mawḍūʿ*) of this art. These words are those used according to different points of view with reference to a single thing (*Comment.*, Δ, Introd.). Thus the examination of these words is a part of metaphysics: they bear an analogical meaning which can be discovered only through them, "to such an extent that here the examination of words is of the same order as the examination of the different sorts of objects which the scholar considers to be his own field". In other sciences, words, having a single meaning, are the immediate signs of objects of experience or of general ideas. In metaphysics, it is true that the words are also signs, but they do not allow their full significance to be grasped; there is nothing which can replace them. The search for the absolute One, the dream of the neo-Platonists, remains for Averroes simply an aim, always in relation to a multiplicity of different aims without which it would be indeterminate. Thus metaphysics must be attached to the fundamental diversity of being, reducible to that of the ten categories. It is because being is always presented in the plurality of the categories that there exists a metaphysical problem of being.

Because of this, metaphysics cannot have the same logical method as the particular sciences, mathematics and physics. The analogy of being, the one, the cause etc. implies an analogical reasoning. Thus, although in one sense it is the First Science which comprehends all the others and takes account of them, it cannot be considered as their source from which they could be unequivocably deduced. Metaphysics itself follows physics, which supplies it with the concrete experience of beings. The object of metaphysics is in fact being as being (*al-mawd̲j̲ūd bi-mā huwa mawd̲j̲ūd*): there is no other science which speculates on this. Mathematics considers being by quantity without asking the question of their existence. Physics considers being as something moved according to the various categories. Metaphysics considers the *lawāḥiḳ* of being (τὰ ὑπάρχοντα τούτῳ καθ' αὑτό, that is, all which is attached to it in its quality as being), and, Averroes adds, its causes (*asbāb*). But metaphysics cannot be the science of the totality of causes, because beings do not form one single category and the same is true of causes. This being so, he defines his thinking thus: "Principles, taken in the absolute sense, even although it happens accidentally that certain beings are perceptible and not absolute, must of necessity be sought for beings considered in the absolute sense. These principles are sought for them in so far as they are beings in an absolute sense, not as they are this or that, for example moved or mathematical" (i, 300). Thus it is by remaining in contact with concrete beings that metaphysics asks the question about their being, that is their existence. This idea is repeated in a commentary of E (ii, 713). If metaphysics is the science with the noblest (*as͟hraf*) object, is it universal and does it apply to many categories? It is not the science of one single category; it therefore has regard for the plurality of categories and *a fortiori* the plurality of beings. Thus the highest science is not the science of the general, as are the particular sciences. In its universality it reaches all that is in its character most concrete. Universal science is not abstract, and this is where the universal is distinguished from the general. It is thus seen that perfect metaphysics would resemble the knowledge which belongs to God. The philosopher attempts to achieve it without succeeding, because he cannot escape completely from generic ideas and material perception, analogy being only an imperfect method of knowing. But metaphysics will attain its culminating point if, among beings, there exist natures separated from matter (*al-ṭabāʾiʿ al-mufāriḳa*). These natures are not, like the Platonic Ideas, hypostasized abstract concepts, but realities which are not composed of matter and form. It is right that theology should have as its object a being thus separate, unmoved and eternal. It is above the science of the heavenly bodies, eternal but moved, of which it grasps the cause: "Just as the things of nature are those which have nature included in their definition (*ḳawl*), so the divine things are those which have God and the divine causes included in their definition" (ii, 712). Thus the word θεολογική is translated and understood as *al-ilāhiyyāt al-ḳawl*. "Since separate things precede in existence things which are not separate, the science which is first and earliest in existence must be the science of separate things" (ii, 711). But "first in existence, not first in knowledge since the order in teaching begins with the end. This is why this science is called meta-physics" (*mā baʿd al-ṭabīʿa*, i, 714).

Thus God is not being considered as being, even taken absolutely, since all being, before becoming what it is, is. Nor can the idea of God be drawn from the notion of being considered as being by means of a sort of division. It is therefore by studying concrete beings and their causes in the distribution of the ten categories that metaphysics must begin the search for God, discovering the distinction of matter and form, then of potentiality and actuality, in order to reach a cause which includes neither matter nor potentiality and which is the eternal and unmoved mover. Thus between physics and theology there exists an intermediary metaphysical research at the level of the concrete universality of being considered as being within all beings. It prepares that theology whose object is neither spiritual in the mystic sense nor ideal in the Platonic sense, but truly meta-physical.

It is not surprising therefore that Averroes gives great importance to the accidental in all the phenomena of this world. He realizes with Aristotle that although the world as a whole is necessary, it includes within itself some realities whose existence merely occurs with a greater frequency (*akt̲h̲ariyya*). This presupposes the existence of realities which occur with a lesser frequency (*aḳalliyya*). Without the accident of chance, there would be no frequency greater than another and everything would be necessary. There must therefore exist in this world accidental causes. But if every cause necessarily produces its effect and itself necessarily results from another

cause, there would have to exist an eternal and continually existing *anniyya* which would determine absolutely the production and the disappearance of each being. Appealing to experience, Averroes disagrees with this entirely determinist conception. No doubt the relation of the cause to the effect is always necessary; but a cause can interfere in a natural process which, as such, is a stranger to its causality. "As for a cause which results in an effect of chance, this is not at all the cause of a natural movement" (ii, 735-6). The result is that the causation of this cause, with regard to the effect produced in the natural process, is without cause. The natural causes are ordered towards a natural end. But the accidental cause, not being naturally directed towards this, is one which produces such an end without its being determined by any cause. Thus fire burns or heats; this is its natural effect. But if it burns a man, its causation intervenes in the natural process of life and destroys it, although the natural end of fire is not to alter the natural processes of life.

Contrary to this is the study of primary substance and of ontological necessity. In a long preamble to the commentary on book Λ, Ibn Rus̲h̲d re-states the complete rational plan of the work and explains that this book is the actual end of it, the two following containing only the criticism of the philosophy of Ideas and Numbers.

Although he is conversant with the analogy of proportionality (iii, 1552), Ibn Rus̲h̲d considers in depth the analogy of attribution. He shows that anteriority of a substance is not like that of one number in relation to another, but that it is "the anteriority of a thing to that which is related to it". Substance is not a universal (this is contrary to Plato). It is divided into perceptible substance, either eternal (*sarmadī*), the heavens, or corruptible (*fāsid*), and unmoved and separate substance. Perceptible eternal substance comes into the field of physics (this is contrary to Avicenna): "The metaphysician seeks to discover what are the principles of substance considered as such, and he explains that separate substance is the principle of physical substance; but in order to solve this problem, it is necessary to resort on the one hand to what is explained in book I of the *Physics* either on generable and corruptible being (i.e. composed of matter and form), or on eternal substance; and on the other hand to that which is explained at the end of book VIII: that the mover of eternal substance is exempt from matter" (iii, 1424). Unmoved substance therefore forms part of metaphysics, but in order to reach an understanding of it, it is necessary to study the changes in moved beings. All generation stems from a being *in posse*: matter. But the matter of the heavenly bodies, subjected merely to a change of place, is in actuality. Thus the heavenly bodies are neither divisible nor corruptible, contrary to the ideas of Avicenna, who considers that the matter of all the bodies is *in posse*.

All generation has three causes: the subject (*mawḍūʿ*), matter *in posse*, and the two contraries (*ḍiddān*) to which it is *in posse*: the one, on which the definition hangs, is form (*ṣūra*), the other is the lack of form (*ʿadam al-ṣūra*). Such are the principles (*mabādiʾ*) of substance. Neither form nor matter can be generated; all that can be engendered is their union (*mad̲j̲mūʿ*) under the action of a mover (*muḥarrik*); what it moves is matter, that towards which it moves is form. Thus the only thing which is engendered is that which is composed (*murakkab*).

Ibn Rus̲h̲d stresses, in criticizing Alexander and Themistius, the question of the "synonymous" or univocal agent (*al-muwāṭiʾ*): man is born of man. But how to explain the animals which are bred by putrefaction (*ʿufūna*)? It is explained thus: there are the natural substances which are engendered naturally (this is what is meant by "univocal generation"), and the accidents which may be produced by nature, art, chance (*bi 'l-ittifāḳ*) or spontaneity (*min tilḳāʾ nafsih*, ἀπὸ τοῦ αὐτομάτου). But all generation of natural substance is natural. Thus the animals which are born from putrefaction are natural productions of a synonymous agent and not the products of chance, "since that which is produced by chance is a generation without order (*niẓām*) and is not an aim pursued by nature". The efficient natural cause has always a natural finality. Decay has the same power as semen among creatures which reproduce themselves in a line of issue (*mutanāsil*): like semen it contains a power of forming each animal which is born of it.

Matter is common to all material beings. In this sense "it has the nature of something universal". But if this were really the case, it would have a form and would be made one by the form. How, being one in number, can it exist in a plurality? It is possible only because it is *in posse*. When the individual differences (*al-fuṣūl al-s̲h̲akh̲ṣiyya*) which give existence to numerical multiplicity are removed, it is said of matter that it is one, and thus that it is common to many things. But it is not called common because it has a common form, as is the case with the category (cf. iii, p. 1473). Unity by form comes from the fact that several concrete beings, numerically distinct, form one same species or one same category. "The community (*is̲h̲tirāk*) which the intelligence recognizes in the common forms has an existence *in posse* outside the soul. That which the intelligence recognizes in matter is pure nothingness, since it is included only by the negation which withdraws from it individual form. But since matter has no existence outside the soul, in so far as it is conceived of as common to the totality of the generables and of the corruptibles . . ., that by means of which it is matter distinct from nothingness and existing outside the soul, is reduced to the fact that it is a subject (substratum) of the perceptible individual which may be seen but is not understood" (p. 1473-4). In short, what makes Zayd exist is not the fact that the intelligible form of the man is shared by common matter: this form and this matter are only thought, and from their encounter, which is that of a universal positive (form) and a universal negative (matter), it having existence only in the soul, there cannot result, outside the soul, this concrete and individual reality which is Zayd. Properly speaking, the creation of an individual takes place neither through matter nor through form. As has been clearly said by M. Cruz Hernandez: "la materia y la forma no poseen *per se* actividad motora, ni autoprincipio de transformacíon alguna". What exists is the individual form in a particular subject, and that which engenders a particular is a particular. Ibn Rus̲h̲d disagrees here with Themistius, who believed that, in generation, the form was created (for him the generation of animals by putrefaction was a proof of this since, he asked, where did the form of these animals come from?). The substantial form would thus be separate and come from without; there would be a *dator formarum* (*wāhib al-ṣuwar*) which would be the agent intellect (*al-ʿaḳl al-faʿʿāl*). This was also the doctrine of Avicenna, based on the following argument: "there are no active powers in matter except the four qualities, hot, cold, dry and wet. These qualities produce what is similar to

them. But the substantial forms do not act upon each other". Ibn Rushd's thesis is that "the agent produces only the composite result of matter and form, and this by setting matter in motion and changing it so that that within it which is *in posse* to the form passes into actuality".

As for the agent, Averroes criticizes the theologians who admit only one single efficient cause and who deny secondary causes. This is because they think that all action is creation *ex nihilo*, and when they see a mover act on a mobile thing, they ask which of them creates the movement. But this is not the question; the true agent is that which causes a subject to pass from potentiality to actuality, and it is in this sense only that it is said that it unites matter and form. The forms exist *in posse* in primary matter and in action in the prime mover, rather in the sense in which it is said that the object of art exists in actuality within the soul of the artist.

The moved movers are thus really agents which have their own natural action. This being so, it is necessary to find not only what moves them but what co-ordinates them. There exists a real and universal movement, that of the sphere, which gives continuity and perenniality (*al-ittiṣāl wa 'l-azaliyya*) to all the movements of the world. As for the sphere and the heavenly bodies, they are moved by the desire inspired in them by the first unmoved mover, "because they understand of themselves that their perfection and their substance are only in movement . . . and also that their movement is the cause of the passage into actuality of what is *in posse* in the separate forms, *i.e.*, the material forms" (iii, p. 1595). In fact, although the forms are in action in the prime mover and *in posse* in matter, as has been seen above, it must be stated that the reverse is true in connexion with the concrete realization of material beings: "one has the impression (*yushabbahu*) that they have two existences: the one in action, which is material existence, and the other *in posse*, which is their existence as separate forms "(*ibid.*). This was the theory of the supporters of the Platonic Ideas, but they fell short of the truth, since the separate forms in themselves are not movers: they are found in the Prime Mover which draws all beings to them and through them. The first end of the movement of the heavens is their own perfection, and it is in consequence of (*tābiʿ*) its search for this that in the second place it ensures this passage of material beings from potentiality to action. "Thus he who performs exercise to preserve his health by practising an art, has as his main aim the preservation of health, and as a secondary aim the practice of this art" (1596).

On the Intellect, Ibn Rushd takes his stand against Alexander, who considered that the material intellect was generated and corruptible, which presents insoluble problems in the matter of intellectual knowledge. Ibn Rushd takes up a thesis which he attributes to Theophrastus, Themistius and the majority of the Peripatetic philosophers: the material intellect exists and the separate agent Intellect is as the form in the material intellect. But he states this more clearly by referring to what he has said in the *De Anima*. The material intellect is in itself generable and corruptible (Bouyges, 1489; the Latin translations add a negative: *non est generabilis et corruptibilis.*) The habitual intellect (*bi 'l-malaka*/*habitu*/ἕξει), which holds at our disposition the knowledge of the intelligibles, has a generable and a corruptible part; the corruptible is its action; but in itself it is incorruptible. It comes to us from without (*min khāridj*/θυράθεν) and is not generated; this is why the intellect *in posse* is for it like a place (*makān*) and not like a material thing. If this intellect, in so far as it must unite with the material intellect, had an action which was not generable, its action would be its essence and there would be nothing in it which constrained it to unite with the material intellect. But since it does unite with it, its action in so far as it unites is not its substance. The action which it produces is not for the benefit of itself, but of another. So it is possible for an eternal being to give to a generable and corruptible being the power to understand. When human perfection is achieved, this intellect sheds all potentiality, and of necessity its action, which is not it itself, is reduced to nothing. So, either *we* no longer understand at all through this intellect, or *we* understand through it, in the sense that its action is reduced, in this state, to its substance. Ibn Rushd shows that the second case is the true one (cf. iii, 1489-90). The question is a difficult one. It seems that Averroes considered the habitual intellect to be the way in which the agent Intellect is present in us, that is, in that part of our soul which is the material intellect. Its action in us has a beginning and an end; like acquired knowledge in the scholar, it is not continually in use. It is therefore, from this point of view, connected with the psychological reality of the feelings, of the imagination, of the memory, and of the will. But when used to perfection, it no longer needs the instruments of the soul: it turns back on itself and in itself in its own action, in which it is identical with the intelligible which it thinks. In this perfection of our intellection we understand through the agent Intellect itself, that is through the action which substantially constitutes it. This is what has led to the statement that our individuality disappears. We have seen the modifications which Averroes introduces into this doctrine, which he considers as being that of Aristotle, without altering it in its demonstrative value: since although all that is demonstrated is true, that which is not demonstrable is not necessarily false.

A general study of the thought of Averroes would have to be based on the texts preserved in Latin or Hebrew. This article has been limited to the main works surviving in Arabic. A Latin Averroes, given the slight variations in emphasis which translations always give to the original work, could be quite different on certain details. A complete and meticulous study on this point would be desirable, but it would be a long and difficult task.

There should however finally be mentioned the commentary on the *Republic* which has survived in Hebrew (ed. with introd., tr., and notes by E. I. J. Rosenthal, *Averroes' Commentary on Plato's Republic*, Cambridge 1956). Ibn Rushd did not know the *Politics* of Aristotle; Plato takes its place. "The two works —*Nichomachean Ethics* and *Republic*—form two complementary parts of the same science of Politics, as Averroes stated himself". Averroes' social awareness appears here in his ideal of a perfect city, the image of the world; he makes frequent use of al-Fārābī; he transposes in a very interesting fashion the Greek institutions into Muslim realities, as, in the *Poetics*, he transposed the Greek literary genres; finally he makes many allusions or applications to Muslim public law and to the situation of the Almohad empire compared with the Almoravids.

Ibn Rushd had few disciples in Islam. His great fame among the Western schoolmen is well known. Renan, followed by many others, claimed that Ibn Rushd's thinking contained nothing original. This is because he deliberately belittled the religious and

juridical works. In a general way, he committed an error of appreciation which was to remain a blind spot with the historians of "Arab" thought, who have seen the *falāsifa* as nothing more than the heirs of Greece. If one considers the whole corpus of Ibn Rus͟hd's works and the unity of his wide thought, it becomes apparent that the "Commentator" was a true philosopher.

(R. Arnaldez)

IBN RUSTA, Abū ʿAlī Aḥmad b. ʿUmar b. Rusta. Little is known of his life except that his native place was Iṣfahān and that he travelled in Ḥid͟jāz in 290/903. He is author of *Kitāb al-Aʿlāḳ al-nafīsa*, of which only the seventh volume has survived (the complete work must have been very voluminous). It is very likely that he was writing between 290-300/903-13. From the subject matter of the extant volume it is evident that the author was highly educated and possessed literary talent.

His *Kitāb al-Aʿlāḳ al-nafīsa* deals with mathematical, descriptive and human geography and a variety of historical and other subjects. The first chapters deal with the celestial sphere, the signs of the Zodiac, the planets, the position of the earth in the universe, and its shape, size and sphericity. The author deals systematically with mathematical and astronomical geography and endeavours to give briefly and without much quotation the sources of his knowledge, and the views and theories of the Arab, Greek and Indian astronomers on the subject. Thus the views of Āryabhatta on the rotation of the earth are included. Among the authorities named by him are Aḥmad b. Muḥammad b. Kat͟hīr al-Farg͟hānī (*ca.* 218/833) and Aḥmad b. al-Ṭayyib al-Sarak͟hsī (d. 286/899). However, he quotes numerous verses from the Ḳur'ān in support of his view of astronomy. After the introduction, there follows a description of Mecca and Medina, of the wonders of the world, the seas, rivers and the seven climes; then follow descriptions of Constantinople, of the K͟hazars, the Bulg͟hars, the Slavs, the Russians and other peoples. The author then gives the itineraries of some places, and ends with a description of some categories of Muslim names, religious groups and schisms, and names of people having special physical characteristics. Apart from the description of the lands of Islam, one finds in it details about many regions that lay outside the domain of Islam. Thus, considering the variety of subjects covered in the book, it may be defined as "a short encyclopaedia of historical and geographical knowledge". From the point of view of its arrangement and the presentation of the geographical material, the work may be classified as belonging to the category of the ʿIrāḳī school of geography as distinct from the broad category of the Balk͟hī school [see d͟jug͟hrāfiyā, 580b]. Ibn Rusta's work is to be compared with those of Ḳudāma and Ibn al-Faḳīh, in whose system too Mecca and Arabia are given precedence. By contrast, others belonging to this school give preference to ʿIrāḳ and Īrāns͟hahr. Again, Ibn Rusta prefers to describe the seven climes according to the Greek system and not according to the Persian system of *kis͟hwars*. J. H. Kramers has very correctly evaluated the work of Ibn Rusta as a rich source of information about all kinds of subjects that interested the cultivated classes of society: "It would seem that this kind of literature was used for the collection of all the secular knowledge that could not find a place in the religious and traditional literature" (see *D͟jug͟hrāfiyā*, in *EI*[1], Supp.).

As for the sources of his information, Ibn Rusta seems to have consulted the work of al-D͟jayhānī [*q.v.*]—he might even have met him. Again, it seems that he utilized the more complete edition of Ibn K͟hurradād͟hbih [*q.v.*], which is not extant. He used the report drawn up by Abū ʿAbd Allāh Muḥammad b. Isḥāḳ, who spent two years in Khmer (Cambodia) and whose report was later used by a number of geographers.

Bibliography: Ibn Rusta, *Kitāb al-Aʿlāḳ al-nafīsa*, ed. de Goeje, Leiden 1892 (= *BGA*, viii), Fr. tr. by G. Wiet, *Les Atours précieux*, Cairo 1955;

IBN SAʿĀDA, Abū ʿAbd Allāh Muḥammad b. Yūsuf al-Mursī (496/1103-565/1170), *ḳāḍī* and traditionist, studied under his kinsman Abū ʿAlī al-Ṣadafī (whose *dīwān*s and the original copies of whose traditions he inherited), Abū Muḥammad Ibn ʿAttāb, Abu 'l-Walīd b. Rushd (grandfather of Averroes) and Abū Bakr b. al-ʿArabī. In 520/1126 he travelled to the East and performed the Pilgrimage the following year. After studying with a number of scholars in Mecca, Alexandria and al-Mahdiyya, he returned to Murcia in 526/1132. His main interests were Ḳur'ānic studies, *ḥadīth*, philology and *kalām*, along with an inclination towards Ṣūfism. He was an eloquent *khaṭīb*, a counsellor, and a teacher of *ḥadīth* and *fiḳh*, and was appointed *ḳāḍī* successively in Murcia and Jativa. He transmitted traditions in these towns and in Valencia, in which three towns he preached the *khuṭba* on Fridays in turn. He was valued for his legal knowledge and just decisions, and was popular with all classes. Among his transmissions was al-Tirmidhī's *Djāmiʿ*.

IBN AL-SĀʿĀTĪ (the son of the clock-maker), Fakhr al-Dīn Riḍwān (or Ruḍwān) b. Muḥammad b. ʿAlī b. Rustam al-Khurāsānī, born at Damascus, where his father, a native of Khurāsān, had settled. His father was a skilled clock-maker, whose most notable works were the clocks at the entrance to the Great Mosque at Damascus, commissioned by the Zangid al-Malik al-ʿĀdil Nūr al-Dīn Maḥmūd (died in Shawwal 569/May 1174); he was also versed in astronomy. Ibn al-Sāʿātī was a physician, but he was also well-versed in literature, logic and the other philosophic disciplines as well as in clock-making. He was at first the vizier of al-Malik al-Fā'iz b. al-Malik al-ʿĀdil Muḥammad b. Ayyūb (nephew of Ṣalāḥ al-Dīn), and then vizier and personal physician of his brother al-Malik al-Muʿaẓẓam b. al-Malik al-ʿĀdil (died 624/1227). He died at Damascus in about 627/1230. There survives a work of his on clock-making, the *Risāla fī ʿamal al-sāʿāt wa-'stiʿmālihā* (abridged translation E. Wiedemann and Fritz Hauser, *Über die Uhren im Bereich der islamischen Kultur*, in *Nova acta academiae naturae curiosorum*, c (1915), 176-267), in which he deals primarily with his father's clock, which he repaired and improved.

His brother, Bahā' al-Dīn Abu 'l-Ḥasan ʿAlī, also called Ibn al-Sāʿātī, was a well-known poet whose *dīwān* has been edited by A. E. Khūrī (Beirut 1938-9). He died, in Cairo, in about 604/1207; for details of his life see Ibn Khallikān, no. 489.

The same name was also given to the Ḥanafī jurisconsult Muẓaffar al-Dīn Aḥmad b. ʿAlī al-Baghdādī, died 694/1295, author of a much used compendium of *fiḳh* which is called *Madjmaʿ al-baḥrayn wa-multaḳā 'l-nayyirayn*, because it is an adaptation of the *Mukhtaṣar* of al-Ḳudūrī [*q.v.*] and of the *Manẓūma* of al-Nasafī; for details see *Ṭabaḳāt al-Ḥanafiyya*, ed. Flügel, 4.

IBN SABʿĪN, ʿAbd al-Ḥaḳḳ b. Ibrāhīm b. Muḥammad b. Naṣr, al-ʿAkkī al-Mursī Abū Muḥammad Ḳuṭb al-Dīn, 'Peripatetic' philosopher and Ṣūfī (*ṣūfī ʿalā ḳāʿidat al-falāsifa*). He himself used the surname Ibn Dāra. This last word, which denotes a circle, a ring, the halo round the moon, here apparently signifies the null or zero which, according to the *ḳāḍī* of Granada, Muḥammad b. Aḥmad (d. 760/1358-9), was said to correspond to the figure of seventy (*sabʿīn*) "according to certain methods of computation peculiar to the people of the Maghrib".

Ibn Sabʿīn was born in Murcia in 613 or 614/1217-8 and died in Mecca in 668 or 669/1269-71.

"A bitter and tormented spirit", L. Massignon called him. His life, consisting entirely of controversies, quarrels and persecutions, seems to have been a long and painful trial, alleviated however by the love and loyalty bestowed on him by his disciples, the *sabʿīniyya*, men humble of heart and living in poverty. In Spain, where he carried out his studies, fortune at first favoured him. His wide learning and knowledge of medicine and alchemy were esteemed. On the other hand, his Ṣūfism was suspect; he was reproached for some of his doctrinal assertions, among others, that in which he defined God as being the sole reality of existing things; this was regarded as a profession of monist faith, which his own position as a hellenizing philosopher could only render more suspect in the eyes of the *ʿulamā'* and *fuḳahā'*. He was compelled to leave his native land, when about thirty years old, to escape from persecution by his enemies. Followed by a group of disciples, he settled in Ceuta. There he acquired such celebrity that Ibn Khalāṣ, the governor of the city, deputed him to answer the philosophical questions which the emperor Frederick II of Hohenstaufen had put, through an ambassador, to the Almohad sultan ʿAbd al-Wāḥid al-Rashīd (630-40/1232-42). But this high official, fearing that public order might be disturbed by the philosopher's teaching, soon expelled a visitor whom he considered to be compromising. Once again, Ibn Sabʿīn was compelled to go into exile. He turned towards the East. He travelled to Bādis, then to Bougie. It was in that town that he met al-Shushtarī (610-68/1213-69), who became the most faithful, as well as the most moving, of all his disciples. Continuing on his way eastwards, he came to Tunis. In a milieu of orthodox Islam, this Aristotelian Ṣūfī once again came up against the hostility of the *ʿulamā'*. To escape from his chief enemy Abū Bakr al-Sakūnī, a theologian from Seville who had settled in Tunis, he hurriedly left the town. There is a record of his journey on to Gabès, and thence to Cairo. But there he scarcely felt secure and the great Mamlūk sultan Baybars I was ill-disposed towards him. Only the *ḥarām* of Mecca remained as a place of refuge for him. But there too he was persecuted, by an Andalusian émigré named Ḳuṭb al-Ḳasṭallānī (614-86/1217-88). For once, however, he escaped unharmed from the accusations that were brought against him.

M. A. F. Mehren regards Ibn Sabʿīn as "one of the last representatives of the Arab 'Peripatetic' school".

This opinion is shared by L. Massignon, who considers that through his very Hellenism the philosopher was condemned to remain without disciples in the history of Islam. Ibn Khaldūn places him among the adherents of *waḥda*, that is to say among the Monists, whom he contrasts with the theorists of *tadjallī*. His isolation in a world of *ʿulamāʾ*, *muftīs*, theologians and *fuḳahāʾ* is not without its poignancy. He reacted by adopting a haughty attitude, pouring scorn on his adversaries. He possessed a restless temperament, racked by a nervous distemper which led even to the vomiting of blood, according to the reports of some of his biographers. This aristocratic intellectual seems to have found his only consolation among the humble men who listened to him and allowed themselves to be charmed by his words. His disciple al-Shushtarī, who spoke of himself as his slave and dedicated three of his *zadjals* to him, called him "the magnet of souls" (*maghnāṭīs al-nufūs*). That he took his own life in the manner of the Stoics, by opening the veins of his wrists, is in no way improbable [see INTIḤĀR]. For this philosopher, possessed by Love, it was the ultimate way of uniting himself with the Beloved, of fleeing a world that rejected him.

The *isnād* of the *ṭarīḳa sabʿiniyya* given by al-Shushtarī in one of his *ḳaṣīdas* shows the overlapping of the two cultures, the Greek and the Muslim, as accepted by the followers of Ibn Sabʿīn. In it, among other links, we find Plato, Aristotle, Alexander the Great, al-Ḥallādj, al-Shūdhī, who as a mystic was the teacher of that strange character al-Suhrawardī, and Abū Madyan. In this initiatory chain, Hellenistic philosophy and Muslim *taṣawwuf* are linked together under the patronage of Hermes, the spokesman of the gods and their messenger to men.

His biographers ascribe a certain number of works to him, the principal ones being *Budd al-ʿārif*, which he is said to have written at the age of fifteen (an ed. is being prepared in Paris), *al-Duradj*, *al-Iḥāṭa*, *al-Fatḥ al-mushtarak*, a short book, *al-Faḳīriyya*, several treatises and a few essays.

Bibliography: M.A.F. Mehren, *Correspondance du philosophe soufi Ibn Sabʾîn Abd oul-Haqq, avec l'empereur Frédéric II de Hohenstaufen*, in *JA*, 1880 (in this article will be found information concerning his biography, the text of the replies that he is said to have given to the four philosophical questions put by the emperor Frederick II, and also some extracts from his two principal biographers, namely Kutubī, *Fawāt al-wafayāt* and Maḳḳarī, *Nafḥ al-ṭīb*). (A. Faure)

IBN SAʿD, Abū ʿAbd Allāh Muḥammad b. Saʿd b. Manīʿ al-Baṣrī al-Hāshimī Kātib al-Wāḳidī, traditionist, b. Baṣra *ca.* 168/784, d. Baghdād on 4 Djumādā II 230/16 February 845. He was a client (*mawlā*) of the Banū Hāshim, for his grandfather had been a freedman of Ḥusayn b. ʿAbd Allāh b. ʿUbayd Allāh b. ʿAbbās (d. in 140 or 141; see Ibn Saʿd *apud* Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, ii, 344). Ibn Saʿd travelled in search of traditions and studied under many authorities. Later he settled in Baghdād and attached himself to al-Wāḳidī [*q.v.*], became his secretary and transmitted his works. He also studied genealogy under Hishām b. al-Kalbī. During the *Miḥna* [*q.v.*], he and six other orthodox scholars were summoned by order of al-Maʾmūn and were made to declare their adherence to the Muʿtazilī dogma (Ṭabarī, iii, 1116 ff., *sub anno* 218).

Ibn Saʿd's fame rests on his Book of the Classes (*Kitāb al-Ṭabaḳāt al-kabīr*; there existed also a small edition, probably an abridgement). It was intended to be an aid to the study of traditions by giving information on some 4250 persons (including about 600 women) who, from the beginning of Islam down to the author's time, had played a rôle as narrators or transmitters of traditions about the Prophet's sayings and doings. Ibn Saʿd compiled it from the works of his predecessors, especially al-Wāḳidī and Ibn al-Kalbī; he usually gives the full *isnād*, but no title; he often quotes, however, the *Kitāb Nasab al-anṣār* of ʿAbd Allāh b. Muḥammad b. ʿUmāra known as Ibn al-Ḳaddāḥ (see *Taʾrīkh Baghdād*, x, 62) which he had written down at the author's dictation (Ibn Saʿd, iii/2, 70). Ibn Saʿd opens his work with a biography of the Prophet; then follow the classes, arranged geographically, and within each region chronologically, and sometimes also genealogically. The articles on the Companions of the Prophet are often extensive, whilst the articles on the other classes get shorter and shorter, until sometimes only the name is given. Later on some lacunae were filled in, and even an article on Ibn Saʿd himself (vii/2, 99) was added by his pupil, al-Ḥusayn Ibn Fahm (d. 289/902), in his recension of the work. Another recension (used by Ṭabarī in his "Annals") was made by al-Ḥārith b. Abī Usāma (d. 282/895), and a third one by Ibn Abi 'l-Dunyā [*q.v.*], which was used by Ibn ʿAbd al-Barr (see Ibn Khayr, *Fahrasa*, 224). The edition published by E. Sachau and others (Leiden 1904-40, 9 volumes in 16 parts) gives the recension of Ibn Ḥayyawayh (d. 381/991), which was also used by Ibn Sayyid al-Nās, Dhahabī, Ibn Ḥadjar and others.

According to his biographers Ibn Saʿd wrote also books on *fiḳh* and *gharīb*. The *Fihrist* (MS Chester Beatty, p. 60) mentions besides the two editions of his *Ṭabaḳāt* a *Kitāb al-Ḥiyal*. Ibn Saʿd studied the *ḥurūf al-Ḳurʾān* under al-Wāḳidī and taught them to Ibn Abī Usāma, who transmitted them to Ibn Mudjāhid (see Ibn al-Djazarī, *Ghāyat al-nihāya*, ii, 142). Among the critics of traditions Ibn Saʿd has—unlike his master al-Wāḳidī—the reputation of being a trustworthy authority.

Muḥammad b. Saʿd is not to be confused with his namesake, Muḥammad b. Saʿd al-ʿAwfī (d. 276/888; see *Taʾrīkh Baghdād*, v, 322 f.), to whom al-Ṭabarī is referring when he says *ḥaddathanī Muḥammad b. Saʿd ʿan abīh* ... in an *isnād* which occurs no less than 1560 times in his *Tafsīr* (see H. Horst in *ZDMG*, ciii (1953), 294) and occasionally in his "Annals" (i, 45, 75, 143, 314, 378, 420, 1394, 1451, 1530). All the transmitters mentioned in this *isnād* belong to the same family: Muḥammad b. Saʿd's father Saʿd b. Muḥammad b. Ḥasan b. ʿAṭiyya (*Taʾrīkh Baghdād*, ix, 126; cf. Ibn Saʿd, vi, 212, 20); the latter's paternal uncle Ḥusayn b. Ḥasan b. ʿAṭiyya al-Ḳāḍī al-Ḥanafī (d. 201 or 202; see *Taʾrīkh Baghdād*, viii, 29 ff.; Ibn Saʿd, vii/2, 74); Ḥasan b. ʿAṭiyya (d. 181; see Ibn Ḥadjar, *Lisān al-Mīzān*, ii, 294) and ʿAṭiyya b. Saʿd (d. 111 in Kūfa; see Ibn Saʿd, vi, 212; Ibn Ḥadjar, *Tahdhīb*, vii, 224-6), who transmits from ʿAbd Allāh b. ʿAbbās explanations of Ḳurʾānic verses. None of them was considered by the critics

as an unimpeachable authority; and it was said of ʿAṭiyya b. Saʿd that he had his *tafsīr* from al-Kalbī but insinuated (by *tadlīs*) that he had heard it from Abū Saʿīd al-Khudrī.

Bibliography: al-Khaṭīb, *Taʾrīkh Baghdād*, v, 321; Ibn Khallikān, no. 656 (who calls him in error al-Zuhrī); Dhahabī, *Tadhkirat al-ḥuffāẓ*, ii, 12; idem, *Mīzān al-iʿtidāl*, iii, 63; Ibn Ḥadjar, *Tahdhīb al-Tahdhīb*, ix, 182; Brockelmann, I, 136, S I, 208; O. Lòth, *Das Classenbuch des Ibn Saʿd*, Leipzig 1869; the prefaces of the individual volumes of Sachau's edition; Wellhausen, *Skizzen und Vorarbeiten*, iv, 87 ff. Gottschalk in *ZDMG*, cv (1955), 105-14. On Ibn Saʿd al-ʿAwfī, see J. W. Fück, in *Studia orientalia in memoriam Caroli Brockelmann*, Halle 1968, 85 f. (J. W. Fück)

IBN ṢADAḲA [see ṢADAḲA, BANŪ].

IBN AL-SADĪD, also known as IBN AL-MUZAWWIḲ, FAKHR AL-DĪN MĀDJID B. ABI 'L-FAḌĀʾIL B. SANĀ 'L-MULK, called ʿAbd Allāh b. al-Sadīd al-Ḳibṭī, d. 833/1430, was an official of the clerical class who served in various government positions under the patronage of the powerful Secretary Saʿd al-Dīn Ibn Ghurāb. Except for brief biographical sketches, little is known about him. Like Ibn Ghurāb [*q.v.*] he was of Coptic origin, and moved from one high position to another during the reign of the Mamlūk Sultan al-Nāṣir Faradj (reigned 801-15/1399-1412) [*q.v.*]. Among his posts were Controller of the Army (*Nāẓir al-djaysh*), briefly around 807/1404-5; and Privy Secretary (*Kātib al-sirr*), for about six months in 808/1405-6 in place of Ibn Ghurāb, who was elevated at that time to Head of the Council and made Emir of the First Class. After the death of Ibn Ghurāb, one of the latter's competitors for the Sultan's favour, Fatḥ al-Dīn Fatḥ Allāh (d. 816/1413), was named Secretary and Ibn al-Sadīd was moved from that office to be Controller of the Royal Stables (*Nāẓir al-iṣṭabl al-sulṭānī*). During the conflicts that ended his reign in 815/1412, Sultan Faradj named Ibn al-Sadīd Secretary for a second time, but the Sultan was killed before this appointment could take effect. From that time on, Ibn al-Sadīd lived in obscurity. Had it not been for his relationship by marriage and his long-time friendship with the Emir Djānibāk al-Ṣūfī, the bitter rival of Sultan al-Ashraf Barsbāy (reigned 825-41/1422-38) [see BARSBĀY], he might have lived out his life in peace. Barsbāy, however, dominated for years by fear of attempts on his throne and his life by Djānibāk after the latter's escape from prison, periodically instituted raids on places where Djānibāk was suspected of hiding and arrested and tortured suspected accomplices. In Rabīʿ II 829/March 1426 Ibn al-Sadīd was seized, and despite protestations that he did not know Djānibāk's whereabouts and had not set eyes on him since his imprisonment, was beaten with cudgels to force him to reveal what he knew. He was banished from Cairo and died four years later in constant fear and suffering on account of Djānibāk.

Bibliography: Wiet, *Manhal*, no. 1950; Ibn Taghrībirdī (Popper), vi, 167, 173, 176, 306, 598, 815; Maḳrīzī, *Sulūk*, ii, 321, 420; Sakhāwī, *Ḍawʾ*, v, 235. A brief biography is found in Wiet, *Les secretaires*, 283. (W. M. Brinner)

IBN AL-SADĪD, KARĪM AL-DĪN ABU 'L-FAḌĀʾIL AKRAM B. HIBAT ALLĀH, AL-ḲIBṬĪ AL-MIṢRĪ, called Karīm al-Dīn al-Kabīr, *ca.* 654-724/*ca.* 1256-1324, a member of the Coptic scribal class, was converted to Islam as an adult, at which time he took the name ʿAbd al-Karīm, by which he is sometimes known. After beginning his government career as the secretary (*kātib*) of Sultan al-Muẓaffar Baybars II (708-9/1308-9), and after a temporary setback at the latter's fall, he rose under Baybars's successor, al-Nāṣir Muḥammad b. Ḳalāwūn (709-41/1309-40). During that ruler's third reign Ibn al-Sadīd became, for a time, the most powerful figure in the governmental administration.

Most contemporary as well as later accounts, generally based on a biography by Khalīl b. Aybak al-Ṣafadī, assert that he was the first to bear the title of Controller of Privy Funds (*Nāẓir al-khāṣṣ*, or *khawāṣṣ*). According to al-Maḳrīzī, however (cf. *Khiṭaṭ*, Būlāḳ ed., ii, 227), the title was known from Fāṭimid times but was of minor importance until Sultan al-Nāṣir Muḥammad abolished the vizerate and appointed Ibn al-Sadīd as Controller. In this office he was the supreme financial administrator in the realm and bore other titles as well, such as *ʿaẓīm al-dawla* and *wakīl* of the Sultan. Among his other responsibilities was the control of the finances of the Manṣūrī hospital and *madrasa* and of the *waḳf* of the mosque of Aḥmad b. Ṭūlūn.

Ibn al-Sadīd seems to have had absolute control over the personal finances of the ruler to such an extent, as is related in an anecdote, that the Sultan was unable to pay for a duck that he wished to buy in the absence of his Controller. Like all bureaucrats of the period, however, Ibn al-Sadīd was dependent for his position and advancement on the personal whims and financial needs of his master. Despite his high position and close personal relationship with the Sultan, recounted in numerous anecdotes, Ibn al-Sadīd met a fate which some chroniclers liken to that of the Barmecides. The exact reasons for his fall from favour are not clear, but in 723/1323 he was seized, confined, and forced to sign a statement, witnessed by the Chief Ḳāḍī, to the effect that all the wealth in his possession actually belonged to the Sultan and that none of it was his (*Khiṭaṭ* (Būlāḳ), ii, 59). After this he was moved from one place of confinement to another, from the tomb that he had built at al-Ḳarāfa outside Cairo to Karak al-Shawbak, thence to Jerusalem, and finally to Aswān in Upper Egypt where, several months after his arrest, he was found strangled with his turban. Although some chroniclers report this as a suicide, others make clear their suspicion that the Sultan's orders were involved.

Upon receiving news of the death of Ibn al-Sadīd the Sultan had his son, ʿAlam al-Dīn ʿAbd Allāh, brought before him and forced from him revelations of the whereabouts of his father's huge hidden treasure. One contemporary account (al-Dawādārī, *Kanz al-durar*, ix, 315) asserts that Ibn al-Sadīd had deposited large sums of money with European merchants in Egypt, planning to flee to a European-held territory—probably Cyprus—in the very year in which he was seized. This account further states that he had been urging on the Sultan a plan to develop the port facilities of Lādhiḳiyya to equal those of Alexandria, with the intention of using that harbour as his point of departure. On the other hand, Ibn Taghrībirdī (Cairo ed. ix, 77), following earlier authorities, praises him for the sincerity of his Islamic feeling, his generosity, reliability and executive ability.

His sister's son, also named Karīm al-Dīn Akram, (*Manhal*, no. 516) and called Karīm al-Dīn al-Ṣaghīr to distinguish him from his uncle, served as *Nāẓir*

al-dawla and was also exiled to Aswān, where he died in 726/1326. Some nine years later, in 735/1334, the sons of both Karīm al-Dīn al-Ṣag̲h̲īr and of his uncle, Ibn al-Sadīd, were arrested.

Although the downfall of Ibn al-Sadīd may be attributed to a change in the Sultan's personal attitude, deeper historical causes may be suggested. One is the possibility that it was connected with changes in fiscal policy as reflected in the monetary reforms introduced by the Sultan almost immediately after the death of Ibn al-Sadīd. Another is the evident suspicion that Ibn al-Sadīd was involved in events connected with the anti-Christian riots in Cairo and other parts of Egypt in 721/1321. It is recorded that he was stoned by the populace for interceding on behalf of Christians accused of starting fires and was condemned by pious Muslims for having persuaded the Sultan to order the demolition of a *miḥrāb* erected on the site of a destroyed Christian church (cf. *K̲h̲iṭaṭ*, 511, 514-6).

A number of building projects are attributed to Ibn al-Sadīd, including a mosque and a *k̲h̲ānḳāh* in Cairo, and the endowment of two mosques bearing his name in the outskirts of Damascus.

Bibliography: As mentioned above, most of the available biographies are based on the as yet unpublished work of al-Ṣafadī and repeat the same material. This is true of Ibn Ḥad̲j̲ar, *Durar*, which has two biographies, one under Akram (i, 401-4) and one under ʿAbd al-Karīm (ii, 401-4); of al-Kutubī, *Fawāt*, ii, 8-15; of Ibn Tag̲h̲rībirdī (Cairo), ix, esp. 75-7; and even of modern works such as al-Ziriklī, *al-Aʿlām*, iv, 180, and *Dāʾirat al-maʿārif*, iii, 164. Additional material occurs in Dawādārī, *Kanz*, ix (ed. Roemer), 188, 203, 217, 247, 282, 296, 302, 305, 306, 307, 310, 311, 314-15, 349, 354, 376, 388, 390, 394; and *K̲h̲iṭaṭ* (Būlāḳ), ii, 59, 66, 68, 131, 164, 186, 225, 227, 269, 392, 425, 426, 511, 514-16. Other references are Sauvaire, in *JA*, 1896, 231, 267-68; Wiet, *Lampes*, app. no. 21-2; Wiet, *Manhal*, no. 1463; ʿAlī Pas̲h̲a, ii, 28; iii, 99-100. (W. M. Brinner)

IBN SAʿDŪN [see yaḥyā b. saʿdūn].

IBN AL-ṢAFFĀR, Abu 'l-Ḳāsim Aḥmad b. ʿAbd Allāh b. ʿUmar al-G̲h̲āfiḳī al-Andalusī, a student of the Spanish astronomer and mathematician Maslama al-Mad̲j̲rīṭī [*q.v.*], lived in Cordova until shortly after the outbreak of civil strife, at which time he moved to Denia, where he died in 426/1035. Ṣāʿid al-Andalusī (d. 462/1070) informs us that Ibn al-Ṣaffār wrote a set of astronomical tables according to the Sindhind method as well as a treatise on the use of the astrolabe. The former seems to survive only partially in an Arabic manuscript written in Hebrew characters (MS Paris, *hebr.*, 1102). The latter text has been edited by J. M. Millás Vallicrosa (see Bibliography). There are two Latin versions of this treatise on the astrolabe; one by Johannes Hispalensis is ascribed to al-Mad̲j̲rīṭī (*Alcacim de Magerit qui dicitur Almacherita*), and the other by Plato of Tivoli is ascribed to Ibn al-Ṣaffār (*Abucazin filio Asafar*). Since they both represent the Arabic text of Ibn al-Ṣaffār, Millás Vallicrosa argued (in his article of 1955) that al-Mad̲j̲rīṭī had been substituted in one version because of the confusion that they both had the same *kunya* (Abu 'l-Ḳāsim). A Hebrew version by Jacob ben Makhir, in two recensions, and a Spanish version are also extant. No other treatises by Ibn al-Ṣaffār are known.

Muḥammad, a brother of Abu 'l-Ḳāsim Ibn al-Ṣaffār, is described as an astrolabe-maker by Ṣāʿid al-Andalusī; at least one surviving astrolabe (dated 420/1029) is ascribed to him (cf. L. A. Mayer, *Islamic astrolabists and their works*, Geneva 1956, 75).

Bibliography: M. Steinschneider, *Die hebräischen Übersetzungen des Mittelalters*, Berlin 1893, 580-4; H. Suter, *Die Math. und Astron. d. Araber und ihre Werke*, in *Abh. z. Gesch. d. math. Wissensch.*, x (1900), 86; Brockelmann, I, 256, S I, 401; Ṣāʿid al-Andalusī, *Kitāb Ṭabaḳāt al-umam*, ed. Cheikho, 70 (transl. R. Blachère, 131); J. M. Millás Vallicrosa, *Las traducciones orientales en los manoscritos de la Biblioteca Catedral de Toledo*, Madrid 1942, 261-84 (an edition of the Latin version by Johannes Hispalensis of Ibn al-Ṣaffār's treatise on the astrolabe); idem, *Los primeros tratados de astrolabio en la España arabe*, in *Revista del Instituto Egipcio de Estudios Islámicos en Madrid*, iii (1955), 35-49 (the Arabic text of Ibn al-Ṣaffār's treatise on the astrolabe appears in a supplement, separately paginated, pp. 47-76). (B. R. Goldstein)

IBN AL-ṢAG̲H̲ĪR, historian, author of a chronicle on the Rustamid imāms of Tāhert. His work forms the earliest document on the Ibāḍīs of North Africa which has survived up to the present, with the exception of extracts from the work of Ibn Salām b. ʿUmar [*q.v.*]. The chronicle of Ibn al-Ṣag̲h̲īr was very highly esteemed by the Ibāḍī historians of the Mag̲h̲rib, two of whom, al-Barrādī [*q.v.*] and al-S̲h̲ammāk̲h̲ī [*q.v.*] quote large extracts from it. His opinions concerning the Ibāḍīs of Tāhert and particularly the Rustamids were certainly not hostile, in spite of an anti-Ibāḍī statement made in one passage of his work. He himself was more a S̲h̲īʿī, and his ʿAlid tendencies appear in more than one passage of his chronicle. While still a young man he owned a shop in Tāhert, in the al-Rahādina quarter, and attended the mosque in this quarter. He lived during part of the reign of the imām Abu 'l-Yaḳẓān and also during that of the imām Abū Ḥātim, when he wrote his chronicle, probably in about 290/903.

Ibn al-Ṣag̲h̲īr's work is an anecdotal rather than a political history, and has been rightly described by A. de C. Motylinski as "la monographie de la Tâhert abâdhite dans sa vie intime". The author used as his basic sources stories narrated by various persons of Tāhert, mainly Ibāḍīs, who were often relating their ancestors' version of events. He only rarely gives the names of his informants, among whom there should be mentioned a certain Aḥmad b. Bas̲h̲īr.

Bibliography: *Chronique d'Ibn Ṣag̲h̲īr sur les imams rostemides de Tahert*, ed. and Fr. tr. A. de C. Motylinski, in *Actes du XIVe Congrès Intern. des Orient.*, Algiers 1905, third part (continuation), Paris 1908, 3-132; A. de C. Motylinski, *Bibliographie du Mzab. Les livres de la secte abadhite*, in *Bull. de Correspondance Africaine*, iii (1885), 45-6; Abu 'l-ʿAbbās al-S̲h̲ammāk̲h̲ī, *Kitāb al-Siyar*, Cairo 1301, 192, 194, 221, 222, 223, 262, 263; T. Lewicki, *Une chronique ibāḍite*, in *REI*, 1936/3, 69; idem, *Les historiens, biographes et traditionnistes ibāḍites-wahbites de l'Afrique du Nord du VIIIe au XVIe siècle*, in *Folia Orientalia*, iii (1961-2), 105-6. (T. Lewicki)

IBN ṢĀḤIB AL-ṢALĀT, Abū Marwān ʿAbd al-Malik b. Muḥammad al-Bād̲j̲ī, Andalusian author of an important history of the Almohads entitled *al-Mann bi 'l-imāma ʿala 'l-mustaḍʿafīn bi-an d̲j̲aʿalahum Allāh al-aʾimma wa-d̲j̲aʿalahum al-wārithīn* (ed. ʿAbd al-Hādī al-Tāzī, Beirut 1964). Practically nothing is known of this Ibn Ṣāḥib al-Ṣalāt nor of his connexion with several other men of the same name. Ibn Ṣāḥib al-Ṣalāt seems himself to have been an Almohad *ḥāfiẓ* and clearly was closely

involved in the events which he describes. Brockelmann's statement, presumably taken from Amari, that he died in 578/1182 is incorrect; it may be deduced from the work itself that he was still living in 594/1198 (Tāzī's Introduction, pp. 24-6). The surviving fragment of *al-Mann bi'l imāma* begins with the year 554/1159 and finishes with 568/1172 (not 580/1159 [*sic*] as in Brockelmann).

Bibliography: Brockelmann, S I, 554.

(J. F. P. HOPKINS)

IBN SAHL AL-ISRĀʾĪLĪ AL-ISHBĪLĪ, ABŪ ISḤĀḲ IBRĀHĪM, one of the few genuine poets of Muslim Spain in the 7th/13th century. When compared with the great names of poetry during this period, such as Abū Baḥr Ṣafwān b. Idrīs (d. 619/1222), Abu 'l-Ḥasan ʿAlī b. Ḥarīḳ (d. 622/1225), Muḥammad b. Idrīs *alias* Mardj al-Kuḥl (d. 634/1236), Ibn Lubbāl (d. 683/1284), Ṣāliḥ b. Sharīf al-Rundī (d. 684/1285) and Ḥāzim al-Ḳarṭādjannī (d. 684/1285), Ibn Sahl impresses us by his truly poetic temperament and his artistic sensibility.

Born in Seville in about 609/1212-3 of a Jewish family, he spent nearly all his life in his native town, wholly absorbed in poetry, to which he devoted himself entirely, and it is only towards the end of his life that we find him attached to one of the governors as secretary. The Seville in which he lived was sad and under constant threat, but he succeeded in escaping into a world of imaginary love and romantic dreams. As early as 625/1227, when he was only sixteen years old, he impressed his contemporaries with his poetic talents when he suggested the insertion of a verse in a poem composed by al-Haythamī in praise of Muḥammad b. Yūsuf b. Hūd. He must have been converted to Islam at the start of his poetic career, since the whole of his *dīwān* expresses his deep Muslim conviction; some of his contemporaries doubted the sincerity of his conversion and tormented him with their incessant curiosity about his faith, but he always remained patient and paid no attention to their provocations. We have no reason to doubt his sincerity because, at a time when Muslim Spain was falling into hopeless decline, the material advantages to be secured by such a conversion were practically nil. Ibn Sahl left Seville after it had fallen into the hands of Ferdinand III (646/1248) and settled in Ceuta, where he became one of the secretaries of the governor, Abū ʿAlī Ibn Khalāṣ; in 649/1251, when the latter decided to send his son to bear a message to Abū ʿAbd Allāh al-Mustanṣir I, the Ḥafṣid ruler of Ifrīḳiya, Ibn Sahl was chosen to accompany him; the travellers set sail on board a galley which was wrecked in a violent storm and all its occupants perished.

The *dīwān* of Ibn Sahl is one of the finest specimens of Andalusian poetry; it consists almost exclusively of love poems and *muwashshaḥāt* which reveal his artistic temperament and his talent as a romantic poet. A number of these poems are dedicated to a youth named Mūsā, and later ones to another youth named Muḥammad; several critics have wondered if Mūsā might not be a symbol of Ibn Sahl's attachment to his original faith and of his regret for abandoning it; the poems dedicated to Muḥammad were composed later, and are regarded as an indication of his final adherence to the faith he had chosen. This is all pure conjecture with no foundation; indeed, one of his first long poems describes the march of a caravan of pilgrims towards Mecca, and palpitates with intense and dramatic Muslim sentiments rare in the poetry of that period.

Bibliography: Ibn Shākir al-Kutubī, *Fawāt al-wafayāt*, i, 23-35; ʿUmarī, *Masālik al-abṣār* (MS Cairo), xi, 473; Ibn al-ʿImād, *Shadharāt*, v, 244, 296 (where it is said that Ibn Sahl died in 649 or 656); Ibn Saʿīd, *Mughrib*, ed. Shawḳī Ḍayf, Cairo 1953, i, 264-5; idem, *Rāyāt*, no. xx, Arabic text 22, Spanish tr. 149; idem, *Ikhtiṣār al-Ḳidḥ al-muʿallā*, ed. Strophengedicht*, Weimar 1897, i, index; Brockelmann, I, 273, S I, 483; M. Soualah, *Ibrahim ibn Sahl, poète musulman d'Espagne*, Algiers 1914-9; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 207.— His *dīwān* has been printed several times in Cairo (1279, 1302), Beirut (1885) and Alexandria (1939); a commentary, by Muḥ. al-Ṣaghīr b. Muḥ. al-Ifrānī, *al-Maslak al-sahl fī tawshīḥ Ibn Sahl*, was lithographed in Fās in 1324. (H. MONÈS)

IBN AL-SĀʿĪ, ʿALĪ B. ANDJAB, ABŪ ṬĀLIB TĀDJ AL-DĪN, ʿIrāḳī historian (14 Shaʿbān 593/2 July 1197-20 Ramaḍān 674/8 March 1276). Born in Baghdād, he appears to have spent all of his life there. He was a librarian, in succession, it seems, of both the Niẓāmiyya and the Mustanṣiriyya libraries. Being inclined to Ṣūfism, he was inducted into it by (ʿUmar b. Muḥammad) al-Suhrawardī in 608/1211-12. He had a son, ʿUbayd Allāh, who was born on 7 Shaʿbān 632/27 April 1235. These are about all the known facts about his life, which began in a tranquil and prosperous period but was then caught up in the storm of the Mongol invasion.

Ibn al-Sāʿī was part of the intellectual life of Baghdād in a period in which historiography was exceptionally flourishing. He wrote numerous and large works. A few titles on *ḥadīth* may have been largely academic exercises, although of considerable size. On *adab*, he composed, for instance, a number of many-volume commentaries on the *Maḳāmāt* of al-Ḥarīrī, commentaries on Thaʿlab's *Faṣīḥ* and the *Nahdj al-balāgha*, and a work on contemporary poets. Titles such as "Lover and Beloved" and "Ascetics" (the latter supposedly his last work) may have been Ṣūfī in character. His historical output was vast. He wrote monographs on the last four ʿAbbāsid caliphs, from al-Nāṣir to al-Mustaʿṣim; biographical collections, such as a continuation of the History of Baghdād, Classes of Jurists, *Manāḳib* of the ʿAbbāsid caliphs and of the professors of the Niẓāmiyya; annalistic history, and much more. No complete list of his works, probably numbering far more than one hundred, can be established. With other members of the ʿIrāḳī historical school of the time of the great upheaval, Ibn al-Sāʿī shares the fate that most of his work has been lost. Beyond brief citations in later authors, we possess so far only one volume of his detailed annalistic history, entitled *al-Djāmiʿ al-mukhtaṣar* (part 9, containing the years 595-606, ed. Muṣṭafā Djawād, Baghdād 1353/1934), and an interesting short treatise on some of the wives of the ʿAbbāsid caliphs, entitled *Djihat al-aʾimma al-khulafāʾ min al-darāʾir wa-'l-imāʾ*, which was recognized as belonging to Ibn al-Sāʿī and published by Muṣṭafā Djawād (*Nisāʾ al-khulafāʾ*, Cairo n.d. [1960?]). A brief and mediocre history of the ʿAbbāsid caliphs (*Akhbār al-khulafāʾ*) is unlikely to go back to him. The existence of a five-volume *Akhbār al-udabāʾ*, claimed by P. Sbath, *al-Fihris, Supplément*, Cairo 1940, 38, is entirely uncertain, as is his connexion with the work mentioned by Brockelmann, S II, 935, No. 58.

Bibliography: (Ibn al-Fuwaṭī), *al-Ḥawā-*

dith al-djāmiʿa, Baghdād 1351, 386; al-Dimyāṭī, *Muʿdjam*, see G. Vajda, *Le Dictionnaire des autorités de ʿAbd al-Muʾmin ad-Dimyāṭī*, Paris 1962, 71; al-Dhahabī, *Taʾrīkh al-Islām*, *anno* 674, also *Muʿdjam* (or its *Talkhīṣ* by Ibn Ḳāḍī Shuhba) (not available); al-Ṣafadī (not available); ʿAbd al-Ḳādir al-Ḳurashī, *Djawāhir*, i, Ḥaydarābād 1332, 354; Taḳī al-Dīn al-Fāsī, *Muntakhab al-Mukhtār*, Baghdād 1357, 137-9; Ibn al-ʿImād, *Shadharāt*, v, 343 f., and other brief notices. IBN SAʿĪD [see AL-MUNDHIR B. SAʿĪD].

IBN SAʿĪD AL-MAGHRIBĪ, ABU ʾL-ḤASAN ʿALĪ B. MŪSĀ B. MUḤ. B. ʿABD AL-MALIK B. SAʿĪD, Andalusian poet, anthologist, historian and geographer, born near Granada in 610/1213, in a family which was descended from the Companion of the Prophet ʿAmmār b. Yāsir [*q.v.*] and which had long previously emigrated to Spain, where, during the period of the *Ṭawāʾif*, it had carved out a principality for itself in the Ḳalʿa of the Banū Yaḥṣub (modern name Alcala la Real), but had afterwards been forced to enter the service of the Almohads (for this family, see G. Potiron, *Eléments de biographie et de généalogie des Banū Saʿīd*, in *Arabica*, xii/1 (1965), 78-92). After spending his youth in Seville, where he divided his time between the traditional studies and pleasures, Ibn Saʿīd left Spain in 639/1241 to perform the Pilgrimage, together with his father, who died on the journey, at Alexandria, in 648/1242. He was then given a warm welcome in Cairo, where there had preceded him a fame which was probably due to the *Kitāb al-Mughrib fī ḥulā ʾl-Maghrib* which he had brought with him. This work has a curious history: begun in 530/1135 by Abū Muḥ. ʿAbd Allāh b. Ibrāhīm al-Ḥidjārī at the suggestion of ʿAbd al-Malik b. Saʿīd, under the title *Kitāb al-Mushib fī gharāʾib al-Maghrib*, it consisted of an account of the events between the conquest of Spain and the year 530; its compilation was continued, with new data added and the title altered, by the two sons of ʿAbd al-Malik, Aḥmad (d. 558/1163) and Muḥammad (519-91/1125-95) and then by the latter's son, Mūsā, and finally by our ʿAlī b. Mūsā. This work, which thus represents the sum of the efforts of several generations of members of the same family, was finished only in 641/1243 by ʿAlī b. Mūsā while he was in Egypt, and it is the autograph but incomplete manuscript, the various volumes of which are dated from 645 to 657/1247-50, which has served as basis for the fragmentary editions of this monumental work (the section relating to Egypt, ed. Zakī Muḥ. Ḥasan, Cairo 1953, one vol.; the section relating to Spain, ed. A. Ḍayf, i, Cairo 1953 [cf. review by E. Lévi-Provençal, in *Arabica*, i/2 (1954), 219-24], ii, Cairo 1955; text and German tr. by K. Vollers of the notice concerning Aḥmad b. Ṭūlūn, in *Semitist. Studien*, Berlin 1894; 4th vol. published and tr. into German by K. C. Tallquist, under the title *al-ʿUyūn al-duʿdj fī ḥulā dawlat Banī Ṭughdj*, Leiden 1898; the section relating to Sicily, ed. Moritz, Palermo 1910).

In 648/1249, Ibn Saʿīd left Egypt to perform the Pilgrimage and travelled throughout ʿIrāḳ and Syria, probably in order to obtain information with a view to the completion of a *Kitāb al-Mushriḳ fī ḥulā ʾl-Mashriḳ*, which had been undertaken by his father and was to be a counterpart to the first; this work does not appear to have been completed, but several volumes of it in manuscript exist in Cairo. He next performed a second Pilgrimage to Mecca and started on his return journey, writing on the way an account of his voyage, *al-Nafḥa al-miskiyya fī ʾl-riḥla al-Makkiyya*. On his arrival in Tunis (652/1254-5) he entered the service of the *amīr* al-Mustanṣir (see R. Brunschvig, *Ḥafṣides*, index), fell for a time into disgrace, but finally succeeded in regaining favour. In 666/1267, he made a second journey in the East which took him as far as Īrān, but the last years of his life are surrounded by some obscurity; he seems to have returned in about 675/1276 to Tunis, where he died in 685/1286.

Ibn Saʿīd's poetry, to judge from the few examples which have survived (for his *Dīwān* is lost), reveals, among much that is hackneyed and stereotyped, some original ideas and personal accents when, in the East, he expresses his nostalgia for his native Andalus. But his fame rests mainly on the *Mughrib*, the anthologies deriving from it and his historical and geographical works, most of which have today disappeared. The following have been printed: *Rāyāt al-mubarrizīn wa-ghāyāt al-mumayyizīn*, partial ed. with Spanish tr. by E. García Gómez, Madrid 1942; Eng. tr. A. J. Arberry, Cambridge 1953.—*ʿUnwān al-murḳiṣāt wa ʾl-muṭribāt*, which seems to have formed part of a *Djāmiʿ al-murḳiṣāt wa ʾl-muṭribāt*; ed. Cairo 1286; partial ed. and Fr. tr. by A. Mahdad, Algiers 1949.—*al-Ghuṣūn al-yāniʿa fī maḥāsin shuʿarāʾ al-miʾa al-sābiʿa*, ed. Ibr. Ibyārī, Cairo 1955; *Ikhtiṣār al-Ḳidḥ al-muʿallā fī ʾl-taʾrīkh al-muḥallā*, ed. Ibyārī, Cairo 1959; *Mukhtaṣar Djughrāfiyā* (and other titles), ed. J. Vernet, Tetuan 1958 (partial Sp. tr. by the same in *Tamuda*, i (1953), vi (1958); ed. with Fr. tr. by G. Potiron, forthcoming).—Some of his other works have survived but are still unpublished (for mss. see Brockelmann): in addition to the *Mushriḳ* already mentioned there exist notably: *Nashwat al-ṭarab fī taʾrīkh djāhiliyyat al-ʿArab*; and *al-Ḥulla al-siyarāʾ fī ṭabaḳāt al-shuʿarāʾ* (Cairo). His writings on the scholars of his time, his own family, his journey to Mecca, and on geography etc. have been used by later writers such as al-Maḳḳarī or Abu ʾl-Fidāʾ, but the latter admits that Ibn Saʿīd's geographical writings are full of errors.

IBN AL-ṢĀʾIGH AL-ʿARŪḌĪ, ABŪ ʿABD ALLĀH SHAMS AL-DĪN MUḤAMMAD B. AL-ḤASAN B. SIBĀʿ AL-DJUDHĀMĪ, known also under the name of Ibn Shaykh al-Salāmiya, poet, grammarian and lexicographer, born at Damascus in 645/1247 and died there *circa* 722/1322. Ibn al-Ṣāʾigh, who taught grammar, prosody and belles-lettres in a shop in the jewellers' quarter, is the author of a certain number of glosses and abridgements of famous works (com-

mentary on Ibn Durayd's *Maḳṣūra*, an abridgement of the *Ṣaḥāḥ* of al-Djawharī, an abridgement of the commentaries by Ibn Kharūf and by al-Sīrāfī on the *Kitāb* of Sībawayh [manuscript in the Ḳarawiyyīn], etc.), as well as of a *Maḳāma shihābiyya* and of a large *Dīwān*, containing especially a long *ḳāfiyya*, composed in Egypt, in which he expressed the nostalgia he felt on being far from his native town; this composition is numbered among the famous *zahriyyāt*.

Bibliography: Kutubī, *Fawāt*, s.v.; Ṣafadī, *Wāfī*, ii, 340; Ḥādjdjī Khalīfa, vi, 94; Kaḥḥāla, ix, 192; F. Bustānī, *DM*, iii, 281-2. On other persons known by the name of Ibn Ṣāʾigh, see *DM*, iii, 281, 282. (ED.)

IBN AL-ṢALĀḤ, TAḲĪ ʾL-DĪN ABŪ ʿAMR ʿUTHMĀN B. ʿABD AL-RAḤMĀN AL-KURDĪ AL-SHAHRAZŪRĪ, who belonged to the Shāfiʿī *madhhab*, was born in 577/1181 at Sharakhān, a village in the Irbil district near Shahrazūr, and died in Damascus in 643/1245. He studied *fiḳh* at Shahrazūr with his father, who later took him to Mosul where he studied *ḥadīth*. He continued his studies in a number of centres such as Baghdād, Naysābūr, Merv, Damascus, Aleppo, Ḥarrān and Jerusalem, with distinction. Ibn Khallikān, who studied under him for a year in Damascus from Shawwāl 632/June-July 1235, says he was one of the most eminent men of his time in *tafsīr*, *ḥadīth*, *fiḳh*, *ʿilm al-ridjāl* and all branches of *ḥadīth* studies, and philology. He taught for a time in the Ṣalāḥiyya *madrasa* in Jerusalem, then went to Damascus where he remained for the rest of his life. He taught in the Rawāḥiyya *madrasa*. When al-Malik al-Ashraf built the *Dār al-Ḥadīth* in Damascus, Ibn al-Ṣalāḥ was appointed to a chair. He was later appointed to the Shaʾmiyya Djuwāniyya *madrasa* newly founded by Sitt al-Shaʾm. Ibn Khallikān says that although he held these three posts simultaneously he was punctilious in the performance of all his duties. He was renowned for his *fatwās*, was an authority on *ḥadīth*, and was a teacher whose classes were largely attended. His writings, though not numerous, were highly valued. He wrote a description of the rites of the *ḥadjdj*, extant but still unpublished. A work containing his *fatwās* has been published (Cairo 1348). His most famous work is his book on the sciences of *ḥadīth*. He refers to it as *Kitāb Maʿrifat anwāʿ ʿilm al-ḥadīth hādhā*, but whether he meant that as a title is not clear. It was published in Lucknow in 1304 with the title *Muḳaddimāt Ibn al-Ṣalāḥ fī ʿulūm al-ḥadīth*, and in Aleppo (1350/1931) with the title *ʿUlūm al-ḥadīth al-maʿrūf bi-Muḳaddimat Ibn al-Ṣalāḥ*, accompanied by ʿIrāḳī's commentary and by notes by Muḥammad Rāghib al-Ṭabbākh, the editor. This work, divided into 65 *nawʿ*, has a claim to be considered the standard work on the sciences of Tradition. It has given rise to commentaries and abridgements, notable among which are the *Taḳrīb* of al-Nawawī, translated by W. Marçais in *JA*, série ix, vols. xvi-xviii, and Ibn Kathīr's abridgement published with a commentary by Aḥmad Muḥammad Shākir with the title *al-Bāʿith al-ḥathīth* (Cairo 1370/1951).

Bibliography: Ibn Khallikān-de Slane, ii, 188-90; al-Dhahabī, *Tadhkirat al-ḥuffāẓ*, iv, 214 f.; al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya al-kubrā*, v, 137-42; Ibn Ḥadjar al-ʿAsḳalānī, *Nukhbat al-fikar*, Cairo 1352/1934, 2 f.; Ibn al-ʿImād, *Shadharāt*, year 643; Ḥādjdjī Khalīfa, ed. Flügel, no. 8766; Brockelmann, I, 440-42, S I, 610-12. (J. ROBSON)

IBN SALĀM B. ʿUMAR (or ʿAMR), the first known Ibāḍī historian of the Maghrib. He lived, at least for a time (in about 240/855), at Tozeur in southern Tunisia. He is known to have been still living in 260/873-4. He is the author of an historical work on the Ibāḍīs of North Africa which has not survived, but fairly long extracts from which are found in the *Kitāb al-Siyar* of al-Shammākhī. This work, whose title is not known, was compiled from the traditions related by the North African Ibāḍī *shaykhs*, such as the author's contemporary Abū Ṣāliḥ al-Nafūsī (whom he met at Tozeur in 240), Nafāth b. Naṣr al-Nafūsī and Sulaymān b. Wakīl al-Zahānī. The extracts given in al-Shammākhī's work deal with the introduction of Islam into the Djabal Nafūsa, with the history of the first Ibāḍī imāms of the Maghrib (Abu ʾl-Khaṭṭāb al-Maʿāfirī and Abū Ḥātim al-Malzūzī), with the relations of the Ibāḍīs of Tāhert with their co-religionists in the East during the imāmate of ʿAbd al-Wahhāb, and with several important Ibāḍīs of Ḳayrawān and central and eastern Tunisia. The date of composition of the work is not known, though it seems fairly probable that it was compiled shortly after the year 260/873-4, which is the last date mentioned in the extracts given by al-Shammākhī.

Bibliography: al-Shammākhī, *Kitāb al-Siyar*, Cairo 1301, 133-4, 135, 142, 143, 161, 162, 260-2; T Lewicki, *Le culte du bélier dans la Tunisie musulmane*, in *REI*, ix (1935), 196-7; idem, *Une chronique ibāḍite*, in *REI*, viii (1934), 73; idem, *Les historiens, biographes et traditionnistes ibāḍites-wahbites de l'Afrique du Nord du VIII^e au XVI^e siècle*, in *Folia Orientalia*, iii (1961-2), 106-7. (T LEWICKI)

IBN AL-SAL(L)ĀR [see AL-ʿĀDIL B. AL-SALĀR].

IBN SALLĀM [see ABŪ ʿUBAYD IBN SALLĀM].

IBN SALLĀM AL-DJUMAḤĪ, ABŪ ʿABD ALLĀH MUḤ. B. SALLĀM, traditionist and philologist of the Baṣra school. He was a *mawlā* of Ḳudāma b. Maẓʿūn al-Djumaḥī and was born at Baṣra in 139/756. It was in his native town that he began the traditional studies—religious sciences and *adab* in general—particularly with his father, who was very well versed in poetry and lexicography. He was in contact, at Baṣra and also at Baghdād, with a considerable number of the scholars of the period, among them the great names of Arabic literature, al-Aṣmaʿī, Abū ʿUbayda, Abū Zayd al-Anṣārī, al-Mufaḍḍal al-Ḍabbī, etc. and several poets such as Bashshār or Marwān b. Abī Ḥafṣa. He also collected *ḥadīths* as related by famous traditionists and transmitted them in his turn to such figures as Abū Ḥātim al-Sidjistānī or Aḥmad b. Ḥanbal and his son ʿAbd Allāh. In the same way he became the transmitter of historical traditions, and ʿUmar b. Shabba was among his listeners. He died at Baghdād in 231/845 or 232/846.

His biographers attribute to him several works: a *Gharīb al-Ḳurʾān* (which, however, is not mentioned by Ibn al-Nadīm), a *K. al-Fāḍil* (?) *fī mulaḥ* (?) *al-akhbār wa ʾl-ashʿār*, a *K. Buyūtāt al-ʿArab*, a *K. al-Ḥallāb* (*al-Ḥalāʾib*?) *wa-idjrāʾ al-khayl*, perhaps also a *K. al-Fursān*, but his fame rests mainly on his *Kitāb Ṭabaḳāt al-shuʿarāʾ*, which nevertheless presents several problems: these are not easy to solve because of the disordered state in which the text has survived and the unsatisfactory way in which it has been transmitted; in fact, although it can be accepted that Ibn Sallām is indeed the originator of this work, its contents were transmitted orally and probably worked over by his nephew Abū Khalīfa al-Faḍl b. al-Ḥubāb al-Djumaḥī, who was blind, and were not written down until some decades after the death of its real author; an indication that

this was so is to be found in the fact that al-Djāḥiẓ, when he cites Ibn Sallām, mentions his *isnād* (this does not necessarily refer to the work which was to become the *Ṭabaḳāt*, but the remark has a general significance), whereas Ibn Ḳutayba has a tendency to suppress it. The *K. Ṭabaḳāt al-shuʿarā'* was first published at Leiden, in 1916, by J. Hell (with an introduction in German which stated the main problems); this work served as the basis for an edition published in Egypt in 1920 and for several other commercially published editions; finally M. M. Shākir published, also in Cairo, in 1952, under the new title of *Ṭabaḳāt fuḥūl al-shuʿarā'*, an excellent critical edition based on a more complete manuscript than those which had been available to Hell. The editor devotes a long introduction to a detailed criticism of Hell's conclusions, attempts to solve the difficulties caused by the arrangement of the work, lists its sources (he names 70 guarantors) and collects citations from it by later writers, in particular by Abu 'l-Faradj al-Iṣfahānī, which to a certain extent reveal their methods of work.

Ibn al-Nadīm attributes to Ibn Sallām two distinct works, a *K. Ṭabaḳāt al-shuʿarā' al-djāhiliyyīn* and a *K. Ṭabaḳāt al-shuʿarā' al-islāmiyyīn*, which certainly seem to form the two basic parts of the printed work; each of them contains ten classes of four poets, but this perfect symmetry is broken, for they are separated by a third part consisting of a class of poets of *marāthī* (four poets), a class of poets belonging to various cities (Medina: five, Mecca: nine, al-Ṭā'if: five, al-Baḥrayn: three) and a class of Jewish poets (eight). There should thus be a total of 114 notices but five of them have disappeared (they could, however, be fairly easily reconstructed). The notices contain in general only rudimentary biographical facts and brief quotations of verses, but the work is nevertheless of considerable interest: it not only provides a documentation which is still useful, although it seems rather thin, but in addition the choice of poets illustrates the tastes of the amateurs and connoisseurs of poetry; finally it was the first work to pose the problem of the authenticity of ancient poetry and provides the modern critics who have expressed doubts about this with a number of examples.

For his place in the development of rhetoric, see AL-MAʿĀNĪ WA'L-BAYĀN.

Bibliography: Djāḥiẓ, *Ḥayawān* and *Bayān*, indexes; Ibn Ḳutayba, *Shiʿr*, index; Ibn al-Nadīm, Cairo ed., 163, 165; Khaṭīb Baghdādī, v, 327 ff.; Yāḳūt, *Udabā'*, xviii, 204-5; Subkī, *Ṭabaḳāt*, i, 27; Abū ʿAlī al-Ḳālī, i, 157; Ibn Ḥadjar, *Lisān al-Mīzān*, v, 182-3; Suyūṭī, *Bughya*, 47; Abu 'l-Ṭayyib al-Lughawī, in Suyūṭī, *Muzhir*[2], ii, 253; A. Trabulsi, *La critique poétique des Arabes*, Damascus 1955, 34-7, 63-6 and index; Brockelmann, S I, 165; R. Blachère, *HLA*, i, 139; ʿAlī Dj. Āl Ṭāhir, in *MMIA*, xli (1966); F. Bustānī, *Dā'irat al-maʿārif*, iii, 197-8. (CH. PELLAT)

IBN SAMADJŪN, ABŪ BAKR ḤĀMID, physician and pharmacologist of Cordova, concerning whom we possess no other biographical notice than that by Ibn Abī Uṣaybiʿa (Cairo 1882, ii, 51). A contemporary of Ibn Djuldjul [*q.v.*], he must have had a part in the rewriting of the text of Dioscorides in Arabic that was undertaken in Cordova, and died probably at the beginning of the 5th/11th century. He wrote a book on medicaments entitled *al-Djāmiʿ fi 'l-adwiya al-mufrada* in which he lists the medicinal herbs in the alphabetical order of ancient Semitic, in the same way as al-Idrīsī. In each article he gives a description of the plant and its medical properties, as well as textual quotations from the authors he had consulted, first of all Dioscorides, then Galen, Paul of Aegina, Abū Ḥanīfa al-Dīnawarī, Ahron b. Aʿyan, Ibn Māsawayh, etc. Some of the articles are of interest, as for instance that on mandragora (*yabrūḥ*), in which he describes its anaesthetic properties.

This scholar must not be confused with a homonym whose *kunya* is Abū Sākin (Ibn al-Abbār, *Takmila*, 34, no. 95; Ibn Saʿīd, *Mughrib*, ed. Shawḳī Ḍayf, ii, 53) and other persons of the same name.

Bibliography: P. Kahle, *Ibn Samağūn und sein Drogenbuch, Ein Kapitel aus den Anfängen der arabischen Medizin*, in *Documenta Islamica Inedita*, Berlin 1952, 25-44. (J. VERNET)

IBN AL-SAMḤ, ABU 'L-ḲĀSIM AṢBAGH B. MUḤAMMAD, geometer, is principally known from the report of his pupil Abū Marwān Sulaymān b. Muḥammad b. ʿĪsā b. al-Nāshī, which is quoted by Ṣāʿid al-Andalusī (p. 70 of Cheikho ed.), and thence by Ibn al-Abbār (pp. 246-7 of Bel and Ben Cheneb ed.) and by Ibn Abī Uṣaybiʿa (Beirut ed., iii, 62-3). According to this authority he died in Granada on Tuesday 18 Radjab 426/Friday (!) 29 May 1035 after having lived 56 solar years; he was born, then, in 979. Ibn al-Abbār adds the information that he originally came from a learned family of Cordova, but fled to the protection of Ḥabūs b. Māksan of Granada (*ca.* 410-29/1019-38) during the troubles of the early 5th/11th century.

A pupil of Maslama al-Madjrīṭī (d. 398/1007-8; see Ibn al-Abbār and Ibn Khaldūn, *Muḳaddima*, tr. Rosenthal, iii, 126-7 and 230), Ibn al-Samḥ wrote on arithmetic, geometry, astronomical instruments and tables, and, perhaps, medicine. Ibn al-Nāshī lists the following works: (1) *Kitāb al-Madkhal ila 'l-handasa fī tafsīr Kitāb Uḳlīdus* (cf. Ḥādjdjī Khalīfa, v, 473); (2) *K. Thimār al-ʿadad*, known as *al-Muʿāmalāt* (cf. Ḥādjdjī Khalīfa, ii, 493); (3) *K. Ṭabīʿat al-ʿadad*; (4) *K. al-Kabīr fi 'l-handasa* (cf. Ḥādjdjī Khalīfa, v, 172); (5) A book in two *maḳāla*s on making astrolabes (cf. Ḥādjdjī Khalīfa, v, 40-1); (6) A book in 130 *bāb*s on using an astrolabe; extant in MSS British Museum Arab 405 and partially in Esc. Arab 972 ff. 29-29v (cf. Ḥādjdjī Khalīfa, v, 40-1 and Millás Vallicrosa, *Los primeros tratados*, 48); (7) A *zīdj* based on the *Zīdj al-Sindhind* (cf. al-Khuwārizmī) in two *djuz'*, one of which contained the tables, the other explanatory texts. Chapter 63 of al-Zarḳālī's *Kitāb al-ʿAmal bi 'l-ṣafīḥa* (see the *Libros del Saber*, ed. Rico y Sinobas, iii, 209-11) contains the *zīdj*'s method of equalizing the astrological places, in which Ibn al-Samḥ follows Hermes; chapter 64, on the projection of rays, and chapter 65, on the risings of the stars, are also said to follow the opinion of Hermes and may be from Ibn al-Samḥ's *zīdj*. The only other surviving fragments of the *zīdj* seem to be those preserved by al-Djahānī (ed. I. Heller, Noribergae 1549), sign. Niii, on the interval between Caesar and Christ, and Yii, on the projection of rays (cf. also Ibn Ḥazm's *Risāla fī faḍl al-Andalus* (in al-Maḳḳarī, *Analectes*, ii, 119; Fr. tr. Ch. Pellat, in *al-And.*, xix/1 (1954), 89) and Ḥādjdjī Khalīfa, iii, 557); (8) *Kitāb al-Kāfī fi 'l-ḥisāb al-hawā'ī*, which apparently is extant in MSS Esc. Arab 973 ff. 1-30 and in Berlin Arab 6010 ff. 1-23 (cf. Ḥādjdjī Khalīfa, v, 20-1); (9) *Kitāb al-Kāmil fi 'l-ḥisāb al-hawā'ī* (cf. Ḥādjdjī Khalīfa, v, 27).

Ibn al-Samḥ also wrote a work on a planetarium, which is translated into Spanish as the first book of the *Libro de las láminas de las VII planetas*, in which

chapter 13 gives the longitudes of the apogees of the planets for 416/1025 (*Libros del Saber*, iii, 241-71). Ibn Khaldūn (iii, 135) also ascribes to him an abridgement of Ptolemy's *Almagest*.

Steinschneider (*Heb. Ueber.*, 584) thinks that Kalonymos ben Kalonymos' Hebrew translation, finished in 1312, of a treatise on the cylinder and the cone ascribed to "Sammāh" is to be referred to Ibn al-Samḥ, and suggests (*Die europ. Ueber.*, sect. 182) that the Latin *Antidotarium* of Abnaçah is also his work; neither of these attributions has anything to support it beyond the vague similarities of the names. Moreover, the implication made by Millás-Vallicrosa (*Azarquiel*, 4, 247 and 278) that the Abū ʿAbd Allāh Muḥammad Ibn al-Samḥ whose observational activity is mentioned by al-Zarḳālī is our author seems erroneous; he should rather be our author's father. Finally, Ibn al-Samḥ is named as the recipient of an epistle on alchemy alleged to have been written by his fellow-student of al-Madjrīṭī, Abū Bakr b. Bishrūn (see Ibn Khaldūn, iii, 230), and F. Rosenthal (*ibid.*, n. 696) notes that a biography of Maslama names Ibn Bishrūn as the authority for a statement that there was an estrangement between al-Madjrīṭī and Ibn al-Samḥ. However, Rosenthal goes on to conclude that Ibn Bishrūn's epistle is pseudepigraphical, and therefore throws no additional light on the still nebulous Ibn al-Samḥ.

Bibliography: Brief articles on Ibn al-Samḥ can be found in Steinschneider, *Heb. Ueber.*, 585; Suter, 85; Sánchez Pérez, *Biografias de matemáticos árabes*, Madrid 1921, 67; Brockelmann, I, 623 and S I, 861; and E. S. Kennedy, *Islamic astronomical tables*, Philadelphia 1956, no. 26. References to him are also found in J. M. Millás Vallicrosa, *Estudios sobre Azarquiel*, Madrid-Granada 1943-50, and *Los primeros tratados de astrolabia en la España árabe*, in *Rev. Inst. Egipcio de Est. Isl. en Madrid*, iii (1955), 35-49, an article which is republished in his *Nuevos estudios sobre historia de la ciencia española*, Barcelona 1960, 61-78. But there has been no study of his works or of his influence. (D. PINGREE)

IBN SANĀʾ AL-MULK, ABU 'L-ḲĀSIM HIBAT ALLĀH B. ABI 'L-FAḌL DJAʿFAR B. AL-MUʿTAMID, known as al-Ḳāḍī al-Saʿīd, Arabic poet of the Ayyūbid period famous mainly for the treatise *Dār al-ṭirāz* which he devoted to the genre of *muwashshaḥ* [*q.v.*]. He was born in Cairo circa 550/1155, and died there in 608/1211; he was educated by Egyptian teachers and, like his father al-Ḳāḍī al-Rashīd, embarked on the career of *ḳāḍī*; he worked under the direction of al-Ḳāḍī al-Fāḍil, whom he joined at Damascus and to whom he dedicated some pieces of poetry; he also wrote in praise of Salāḥ al-Dīn (Saladin).

Ibn Sanāʾ al-Mulk wrote in the traditional genres without much originality; he is the author of a *Dīwān* (published in Ḥaydarābād [Dairatu'l-Ma'arif, n.s. no. xii] in 1958, by M. ʿAbd al-Ḥaḳḳ, with detailed biography) and of an anthology of his own works in verse and prose, the *Fuṣūṣ al-fuṣūl wa ʿuḳūd al-ʿuḳūl* (MS Paris 3333); he is said to have written also an abridgement of the *K. al-Ḥayawān* of al-Djāḥiẓ under the title *Rūḥ al-ḥayawān*; but his importance is due the the fact that he was the first person, in the East, to compose *muwashshaḥāt* (sometimes with a *khardja* containing Persian words) and that he had the idea of deducing from the Andalusian and Maghribī specimens available to him the rules of the genre, while realizing the difficulty of such an enterprise. His treatise, the *Dār al-ṭirāz fī ʿamal al-muwashshaḥāt*, was published by Dj. Rikābī in Damascus in 1368/1949, and made it possible to see more clearly the structure of *muwashshaḥāt* just at a time when the originality of the *khardja* was beginning to be perceived [see MUWASHSHAḤ]. The work consists of a selection of 34 *muwashshaḥāt* from al-Andalus and the Maghrib and 35 specimens composed by the author himself. The whole is preceded by a long introduction in which Ibn Sanāʾ al-Mulk sets out his theory about the structure and the prosody of the genre.

Bibliography: Ibn Khallikān, iii, s.v.; Yāḳūt, *Udabāʾ*, xix, 265-71; Ibn al-ʿImād, *Shadharāt*, v, s.v.; Suyūṭī, *Ḥusn al-muḥādara*, i, s.v.; Ibn Saʿīd, *Mughrib*, Cairo 1955, s.v.; al-ʿImād al-Iṣfahānī, *Kharīda*, Egypt, Cairo 1951, i, s.v.; Brockelmann, I², 304, S I, 462; J. Rikabi, *La poésie profane sous les Ayyūbides*, Paris 1949, index; idem, in F. Bustāni, *DM*, iii, 203-5. (ED.)

IBN SARĀBIYŪN, SUHRĀB, author of the *Kitāb ʿAdjāʾib al-akālīm al-sabʿa*, lived in the first half of the 4th/10th century. Hardly anything is known about the life of the author except for the little that can be ascertained from internal evidence in his extant work. In its introduction he calls himself Suhrāb (p. 5), and so was presumably of Persian origin. Again, from the detailed information that the author presents about the rivers of Baghdād and of ʿIrāḳ (pp. 114-38) it seems that he lived in these regions for some time. The work was produced between 289-334/902-45, and although the title of the work suggests that it dealt with "marvels" (*ʿadjāʾib*) of the world, these are not described in the extant work. The author characterizes the work as a summary of information gathered from various works of earlier writers on the subject, it being his object to make this information on the positions of towns, seas, rivers, mountains, valleys, and on land- and sea-routes, available to those interested in constructing a map of the world. Hence, he describes in detail the technique of constructing a map on a cylindrical projection. Al-Khuwārizmī's work, *Ṣūrat al-arḍ*, which forms the basis of Suhrāb's work, must, in the opinion of H. von Mžik, have originally contained similar introductions on map-making (the world-map described by Suhrāb and al-Khuwārizmī has been reconstructed in detail by Rāḍiya Djafrī of the Aligarh Muslim University). Though Suhrāb's work is mainly based on al-Khuwārizmī, he must have utilized other sources also, as is evident from a comparative study of the two authors; from this the following points of difference emerge: (1) in many cases, Suhrāb adds 5′ to the longitudes or latitudes of towns, mouths of rivers, mountains, etc. as given by al-Khuwārizmī; and his figures for the limits of some climes as given in the Table are different from those given by al-Khuwārizmī (p. 7); (2) in some cases, the longitudes given by Suhrāb seem to be more correct than those given by al-Khuwārizmī, *e.g.*, the longitude of the city of Baghdād according to al-Khuwārizmī is 78°, but according to Suhrāb it is 70° (cf. al-Bīrūnī, *Ṣifat al-maʿmūra ʿalā al-arḍ*, 24, who gives it as 70° 0′). According to al-Khuwārizmī, the river ʿĪsā, a branch of the Euphrates, flows into Baghdād at 69° 40′, but Suhrāb does not give the longitude of the mouth of the tributary; (3) in some cases, Suhrāb indicates the names of certain rivers, lakes and swamps while al-Khuwārizmī does not; thus Suhrāb's information is helpful in identifying place-names and in determining their geographical positions; he also adds some new names to the list, *e.g.*, Kashmīr, Baʿlbakk (pp. 23, 29), but at the same time he omits the towns south of the

Equator which are given by al-Khuwārizmī; Suhrāb also gives a few additional names of mountains, *e.g.*, Ṭūr Sīnā, Djūdī, Siyāh Kōh, etc.; (4) Suhrāb calls the Sea of Baṣra (the Persian Gulf) the "Sea of Fārs" which suggests that he was under the influence of the Balkhī School of Muslim geography; (5) the main difference between the two lies in the arrangement of the rivers: while al-Khuwārizmī describes all the rivers under the climes in which their sources lie, Suhrāb describes most of the large and small rivers in a separate chapter and does not give their longitudes or latitudes as al-Khuwārizmī does, but describes their courses in terms of *farsakhs* or *mīls* or in relation to places; (6) Suhrāb makes use of diacritical marks to names and to portions added by him.

As pointed out by Kračkovskiy, Suhrāb's style is that of a naturalized Arab. The works of Suhrāb and al-Khuwārizmī are complementary and should be studied together.

Yu. Kračkovskiy, *Izb. Soč.*, iv; Arabic tr. by Ṣalāḥ al-Dīn ʿUthmān Hāshim, Cairo 1963, part i, 103-4; al-Bīrūnī, *Ṣūrat al-Maʿmūra ʿalā al-Bīrūnī, Bīrūnī's picture of the world*, ed. Zeki Validi Togan, Delhi (*MASI*, no. 53) 1937. (S. Maqbul Ahmad)

IBN al-SARĀYA [see ṢAFĪ AL-DĪN AL-ḤILLĪ].

IBN al-SARRĀDJ [see IBN AL-ḲIṬṬ].

IBN al-SARRĀDJ, Muḥammad b. ʿAlī b. ʿAbd al-Raḥmān al-Ḳurashī al-Dimashḳī, Arab mystic, compiled in about 714/1314 a collection of edifying anecdotes entitled *Tuffāḥ al-arwāḥ wa-miftāḥ al-arbāḥ*, which formed part of his lost work *Tashwīḳ al-arwāḥ wa 'l-ḳulūb ilā dhikr ʿallām al-ghuyūb* (see Ahlwardt, *Verzeichnis der ar. Hdss. von Berlin*, no. 8794). (C. Brockelmann)

IBN al-SARRĀDJ, Abū Bakr Muḥammad b. al-Sarī al-Sarrādj ("the saddle-maker") al-Naḥwī al-Baghdādī, Arab grammarian. The date of his birth is unknown, but he lived in Baghdād. He was the youngest pupil of Abu 'l-ʿAbbās al-Mubarrad, who for that reason devoted particular attention to him. For a time he allowed himself to be led away from grammatical studies in favour of logic and music, but then returned to them resolutely. He taught in Baghdād, and some famous grammarians were included among his pupils: Abu 'l-Ḳāsim al-Zadjdjādjī, Abū Saʿīd al-Sīrāfī, ʿAlī b. ʿĪsā al-Rummānī and Abū ʿAlī al-Fārisī. There is mention of his modesty and the soundness of his teaching, and one fact noted is that he had difficulty in pronouncing the rolled *rāʾ* which, in his speech, became a *ghayn* (Ibn Khallikān, *Wafayāt*, iii, 462).

A pupil of al-Mubarrad, he took part in the widespread movement which led the Arab grammarians to base their work on the *Kitāb* of Sībawayhi. He wrote a *Sharḥ* to the *Kitāb* as the outcome of his teachings. He repeated the doctrine of the *Kitāb* in various didactic works: — the *K. al-Uṣūl al-kabīr* which was esteemed very highly, then the *K. Djumal al-uṣūl* (*wa-huwa 'l-Uṣūl al-ṣaghīr*, according to Yāḳūt, *Muʿdjam*, xviii, 200). The *Fihrist* (62) mentions also the *K. al-Mūdjaz*, the *K. al-Djumal*, the *K. al-Muwāṣalāt fi 'l-akhbār wa 'l-mudhakkarāt* and the *K. al-Ishtiḳāḳ* which he did not complete, according to Yāḳūt (*loc. cit.*); the latter adds the *K. al-Khaṭṭ* and the *K. al-Hidjāʾ*. He touched on lexicography in the *K. al-Riyāḥ wa 'l-hawāʾ wa 'l-nār*, and Ḳurʾānic sciences in the *K. Iḥtidjādj al-ḳurrāʾ* and the *K. al-Shakl wa 'l-naḳṭ* (mentioned in al-Ḳifṭī, *Inbāh*, ii, 295). As one who loved to give a reply by quoting an apposite line of verse, he composed a *K. al-Shiʿr wa 'l-shuʿarāʾ*; incidentally he was a man of marked sensitivity. He died while quite young in Dhu 'l-Ḥidjdja 316/February 929.

Several authors, among them Ibn Khallikān (*Wafayāt*, iii, 463), Abu 'l-Barakāt Ibn al-Anbārī (*Nuzhat al-alibbāʾ*, ed. ʿA. Amer, 150), al-Ḳifṭī (*Inbāh*, iii, 146), record the date of the death of Ibn al-Sarrādj in these words: — *fī yawm al-aḥad li-thalāth layālin baḳīna min Dhi 'l-Ḥidjdja*, that is to say the 27th day of the month, or 10 February; but this 10 February was not a Sunday (according to the *Tables* of H. G. Cattenoz, 2nd ed.). The source of the information was the grammarian Abu 'l-Fatḥ ʿUbayd Allāh b. Aḥmad (on whom see al-Suyūṭī, *Bughya*, 319).

Of his works, the following are preserved in manuscript: — a *K. al-Uṣūl* (Br. Mus. Suppl. 916; Brockelmann, S I, 174), which must be *al-kabīr*; the *K. al-Hidjāʾ*, the *K. al-Mūdjaz*, in a *madjmūʿa*, recently placed in the General Library in Rabat, under no. 100 *ḳ* (this last work published by Moustafa el-Chouémi and Bensalem Damerdji, Beirut 1385/1965); a *K. al-ʿArūḍ* (not mentioned elsewhere) contained in the same *madjmūʿa*.

Bibliography: *Fihrist*, 62; Abū Bakr al-Zubaydī, *Ṭabaḳāt al-naḥwiyyīn wa 'l-lughawiyyīn*, Cairo 1373/1954, 122-5; Yāḳūt, *Muʿdjam al-udabāʾ*, xviii, 197-201 = *Irshād*, vii, 9-12; Ḳifṭī, *Inbāh al-ruwāt ʿalā anbāh al-nuḥāt*, Cairo 1374/1955, iii, 145-9; Ibn Khallikān, Cairo 1367/1948, iii, 462-3; the *Muḳaddima* of the editors of the *Mūdjaz*, which also provides information on the *madjmūʿa* mentioned above. Several other references will be found in al-Ḳifṭī, *Inbāh*, iii, 145, note 1, without adding anything new to all those already available. (H. Fleisch)

IBN ṢAṢRĀ (sometimes, incorrectly, Ṣaṣarrā, Ṣaṣarī, and Ṣarṣarī), the name of a scholarly family of Damascus which can be traced for several centuries. Probably of Mesopotamian origin, as is attested by their *nisbas* al-Taghlibī and al-Baladī (referring to the town of Balad/Balaṭ, now Eski Mosul), the family, like others of its class during Ayyūbid and Mamlūk times, carried on a tradition of Islamic scholarship and activity for generations. Traditionists, teachers, and jurists appear on the family tree from *ca.* 450/1060 to 800/1398. The most important members of the family are the following:

(1) ʿAlī b. Ḥusayn, Abu 'l-Ḥasan, d. 467/1074, a traditionist who transmitted in the name of Tamām b. Muḥammad al-Rāzī (d. 414/1023) and al-Ḥusayn b. ʿUthmān al-Yabrūdī (d. 401/1010), cf. Ibn Taghrībirdī, ii, 257. His daughter's son, who studied with him and transmitted in his name, became even more famous as a traditionist, *ḥāfiẓ* and writer. His name was Hibat Allāh b. Aḥmad, al-Anṣārī, Abū Muḥammad, known as Ibn al-Akfānī (444-523/1052-1129), cf. Sibṭ b. al-Djawzī, *Mirʾāt*, 132; Ibn Taghrībirdī, ii, 389.

(2) Maḥfūẓ b. Abī Muḥammad al-Ḥasan, Abu 'l-Barakāt, *ca.* 455-545/1063-1151, a *ḳāḍī* and son of a *ḳāḍī*, known as "The Great *Ḳāḍī*", cf. Ibn al-Ḳalānisī (Amedroz), 312 (al-Miṣrī (!) = Ṣaṣrā). The remaining members of the family known through references in biographical dictionaries, chronicles, or other contemporary sources were all descendants of Maḥfūẓ through one or another of his three sons:

Hibat Allāh, ʿAlī, and Muḥammad. Of these three, the family of Hibat Allāh was most important.

(3) Hibat Allāh b. Maḥfūẓ, Abu 'l-Ghanāʾim, d. 563/1168, served as a ḳāḍī at the age of twenty, heard and transmitted many traditions from teachers such as Hibat Allāh b. Aḥmad b. Ṭāʾūs and studied jurisprudence with Abu 'l-Ḥasan al-Sulamī, cf. Sibṭ b. al-Djawzī, *Mirʾāt*, 274; Ibn Taghrībirdī, iii, 125.

(4) al-Ḥasan b. Hibat Allāh, Abu 'l-Mawāhib, 537-86/1142-90, probably the most important of the 6th/12th century members of the family, travelled extensively in the eastern Islamic world in pursuit of the study of traditions. In Iraq he studied with Ibn al-Buṭā (d. 564/1169), and in Iran with al-Ḥasan b. Aḥmad al-ʿAṭṭār (d. 569/1174) and Ibn Māshādah (d. 572/1176). He was a companion of Ibn ʿAsākir, the historian of Damascus, and his name appears frequently in the *samāʿāt* of Ibn ʿAsākir's history as well as in the works of other authors. The titles of at least four of his own works are known. He was the first of his family to have been buried in a family *turba* on Mount Ḳāsiyūn, cf. al-Dhahabī, iii, 48; Ibn Taghrībirdī (Cairo), vi, 112.

(5) al-Ḥusayn b. Hibat Allāh, Abu 'l-Ḳāsim, 530-626/1135-1229, the elder brother of al-Ḥasan, also a scholar and traditionist, but not so well known and often confused with his brother by later historians and chroniclers. He was important as a teacher of tradition, which he studied first with his grandfathers (on his maternal side ʿAbd al-Wāḥid b. Hilāl, d. 565/1169-70) and with many other scholars listed in a 17-volume work no longer extant. See Abū Shāma, *Tarādjim*, 154; Ibn Taghrībirdī (Cairo), vi, 272.

(6) Sālim b. al-Ḥasan, Abu 'l-Ghanāʾim, Amīn al-Dīn, 577-637/1181-1240, accompanied his father on some of his journeys and thus had the opportunity of studying with important scholars in other lands. See *Orientalia*, ii, 186.

The children and grandchildren of Sālim were the bearers of the family tradition of scholarship down to the beginning of the 9th/15th century, when the family name disappears. The sons of Sālim, ʿAbd al-Raḥmān (d. 664/1266), al-Ḥasan (d. 664/1266), and Muḥammad (d. 670/1272), are all noted in their biographies for their learning and for performing public religious functions—usually as ḳāḍī. In the next generation, that of the grandchildren of Sālim, there is increasing involvement in the financial administration of the province of Damascus. Among the chief figures of that period are the following:

(7) Ibrāhīm b. ʿAbd al-Raḥmān b. Sālim, Djamāl al-Dīn, Abū Isḥāḳ, d. 693/1294, became *Nāẓir al-dawāwīn*, as his father before him, serving from 678-79/1279-80. In the latter year he was seized, together with the Vizier of Damascus, Ibn Kusayrāt, and they were mulcted of much wealth. In 682/1283, he was appointed *muḥtasib* and reappointed to his previous post as well. He continued to serve until 687/1288, when he and a number of Damascene notables were summoned to Cairo and were forced to give up their wealth. He was restored to his position, however, and in 691/1292 was again confirmed in office. See al-Djazarī, no. 230; Ibn Kathīr, xiii, 302.

(8) Sālim b. Muḥammad b. Sālim, Abu 'l-Ghanāʾim, 644-98/1246-99, served as ḳāḍī and was named *Nāẓir al-khāṣṣ* in the year 691/1292. In 693/1294 he was appointed to the post of *Nāẓir al-dawāwīn* on the death of his uncle Ibrāhīm (see above), and held that post until 696/1297 when he was summoned to Cairo and was forced to pay 60,000 *dirhams* to obtain his release. He was reinstated as *ḳāḍī* but died destitute a few years later. See *Orientalia*, ii, 297; Wiet, *Manhal*, no. 1050.

(9) Aḥmad b. Muḥammad, Nadjm al-Dīn Abu 'l-ʿAbbās, 655-723/1257-1322, brother of no. (8) and the most prominent of all the Banū Ṣaṣrā. He studied tradition in Egypt as well as Syria, and also studied jurisprudence and grammar. He was appointed to teach at several *madrasas*, among them the Lesser ʿĀdiliyya, the Amīniyya, the Ghazzāliyya, the Greater ʿĀdiliyya, and the Atābakiyya. In 695/1296 he was named *Ḳāḍī* of the Army (*ḳāḍī 'l-ʿaskar*), and in 702/1302 was named Shāfiʿī Chief *Ḳāḍī* of Damascus, a post he held until his death 21 years later. He figured prominently in the religious and civil events in Damascus during that period, which included the *cause célèbre* of Ibn Taymiyya. Students flocked to his lectures and some of the prominent scholars of Damascus were taught by him. Many biographical notices and references are devoted to him, among them Ibn Kathīr, xiv, 106; al-Kutubī, *Fawāt*, i, 62; Wiet, *Manhal*, no. 260; Ibn Ḥadjar, *Durar*, i, 263; Ibn Taghrībirdī (Cairo), ix, 258.

Two women of the family are noted for their scholarly attainments, a sister of the Chief *Ḳāḍī* named Asmāʾ, 638-733/1240-1333, and her daughter Malika, d. 749/1348.

Finally there is a writer of local history known only through a unique Bodleian Library manuscript of one of his works, Muḥammad b. Muḥammad b. Muḥammad b. Aḥmad—presumably a great-grandson of the Chief *Ḳāḍī*. His work *al-Durra al-muḍīʾa fi 'l-dawla al-Ẓāhiriyya*, a valuable study of Damascus during a part of the reign of Sultan al-Ẓāhir Barḳūḳ, has been edited and translated by W. M. Brinner as *A chronicle of Damascus 1389-1397*, Berkeley 1963, 2 vols.

Bibliography: A brief survey is found in *Dāʾirat al-maʿārif*, iii, 285. A full study of the family may be found in the article by W. M. Brinner, *The Banū Ṣaṣrā: A study in the transmission of a scholarly tradition*, in *Arabica*, vii/2 (1960), 167-95. Some important additions to this article appear in a brief notice by G. Vajda, *A propos des Banū Ṣaṣrā*, in *Glanes intéressant l'histoire littéraire du VII^e/XII^e siècle dans le* Muʿǧam al-Šuyūḫ *d'al-Dimyāṭī*, in *Arabica*, viii/1 (1961), 98. (W. M. Brinner)

IBN SAʿŪD [see suʿūd, āl].

IBN al-SAWDĀʾ [see ʿabd allāh b. sabaʾ].

IBN SAYḤĀN, ʿAbd al-Raḥmān (b. Sayḥān) b. Arṭāt al-Muḥāribī, a minor poet of Medina who lived in the 1st/7th century, on intimate terms with the governors or members of the Umayyad aristocracy of the town—al-Walīd b. ʿUthmān b. ʿAffān, al-Walīd b. ʿUtba b. Abī Sufyān, ʿAbd al-Raḥmān b. al-Ḥakam and al-Walīd b. ʿUḳba b. Abī Muʿayṭ; indeed he belonged to a clan which was a *ḥalīf* of the Banū Ḥarb b. Umayya, a fact which incidentally won him the friendship and protection of Muʿāwiya. Although we possess a number of his verses, which belong to the classical categories, as well as a poem in praise of the singer Djamīla [*q.v.*], this somewhat unproductive poet has escaped falling into total oblivion merely because some of his compositions were set to music; in these works panegyrics of his friends are usually combined with the glorification of wine, and he even uses sacrilegious terms in advocating its enjoyment. He thus takes his place in the line of Bacchic poets, while giving this poetry a distinctly anti-Muslim flavour. The potations in

which he indulged with his Umayyad friends brought him into conflict with Marwān b. al-Ḥakam [*q.v.*], who punished him with the statutory 80 strokes of the whip, but it is interesting to note that Muʿāwiya compelled Marwān to make a public retraction.

Bibliography: the only notice is that in the *Aghānī* (Beirut ed., ii, 208-26) which contains interesting details regarding the consumption of wine in Medina; see also C. A. Nallino, *Letteratura*, French tr., 96; F. Bustānī, *Dāʾirat al-maʿārif*, ii, 331-2. (CH. PELLAT)

IBN AL-ṢAYRAFĪ, TĀDJ AL-RIʾĀSA AMĪN AL-DĪN ABU 'L-ḲĀSIM ʿALĪ B. MUNDJIB B. SULAYMĀN, Egyptian civil servant and a prolific writer in prose and verse, was born on 22 Shaʿbān 463/25 May 1071. His grandfather had been a *kātib* and his father was a money-changer. He learned the profession of *kātib* under Ibn Mufarridj, *walī* of the Department of the Army (*Dīwān al-Djaysh*), and finally rose to be head of this *Dīwān*. In 495/1102 the vizier al-Afḍal b. Badr [*q.v.*] transferred him to the Chancery (*Dīwān al-Inshāʾ*); on the death of its head Sanāʾ al-Mulk Abū Muḥammad, Ibn al-Ṣayrafī succeeded him, and he was employed there for some fifty years, until his death on 20 Ṣafar 542/21 July 1147.

The following is a tentative list of his works: (1) *Sidjillāt* (referred to as *rasāʾil*) which he composed in the course of his official duties; according to Yāḳūt, he wrote more than four volumes of official letters, while Ibn Saʿīd (*al-Murḳiṣāt*, 111) says that he saw a collection in twenty volumes. For those that survive, dispersed in various histories and literary works, see Djamāl al-Dīn al-Shayyāl, *Madjmūʿat al-wathāʾiḳ al-Fāṭimiyya*. (2) *Ḳānūn Dīwān al-Rasāʾil*, a guide to chancery practice, ed. ʿAlī Bahdjat, Cairo 1905, with extensive notes; Fr. tr. by H. Massé, *Code de la chancellerie*, in *BIFAO*, xi (1914), 65-120. The work is dedicated to al-Afḍal Kutayfāt [*q.v.*]. (3) *al-Ishāra ilā man nāl al-wizāra*, a history of the Fāṭimid viziers from Ibn Killis to al-Baṭāʾiḥī [*qq.v.*], ed. ʿAbd Allāh Mukhliṣ, in *BIFAO*, xxv (1924), 49-112; addendum, xxvi (1926), 49-70. (4) *al-Afḍaliyyāt*, a collection of letters and treatises written for al-Afḍal b. Badr. The unique MS (Istanbul, Fatih 5410; a microfilm in the Institute of Arabic Manuscripts, Cairo) contains seven opuscula entitled (i) *Risālat al-ʿAfw* (a plea to the vizier for forgiveness), (ii) *Radd al-maẓālim* (in praise of the vizier's sense of justice, with anecdotes and apposite verse quotations), (iii) *Lumaḥ al-mulaḥ*, (iv) *Manāʾiḥ al-ḳarāʾiḥ*, (v) *Munādjāt shahr Ramaḍān*, (vi) *ʿAḳāʾil al-faḍāʾil*, and (vii) *al-Tadallī fi 'l-tasallī*. Four of these figure in the list of Ibn al-Ṣayrafī's "books" given by Yāḳūt; it is probable therefore that the three other "books" named by Yāḳūt and not yet known to exist (*ʿUmdat al-muḥādatha*, *Istinzāl al-raḥma*, *Kitāb fi 'l-sukr*) were *risāla*s of the same type. A historical work by Ibn al-Ṣayrafī, apparently an abridgement and continuation of an earlier Fāṭimid chronicle, is cited by Ibn Aybak al-Dawādārī (*Kanz al-durar*, vi, ed. Ṣ. Munadjdjid, Cairo 1961, 111, etc.; cf. B. Lewis in *BSOAS*, xxvi (1963), 430). The earliest citation is from the reign of al-Ḳāʾim; the latest deals with the accession of al-Ḥāfiẓ in 526/1132. Ibn Aybak cites this work several times, notably for panegyric poems in praise of the Fāṭimid caliphs.

In addition to his historical and epistolary writings, he is credited with the composition of several poetic anthologies, of which at least two, dealing with Sicilian and Spanish Arabic poets, are extant. Ibn al-Ṣayrafī's letters are a valuable guide to the prose style of the Fāṭimid period.

Bibliography: Biographical notices: Ibn Muyassar, *Taʾrīkh Miṣr*, ed. H. Massé, Cairo 1919, 87-8 (followed by Maḳrīzī, *Ittiʿāẓ*, MS 141a); Yāḳūt, *Udabāʾ*, v, 422-3. See further Brockelmann, S I, 489-90; Djamāl al-Dīn al-Shayyāl, *Madjmūʿat al-wathāʾiḳ al-Fāṭimiyya*, i, Cairo 1958 (2nd. ed. Alexandria 1965); Muḥammad Kāmil Ḥusayn, *Fī adab Miṣr al-Fāṭimiyya*, Cairo 1950; F. Gabrieli, *L'Antologia di Ibn as-Sairafi sui poeti arabo-siciliani*, in *Boll. del Centro di Studi filologici e linguistici Siciliani*, ii (1954), 1-15; O. Kaak, *De la poésie arabo-sicilienne*, in *Atti del Cong. Intern. di poesia e di filologia per il VII centenario della poesia e della lingua italiana*, Palermo 1953, 155-64. (GAMAL EL-DIN EL-SHAYYAL)

IBN AL-ṢAYRAFĪ, ABŪ BAKR YAḤYĀ B. MUḤAMMAD B. YŪSUF AL-ANṢĀRĪ, Andalusian poet, historian and traditionist, born at Granada in 467/1074. He had a profound knowledge of Arabic language and literature, and was a prolific poet, particularly of *muwashshaḥāt*. He was *kātib* of the *amīr* Abū Muḥammad Tāshfīn at Granada; but his fame rests on a history of the Almoravid dynasty entitled *Taʾrīkh al-dawla al-lamtūniyya* or *al-Anwār al-djaliyya fī akhbār al-dawla al-murābiṭiyya*; at first ending at the year 530/1135 6, then continued by the author until shortly before his death, which took place at Orihuela probably in 557/1162 (the other date recorded, 570/1174-5, seems to be too late), this chronicle has not yet been discovered; there exist only some extracts, preserved in particular in the *Bayān* of Ibn ʿIdhārī and the publication of which had been promised by E. Lévi-Provençal (see Lévi-Provençal and R. Menéndez Pidal, in *al-Andalus*, xiii (1948), 157, 160, 161); this chronicle is also quoted in *al-Ḥulal al-mawshiyya*, and some passages from it are reproduced by Ibn al-Khaṭīb and other historians.

Bibliography: Ibn al-Abbār, *Takmila*, no. 2045; Ibn al-Zubayr, *Ṣilat al-Ṣila*, ed. E. Lévi-Provençal, Rabat 1937, 183; Ibn al-Khaṭīb, *Iḥāṭa*, MS Escurial, 416; Suyūṭī, *Bughya*, 416 (follows Ibn al-Zubayr); Pons Boigues, *Ensayo*, no. 193, 240-1 and references there given; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 292. (ED.)

IBN SAYYID AL-NĀS, FATḤ AL-DĪN MUḤAMMAD B. MUḤAMMAD AL-YAʿMURĪ AL-ISHBĪLĪ, biographer of the Prophet. The home of the distinguished scholarly family of the Ibn Sayyid al-Nās was in Seville, which they were forced to leave because of the unsettled political situation leading to the city's conquest by the Christians in 646/1248. The grandfather, Abū Bakr Muḥammad b. Aḥmad, who was born in 597/1200-1, settled in Tūnis, where he died in Radjab 659/June 1261 (cf. al-Dhahabī, *ʿIbar*, v, 255). His son, Muḥammad, was born in Djumādā II 645/October 1247. He studied with his father in Tūnis and Bidjāyā, and continued his studies in Alexandria, Cairo, and Mecca. He settled in Cairo, where for some time he was rector of the Kāmiliyya. He died in Djumādā I 705/November-December 1305 (Ibn Ḥadjar, *Durar*, iv, 162). His son, Muḥammad, was born in Cairo on 14 Dhu 'l-Ḳaʿda 671/2 June 1273. As a small child—he started out when he was not yet four years old—, he attended classes together with his father (cf. *ʿUyūn*, i, 152, 157, 181, ii, 342, 346 f., etc.). From his family, he inherited a splendid library, which was transferred from Tūnis to Cairo. It also contained the papers of his grandfather, which he occasionally quoted (cf. *ʿUyūn*, i, 302, etc.). He became particularly famous for his excellent,

fast handwriting, both *maghribī* and eastern. He was popular with almost all high government officials, but there are hints that this was not the right company for a scholar and that he was not as devoted to scholarship as a man of his gifts should have been. He held a professorship in *ḥadīth* in the Ẓāhiriyya, and some other teaching and mosque positions. Instead of a government appointment offered him by al-Malik al-Manṣūr Lādjīn, he accepted a pension for life, and he had additional sources of income. He died on 11 Shaʿbān 734/17 April 1334.

He wrote a good deal of poetry which was highly esteemed. He is credited with two works on the *ṣaḥāba*, and he wrote a commentary on al-Tirmidhī's *Ṣaḥīḥ* (cf. Sezgin, i, 155). MS. Escorial 1160 (= 1155 Casiri) contains his answers to questions submitted to him in 731/1330-1 by Aḥmad b. Aybak Ibn al-Dimyāṭī, concerning various *ḥadīth*s, some problems of the science of *ḥadīth*, and, it seems, biographical information on his father (requiring further study). Mainly, he wrote on the Prophet, and his lasting reputation rests on his biography of the Prophet, entitled *ʿUyūn al-athar fī funūn al-maghāzī wa 'l-shamāʾil wa 'l-siyar* (ed. Cairo 1356). It is compiled on the basis of Ibn Isḥāḳ (Ibn Hishām) and al-Wāḳidī [*qq.v.*], but it makes use also of a number of sources now lost or imperfectly known, such as Mūsā b. ʿUḳba, Ibn ʿĀʾidh, Abū ʿArūba, and Abū Bishr al-Dawlābī (cf. *ʿUyūn*, ii, 342-7). The work was eminently successful in its time. Ibn Sayyid al-Nās himself wrote an abridgement of it, and it was commented upon several times and also versified.

Bibliography: Biographies by contemporaries such as al-Ṣafadī, *Wāfī*, i, 289-311; al-Udfuwī, *al-Badr al-sāfir* (not available, quoted by Ibn al-ʿImād, *Shadharāt*, vi, 108); al-Dhahabī, *al-Muʿdjam al-mukhtaṣṣ* (not available); al-Kutubī, *Fawāt*, Cairo 1951, ii, 344-9, etc., and many later notices, such as, for instance, al-Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, Cairo 1324, vi, 29-31; Ibn Ḥadjar, *Durar*, iv, 208-13. Cf. also Pons Boigues, 320 f.; R. Basset, in *Le Muséon*, v (1886), 247-55 (with a discussion of the Tunisian family Ibn Sayyid al-Nās); Brockelmann, I, 169; II, 85; S II, 77, S III, 1252.

(F. ROSENTHAL)

IBN SHADDĀD, ABŪ MUḤAMMAD ʿABD AL-ʿAZĪZ B. SHADDĀD B. TAMĪM B. AL-MUʿIZZ B. BĀDĪS (d. after 582/1186), sometimes also called Abu 'l-Gharīb ʿIzz al-Dīn al-Ṣanhādjī, chronicler of Zīrid descent, being the grandson of Tamīm (454-501/1062-1108) and the nephew of Yaḥyā b. Tamīm (501-9/1108-16). He lived at first in the entourage of the last Zīrid of Mahdiyya, al-Ḥasan b. ʿAlī, and seems to have gone with him, at least for some time, to the Almohad ʿAbd al-Muʾmin whose support he was seeking. It appears also that he was at Palermo in 551/1156-7. Finally, he travelled to the East and settled at Damascus, in 571/1175-6 at the latest. He was still there in 582/1186 for in that year he recorded an account of events in Ifrīḳiya given to him by a citizen of Mahdiyya (al-Tīdjānī, *Riḥla*, Tunis ed. 1958, 14).

His history, which betrays some anti-Shīʿī bias (see al-Maḳrīzī, *Ittiʿāẓ*, ed. al-Shayyāl, Cairo 1948, 47), and whose full title seems to have been *Kitāb al-Djamʿ wa 'l-bayān fī akhbār al-Ḳayrawān wa fī man fīhā wa fī sāʾir bilād al-Maghrib min al-mulūk wa 'l-aʿyān*, was used by Ibn Khallikān, Ibn al-Athīr (*Kāmil*, Cairo ed. 1938-9, vi, 125), al-Nuwayrī, al-Maḳrīzī, al-Tīdjānī (*Riḥla*, Tunis 1958, 14-5, 341-7), and Abu 'l-Fidāʾ. It is almost certainly lost (al-Shayyāl, introd. to his ed. of al-Maḳrīzī's *Ittiʿāẓ*, p. *kāf*), and B. Lewis (*The origins of Ismāʿīlism*, Cambridge 1940, 57) was mistaken in supposing that manuscripts exist in Egypt and Syria.

Bibliography: for the sources, see Brockelmann, S I, 575; Amari, *Storia*, ed. Nallino, 1933, i, 40-1 (see also iii, 486); and H. R. Idris, *Zīrides*, i, pp. xviii-xix. (M. TALBI)

IBN SHADDĀD, ʿIZZ AL-DĪN ABŪ ʿABD ALLĀH MUḤAMMAD B. ʿALĪ AL-ḤALABĪ, Syrian author of topographical and historical works, born in 613/1217 in Aleppo, died in Cairo in 684/1285. A famous secretary of the chancellery and a skilful administrator, he was employed by the ruler of Aleppo, al-Malik al-Nāṣir, who sent him in 640/1242-3 on a mission to inspect the finances in Ḥarrān. Later, when the Mongols were approaching, in 657/1259, he was instructed to accompany the ruler's family from Damascus to Aleppo and to negotiate an agreement with the Mongols, who had occupied Mayyāfāriḳīn. These negotiations having been unsuccessful, northern Syria was overrun, and Ibn Shaddād fled to Egypt in 659/1261, as did the majority of the important inhabitants. He was welcomed by the Mamlūk sultan Baybars and enjoyed his favour and that of his successors. He did not return to Syria until 669/1271, in the course of a journey made with this sultan.

It was in Egypt that he wrote his main works: the historical topography of Syria and the Djazīra entitled *al-Aʿlāḳ al-khaṭīra fī dhikr umarāʾ al-Shaʾm wa 'l-Djazīra*, in three substantial sections, written between 671/1272-3 and 680/1281-2, and the life of Baybars (Turkish tr. of the Edirne MS by Yaltkaya, 1941), sometimes wrongly attributed to Bahāʾ al-Dīn Ibn Shaddād (see next art.). There is also attributed to him a work on the Yemen, unpublished.

Bibliography: Brockelmann, I², 634, S I, 883; Cl. Cahen, *La Syrie du nord* . . ., Paris 1940, index; parts of the historical topography have been published: of Aleppo, by D. Sourdel, Beirut 1953; of Damascus, by S. Dahan, Damascus 1956; of Lebanon, Jordan and Palestine, by S. Dahan, Damascus 1963; on the section relating to the Djazīra, see Cl. Cahen, *La Djazīra au milieu du XIIIe siècle d'après ʿIzz al-dīn ibn Chaddād*, in *REI*, viii (1934), 109-28. (D. SOURDEL)

IBN SHADDĀD, BAHĀʾ AL-DĪN ABU 'L-MAḤĀSIN YŪSUF B. RĀFIʿ B. TAMĪM (not to be confused with ʿIzz al-Dīn, see above), biographer of Saladin, was born in Mosul in 439/1145 and died at Aleppo, at a great age, in 632/1235.

After completing his education in Mosul, he spent four years as assistant teacher (*muʿīd*) in the Niẓāmiyya at Baghdād. Returning to Mosul, he taught at the *madrasa* founded by Kamāl al-Dīn al-Shahrazūrī. He was sent by the Atabegs of Mosul on various embassies, to the caliph in Baghdād, to Saladin, and to the governors of neighbouring towns. In 583/1188 he performed the Pilgrimage; while he was at Damascus, on his way home, Saladin, then besieging the castle of Kawkab, sent for him and listened to a work on *ḥadīth* which he had composed. Ibn Shaddād visited Jerusalem (now back in Muslim hands), and then sought Saladin's permission to return to Mosul. Saladin, much impressed by a work on *djihād* which Ibn Shaddād had dedicated to him, retained him in his service (from Djumādā I 584/July 1188); as *ḳāḍī* of the army and of Jerusalem he remained in constant attendance on Saladin until the latter's

death (589/1193), of which he has left a moving description.

Ibn Shaddād then moved to Aleppo, where he acted as the conciliator and adviser of Saladin's sons. In 591/1195 al-Malik al-Ẓāhir appointed him *ḳāḍī* of Aleppo, with supervision of the *waḳfs*. It was in these years that he founded his magnificent *madrasa*, for the promotion of the Shāfiʿī *madhhab*, opposite the *madrasa* of Nūr al-Dīn, and a *dār al-ḥadīth*, erecting his own tomb between his two foundations. There are numerous records of missions he made to Cairo (in 593, 608 and 603) in attempts to compose Ayyūbid family quarrels; and in 629/1232 he led the delegation which brought the daughter of al-Malik al-Kāmil from Cairo to marry al-Malik al-ʿAzīz of Aleppo. In his latter years his house was frequented by such famous writers as Ibn Khallikān, who has left an impressive description of the aged scholar; Abū Shāma, who gives Ibn Shaddād's biography, s.a. 632, in his *Dhayl ʿala 'l-Rawḍatayn*; and Ibn Wāṣil [*qq.v.*], who visited Aleppo in 627 and 628/1230-1 and attended Ibn Shaddād's lectures.

Ibn Shaddād's minor works are: (1) *Dalāʾil al-aḥkām*, still in manuscript (Paris, Bibl. Nat., MS ar. 736); (2) *Maldjaʾ al-ḥukkām ʿind iltibās al-aḥkām* (MS in 2 vols. at the Egyptian National Library, Cairo); (3) *Durūs al-ḥadīth*, lectures delivered in Cairo in 629/1231 (Bodleian Library, *Cat.*, i, 1173); (4) *Kitāb al-ʿAṣāʾ*, on the encounter of Moses and Pharaoh (MS: Patna); (5) *Faḍāʾil al-djihād*, the work presented to Saladin (Istanbul, MS Köprülü 764); (6) *Asmāʾ al-ridjāl alladhīn fī Muhadhdhab al-Shīrāzī* (not in Brockelmann: Istanbul, MS Millet/Veliyüddin Carullah 255).

His most important work is his biography of Saladin, entitled *al-Nawādir al-sulṭāniyya wa 'l-maḥāsin al-Yūsufiyya* or *Sīrat Salāḥ al-Dīn*. First published by A. Schultens in 1732-55, it was edited, with French tr., by De Slane in *RHC, HOr.*, iii, Paris 1884, 3-370, and reprinted Cairo 1317 A.H.; Eng. tr. by C. R. Conder as *The life of Saladin . . .*, London (PPTS), 1897; extracts, in Italian translation, in F. Gabrieli, *Storici arabi delle Crociate*, n.p. 1957, 85 ff. A new edition, based on a MS read over to the author (Jerusalem, al-Masdjid al-Aḳṣā, *taʾrīkh* 595), was published by Djamāl al-Dīn al-Shayyāl, Cairo 1964. The work is in two parts, on Saladin's birth, early life, merits and habits, and on his wars and conquests. Its author claims to depend on trustworthy friends for the account of the years before he joined Saladin's service (in 584/1188), and for the later years on his own observation. For the period before 584/1188, it does in fact rely on second-hand reports, and at times commits errors of detail and chronology; for the later period, his biography, together with the surviving works of ʿImād al-Dīn [*q.v.*], is the most authentic source for Saladin's life, and has been used by nearly all later historians, Muslim and European; it gives invaluable information not only on the battles of the opposed armies and the weapons employed, but also on the social and administrative systems on both the Muslim and the Christian sides, and contains important documents illustrating the relations between Saladin and the neighbouring Crusader States. As a "specimen of royal biography . . . based on a study of character", it is, in F. Gabrieli's words, "without parallel in the historical literature of early Islam".

Bibliography: Ibn Khallikān, no. 852; Abū Shāma, *al-Dhayl ʿala 'l-Rawḍatayn = Tarādjim ridjāl al-ḳarnayn al-sādis wa 'l-sābiʿ*, Cairo 1947, 163; Ibn Wāṣil, *Mufarridj al-Kurūb*, MS; ʿAbd al-ʿAẓīm al-Mundhirī, *al-Takmila li-wafāyāt al-naḳala* (MS, Alexandria Municipal Library); Bahāʾ al-Dīn Ibn Shaddād, *al-Nawādir al-sulṭāniyya . . .*, ed. Djamāl al-Dīn al-Shayyāl, Cairo 1964, introduction; H. A. R. Gibb, *The Arabic sources for the life of Saladin*, in *Speculum*, xxv (1950), 58-72; C. Cahen, *La Syrie du Nord à l'époque des Croisades*, Paris 1940, introduction; H. L. Gottschalk, *al-Malik al-Kamil von Egypten und seine Zeit*, Wiesbaden 1958, 33, 71 ff., 166, 201, 204; M. Hilmy M. Ahmad, *apud* B. Lewis and P. M. Holt, *Historians of the Middle East*, London 1962, 87-8; F. Gabrieli, *ibid.*, 104; Brockelmann, I, 316-7, S I, 549-50. (GAMAL EL-DIN EL-SHAYYAL)

IBN AL-SHADJARĪ AL-BAGHDĀDĪ, ABU 'L-SAʿĀDĀT HIBAT ALLĀH B. ʿALĪ B. MUḤAMMAD B. ḤAMZA, a descendant of ʿAlī b. Abī Ṭālib (he is thus called al-Sharīf al-Ḥasanī al-ʿAlawī), was a grammarian and poet of Baghdād, born in Ramaḍān 450/November 1058. After making the traditional studies under the direction of numerous teachers (see how, at the end of his *Nuzha*, Ibn al-Anbārī [*q.v.*], who was his pupil, traced back his grammatical knowledge to ʿAlī through an unbroken line of teachers), he taught grammar for 70 years. At the same time he was *nāʾib* of the *naḳīb* [*q.v.*] of the Ṭālibīs in al-Karkh, where he lived. He died in Ramaḍān 542/February 1148, and was buried in his own house.

His *Amālī*, dictated in 84 sessions, form his principal work (ed. Ḥaydarābād 1349), completed by his *Intiṣār* which had been provoked by a discussion with Ibn al-Khashshāb [*q.v.*]. He is also the author of a *Ḥamāsa* (ed. Krenkow, Ḥaydarābād 1345; Cairo 1306, under the title *Mukhtārāt shuʿarāʾ al-ʿArab*). Of his other works, we may note a commentary on the *Lumaʿ* of Ibn Djinnī [*q.v.*] and a treatise entitled *Mā 'ttafaḳa lafẓuh wa 'khtalafa maʿnāh*. His poems in *ghazal* form, his panegyrics, funeral orations and verses of parenetic character do not reveal any great originality.

Bibliography: Ibn al-Anbārī, *Nuzha* (last biography); Yāḳūt, *Udabāʾ*, xix, 282-4; Ibn Khallikān, index, s.v.; Suyūṭī, *Bughya*, 407-8; Brockelmann, S I, 493; F. Krenkow, in *JRAS*, 1929, 96-100; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 252. (ED.)

IBN AL-SHAHĪD, ABŪ ḤAFṢ ʿUMAR AL-TUDJĪBĪ, Andalusian man of letters of the 5th/11th century. Almost nothing is known of his life except that he was one of the panegyrists of al-Muʿtaṣim Ibn Ṣumādiḥ, king of Almeria. Ibn Bassām devotes to him a notice of some length in his *Dhakhīra* (i/2, 180-200) and quotes a fair number of his poems. Ibn Saʿīd also mentions him in the *Mughrib* (ed. Sh. Ḍayf, ii, 209-10) but without giving any personal details of him.

As a poet, Ibn al-Shahīd was merely one of the many flourishing at that period, without any especial claim to fame. He has on the other hand some importance as a prose writer, although this may be judged only from a *Risāla* and a *Maḳāma*, both of them reproduced (the latter only fragmentarily) by Ibn Bassām. The *Maḳāma*, written in an elegant rhyming prose without excessive use of ornament, follows its subject, in the manner of a short story, and differs slightly, in its theme and its structure, from the classical works in the same genre written in the East.

Bibliography: In addition to the references given in the text, see Ḥumaydī, *Djadhwat al-muḳtabis*, Cairo 1952, 283-4; Ḍabbī, *Bughya*,

no. 1065; H. Pérès, *Poésie andalouse*, 37, 83, 368 (where for Ibn Šuhayd, read Ibn al-Šahīd and ignore the reference to his being related to Ibn Shuhayd [*q.v.*]); F. de la Granja, *Los fragmentos en prosa de Abū Ḥafṣ ʿUmar Ibn al-Šahīd*, in *al-Andalus*, xxv (1960), 71-92.

(F. DE LA GRANJA)

IBN SHĀHĪN [see NISSĪM BEN YAʿḲOB IBN SHĀHĪN].

IBN SHĀHĪN AL-ẒĀHIRĪ, GHARS AL-DĪN KHALĪL, born in Cairo (or Jerusalem) in 813/1410, son of a *mamlūk* of the Burdjī sultan Sayf al-Dīn Tatar, studied in Cairo and achieved a brilliant administrative career under Barsbay and Čaḳmaḳ (cf. Ziriklī, *Aʿlām*², iii, 367). In about 857/1453 he composed a major work, *Kashf al-mamālik wa-bayān al-uruḳ wa 'l-masālik*, of which only an abridged version, *Zubdat Kashf al-mamālik* ... has survived. This vivid and exact picture of Egypt under the Mamlūks, the interest of which was first emphasized by Volney in the appendix to the *Voyage en Egypte et en Syrie*³, ed. Dugour and Durand, Paris year 7/1799, has been published in a rather poor edition by Paul Ravaisse, in *Publ. de l'École des Langues Orientales Viv.*, 3rd series, xvi, Paris 1894. The principal manuscripts are: Paris B. N. 1724 and 2258; Berlin 9818; Oxford, Bodl. i, 735a; Istanbul, Saray 2900 and 3008. An excellent French translation, made in about 1788 by Venture de Paradis, was published by the Institut Français, Damascus in 1950.

Ibn Shāhīn is also the author of an oneirocritical treatise entitled *K. al-Ishārāt fī ʿilm al-ʿibārāt* which was widely circulated. Numerous manuscript versions of it exist in the great oriental collections (Atif Ef. 1973; Rağib Paşa 646; Köprülü, Fazil P. 116; Istanbul Un. Lib. A 35, 2912, 3887, 6245, 6266; Iskilip 1206; Cairo 4856; Paris 2752; etc.) and it is printed in the margin of *Taʿṭīr al-ānām fī taʿbīr al-manām* of ʿAbd al-Ghanī al-Nābulusī (d. 1143/1730), Cairo 1301-/1883-. He rewrote the treatise of al-Sālimī (end of 8th/14th century) entitled *K. al-Ishāra ilā ʿilm al-ʿibāra*, which he names as one of his numerous sources and to which he added thirty new chapters. In his introduction, the author mentions having already published a compendium under the title *al-Kawkab al-munīr fī uṣūl al-taʿbīr* (compare *al-Badr al-munīr fī ʿilm al-taʿbīr* of Shihāb al-Dīn al-Maḳdisī, d. 697/1298). He is said to have left about thirty works, including a treatise entitled *al-Mawāhib fī 'khtilāf al-madhāhib*, and a *dīwān* in several parts (cf. Ziriklī, loc. cit.).

(J. GAULMIER and T. FAHD)

IBN SHAHRĀSHŪB, ABŪ DJAʿFAR (or Abū ʿAbd Allāh) MUḤAMMAD B. ʿALĪ B. SHAHRĀSHŪB B. ABĪ NAṢR B. ABI 'L-DJAYSH, known as Zayn al-Dīn (ʿIzz al-Dīn, Rashīd al-Dīn), Imāmī theologian, preacher and jurist. Born at Sārī, in Māzandarān, he was obliged for religious reasons to leave Saldjūḳid Persia and went to Aleppo, the refuge of the Shīʿī ʿulamāʾ ever since the time of the Ḥamdānids; he died there at an advanced age on 22 Shaʿbān 588/2 September 1192 and was buried at Djabal al-Djawshan, near to a much revered Ḥusaynī *mashhad*. He had the reputation of being the greatest Shīʿī scholar of his time and was recognized and highly thought of even by the Sunnīs: his sermons having made an impression on the ʿAbbāsid caliph al-Muktafī (530-55/1136-60), he is said to have received at Baghdād the *laḳab* of Rashīd al-Dīn and also to have received the *idjāza* even from famous enemies, notably al-Zamakhsharī, and from Muḥammad al-Ghazālī, also from his contemporary, the pupil of al-Zamakhsharī, al-Khaṭīb al-Khuwārizmī al-Makkī. He had as his teachers Abū Manṣūr Aḥmad b. Abī Ṭālib al-Ṭabarsī [see AL-ṬABARSĪ], author of the *Iḥtidjādj*, Faḍl b. al-Ḥasan Amīn al-Dīn al-Ṭabarsī [see AL-ṬABARSĪ], author of the *Madjmaʿ al-bayān*, the *shaykh* Abu 'l-Futūḥ al-Rāzī [see AL-RĀZĪ], author of one of the most important Shīʿī *tafsīrs* in Persian, and others such as al-Ḳuṭb al-Rāwandī and the Sayyid Nāṣiḥ al-Dīn al-Āmidī. His most important teacher, whom he mentions particularly in his two main works, was, however, the *shaykh* Naṣīr al-Dīn al-Ṭūsī. Ibn Shahrāshūb's grandfather—referred to in certain texts as Ibn Kayākī—was the *shaykh*'s direct pupil and transmitted his "lessons" to his grandson through his son; indirectly, as a pupil of al-Ṭūsī, Ibn Shahrāshūb may be said to have been a pupil also of the *ḳāḍī* Abu 'l-Saʿādāt Asad b. ʿAbd al-Ḳāhir al-Iṣfahānī. The sources mention a great number of Ibn Shahrāshūb's pupils and it is a sign of his prestige that even al-Muḥaḳḳiḳ al-Ḥillī acknowledges him as his master, through only one intermediary (*wāsiṭa*).

His main works are the following: (1) *Maʿālim al-ʿulamāʾ*, ed. ʿAbbās Iḳbāl, Tehrān 1353/1934-5: the *Fihrist* of al-Ṭūsī, which, with the *Ridjāl* of al-Nadjāshī, is its chief source, is incorporated in it; a unique feature, however, is the chapter on the Shīʿī poets, certainly written, according to Iḳbāl, between 573 and 581/1177-86; (2) *Manāḳib Āl Abī Ṭālib*, 3 vols., ed. Nadjaf 1956, a theoretical-apologetic treatise on the *imāms* rather than a work of genealogy and *ḥadīth*. Other works, the majority consisting of Shīʿī apologetic: *Mutashābih al-Ḳurʾān* (printed in Tehrān); *Bayān al-tanzīl*; *Aʿlam al-ṭarāʾiḳ fī 'l-ḥudūd wa 'l-ḥaḳāʾiḳ*; *Ansāb Āl Abī Ṭālib*; *al-Asbāb wa 'l-nuzūl ʿalā madhhab Āl al-Rasūl*; *al-Arbaʿīn fī manāḳib sayyidat al-nisāʾ Fāṭima al-Zahrāʾ*.

Bibliography: Ibn al-Fuwaṭī, *Talkhīs madjmaʿ al-ādāb fī muʿdjam al-alḳāb*, iv, ed. Muṣṭafā Djawād, I, n. 443 (which quotes the *Lisān al-mīzān* of Ibn Ḥadjar, the *Taʾrīkh al-Islām* of al-Dhahabī—obituaries for the year 588—and a biography contained in the *Taʾrīkh* of Yaḥyā b. Abī Ṭayy al-Ḥalabī—on whom see Brockelmann, S I, 549, s.v. Ibn Shaddād); Mīrzā Muḥammad Tunakābunī, *Ḳiṣaṣ al-ʿulamāʾ*, Tehrān n.d., 428-9; ʿAbbās al-Ḳummī al-Nadjafī, *Kitāb al-Kunā wa 'l-alḳāb*, i, Nadjaf 1956, 327-8; al-Mamaḳānī, *Kitāb Tanzīḥ al-maḳāl fī aḥwāl al-ridjāl*, iii, Nadjaf 1352/1933-4, 157; Āghā Buzurg Ṭihrānī, *al-Dharīʿa*, s.v.; idem, *Muṣaffā al-maḳāl fī muṣannifī ʿilm al-ridjāl*, Tehrān 1959, cols. 414-5; al-ʿĀmilī, *Aʿyān al-shīʿa*, vi, 28, xlvi, 136, n. 2556; al-Khwānsārī, *Rawḍāt al-djannāt*, lith. Tehrān 1306/1888-9, 602 (wrong pagination); Muḥammad ʿAlī Tabrīzī Khiyābānī, *Rayḥānat al-adab fī tarādjim al-maʿrūfīn bi 'l-kunya wa 'l-laḳab*, vi, Tabrīz n.d., 47-8; A. (B. SCARCIA AMORETTI)

IBN SHĀKIR [see AL-KUTUBĪ].

IBN AL-SHALMAGHĀNĪ [see MUḤAMMAD B. ʿALĪ AL-SHALMAGHĀNĪ].

IBN SHANABŪDH (SHANBŪDH, SHANNABŪDH), ABU 'L-ḤASAN MUḤAMMAD B. AḤMAD B. AYYŪB B. AL-ṢALT AL-BAGHDĀDĪ, widely travelled and learned

"reader" of the Ķur'ān and teacher of Ķur'ānic reading, died Ṣafar 328/November-December 939, introduced in the public prayer (*fi 'l-miḥrāb*) readings of Ibn Mas'ud, Ubay and others which varied from 'Uthmān's recension; for this, perhaps at the instigaion of his influential colleague Ibn Mudjāhid (whom he detested), he was brought to trial in 323/935 before a special court presided over by the vizier Ibn Muķla and with Ibn Mudjāhid also as a member; he at first in a confident and aggressive manner defended the variants which had provoked the charge. However, after he had been flogged on the vizier's orders he perforce ceased resisting, made a complete recantation and signed a document (*maḥḍar*) stating that for the future he would adhere to 'Uthmān's text as being the only valid one. After being discharged from the vizier's house, Ibn Shanabūdh had at first to seek safety outside Baghdād from the infuriated mob.

Bibliography: al-Ṣūlī, *Akhbār al-Rāḍī bi-'llāh wa 'l-Muttaķī li-'llāh*, ed. J. Heyworth-Dunne, Cairo 1935, 62-3; Fr. tr. by M. IBN SHARAF AL-ĶAYRAWĀNĪ, ABŪ 'ABD ALLĀH MUḤAMMAD B. SA'ĪD AL-DJUDHĀMĪ, writer and poet, born at Ķayrawān about 390/1000. He received his initiation into poetry under the direction of Abu 'l-Ḥasan al-Ķābisī and Abū 'Imrān al-Fāsī, into grammar under Muḥammad b. Dja'far al-Ķazzāz, and into belles-lettres under al-Ḥuṣrī [*q.v.*]; he probably studied also under Ibn Abi 'l-Ridjāl [*q.v*]. Although he was one-eyed, he succeeded in gaining admittance to the entourage of al-Mu'izz b. Bādīs [*q.v.*] and thus was on terms of familiarity with the best minds of the age, though not without making enemies and rivals; among these stands out the name of Ibn Rashīķ [*q.v.*], whose name is inseparable from that of Ibn Sharaf because the two men followed more or less parallel courses; their rivalry, slily maintained by al-Mu'izz, turned out in the end to be fruitful, for it stimulated not only an exchange of epigrams and epistles (which are today lost) but also the composition of several works which testify to the high degree of culture reached by the Ķayrawānīs at the beginning of the 5th/11th century. Besides this, Ibn Sharaf devoted himself to the habitual activity of court poets, composing verses in praise of the *amīr*, describing flowers and fruits, taking part in the literary gatherings which were held at the court, and replying on the spot to the slightest caprice of his master.

The Hilālī invasion [see HILĀL] obliged al-Mu'izz to take refuge in al-Mahdiyya in 447/1055, and he took the two rival poets with him. After a short stay with Tamīm b. al-Mu'izz, Ibn Sharaf went to Sicily and established himself at Mazara, where he was shortly joined by Ibn Rashīķ, with whom, it is said, he was reconciled. However, he did not stay long in Sicily but in 449/1057 embarked for Spain; after trying his luck at the courts of several of the *Mulūk al-Ṭawā'if* [*q.v.*], he settled at Berja, near Almeria, but his biographers state that he died at Seville, on 1 Muḥarram 460/11 November 1067.

As a court poet Ibn Sharaf is compared by Ibn Bassām (*Dhakhīra*, iv/1, 133) to Ibn Darrādj al-Ķasṭallī [*q.v.*], and his *dīwān*, which had been collected, must have been fairly extensive; the author himself had gathered, in his *Abkār al-afkār*, the verse or prose passages which he thought worth preservation, but all of these are lost, as are also his *Lumaḥ al-mulaḥ* (Ibn Diḥya, *Muṭrib*, 53v) and his masterpiece, which bore the title of *A'lām al-kalām*. Altogether there remain only the extracts preserved by Ibn Bassām, the verses gathered by al-Maymanī al-Radjakūtī (*al-Nutaf min shi'ray Ibn Rashīķ wa-zamīlih Ibn Sharaf*, Cairo 1343/1924, 90-115), a few historical passages of doubtful authenticity, and, finally, two fragments which probably formed part of the *A'lām al-kalām*: these last are two *ḥadīths* out of the twenty which the author declares that he had composed on the model of the *Maķāmāt* of al-Hamadhānī [*q.v.*]. In them he gives in rhymed prose a judgement on the Arab poets who went before him, and then gives in less mannered language a few lessons of literary criticism. This work, which was probably written in Spain, and hence between 449/1057 and 460/1067, is a characteristic specimen of the Ķayrawānī school of criticism. Its genuine interest has attracted the attention of philologists, who have devoted several studies to it: edition of the text by Ḥ. Ḥ. 'Abd al-Wahhāb in *al-Muķtabas*, iv (1911) and offprint Damascus 1329/1911, with title *Rasā'il al-intiķād* (text reproduced by M. Kurd 'Alī in his *Rasā'il al-bulaghā'*[3], Damascus 1365/1946, 302-44); ed. by 'Abd al-'Azīz al-Khāndjī, Cairo 1344/1926, with title *A'lām al-kalām*; ed. and French tr. by Ch. Pellat, Algiers 1953, under the title *Questions de critique littéraire*; Italian tr. by U. Rizzitano, *Ibn Šaraf al-Qayrawānī (m. 460/1067-8) e la sua* Risālah al-intiqād, in *RSO*, xxi/1 (1956), 51-72. There is no question of its being a *risāla*, but the problem of the title is resolved by the colophon, which has: *tammat al-maķāma al-ma'rūfa bi-masā'il al-intiķād*, if indeed it is a fact that the author gave a particular title to the two fragments preserved.

Bibliography: Ibn Bassām, *Dhakhīra*, iv/1, 133-86; Yāķūt, *Irshād*, vii, 96 ff. = *Udabā'*, xix, 37 ff.; Kutubī, *Fawāt*, ii, 204-5; Ibn Bashkuwāl, *Ṣila*, no. 1208; Suyūṭī, *Bughya*, 46; Ḥādjdjī Khalīfa, i, 145; Ibn Diḥya, *Muṭrib*, B.M. MS, fols. 52r-57v (Cairo and Khartoum edd., 1954, index); Ibn Nādjī, *Ma'ālim*, iii, 249-51; Ḥ. Ḥ. 'Abd al-Wahhāb, *Bisāṭ al-'aķīķ fi ḥaḍārat al-Ķayrawān wa-shā'irihā Ibn Rashīķ*, Tunis 1330/1911; F. Bustānī, *Dā'irat al-ma'ārif*, iii, 259-60. Maymanī's collection of verses may be supplemented from Nuwayrī, *Nihāya*, Ibn Diḥya, *Muṭrib*, Ibn Bassām, *Dhakhīra*, Ibn Luyyūn, *Lamḥ*, Ibn al-'Imād, *Kharīda*, 'Umarī, *Masālik al-abṣār*, etc. (a new collection is being prepared in Paris).

The son of the foregoing, Abu 'l-Faḍl Dja'far b. Muḥammad, was likewise a celebrated poet and prosewriter. Born at Ķayrawān in 444/1052-3, he emigrated with his father and passed the rest of his life in Spain, where he attained the rank of *wazīr* at Almería during the reign of Muḥammad al-Mu'taṣim (443/1051-484/1091), at whose court he passed a number of years. He died in 534/1139. Abu 'l-Faḍl was a man of wide culture and a facile talent in the customary genres: panegyric, description, gnomic poetry. He is the author of two collections of aphorisms and maxims in prose and verse, *Nudjḥ*

al-nuṣḥ and *Sirr al-birr*, and also an *urdjūza* on asceticism, but these are mostly lost; to the verses of poetry collected by al-Maymanī (*Nutaf*, 116-21, see above) may be added a few official letters and pieces of verse preserved by Ibn Bassām, iii (still in MS) and some of the anthologies quoted above.

A son of Abu 'l-Faḍl, Abū ʿAbd Allāh Muḥammad, is also quoted by Maķķarī, *Analectes*, index, as a gnomic poet.

Bibliography: Ḍabbī, *Bughya*, nos. 610 and 1557; Ibn Bashkuwāl, *Ṣila*, no. 295; Ibn Khāķān, *Ķalāʾid*, Cairo n.d., 263 ff.; Ibn Diḥya, *Muṭrib*, B.M. MS, fol. 54r; Marrākushī, *Muʿdjib*, Cairo 1324/1906, 50 (tr. Fagnan, 66); Maķķarī, *Analectes*, index; Dozy, *Recherches*³, i, 248 ff.; González Palencia, *Literatura*², 89-90; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 260-1; bibl. cited by Ch. Pellat in *Questions de critique* (see above), xx, n. 7.

(CH. PELLAT)

IBN SHARYA, ʿABĪD/ʿUBAYD AL-DJURHUMĪ, sage and antiquary, frequently cited as a relater of quasi-historical traditions. The form of his name is not certain. The manuscripts appear to vacillate between ʿAbīd and ʿUbayd. ʿUmayr occurs by mistake (Ibn al-Athīr, *Usd al-ghāba*, Būlāķ 1286, iii, 351; Ibn Ḥadjar, *Iṣāba*, Calcutta 1856-73, iii, 201). The form Sharya is confirmed by the metre (cf. O. Löfgren, *Ein Hamdānī-Fund*, *Uppsala Universitets Årsskrift*, vii (1935), 24; al-Hamdānī, *Iklīl*, ed. O. Löfgren, Uppsala 1954, 6). However, Ibn Ḥadjar advocates the pronunciation Shariyya. Sāriya, Sariyya, and Shubruma(?) also occur (Ibn ʿAsākir, *Taʾrīkh Dimashķ*; Yāķūt, *Udabāʾ*, v, 10; *Usd*).

Strong attempts have been made in recent years to defend the historical existence of Ibn Sharya (cf., for instance, N. Abbott, *Studies in Arabic literary papyri*, i, Chicago 1957, 9 ff.), but his historicity as a scholar and author remains entirely conjectural. According to the sources, Muʿāwiya called him to his court in order to hear him tell stories of the past. He died at the age of over 220, 240, or 300 years during the reign of ʿAbd al-Malik. In the first half of the 3rd/9th century, Abū Ḥātim al-Sidjistānī (*Muʿammarūn*, ed. Goldziher, *Abh. z. arab. Phil.*, ii, 40-3) knew him as a long-lived sage. Al-Djāḥiẓ (*Bukhalāʾ*, Cairo 1948, 40, trans. Pellat, 67, 337) already seems to refer to him as an authority on the great South Arabian past, and so does Ibn Hishām in the *Kitāb al-Tīdjān*, Ḥaydarābād 1347, 66, 209. Later in that century, Ibn Ķutayba (*Taʾwīl mukhtalif al-ḥadīth*, Cairo 1386/1966, 283, trans. Lecomte, Damascus 1964, 313) knew him as a genealogist, apparently in connexion with South Arabian history. The early historians usually do not mention him by name. Al-Masʿūdī (*Murūdj*, iv, 89) is inclined to discount his reports on South Arabian history as fiction.

He is credited with a collection of proverbs, which is not preserved (*Fihrist*, 89; al-Bakrī, *Faṣl al-maķāl*, Kharṭūm 1958; R. Sellheim, *Die klassisch-arabischen Sprichwörtersammlungen*, The Hague 1954, 45, 89, 149). His famous "Book of the kings and history of the past" (*Fihrist*, 89) was already quoted by al-Masʿūdī (*Murūdj*, iii, 173-5, 275 ff., iv, 89; A. v. Kremer, *Über die südarabische Sage*, Leipzig 1866, 46 ff.). According to a somewhat corrupt passage in Ibn Ḥadjar, *Iṣāba*, iii, 202, al-Hamdānī mentioned that in the 4th/10th century a great number of different recensions of the work were in circulation. One of those recensions has been preserved in an incomplete form. It has been published under the title of *Akhbār al-Yaman wa-ashʿāruhā wa-ansābuhā*, together with the *Kitāb al-Tīdjān*, Ḥaydarābād 1347, 311-487. The quotations in al-Masʿūdī are sufficiently similar to the published text (cf. *Murūdj*, iii, 275 ff. = 483 ff. of the ed.) to prove the general identity. The published text has later additions; it refers often to ʿAbd Allāh b. al-ʿAbbās as a cousin of Muʿāwiya; it has an allusion to the expected South Arabian Mahdī (478, cf. also the verses quoted in Nashwān, *Shams al-ʿulūm*, GMS, xxiv, 103) and one to the Berber ʿAlid (which may be a later, Fāṭimid-period addition, 323); and it mentions the Daylam and Turks (476).

The available data would seem to indicate that the use of the figure of Ibn Sharya as an historical narrator does not antedate the early 3rd/9th century, after the figure of the sage had become securely established. The author of the "Book of kings" may not have been a South Arabian patriot, but rather some Baghdādī antiquarian who tried to profit from the fashionable interest in South Arabian antiquity. Whether the work contains many reflexions of genuine South Arabian folklore, as v. Kremer maintained, is another question, though great scepticism would seem to be indicated.

Bibliography: In addition to the references in the text, cf. also, for instance, al-Djāḥiẓ, *Bayān*, Cairo 1367/1948, i, 361; idem, *Ḥayawān*, Cairo 1366/1947, i, 365; idem, *Tarbīʿ*, ed. Pellat, Damascus 1955, 37, (21); Ibn Ķutayba, *ʿUyūn*, Cairo 1346/1928, ii, 305; *Aghānī*, xxi, 191, 206; Masʿūdī, *Tanbīh*, 82; Usāma b. Munķidh, *Lubāb*, Cairo 1354/1935, 123 f.; Ibn ʿAsākir, *Taʾrīkh Dimashķ*, ms. Topkapusaray, Ahmet III, 2887, vol. iii, 299b-300a; al-Ḥarīrī, *Durrat al-ghawwāṣ*, ed. Thorbecke, 55 f.; Ibn Ṣaṣrā, ed. Brinner, Berkeley and Los Angeles 1963, i, 137 f., ii, 101 f.; ʿAbd al-Ķādir al-Baghdādī, *Khizānat al-adab*, i, 323. Cf. also Goldziher, *Muh. St.*, i, 97, 182 f., ii, 171, 203 f.; Brockelmann, I, 63 f., S I, 100; Sezgin, i, 260.

(F. ROSENTHAL)

IBN SHAYKH ḤIṬṬĪN [see AL-DIMASHĶĪ, SHAMS AL-DĪN].

IBN SHIBL (or AL-SHIBLĪ), ABŪ ʿALĪ AL-ḤUSAYN B. ʿABD ALLĀH B. YŪSUF . . . AL-BAGHDĀDĪ, according to Ibn Abī Uṣaybiʿa (d. 655/1257), but MUḤAMMAD B. AL-ḤASAN B. ʿABD ALLĀH according to al-Kutubī (and according to Kaḥḥāla his genealogy is continued thus: B. AḤMAD B. SHIBL B. USĀMA AL-SHĀMĪ) and, according to al-Ṣafadī, Ḥādjdjī Khalīfa and, later, al-Ziriklī, MUḤAMMAD B. AL-ḤUSAYN B. ʿABD ALLĀH B. AḤMAD B. YŪSUF B. SHIBL, theoretician and practitioner in medicine, and poet; he lived during the reigns of al-Ķādir bi-'llāh and of al-Ķāʾim bi-amr Allāh (381-468/991-1075). The exact date of his birth is not known, though Kaḥḥāla puts it at 401/1010-11; he was educated in Baghdād, to which his family belonged, and died there in 473/1080-1, according to al-Ṣafadī, al-Kutubī, Ḥādjdjī Khalīfa, al-Ziriklī and Kaḥḥāla, or in 474/1081-2, according to Ibn Abī Uṣaybiʿa, and was buried at Bāb al-Ḥarb. The sources, notably the *ʿUyūn al-anbāʾ*, contain little information on his medical career, merely mentioning that he continued in it until an advanced age; but they contain more details on the *dīwān* which he wrote. Among the verses which they quote, in particular two famous *ķaṣīdas* reproduced in full by Ibn Abī Uṣaybiʿa, the attribution of some is uncertain (Ibn Sīnā and al-Maʿarrī are mentioned as possible authors). They seem to display, together with a pessimistic view of life similar to that of Ibn Sīnā and ʿUmar Khayyām, a certain mechanistic and determinist conception of the universe seen as

independent of the divine will. This could explain some suspicions of atheism, or at least of doubtful orthodoxy, which were attached to this writer, whose philosophico-scientific scepticism was typical of his period.

Bibliography: Ibn Abī Uṣaybiʿa, *ʿUyūn al-anbāʾ fī ṭabaḳāt al-aṭibbāʾ*, ed. A. Müller, i, Göttingen 1884, 248-52; al-Kutubī, *Fawāt al-wafayāt*, ii, Cairo Radjab 1283/1866, 244-7; al-Ṣafadī, *Wāfī*, iii, Damascus 1953, 11-16, n. 872; Ḥādjdjī Khalīfa, i, column 766; Kaḥḥāla, ix, Damascus 1959, 196-7; Ziriklī, *Aʿlām*², ii, 332. An important part of Ibn Shibl's poetry is to be found in Ḳifṭī, *al-Muḥammadūn min al-shuʿarāʾ*, Paris MS. 3335, fols. 91a-101b (an ed. by M. Mammeri is to appear).

(B. Scarcia Amoretti)

IBN AL-SHIḤNA, Muḥibb al-Dīn Abu 'l-Faḍl Muḥammad, Ḥanafī chief *ḳāḍī* in Cairo between 866/1463 and 876/1471, died in 890/1485. He belonged to an important family of Aleppo, whose ancestor was a freedman called Maḥmūd al-Khutluḳī or b. al-Khutlū who was *shiḥna* of Aleppo in the time of the Ayyūbid ruler al-Malik al-ʿAzīz in about 616/1219. His father was *ḳāḍī* of Aleppo at the beginning of the 9th/15th century, and is remembered for having founded a *waḳf* for the benefit of the mosque of the citadel of Aleppo, commemorated by an inscription which still exists, dated 811/1408. He himself wrote several works, the most important of which is a description of Aleppo and northern Syria entitled *al-Durr al-muntakhab li-taʾrīkh Ḥalab*, a completion of the earlier work by (ʿIzz al-Dīn) Ibn Shaddād [*q.v.*]. J. Sauvaget has pointed out that doubts about the authorship of this work are unfounded, as the author mentions the *waḳf* founded by his father.

Bibliography: Brockelmann, II, 53, S II, 40; J. Sauvaget, "*Les perles choisies*" *d'Ibn ach-Chichna*, Beirut 1933, introduction; E. Herzfeld, *Matériaux pour un Corpus inscriptionum arabicarum*, 2nd part: Syrie du nord, *Inscriptions et monuments d'Alep*, Cairo 1955, 130-1.

(D. Sourdel)

IBN SHUBRUMA, ʿAbd Allāh b. Shubruma b. al-Ṭufayl al-Ḍabbī, traditionist, jurist and *ḳāḍī* of Kūfa, and poet and dilettante on occasion. He died in 144/761. His father (or grandfather), Shubruma, was a Companion of the Prophet (*Iṣāba*, ii, 135) who seems to have been a member of the entourage of Ibn Masʿūd [*q.v.*], where there often circulated maxims hostile to "the prince" (who must certainly in the context have been the caliph ʿUthmān). This fact explains the low opinion held of Shubruma b. al-Ṭufayl in later Islamic tradition. His son, ʿAbd Allāh (or his descendant, as the difference in time between the two would seem to indicate), was one of those prudent Kūfans, more adapted to a new era, who made great efforts to achieve a compromise with the new power of the ʿAbbāsids. He had access over matters great and small to the ʿAbbāsid prince, ʿĪsā b. Mūsā. He was for long recognized as an authentic transmitter of the important Kūfans, in particular of Abu 'l-Ṭufayl ʿĀmir b. Wāthila, the companion of Ḥudhayfa b. al-Yamān, and of the Shīʿī ʿAbd Allāh b. al-Shaddād b. al-Hād (*Tahdhīb*, viii, 251; Nawawī, ed. Wüstenfeld, 349).

He did not hesitate to quote in law from Ibn Abī Laylā (*Fihrist*, 202; *Tahdhīb*, ix, 301), whose authority was soon contested by the specialists (Yaḥyā b. Maʿīn). Tradition tends to minimize the importance of Ibn Shubruma: it insists that he was only a poet, wit and rhetorician; and only a few of his *ḥadīths* are reported, it being considered that he never had any contact with the neighbouring town of Baṣra, and doubts are cast on the authenticity of the transmission which he claimed to hold from ʿAbd Allāh b. Shaddād. The Ḥanbalīs and the Medinans were more indulgent towards him than the ruling orthodox (*e.g.* ʿAbd Allāh b. Mubārak, who taught from 141/758, and especially Ibn Saʿd, who mocks Ibn Shubruma slightly in the portrait he gives of him).

Bibliography: Ibn Saʿd, *Ṭabaḳāt*, Beirut ed., xxiii, 350; Ibn Ḥadjar, *Tahdhīb*, v, 250; Djāḥiẓ, *Bayān*, iii, 146 (where he is presented as an ascetic); Ibn al-ʿImād, *Shadharāt*, i, 210; Wakīʿ, *Akhbār al-ḳuḍāt*, see index, iv, 15.

(J.-C. Vadet)

IBN SHUHAYD, Abū ʿĀmir Aḥmad b. Abī Marwān ʿAbd al-Malik b. Abī ʿUmar Aḥmad b. ʿAbd al-Malik b. ʿUmar b. Muḥammad b. ʿĪsā b. Shuhayd al-Ashdjaʿī, Andalusian poet, man of letters and vizier, born at Cordova, in 382/992, of an Arab family whose ancestor Shuhayd had settled in Spain before 162/778 and whose members included important officials in the Umayyad government. ʿĪsā b. Shuhayd had been a minister during the reign of Muḥammad I (238-73/852-86); Abū ʿĀmir's great-grandfather had been appointed vizier in 317/929, during the reign of ʿAbd al-Raḥmān III; his grandfather, Abū ʿUmar, had been the first dignitary to receive, in 327/939, the title of *dhu 'l-wizāratayn*; his father, Abū Marwān, was an important official and al-Manṣūr had even appointed him vizier. Abū ʿĀmir was therefore destined to hold similar offices, and on his father's death, in 393/1003, he was even to inherit the honorific title of *wazīr* and to incur heavy responsibilities while still very young, since he was the last representative of the family. However, he was prevented from occupying the offices which, by his descent, he might have expected through the unrest which very soon occurred in Cordova, the fall of the ʿĀmirids, who were his protectors, and the overthrow of the Umayyads, and was thus led to devote himself wholeheartedly to literature.

He received in his youth the education usually given to young members of the aristocracy, learning a great deal about poetry and *adab*, some history and *fiḳh*, perhaps also a little medicine and philosophy, and prepared himself to fill his position as government official and courtier. Certainly, when the *fitna* broke out in 399/1008, he was attached to the court, but the title of *ṣāḥib al-shurṭa* which is attributed to him seems to have been a purely honorific one. A legitimist to a lesser degree than Ibn Ḥazm [*q.v.*], he refused to leave the capital during the years of unrest, but he certainly seems to have had no scruples about making approaches to the Ḥammūdids [*q.v.*], who were established at Cordova in 406/1016; probably his situation was not always very secure, and Ibn Khāḳān even claims, as a result of an unjustifiable interpretation of an alleged *djahdariyya*, that he was for a time in prison. The accession of al-Mustaẓhir, in 414/1023, seemed to put an end to his troubles, and indeed the new caliph did appoint him as *wazīr* in company, notably, with Ibn Ḥazm, but this ministry lasted for only forty-seven days; while Ibn Ḥazm was imprisoned, Ibn Shuhayd succeeded in fleeing and took refuge with the Ḥammūdid Yaḥyā b. ʿAlī at Malaga. He probably returned to Cordova after the flight of al-Mustakfī, in 416/1025, and did not again leave his native town. After the final attempt to restore the Umayyads and the accession of al-Muʿtadd, in 418-1027, he had

an opportunity to play a political rôle under the new caliph; in particular he drew up, against the Cordovans who were discontented because of the extortions of the minister Ḥakam b. Saʿīd, a violent manifesto which he himself read in front of the assembled notables. After the abdication of al-Muʿtadd (422/1031), Ibn Shuhayd was able to live at the court of the Djahwarids, and his funeral prayer was recited by Abu 'l-Ḥazm himself; he was afflicted by hemiplegia and died, after a period of suffering which inspired some of his finest poetry, on 29 Djumādā I 426/11 April 1035, while still in the prime of life.

Ibn Shuhayd is generally thought of as a libertine who led a dissolute life. It is true that his conduct was not of the standard demanded by the puritans of his time, but he seems to have been slandered by the historians and biographers, who accuse him in particular of having sacrificed his salvation to futile pleasures and of having preferred *hazl* to *djidd*, that is, to have written nothing on religion. Actually the dominant feature of his character was an inordinate pride, which is not, however, too much to be regretted since it gave rise to a small masterpiece, the *Risālat al-Tawābiʿ wa 'l-zawābiʿ* (the spirits of inspiration [*tābiʿa*, pl. *tawābiʿ*] and the *zawābiʿ*, pl. of *zawbaʿa*—the name of a genie—given in this form in order to make the rhyme with the preceding word). The author of this article believes that he has demonstrated the *Risāla* to be a work of Ibn Shuhayd's youth, written before 401/1011 (although some passages may have been added later), since it is dedicated to Abū Bakr Ibn Ḥazm, who died during the epidemic of plague which occurred in that year (cf. E. Lévi-Provençal, *Hist. Esp. Mus.*, ii, 64, n. 3). It consists essentially of school exercises in verse and prose which Ibn Shuhayd had written in imitation of the great Arabic poets and prose writers, with the private conviction that he could equal, if not surpass, them all. The intrinsic quality of these pieces is open to argument, but the originality of the *Risāla* lies in the manner in which they are presented. Basically the work introduces Ibn Shuhayd's inspiring genius, who leads him into the valley of the genies (and not to Paradise), where he meets the *tawābiʿ* of the great figures of the past. In the form in which it has survived (all that exists is an extract fortunately preserved by Ibn Bassām), it may be divided into a prologue and four scenes: *Prologue.* Ibn Shuhayd mentions the remarks of Abū Bakr Ibn Ḥazm on his precocious talent, proclaims his taste for literature, and admits that one of his first poetical attempts—a lament for the death of the object of a juvenile love, already somewhat forgotten—stopped short. There then appears to him a *djinn* named Zuhayr b. Numayr, of the tribe of the Ashdjaʿ (*Ashdjaʿ al-djinn*, not *Ashdjaʿ al-ins*), who helps him to finish his poem and offers him his help, revealing to him the formula to be used to make him appear. *First scene.* Ibn Shuhayd asks Zuhayr to let him visit the valley in which the *tawābiʿ* live and thus meet the inspiring geniuses of Imruʾ al-Ḳays of Ṭarafa, of Ḳays b. al-Khaṭīm, then of Abū Tammām, of al-Buḥturī, of Abū Nuwās and finally of al-Mutanabbī. The *tābiʿa* of each of them is summoned by Zuhayr by means of a characteristic word or verse from the work of the poet concerned; after some preliminaries it invites Ibn Shuhayd to recite some verses of his own composition and finally accords him its *idjāza*, a kind of *dignus intrare*. The *tābiʿa* in question is always described by the characteristics, easily imagined by Ibn Shuhayd, of the poet which it represents. *Second scene.* Abū ʿĀmir expresses the desire to meet the inspiring geniuses of the prose writers; the *tābiʿas* of al-Djāḥiẓ and of ʿAbd al-Ḥamīd reproach him for using rhyming prose, but he defends himself on the grounds that his compatriots speak a barbarous language, then recites some prose passages which he himself has written and, after some delay, receives the approbation of the two prose writers who describe him as *shāʿir khaṭīb*. *Third scene.* Ibn Shuhayd is present at a literary meeting of the *djinns* during which various compositions are examined. *Fourth scene.* Abū ʿĀmir is asked to act as judge of a group of poetry-writing asses and mules. He then meets a goose which is the *tābiʿa* of one of his contemporaries, perhaps Ibn al-Ḥannāt [*q.v.*], and it is with various pieces of literary advice that the surviving text ends.

In addition the biographers attribute to Ibn Shuhayd some prose works which are to be found in part in the *Risālat al-Tawābiʿ wa 'l-zawābiʿ*, a *Ḥānūt ʿaṭṭār* and a *K. Kashf al-dakk wa-īḍāḥ al-shakk*, of which nothing is known. But Ibn Bassām inserted in the *Dhakhīra* a certain number of *risālas* which are not without interest, since they reveal Ibn Shuhayd's constant concern to define *bayān*, *i.e.*, ultimately literary talent, in order to be able to communicate it to the future *kuttāb* who form the élite of the men of letters. Four main ideas are apparent in these texts: (1) literary talent does not consist of craftsmanship and slavish imitation, but of natural gifts supplemented by a suitable proportion of *gharīb* and of grammar; (2) it is God alone who teaches *bayān*; (3) beauty is indefinable and inexplicable, for it derives precisely from this innate talent and is composed of subtle and intangible elements; (4) in short, *bayān* alone is the mark of poetry. In this connexion Ibn Shuhayd distinguishes three categories of men of letters, but more precisely of poets: those who have original ideas but not much inspiration; those who are able to improvise without difficulty long poems of great worth; those who succeed by using the resources of technique. From all the evidence he classes himself in the second category.

Ibn Shuhayd's rôle as a literary critic is therefore not a negligible one, particularly since he has a feeling for the evolution of Arabic literature in prose as well as verse; but the very percipient observations of E. García Gómez, who, in his *Poesía arábigoandaluza*, Madrid 1952, 60-5, and in the introduction to his translation of the *Ṭawḳ al-ḥamāma*, 6-9, classes Abū ʿĀmir and Ibn Ḥazm as the leaders of a poetic school with a tendency to create a specifically Andalusian poetry, seem in the last analysis to be an exaggeration, since Ibn Ḥazm was hardly ever an innovator and Ibn Shuhayd's only ambition was to surpass his models with the aid of inspiration and no longer of craftsmanship. Some of his verses are indeed of high quality (for example the theme of the *dabīb*) and he excels in description; a writer of great sensibility, he brings to the *ghazal* great finesse, while in his panegyrics he maintains the dignity and nobility suitable to his rank.

In short, although Abū ʿĀmir may be considered as an eminent representative of classical poetry (for he did not stoop to composing *muwashshaḥāt*) and literary prose in Spain at the beginning of the 5th/11th century, his chief merit resides in the form which he had devised to present his youthful works, the *Risālat al-Tawābiʿ wa 'l-zawābiʿ*.

Bibliography: The notice in the *Matīn* of Ibn Ḥayyān was extensively used by Ibn Bassām who, in his *Dhakhīra* (i/1, 161-289 and *passim*), provides the fullest biographical detail and reproduces the

major part of the prose or verse texts which have survived, in particular long extracts from the *Risālat al-Tawābiʿ wa 'l-zawābiʿ*, which have been published separately, with a long introduction, by B. al-Bustānī, Beirut 1951; Ibn Khāḳān, in the *Ḳalāʾid* and the *Maṭmaḥ*, gives extracts especially from the poems, with personal commentaries which should be read with caution; biographical details are found also in Ḍabbī, *Bughya*; Yāḳūt, *Udabāʾ*, iii, 220-3; Ibn Saʿīd, *Mughrib*, 78-85; Ibn Khallikān; Ibn Faḍl Allāh al-ʿUmarī, *Masālik*, xvii, MS Paris 2327, 26v.-31r.; Suyūṭī, *Bughya*; extracts from the works of Ibn Shuhayd are scattered throughout the works mentioned above, as well as in Thaʿālibī, *Yatīma*, ii, 35-50 (which proves that Ibn Shuhayd had quickly become famous also throughout the East); ʿImād al-Dīn al-Iṣfahānī, *Kharīda*, MS Paris 3331, 201r.-204r.; Ibn al-Khaṭīb, *Aʿmāl*; Maḳḳarī, *Analectes*. Among the modern works should be mentioned: A. Ḍayf, *Balāghat al-ʿArab fī 'l-Andalus*, Cairo 1924, 43-59; H. Pérès, *Poésie andalouse, passim*; Z. Mubārak, *La prose arabe au IVᵉ siècle*, Paris 1931, 233-40 (= *al-Nathr al-fannī*, Cairo 1934, 258-60); the most detailed biographies are those of B. al-Bustānī, in his introduction to the *Risālat al-Tawābiʿ wa 'l-zawābiʿ* and in the *Dāʾirat al-maʿārif*, iii, 269-74; of J. Dickie, *Ibn Šuhayd. A biographical and critical study*, in *al-Andalus*, xxix/2 (1964), 234-310, with a very full bibliography; of Ch. Pellat, *Ibn Shuhayd, ḥayātuh wa-āthāruh*, ʿAmmān n.d. [1966]. An attempt to reconstruct the poetic works has been made by Ch. Pellat, *Dīwān Ibn Shuhayd al-Andalusī*, Beirut 1963. (Ch. Pellat)

IBN AL-SĪD [see AL-BATALYAWSĪ].

IBN SĪDA (Sīduh), Abu 'l-Ḥasan ʿAlī b. Ismāʿīl, or Abu 'l-Ḥasan ʿAlī b. Aḥmad b. Ismāʿīl, Andalusian philologist and lexicographer, born in Murcia, died at the age of about 60 on Sunday 25 Rabīʿ II 458/26 March 1066. He compiled two important dictionaries: *al-Mukhaṣṣaṣ* and *al-Muḥkam*.

Ibn Sīda was blind, as was his father, so that his life was not very active. It was entirely devoted to philology and lexicography, disciplines which had probably been traditionally cultivated in his family. It was in fact from his father that he received his early education. Later, he attended the lectures of the famous Ṣāʿid al-Baghdādī [*q.v.*], who was himself a pupil of Abū ʿAlī al-Fārisī and of al-Sīrāfī. He then received lessons from Abū ʿAmr al-Ṭalamankī, to whom, it is stated, he recited from memory the *Gharīb al-muṣannaf* of Abū ʿUbayd al-Harawī. From then on Ibn Sīda's life is well documented.

At an unknown date, he left Murcia to settle at Denia, where he found in al-Muwaffaḳ an excellent patron to whom he dedicated *al-Mukhaṣṣaṣ* and *al-Muḥkam*. The introduction to the latter work shows however an author who was bitter and not entirely satisfied with his lot. On the death of al-Muwaffaḳ, therefore, Ibn Sīda chose to flee, but he returned soon afterwards to Denia and the patronage of al-Muwaffaḳ's successor, Iḳbāl al-Dawla.

Among Ibn Sīda's many works (*Sharḥ iṣlāḥ al-manṭiḳ*; *al-Anīḳ fī sharḥ al-ḥamāsa*; *al-ʿĀlam fi 'l-lugha*; *al-ʿĀlim wa 'l-mutaʿallim*; *al-Wāfī fī ʿilm aḥkām al-ḳawāfī*; *Shādhdh al-lugha*; *al-ʿAwīṣ*), only *al-Mukhaṣṣaṣ* and *al-Muḥkam* survive. Dictionaries based on other dictionaries which display not the slightest specifically Spanish feature, these two works differ from each other less in their content, drawn from earlier works, than in their arrangement. *Al-Muḥkam* is a classical type of dictionary; *al-Mukhaṣṣaṣ*, devoted to the search for the precise term, is rather an analogical dictionary compiled according to the plan of *al-Gharīb al-muṣannaf*.

Bibliography: Ḍabbī, *Bughya*, ed. F. Codera, Madrid 1885, 405, no. 1205 (does not mention any sources); Ibn Bashkuwāl, *Ṣila*, ed. F. Codera, Madrid 1883, 410, no. 889; Ṣāʿid al-Andalusī, *Ṭabaḳāt al-umam*, tr. R. Blachère, 142; Suyūṭī, *Bughya*, Cairo 1326, 327; Ḥumaydī, *Djadhwa*, ed. al-Ṭandjī, Cairo, 293; Ibn Khallikān, *Wafayāt*, Cairo ed. 1310, ii, 25; Yāḳūt, *Udabāʾ*, xii, 231-5 (quotes Ibn Bashkuwāl and al-Ḥumyadī); Ṣafadī, *Nakt al-himyān*, 204 (quotes al-Ḥumyadī and Yāḳūt); Ibn Khāḳān, *Maṭmaḥ*, 60 (does not mention his sources); introd. to *al-Mukhaṣṣaṣ* and *al-Muḥkam*; M. Talbi, *al-Mukhaṣṣaṣ d'Ibn Sīda, étude, index*, Tunis 1956, 5-12; J. A. Haywood, *Ibn Sīda (d. 458/1066). The greatest Andalusian lexicographer*, in *Actas del Primer congreso de estudios árabes y islámicos*, Cordova 1962; D. Cabanelas Rodriguez, *Ibn Sīda de Murcia, el mayor lexicógrafo de al-Andalus*, Granada 1966; Brockelmann, I, 308, 691, S I, 542. (M. Talbi)

IBN AL-SIKKĪT, Abū Yūsuf Yaʿḳūb b. Isḥāḳ, a celebrated Arabic philologian and lexicographer, came from a family who were natives of Dawraḳ, in Khūzistān, but apparently he was born in Baghdād in about 186/802. His father, nicknamed al-Sikkīt (the Taciturn), is reputed to have been an expert in poetry and lexicography; it was he who started his son's education, which was later continued under the direction of Abū ʿAmr al-Shaybānī, al-Farrāʾ, Ibn al-Aʿrābī and other famous teachers; like many of his contemporaries, he went to live for a time among the Bedouin in order to perfect his knowledge of Arabic. After teaching at the Darb al-Ḳanṭara, in Baghdād, he turned to instruction at a higher level and dictated the most important of his works to his pupils. Entrusted by al-Mutawakkil with the education of his sons al-Muʿtazz and al-Muʾayyad, he came to be on familiar terms with the caliph, but his attachment to the ʿAlids, which he was imprudent enough to display in the presence of al-Mutawakkil, brought about his fall; trampled underfoot by the Turkish soldiers of the guard (it is even said that his tongue was torn out), he died at the age of 58, on 5 Radjab 244/17 October 858 (but other dates, 243, 245 and 246, are also given).

In grammar, Ibn al-Sikkīt would belong to the Kūfa school, but he cannot be regarded as an eminent grammarian, while the lexicographical works and commentaries that have won him fame would connect him rather with the Baṣra school, for he underwent the influence of the celebrated masters of that town, al-Aṣmaʿī, Abū ʿUbayda, Abū Zayd al-Anṣārī; in reality, he represents the syncretist tendency characteristic of the Baghdād school.

A specialist in lexicography and Arabic poetry, Ibn al-Sikkīt left, firstly, about twenty works, the most important of which appear to be the *Kitāb Iṣlāḥ al-Manṭiḳ* (ed. Shākir and Hārūn, Cairo 1368/1949; cf. *Oriens*, iii (1950), 325 ff.) and the *Kitāb al-Alfāẓ*, ed. Cheikho, Beirut 1897 (comm. of al-Khaṭīb al-Tabrīzī, *Kanz al-ḥuffāẓ*, ed. Cheikho, Beirut 1895-8); in addition, Haffner published the *Kitāb al-Ḳalb wa 'l-ibdāl* (in *Texte zur arabischen Lexicographie*, Leipzig 1905, 3-65) and the *Kitāb al-Aḍdād* (in *Drei Quellenwerke über die Aḍdād*, Beirut 1913). Incidentally, in the recension of the old *dīwāns*, he holds chronologically an intermediate position between

on the one hand al-Aṣmaʿī, Abū ʿUbayda and some others who initiated the first work of methodical arrangement, and on the other hand al-Sukkarī [*q.v.*] who completed the process. It is for this reason that the *Fihrist* (i, 157-8) lists some thirty ancient poets whose *dīwān* was collected and commented on by Ibn al-Sikkīt, with a care which in general compels the respect of critics. Only a few of his works have survived: those on al-Khansāʾ (see Cheikho's ed. of the *dīwān* of this poetess, Beirut 1896); on ʿUrwa b. al-Ward (see Nöldeke, *Die Gedichte des ʿUrwa ibn Alward*, Göttingen 1883); on Ḳays b. al-Khaṭīm (ed. Th. Kowalski, Leipzig 1914); and on al-Ḥuṭayʾa (ed. N. A. Ṭāhā and M. Ḥalabī, Cairo 1958).

Bibliography: *Fihrist*, i, 72, 157-8 (Cairo ed. 107, 224-5); al-Anbārī, *Nuzha*, ed. A. Amer, 109-11; Zubaydī, *Ṭabaḳāt*, in *RSO*, viii; Ibn Khayr al-Ishbīlī, *Fahrasa*, 382; Yāḳūt, *Udabāʾ*, xx, 50-2; Ibn Khallikān, Cairo 1310, ii, 309; Suyūṭī, *Bughya*, 418; Flügel, *Die grammatischen Schulen der Araber*, Leipzig 1862, 159; M. Ben Cheneb, *Etude sur la fahrasa* . . ., 433, § 237; R. Blachère, *HLA*, i, 113; M. Makhzūmī, *Madrasat al-Kūfa*, Baghdād 1374/1955, 155; S. A. Ahmedali, *Ibn as-Sikkīt*, Lahore n.d.; idem, in *ZDMG*, xc (1936), 201-8; R. Sellheim, *Die klassisch-arabischen Sprichwörtersammlungen*, The Hague 1954, 112 and index; H. Fleisch, *Traité de philologie arabe*, i, Beirut 1961, index; Brockelmann, I², 121, S I, 180.

(ED.)

IBN SĪNĀ, ABŪ ʿALĪ AL-ḤUSAYN B. ʿABD ALLĀH B. SĪNĀ, known in the West as AVICENNA. He followed the encyclopaedic conception of the sciences that had been traditional since the time of the Greek Sages in uniting philosophy with the study of nature and in seeing the perfection of man as lying in both knowledge and action. He was also as illustrious a physician as he was a philosopher [see ḤIKMA].

Life. His life is known to us from authoritative sources. An autobiography covers his first thirty years, and the rest are documented by his disciple al-Djuzadjānī, who was also his secretary and his friend.

He was born in 370/980 in Afshana, his mother's home, near Bukhārā. His native language was Persian. His father, an official of the Sāmānid administration, had him very carefully educated at Bukhārā. His father and his brother were influenced by Ismāʿīlī propaganda; he was certainly acquainted with its tenets, but refused to adopt them. His intellectual independence was served by an extraordinary intelligence and memory, which allowed him to overtake his teachers at the age of fourteen.

It was he, we are told, who explained logic to his master al-Nātilī. He had no teacher in the natural sciences or in medicine; in fact, famous physicians were working under his direction when he was only sixteen. He did, however, find difficulty in understanding Aristotle's *Metaphysics*, which he grasped only with the help of al-Fārābī's commentary. Having cured the *amīr* of Khurāsān of a severe illness, he was allowed to make use of the splendid library of the Sāmānid princes. At the age of eighteen he had mastered all the then known sciences. His subsequent progress was due only to his personal judgment.

His training through contact with life was at least equal to his development in intellectual speculation. At the age of twenty-one he wrote his first philosophical book. The following year, however, the death of his father forced him to enter the administration in order to earn his living. His judgment was swiftly appreciated. Having consulted him on medical matters, the princes had recourse to him also in matters of politics. He was a minister several times, his advice being always listened to; but he became an object of envy, sometimes persecuted by his enemies and sometimes coveted by princes opposing those to whom he wished to remain loyal. He took flight and was obliged to hide on several occasions, earning his living by medical consultations. He was imprisoned, escaped, lived for fourteen years in relative peace at the court of Iṣfahān and died at Hamadān, during an expedition of the prince ʿAlāʾ al-Dawla, in 428/1037. He was buried there; and a monument was erected to him to celebrate the (*hidjrī*) millenary of his birth.

If his works are to be understood, they should not be thought of as those of a philosopher who lived in his books. He was occupied all day by affairs of state, and he laboured by night on his great works, which were written with astonishing rapidity. He was never safe, and was frequently compelled to move; he would write on horseback, and sometimes in prison, his only resource for reference being his memory. It has been found surprising that he differs from Aristotle in his works: but he quoted him without re-reading him, and, above all, his independence of mind inclined him to present his own personally worked out thought, rather than to repeat the works of another. Besides, his personal training was different. He was a man who lived in touch with the concrete, constantly faced with difficulties, and a great physician who dealt with specific cases. Aristotle's *Logic* seemed to him insufficient, because it could not be applied in a way that was sufficiently close to life. Many recent controversies have been aroused since the study of his works has increased, especially at the time of his millenary, but the most plausible view of his personality is still the following: he is a scientific man, who attempts to bring the Greek theories to the level of that which needs to be expressed by the study of the concrete, when apprehended by a great mind.

The secret of his evolution, however, will remain concealed from us as long as we do not possess such important works as the *Kitāb al-Inṣāf*, the "Book of Impartial Judgment", which investigated 28,000 questions, and his "Eastern Philosophy", of which we have only a fragment.

Works. The corpus of Ibn Sīnā's works that has come down to us is considerable, but incomplete. To the many questions that were put to him he replied hastily, without always taking care to keep his texts. Al-Djuzadjānī has preserved several of these; others have been transmitted with different titles, others lost. The manuscript of the *Inṣāf* disappeared at the sack of Iṣfahān, in his own lifetime. The fundamental bibliography is that which al-Djuzadjānī included in his biography, but it is not exhaustive. G. C. Anawati lists a total of 276 works, including texts noted as doubtful and some apocryphal works, in his bibliography of 1950. Mahdavi, in 1954, lists 131 authentic, and 110 doubtful works. Ibn Sīnā was known primarily as a philosopher and a physician, but he contributed also to the advancement of all the sciences that were accessible in his day: natural history, physics, chemistry, astronomy, mathematics, music. Economics and politics benefited from his experience as a statesman. Moral and religious questions (not necessarily pertaining to mysticism), Ḳurʾānic exegesis, statements on Ṣūfī doctrine and behaviour produced minor writings. He wrote poetry for instructional purposes, for he versified epitomes of logic and medicine, but he had also the abilities

of a true poet, clothing his philosophical doctrine in images, both in verse (as in his poem on the soul) and in prose, in symbolic narratives whose meaning has given rise to controversy [see ḤAYY B. YAḲẒĀN].

Medicine is the subject of separate works; but natural history and mathematics are thought of as parts of philosophy. Thus, his principal treatise on these sciences is included in the great *Kitāb al-S̲h̲ifā'*, "Book of Healing [of the Soul]", in the same way as that on Metaphysics, while the famous *Ḳānūn fi 'l-ṭibb*, "Canon of Medicine", is a separate work.

The *Ḳānūn* appears to have formed a more consciously coherent whole than the philosophical works. Because it constituted a monumental unity, which maintained its authority until modern times when experimental science began, and because it still remained more accessible than Hippocrates and Galen, it served as a basis for seven centuries of medical teaching and practice. Even today it is still possible to derive useful information from it, for Dr. ʿAbd Allāh Ahmadieh, a clinician of Tehran, has studied the therapeutics of Avicenna and is said to use them with good results, particularly in treating rheumatism.

The *Ḳānūn* is the clear and ordered "Summa" of all the medical knowledge of Ibn Sīnā's time, augmented from his own observations. It is divided into five books. The first contains generalities concerning the human body, sickness, health and general treatment and therapeutics (French translation of the treatise on Anatomy by P. de Koning, 1905; adaptation giving an incomplete résumé of the first book, in English, by Cameron Grüner, 1930). The second contains the Materia Medica and the Pharmacology of herbs; the page on experimentation in medicine (115, of the Rome 1593 edition) quoted in the Introduction to the French translation of the *Is̲h̲ārāt*, 58, is to be found there. This passage sets out the three methods—agreement, difference and concomitant variations—that are usually regarded as characteristic of modern science. The third book deals with special pathology, studied by organs, or rather by systems (German translation of the treatise on diseases of the eyes, by Hirschberg and Lippert, 1902). The fourth book opens with the famous treatise on fevers; then follow the treatise on signs, symptoms, diagnostics and prognostics, minor surgery, tumours, wounds, fractures and bites, and that on poisons. The fifth book contains the pharmacopoeia.

Several treatises take up in isolation a number of the data in the *Ḳānūn* and deal with particular points. Some are very well-known: their smaller size assured them of a wide circulation. Among the most widely diffused are treatises on the pulse, the medical pharmacopoeia, advice for the conservation of health and the study of diarrhoea; in addition, monographs on various remedies, chicory, oxymel, balsam, bleeding. The virtues of wine are not neglected.

Physicians were offered a mnemonic in the form of a poem which established the essentials of Avicenna's theory and practice: principles, observations, advice on therapeutics and dietetics, simple surgical techniques. This is the famous *Urd̲j̲ūza fi 'l-ṭibb*, which was translated into Latin several times from the 13th to the 17th century, under the title *Cantica Avicennae* (ed. with French trans. by H. Jahier and A. Noureddine, Paris 1956, *Poème de la Médecine*, together with Armengaud de Blaise's Latin translation).

Ibn Sīnā's philosophical works have come down to us in a mutilated condition. The important *Kitāb al-S̲h̲ifā'* is complete (critical text in process of publication, Cairo 1952-). Extracts chosen by the author himself as being the most characteristic make up the *Kitāb al-Nad̲j̲āt*, "The Book of Salvation [from Error]", which is not an independent redaction, as was thought until 1937 (table of concordances established by A.-M. Goichon in *La distinction de l'essence et de l'existence d'après Ibn Sīnā*, 499-503). The *Kitāb al-Is̲h̲ārāt wa 'l-tanbīhāt*, "Book of directives and remarks", is complete (trans. into Persian and French), as is the *Dānis̲h̲nāma-i ʿAlā'ī*, "The Book of Knowledge for ʿAlā'", a résumé of his doctrine written at the request of the prince ʿAlā' al-Dawla. We have only fragments of the *Kitāb al-Inṣāf*, "Book of Impartial Judgment between the Easterners and the Westerners", which have been published by A. Badawī, and a small part of the *Manṭiḳ al-mas̲h̲riḳiyyīn*, "Logic of the Easterners", which is the logic of his "Eastern Philosophy", the rest of it being lost. A fairly large number of minor writings are preserved; they illuminate points of detail which are often important, but are far from completing the lacunas.

Ibn Sīnā's was too penetrating a mind, and one too concerned with the absolute, not to venture outside the individual sciences. He looked for the principle and the guarantee of these, and this led him to set above them, on the one hand, the science of being, Metaphysics, and, on the other, the universal tool of truth, Logic, or "the instrumental science", as the *falāsifa* termed it.

As far as one can tell in the absence of several of his fundamental works, he seems to have been an innovator particularly in logic, correcting the excess of abstraction which does not permit Aristotle to take sufficient account of change, which is present everywhere and at all times in the terrestrial world; and, thus, of the difference between strict (*muṭlaḳ*) meaning, and concrete meaning, specified by the particular "conditions" in which a thing is actualized. As a physician, he enters into logic when he admits a sign as the middle term of a syllogism. He gives it the force of a proof, as the latter is recognized in a symptom in medical diagnosis (see Introduction to the French trans. of the *Is̲h̲ārāt*).

In Metaphysics the doctrine of Ibn Sīnā is most individual, and is also illuminated by his personal antecedents. On the other hand, his thought was fashioned by three teachers, of whom, however, he knew only two by name: Aristotle and al-Fārābī, who introduced several of the great concepts subsequently developed by Ibn Sīnā. The third was Plotinus, who came down to him under the name of Aristotle, in the so-called "Theology of Aristotle" [see ARISṬŪṬĀLĪS], which was composed of extracts from Plotinus's *Enneads*, and presented as the culmination of Aristotle's *Metaphysics*. This error of attribution dogs the whole of Avicenna's work. As a born metaphysician he earned the title of "Philosopher of being" but as a realist he wished to understand essences in their actualized state, so that he is just as much the "Philosopher of essence". The whole of his metaphysics is ordered round the double problem of the origin of being and its transmission to essence, but to individually actualized essence (cf. Goichon, *La distinction de l'essence et de l'existence d'après Ibn Sīnā*, Paris 1937).

It is at this point that a free interpretation of Aristotle and Plotinus gives him his theory of the creation of forms by emanation. This is linked with a cosmogony taken from the apocryphal *Theology*, but is also inspired by hylemorphism and Aristotelian data on the soul. The extensive place occupied in his thought by the intelligence prompts him to this startling view: the gift of being is linked with the

light of the intelligence. Moreover, Ibn Sīnā is a believer; in accordance with Islam he believes in God as the Creator. None of the philosophies handed down from pagan antiquity takes account of this. He attempts to integrate dogma with his philosophical formulation. In fact, he does not succeed very well, but he continually works in this direction.

The first certitude apprehended by the human mind, he says, is that of being, which is apprehended by means of sense-perceptions. The idea of being, however, is so deep-rooted in man that it could be perceived outside of the sensible. This prefiguration of the Cartesian "Cogito ergo sum" appears to have two causes: intuition (*ḥads*) is so powerful in Ibn Sīnā (see in the Physics of the *Dānishnāma* the part that it played for him) that he bases himself here on a metaphysical apprehension of being; in addition, since the human soul, according to him, is a separate intelligence, which leads its own spiritual existence while being united with the body, it is capable of apprehending itself directly.

The second certitude is that the being thus apprehended in man, and in every existing thing, is not present there of necessity. The essence of "man", "horse" or "stone" does not imply the necessity of the existence of a particular man or horse. Existence is given to actualized, concrete beings by a Being that differs from all of them: it is not one of the essences that have no existence in themselves, but its essence is its very being. The Creator is the First Cause; as a consequence of this theory the proof of the existence of God is restricted to Metaphysics, and not to Physics, as happens when God is proved to be the prime mover.

A Western controversy enters here: did Avicenna really believe in the analogy of being? It is true that he does not place the uncreated Being in the genus Substance or in a genus Being; but if he proceeds from knowledge of created beings to that of the uncreated Being, is not this a proof that he considers their natures to be allied? He certainly apprehends an analogy between the being of substance and that of accident, as he states explicitly, but did he go further? (see M. Cruz Hernandez, *passim*).

Ibn Sīnā did not formulate the distinction between the uncreated Being and created beings as clearly as did Thomas Aquinas, but the latter does base himself on Ibn Sīnā's doctrine; only being is in God, God is in no genus and being is not a genus. He then sets out his thought precisely (cf. Vasteenkiste, *Avicenna-Citaten bij S. Thomas*, in *Tijdschrift voor Philosophie*, September 1953, citations nos. 12, 13, 14, 15, 20, 148, 330, pp. 460-1, 473 and 491).

With the principles established, two reasons for the omission of the conclusion are plausible, but neither involves the distinction not being made. Either, having set it out and admitted it, he withdrew it with difficulty because of the confusion between the data of Aristotle and Plotinus, or, as G. M. Wickens (*Avicenna, scientist and philosopher*, 52) suggests, he does not speak of it as a discovery because the celebrated distinction was then generally admitted—as Abū Ḥayyān al-Tawḥīdī says. But Ibn Sīnā maintains that God, as he conceives Him, is "the first with respect to the being of the Universe, anterior to that being, and also, consequently, outside it" (E. Gilson, *L'esprit de la philosophie médiévale*[2], 80-1).

However, this apparent impetus of Ibn Sīnā is interrupted by the data of Plotinus, for they inspire the emanatist theory of creation. The Ḳurʾān, like the Old and New Testaments, explains creation by a free act of will on the part of God. For Ibn Sīnā, by way of Plotinus, the necessary Being is such in all its modes—and thus as creator—and being overflows from it. (Here the reader will ask himself the question: "Is it an analogous being? is it not rather the same being?") Moreover, this emanation does not occur freely, and creation involves intermediaries, which are also creators. From the One can come only one. The necessary Being thus produces a single Intelligence. This, having a cause, necessarily possesses a duality of being and knowledge. It introduces multiplicity into the world; from it can derive another Intelligence, a celestial Soul and a celestial body. Ptolemy's system becomes the framework of creative emanation; emanation descends from sphere to sphere as far as a tenth pure Intelligence, which governs, not a sphere, but our terrestrial world, which is made, unlike the others, of corruptible matter. This brings with it a multiplicity which surpasses human knowledge but is perfectly possessed and dominated by the active Intellect, the tenth Intelligence. Its role is demonstrated in a poetic and symbolic form in the "Tale of Ḥayy b. Yaḳẓān", a name that refers to the active Intellect itself.

The philosophical origin of this active Intellect is the passage in the *De Anima* in which Aristotle refers by this name to the active part of the human soul. Ibn Sīnā irremediably mutilates the latter by taking away from it this active part, and with it its most noble action and its highest intellectual function: abstraction of intelligibles. This active Intellect, which, according to Aristotle, produces all intelligibles, is now a separate Intelligence. Thus the human soul receives them passively, and so cannot think except by leave of the Intellect; comprehension, knowledge and the sciences are now no longer its affair. It can elaborate only that which is given to it by the active Intellect. The latter produces not only these intelligibles but also all the substantial forms that are created in accordance with the models that it has conceived in conformity with the potentialities of matter. It is in this way, Ibn Sīnā replies to Plato's anxious question (*Parmenides*, 131 a-b), that the concrete being can share in the Idea. The active Intellect has an ability which Plato sought for in vain: it apprehends the two series of relative perceptions, both the forms with their mutual relationships and the concrete beings with their mutual relationships; in addition, it apprehends their common repository, which is its own essence (cf. Goichon, *La théorie des formes chez Avicenne*, in *Atti XII congr. intern. de filosofia*, ix, at 137-8). A reply is also given to the question of Aristotle as to the provenance of form and the contribution of the Ideas to sensible beings (*Metaph.*, Z 8 and M 5).

The human soul by itself can attain only the first three degrees of abstraction: sensation, imagination and the action of estimation that extracts individual non-sensible ideas. It then apprehends the intelligible that is given to it from outside. Intuition is due to its joining with the active Intellect.

Being and intelligence overflow like a river from the necessary Being and descend to the extreme limits of the created. There is an equally full re-ascent, produced by creatures' love and desire for their creators, as far as the supreme Principle, which corresponds to the abundance of this gift. This beautiful concept, which could derive only from a soul inclined towards religion, has been thought of as mystical. The *Risāla fi 'l-ʿishḳ*, "The Epistle on Love", however, is primarily a metaphysical explanation of the tendency of every being towards its

good, and a physical explanation of the motion of the stars; they imitate in their fashion, which is material, the unceasing action of the pure Act. The spheres, in fact, thus imitate the unceasing desire of the celestial Souls which correspond to each one of them. The rational soul of man tends towards its good with a conscious motion of apprehension of, and love for, the active Intellect, and, through it, for the necessary Being, which is pure Good. In the highest states, however, it can tend directly towards the latter.

Ibn Sīnā believed firmly in the immortality of the soul. Corruption cannot touch it, for it is immaterial. The proof of this immateriality lies in its capability of apprehending the intelligibles, which are in no way material. He is much more hesitant on the question of the resurrection of the body, which he at first admits in the *Shifā'* and the *Nadjāt*, and then denies in the epistle *Aḍḥawiyya*, after indicating in the "Tale of Ḥayy b. Yaḳẓān" that this dogma is often an object of temptations. He appears finally to have decided to understand it in a symbolic sense.

Among the fierce controversies to which Avicenna's thought has given rise is the discussion as to whether or not he should be considered a mystic.

At first sight, the whole range of expressions that he uses to speak of love's re-ascending as far as to the Creator leads one to an affirmative interpretation —not in an esoteric way [see ḤAYY B. YAḲẒĀN], but in the positive sense of the love of God. The more one studies his philosophical doctrine, the more one finds that it illuminates these expressions. The stages of the Ṣūfīs, studied in the *Ishārāt*, leave rather the impression of experiences observed by a great, curious and respectful mind, which, however, does not participate. Ibn Sīnā is a believer, and this fact should be maintained in opposition to those who have made of him a lover of pleasure who narrowly escapes being a hypocrite, although there is so much seriousness in his life and such efforts to reconcile his philosophy with his faith—even if he is not always successful. He is far above the gnosis impregnated with occultism and paganism to which some would reduce him. Is he a mystic in the exact sense that the word has in Catholic theology? It reserves the word for one whose whole life is a great love of God, in a kind of intimacy of heart and thought with Him, so that God holds the first place in all things and everything is apprehended as related to Him. Had it been thus with Ibn Sīnā, his writings would give a totally different impression. Nevertheless, at bottom he did perhaps apprehend God. It is in the simple expression of apprehension through the heart, in the secret of the heart (*sirr*), in flashes, however short and infrequent, that we are led to see in him a beginning of true mystic apprehension, in opposition to the gnosis and its symbols, for at this depth of the heart there is no longer any need for words. One doubt, however, still enters in: his general doctrine of apprehension, and some of the terms that he uses, in fact, in texts on *sirr*, could be applied at least as well to a privileged connexion with the active Intellect, and not with God Himself (cf. Goichon, *Le "sirr" (l'intime du coeur) dans la doctrine avicennienne de la connaissance*). Again, on this question, the absence of his last great work, the "Eastern Philosophy", precludes a definite answer.

This irreparable lacuna in the transmission of his works does not allow us to understand in what respects he wished to complete, and even to correct, Aristotle, as he states in the prologue. As a hypothesis, suggested by his constant efforts to express the concrete and by his biography, we may suppose that he wished to make room for the oriental scientific tradition, which was more experimental than Greek science. The small alterations made to Aristotelian logic are slanted in this direction. In metaphysics, it is probable that he was shocked by the contradictions between Plotinus and Aristotle that were evident in the texts which the knowledge of the time attributed to one single author, and that he wished to resolve these anomalies by giving new explanations.

Influence of Ibn Sīnā. The transmission of Greek science by the Arabs, and the translation of the works of the Arabs into Latin, produced the first Renaissance in Southern Europe, which began in the 10th century in Sicily, flourished in the 12th round Toledo, and soon afterwards in France. The two principal works of Ibn Sīnā, the *Shifā'* and the *Ḳānūn*, made him an undisputed master in medicine, natural sciences and philosophy.

From the 12th to the 16th century the teaching and practice of medicine were based on him. The works of Abū Bakr Muḥammad b. Zakariyyā' al-Rāzī were also known, and he was considered to be a better clinician; but the *Ḳānūn* provided an irreplaceable didactic corpus, for the *Kitāb al-Kulliyyāt fi 'l-ṭibb* of Ibn Rushd corresponded only with the first part of the *Ḳānūn*. The latter was translated in its entirety between 1150 and 1187 by Gerard of Cremona, and, in all, eighty-seven translations of it were made, some of which were only partial. The majority were into Latin, but several Hebrew translations were also made, in Spain, Italy and the south of France. The medical translations are less good than those of the philosophical works; some words transcribed in Arabic from Greek were not understood or identified, and some Arabic technical terms were more or less transcribed in Latin, and remain incomprehensible. The *Ḳānūn* formed the basis of teaching at all the universities. It appears in the oldest known syllabus of teaching given to the School of Medicine at Montpellier, a bull of Clement V, dating from 1309, and in all subsequent ones until 1557. Ten years later Galen was preferred to Ibn Sīnā, but the latter continued to be taught until the 17th century. The editing of the Arabic text, at Rome in 1593, demonstrates the esteem in which he was still held. (On the teaching of the works of Avicenna in the universities, see A. Germain, *L'Ecole de médecine de Montpellier* . . ., Montpellier 1880, 71; Stephen d'Irsay, *Histoire des universités françaises et étrangères des origines à nos jours*, Paris 1933, i, 119; C. Elgood, *A medical history of Persia . . . until the year 1932*, Cambridge 1951, 205-9). Chaucer reminds us in the Prologue to the *Canterbury Tales* that no doctor should be ignorant of him. Almost all, in fact, possessed either fragments of the *Ḳānūn*, especially the "Fevers" and the "Diseases of the eyes", or shorter writings, the treatise on the pulse or that on "Diseases of the heart". All Arab authors, from the 7th/13th to the 10th/16th century, are dependent on Ibn Sīnā, even though they question him, like the father of Ibn Zuhr (Avenzoar), or augment and correct him, like Ibn al-Nafīs, who recorded his discovery of pulmonary circulation in his commentary on the *Ḳānūn*; he wrote a summary of the *Ḳānūn* which any physician could obtain more easily than he could the original text.

In the West several physicians learned Arabic for the sake of the works of Ibn Sīnā. The first known influence appears in the works of a Dane, Henrik Harpestraeng, a royal physician who died in 1244. Arnold of Villeneuve, born at Valence, translated the treatise on the diseases of the heart, as well as

some of the books of al-Kindī and other Arab authors. Some surgeons also quoted him as their authority: William of Saliceto in Italy, and his disciple Lanfranc, the founder of surgery in France; Guy of Chauliac, who died in 1368, and whose teaching employed Arabic terms and doctrines. At the University of Bologna, anatomy was still being taught in Arabic terms in the 14th century.

The Renaissance brought a violent reaction; Leonardo da Vinci rejected Ibn Sīnā's anatomy, but, for want of another vocabulary, used the Arabic terms. Paracelsus burned the *Ḳānūn* at Basle. Harvey dealt him a severe blow by publishing his discovery of the major circulation in 1628.

The natural sciences presented in the *Shifāʾ* were much used by the mediaeval encyclopaedists, as were the treatises of al-Rāzī and apocryphal treatises. The "Treatise on Animals" was translated by Michael Scot; Albertus Magnus employed the mineralogy (on Ibn Sīnā's scientific influence, see G. Sarton, *Introduction to the history of science*, ii, *passim.*). In physics, Ibn Sīnā was an Aristotelian, and as such inferior to al-Rāzī, who had discovered the existence of the vacuum, which he himself denied. However, he opposed the theory of the transmutation of metals, and hence alchemy (for citations to this effect from several Arab authors, see the introduction by Holmyard and Mandeville to their translation of *Avicennae De congelatione et conglutinatione lapidum*, Paris 1927, 6-7).

Ibn Sīnā's influence in philosophy was less absolute and more disputed, but more lasting, for the use made of him by St Thomas Aquinas embodied certain of his proofs in Catholic theology (cf. Goichon, *La philosophie d'Avicenne et son influence en Europe médiévale*, Paris 1944, ch. III).

The translation of the *Shifāʾ* came at a moment when Aristotle was scarcely known, and that only through the "Posterior Analytics", the "Topics" and the "Refutation of the Sophists". The corpus that presented a "Metaphysics", the "Treatise on the Soul" and that on the "Heavens", etc. seemed to hold another significance. It was, however, thought to be a simple commentary on Aristotle. For a century it received unreserved admiration; when Aristotle was better known, it was still thought that the *Shifāʾ* augmented his work on the subject of the origin of the world, on God, the soul, the intelligence and angels. He was placed in the Neoplatonist and Augustinian traditions; his attempts to reconcile philosophy and faith corresponded with the ardent desires of the Schoolmen. He was forbidden by the decrees of 1210 and 1215, referring to "Aristoteles et sequaces ejus", which banned Ibn Sīnā from the Sorbonne. But his role remained undiminished in private discussions.

After acclaim for his similarities with Christian thought came criticism of his divergences from it, violently initiated by William of Auvergne in 1230. Nevertheless, a pontifical decree of Gregory IX, in 1231, once more permitted the study of Ibn Sīnā's philosophy. The lacunas, however, were now apparent. Nonetheless, the thought of all philosophers was nourished by his, to such a degree that it is impossible to tell what it would have been like without him. Latin scholasticism owes to his opponent, William of Auvergne, the fact that it received from him the distinction between essence and existence, which William considered that he had found in him.

Another current of thought, stemming from English centres of study, developed particularly in the Franciscan order. It saw Ibn Sīnā as more of a philosopher, augmenting Saint Augustine: the active Intellect was like the sun of minds and the internal Master. They believed that he opened up a whole mystic world. Roger Bacon and Duns Scotus were influenced by him. The latter, however, based his doctrine of the univocity of being on the same text that Thomas Aquinas had used to support the opposite doctrine.

Selection was gradually practised in the corpus of Ibn Sīnā. He took his definitive place, together with Saint Thomas Aquinas. The distinction between essence and existence became one of the fundamentals of Thomist philosophy. It gave an explanation for the immateriality of angels; Saint Thomas's *De Ente et Essentia* is imbued with Avicennism. The better the theologian masters his own thought, the less he cites Ibn Sīnā (see the quotations in Vansteenkiste, *op. cit.*), but he still respects him. Saint Thomas's commentators, Cajetan and Jean de Saint-Thomas, writing respectively at the end of the 15th century and during the 17th, still allotted to Ibn Sīnā the place that he had taken in Thomism, the place that is definitely his.

Bibliography: I. Works of Ibn Sīnā: Brockelmann, I, 452-8, S I, 812-29; C. A. Nallino, art. *Avicenna*, in *Enciclop. Italiana*, v, 638-9, up to 1930; O. Ergin, *I. S. bibliografyası*, in *Büyük Türk filosof ve tıb ustadı Ibni Sina Şahsiyeti ve eserleri hakkında tetkikler*, Istanbul 1937, in Turkish; G. C. Anawati, *Muʾallafāt I. S. Essai de bibliographie avicennienne*, Cairo 1950, in Arabic, manuscripts and published works; résumé in French, *La tradition manuscrite orientale de l'oeuvre d'Avicenne. Essai de bibliographie avicennienne*, in *Rev. thomiste*, 1951, 407-40; A. A. Hekmat, *Les oeuvres persanes d'A.*, in *Ligue des Etats arabes, Millénaire d'A., Congrès de Baghdad*, Cairo 1952, 84-97; S. Naficy, *Pur-e Sina (A., his life, works, thought and time)*, Tehran 1954, bibl. 9-53; S. M. Afnan, *A., his life and works*, London 1958; Yahya Mahdavi, *Bibliographie d'I. S.*, Tehran 1954 (critical notes in Persian, signalizing manuscripts, editions, translations and numerous studies on each work). All the Persian works of Ibn Sīnā were published at Tehran on the occasion of his millenary, as well as some of the Arabic works; lists of these works and of some Persian translations of Arabic works published in this collection by E. Rossi, *Il millenario di A. a Teheran e Hamadan*, in *OM*, 1954, 214-24. For the medical and scientific works, both texts and translations into Latin, Hebrew, Persian and modern European languages, published since 1497, the date of the publication of Gerard of Cremona's translation of the *Ḳānūn*, see *Index Catalogue of the Library of the Surgeon-general's Office, U. S. Army*, Washington, including works on I. S., i, 1880, 712-3, 2nd series, i, 1896, 819-21, 3rd series, ii, 1920, 230-1 (s.v. *Avicenna*), 4th series, viii, 1943, 2-3 (s.v. *Ibn Sīnā*), then *Armed forces medical library catalog*, i, 1955, 112 (s.v. *Avicenna*).

Philosophical works: Except for the *Nadjāt*, printed after the *Ḳānūn*, Rome 1593, all editions of texts are recent; *al-Ḳaṣīda fī ʿilm al-Manṭiḳ*, ed. Schmoelders, 1836; *Politics*, ed. Margoliouth, 1887; *al-Shifāʾ*, lithographed at Tehran 1303/1886; the opuscula edited by Mehren under the title *Traités mystiques*, Leiden 1889-94, and *al-Ishārāt*, ed. Forget, Leiden 1892, are among the oldest (see Goichon, *Distinction de l'essence et de l'existence...*, XIII-XV, 506-7, and bibliographies cited). Later publications: complete critical text of *al-Shifāʾ*, Cairo 1952- ; in the collection *Mémorial*

d'Avicenne, IFAO, Cairo 1952-63: fasc. IV, *al-Akhlāḳ wa-'l-infiʿālāt al-nafsāniyya*, text established and translated by D. Rémondon; fasc. V, *ʿUyūn al-ḥikma*, text established by A. Badawī, and Introd., 1954; fasc. VI, *Kitāb al-Ḥudūd, Livre des Définitions*, text established, translated and annotated by A.-M. Goichon, 1963, augmenting by study of the Greek sources the *Introduction à A., son Epître des Définitions*, trans. from the printed editions, and illuminated by numerous texts taken from the works of Ibn Sīnā (Paris 1933); *Ibn Sina risaleleri*, several opuscula, ed. with French trans. by H. Z. Ülken, A. Ateş, Istanbul 1953; *al-Burhān min al-Shifāʾ*, ed. by A. Badawī, Cairo 1954; the same edited several texts, entire or fragmentary, in the collection *Arisṭū ʿind al-ʿArab*, Cairo 1948; *Ḳiṣṣat Ḥayy b. Yaḳẓān*, text established and French trans. by H. (A.-M. GOICHON)

IBN SĪRĪN, ABŪ BAKR MUḤAMMAD, the first renowned Muslim interpreter of dreams, was also, according to Ibn Saʿd (vii/1, 140), a traditionist "of great trustworthiness, who inspired confidence, great and worthy, well-versed in jurisprudence. He was an *imām* of great scholarship and piety". Born two years before the end of the caliphate of ʿUthmān, *i.e.*, in 34/654, he was the contemporary and friend of al-Ḥasan al-Baṣrī [*q.v.*] and died in the same year as he, in 110/728. His father, a tinker from Djardjarāyā, had been taken prisoner in ʿIrāḳ (at Maysān or at ʿAyn al-Tamr) by Khālid b. al-Walīd; he then became a slave of Anas b. Mālik who was ordered by the caliph ʿUmar to set him free by contract of enfranchisement (see Bukhārī, ed. Krehl, ii, 50, no. 1, p. 127). His mother, Ṣafiyya, was a slave of the caliph Abū Bakr; she was held in such esteem within the community that when she died her laying-out was performed by three of the Prophet's wives, and eighteen *Badrī*s, led by Ubayy b. Kaʿb, were present at her burial.

Muḥammad was a cloth merchant, but this does not seem to have earned him enough to live on, since he died in debt (on the origin of this debt, cf. the various opinions reported by Ibn Saʿd, 144 f.). He is reputed to have had thirty children by the same Arab wife, only one of whom survived. He was at one period the secretary of Anas b. Mālik, who had requested that Ibn Sīrīn should lay him out and lead his funeral prayer. In order to do this, he had to be released from prison for one day.

So renowned was he for his piety and for the reliability of the information which he handed on that a century later al-Aṣmaʿī was to say of him: "When the deaf man [Ibn Sīrīn was deaf] relates traditions, clasp your hands" (probably as a sign of the intense interest aroused by his statements). Full details of his life are to be found in Ibn Khallikān, no. 576.

The pages which Ibn Saʿd (*op. cit.*, 140-50) devotes to Muḥammad b. Sīrīn prove the seriousness with which he acted as a *muḥaddith*. He said: "This science is religion; take care from whom you learn it" (141). In the chain of transmitters of *ḥadīth*s in which his name appears there are found also, in particular, those of Abū Hurayra, Zayd b. Thābit, Anas b. Mālik, Yaḥyā b. al-Djazzār, and Shurayḥ. Especially noticeable among those who have transmitted his *ḥadīth*s are Ḳatāda and Khālid al-Ḥadhdhāʾ. He was opposed to the written transmission of traditions (*ibid.*), and regarded the cunning questions which he was asked, particularly on the subject of predestination, as having been prompted

by devils (143). He was capable of laughter and joking, but he had a quick temper, which led to a comparison between his irascibility and the mildness of his friend al-Ḥasan al-Baṣrī (142). Several details of his behaviour, of his way of dressing, of his scruples over anything unlawful and of his private devotions show him to have been very pious and also very eccentric.

Much less is known of Ibn Sīrīn's activity as a *muʿabbir*, although this finally eclipsed that of *muḥaddith*. In fact Ibn Saʿd (d. 230/845), although he does not fail to mention his ability to interpret dreams, certainly does not stress this, whereas he does include a whole list of dreams interpreted by Saʿīd b. al-Musayyab (v, 91-3) who was the true ancestor of Arab dream interpretation (see T. Fahd, *La divination arabe*, 309-12). It was, however, in about the middle of the 3rd/9th century that his fame as an interpreter of dreams began to be attested: several of his interpretations are mentioned in the *K. al-Ḥayawān* of al-Djāḥiẓ and his ability as an interpreter was known also to Ibn Ḳutayba (see *ibid.*, 313 ff.).

From the 4th/10th century onwards he was credited with works on the interpretation of dreams (see *Fihrist*, 316), the diversity of whose titles, and the contents and the late character of which show them to have been the work of forgers anxious to acquire for their writings the authority and prestige of a *tābiʿī* of the second generation. The first of these writings is the *Taʿbīr al-ruʾyā*, published several times in Egypt; the second is the *Muntakhab al-kalām fī taʿbīr al-aḥlām*, a compilation made, at the beginning of the 9th/15th century, by Abū ʿAlī al-Ḥusayn b. Ḥasan b. Ibrāhīm al-Khalīlī al-Dārī (see T. Fahd, *op. cit.*, 335, no. 27) and printed in the margin of the first volume of the *Taʿṭīr al-ānām fī taʿbīr al-manām* of ʿAbd al-Ghanī al-Nābulusī (see *ibid.*, 348, no. 85). It is on this compilation that there is based the *thèse complémentaire* by A. Abdel Daïm on *L'Oniromancie arabe d'après Ibn Sīrīn*. Other unpublished writings which bear his name are: *Tafsīr al-aḥlām* (or *al-manām* or *al-manāmāt*); *K. al-luʾluʾ fī taʿbīr al-manām*; *K. al-Tanwīr fī ruʾyat al-taʿbīr*; *K. al-Djawāmiʿ*; etc. His name is also found as the author of treatises in Turkish, Persian, Greek and Latin. The references to the editions and the manuscripts of all these works are to be found *apud* T. Fahd, *op. cit.*, 355, no. 117.

IBN AL-SITRĪ [see IBN AL-BAWWĀB].

IBN SŪDA (Sawda), name of a number of Mālikī scholars and *ḳāḍī*s of Fez belonging to an Andalusian family which had emigrated to Tāwda (present name Fās al-Bālī), about 80 km. north-north-west of Fez, and was therefore known by the name of Tāwdī.

1. Abu 'l-Ḳāsim Ibn Abī Muḥammad Ḳāsim Ibn Sūda al-Murrī al-Gharnāṭī, died at Fez on 25 Shawwāl 1004/22 June 1596, was *ḳāḍī* of Taza, of Marrākush and of Fez (see al-Ifrānī, *Ṣafwat man intashar*, 100; al-Ḳādirī, *Nashr al-mathānī*, i, 34; al-Kattānī, *Salwat al-anfās*, ii, 61; Lévi-Provençal, *Chorfa*, index).

2. Muḥammad b. Muḥammad Ibn Sūda (d. 1076/1666) was *ḳāḍī* of Fez (see Lévi-Provençal, *Chorfa*, 402).

3. Abū ʿAbd Allāh Muḥammad b. al-Ṭālib al-Tāwdī, died at Fez on 29 Dhu 'l-Ḥidjdja 1209/17 July 1795, is the most famous member of the Banū Sūda family; Lévi-Provençal (*Chorfa*, 332) even considers him as "one of the greatest scholars that Morocco has produced". After having been the pupil of the leading scholars of Fez, he was initiated into Ṣūfism, then taught in his native town *tafsīr*, *ḥadīth*, *fiḳh*, *taṣawwuf*, *kalām*, logic and *uṣūl*; his learning earned him the honorific title of *shaykh al-djamāʿa*. In 1191/1777-8, he went on the Pilgrimage to Mecca and spent quite a long time in the holy cities and in Cairo, where he gave lectures and met notably the *shaykh* Murtaḍā al-Zabīdī, author of *Tādj al-ʿArūs*, which mentions him under *S.W.D.* At Fez, he was the teacher of the majority of the Moroccan scholars of his time and in particular of Ibn ʿAdjība [*q.v.*]. He wrote a number of glosses and commentaries, among which may be mentioned: (1) *Ṭāliʿ al-amānī ʿalā sharḥ al-Zarḳānī* [*q.v.*]; (2) a *sharḥ* of the *Tuḥfa* of Ibn ʿĀṣim [*q.v.*] (Cairo, in the margin of the commentary on the *Tuḥfa* by al-Tasūlī); (3) a commentary on the *Lāmiyya* of al-Zaḳḳāḳ [*q.v.*] (MS Rabat, no. 1486; this *sharḥ* has been the subject of a gloss, MS Rabat, no. 1438); (4) *Zād al-mudjidd al-sārī fī maṭāliʿ al-Bukhārī*, a commentary on the *Ṣaḥīḥ*, published at Fez 1328-30, 4 vols.; (5-6) *al-Ḍawʾ al-lāmiʿ bi-sharḥ al-Djāmiʿ* of Khalīl [*q.v.*] (MS Rabat, 40, 514) also a *Taḳyīd ʿala 'l-Djāmiʿ al-mansūb li-Khalīl* (MS Rabat, no. 1414); (7) *Manāsik al-ḥadjdj*; (8) *Tuḥfat al-ikhwān* (MS Rabat, no. 1395; MS of the Real Acad. de Cordoba [see *al-Mulk*, iv (1964-5), 108]); (9) finally a *Fahrasa* [*q.v.*] (MS Rabat, no. 414 bis).

Bibliography: Ifrānī, *Ṣafwa*, 159; Nāṣirī, *Istiḳṣāʾ*, iv, 134; Kattānī, *Salwa*, ii, 71; Fuḍaylī, *al-Durar al-bahiyya*, ii, 294; Lévi-Provençal, *Chorfa*, 332-4; ʿA. Gannūn, *al-Nubūgh al-maghribī*, Beirut 1961, i, 293-4; Brockelmann, S II, 689 (see also S I, 263[24], S II, 375).

4. Abu 'l-ʿAbbās Aḥmad b. Muḥammad (1153-1235/1740-1820), son and pupil of the above, was *ḳāḍī* of Fez and took part in the preparation of a commentary on the 40 *ḥadīth*s of al-Nawawī (MS Rabat, no. 55). See al-Kattānī, *Salwa*, i, 115; Lévi-Provençal, *Chorfa*, i, 115.

5. Abu 'l-Faḍl al-ʿAbbās b. Aḥmad b. Muḥammad, died 26 Djumādā I 1241/6 January 1826, *ḳāḍī* of Fez (see al-Kattānī, *Salwa*, i, 116; Lévi-Provençal, *Chorfa*, index).

6. Abū ʿĪsā Muḥammad al-Mahdī b. al-Ṭālib Muḥammad b. Muḥammad (1220-94/1805-77), was also a Mālikī *faḳīh* and a philologist. In 1269/1853 he performed the Pilgrimage to Mecca, of which he left an account, *al-Riḥla al-ḥidjāziyya*. He wrote also various glosses, in particular a *Ḥāshiya ʿalā sharḥ al-Samarḳandī* [*q.v.*] *ʿala 'l-Risāla al-ʿaḍudiyya* of al-Īdjī [*q.v.*] (MS Rabat, no. 309) and a *Kitāb fi 'l-radd ʿalā taʾlīf Muḥammad Akansūs* [see AKANṢŪS] (MS Rabat, no. 513).

7. Abū ʿAbd Allāh b. ʿAbd al-Wāḥid b. Aḥmad was *ḳāḍī* of al-Ḳaṣr and a preacher at Fez; he died in Dhu 'l-Ḳaʿda 1299/October 1882. See al-Kattānī, *Salwa*, i, 121; Lévi-Provençal, *Chorfa*, 380.

8. Abu 'l-ʿAbbās Aḥmad b. al-Ṭālib (1241-1321/1826-1903), a man of great learning in religion and philology, was *ḳāḍī* at Azemmour in 1280/1863-4, then at Tangier in 1292/1875, and finally, in 1294/1877, at Meknès, where he also held the office of

preacher. Among his more important works are a gloss on the *Ṣaḥīḥ* of al-Bukhārī, a *risāla* on the *Basmala* and a *Rafʿ al-lubs wa 'l-shubuhāt ʿan thubūt al-sharaf min ḳibal al-ummahāt*, Cairo 1231.

Bibliography: apart from the sources mentioned in this article, see *Dāʾirat al-maʿārif*, iii, 208-9; Sulaymān al-Ḥawwāt (1160-1231/1747-1816) wrote *al-Rawḍa al-maḳṣūda wa 'l-ḥulal al-mamdūda fī maʾāthir Banī Sūda*, a biography of the family of the Banū Sūda from its beginning to Muḥammad al-Tawdī (3) who was the teacher of al-Ḥawwāt, to his son Abu 'l-ʿAbbās (4) and even to his grandson Abu 'l-Faḍl (5), who was in his turn the pupil of the author; a microfilm of this work is said to exist in the Rabat library.

(Ed.).

IBN SULAYM al-ASWĀNĪ, ʿAbd Allāh b. Aḥmad, a Fāṭimid *dāʿī*, author of *Kitāb Akhbār al-Nūba wa 'l-Muḳurra wa ʿAlwa wa 'l-Budja wa 'l-Nīl*. He was sent on a special mission to Nubia by Djawhar al-Ṣiḳillī [*q.v.*], probably in 365/975. He persuaded King George of Nubia to resume the delivery of the *baḳt* [*q.v.*], which had lately been withheld, but failed in debate to convert the court to Islam. He travelled into the southern Nubian kingdom of ʿAlwa, but there is no evidence that he actually toured the country of the Budja. His book is known only from excerpts transcribed by al-Maḳrīzī in *al-Khiṭaṭ*, and by Ibn Iyās in *Nashḳ al-azhār*, the latter text appearing on comparison to be an abridgement of the former. The extant passages are, however, one of the principal mediaeval sources on the eastern *bilād al-Sūdān*, and provide data in four categories: a geographical survey of the region, its historical background, an invaluable account of the contemporary situation, and some legendary narratives.

Bibliography: Maḳrīzī, *Khiṭaṭ*, Cairo 1922, iii, 252-78; idem, *al-Taʾrīkh al-kabīr al-muḳaffā*, Bibl. Nat., Paris, MS arabe 2144, v, fols. 227-8; Kračkovskiy, *Iz. Soč.*, iv, 192-3, and references there given; Ibn Iyās, *Nashḳ al-azhār fī ʿadjāʾib al-aḳṭār*, British Museum, London, MS. Add. 7503, fols. 72a, 73b, 74b, 76a-79b; Brockelmann, S I, 410; Y. F. Ḥasan, *The Arabs and the Sudan*, Edinburgh 1967, 91-2, 190-2.

(Yūsuf Faḍl Ḥasan)

IBN SURAYDJ, Abu 'l-ʿAbbās Aḥmad b. ʿUmar, a famous Shāfiʿī scholar and polemicist of the 3rd/9th century. His grandfather, Suraydj (d. 235/849-50), had been a pious traditionist (Ibn Taghrībirdī, *Nudjūm*, ed. Juynboll, i, 709 f.; Cairo ed., ii, 281 f.). He is considered the most prominent Shāfiʿī scholar after Shāfiʿī's own companions, and some ranked him even higher than al-Muzanī [*q.v.*]. His main teacher was ʿUthmān b. Saʿīd al-Anmāṭī (d. 288/901), a disciple of Muzanī. The tradition according to which each century would see a renovator of Islam was applied to him by the Shāfiʿīs. He disputed on questions of *fiḳh*, not indeed with Dāwūd b. Khalaf [*q.v.*] (information to this effect is apocryphal), but with Dāwūd's son, Muḥammad b. Dāwūd, in the presence of the *wazīr* ʿAlī b. ʿĪsā [*qq.v.*], with whom he became friendly; numerous anecdotes are related of these often stormy sessions. During his earlier years, Ibn Suraydj was *ḳāḍī* in Shīrāz, and he was also active as a traditionist in a small way; towards the end of his life, ʿAlī b. ʿĪsā wanted to make him *ḳāḍī* of Baghdād, it is said, but he refused. Ibn Suraydj had visited, out of curiosity, a teaching session of al-Djunayd [*q.v.*]; he did not feel himself drawn to mysticism but kept an objective attitude towards it; when at the beginning of the investigation of al-Ḥallādj [*q.v.*], about 297/909, he was asked for a *fatwā* concerning him, he refrained from giving an opinion, declaring himself ignorant of his source of inspiration. This episode is quite neglected by his biographers. Ibn Suraydj died in Baghdād in 306/918 (305 according to the *Fihrist*), at the age of 57 years and 6 months.

Of the extensive literary activity of Ibn Suraydj, which is said to have run to more than 400 titles (*muṣannaf*), nothing seems to have been preserved; al-Ghazālī refers to his *Kitāb al-Intiṣār* (quoted by al-Subkī, ii, 96), Ibn Ḥadjar al-Haytamī to his *Kitāb al-Ziyādāt*, and al-Asnawī possessed his *Kitāb al-Furūḳ fi 'l-furūʿ* (cf. *Islamica*, ii/4, 1927, 505-37 on this type of literature) and his *Kitāb al-Wadāʾiʿ* (on deposits). Other titles mentioned include a *Kitāb Mukhtaṣar fi 'l-fiḳh*, a *Kitāb al-Ghunya fi 'l-furūʿ*, a *Kitāb al-ʿAyn wa 'l-dayn*, and a *Kitāb al-Farāʾiḍ*. (The *Kitāb al-Khiṣāl fi 'l-furūʿ*, however, which according to al-Subkī was not worth much, is probably by his son, Abū Ḥafṣ ʿUmar, who is also the author of a *Tadhkirat al-ʿālim wa 'l-mutaʿallim*; on him, see al-Subkī, ii, 313; Wüstenfeld, no. 75). Ibn Suraydj further wrote a number of polemical treatises against his opponents, both Ḥanafīs and Ẓāhirīs, and the *ahl al-kalām* [see ʿilm al-kalām]; this is perhaps why the *Fihrist* calls him also a *mutakallim*, although nothing is known of a particular interest of his in theology. So we hear of a *Kitāb al-Radd ʿalā Muḥammad b. al-Ḥasan*, a *Kitāb al-Radd ʿalā ʿĪsā b. Abān* (a Ḥanafī scholar, d. 221/836), a *Kitāb al-Taḳrīb bayn al-Muzanī wa 'l-Shāfiʿī*, a *Kitāb Djawāb al-Ḳāshānī*, a *Kitāb fi 'l-radd ʿala 'bn Dāwūd fī 'l-ḳiyās*, "and another refuting him (*i.e.*, Ibn Dāwūd) on questions on which he had been in opposition to al-Shāfiʿī".

Ibn Suraydj has given its name to the hotly debated problem of the *Masʾala al-Suraydjiyya*, or "vicious circle of repudiation" (*dawr al-ṭalāḳ*, *al-masʾala al-dāʾira*). If a man says to his wife : "If I repudiate you, consider yourself to have been already repudiated by me three times", and then repudiates her once, two (or with a variant, three) answers are possible: either nothing but the repudiation not subject to the condition is effective (or, as an alternative, it is effective and two repudiations of the lot which was made conditional, are added to it, making up the allowed maximum of three repudiations), or no repudiation at all takes place, because, if the repudiation not subject to the condition is effective, three repudiations earlier than it have already taken place, and if this is the case, there is no marriage in which that first repudiation could have effect, and if this is the case, the three repudiations made conditional on it can also have no effect, so no repudiation at all takes place. Ibn Suraydj was no doubt the first to formulate the dilemma (it is most improbable that al-Shāfiʿī himself should have done so and have laid down the second answer, as is sometimes asserted), and the kind of reasoning behind it corresponds to the reasoning apparent from Ibn Suraydj's reported treatment of some other problems (al-Subkī, ii, 93 f.), and for which some veiled criticism was levelled at him (al-Nawawī, al-Dhahabī). Ibn Suraydj's own answer is open to doubt, but he seems to have favoured first the second, and later the first answer. The Shāfiʿī scholars, up to the time of al-Ghazālī, remained under the spell of the reasoning leading to the second answer; al-Ghazālī himself, when he was on the point of breaking away from the scholastic technicalities of *fiḳh*, nevertheless recom-

mended the second answer as a possible escape for people who had been forced to take an oath of secrecy, under penalty of automatic repudiation, by the Bāṭinīs (Ismāʿīlīs [*q.v.*]), but he later adopted the opposite opinion; the final doctrine of the Shāfiʿī school, as for instance expressed by Ibn Ḥadjar al-Haytamī and his commentators, most definitely insists on the first answer. Of Ibn Suraydj, the originator of the problem, the traditionist al-Dāraḳuṭnī [*q.v.*] says: "He would have been perfect, were it not that he had thrown among the Muslims the question of the vicious circle of repudiation" (Ibn Taghrībirdī), but the Shāfiʿī scholar Ibn al-Ṣabbāgh (d. 477/1083; Brockelmann, I, 388, S I, 671) declared that he was not responsible for it.

(J. Schacht)

IBN SURAYDJ, ʿUbayd Allāh Abū Yaḥyā, one of the great singers of the early Ḥidjāzī school of Arabic music, was born in Mecca in 40/660. His father was a slave of Turkish origin, his mother a *mawlāt* of the Banū Muṭṭalib. He was favoured by the generous cousin of the Prophet, ʿAbd Allāh b. Djaʿfar [*q.v.*]. Before he became a singer he was a mourner (*nāʾiḥ*) who lamented the dead at funerals. His teacher in music was Ibn Misdjaḥ [*q.v.*]. His greatest pupil was al-Gharīḍ [*q.v.*], who finally outshone his master. Ibn Suraydj's art was highly appreciated by the élite of Mecca, and he was invited by al-Walīd b. ʿAbd al-Malik to Damascus. According to Isḥāḳ al-Mawṣilī he composed 68 melodies, 63 of which were original; one of them belongs to the "three hundred selected airs". He preferred the light rhythms *ramal* and *hazadj*, but mastered also the "heavy" rhythms. He used to improvise his songs and to accompany himself on the Persian flute. He set to music poems of ʿUmar b. Abī Rabīʿa and other poets. He moved his audience to tears, for his song came from the heart, not from the head. Some of his melodies go under the name of his son-in-law Saʿīd b. Masʿūd al-Hudhalī. He died of elephantiasis in Mecca in 96/714, but other dates (even as late as 126/744) are also given. His death was lamented by Kathīr b. Kathīr (al-Sahmī).

Ibn Isḥāḳ al-Mawṣilī wrote an *Akhbār Maʿbad wa-Ibn Suraydj* (*Fihrist*, 141, 9) and Abū Ayyūb al-Madīnī a *Kitāb Ibn Suraydj* (*Fihrist*, 148, 9).

IBN SUʿŪD [see suʿūd, āl].

IBN al-TAʿĀWĪDHĪ, Abu 'l-Fatḥ Muḥammad b. ʿUbayd Allāh, better known under the name of Sibṭ Ibn al-Taʿāwīdhī, official and poet of the Ayyūbid period, d. 584/1188, author of a substantial *dīwān*. The more perceptive critics agree in crediting him with finesse and delicacy, that is to say, with a perfectly harmonious use of the Arabic language. It is said that his poems were plagiarized and copied by other poets. In the eyes of the public, he united the charm of melody with the distinction of perfect form. He liked to write of the passion "which guides and which leads astray", the intoxication of the first glance which plunges the soul into confusion. His life was free of any great tragedy except that he became blind in his old age, which caused him to fall into the deepest melancholy. He lived during the reigns of the caliphs al-Mustandjid, al-Mustaḍīʾ and al-Nāṣir. Continually seeking for patronage and reward, but too independent to attach himself permanently to one master, he attempted to gain the sympathy of the famous vizier Ibn al-Baladī [*q.v.*]. It is probable that the latter, who at times had himself suffered from the biting satires of Ibn al-Taʿāwīdhī, turned a deaf ear to the poet's complaints and petitions. Later he sedulously cultivated the friendship of the caliph al-Nāṣir, which did not however prevent his dedicating enthusiastic panegyrics to Saladin. His powerful and vivid language lacked none of the conceits likely to appeal to the wits of the period. Shameless and fickle, he did not hesitate to mingle his own personal interests with the great lyric themes inherited from early times; any subject was a pretext for a poem: the granting of a fur for which he asks insistently, or of fodder for his horse, grown thin from too long a fast. Ibn Taʿāwīdhī, in spite of some brilliant passages, does not seem to have had any more continuity in his style than in his life. Although the details of his life do not always give a very edifying picture of his character, there is no doubt that he was a talented writer both of prose (he wrote a sarcastic *al-Ḥadjaba wa 'l-ḥidjāb* in fifteen sections) and of verse, of which he is generally regarded as being one of the outstanding authors of his period.

Bibliography: Kaḥḥāla, *Muʿdjam*, x, 278; Brockelmann, I, 249, S I, 442; Ibn al-ʿImād, *Shadharāt*, iv, 281; Yūsuf Yaʿḳūb Maskūnī, *Sibṭ Ibn al-Taʿāwīdhī*, *Dīwān*, published in Cairo by Margoliouth in *al-Muḳtaṭaf*, 1321/1903.

IBN ṬABĀṬABĀ, Abū ʿAbd Allāh Muḥammad b. Ibrāhīm b. Ismāʿīl al-Dībādj b. Ibrāhīm al-Ghamr b. al-Ḥasan al-Muthannā, Ḥasanid, d. 1 Radjab 199/15 February 815.

The sources generally give the by-name of Ṭabāṭabā to Muḥammad's grandfather, who owed it to a defect in pronunciation, but the *ʿUmdat al-ṭālib* calls his father Ibrāhīm by this name and explains it by relating an anecdote according to which Ismāʿīl, ordering a garment for his son, said *ṭabā* instead of *ḳabā*. This same text states however that the expression *ṭabāṭabā* means, in the common language, *sayyid al-sādāt* (of ʿAlid descent on both the father's and the mother's side, a meaning which this word still retains in Persian).

He lived mainly at Medina and his descendants disappeared after a series of migrations (to Ethiopia and to Kirmān).

While his nephews, the grandsons of Ibrāhīm b. Ismāʿīl, are often referred to as good poets, his own reputation is linked with the Zaydī revolt which took place in Kūfa under the effective command of Abu 'l-Sarāyā [*q.v.*] in 199/815. Ibn Ṭabāṭabā's political ambitions seem to have been awakened by Naṣr b. Shabath (Shabīb in the *Maḳātil al-Ṭālibiyyīn*), who

sought him out at Medina during the *ḥadjdj* (probably of 198), preferring him as *imām* to the Ḥasanid ʿAbd Allāh b. Mūsā b. ʿAbd Allāh and to the Ḥusaynid ʿAlī b. ʿUbayd Allāh b. al-Ḥasan, who refused to become involved personally in an armed conflict, in accordance with the usual attitude of the Ahl al-Bayt. Once in ʿIrāḳ, Ibn Ṭabāṭabā encountered the opposition of Naṣr's collaborators, who seem to have abandoned him and offered him as compensation the sum of 5,000 *dīnārs*, which he refused. Returning towards the Ḥidjāz, Ibn Ṭabāṭabā stopped at ʿĀnāt, where he succeeded in contacting Abu 'l-Sarāyā, who was engaged in organizing the revolt. While the ʿAlid was with difficulty gathering together a few inadequately armed citizens at Kūfa, where he had immediately gone, Abu 'l-Sarāyā was arming a small group of Zaydīs around the tomb of al-Ḥusayn, and arrived on the day appointed in the suburb of Kūfa chosen in advance. The two groups went together towards the town, where Abu 'l-Sarāyā pronounced a *khuṭba* which included all the Muʿtazilī principles, the ideological basis of the Zaydī revolts; then he obtained, with some difficulty, the investiture of his leader (in the *ʿUmda*: *amīr al-muʾminīn*) on 10 Djumādā I 199/27 December 814, as had been predicted by a *ḥadīth* going back to Zayd b. ʿAlī.

The revolt went through various phases; it began with some victories due in part to the negligence of the enemy commander, al-Ḥasan b. Sahl, who was occupied in studying the horoscope of the ʿAlid. But Ibn Ṭabāṭabā, merely the nominal leader of the revolt, played only a small part in this event, although some sources mention his receiving a wound outside the gate of Kūfa. The ʿAlid, gravely ill, or rather, according to al-Ṭabarī, poisoned by Abu 'l-Sarāyā himself, welcomed the latter after the victory over al-Ḥasan b. Sahl, but reproached him for having organized night attacks. However, he expressed to him his last wishes, in particular concerning the new *imām*, who was to be ʿAlī b. ʿUbayd Allāh. Although such a definite nomination might have been expected to give rise to contradictory proposals, ʿAlī b. ʿUbayd Allāh found himself with the task of choosing the new *imām*, he himself having refused this position on the grounds that others were more entitled to it; he proposed Muḥammad b. Zayd, who, with the assent of Abu 'l-Sarāyā, was elected.

IBN TAGHRĪBIRDĪ [see abu 'l-maḥāsin].

IBN TAYMIYYA, Taḳī al-Dīn Aḥmad Ibn Taymiyya, born at Ḥarrān on 10 Rabīʿ I 661/22 January 1263 and died at Damascus on 20 Dhu 'l-Ḳaʿda 728/26 September 1328, Ḥanbalī theologian and jurisconsult. Belonging to a family which had already given to this school two well-known scholars, his uncle Fakhr al-Dīn (d. 622/1225) and his paternal grandfather Madjd al-Dīn (d. 653/1255), Ibn Taymiyya was forced to leave his native town in 667/1269 before the approach of the Mongols and to take refuge in Damascus with his father ʿAbd al-Ḥalīm (d. 682/1284) and his three brothers. It was at Damascus, where his father was the director of the Sukkariyya *madrasa*, that he was educated; among his teachers was Shams al-Dīn ʿAbd al-Raḥmān al-Maḳdisī (d. 682/1283), who was the first Ḥanbalī *ḳāḍī al-ḳuḍāt* of Syria after the reform of the judiciary by Baybars. He succeeded his father in his office at the Sukkariyya and, on 2 Muḥarram 683/21 March 1284, gave his first lesson there. One year later, on 10 Ṣafar 684/17 April 1285, he began to teach Ḳurʾānic exegesis at the Umayyad Mosque.

He performed the Pilgrimage to Mecca towards the end of 691/November 1292 and was back in Damascus in 692/February 1293, bringing with him from this journey the subject matter of his treatise on the *Manāsik al-ḥadjdj* in which he denounced a certain number of *bidʿas* in the ritual of the Pilgrimage (*MRK*, ii, 365-401).

Ibn Taymiyya's first incursion into political life took place in 693/1293, at the time of the affair of ʿAssāf al-Naṣrānī, a Christian of Suwaydāʾ who was accused of having insulted the Prophet: Ibn Taymiyya's intransigeance in this affair led to his being imprisoned for the first time, at the ʿAdhrāwiyya. On this occasion he wrote his first great work, the *K. al-Ṣārim al-maslūl ʿalā shātim al-Rasūl* (Ḥaydarābād 1322/1905).

On 17 Shaʿbān 695/20 June 1296, Ibn Taymiyya began to teach at the Ḥanbaliyya, the oldest Ḥanbalī *madrasa* of Damascus, where he succeeded one of his teachers, Zayn al-Dīn Ibn al-Munadjdjā, who had just died.

During the reign of al-Malik al-Manṣūr Lādjīn (696-8/1297-9) he was appointed by the sultan to exhort the faithful to the *djihād* at the time of the expedition undertaken by the sultan against the kingdom of Little Armenia. At almost the same time, in 698/1299, he wrote, at the request of the people of Ḥamāt, one of his most famous professions of faith, *al-Ḥamawiyya al-kubrā*, very hostile to Ashʿarism and to *kalām* (*MRK*, i, 414-69).

Accused by his enemies of anthropomorphism (*tashbīh*), Ibn Taymiyya refused to appear before the Ḥanafī *ḳāḍī* Djalāl al-Dīn Aḥmad al-Rāzī (d. 745/1344-5), on the grounds that this *ḳāḍī* had not received from the sultan powers of jurisdiction in matters of dogma. After a private meeting, held in the house of the Shāfiʿī *ḳāḍī* Imām al-Dīn ʿUmar al-Ḳazwīnī (d. 699/1299-1300), at which the *Ḥamawiyya* was studied, Ibn Taymiyya, whose replies are said to have been judged satisfactory, was troubled no further.

During the Mongol invasion in 699/1300, led by the Īlkhān Ghāzān with the support of the Mamlūk *amīr* Ḳibdjaḳ, Ibn Taymiyya was, at Damascus, one of the spokesmen of the resistance party. In addition, he took part, in Shawwāl 699/June 1300, in the expedition which the Mamlūk authorities undertook against the Shīʿīs of Kasrawān who were accused of helping the Franks and the Mongols.

In 700/1300, when a new Mongol threat arose, he was instructed to exhort people to the *djihād* and went to Cairo, in Djumādā I 700/January 1301, to ask the Mamlūk sultan Muḥammad b. Ḳalāwūn to intervene in Syria. In 702/1303, at the time of the new Mongol invasion, he was present at the victory of Shaḳḥab, on 4 Ramaḍān 702/22 April 1303, where he had been instructed to issue a *fatwā* on the dispensation from the duty of fasting for those who were fighting.

The years which followed were marked by intense polemic activity. In 704/1305, he attacked a certain Ibrāhīm al-Ḳaṭṭān, accused of using *ḥashīsh*, and another *shaykh*, Muḥammad al-Khabbāz, who was accused, among other things, of antinomianism. At about the same time he went with some stone-

masons to smash a sacred rock in the mosque of al-Narandj (*Bidāya*, xiv, 34). He also took up arms against the Ittiḥādiyya, supporters of Ibn al-ʿArabī (d. 638/1240-1), and sent to one of their most prominent members, the *shaykh* Naṣr al-Dīn al-Manbidjī, the spiritual director of Baybars al-Djāshnikīr, a letter which was courteous, but nevertheless firmly condemned the monism of Ibn al-ʿArabī (*MRM*, i, 161-83). Towards the end of the year 704/July 1305, he took part in a new expedition against the *Rawāfiḍ* of Kasrawān and, on his return, attacked in Damascus the Aḥmadiyya Rifāʿiyya, whose *shaykh* was accused of Mongol sympathies (*MRM*, i, 121-46).

His enemies then renewed their attacks on his *credo* and cast doubts on the correctness of his profession of faith *al-Wāsiṭiyya*, written shortly before the arrival of the Mongols in Damascus. Two councils were held on 8 and 12 Radjab 705/24 and 28 January 1306, at the residence of the governor of Damascus, al-Afram. The second council, a member of which was Ṣafī al-Dīn al-Hindī (d. 715/1315), a pupil of Fakhr al-Dīn al-Rāzī (d. 606/1209-10), found that the *Wāsiṭiyya* "was in conformity with the Ḳur'ān and the *Sunna*".

The affair seemed to be finished. However the Shāfiʿī *ḳāḍī* Ibn al-Ṣarṣarī (d. 723/1323), a pupil of Maḥmūd al-Iṣfahānī (d. 688/1289), set about reopening it, having several of Ibn Taymiyya's pupils beaten and imprisoning the traditionist al-Mizzī (d. 743/1342-3). A third council was held at the governor's residence on 7 Shaʿbān 705/22 February 1306, on the sultan's orders. Again the *Wāsiṭiyya* was not condemned, and Ibn al-Ṣarṣarī resigned. The two adversaries were finally sent to Cairo, where they arrived on 22 Ramaḍān 705/7 April 1306.

The very day after his arrival, Ibn Taymiyya appeared before a new council which was held in the Citadel and consisted of a number of high officials of the state and the four *ḳāḍī 'l-ḳuḍāt* of Egypt. Ibn Taymiyya was accused of anthropomorphism and condemned to imprisonment. He remained in the Citadel of Cairo for nearly a year and a half, until 26 Rabīʿ I 707/25 September 1307. He was released on the intervention of the *amīr* Salār, the rival of Baybars al-Djāshnikīr, and of the Bedouin *amīr* Muhannā b. ʿĪsā (d. 736/1335-6), for whom he wrote, at a date not known, *al-ʿAḳīda al-tadmuriyya* (Cairo 1325/1908).

Granted his liberty, but not authorized to return to Syria, Ibn Taymiyya, who continued to denounce all the innovations (*bidʿa*) which he regarded as heretical, soon encountered the opposition of two of the most influential Ṣūfīs of Egypt: Ibn ʿAṭā' Allāh (d. 709/1309-10), a pupil of Abu 'l-Ḥasan al-Mursī, and Karīm al-Dīn al-Amulī (d. 710/1310-11), the head of the *Dār Saʿīd al-suʿadā'*. Following a popular demonstration, he was summoned, in Shawwāl 707/end of March 1308, before the Shāfiʿī *ḳāḍī* Badr al-Dīn Ibn Djamāʿa, who questioned him on his interpretation of the doctrine of the intercession of the saints (*tawassul*; *istighātha*). He was authorized to return to Syria but was nevertheless held in Cairo and imprisoned for several months in the prison of the *ḳāḍīs*.

The coming to power of Baybars al-Djāshnikīr, proclaimed sultan in 708/1309, was to re-open a period of persecutions. On the last night of Ṣafar 709/7-8 August 1309, Ibn Taymiyya was taken, under strong guard, to Alexandria, where he was put under house arrest. Lodged in a tower of the sultan's palace, permitted to receive visits and to write, Ibn Taymiyya, during the seven months which his exile was to last, was able to meet at Alexandria Maghribīs who were passing through, and wrote some important works, among them a long refutation (now lost) of the *Murshida* of Ibn Tūmart, and the *Radd ʿala 'l-Manṭiḳiyyīn* (Bombay 1368/1949). Restored to the throne on 1 Shawwāl 709/4 March 1310, Muḥammad b. Ḳalāwūn released Ibn Taymiyya and received him in audience in Cairo (*Bidāya*, xiv, 53-4).

Ibn Taymiyya was back in Cairo on 8 Shawwāl 709/11 March 1310 and remained there again for about three years. He was occasionally consulted by Muḥammad b. Ḳalāwūn (al-Malik al-Nāṣir) on Syrian affairs and continued to teach privately and to give answers to the various enquiries which were addressed to him. It was at this time that he began, if not the final redaction, at least the development of his treatise on juridical policy, the *Kitāb al-Siyāsa al-sharʿiyya*, the date of which may be put at between 711/1311 and 714/1315 (cf. the Fr. tr. by H. Laoust, Damascus (PIFD) 1948, and Eng. tr. by Omar A. Farrukh, Beirut 1966; latest ed. by Muḥammad al-Mubārak, Beirut 1967). Several of the *Fatāwā miṣriyya* (Cairo 1368/1949) also date from this period.

A new Mongol threat, rapidly dispelled, caused Ibn Taymiyya to return to Damascus, where he arrived, after a brief stay in Jerusalem, on 1 Dhu 'l-Ḳaʿda 712/28 February 1313. Al-Malik al-Nāṣir, who had preceded him by one week, had left on the Pilgrimage; on his return to Damascus on 11 Muḥarram 713/8 May 1313, he took various measures of administrative and financial reorganization. In addition, a new governor of Damascus, the *amīr* Tankiz (d. 740/1340), had been appointed in Rabīʿ II 712/August 1312.

It was under the governorate of Tankiz that Ibn Taymiyya spent his last fifteen years. Promoted to the rank of professor, and considered by his supporters as an independant *mudjtahid*, he now had as his chief pupil Ibn Ḳayyim al-Djawziyya (d. 751/1350 [*q.v.*]), who did much to spread his ideas and indeed shared some of his persecution. Relations between Ḥanbalīs and Ashʿarīs continued often to be strained, as is proved by the incident in Muḥarram 716/April 1316 which again saw the two schools in disagreement on the question of dogma (*Bidāya*, xiv, 75-6).

Towards the end of 716/February 1317 and in the following months, Ibn Taymiyya was involved in the affair concerning Ḥumayḍa, the *amīr* of Mecca who had formed an agreement with the Īlkhān Khudābanda (d. 716/1316) in order that there should prevail in Mecca a policy favourable to Shīʿism; it seems to have been at about this time that Ibn Taymiyya wrote the *Minhādj al-sunna al-nabawiyya* (Cairo 1321/1904; reprinted), in which he attacked the Imāmī theologian al-ʿAllāma al-Ḥillī (d. 726/1325) (cf. H. Laoust, *La critique du sunnisme dans la doctrine d'al-Ḥillī*, in *REI*, 1966, 35-60).

However the persecutions were soon to recommence. In 718/1318, a letter from the sultan forbade Ibn Taymiyya to issue any *fatwās* on repudiation (*ṭalāḳ*) contrary to the prevailing Ḥanbalī doctrine; he was criticized for denying the validity of uniting three repudiations into one single one and for considering the oath (*ḥalf*) of repudiation as a single oath if the person who uttered it did not intend to proceed to an actual repudiation. Two councils were held on the matter, presided over

by Tankiz, in 718/1318 and 719/1319. A third council, held on 20 Radjab 720/26 August 1320, accused Ibn Taymiyya of infringing the sultan's prohibition and condemned him to prison.

Ibn Taymiyya was immediately arrested and imprisoned in the Citadel at Damascus, where he remained for slightly over five months, and was released, on 10 Muḥarram 721/9 February 1321, by a decree from al-Malik al-Nāṣir. He is mentioned in the years that followed as taking part in various incidents in the religious or political life of Egypt and Syria (cf. *REI*, 1960, 32-3).

On 16 Shaʿbān 726/18 July 1326, Ibn Taymiyya was again arrested, without any further trial, and was deprived of the right to issue *fatwās* by a decree of the sultan which was read out in the Umayyad Mosque. He was criticized because of his *risāla* on visits to tombs (*ziyārat al-ḳubūr*) in which he condemned the cult of saints. A number of his disciples were arrested at the same time as he was but must have been released shortly afterwards except for Ibn Ḳayyim al-Djawziyya (the text of the *Ziyārat al-ḳubūr*, written before this date, is given in *MR*, 103-22).

Ibn Taymiyya then encountered the opposition of the Mālikī *ḳāḍī 'l-ḳuḍāt*, Taḳī al-Dīn al-Ikhnāʾī (d. 750/1349). Another influential opponent was ʿAlāʾ al-Dīn al-Ḳūnawī, a disciple of Ibn al-ʿArabī, who, after having been director of the Dār Saʿīd al-suʿadāʾ in Cairo, had recently been appointed Shāfiʿī *ḳāḍī 'l-ḳuḍāt* at Damascus.

Ibn Taymiyya remained a prisoner in the Citadel for more than two years; he continued to write and to issue *fatwās*; there date from this period several works which have survived and which were written with the aim of justifying his doctrines, in particular the *Kitāb Maʿārif al-wuṣūl*, on the methodology of *fiḳh* (*MRK*, i, 180-217), the *Rafʿ al-malām* (*MR*, 55-83) and the *Kitāb al-Radd ʿala 'l-Ikhnāʾī* (Cairo 1346/1928), in which he made a violent personal attack on his opponent and set out at length his ideas on the cult of saints (cf. *Essai*, 353-4).

As a result of a complaint by al-Ikhnāʾī to the sultan, the latter ordered, on 9 Djumādā II 728/21 April 1328, that Ibn Taymiyya's paper, ink and pens should be taken from him. Five months later, Ibn Taymiyya died in the Citadel, on 20 Dhu 'l-Ḳaʿda 728/26 September 1328. His burial, attended by a large number of the inhabitants of Damascus, was in the cemetery of the *Ṣūfiyya*, where his tomb is still honoured.

Ibn Taymiyya's works are numerous; nearly all have now appeared in print. A list of his main works is given in the treatise by Ibn al-Ḳayyim entitled *Asmāʾ muʾallafāt Ibn Taymiyya* (Damascus 1372/1953); cf. Brockelmann, II, 125-7 and S II, 119-26. There should be mentioned several collections published in Cairo or in Arabia: *Madjmūʿat al-rasāʾil* (abbr. as *MR* in this article, Cairo 1323/1906); *Madjmūʿat al-rasāʾil al-kubrā* (abbr. *MRK*, Cairo 1326/1906, 2 vols.); *Kitāb Madjmūʿat al-fatāwa* (Cairo 1326-9/1908-11); *Madjmūʿat al-rasāʾil wa 'l-masāʾil* (abbr. *MRM*, Cairo (*Manār* press) 1349/1930- , 5 vols.); and finally *Madjmūʿat fatāwā shaykh al-Islām Aḥmad Ibn Taymiyya* (Riyāḍ 1381-3/1961-4, 30 vols.).

Ibn Taymiyya's education was primarily that of a Ḥanbalī theologian and jurisconsult. He possessed a very sound knowledge of all the great works of his school, from those of the imām Aḥmad (d. 240/854-5) or of al-Khallāl (d. 311/923-4) to those of Muwaffaḳ al-Dīn b. Ḳudāma (d. 620/1223) or of his own paternal grandfather, Madjd al-Dīn Abu 'l-Barakāt (d. 652/1254), whose *Muḥarrar* and *Muntaḳā* formed part of the everyday reading of the Ḥanbalīs of the Mamlūk period.

To this knowledge of early and classical Ḥanbalism, he added not only that of the other schools of jurisprudence (*khilāf*), but also that of heresiographical literature (*firaḳ*), in particular of *falsafa* and of Ṣūfism. Indeed, he refers to knowing and having reflected on the works of many of the *Ṣūfiyya*: Sahl al-Tustarī (d. 283/896), Djunayd (d. 290/903), Abū Ṭālib al-Makkī (d. 386/996), Abu 'l-Ḳāsim al-Ḳushayrī (d. 564/1169), ʿAbd al-Ḳādir al-Djīlī (d. 561/1166) and Abū Ḥafṣ al-Suhrawardī (d. 632/1235). He mentions also having allowed himself to be deluded, in his youth, by the *Futūḥāt* of Ibn al-ʿArabī (d. 638/1240-1), before discovering how subtly heretical they were. He never condemned Ṣūfism in itself, but only that which he considered to be, in the case of too many Ṣūfīs, inadmissible deviations in doctrine, ritual or morals, such as monism (*waḥdat al-wudjūd*), antinomianism (*ibāḥa*) or esotericism (*ghuluww*).

His doctrine was intended to be primarily, while centred on and inspired by the spirit of Ḥanbalism, a doctrine of synthesis or of conciliation—"the happy mean" (*wasaṭ*)—which would accord to each school its rightful place in a strongly hierarchical whole in conformity with the precepts of the Ḳurʾān and the *Sunna*. "The dogmatic theologians", he wrote, "based their system on reason (*ʿaḳl*), the traditionists based theirs on *ḥadīth* (*naḳl*), and the Ṣūfīs theirs on free-will (*irāda*)". Tradition, reason and free-will are precisely the three elements Ibn Taymiyya aimed to integrate and harmonize in a solidly constructed doctrine which might be defined as a conservative reformism, whether it was a case of the formulation of the *credo*, the rehabilitation of *idjtihād* or the reconstruction of the state.

In the field of dogma, Ibn Taymiyya's main intention was to follow the Ḳurʾān and *ḥadīth*, "to describe God only as He has described Himself, in His Book and as the Prophet has described Him in the *Sunna*". Repudiating simultaneously *taʿṭīl*, the denial of attributes, *tashbīh*, the comparison of God with His creatures, and *taʾwīl*, recourse to allegorical or symbolic exegesis, he concentrates on other notions which are characteristic of Ḥanbalism: *tafwīḍ*, or leaving to God the ultimate mystery of things, and *taslīm*, voluntary and intentional submission to the word of God and of his Prophet both in knowledge and in action; this doctrine nevertheless provides authority, within the framework of Holy Writ and of tradition, for the widest possible scope in the personal interiorization of religion. In fact, in his definition of faith (*īmān*), Ibn Taymiyya encompasses the feelings on which it is based, the formulas in which it is expressed and the actions through which it is completed. In politics, he admits the legitimacy of the first four caliphs (*Rāshidūn*) in their chronological order of succession, but distinguishes between the problem of the caliphate (*khilāfa*) and that of the respective merits (*tafḍīl*) of these four caliphs; although he declares the obvious superiority of Abū Bakr and ʿUmar, he acknowledges that there might be hesitation in pronouncing (*tawaḳḳuf*) on the respective merits of ʿUthmān and ʿAlī.

His loyalty to the "men of old" (*salaf*) led him to prefer the ideas upheld by the Companions

(*ṣaḥāba*) or their early successors to the doctrine taught by the founders of the *madhāhib*.

Ibn Taymiyya did not, as is sometimes said, announce the "re-opening" of *idjtihād*, and still less did he claim this privilege for himself: he did not consider that *idjtihād* required to be "closed", since its continuance is necessary for the interpretation of the Law (cf. the opposition between *kulliyyāt* and *djuz'iyyāt*). But anxious to impose some discipline on this *idjtihād*, he attempted to define the rules which every *mudjtahid* ought to follow. With this intent, he announced the absolute supremacy of the text (*naṣṣ*) (Ḳur'ān or *ḥadīth*) and reduced correspondingly the importance of *idjmā'*, to which he opposed the agreement (*ittifāḳ*) of the doctors of the Law, the validity of which derives from the text on which it is based.

He attaches much importance to reasoning by analogy (*ḳiyās*), which consists first of all in seeking the cause (*'illa*) of a judgement (*ḥukm*) resulting from the Ḳur'ān or from the *Sunna* and then in extending this judgement to all cases which share the same cause.

Ibn Taymiyya was often suspicious of *maṣlaḥa*, which he criticized for approaching methods based on reason (*ra'y*; *istiḥsān*; *dhawḳ*; *kashf*), but he finally approved a use of it which was both extensive and disciplined. The application of *maṣlaḥa*, which may apply in all fields, including even that of the *'ibādāt*, presupposes a previous long meditation on the Ḳur'ān, on *ḥadīth* and on the jurisprudence of the great doctors of the Law.

In fact Ibn Taymiyya considered religion and the State to be indissolubly linked. Without the coercive power (*shawka*) of the State, religion is in danger. Without the discipline of the revealed Law, the State becomes a tyrannical organization. The essential function of the State is to see that justice (*'adl*) prevails, to ordain good (*amr*) and to forbid evil, to bring about, in reality, the reign of unity (*taḥḳīḳ al-tawḥīd*), and to prepare for the coming of a society devoted to the service of God (*'ibāda*).

While recognizing the legitimacy of the *Rāshidūn*, Ibn Taymiyya never upheld the principle of the permanence of the single caliphate. He pointed out that the Muslim profession of faith (*shahāda*) requires obedience only to God and to His Prophet: it does not limit the number of the *imāms* to whom obedience is owed. He regards the Muslim community (*umma*) as a natural confederation of states.

Every imām is at once the proxy (*wakīl*), guardian (*walī*) and partner (*sharīk*) of those whom he administers, and therefore his mission is to construct and instil respect for the system of orders and prohibitions which, within the framework of the revealed Law according to the circumstances, is to govern the various areas of the life of the community.

Furthermore, each member of the community has the duty and the right to give advice (*naṣīḥa*), within the limits of his competence, to his brothers in religion and hence to ordain good and forbid evil, striving to avoid anything which could endanger the solidarity of the Believers and divide the community.

Ibn Taymiyya's economic ethics also share this emphasis on solidarity or the importance of the community. He favours the idea of property, but states that the rich should be the friends and partners of the poor, and substitutes for the idea of competition that of co-operation and mutual help. He disapproved of the authoritarian fixing of prices (*tas'īr*) and permitted this fixing only after negotiation and agreement. He reminded people that "The revealed Law condemns those who make riches their goal and wish to resemble Ḳārūn, just as it condemns those whose aim is political power and who wish to be like Pharaoh".

Ibn Taymiyya's influence, even in his own lifetime and under the Baḥrī Mamlūks, was great, in spite of the hostility which he encountered from the powerful family of the Subkī, the two founders of which, Taḳī 'l-Dīn (d. 756/1355) and his son Tādj al-Dīn (d. 771/1369-70), were among the most eminent representatives of Shāfi'ism and Syro-Egyptian Ash'arism. Among his chief disciples, in the world of the *'ulamā'*, were, in addition to Ibn al-Ḳayyim mentioned above, men or women who sometimes belonged to other schools than his.

Aḥmad b. Ibrāhīm al-Wāsiṭī (d. 711/1311-2), one of his first disciples, was the son of the head of the Rifā'iyya brotherhood of Wāsiṭ. Umm Zaynab (d. 711/1311-2), a native of Baghdād, who led a campaign in Damascus against the Ittiḥādiyya, is an excellent example of the type of devout woman which existed at that time in Syria. Al-Mizzī (d. 743/1342-3), who had come from Aleppo and was one of the greatest traditionists of the period, belonged to the Shāfi'ī school. Al-Dhahabī (d. 748/1347-8), the famous theologian and historian, wrote a summary of the *Minhādj al-sunna* of Ibn Taymiyya. Ibn Kathīr (d. 774/1372-3), also a Shāfi'ī, inserted, in his *Bidāya*, a valuable biography of Ibn Taymiyya, of whom he was an admirer. Finally, Ibn Radjab (d. 795/1393), who wrote a well-documented history of Ḥanbalism, was inspired by Ibn Taymiyya's doctrine in his *Ḳawā'id fiḳhiyya*.

In addition, Ibn Taymiyya's influence under the Baḥrī sultans extended also to the milieu of the *umarā'*. Thus Katbughā al-Manṣūrī (d. 721/1321), who was *ḥādjib* at Damascus, and Arghūn al-Nāṣirī (d. 731/1330-1), who held the offices of viceroy of Egypt and governor of Aleppo, are often described, together with several other *amīrs*, as disciples or admirers of Ibn Taymiyya.

Under the Circassian Mamlūks (783-922/1382-1517), Ibn Taymiyya's influence was less apparent but nevertheless continued to be deeply felt in various *'ulamā'* circles. Al-Maḳrīzī (d. 845/1441-2), in his *Khiṭaṭ* (Cairo 1326/1909, iv, 185), contrasts to the supporters of al-Ash'arī—of whom he was one—those of Ibn Taymiyya, the defender of the faith of the "men of old" (*salaf*). "People", he writes, "are divided into two factions over the question of Ibn Taymiyya; for until the present, the latter has retained admirers and disciples in Syria and Egypt".

The Ottoman conquest of Syria and Egypt (922/1517), which led to the official supremacy of the Ḥanafī school, struck a severe blow to Ḥanbalism, which did not however disappear altogether. Supporters of Ibn Taymiyya remained: among them were al-'Ulaymī (d. ca. 928/1522), the historian of Jerusalem and Hebron, who wrote a history of Ḥanbalism which is a valuable source of information on this school after the death of Ibn al-Ḳayyim, and also especially al-Mar'ī (d. 1033/1623), who wrote a laudatory biography of Ibn Taymiyya, *al-Kawākib al-durriyya* (Cairo 1329/1911). It was under the Ottomans also that Ibn Taymiyya's ideas, most of which were adopted by Muḥammad b. 'Abd al-Wahhāb (d. 1206/1792), gave rise to Wahhābism and to the state of the Su'ūd dynasty. Ibn Taymiyya

remains today, with al-Ghazālī (d. 505/1111) and Ibn al-ʿArabī (d. 638/1240), one of the writers who have had the greatest influence on contemporary Islam, particularly in Sunnī circles.

IBN AL-TAYYĀN [see TAMMĀM B. GHĀLIB].

IBN AL-ṬAYYIB, Abu 'l-Faradj ʿAbd Allāh al-ʿIrāḳī, Nestorian monk, physician, philosopher and theologian known in mediaeval Europe under the name of Abulpharagius Abdalla Benattibus. He studied and worked at the ʿAḍudī hospital of Baghdād, was the secretary of the *katholikos* Elias I, and died in 435/1043. The physicians Ibn Buṭlān, ʿAlī b. ʿĪsā and Abu 'l-Ḥusayn al-Baṣrī were his pupils. An inventory of his works of Christian exegesis has been made by Graf: there may be mentioned especially the *Firdaws al-Naṣrāniyya*, the Arabic translation of the *Diatessaron* of Tatian, and the *Fiḳh al-Naṣrāniyya* (ed. W. Hoenerbach and O. Spies, Louvain 1956). In philosophy he wrote several commentaries on works of Aristotle, on the *Isagoge* of Porphyry [see FURFŪRIYŪS] (the text mentioned by Brockelmann I, 233 *Logic* no. 4 is to be attributed to Ibn al-Ṭayyib and not to al-Fārābī; cf. S. M. Stern, in *BSOAS*, xix (1957), 419-25). He wrote a commentary on the *Tabula Cebetis* of Ibn Miskawayh [*q.v.*]. In medicine he wrote abridgements of Hippocrates, Aristotle and Galen.

(J. Vernet)

IBN THAWĀBA, name of the members of an important family, of Christian origin, among whom were several high officials of the ʿAbbāsid administration. An anecdote related by Ibn al-Nadīm (*Fihrist*, 130) and repeated by Yāḳūt (*Udabāʾ*, iv, 144-5) suggests that the family's ancestor, Thawāba, lived in Baḥrayn where he was a barber. His son Muḥammad entered the administration at an unknown date. The best-known members of the family are:

Abu 'l-ʿAbbās Aḥmad b. Muḥammad, who was, under al-Muhtadī (ruled 255/869-256/870), one of the chief assistants of the vizier Sulaymān b. Wahb. Ismāʿīl b. Bulbul himself, whom Aḥmad disliked and disagreed with, forgave him for his hostile attitude towards him and entrusted him with the administration of several regions of ʿIrāḳ. He was to remain in charge of these districts until the arrival in office of the vizier ʿUbayd Allāh b. Sulaymān b. Wahb, who replaced him by Abu 'l-Ḥasan b. Makhlad; but Ibn Thawāba remained an official until his death, in 277/890 according to the majority of his biographers, in 273/886 according to al-Ṣūlī.

He was a stylist of talent and a poet. He is said to have left two works, one of them a collection of letters, which have not survived. But he had acquired a reputation for clumsiness, and his contemporaries regarded as grotesque his affected language, his upstart affectation, and his excessive arrogance. It is not known whether he shared the pro-Shīʿī sentiments of his son Muḥammad, but Ibn Bulbul's conciliatory attitude towards him seems to indicate this.

Ibn Thawāba presided over a circle in which a number of poets and men of letters met regularly. His generosity, sometimes ostentatious, led some poets of his time (such as al-Buḥturī and al-Rūmī) to write of him very elegant panegyrics, which still survive. But the disagreements which he had with some of them, and notably with Ibn al-Rūmī, earned him a series of epigrams full of irony and persiflage. Some writers of the following centuries, and notably al-Tawḥīdī, retained the image of him which is given in these satires and present him in some of their anecdotes as a grotesque, narrow and pretentious bore.

Very little is known of the career of his son Muḥammad. He was the secretary of the Turk Bāykbāk and he had to go into hiding for a period to escape from the anger of al-Muhtadī, who had been incited against him by certain courtiers who accused him of Shīʿism. His master finally exonerated him and obtained for him the caliph's pardon, which enabled him to return to his office in 250/864. He also was a man of letters and is said to have left a collection of letters which has not survived.

Bibliography: *Fihrist*, 130, 168; Yāḳūt, *Udabāʾ*, iv, 144-74; *Aghānī*, Dār al-Thaḳāfa ed., xviii, 96; Tawḥīdī, *Akhlāḳ al-wazīrayn*, Damascus 1965, 236 ff.; Ḥusrī, *Zahr*, index; D. Sourdel, *Vizirat*, index; S. Boustany, *Ibn al-Rūmī, sa vie et son oeuvre*, Beirut 1967, 193-5; *D.M.*, ii, 293.

Abu 'l-Ḥusayn Djaʿfar b. Muḥammad, the brother of Abu 'l-ʿAbbās Aḥmad, occupied a high office in the administration; under the vizierate of ʿUbayd Allāh b. Sulaymān b. Wahb he was appointed as deputy to the vizier's son, al-Ḥasan, who had just been put in charge of several offices, among them the Chancellery and the Police (*Nishwār*, viii, 83-4; Yāḳūt, *Udabāʾ*, vii, 187). On al-Ḥasan's death, Djaʿfar succeeded him in these offices and remained in them until he died in 284/897 (al-Ṣafadī, *Wāfī*, iii/2, 68). He was replaced by his son Muḥammad, who was a great favourite of al-Muḳtadir and who died in 312/924 (*Udabāʾ*, xviii, 96). Muḥammad was succeeded by his son Abū ʿAbd Allāh Aḥmad, who was the last of the Banū Thawāba to hold an important office in the administration. On his death, the offices which had been hereditary among the Banū Thawāba since the death of al-Ḥasan b. ʿUbayd Allāh were entrusted to Abū Isḥāḳ al-Ṣābī (*Udabāʾ*, vii, 188).

Djaʿfar was a cultivated man and a talented poet. It is known that he attempted to compete with Ibn al-Rūmī and that he was closely connected with Ibn al-Muʿtazz, who wrote a touching elegy on his death in which Djaʿfar's moral and literary virtues are sympathetically enumerated.

His son and his grandson were also talented men of letters. Abū ʿAbd Allāh is said to have left a collection of letters (*Udabāʾ*, iv, 146).

IBN AL-THUMNA, Muḥammad b. Ibrāhīm, one of the Muslim *ḳā'ids* who shared Sicily among themselves after the last Kalbī *amīr* al-Ḥasan, called al-Ṣamṣām, was deposed in 444/1052-3 (according to Ibn Khaldūn: 431/1039-40). Having unexpectedly become lord of Syracuse, on the east coast of the island, Ibn al-Thumna, after killing his adversary Ibn al-Maklātī, who was absolute master of Catania, had to fight another rival, Ibn al-Ḥawwās [*q.v.*]. But, having been defeated by the latter, he decided to give his support to the Normans and to encourage them to make themselves masters of Sicily. The first landing by Count Roger on the island took place towards the end of February 1061, but this ended in a repulse, which forced the Normans to withdraw and Ibn al-Thumna to take refuge in Catania. Some months after these events, Messina fell into the hands of the Normans, who then joined Ibn al-Thumna for their attacks against the army of Ibn al-Ḥawwās; the latter was beaten on the outskirts of Castrogiovanni, which the Christians had been besieging for a month. But, as the Normans were unable to make the fortress capitulate, Robert and Roger decided to withdraw, whereas Ibn al-Thumna continued to reduce his most stubborn adversaries to obedience, until his death in 454/1062 on the battlefield.

Bibliography: the bibliography of the events in which Ibn al-Thumna took part is found almost exclusively in the sources noted by M. Amari in the *Storia dei Musulmani di Sicilia*², and published in his *Biblioteca arabo-sicula*, Leipzig 1857.

(U. Rizzitano)

IBN AL-ṬIḲṬAḲĀ, Ṣafī al-Dīn Muḥammad b. ʿAlī, ʿIrāḳī historian. A descendant of al-Ḥasan b. ʿAlī through Ibrāhīm al-Ṭabāṭabā, he was born, it seems, shortly after the conquest of Baghdād by the Mongols, which he does not mention as having witnessed personally. His father, Tādj al-Dīn ʿAlī b. Muḥammad b. Ramaḍān, chief *naḳīb* of the ʿAlids, had gained great wealth and influence, but in a game of political intrigue against the brothers ʿAlā' al-Dīn and Shams al-Dīn al-Djuwaynī [*qq.v.*], he lost his life and property (Ibn ʿInaba, *ʿUmdat al-ṭālib*, al-Nadjaf 1381/1961, 180 f.). His son too, was a *naḳīb* of the ʿAlids, probably with more regionally limited authority. He appears to have travelled widely in ʿIrāḳ and Ādharbaydjān. In the period from Djumādā II to Shawwāl 701/February to early June 1302, during a stay in Mosul on the way to Tabrīz, he wrote his history, *al-Fakhrī*, for Fakhr al-Dīn ʿĪsā b. Ibrāhīm of Mosul. The work consists of a brief *fürstenspiegel* and biographies of the caliphs down to al-Mustaʿṣim, followed in each case by biographies of the viziers of the caliph (ed. W. Ahlwardt, Gotha 1860; H. Derenbourg, Paris 1895; and later reprints; French trans. É. Amar, Paris 1910, *Archives Marocaines*, xiv; Engl. trans. C. E. J. Whitting, London 1947). The author's skilful choice of his largely anecdotal material, his reflective rather than factual approach to history, and the obvious love for his subject of an urbane and literate personality combine to make the *Fakhrī* enjoyable and instructive reading to a degree uncommon in medieval scholarly historiography. A Persian translation by Hindūshāh b. Sandjar made in 723-4/1323-4 and entitled *Tadjārib al-salaf*, indicates the title of Ibn al-Ṭiḳṭaḳā's work as *Munyat al-fuḍalā' fī tawārīkh al-khulafā' wa-'l-wuzarā'*. This *Munya* was probably a later edition of the historical section of the *Fakhrī*. A *Kitāb al-Ghāyāt* is mentioned by Ibn al-Fuwaṭī, *Talkhīṣ Madjmaʿ al-ādāb*, ed. M. Djawād, iv/2, Damascus 1963, 784.

IBN AL-TILMĪDH, Abu 'l-Ḥasan Hibat Allāh b. Abi 'l-ʿAlā' Ṣāʿid b. Ibrāhīm, with the honorific names of Muwaffiḳ al-Mulk and Amīn al-Dawla (he was widely known under the latter name), Christian Arab physician of Baghdād, where he was born in the second half of the 5th/11th century, and son of a very eminent physician. He completed his education in various branches of learning by making fairly long journeys in Persia, and then returned to settle in Baghdād, where he succeeded his father. He seems to have been extraordinarily gifted: in addition to his fine command of Arabic, he knew Syriac and Persian, was skilled in poetry and music, and was also an excellent calligrapher. He was well-versed in Christian theology, and evidently also in the Muslim religion, since he wrote on medical questions treated in *ḥadīths*. He appears to have been a priest, and he was the leader of the Christian community of Baghdād. As a physician, he was highly esteemed by his contemporaries and his successors, for example ʿAbd al-Laṭīf [*q.v.*]; he enjoyed the favour of the caliphs al-Muḳtafī, al-Mustandjid and al-Mustaḍī' [*qq.v.*], and he remained until his death the Christian director (*sāʿūr*, a Syriac title) of the famous hospital founded by ʿAḍud al-Dawla [*q.v.*] in the capital. He was appointed by al-Mustaḍī' as head of all the physicians, and, in this capacity, was instructed to examine the professional competence of all the physicians of Baghdād and the surrounding district. Ibn Abī Uṣaybiʿa (i, 261) relates an amusing scene which took place during an examination of this type. Ibn al-Tilmīdh died on 28 Rabīʿ I 560/12 February 1165 in Baghdād at the age of 95 lunar years (92 solar years), leaving to his son a considerable fortune and a large library, which on the son's death became the property of the state. It appears from the various information given by the Arab historians that Ibn al-Tilmīdh made use of the works of the Greek physicians, and also of the great *Ḳānūn* of Ibn Sīnā [*q.v.*] as the basis of his teaching on the theory of medicine. He acquired a following of eminent disciples (Fakhr al-Dīn al-Māridīnī, Ibn Abi 'l-Khayr al-Masīḥī, Raḍī al-Dīn al-Raḥbī, Muwaffiḳ al-Dīn b. al-Maṭrān, etc.), the majority of whom later went from ʿIrāḳ to Syria and Egypt, where they founded new medical schools which began to flourish in Egypt in the 7th/13th century [see IBN AL-NAFĪS]. Ibn al-Tilmīdh left a whole series of medical works; they are not in fact original, but consist for the most part of commentaries on or summaries of works from the Hippocratic *Corpus* and from Galen, or of works by Ibn Sīnā, Rāzī, Ḥunayn and other Christian physicians. His pharmacological works are nevertheless often quoted, in particular an *Aḳrābādhīn* (Pharmacopoeia) and two abridged versions of it intended for use in hospitals. In the ʿAḍudī hospital they replaced the Pharmacopoeia of Sābūr b. Sahl (d. 255/869), which had been used until then. These works and some others (a treatise on bleeding and a

practical manual of medical treatment) have survived in manuscript (see Brockelmann, I, 487, S I, 891); nothing has so far been printed.

Dietrich, *Medicinalia* ..., no. 43 and no. 116; Ziriklī, *Aʿlām*, ix, 59; Ibn Khallikān, ii, 191 (ed. Wüstenfeld, v, 129, no. 520).

(M. Meyerhof)

IBN ṬUFAYL, celebrated philosopher, whose full name was Abū Bakr Muḥammad b. ʿAbd al-Malik b. Muḥammad b. Muḥammad b. Ṭufayl al-Ḳaysī. He belonged to the prominent Arab tribe of Ḳays; he was also called al-Andalusī, al-Ḳurṭubī or al-Ishbīlī. Christian scholastics call him Abubacer, a corruption of Abū Bakr.

Ibn Ṭufayl was probably born in the first decade of the 6th/12th century in Wādī Āsh, the modern Guadix, 40 miles N.E. of Granada. Nothing is known of his family or his education. That he was a pupil of Ibn Bādjdja [*q.v.*], as is frequently stated, is incorrect, for in the introduction to his philosophical romance he says expressly that he was not acquainted with this philosopher. He first of all practised as a physician in Granada, and then became secretary to the governor of the province. In 594/1154, he became secretary to the governor of Ceuta and Tangier, a son of ʿAbd al-Muʾmin, the founder of the Almohad dynasty. Finally he received the appointment of court physician to the Almohad sultan Abū Yaʿḳūb Yūsuf (558-80/1163-84). It has also been held that he was the latter's vizier; but it is doubtful if he really held this title, since only one text gives him it, as L. Gauthier points out. Al-Biṭrawdjī [*q.v.*], who was his pupil, simply calls him *ḳāḍī* (L. Gauthier, *Ibn Thofaïl*, 6). In any case Ibn Ṭufayl always had great influence with this prince, which he used to attract scholars to the court. For example, he introduced the young Ibn Rushd to the sultan. The historian ʿAbd al-Wāḥid al-Marrākushī (*al-Muʿdjib*, ed. Dozy², 174 f.; tr. Fagnan, 208-10) gives a description of this meeting from Averroes' own account. On this occasion the sultan showed a remarkable erudition in philosophical matters. It was also Ibn Ṭufayl who, at the instigation of the prince, advised Averroes to write a commentary on the works of Aristotle. This is stated by Abū Bakr Bundūd, a pupil of Ibn Ṭufayl, who says further: "The commander of the faithful was exceedingly attached to him (Ibn Ṭufayl). I am told that he remained whole days and nights in the palace with him without appearing in public".

In 578/1182 Ibn Ṭufayl on account of his advanced age was succeeded by Ibn Rushd as court physician to the Caliph. But he continued to retain Abū Yaʿḳūb's favour, and, after the latter's death in 580, retained the friendship of his son and successor, Abū Yūsuf Yaʿḳūb. He died in 581/1185-6 at Marrākush, the Caliph himself attending his obsequies.

Ibn Ṭufayl is the author of the celebrated philosophical novel *Ḥayy b. Yaḳẓān* [*q.v.*], one of the most remarkable books of the Middle Ages. Little else from his pen is known. He wrote two treatises on medicine, and corresponded with Averroes about the latter's medical work *al-Kulliyyāt*. According to the astronomer al-Biṭrūdjī and Ibn Rushd in his middle commentary on Aristotle's *Metaphysics* (book xii), he had some original astronomical ideas. Al-Biṭrūdjī attempted to refute Ptolemy's theory of epicycles and eccentric circles, and says in his preface that he is following the ideas of Ibn Ṭufayl.

IBN ṬŪLŪN, Shams al-Dīn Muḥammad b. ʿAlī b. Aḥmad, al-Ṣāliḥī, al-Dimashḳī, al-Ḥanafī (880-953/1473-1546), a scholar and a prolific writer, noted in his own time as a teacher of traditions and jurisprudence, is perhaps more valued today for his historical writings dealing with the end of Mamlūk rule and the beginning of Ottoman domination of Syria. His autobiography, called *al-Fulk al-mashḥūn fī aḥwāl Muḥammad b. Ṭūlūn* (pub. Damascus 1348/1929), while it gives little personal information, is an excellent source for a study both of the author's intellectual development and of traditional Islamic education at that time.

Ibn Ṭūlūn was born in al-Ṣāliḥiyya, the suburb of Damascus on Mount Ḳāsiyūn, to a family with scholarly connexions. His paternal uncle, Djamāl al-Dīn Yūsuf b. Ṭūlūn, was a *ḳāḍī* and *muftī* of the Palace of Justice (*Dār al-ʿadl*). He traced his paternal ancestry to a Mamlūk, Khumārwayh b. Ṭūlūn, while his mother, Azdān, who died of plague during his infancy, was of Anatolian origin (*rūmiyya*). The latter term and the fact, mentioned in the autobiography, that she spoke *lisān al-arwām*, has given rise to dispute as to whether this meant, in the usage of that time, that she was Anatolian Turkish or Greek. Reared by his father and the aforementioned uncle, Ibn Ṭūlūn showed precocious intellectual abilities, completing the reading of the Ḳurʾān by the age of seven and in 891/1484, when he was eleven, receiving a stipend from the *waḳf* of the Māridāniyya *madrasa* as a student of jurisprudence (*fiḳh*). During his lifetime he filled numerous teaching and administrative posts of a religious nature—the latter, however, never of very high rank—although in his last years he declined posts such as preacher (*khaṭīb*) in the Umayyad Mosque and Ḥanafī Muftī of Damascus, pleading advanced age as a reason. Most of his life was devoted to scholarship and writing and he seems to have avoided any political involvements under both régimes. He died over 70 years of age, a bachelor without issue.

In the breadth of his interests and variety of his writings Ibn Ṭūlūn resembles his Egyptian contemporary, al-Suyūṭī [*q.v.*] (d. 911/1505), from whom he received an *idjāza*. In his autobiography, which records all the scholars with whom he studied, he lists as well all the books he read, covering at least thirty fields of learning and representing all the traditional Islamic sciences as well as "secular" sciences such as medicine and astronomy. His wide-ranging interests are reflected in his numerous writings, the titles of 750 of which are listed, varying in length from brief pamphlets to weighty

volumes, many of which are no longer extant. In the field of history the scholars who influenced him most strongly were Yūsuf b. ʿAbd al-Hādī [*q.v.*] (d. 909/1503) and ʿAbd al-Ḳādir al-Nuʿaymī (d. 927/1521), both of whom are known today for their studies of the mosques and *madrasas* of Damascus respectively. Several of Ibn Ṭūlūn's works, especially those devoted to suburbs of Damascus like al-Ṣāliḥiyya, his birthplace, and al-Mizza, reflect the methods of these scholars.

Among the numerous works by Ibn Ṭūlūn the following historical studies—mostly, but not exclusively, dealing with Damascus and its environs—have been published:

(1) *Mufākahat al-khillān fī ḥawādith al-zamān* (2 vols., ed. M. Mostafa, Cairo 1962-4), a chronicle of Egypt and Syria covering the years 884-926/1479-1520. The published text omits the years 898/1492-93, 920/1514, and 925/1519, which were missing in the manuscript used—Tübingen MS No. MA VI, 7.

Extracts were published much earlier by R. Hartmann as *Das Tübinger Fragment der Chronik des Ibn Ṭūlūn*, in *Schriften der Königsberger Gelehrten Gesellschaft*, 3. Jahr, Heft 2, 1926.

(2) *al-Ḳalāʾid al-djawhariyya fī taʾrīkh al-Ṣāliḥiyya* (2 pts., ed. Muḥ. Aḥmad Duhmān, Damascus 1368-75/1949-56), a history of the author's birthplace, and an account of scholars and religious monuments.

(3) *Iʿlām al-warā bi-man waliya nāʾiban min al-atrāk bi-Dimashḳ al-shām al-kubrā*. The original has not been published as yet. A French translation by H. Laoust is included in the work *Les gouverneurs de Damas sous les Mamlouks et les premiers Ottomans* ... (Damascus 1952).

(4) Five shorter works were published from autograph manuscripts in 1348/1929 in Damascus by Maktabat al-Ḳudsī wa 'l-Budayr under the title *Rasāʾil taʾrīkhiyya*:

(a) *al-Fulk al-mashḥūn*, the autobiography, 54 pp.
(b) *al-Shamʿa al-muḍīʾa fī akhbār al-ḳalʿa al-dimashḳiyya*, a history of the Citadel of Damascus, 28 pp.
(c) *al-Muʿizza fīmā ḳīla fī 'l-Mizza*, about the suburb of Damascus al-Mizza, and an account of its mosques, tombs, great men, etc., 26 pp. (d) *al-Lamʿāt al-barḳiyya fi 'l-nukat al-taʾrīkhiyya*, 44 stories, 72 pp.
(e) *Iʿlām al-sāʾilīn ʿan kutub sayyid al-mursalīn*.

(5) *Ḍarb al-ḥūṭa ʿalā djamīʿ al-Ghūṭa*, about the Ghūṭa (orchards and gardens) of Damascus. Published by Asʿad Ṭalas in *RAAD*, xxi/3-4, 149-61; 5-6, 236-47; 7-8, 338-51, and by Ḥabīb al-Zayyāt in *al-Khizāna al-sharḳiyya*, ii/39.

(6) *al-Shadharāt al-dhahabiyya fī tarādjim al-aʾimma al-ithnā ʿashar ʿind al-imāmiyya*, a collection of literary material about the twelve imāms. Published by Ṣalāḥ al-Dīn al-Munadjdjid as *al-Aʾimma al-ithnāʿashar* (Beirut 1958).

Some of his other historical studies, especially the biographical dictionaries, contain valuable contemporary material and are undoubtedly worthy of publication.

Bibliography: The best source for the life and work of Ibn Ṭūlūn is his autobiography *al-Fulk al-mashḥūn*, mentioned above. All other biographical sketches are based on it, for example: al-Ghazzī, *al-Kawākib al-sāʾira*, ii, 52-4; Ibn al-ʿImād, *Shadharāt*, viii, 298; al-Ziriklī, *al-Aʿlām*, vii, 184-5; *Dāʾirat al-maʿārif*, iii, 318-20, by Ṣ. al-Munadjdjid, as well as the latter's introduction to *al-Aʾimma al-ithnāʿashar*, mentioned above, and his study *al-Muʾarrikhūn al-dimashḳiyyūn*, Cairo 1956, 79-81 (note some errors there, esp. attribution of publication of part of *Iʿlām al-warā* to Littmann). See also the introduction to *al-Ḳalāʾid al-djawhariyya*, i, by M. A. Duhmān, pp. [i-xxiv]; the introduction by M. Mostafa to vol. ii of *Mufākahat al-khillān*, pp. [vii-xxi]; the excellent introduction by H. Laoust to *Les gouverneurs de Damas*, esp. pp. ix-xvii. The best information on extant manuscripts is in Brockelmann, II, 481, S II, 494. (W. M. Brinner)

IBN ṬŪLŪN [see AḤMAD B. ṬŪLŪN and ṬŪLŪNIDS].

IBN TŪMART, the Mahdī [*q.v.*] of the Almohads and founder of the Almohad movement [see MUWAḤIDDŪN]. The biographies of so celebrated a figure inevitably contain much legendary matter besides evident contradictions. He was born between 471/1078 and 474/1081 in the Anti-Atlas of Morocco. His father belonged to the Hargha and his mother to the Masakkāla, both of which are divisions of the Maṣmūda tribal group and there can be no doubt that he was a pure Berber despite the various Sharīfian genealogies attributed to him. Of his first 30 or so years we have no real knowledge. In 500/1106 he left his native mountains and went first to Cordoba, where he spent a year. Only Ibn Ḳunfudh gives any information as to what he did there, saying merely that he studied with the *ḳāḍī* Ibn Ḥamdīn. Ibn Tūmart next embarked at Alméria for the East. At Alexandria he met Abū Bakr al-Ṭurṭūshī and then went via Mecca to Baghdād, where he met Abū Bakr al-Shāshī and Mubārak b. ʿAbd al-Djabbār. All the sources recount, some with reserve, Ibn Tūmart's supposed meeting with al-Ghazālī in Baghdād. The story (given most fully by Ibn al-Ḳaṭṭān, pp. 14-8) goes that al-Ghazālī, learning that his new student was recently in Cordoba, enquired as to the doings of the *fuḳahāʾ* there. When told that at the instigation of Ibn Ḥamdīn, *ḳāḍī* of Cordoba, the *Iḥyāʾ* had been officially burnt throughout the Almoravid dominions he called upon God to destroy the Almoravids. Thereupon Ibn Tūmart exclaimed: "Imām, pray to God to do that by my hand!" The Imām ignored him at first but on a second occasion acceded. His prayer of course was granted. The story is, however, apocryphal: by the time Ibn Tūmart reached Baghdād al-Ghazālī had already left the city for good and had been for over ten years in Khurāsān, where it is never hinted that Ibn Tūmart ever went.

The return towards the Maghrib began in 510/1116 or 511/1117. It was a turbulent journey. Ibn Tūmart caused public disturbances and put himself in danger of his life by his uncompromising insistence on the punctilious observance of religious obligations. At the same time his learning and piety made an impression, and during the many long halts in his journey he found ready audiences. En route, probably at Tunis, he was joined by Abū Bakr b. ʿAlī al-Ṣanhādjī, surnamed al-Baydhaḳ, who became his devoted follower and whose *Mémoires* are a prime source of information for the remainder of Ibn Tūmart's career and that of his successor ʿAbd al-Muʾmin. At Mallāla, near Bougie (Bidjāya), the momentous meeting between Ibn Tūmart and ʿAbd al-Muʾmin took place. Love of the supernatural has embellished the circumstances of this meeting with a wealth of picturesque detail but subsequent events confirmed the power of this combination of Ibn Tūmart's personal magnetism and ʿAbd al-Muʾmin's administrative and military genius. This peculiar force of personality must be invoked to explain why Ibn Tūmart, despite the continual riots which he provoked, ran the gauntlet of lesser authorities unscathed and finally confronted the Al-

moravid sultan himself at Marrākush. This was in 514/1120. ʿAlī b. Yūsuf b. Tāshfīn arranged a debate between Ibn Tūmart and a group of *fuḳahāʾ*, who were as nonplussed as ʿAlī himself. One party, represented by the vizier Mālik b. Wuhayb, saw in Ibn Tūmart's preaching a serious threat to the régime and so advocated his destruction. Others, among whom Yintān b. ʿUmar is mentioned, could not stomach the punishment of one who could not be convicted of any crime against the *Sharīʿa*. While the pacific ʿAlī vacillated, Yintān took Ibn Tūmart under his protection. But Yintān succeeded in convincing the stubborn and now perhaps over-confident Ibn Tūmart of his mortal danger, so he prudently withdrew to Aghmāt. There the usual disturbances took place and a new stage in his career began.

Until now Ibn Tūmart had apparently not viewed himself as the actual or potential leader of a movement or as a rebel against established authority; he was merely an individual fulfilling his religious obligations as he conceived them. But now the situation had changed. ʿAlī b. Yūsuf had finally overcome his scruples at the news of the latest troubles in Aghmāt and despatched a messenger to order the return of the trouble-maker to Marrākush. Ibn Tūmart refused to go and so was now in open rebellion. At the same time he had now won a powerful supporter in the person of Ismāʿīl Īgig, chief of the Hazardja, who was soon after joined by ʿUmar Īntī and Yūsuf b. Wānūdīn of the Hintāta. He found himself apparently by accident the spiritual leader of substantial forces united, no doubt, more by tribal anti-Almoravid sentiments than by concern for the purity of the faith. The idea of proclaiming himself Mahdī began to grow in his mind and from the time he finally reached his birthplace at Īgīlīz in 515/1121 and installed himself in a cave (*al-Ghār al-muḳaddas*—not now identifiable with certainty) he devoted himself to spreading the belief that the appearance of the Mahdī in the Maghrib was imminent. At the end of one harangue in which he listed the attributes of the Mahdī he was finally acclaimed. "When the Imām al-Mahdī finished his speech", says ʿAbd al-Muʾmin, "ten men, of whom I was one, rushed up to him and I said: 'These signs are found only in you! You are the Mahdī!' And so we swore fealty to him as the Mahdī."

Just as the Ten mentioned by ʿAbd al-Muʾmin and often encountered subsequently have analogies with *al-ʿAshara al-mubashshara* [*q.v.*], so other features of Ibn Tūmart's career indicate a conscious attempt by himself or his followers to liken him to the Prophet. His expeditions are referred to as *maghāzī*; the acclamation just mentioned took place under a tree, like the Prophet's *Bayʿat al-riḍwān*; the move to Tīnmallal (see below) is called a *hidjra*; the *Ahl Tīnmallal* have analogies with the Companions; etc.

Within two years, marked by numerous skirmishes between Almohads and Almoravids, most of the Anti-Atlas and Sūs were actively backing Ibn Tūmart and all the Maṣmūda tribes were ready to support him. The Almoravid government, now seriously alarmed, increased its efforts. Ibn Tūmart, judging it prudent to move to a more easily defended position, "emigrated" in 517/1123 to Tīnmallal (*var.* Tīnmāl) in the upper Nfis valley, about 75 kms. south-south-west of Marrākush. The manner in which he and his followers took possession of Tīnmallal and its territory is not entirely clear, but it led to a protest by one of the Ten which cost him his life. The Ahl Tīnmallal of the Almohad hierarchy are significantly a heterogeneous group. This fact and other evidence indicates that the original inhabitants of Tīnmallal were liquidated and replaced by a mixed group of the Mahdī's close followers.

The next few years were passed in the consolidation and steady extension of Almohad power. This was made easier by the preoccupation of the Almoravids with troubles in Spain but also made more difficult by discord among the Almohads themselves. Though the Almohad movement was certainly helped by the antipathy for the Almoravids shared by all the mountain tribes, it was at the same time hindered by the fragmentation of the Maṣmūda into very small and jealously independent groups who resisted incorporation into any larger federation. Perhaps impatience with the speed of the movement's development was the main motive behind the next important event in the Mahdī's career, the *tamyīz*.

The scanty texts on the *tamyīz* are difficult to interpret, but it seems that under the supervision of one Bashīr al-Wansharīsī there was a methodical and stringent elimination of real or suspected dissidents. This took place in 523 or 524/1128-9. Dating from this period, and obscurely connected with the *tamyīz*, is the peculiar organization of the Almohads into a hierarchy headed by the Ten. The origin and significance of this apparently quite artificial creation remain a mystery.

Whether the *tamyīz* so consolidated the movement's strength that Ibn Tūmart felt strong enough to embark on the taking of Marrākush or whether it aroused such resentment that such a diversion of interest became necessary is an open question, but the campaign began at once. The leader was the same al-Bashīr. The expedition was unsuccessful, for though the Almohads besieged Marrākush for six weeks they were defeated, five of the Ten being killed, nearby at al-Buḥayra in mid-524/1130. This defeat was doubtless a severe psychological setback for the Almohads, but subsequent events show that it did not in fact much hinder the progress of the movement; and it was an empty victory for the Almoravids, who proved impotent to press home their advantage.

The Mahdī died a few months after the battle of al-Buḥayra, in Ramaḍān 524/August 1130. His close companions concealed his death, presumably because they feared the effect on the morale of the Almohads of his death at this inauspicious moment without moreover his having justified any of his Mahdī-pretensions. His "retreat" lasted for three years until the proclamation of ʿAbd al-Muʾmin in 527/1132. He was buried at Tīnmallal. His tomb was still venerated, according to Leo Africanus, some five centuries later, but he and his movement no longer survive in local tradition.

Ibn Tūmart regarded himself primarily as a religious reformer. It is not certain that even when in later life he had adopted the mantle of the Mahdī and become the head of an embryonic state in declared rebellion against the Almoravids he had developed any secular ambitions beyond those necessary to back his religious ones. As a Muslim he naturally did not draw a sharp distinction between the religious and the secular. He was a fundamentalist who wished to re-establish what he conceived to be the original purity of the faith by reference to the Ḳurʾān and the Sunna and so rejected the *taḳlīd* which in his day dominated theology in the West. He placed especial stress on the doctrine of *tawḥīd*, which to him meant a complete abstraction

or spiritualization of the concept of God, as opposed to *tadjsīm*, the literal acceptance of the anthropomorphic phrases of the Ḳurʾān of which he so often accused the Almoravids. But there is nothing original in his religious ideas. He adopted those which suited him wherever he found them, including the Shīʿī notion of the impeccable (*maʿṣūm*) Imām, who he claimed to be. His theology is not important. His career followed a pattern, familiar in the Maghrib, of a charismatic personality being able briefly to unite groups who live normally in anarchical fragmentation. It is a question primarily of personalities, that of the Berber race and that of the leader, and doctrine is of minor importance. The role of ʿAbd al-Muʾmin in founding the Almohad state was as important as that of the Mahdī, though probably neither would have achieved anything without the other.

The writings attributed to the Mahdī consist of a collection of short pieces without organic unity or title gathered in a unique manuscript, and one or two letters of doubtful authenticity.

IBN ṬUMLŪS, Andalusian physician and philosopher, whose full name was Yūsuf b. Aḥmad, with the *kunyas* Abu 'l-Ḥadjdjādj and Abū Isḥāḳ. He was known in mediaeval Europe under the name of Alhagiag bin Thalmus, and Nallino (cf. *RSO*, xiii, 170) considers that the name Ṭumlūs may be a corruption of Bartholomaeus or Ptolemaeus. He was born at Alcira in about 560/1164, was a pupil of Ibn Widāḥ al-Lakhmī and perhaps of Ibn Rushd (Averroes). He studied medicine and philosophy, and succeeded Ibn Rushd as personal physician to the Almohad caliph al-Nāṣir (595-610/1199-1214). He died at Alcira in 620/1223. A few years later, the family estates were shared out among the Christian conquerors. His biographers attribute to him the following works: (1) commentaries on *Analitika protera kai hystera* and on *Peri hermeneias* (Escorial[2] 649); (2) *De mistione propositionis de inesse et necessariae*; (3) *Kitāb al-madkhal li-ṣināʿat al-manṭiḳ* (*Introducción al arte de la lógica*, ed. with Sp. tr. by Asín Palácios, Madrid 1916); and (4) a commentary on Ibn Sīnā's *Urdjūza* on medicine.

IBN al-ṬUWAYR, Abū Muḥammad ʿAbd al-Salām b. al-Ḥasan ... al-Ḳaysarānī al-Miṣrī (525-617/1130-1220), high-ranking official of the later Fāṭimids, wrote in the reign of Salāḥ al-Dīn a "History of the two dynasties", *Nuzhat al-muḳlatayn fī akhbār al-dawlatayn*, an important work now unfortunately lost, to which the great compilers of the Mamlūk period, Ibn al-Furāt, al-Maḳrīzī, al-Ḳalḳashandī, Ibn Taghrībirdī, and even before them Ibn Khaldūn, owe the most important part of their knowledge of the history of the later Fāṭimids and of the general institutions of the régime.

IBN UDHAYNA [see ʿurwa b. udhayna].

IBN ʿUḲBA [see mūsā b. ʿuḳba].

IBN al-UKHUWWA, Ḍiyāʾ al-Dīn Muḥammad b. Muḥammad b. Aḥmad al-Ḳurashī al-Shāfiʿī, known as Ibn al-Ukhuwwa, author of a manual of *ḥisba*, enlarging, from an Egyptian point of view, that of the Syrian writer of the previous century, al-Shayzarī. It was published by R. Levy, with an analysis in English, under the doubtful title of *Maʿālim al-ḳurba fī aḥkām al-ḥisba* (*GMS*, n.s. xii, London 1938); according to the only biographical notice so far discovered, that by Ibn Ḥadjar (*Durar*, Ḥaydarābād no. 446), the author died in 729/1329, and nothing more is known of him.

Bibliography: In addition to the work mentioned above and the article ḥisba, see M. Gaudefroy-Demombynes, *Sur quelques ouvrages de hisba*, in *JA*, ccxxx (1938), 449 f.

IBN ʿUMAR [see ʿabd allāh b. ʿumar; yaʿḳūb b. ʿumar al-maghribī].

IBN ʿUMAR, DJAZĪRAT, in Turkish Cezire-i Ibn Ömer or Cizre, today a frontier town between Turkey and Syria, is said to have been founded by and named after al-Ḥasan b. ʿUmar b. al-Khaṭṭāb al-Taghlibī (d. *ca.* 250/865). Its construction is attributed also to Ardashīr Bābakān. The ancient town was called in Aramaic Djazarta d'Kardū, a name which re-appears in Christian texts of the 16th and 17th centuries. It has been identified with the ancient Bāzabdā, where Alexander the Great crossed the Tigris; later this was one of the foremost points of the Roman advance mentioned by Ammianus Marcellinus (xx, xvii, i).

Situated in the Diyār Rabīʿa [*q.v.*] (37° 15′ N and 42° 5′ E), at 400 metres altitude, 125 kilometres downstream from the confluence of the Bohtan Su, to the west of Mount Djūdī [*q.v.*], Djazīrat Ibn ʿUmar is on the Tigris at the point where its distance from the Euphrates is greatest. Emerging from the gorges of the Taurus, the Tigris then enters the Upper Djazīra, a flat region where the river flows more slowly. The city was built in a bend in the river, the two ends of which were joined at the narrowest point by a canal which is said to have been dug by al-Ḥasan Ibn ʿUmar. The site of the town thus became an island, whence its name of Djazīra; the force of the current turned the canal into the main bed of the Tigris, while the flow in the original river bed encircling the town dried up. The town also possessed a bridge, and was a river port in an island position; from this point the Tigris was navigable, and a

system of navigation existed to transport merchandize in the direction of Mosul. As a river port, Djazīrat Ibn ʿUmar was an important commercial centre in a prosperous region of vineyards and orchards, made so by the supply of fresh water. In the neighbouring mountains, covered with oak forests and producing an abundance of walnuts, hazel-nuts and gall-nuts, bees produced honey and wax which were exported. The frontier between the Arab and the Kurdish regions is marked by a Roman road, *darb ʿatīḳ*, which joins Djazīrat Ibn ʿUmar to Niṣībīn and then Mārdīn.

The town, whose monuments witness to its brilliant past, lost many of its inhabitants at the beginning of the 20th century; the population, which consists of Muslims, Kurds, and Christians of various denominations, fell from 9,560 in 1890 to 5,575 in 1940. In 1960 it was 6,473. In the 4th/10th century, the town possessed imposing walls built of mud bricks, which in the time of Ibn Baṭṭūṭa had three gates; they were rebuilt in basalt, and a section of them still stands today, dominated to the north by the castle of the Kurdish *amīrs*. In the 6th/12th century, the town possessed a hospital, fourteen *ḥammāms*, of which eight still remained at the end of the 19th century, with thirty *sabīls* and nineteen mosques. The intellectual and religious role which the town played in the 6th/12th century was illustrated by four Shāfiʿī *madrasas*, while there existed for the Ṣūfīs two *khānḳāhs* outside the walls. Beside the original Great Mosque, the *amīr* Badr al-Dīn Luʾluʾ built another in the following century. In the 19th century, there remained of this active commercial centre, according to Cuinet, five *khāns*, a vaulted bazaar, one hundred and six small shops and ten cafés. The presence of some early churches demonstrates the importance of the Christian element.

Slightly downstream from Djazīrat Ibn ʿUmar there exist today the ruins of a fine bridge of which a single arch of twenty-eight metres is still standing; on its piers are carved representations of the signs of the zodiac as on the bridge of Ḥiṣn Kayfā [*q.v.*], a work of the Artukid period. Upstream there exists on the Batman Su a bridge built by the *amīr* Timurtash of Mārdīn.

For a long time under the control of the Kurdish *amīrs*, Djazīrat Ibn ʿUmar had a certain importance in the Middle Ages. In the 4th/10th century the town was a dependency of Mosul; in the 5th/11th century, after having had as governor in 495/1102 Shams al-Dawla Djakarmish, a former *mamlūk* of Malikshāh, it was in the hands of the Marwānids; in the 6th/12th century, it belonged to the Zangids, who appointed ʿIzz al-Dīn Abū Bakr al-Dubaysī as governor in 541/1146. In 553/1158, the region occupied by the Bashnawī Kurds was taken by Ḳuṭb al-Dīn Mawdūd b. Zangī. In the 6th and 7th/12th and 13th centuries, two families brought glory to the town: the Banu ʾl-Athīr, rich in scholars and writers, and the Banū ʿAbd al-Karīm al-Djazārī, who produced many *imāms*. In the 10th/16th century, there was rivalry between the Ṣafawids and the Ottomans for the possession of the town; the Kurds then sought the protection of the Ottomans, and succeeded in maintaining a relative independence together with the Ḥāmidiyya. After 941/1535, when Sayyid Aḥmad was its master, Djazīrat Ibn ʿUmar controlled Mosul. In 973/1566, some Christian families, fleeing from Irbil, took refuge there. In the 11th/17th century, the town in practice regained its autonomy, but in the 19th century there occurred a reaction by the Ottomans, who occupied the region in 1248/1833 and re-took Djazīrat Ibn ʿUmar in 1836, from which date the town stagnated; the former centre of a Kurdish principality became the modest capital of a Turkish *ḳaḍāʾ*.

IBN UMAYL, al-Ḥakīm al-Ṣādiḳ al-Tamīmī, Abū ʿAbd Allāh Muḥammad, one of the representatives of the allegorical and mystagogical type of alchemy, which has now become an object of psychoanalytic interpretation (cf. C. G. Jung, *Psychologie und Alchemie*², Zurich 1952, index s.v. Senior). He lived in Egypt, about the first half of the 4th/10th century (for the chronological connection with the Djābir-question cf. M. Plessner, in *ZDMG*, cxv (1965), 31 f.). Among his numerous writings are several *ḳaṣīdas*, one of which, the *Risālat al-shams ila ʾl-hilāl*, was commented upon by himself under the title *al-Māʾ al-waraḳī wa ʾl-arḍ al-nadjmiyya*. This commentary and the poem became known in mediaeval Europe in a defective Latin version as *Tabula chimica* and *Epistola solis ad lunam crescentem*, the name of the author being rendered Senior Zadith Filius Hamuelis. *Al-Māʾ al-waraḳī* begins with a description of two quasi-archaeological excursions to an ancient temple at Būṣīr al-Sidr [*q.v.*] in order to find documents of alchemical wisdom there. This introduction follows a common pattern of fiction in Hermetic literature, but, as B. H. Stricker has shown, Ibn Umayl must actually have been in that temple, where he saw a statue of Imhotep, without of course recognizing its true significance (*AO*, xix (1942), 101-37). His special interest in the old temples and their wall-paintings is also indicated by another title: *al-Sifr al-kabīr fī ḥall al-ashkāl al-birbāwiyya wa ʾl-taṣāwīr* (cf. Semenov, no. 534). Among the many alchemical authorities quoted in *al-Māʾ al-waraḳī* we find the names of Hermes [see hirmis], the legendary Egyptian king Marḳūnus (cf. G. Wiet, *L'Égypte de Murtadi*, Paris 1953, 21), Democritus, Socrates, Plato, Zosimus, Mary the Jewess, Khālid b. Yazīd [*q.v.*], Dhu ʾl-Nūn [*q.v.*], and Djābir b. Ḥayyān [*q.v.*]; he also depends on the *Turba Philosophorum*. He is silent about al-Rāzī [*q.v.*], but he seems to include him when attacking those contemporary adepts who tried to obtain the elixir [see al-iksīr] from base organic substances such as eggs and hairs.

Bibliography: *Three Arabic treatises on alchemy by Muḥammad bin Umail*, ed. M. Turāb ʿAli, in *Memoirs of the Asiatic Society of Bengal*, xii/1 (1933), 1-213 (contains the text of *al-Māʾ al-waraḳī*, *Risālat al-shams ila ʾl-hilāl*, and *al-Ḳaṣīdat al-nūniyya* together with an edition of the Latin version of the first two writings and an excursus on the date, writings and place in al-

chemical history of Ibn Umayl by H. E. Stapleton and M. Hidāyat Ḥusayn; p. 126 f. a list of titles and extant manuscripts; for further references see Brockelmann, I, 279 and S I, 429 f., 962; A. (G. Strohmaier)

IBN ʿUNAYN, Abu 'l-Maḥāsin Sharaf al-Dīn Muḥ. b. Naṣr b. ʿAlī b. Muḥ. b. Ghālib al-Anṣārī, satirical poet born at Damascus on 9 Shaʿbān 549/19 October 1154, and died there on 20 Rabīʿ I 630/4 January 1233. After receiving a traditional education from the main teachers of Damascus and spending a period in ʿIrāḳ, Ibn ʿUnayn began early to use his lively satire against many different kinds of people; he did not spare even Salāḥ al-Dīn (Saladin), who had just made himself master of the town (570/1174), and for this he was soon banished. He then went on some journeys connected with commercial matters, which led him to ʿIrāḳ, Ādharbaydjān, Khurāsān, Transoxania and even to India; then he returned to the Yemen, where he spent some time in the entourage of Saladin's brother, Ṭughtakīn; and then he settled for a time in Egypt (before 593/1197). His nostalgia for his native town led him to write a request in verse to al-Malik al-ʿĀdil for permission to return there, and he finally saw again the Umayyad Mosque in 597/1201. Al-ʿĀdil's son, al-Malik al-Muʿaẓẓam ʿĪsā, who was then governor of Damascus, welcomed the poet, who became his favourite and even his *wazīr*.

Ibn ʿUnayn is said to be the author of a *Mukhtaṣar* of the *Djamhara* of Ibn Durayd and of a *Ta'rīkh ʿAzīzī*, but neither of these works seems to have survived. It was mainly as a poet that he was famous. With his taste for jokes, irony and mockery, he held up to ridicule, with great wit, important people, the *ḳāḍīs*, the *fuḳahā'*, and the preachers, to such an extent that he was accused of *zandaḳa*. His *hidjā'*, aimed against himself, his father and important people, even sultans, was wicked and scathing. The panegyrics on his patrons are well written, whereas his satirical poetry is full of dialectal expressions. He expressed his nostalgia in some famous poems which include long descriptions of Damascus and its surroundings, while no other country pleases him. He wrote riddles as well, and also topical poems, in which he refers to all kinds of personal or historical facts. He always refused to collect his works in a *dīwān*, but one of his compatriots managed to save some of them to form the *Dīwān* published by Khalīl Mardam at Damascus in 1946.

Bibliography: Ibn Khallikān, iv; Yāḳūt, *Udabā'*, xix, 81-92; Abū Shāma, *Rawḍatayn*; Ibn Kathīr, *Bidāya*, xi-xii; Sibṭ Ibn al-Djawzī, *Mir'āt al-zamān*, viii, s.v.; Ibn al-ʿImād, *Shadharāt*, iv, v; Ḥādjdjī Khalīfa, i, col. 767; J. Rikabi, *La poésie profane sous les Ayyūbides*, Paris 1949, index; Khalīl Mardam, introduction to the *Dīwān*; idem, in *DM*, iii, 403-7.

(Ed.)

IBN ʿUṢFŪR, Abu 'l-Ḥasan ʿAlī b. Mu'min, Andalusian grammarian of the 7th/13th century. Born at Seville in 597/1200, he studied under al-Shalawbīn, the most famous grammarian of the period. After a quarrel with his master, he left his native town and travelled throughout al-Andalus, staying in several towns where he taught the Ḳur'ān and grammar. Then he proceeded to Ifrīḳiya, staying at Tunis and at Bougie, at the court of the Ḥafṣid *amīr* Abū Zakariyyā'. Returning to his own country, he once again travelled in al-Andalus, then crossed to the Maghrib and stayed at Salé. At the invitation of the Ḥafṣid caliph al-Mustanṣir, he returned to Ifrīḳiya and settled in Tunis, where he died in 670/1271.

Ibn ʿUṣfūr was the author of two grammatical treatises, the *K. al-Muḳarrib fi 'l-naḥw* and the *K. al-Mumtiʿ fi 'l-taṣrīf*, and dictated also commentaries on four grammatical works: the *Kitāb* of Sībawayh, the *K. al-Īḍāḥ* of al-Fārisī, the *K. al-Djumal* of al-Zadjdjādjī and the *Muḳaddima* of al-Djuzūlī.

Bibliography: Brockelmann, I, 381, S I, 546; ʿU. R. Kaḥḥāla, vii, 251, and add to the references there given: Ibn al-Zubayr, *Ṣilat al-Ṣila*, ed. Lévi-Provençal, 142-3 (no. 285).

(G. Troupeau)

IBN ʿUYAYNA [see sufyān b. ʿuyayna].

IBN WĀFID, Abu 'l-Muṭarrif ʿAbd al-Raḥmān b. Muḥammad al-Lakhmī, Andalusian physician, pharmacologist, and agricultural theorist. Little is known of his life except that he was born in 398/1007 (according to Ṣāʿid) and was resident at Toledo in 460/1067 having studied medicine with Zahrāwī at Cordoba. He died in 467/1074. In spite of his pharmacological knowledge, says Ṣāʿid, he preferred to treat sickness by diet and if forced to use drugs preferred the simple to the compound. Of the seven works by him mentioned by his biographers the following are certainly or probably extant:

(1) *K. fi 'l-adwiya al-mufrada*. This was abridged and translated into Latin by Gerard of Cremona with the title *Liber Albenguefith philosophi de virtutibus medicinarum et ciborum*. There are also translations into Hebrew and Catalan. The Arabic text is partially extant but has not been published.

(2) *K. al-Wisād fi 'l-ṭibb*. In MS.

(3) *Madjmūʿ fi 'l-filāḥa*. Texts in Arabic and Castilian which are almost certainly to be identified with this are discussed by Millás and García Gómez.

(4) *De balneis sermo*. A work with this title is mentioned by Mieli but does not clearly correspond with any Arabic title.

Bibliography: Ibn al-Abbār, ii, 551; Ṣāʿid al-Andalusī, Cairo n.d., 110 = Fr. tr. R. Blachère, Paris 1935, 148 ff.; Ibn Abi Uṣaybiʿa (ed. Müller), ii, 49; J. K. al-Adwiya); M. Steinschneider, *Die Hebraeischen Übersetzungen des Mittelalters*, § 475 (on the Hebrew tr.); Mieli, *La science arabe*, Leiden 1938, § 38.7. (J. F. P. Hopkins)

IBN WAHB, ʿAbd Allāh b. Wahb b. Muslim al-Fihrī al-Ḳurashī, Mālikī traditionist of Egypt, born in Cairo in 125/743 and died there in 197/813. From a very early age he was taught by the imām of Medina, until the latter's death, and then returned to Cairo, where his own tomb is in the Ḳarāfa (see Ibn Khallikān, tr. de Slane, ii, 16; Ibn al-Zayyāt, *al-Kawākib al-sayyāra*, 44). The *ḳāḍī* ʿIyāḍ (*Tartīb al-madārik*, Cairo MS, fol. 88a) states that he wrote thirty works based on Mālik, and mentions the titles of some of them. Up to now the only work known is a codex on papyrus of about one hundred pages, a fragment of his *Djāmiʿ*; this manuscript, which has been edited with a commentary by J. David-Weill, is dated 276/889. This fragment of the *Djāmiʿ* consists of: the Book of Genealogies, the Book of Silence, the Book of the Seal, some traditions concerning the battle of Ḥunayn and a prayer of Ibn ʿAbbās. It is strange that practically nothing of this text is found in any of the numerous recensions of the *Muwaṭṭaʾ* of Mālik or in the *Mudawwana* of Saḥnūn. (For other fragments, see J. Schacht, in *Arabica*, xiv (1967), 231.)

For the biography of Ibn Wahb see *Le Djāmiʿ d'Ibn Wahb*, ed. J. David-Weill (BIFAO), Cairo 1939-48, i, XI, and J. David-Weill, *Manuscrit malékite d'Ibn Wahb*, in *Mélanges Maspéro*, Cairo 1940, iii, 177-83. (J. David-Weill)

IBN WAHBŪN, Abū Muḥammad ʿAbd al-Djalīl b. Wahbūn, Arab poet of Spain, whose career was passed at the court of the master of Seville, al-Muʿtamid Ibn ʿAbbād [*q.v.*]. Born at Murcia, probably about 430-40/1039-49, into a family of humble origin, he went to seek his fortune at Seville, where he was the pupil of the philologist al-Aʿlam al-Shantamarī [*q.v.*] and formed a friendship with the vizier and poet Ibn ʿAmmār [*q.v.*] before being admitted to the court, in circumstances which are variously reported. He then became one of the official panegyrists of al-Muʿtamid and made his mark by a number of brilliant improvisations. In 476/1083 he delivered the funeral oration of al-Aʿlam, then had the courage to intercede in favour of Ibn ʿAmmār and to lament his death; there exist also some fragments of poems which he composed after the battle of al-Zallāḳa [*q.v.*] and on the occasion of the voyage of al-Muʿtamid to Morocco to ask for help from Yūsuf b. Tāshfīn in 481/1089. Ibn Wahbūn also left some fairly successful descriptive poems, notably that on the palace of al-Muʿtamid called al-Zāhī, as well as a number of short pieces, in which he does not scruple to reveal his taste for *ghilmān*.

His poetry, however, reaches quite another level when he is either complaining of the injustice of his fate or expressing, in commenting on human destiny, a pessimism which shows the influence of al-Mutanabbī. His natural pride and his loyalty to al-Muʿtamid, in spite of some stormy periods, are the other aspects of his character which deserve mention.

It is likely that he did not know of his master's tragic fate, for it was probably in 484/1092 (and not in 533/1138-9 as is given by some sources) that he was killed by some Christian horsemen when he was travelling to Murcia with Ibn Khafādja [*q.v.*].

Bibliography: Ibn Bassām collected the *Dīwān* of Ibn Wahbūn under the title *al-Iklīl al-mushtamil ʿalā shiʿr ʿAbd al-Djalīl*, but this collection has not survived, and of this anthologist's work on the poet there remains only a chapter of the *Dhakhīra* (2, still unpublished); al-Fatḥ Ibn Khāḳān, *Ḳalāʾid*, 13-4, 242-5; Ibn Diḥya, *Muṭrib*, index, s.v.; Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-abṣār*, xvii, MS Paris, 32v.-36v.; al-ʿImād al-Iṣfahānī, *Kharīda*, xi, MS Paris; Ibn Ẓāfir, *Badāʾiʿ al-badāʾih*, 37; Ibn al-Khaṭīb, *Aʿmāl*², 246; Maḳḳarī, *Analectes*, index; Marrākushī, *Muʿdjib*, 102-5; Ibn Khallikān, index, s.v.; Ḍabbī, 374, no. 1101; Ibn Saʿīd, *Mughrib*, index; Dozy, *De Abbadidis*, i, 50, 116-7; Luya, in *Hespéris*, 1936, 150; A. Ḍayf, *Balāghat al-ʿArab fi 'l-Andalus*, 121-8; H. Pérès, *Poésie andalouse*, index; A. González Palencia, *Literatura*², 93, 200, 202; S. Khalis, *La vie littéraire à Séville au XIe siècle*, unpublished thesis, Sorbonne 1953. (Ch. Pellat)

IBN WAḤSHIYYA, name of a person to whom are attributed a number of works and whose full name is said to have been Abū Bakr Aḥmad b. ʿAlī b. Ḳays (omitted in *Fihrist*, 311, which adds: b. al-Mukhtār b. ʿAbd al-Karīm b. Djarthiya b. Badniyā b. Barṭāniyā b. ʿĀlāṭiyā) al-Kasdānī (omitted in MS Istanbul, Beyazit 4064 [see below]) al-Ṣūfī (added in *Fihrist* and some manuscripts) al-Ḳussaynī (added in MSS Beyazit 4064 and Leiden, vocalized thus in Beyazit, read al-Ḳasītī or al Ḳusaytī by M. Plessner; cf. *Fihrist*: *min ahl Ḳussīn*), known as Ibn Waḥshiyya, but of whose existence there is as yet no reliable historical proof. Since Nöldeke (in *ZDMG*, xxix (1875), 453 f.), it has been thought that the real author (or at least compiler) was Abū Ṭālib Aḥmad b. al-Ḥusayn b. ʿAlī b. Aḥmad b. Muḥammad b. ʿAbd al-Malik al-Zayyāt, to whom Ibn Waḥshiyya states that he dictated his translations "from the language of the Chaldees into Arabic". This Abū Ṭālib al-Zayyāt, who claims to be a pupil and secretary of Ibn Waḥshiyya, was, according to L. Massignon (apud Festugière, *La Révélation d'Hermès Trismégiste*, i, Paris 1944, App. III, 396), "a Shīʿī, a member of a family of viziers" (d. *ca.* 340/951); he lived in the time of Ibn al-Nadīm (*Fihrist*, 312). If all parts of his name are correct, he was the great-great-grandson of the vizier Abū Djaʿfar Muḥammad b. ʿAbd al-Malik (b. Abān, omitted in all sources when Abū Ṭālib is referred to) al-Zayyāt [see ibn al-zayyāt]. Probably originally Christian before being converted to Islam, as the *laḳab* al-Zayyāt would seem to imply, the family appears to have come from one of the localities named al-Karkh [*q.v.*]. It may have had in its possession ancient documents in Syriac (*bi 'l-suryāniyya al-ḳadīma*: MS Leiden, pp. 1 and 3) written in ancient Edessan script, which, towards the end of the 4th/10th century, came to be called Estrangelo and was much developed by the Nestorians of Persia. Certainly the language and style of the translations which are attributed to Ibn Waḥshiyya are not those of a native user of Arabic. The question is whether they were made directly from Syriac, from Greek or from Pahlavi. There are certain indications which support the author's claim to have translated from Syriac, the most important of them being, in addition to the style of the language, the type of prayers which are included, in particular, in the *K. al-Filāḥa al-nabaṭiyya* and which bear a striking resemblance to those of Syriac liturgy (cf. in particular the prayer with which the book begins (see *ZS*, vi (1928-9), 35 f.) and which is a sort of *prūmīyōn* = πρόιμον in the style of the Syriac breviary). This type of prayer is found in the manuals of magic and talismanic art (such as

Ghāyat al-ḥakīm of the Ps.-Madjrīṭī) and what has been preserved from the Ḥarrānians by Ibn al-Nadīm, but nowhere is it so close, in form and in spirit, to that of the prayers of the Syriac liturgy. This indication alone however is of no significance, since this type of prayer is found also in the Byzantine liturgy. A detailed study of the works attributed to Ibn Waḥshiyya would probably show that in them Syriac served as a vehicle for Greek, Pahlavi and Indian scientific and pseudo-scientific ideas.

Here follows a list of the works attributed to Ibn Waḥshiyya with a summary of what is known about each of them:

(1) The most important of them all is undoubtedly the *K. al-Filāḥa al-nabaṭiyya*, a vast work (MS Leiden, 1264 pages; Beyazit 19052-3, 465 fols., 32 × 24 cm., *naskhī*; Beyazit 4064, 332 fols., 25 × 17 cm., *naskhī*), represented by numerous manuscripts not all of which are complete. Ibn Waḥshiyya states that he "translated it from the language of the Chaldees into Arabic ... in 291/903-4" and "dictated it to Abū Ṭālib ... al-Zayyāt in 318/930" (Leiden MS, p. 1). The original title in "Nabataean" (*i.e.*, Syriac) was *K. Iflāḥ al-arḍ wa-iṣlāḥ al-zarʿ wa 'l-shadjar wa 'l-thimār wa-dafʿ al-āfāt ʿanhā*. M. Plessner has given a list of its contents in *ZS*, vi (1928-9), 35-55. From 1835 to 1875, this work was the subject of vigorous debate among orientalists: E. M. Quatremère, in his *Mémoire sur les Nabatéens*, in *JA*, xv (1835), 5-55, 97-137, 209-71 (see also *Journal des Savants*, March 1857) considered it to be the translation of a Chaldean work of the period of Nabuchodonosor II (605-562 B. C.; the *Fihrist* says of Ibn Waḥshiyya: *wa-huwa min wild Sinḥārīb* = Sennacherib, 705-681 B. C.); E Meyer, in *Gesch. der Botanik*, iii (1856), 43-89, places it in the first century A. D.; D. Chwolson in *Über die Überreste der altbabylonischen Literatur im arabischen Übersetzungen*, in *Mémoires des Savants Etrangers présentés à l'Académie Impériale des Sciences de St. Pétersbourg*, viii (1859), 329-524, dates it at the latest to the beginning of the 14th century B. C. This extreme view of Chwolson produced such a violent reaction from orientalists that it was about fifty years before this work was discussed again. Three important studies were written in reply to the articles mentioned above: E. Renan (*Sur les débris de l'ancienne littérature babylonienne conservés dans les traditions arabes*, in *Mém. de l'Académie des Inscriptions*, xxiv/1 (1861), 139-90; extracts in *Revue Germanique*, x (1860), 136-66; *L'Institut*, April-May 1860, 37-44), after summarizing the different opinions concerning the date, ascribes the work to the Hellenistic period (3rd-4th centuries A. D.), in a Sabean, and more precisely a Mandean, environment; he considers the "Nabataean" language to be Mandean. A year later there appeared the most controversial study on the question, that of Alfred von Gutschmid, *Die Nabatäische Landwirtschaft und ihre Geschwister*, in *ZDMG*, xv (1861), 1-110 (= *Kleine Schriften*, ii, 568-716; cf. also *War Ibn Wahshijjah ein nabatäischer Herodot?*, in *Berichte über d. Verhandl. d. kgl. sächs. Gesellschaft d. Wiss. zu Leipzig*, Phil.-hist. Kl., 1862, 67-99 = *Kleine Schriften*, ii, 717-53), who maintained with strong arguments that the Nabataean works were nothing but a forgery of the Muslim period (beginning of the 9th century A. D.) and certainly not earlier than 700 A. D. He based his proofs on the similarity between the religious and political situation which appears in these works and that of the early ʿAbbāsid period (the Arab disdain for the Nabataeans in spite of their illustrious past; the fashion for agnosticism; the greatness and wisdom attributed to the Chaldeans in the Muslim legends). But whereas von Gutschmid still regarded Ibn Waḥshiyya as an early and well-disguised forger, Nöldeke, in *Noch Einiges über die "nabatäische Landwirtschaft"*, in *ZDMG*, xxix (1875), 445-55, added further proofs to the theses that these works were forged, dating them to the beginning of the 4th/10th century. He considers the author of this forgery to be Abū Ṭālib ... al-Zayyāt. He sees in it the influence of Greek works written in the *koine* and points out the author's use of an Edesso-Ḥarrānian calendar (based on the solar (Julian) calendar, instead of the Muslim lunar calendar) and his knowledge of the kalends.

The work attributed to Ibn Waḥshiyya has not yet recovered from this serious attack by A. von Gutschmid and Th. Nöldeke, in spite of the efforts of several scholars during the last fifty years to re-instate him (cf. E. Wiedemann, *Zur Nabatäischen Landwirtschaft*, in *ZS*, i (1922), 201-2; M. Plessner, *Der Inhalt der Nabatäischen Landwirtschaft. Ein Versuch Ibn Waḥšija zu rehabilitieren*, in *ZS*, vi (1928-9), 27-56; E. Bergdolt, *Beiträge zur Geschichte der Botanik. I — Ibn Waḥschija: Die Kultur des Veilchens* (viola odorata) *und die Bedingungen des Blühens in der Ruhezeit*, in *Berichte der Deutschen Botanischen Gesellschaft*, l (1932), 321-36; *II — Über einigen Pfropfungen*, *ib.*, lii (1934), 87-94; *III — Wasseranzeigende Pflanzen*, *ib.*, liv (1936), 127-34; G. O. S. Darby, *The mysterious Abolays*, in *Osiris*, i (1936), 251-59; idem, *Ibn Waḥshīya in mediaeval Spanish literature*, in *Isis*, xxxii (1941), 433-8). The very pessimistic prediction of Franz Boll, who says, referring to the *K. Tankalūsha* (see below): "ist gleich seinen übrigen Schriften verdientermassen noch immer unedirt geblieben und wird es wohl auch bleiben" (*Sphaera*, Leipzig 1903, 428), certainly seems to be justified.

It was concerning *al-Filāḥa al-nabaṭiyya* that the dispute over Ibn Waḥshiyya arose; the other works attributed to him, although much less well-known, suffered repercussions from this.

(2) *K. Shawḳ al-mustahām fī maʿrifat rumūz al-aḳlām*, an extraordinary collection of 93 cryptic alphabets attributed to the ancient Semitic, Hellenistic and Hindu peoples, and to famous persons, accompanied by alphabets appropriate to each planet and each sign of the zodiac (MS Paris 6805, 131 fols., *naskhī* of 1165/1751-2, in which it is stated, fol. 129 r., that the work was written for ʿAbd al-Malik b. Marwān in 241/885 (*sic*); the author lived in Damascus; J. Hammer, *Ancient alphabets and hieroglyphic characters explained, with an account of the Egyptian priests, their classes, initiation and sacrifices in the Arabic language ...*, London 1806; S. de Sacy, *apud* A. L. Millin, *Magasin Encyclopédique*, vi (1810), 145-75; v. Gutschmid, *loc. cit.*, 16-21). This type of collection of scripts is used in works of magic and of talismanic art; specimens of it are found in many *madjmūʿas* of esoteric writings. It is not impossible that many of these alphabets were used as ciphers; they have the characteristics of this (symmetry, opposition, superposition, interlacing of downstrokes; differentiation by small downstrokes, decorative refinements).

(3) *K. Tankalūsha* (= Teucros; cf. A. Borissov, in *JA*, ccxxvi (1935), 300-5) *al-Bābilī al-Ḳūḳānī, fī ṣuwar daradj al-falak wa-mā yadillu ʿalayhi min aḥwāl al-mawlūdīn*, "translated from the Nabataean into Arabic by Abū Bakr b. Aḥmad b. Waḥshiyya

and dictated to ʿAlī (*sic*) b. Abī Ṭālib ... al-Zayyāt" (MS Leiden 891/2, fols. 28-69, preceded by a treatise on astrological divination attributed to Dorotheos [of Sidon], the translator of which is said to have been ʿUmar b. Farrukhān al-Ṭabarī, see Brockelmann, S I, 392), an astrological treatise describing the twelve signs of the zodiac and the thirty degrees of each of them and based on the Pahlavi versions of the Παρανατέλλοντα of Teucros of Babylon and the Ἀνθολογίαι of Vettius Valens (cf. Nallino, *Tracce di opere greche giunte agli Arabi per trafila pehlevica*, in *A volume.... presented to E. G. Browne*, Cambridge 1922, 345-63; idem, *Raccolta*, v, 1944, 236 ff.).

(4) *K. al-Sumūm*, translated from the "Nabataean" and dictated to Abū Ṭālib ... al-Zayyāt (MSS Istanbul, Şehid Ali Paşa 2073, *naskhī* of 905/1499-1500, 21.5 × 15 cm.; Leiden 726, 142 fols., a copy made from the British Museum manuscript 1357; other manuscripts in Brockelmann, S I, 431). Ibn Waḥshiyya gives his sources: it is a compilation from two treatises on toxicology, one by Yārbūkā (Istanbul MS: Baryūfā) al-Nabaṭī al-Kardānī, the other by Sūhāb Sāṭ (Istanbul MS: Shūhāt Bisāṭ) "of the inhabitants of ʿAḳūḳūḳā" (so Istanbul). It is the manual of poisons of Çanakya, according to a new redaction, produced in the medical circles of Gondeshāpūr, from the Persian translation of this treatise (cf. B. Strauss, *Das Giftbuch des Sâhâq*, in *Quellen u. Studien z. Gesch. der Naturwiss. u. der Medizin*, iv/2 (1934), 28 (116) ff.; Massignon, *loc. cit.*, 393). The work covers (a) things which kill by a look, (b) voices which terrify, (c) things which kill by their smell, (d) those which are lethal if eaten or drunk and (e) those which are lethal if touched; from chapter 8 onwards it deals with snake-bites, bites by dogs, the stings of spiders, scorpions, etc. (cf. *K. al-Sumūm wa-dafʿ maḍārrihā* by the Ps.-Djābir: Brockelmann, S I, 428, n. 31; Kraus, *Jabir*, i, 156-9).

(5) *K. al-Uṣūl al-kabīr*, a treatise on alchemy (MSS Istanbul, Ragıp Paşa 963/3, fol. 49v. ff., *naskhī*, 24 × 18 cm.; the same *madjmūʿa*, fols. 1-38v., attributes to him *K. al-Shawāhid fi 'l-ḥadjar al-wāḥid*; Haci Beşir Ağa, 649, fols. 22r-30r, *taʿlīḳ fārisī*, n. d., 35 × 26 cm., in a *madjmūʿa* of works on alchemy, the majority of them Persian, beginning with the *K. Muṣaḥḥaḥāt Aflāṭūn wa-tafsīr Djābir* [b.] *Ḥayyān al-Ṣūfī*, fols. 1-22r). In another *madjmūʿa* in Konya (Yusuf Ağa, 4887/3, 55 fols., 16 × 11.5 cm., small *taʿlīḳ* of 707/1307-8; see also 5486 in the same collection), there is attributed to him another treatise on alchemy entitled *K. Kashf al-rumūz*.

There are also attributed to him other Hermetic works such as *Kanz al-ḥikma*, *Maṭāliʿ al-anwār fi 'l-ḥikma*, used by the Ismāʿīlīs, *K. al-Hayākil wa 'l-tamāthīl* and *K. Ṭabḳānā* (cf. reference in Brockelmann, I, 281, S I, 431), about which much less is known. He himself states, in *al-Filāḥa al-nabaṭiyya* (Leiden MS, p. 2), that he translated also extracts from a vast and valuable work on astrology entitled *K. D(dh)awānāy al-Bābilī fī asrār al-falak wa 'l-aḥkām ʿala 'l-ḥawādith min ḥarakāt al-nudjūm*, and *K. al-Adwār al-kabīr*. The *Fihrist*, 312, lists other titles, for the existence of which there is no other evidence.

From his works as a whole there emerges a striking resemblence between his opinions and those of the Neoplatonist school of Syria founded by Iamblichus (d. 330 A. D.). Like the latter, Ibn Waḥshiyya believed that man can come into contact with God by means of esoteric rites and symbolic formulas. The perspicacious Ibn Khaldūn (*Muḳaddima*, iii, 120/165 f.; tr. Rosenthal, iii, 151 f.) had realized this when he stressed the care which the ancient authors of *Geoponica* took to discover the secret correspondences between the spiritual properties (*rūḥāniyyāt*) of plants and those of the heavenly bodies, and when he stated that the *K. al-Filāḥa al-nabaṭiyya* had been translated from the Greek (*turdjima min kutub al-Yūnāniyyīn*).

In conclusion, we believe (as had already been suggested by G. H. Ewald, in *Göttinger Nachrichten*, 1857, 141 and 1861 (15 May)) that the works attributed to Ibn Waḥshiyya are to be considered as the result of various successive re-writings and revisions of scientific and pseudo-scientific materials surviving from antiquity, preserved, amplified and modified by Syrian and Alexandrian Hellenism and carried on until the period of the translators of the *Bayt al-Ḥikma*, either by Greek documents or by Pahlavi and Syriac versions (there should be noted the existence in Persian of a treatise of *Geoponica* already used by ʿAlī b. Sahl b. Rabbān al-Ṭabarī in *Firdaws al-ḥikma*, completed in 235/850: cf. reference in Brockelmann, S I, 363). The present writer plans further research on Ibn Waḥshiyya's work along these lines.

IBN AL-WANNĀN, ABU 'L-ʿABBĀS AḤMAD B. MUḤAMMAD B. MUḤAMMAD, Moroccan poet of the 12th/18th century, famous for one poem, well-known in Moroccan literary circles. Neither the date nor the place of his birth is known. He is said to have belonged to an Arab family from the Tuwāt (southern Algeria and Morocco). He described himself as Ḥimyarī, therefore Yemenī, and claimed descent from the Anṣār. He lived and died in Fez, where his family had settled at an unknown date and was known by the name of Banū Mallūk (changed by him into Mulūk). Al-Wannān was a

nickname of his grandfather, and it is not known whether he was given it because of his peevish nature or because he played the *wann* (cymbals) (see *L.A.* under the root *w.n.n.*). His father was a court poet of the ʿAlawid sultan Muḥammad b. ʿAbd Allāh (1170-1204/1757-90). Totally deaf, but with a lively intelligence, he left behind him the reputation of an amusing courtier, with an inexhaustible supply of witty anecdotes. The sultan, who prided himself on his literary culture, called him Abu 'l-Shamaḳmaḳ, probably because he had a large mouth and a large nose, like the poet from Kūfa with the same name [*q.v.*], and was as skilful as he in panegyric and satire. This *kunya* became part of his proper name, and was passed on to his son and to the *urdjūza* on which the latter's fame was based.

As Abu 'l-ʿAbbās Aḥmad did not succeed, either during his father's lifetime or after his death, in gaining admittance to the court, which was barred to him by envy, and as he wished at all costs to recite to the sultan the *urdjūza* which he had written for this purpose, he resorted to a ruse: stationing himself one day on a promontory overlooking the route of the royal procession, he declaimed at the top of his voice as the sultan was passing, in the *radjaz* metre, the following couplet:

"My lord, son of the Prophet (*nabī*),
Abu 'l-Shamaḳmaḳ was my father (*abī*)"

The Sultan recognized him, received him, listened to his poem, with which he was delighted, gave him a generous reward and awarded him a place in his entourage where he remained until his death, which is said to have occurred in 1187/1773.

Of his works, which are reputed to have included epistles on various subjects and some poems, all that is known is the *urdjūza* called *al-Shamaḳmaḳiyya*, a *ḳāfiyya* of 275 verses in the *radjaz* metre. The success of this work is due to its educational value. It is in fact a résumé of the traditional culture of the Arabs in a form which could be understood, learned and remembered by an educated Moroccan of that period: a vocabulary dealing with the desert, inherited from the early poets of the Djāhiliyya—the names of its winds, its flora and fauna, its proverbs, legends, anecdotes, historical facts, famous characters (both men and women)—in short a synthesis of the great collections of *adab*, poetry and history. Thus the *Shamaḳmaḳiyya* was used as a textbook, a précis to be learned by heart in the same way as the *Muʿallaḳāt*, the *dīwān*s and the *maḳāmāt*, and it has formed the subject of several commentaries, the best known of which are: (1) Abu 'l-ʿAbbās Aḥmad b. Khālid ... al-Nāṣirī, *Zahr al-afnān min ḥadīḳat Ibn al-Wannān*, lith. Fez 1314/1896; (2) Abū Ḥāmid al-Ḥadidjī Muḥammad al-Makkī b. Muḥammad al-Biṭāwrī al-Sharshālī al-Ḥasanī, *Iḳtiṭāf zahrat al-afnān min dawḥat ḳāfiyyat Ibn al-Wannān*, lith. Fez 1333/1915; (3) Abū Muḥammad al-ʿArabī b. ʿAlī al-Mashrafī, *Sharḥ al-Shamaḳmaḳiyya* (cf. Kattānī, *Fihris*, ii, 15); (4) ʿAbd Allāh Kannūn (Gennûn), *Sharḥ al-Shamaḳmaḳiyya*, Cairo 1964.

(M. HADJ-SADOK)

IBN AL-WARDĪ, SIRĀDJ AL-DĪN ABŪ ḤAFṢ ʿUMAR, Shāfiʿī scholar, d. in Dhu 'l-Ḳaʿda 861/September-October 1457. He is said to be the author of the *Kharīdat al-ʿadjāʾib wa-farīdat al-gharāʾib*, a sort of geography and natural history without any scientific value. In spite of the authorities mentioned in the introduction (al-Masʿūdī, al-Ṭūsī, Ibn al-Athīr, al-Marrākushī), the *Kharīda* is merely a plagiarism of the *Djāmiʿ al-funūn wa-salwat al-maḥzūn* of Nadjm al-Dīn Aḥmad b. Ḥamdān b. Shabīb al-Ḥarrānī al-Ḥanbalī, who lived in Egypt *circa* 732/1332. The work has nevertheless had a certain vogue among orientalists, who have published or translated fragments from it: De Guignes, A. Hylander (Lund 1824), C. J. Tornberg (Upsala), M. Fraehn (Halle), etc.; it has been printed in Cairo several times since 1276.

However, there remain two problems: the first is the name of this Ibn al-Wardī, who, according to al-Ziriklī, was called Ibn al-Wurūdī; the second is the real authorship of the *Kharīda*, which is also attributed to Zayn al-Dīn Ibn al-Wardī [see next article] and to ʿUmar b. Manṣūr b. Muḥ. b. ʿUmar Ibn al-Wardī al-Subkī in a Vatican manuscript.

Bibliography: Ibn Iyās, *Badāʾiʿ al-zuhūr*, ii, 60; Brockelmann, II, 131-2, S II, 162-3; F. Bustānī, *DM*, iv, 137; Ziriklī, *Aʿlām*, x. (ED.)

IBN AL-WARDĪ, ZAYN AL-DĪN ABŪ ḤAFṢ ʿUMAR B. MUẒAFFAR B. ʿUMAR B. ABI 'L-FAWĀRIS MUḤ. B. ʿALĪ AL-WARDĪ AL-ḲURASHĪ AL-BAKRĪ AL-SHĀFIʿĪ, Shāfiʿī *faḳīh*, philologist, man of letters, historian and poet, born at Maʿarrat al-Nuʿmān (he has also the *nisba* al-Maʿarrī) in 689 or 691/1290-2, died of plague in Aleppo on 27 Dhu 'l-Ḥidjdja 749/18 March 1349.

He was educated in his native town, then at Ḥamāt, Damascus and Aleppo; he seems to have held for a time the office of deputy to the *ḳāḍī*s of Manbidj and of Aleppo, but, as the result of a dream, he abandoned this career to devote himself to his literary work.

He is the author of the following works: a *Dīwān* including poems, *maḳāmāt*, epistles, discourses, a *risāla* on the plague, etc. (published in Istanbul by Fāris al-Shidyāḳ, in the *Madjmūʿat al-Djawāʾib*, in 1300); *Lāmiyyat* (or *Naṣīḥat* or *Waṣiyyat*) *al-ikhwān wa-murshidat al-khillān*, a moral poem of 77 verses in the *ramal* metre, long a classic (ed. Cairo 1301 with commentary by Masʿūd b. Ḥasan al-Ḳunāwī; in C. J. David, *Tansīb al-albāb*, Mosul 1863; also al-Shirwānī, *Nafḥat al-Yaman*; Fr. tr. in *RI*, 1900; with the text, by A. Roux, Algiers 1905); *Taḥrīr al-khaṣāṣa fī taysīr al-Khulāṣa*, a prose version of the *Alfiyya* of Ibn Mālik (MS Cairo); *al-Tuḥfa al-wardiyya fī mushkilāt al-iʿrāb*, an *urdjūza* of 153 verses (ed. R. Abicht, Breslau 1891); a commentary on the preceding work (MS Berlin); *al-Bahdja al-wardiyya*, an *urdjūza*, a rendering in 5000 verses of *al-Ḥāwī al-ṣaghīr* of al-Ḳazwīnī (a manual of Shāfiʿī *fiḳh*) (lith. Cairo 1311); *Tatimmat al-Mukhtaṣar fī akhbār al-bashar*, an abridgement of the chronicle of Abu 'l-Fidāʾ with continuation from 729 to 749/1329-49 (Cairo 1285); *al-Masāʾil al-mudhahhaba fi 'l-masāʾil al-mulaḳḳaba*, an *urdjūza* of 71 verses on questions of succession (MSS Berlin and Cairo); *al-Shihāb al-thāḳib wa 'l-ʿadhāb al-wāḳif*, a work of mysticism (MS Aya Sofya); *al-Alfiyya al-wardiyya*, an *urdjūza* on the interpretation of dreams (several eds. in Egypt after that of Būlāḳ 1285); also: *al-Lubāb fī ʿilm al-iʿrāb*; *al-Durra*, a commentary on the *Alfiyya* of Ibn Muʿṭī; *Tadhkirat* (*Mudhakkirat*) *al-gharīb*; *Abkār al-afkār*.

Bibliography: Kutubī, *Fawāt*, ii, 116; Subkī, *Ṭabaḳāt al-Shāfiʿiyya*, vi, 243; Suyūṭī, *Bughya*, 365; Ibn al-ʿImād, *Shadharāt*, i, 161; Ibn Ḥadjar, *Durar*, ii, s.v.; Ibn Iyās, *Badāʾiʿ al-zuhūr*, i, 198; Wüstenfeld, *Geschichtschreiber*, no. 412; Sarkīs, *Muʿdjam*,

IBN WĀṢIL, ABŪ ʿABD ALLĀH DJAMĀL AL-DĪN MUḤAMMAD B. SĀLIM B. NAṢR ALLĀH B. SĀLIM B. WĀṢIL, historian, *ḳāḍī* and man of letters, born in Ḥamāt on Sunday 2 Shawwāl 604/20 April 1208. He began his studies under his father, who was successively *ḳāḍī* of Ḥamāt and al-Maʿarra, and a *mudarris* at the Nāṣiriyya in Jerusalem. During his father's absence on the Pilgrimage in 624-6/1227-9, Ibn Wāṣil deputized for him at the Nāṣiriyya. In the next two years he continued his studies at Damascus and Aleppo (where his teachers included the historian Ibn Shaddād [*q.v.*]) In 629/1232 he attached himself to al-Malik al-Nāṣir Dāwūd, the Ayyūbid ruler of Karak, where he studied under Shams al-Dīn al-Khusraw-shāhī. For two years from 631/1234 he was in the service of the Ayyūbid ruler of Ḥamāt, al-Muẓaffar II, upon whose orders he assisted the Egyptian mathematician ʿAlam al-Dīn Ḳayṣar (known as Taʿāsīf) in the construction of an observatory and various astronomical instruments. He then returned to Damascus, where he made the acquaintance of the Kurdish *amīr* Ḥusām al-Dīn b. Abī ʿAlī (later the deputy in Egypt of the Ayyūbid sultan al-Malik al-Ṣāliḥ Nadjm al-Dīn), whose friendship was to be of great profit to him during his years in Egypt.

In 641/1243-4, accompanied by his friend and relative Ibn Abi 'l-Dam [*q.v.*], he went on a delegation to Baghdād, and thence made his way to Cairo. There he procured access to the sultans al-Malik al-Ṣāliḥ Nadjm al-Dīn, to whom he dedicated his *al-Taʾrīkh al-Ṣāliḥī* (no. (1) below), and his successor al-Malik al-Muʿaẓẓam Tūrān-shāh, to whom he dedicated his *Naẓm al-durar* (no. (2) below) and a work on astronomy. After performing the Pilgrimage in the company of his friend Ḥusām al-Dīn b. Abī ʿAlī in 649/1252, he returned to witness the assassination of Tūrān-shāh, the fall of the Ayyūbids, and the establishment of the Mamlūk dynasty.

In Ramaḍān 659/August 1261, Baybars sent him on an embassy to the King of Sicily, Manfred, whom he met in Barletta in southern Italy and to whom he dedicated a treatise on logic, *al-Risāla al-Anbrūriyya*.

In about 663/1264-5, Ibn Wāṣil returned to his native Ḥamāt, where he was appointed chief *ḳāḍī* but devoted his time to writing, composing there his *Mukhtaṣar al-Aghānī* and his *Mufarridj al-kurūb* (no. (3) below), begun in 671 and finished in 683 (1272-85). Stricken with blindness in his last years, he died at Ḥamāt, at the age of 93, in 697/1298.

Ibn Wāṣil's three historical works are: (1) *al-Taʾrīkh al-Ṣāliḥī*, a general history from the Prophet to 637/1240 (MS: British Museum, 6657); (2) *Naẓm al-durar fi 'l-ḥawādith wa 'l-siyar* (MS: Chester Beatty 5264); (3) *Mufarridj al-kurūb fī akhbār Banī Ayyūb*: reaching to the year 661/1263, this is the most valuable source for the history of the Ayyūbids. The full text, which can be reconstituted from the four incomplete manuscripts, is in process of publication by Djamāl al-Dīn al-Shayyāl, the three volumes published (Cairo 1954, 1957, 1961) reaching to the death of al-ʿĀdil I.

Bibliography: Djamāl al-Dīn al-Shayyāl, *Jamāl al-Dīn Ibn Wāṣil and his book*, Mufarrij al-Kurūb fī akhbār Banī Ayyūb, unpubl. Ph. D. thesis, Alexandria 1948; Ibn Wāṣil, *Mufarridj al-kurūb*, ed. (GAMAL EL-DIN EL-SHAYYAL)

IBN YAʿĪSH, ABEN YAʿĪSH, family name of a number of Jews originating from Spain and Portugal who were active in medicine, scholarship, business or diplomacy. The relationship (if any) of the various bearers of this name is generally uncertain. The most notable are:

1. SOLOMON BEN ABRAHAM IBN YAʿĪSH (Abū Rabīʿ Sulaymān ibn Yaʿīsh), a physician and scholar of Seville, where he died in Muḥarram 746/May 1345. His works include an important detailed commentary in Arabic on Ibn Sīnā's *al-Ḳānūn fi 'l-ṭibb*; an Arabic super-commentary on Abraham ibn ʿEzra's commentary on the Pentateuch; and a dictionary of difficult words occurring in Arabic poetry. He may also be identical with Solomon ben Abraham ibn Daʾūd, who translated into Hebrew two Arabic medical works: Ibn Rushd's *Kulliyyāt fi'l-ṭibb* (translation entitled *Mikhlol*), and Ibn Sīnā's *al-Urdjūza*, with Ibn Rushd's commentary.

Bibliography: M. Steinschneider, *Die hebräischen Übersetzungen des Mittelalters und die Juden als Dolmetscher*, Berlin 1893, repr. Graz 1956, 672-3, 686-7, 840; idem, *Die arabische Literatur der Juden*, Frankfort 1902, 167; H. Friedenwald, *The Jews in medicine*, Baltimore 1944, 156, 634, 643; *Jewish Encyclopaedia*, xi, 210, 449, 458; photograph of his tombstone, with commentary, in F. Cantera and J. M. Millás, *Las inscripciones hebraicas de España*, Madrid 1956, 175-80.

2. SALOMO(N) IBN YAʿĪSH (other spellings: Sallomo Abenajaex [autograph], Abenaish, Abenjaish), *alias* ALVARO MENDEZ (Mendes), ca. 1520-1603, a merchant and financier who was active in international and Ottoman diplomacy. He was born at Tavira (Portugal) into a Marrano ('new Christian', crypto-Jewish) family, and made a fortune as a young man by farming the diamond mines in Narsinga (the later Madras Presidency), returning to Portugal in about 1555. King João III made him a Knight of the Order of Santiago. He subsequently lived for various periods in Madrid, Florence and Paris. In 1585 he came to Salonica, where he openly returned to Judaism, and then settled in Istanbul. He hated Spain passionately, and European diplomatic documents show that he actively and successfully fostered the development of an Anglo-Turkish entente against Spain: he had some influence at the courts of both Murād III and Queen Elizabeth (whose physician Rodrigo Lopez was his brother-in-law). He also enjoyed considerable prestige in several other European courts, notably that of France. His diplomatic efforts played a part in nullifying Spanish attempts to secure Ottoman neutrality in the war between England and Spain, and in ensuring England's benevolent neutrality during the successful Ottoman campaign in Hungary which culminated in the victory at Ḥāč Ovasī (Kereztes) in 1005/1596. As a reward the Sultan created him Duke of Mitylene. The grant of Tiberias, originally made to his kinsman Joseph Nasi (João Miquez, d. 1579; see NASI) was renewed to him, and his own son Jacob (Francisco) settled there. Salomo ibn Yaʿīsh died in Istanbul in 1603.

3. A noted family called Ibn Yaʿīsh, reputedly descended from Yaḥyā ibn Yaʿīsh, a 6th/12th century

physician in Portugal, produced physicians, rabbis and merchants in the Ottoman Empire from the 10th/16th to the 20th centuries.

IBN YAʿĪSH, Muwaffaḳ al-Dīn Abu 'l-Baḳāʾ Yaʿīsh b. ʿAlī b. Yaʿīsh al-Ḥalabī, also known as Ibn al-Ṣāniʿ, Arab grammarian, born at Aleppo on 3 Ramaḍān 553/28 September 1158, died there 25 Djumādā I 643/18 October 1245. He studied grammar (*naḥw*) and tradition (*ḥadīth*) first in Aleppo, then in 577/1181 in Mosul and finally under Abu 'l-Yumn al-Kindī in Damascus. Then he returned to Aleppo, where he lectured on grammar and literature until his death. Ibn Khallikān, who was his pupil in 626-7/1229-30, gives a vivid picture of him, and tells some anecdotes about his wit. Other pupils of his were Yāḳūt (i, 757, *Irshād*, iii, 77 f.), Ibn Mālik Djamāl al-Dīn and al-Sharīshī. Ibn Yaʿīsh is best known for his extensive commentary on Zamakhsharī's *al-Mufaṣṣal* (published by G. Jahn, Leipzig 1882-6, 2 vols.). He adheres strictly to the doctrine of Sībawayh and the Baṣra school, but discusses at length the differences between the two schools. His style is verbose and sometimes slovenly. For other works of his, see Brockelmann, I, 397; S I, 521.

Bibliography: Ibn Khallikān, no. 843; Yāfiʿī, *Mirʾāt al-djinān*, iv, 106; Suyūṭī, *Bughya*, 419; G. Weil, in *ZA*, xix, 4; idem, in the introduction to his edition of Ibn al-Anbārī, *K. al-Inṣāf* (= *Die grammatischen Streitfragen der Basrer und Kufier*, Leiden 1913), *passim*. (J. W. Fück)

IBN YALLAS, Muḥammad al-Ḥādjdj ʿIlāl ʿAlī b. Muḥammad Yallas Shāwush, Ṣūfī *Shaykh* of the order of the Darḳāwa [*q.v.*]. Born in 1271/1855, he studied theology and law thoroughly at Tlemcen, where he was initiated into *taṣawwuf* by Aḥmad b. Muḥammad Dakkālī. His other teachers in Ṣūfism were, successively, Muḥammad al-Habrī (d. 1900) and Ibn al-Ḥabīb al-Būzīdī (d. 1909 at Mostaganem) with whom his fellow-pupil was Aḥmad al-ʿĀlawī (or Ibn ʿAlīwa [*q.v.*]), the founder of the ʿAlawiyya *ṭarīḳa*. In 1911, he emigrated to Damascus with his disciple Muḥammad al-Hāshimī [*q.v.*], who was to succeed him as spiritual leader of the Darḳāwa-ʿAlawiyya in Syria after his death at Damascus on 11 Djumādā II 1346/6 December 1927. He was the author of a *Dīwān* (printed at Damascus, n.d.) in which he celebrated the beauty of Laylā, the beloved Divine Presence; his poems are still sung in Damascus during the sessions of *dhikr* of the *fukarāʾ*.

Bibliography: see the articles referred to above. (J.-L Michon)

IBN-I YAMĪN, in full Amīr Fakhr al-Dīn Maḥmūd b. Amīr Yamīn al-Dīn Tughrāʾī Mustawfī Faryūmadī, the most important Persian poet of *ḳiṭʿas* (literally "fragments", *i.e.*, epigrams or occasional verses), born in 685/1287 in Faryūmad (in the district of Bayhaḳ, the modern Sabzavār), where his father was a small landowner and at the same time a director of finance (*mustawfī*), in the service of the governor of Khurāsān, Khwādja ʿAlāʾ al-Dīn Muḥammad. Both occupations, it seems, had been hereditary in the family from ancient times (according to some, having immigrated from Transoxania to Faryūmad). Ibn-i Yamīn received the usual education (chiefly in medicine and literature) in his native town, whose culture at that time stood at a very high level. Under the influence of his father, who was himself a poet and who loved his son dearly, he began at an early age to write verses. The son even entered into a poetical contest with his father. On his father's death (724/1323-4) Ibn-i Yamīn's peaceful life came to an end, since he now became court poet, financial official, and after a time *mustawfī* to ʿAlāʾ al-Dīn, and was later granted the title of *amīr*. He disliked the bustle of court life, and disagreement arose between him and his master, who moreover fell from favour and was replaced by Tari Taghāʾī (727-9/1327-29), a tyrant, under whom Ibn-i Yamīn lost the greater part of his estate, and was finally forced to give up also the remainder. After spending the years 738-42/1337-41 at the court of the Īlkhān Tagha Tīmūr in Gurgān, he joined in 742/1341 the radical wing of the Sarbadārs [*q.v.*]. The encounter with the Kurts at Zāva (743/1342) resulted in a severe defeat for the Sarbadārs; the poet was taken prisoner and lost the *dīwān* containing all that he had written until then. The conquerors took him to Herāt, where he was well treated, so that he was able to write his poetry in peace. In 747/1346, he returned to Sabzavār, from whence however he was soon temporarily driven out, by a crisis of the Sarbadārs, to Ādharbaydjān and Baghdād. From 749/1348 he lived almost without interruption in Faryūmad in the "service" of the Sarbadārs, and even received a pension from them. He occupied himself with farming and the writing of epigrams. He died at the same place at an advanced age in 769/1368.

Like all the inhabitants of Sabzavār, he was a Shīʿī, though not without hesitations. He was one of the earliest poets to write of the *imāms* and the tragedy of Karbalāʾ.

The question of the authenticity of the *kulliyyāt* and *dīwāns* which appear under the name of Ibn-i Yamīn has not been satisfactorily solved. When the *dīwān* written in his early years was irretrievably lost in 743/1342, the poet made great efforts to reconstruct it. With the help of his own memory and notes, and those of his friends, he succeeded in producing a first redaction of the earlier collection in 746/1346 and a second in 1356. Compared with the edition of Saʿīd Nafīsī with more than 5,000 couplets, the reliable MS 403 (Dorn) in the Saltīkov-Shčedrin Library (Leningrad) consists of about 16,120 couplets according to Mullādjānāvī Shahristānī (according to S. Imronov, however, only 13,387 couplets); the manuscript dates from the 9th/15th century and was copied from Ibn-i Yamīn's texts. There exist however several other manuscripts which differ from this one and those related to it, yet similarly bear the name of Ibn-i Yamīn, but which must belong to another poet, as has already been recognized by ʿA. A. Dihkhudā. According to the completely convincing arguments of S. Imronov, this is the much later Shaykh al-shuyūkh Ibn-i Yamīn Shiburghānī (d. 1005/1596-7), a distinguished Ṣūfī of his day (cf. S. Nafīsī, *Tārīkh-i naẓm wa nathr*, i, 587), whose *dīwān* is indeed entirely permeated by mysticism.

Ibn-i Yamīn's *ḳaṣīdas* are certainly not of the highest quality and are marred by mendicancy, repetition and plagiarism. They are in praise of 65 rulers of minor importance, whose generosity he praises in thinly-veiled appeals for money. On

the other hand, he is an unequalled master in *ḳiṭʿas*, "epigrams", to which after 757/1356 he applied himself almost exclusively (they are of course included with the earlier poems in the manuscripts which have now come to light). These epigrams are divided by A. R. Khekmat into autobiographical, social critical, didactic, philosophical, and other types. Particularly convincing is his sympathy for the rural population, of whose joys and sorrows he had direct experience. His pen was guided by reason, though not without inconsistencies (such as a belief in predestination side by side with enthusiasm for free will and work). He sharply opposed flattery, untruthfulness, despotism and foreign rule. He lived in an unsettled age, which is vividly reflected in his *kulliyyāt*, which therefore represent a useful historical source. Ibn-i Yamīn's literary heritage consists of collected poetical works, a *Karnāme* and short prose works (letters).

Bibliography: A. Earliest manuscripts: India (? Aligarh), of 753/1352 (*i.e.*, in the author's lifetime): K. Ayni, in *Shafaḳ-i surkh*, 1964, no. 5, 33; Isfahan Public Library, of 783/1381; 8th/14th century: private collections of S. Nafīsī and Mahdī Bayānī; Leningrad, Saltikov-Shčedrin Library (very good MS); Tashkent (?). An edition containing some 8,000 verses has been prepared by ʿA. A. Dihkhudā. Several MSS are recorded by S. Imronov (see below, 1966), 12-15, 25, and A. R. Khekmat (see below), 18 and 95 (Library of the Madjlis of Iran, no. 13271).

IBN YŪNUS, Abū Saʿīd ʿAbd al-Raḥmān b. Aḥmad al-Ṣadafī (b. 281/894, d. Monday 26 Djumādā II 347/14 September 958, which, however, was a Tuesday), a grandson of the famous early Egyptian supporter of al-Shāfiʿī, Yūnus b. ʿAbd al-Aʿlā, and the father of the astronomer (below). He wrote on Egyptian scholars and, in a separate work, on the foreigners who came to visit or settle in Egypt. Both works were much used sources of information for later authors, but they seem not to have been preserved. Only part of a supplement by Abu 'l-Ḳāsim Yaḥyā b. ʿAlī b. al-Ṭaḥḥān has so far been traced in a manuscript in Damascus.

Bibliography: Samʿānī, 350b; Sezgin, i, 357 f. (F. Rosenthal)

IBN YŪNUS (or yūnis), whose full name was Abu 'l-Ḥasan ʿAlī b. Abī Saʿīd ʿAbd al-Raḥmān b. Aḥmad b. Yūnus al-Ṣadafī, one of the most prominent Muslim astronomers, died in 399/1009.

Ibn Yūnus's chief astronomical work, *al-Zīdj al-kabīr al-ḥākimī* (not all of which seems to have survived), was begun *ca.* 380/990 and completed shortly before his death. Several long extracts have been published and translated, and it is one of the few *zīdj*es (sets of astronomical tables) that has been treated extensively by modern scholars. He quotes a large number of astronomical observations (eclipses and other phenomena), some made by his predecessors of the 9th and 10th centuries and others made by himself in Cairo; they constitute the most extensive list of medieval astronomical observations presently known. Ibn Yūnus is especially careful in reporting the researches of his predecessors, and his criticisms of errors and discrepancies in their works are distinctly modern in tone.

The *zīdj* of Ibn Yūnus was analysed by Delambre on the basis of Caussin's publication of chapters 3-5 and an unpublished translation of most of the remaining chapters by Sédillot that has since disappeared. The observations reported by Ibn Yūnus were discussed by S. Newcomb, who was interested in their possible usefulness for determining the value of the secular acceleration of the moon. Ibn Yūnus's original contributions to plane and spherical trigonometry have been treated by Delambre, von Braunmühl, and Schoy.

Bibliography: C. Caussin, *Le livre de la grande table hakémite*, in *Notices et extraits* ...., vii (1804), 16-240; Delambre, *Hist. de l'astron. du moyen âge*, Paris 1819; S. Newcomb, *Researches on the motion of the moon*, in *Washington Observations for 1875* (Washington 1878), Appendix 2, pp. 44-54, 276-8; von Braunmühl, *Vorlesungen über Geschichte der Trigonometrie*, i, Leipzig 1900; H. Suter, *Die Math.*

und Astron. d. Araber, in *Abh. z. Gesch. d. math. Wissensch.*, x (1900), 77-9 (to the list of mss. noted by Suter may be added: Chester Beatty Library MS arab. 3673); C. Schoy, 3 articles in the *Annalen der Hydrographie und Maritimen Meteorologie*: *Das 20. Kapitel der grossen Ḥākemitischen Tafeln des Ibn Yūnus "Über die Berechnung des Azimuts aus der Höhe und der Höhe aus dem Azimut"*, xlviii (1920), 97-111, *Über eine arabische Methode, die geographische Breite aus der Höhe der Sonne im 1 Vertical (Höhe ohne Azimut) zu bestimmen*, xlix (1921), 124-33, *Die Bestimmung der geographischen Breite eines Ortes durch Beobachtungen der Meridianhöhe der Sonne* ..., l (1922), 3-20; C. Schoy, *Beiträge zur arabischen Trigonometrie*, in *Isis*, v (1923), 364-99; Brockelmann, I, 255, S I, 400; E. S. Kennedy, *A survey of Islamic astronomical tables*, in *Trans. Amer. Philos. Soc.*, xlvi (1956), 126. (B. R. GOLDSTEIN)

IBN (AL)-ZABĪR, ABŪ KAT͟HĪR ʿABD ALLĀH B. (AL-)ZABĪR B. AL-AS͟HYAM AL-ASADĪ, Arabic poet of the 1st/7th century. He became a writer of panegyrics of the local Umayyads and wrote particularly, in an entirely classical manner, in praise of Asmāʾ b. K͟hārid͟ja; but he did not hesitate to address praises to the Zubayrids after Muṣʿa b. al-Zubayr, who had seized Kūfa, had treated him leniently when his supporters had arrested him; it was, so to speak, as a private person that he wrote a *hid͟jāʾ* against ʿAbd Allāh b. al-Zubayr, who had treated badly his own brother ʿAmr, a friend of the poet. According to the *Ag͟hānī*, his satires were much feared, and they are certainly caustic without being scurrilous. His quarrels with ʿAbd al-Raḥmān b. Umm al-Ḥakam, governor of Kūfa for his maternal uncle Muʿāwiya, are widely reported; but in addition the poet did not hesitate to complain to the caliph—who saw that he obtained justice—of the bad treatment he had received from his nephew, just as he takes to task al-Ḥad͟jd͟jād͟j in person in an often-quoted poem. He is said to have died either during a campaign organized by the latter, or while trying to escape from compulsory conscription for the operations in Media, probably about 78/698.

Bibliography: Some verses of Ibn (al-)Zabīr are quoted as examples in dictionaries and grammatical works; the most detailed notice is that in the *Ag͟hānī*, xiii, 33-49, = Beirut ed., xiv, 211-46; see also D͟jāḥiẓ, *Bayān*, i, 226; idem, *Buk͟halāʾ*, ed. Ḥād͟jirī, 207, 380; Ibn Ḳutayba, *S͟hiʿr*, index; idem, *ʿUyūn*, ii, 186; iii, 67, 265; Ibn Sallām, *Ṭabaḳāt*, 146; Mubarrad, *Kāmil*, 122, 217, 665; Ḥuṣrī, *Zahr*, 405, 474, 817; Ṭabarī, ii, 231, 269, 871; Masʿūdī, *Murūd͟j*, v, 300-1; Marzubānī, *Muʿd͟jam*, 244, 470; Bag͟hdādī, *K͟hizāna* (Būlāḳ), i, 345; ii, 100; Ibn al-At͟hīr, ii, 317; iv, 30, 272, 307; Tibrīzī, *S͟harḥ Dīwān al-Ḥamāsa, passim*; Caetani, *Annali*, ii, 231, 269, 871; Nallino, *Letteratura*, 133, 143 = Fr. tr. 205-6, 220. (ED.)

IBN ẒAFAR, ABŪ ʿABD ALLĀH (var. Abū Hās͟him, Abū Djaʿfar) MUḤ. B. ABĪ MUḤ., an Arab scholar and polygraph to whom the sources attribute the *nisba* al-Ṣiḳillī (often followed by the *nisba* al-Makkī) and various honorific titles. According to Ibn K͟hallikān (M. Amari, *Bibliotheca arabo-sicula* [=*BAS*], Leipzig 1857, 630), he was born in Sicily (in 497/1104, according to certain biographers) and brought up in Mecca; he travelled in various countries in the East and in the Mag͟hrib and, towards the end of his life, retired to Ḥamāt where he died in 565/1170 (var. 567 and 598). But these biographical data, and in particular his origin, birth and journeyings, vary considerably in the other authors mentioned in the *BAS*. In fact, according to Yāḳūt (*Irs͟hād*, vii, 102), the places where he stayed during his journeys were Egypt, Ifrīḳiya (in al-Mahdiyya), Sicily, Egypt again, Aleppo and Ḥamāt.

Of this author's vast output (Ibn Ẓafar, in the introduction of his *Sulwān al-muṭāʿ* [see below], credits himself with 32 works), only four works have survived. As for the subjects treated in those of his writings which must be regarded as lost and which, according to Yāḳūt (*op. cit.*, 102), were destroyed in Aleppo during the struggles between S͟hīʿīs and Sunnīs, from the few that we possess it may be deduced that they were concerned with Ḳurʾānic exegesis, theology, *fiḳh*, moral philosophy, exhortation, grammar, Aristotelian logic and lexicography (several commentaries on the *Maḳāmāt* of al-Ḥarīrī).

The only writings to have survived are: *Yanbūʿ al-ḥayāt fī tad͟hkīr al-d͟hikr al-ḥakīm*, a long unt published commentary on the Ḳurʾān and, in he-author's own opinion, the best of his writings (for the MSS, see Brockelmann, I, 352, S I 596); *K͟hayr al-bis͟har bi-k͟hayr al-bas͟har* (lith. Cairo 1280/1863) on the predictions received by mankind on the subject of Muḥammad's prophetic mission; *Anbāʾ nud͟jabāʾ al-abnāʾ* (the undated Cairo ed. belongs to 1322/1904), biographies of illustrious individuals, starting with Muḥammad, and various subjects of *adab* (see Brockelmann, I, 352, S I, 595, and also C. A. Nallino, *I manoscritti arabi ... di Torino*, in *Mem. Acc. Scienze*, 1900, 37-8); *Sulwān al-muṭāʿ fī ʿudwān al-atbāʿ* (lith. Cairo 1278/1861-2; printed Tunis 1279/1862, Beirut 1300/1882-3); this *Fürstenspiegel*, drawn up on the model of *Kalīla wa-Dimna*, and of which Italian, English and Turkish translations were made, must be regarded as the author's most widely known work.

Bibliography: Brockelmann, I, 352, S I, 595; the preface to the Italian translation, by M. Amari, of the *Sulwān*, Florence 1851, 1882; on the *Sulwān*, see V. Chauvin, ii, 175-87.—M. Amari, *Storia dei Musulmani di Sicilia*, Catania 1933, iii, 735-57. Lastly, we must add that, in the Catalogue of MSS in the Mosque of al-Azhar, a work (775, no. 2120 "Fiḳh ʿĀmm") is attributed to Ibn Ẓafar, bearing the title *Zād al-mulūk al-muẓaffarī* (*Muẓaffirī*?) *fī 'l-muʿtaḳadāt wa 'l-ʿibādāt*, of which the author himself makes no mention in the list of his writings contained in the *muḳaddima* of the *Sulwān*. (U. RIZZITANO)

IBN ẒĀFIR, D͟JAMĀL AL-DĪN ABU 'L-ḤASAN ʿALĪ B. ABĪ MANṢŪR ẒĀFIR B. AL-ḤUSAYN AL-AZDĪ, Egyptian chancery secretary and man of letters, born in Cairo in 567/1171. He was the pupil of his father, who was a teacher at the Mālikī *madrasa* al-Ḳumḥiyya, and eventually succeeded him. He was next employed in the chancery of al-ʿAzīz (589-95/1193-8), then in that of al-ʿĀdil (596-615/1200-18), and finally in that of the latter's son, al-As͟hraf (d. 635/1237), at Damascus. In 612/1215, he gave up his office and returned to Cairo, where he died, according to Yāḳūt, on 15 S͟haʿbān 613/27 November 1216, or, according to Ibn S͟hākir, in 623/1226.

There are attributed to him about a dozen works, among which there have survived the *Kitāb Badāʾiʿ al-badāʾih* (Būlāḳ 1278, Cairo 1316, on the margin of the *Maʿāhid al-tanṣīṣ*), an anthology of improvisations of some worth; *al-Manāḳib al-nūriyya* (MS Escorial), which must be identical with the *Kitāb al-Tas͟hbīhāt*; and finally *K. al-Duwal al-munḳaṭiʿa* (MSS British Museum, Gotha and photocopy in Cairo), of which the *Ak͟hbār mulūk al-dawla al-*

saldjūḳiyya may form a part (see Cl. Cahen, in *Historians of the Middle East*, 70), but of which the most important part is that which concerns the Fāṭimids: it was used by Ibn Khallikān and Wüstenfeld, but remains unpublished. The other titles mentioned are *Akhbār al-shudjʿān*, *Asās al-siyāsa* (or *al-balāgha*), *Nafāʾis al-Dhakhīra* (extracts from Ibn Bassām?), *Shifāʾ al-ghalīl fī dhamm al-ṣāḥib wa ʾl-khalīl* (abridged by al-Suyūṭī), *Man uṣība mimman ismuh ʿAlī*, *Makrumāt al-kuttāb*.

Bibliography: Yāḳūt, *Irshād*, v, 228 = *Udabāʾ*, xiii, 264; Ibn Shākir, *Fawāt*, s.v.; Maḳḳarī, *Analectes*, ii, 167-8, 176; Süssheim, *Prolegomena zu einer Ausgabe der Seldjukgeschichte*, Leipzig 1911, 32 ff.; F. Bustānī, *Dāʾirat al-maʿārif*, iii, 322; Brockelmann, S I, 533; Cl. Cahen, *Quelques chroniques anciennes relatives aux derniers Fatimides*, in *BIFAO*, xxxvii (1937), 2 ff. (Ed.)

IBN al-ZAḲḲĀḲ, Abu ʾl-Ḥasan ʿAlī b. ʿAṭiyyat Allāh b. Muṭarrif b. Salama, Andalusian poet, born at the very end of the 5th/11th century, probably at Valencia, whence his *nisba* of al-Balansī, although he is sometimes, probably wrongly, given that of al-Mursī (of Murcia). The little that is known of his personal life is in part contradictory; his genealogy varies according to the writer, but the most probable is that given above. It is known that his mother was the sister of the great poet Ibn Khafādja [*q.v.*]; the information concerning his father is confused: Ibn ʿAbd al-Malik describes him as related to the Banū ʿAbbād of Seville [see ʿabbādids], but states that he denied this relationship when al-Muʿtamid was deposed and exiled by the Almoravids (484/1091) and that he lived in Valencia, where he was the muezzin of the Great Mosque. Al-Maḳḳarī (*Analectes*, ii, 196) states that he was a poor artisan and relates an anecdote in which the son plays a part and which seems to be a legend. Nor do the early writers agree about his ethnic name: some consider his *nisba* to be al-Lakhmī, which implies a purely Arab origin, others refer to him as al-Buluggīnī, making him a Berber. Nor are they consistent on the name under which the poet is known, Ibn al-Zaḳḳāḳ, which has been confused with others and corrupted into Ibn al-Raḳḳāḳ and Ibn al-Daḳḳāḳ.

He studied *ḥadīth* with Ibn al-Sīd al-Baṭalyawsī [see al-baṭalyawsī] and probably studied poetry with his uncle Ibn Khafādja. His life was short but very happy, to judge by his epitaph, which he wrote himself. He died in 528/1133 or 530/1135, before he was forty.

Ibn al-Zaḳḳāḳ, whose poems, collected in a *dīwān*, "passed from hand to hand", very soon acquired great fame, and the Arab authorities and critics, as well as modern orientalists, regard him as one of the great poets of Muslim Spain. His poetry, according to E. García Gómez, imitates Ibn Khafādja, but not slavishly; it is more restrained, perhaps less brilliant, but more refined.

Bibliography: Ibn al-Abbār, *Takmila*, no. 1844; Ibn ʿAbd al-Malik al-Marrākushī, *al-Dhayl wa ʾl-takmila*, ed. Iḥsān ʿAbbās, Beirut 1964, v, 265-8; Ibn Diḥya, *al-Muṭrib*, Cairo 1954, 100-10; Ibn Saʿīd, *al-Mughrib*, Cairo 1955, ii, 323-38; H. Pérès, *Poésie andalouse*, Paris 1953, index; E. García Gómez, *Ibn al-Zaqqāq, Poesías*, ed. and tr., with important introduction, Madrid 1956. The edition of the *Dīwān Ibn al-Zaḳḳāḳ al-Balansī*, preceded by a study, was published in Beirut, in 1964, by ʿAfīfa Maḥmūd Dayarānī.

(F. de la Granja)

IBN ZĀKŪR, Abū ʿAbd Allāh Muḥ. b. Ḳāsim b. Muḥ. b. ʿAbd al-Wāḥid b. Aḥmad al-Fāsī al-Maghribī, who was born in Fez in the first half of the 11th/17th century, and who died in that city on 20 Muḥarram 1120/11 April 1708 and was buried at bāb Gīsa, was a fine scholar, historian, biographer and poet of his day, and a commentator on didactic poems. He applied himself early in life to studies predominantly Islamic in Fez, under masters of high repute such as Abū Muḥ. ʿAbd al-Ḳādir b. ʿAlī b. Yūsuf al-Fāsī (1007-91/1599-1680); his son Abū ʿAbd Allāh Muḥammad, d. 1100/1689; Abū ʿĪsā (alternatively Abū ʿAbd Allāh) Muḥ. al-Mahdī b. Aḥmad b. ʿAlī b. Yūsuf al-Fāsī (1035-1109/1624-98); Abū ʿAlī al-Ḥasan b. Masʿūd al-Yūsī (1040-1102/1630-91); Abū Muḥ. ʿAbd al-Salām b. al-Ṭayyib al-Ḳādirī (1058-1110/1648-98); the *ḳāḍi ʾl-djamāʿa* and *muftī* of Fez Abū Muḥ. (also Abū ʿAbd Allāh) Muḥ. al-ʿArabī (pronounced al-ʿArbī) b. Aḥmad Burdula (or Burdala or, more exactly, Burdulla or Burdullu) al-Andalusī, al-Fāsī (1042-1133/1632-1721); Abū ʿAbd Allāh Muḥ. b. Aḥmad al-Ḳusanṭīnī al-Ḥasanī called al-Kammād, d. 1116/1704; Abu ʾl-ʿAbbās (alternatively, Abu ʾl-Faḍl) Aḥmad b. al-ʿArabī (pronounced al-ʿArbī) b. Muḥammad b. al-Ḥādjdj al-Ḥārithī al-Mirdāsī al-Sulamī, *ḳāḍī* of Fās al-djadīd, d. 1109/1697.

He completed his studies subsequently in Tetuan under Abu ʾl-Ḥasan al-Ḥādjdj ʿAlī b. Muḥammad al-Tiṭṭawānī al-Andalusī called Baraka or Barakatuh or Bārāktu, d. 1120/1709, and then in Algiers, under Abū Ḥafṣ ʿUmar b. Muḥ. b. ʿAbd al-Rahmān (alternatively, ʿAbd al-Wahhāb) b. Yūsuf al-Māndjallātī (pronounced al-Mangellātī), Abū ʿAbd Allāh Muḥ. b. Muḥ. b. ʿAbd al-Muʾmin al-Ḥasanī (on these two teachers there is little information), Abū ʿAbd Allāh Muḥ. b. Saʿīd b. Ibrāhīm b. Ḥammūda called Ḳaddūra, d. 1098/1687.

From each of these teachers he requested, and nearly always obtained, an *idjāza* (authorization to teach) which he preserved carefully. Six of these documents have survived *in extenso*, with dates. The earliest, drawn up by Muḥ. al-Mahdī, in Fez, is dated Dhu ʾl-Ḳaʿda 1100/1689. During the seven months which he spent in Algiers, he had three *idjāza* conferred on him, one in Djumādā II and two in Radjab 1094/1683. In Tetuan, ʿAlī Bārāktu conferred his in Shaʿbān 1094/1683; finally, in Fez, he obtained an *idjāza* from Ḥasan al-Yūsī in 1095/1684.

These texts provide accurate information on the subjects studied and the works read: (a) grammar: Ibn Mālik [*q.v.*], *Alfiyya* and *Kāfiyya*; (b) rhetoric: al-Sakkākī [*q.v.*], *Miftāḥ al-ʿulūm*, abridged by al-Ḳazwīnī [*q.v.*] under the title *Talkhīṣ al-Miftāḥ*, with a commentary by Saʿd al-Dīn al-Taftazānī [*q.v.*], entitled *Mukhtaṣar*, and a gloss by al-Djurdjānī [*q.v.*]; (c) law: Khalīl [*q.v.*], *Mukhtaṣar*; Ibn Abī Zayd al-Ḳayrawānī [*q.v.*], *Risāla*; Ibn ʿĀṣim [*q.v.*], *Tuḥfa*; Abū Isḥāḳ Ibrāhīm b. Abī Bakr b. ʿAbd Allāh al-Anṣārī al-Tilimsānī, al-Waḳshī (699-760/1299-1359), *al-Urdjūza fi ʾl-farāʾiḍ*; (d) *ḥadīth*: al-Bukhārī [*q.v.*], *Ṣaḥīḥ*; al-Tirmidhī [*q.v.*], *Ṣaḥīḥ* and *Shamāʾil*; al-Suyūṭī [*q.v.*], *al-Djāmiʿ al-ṣaghīr min ḥadīth al-Bashīr al-nadhīr*; (e) *uṣūl*: al-Subkī [*q.v.*], *Djamʿ al-djawāmiʿ*, with the commentaries of al-Maḥallī (Djalāl al-Dīn) [*q.v.*], of al-ʿIrāḳī (Walī al-Dīn) [*q.v.*] and of al-Kūrānī (Muḥ. b. Rasūl) [*q.v.*]; (f) theology: Muḥ. b. Muḥ. b. ʿAbd al-Muʾmin al-Djazāʾirī, *Manẓūma fi ʾl-tawḥīd* (consisting of 79 verses, reproduced in *Nashr azāhir al-bustān*, 17).

In addition, Ibn Zākūr had expounded to him eleven works by his teacher Muḥ. al-Mahdī mentioned

above (cf. ʿAlamī, *al-Anīs al-muṭrib*, 24; Lévi-Provençal, *Chorfa*, 274 and n. 1). He also studied poetry, versification and *adab*, and joined the confraternity founded in Morocco by Abū ʿAbd Allāh Muḥammad b. Nāṣir.

The method of tuition consisted often in listening to an elucidation of the same treatise carried out several times by the same tutor, and on occasion by several tutors. Thus, the *Mukhtaṣar* of Khalīl was explained to him three times by Burdullu and once by Bārāktu; similarly, *Djamʿ al-djawāmiʿ* was explained to him by Māndjallātī and by Bārāktu.

In addition, according to his biographers, he knew by heart the *Talkhīṣ al-Miftāḥ*, the *Djamʿ al-djawāmiʿ*, the *Kāfiyya* and the *Alfiyya* of Ibn Mālik, the *Mukhtaṣar* of Khalīl, the *Maḳāmāt* of al-Ḥarīrī, etc., and had acquired the titles of *adīb*, of *ḳawwāl* (versed in the art of fine speaking) and of *nāẓim* (versifier).

According to these biographers, he was the author of sixteen works: (1) a *riḥla* entitled *Nashr azāhir al-bustān fī man adjāzanī bi 'l-Djazāʾir wa-Tiṭṭawān min fuḍalāʾ al-akābir wa 'l-aʿyān*, Algiers 1319/1902; (2) a *dīwān* entitled *al-Rawḍ al-ʿarīḍ fī badīʿ al-tawshīḥ wa-muntaḳa 'l-ḳarīḍ*; for the autograph MS, now at Rabat, see *RIMA*, v (1959), 189; about fifteen fragments, totalling 350 verses, are contained in his *riḥla* and in ʿAlamī, *al-Anīs al-muṭrib*, *passim*; (3) *al-Muʿrib al-mubīn ʿammā taḍammanah al-Anīs al-muṭrib. wa-Rawḍat al-nisrīn*, MS. in Rabat (cf. Lévi-Provençal, *Mss. ar. de Rabat*, w. 498 (2), 215) and in the library of Abu 'l-Djaʿd (Tādlā) under the title *al-Muṭrib fī akhbār salāṭīn al-Maghrib* (cf. Neigel, in *RMM*, xxiv, 296); (4) *Aʿdjab al-ʿadjab* (alternatively, *Tafrīdj al-kurab*) *fī sharḥ Lāmiyyat al-ʿArab* of al-Shanfarā, of which there are half a dozen MSS (cf. Brockelmann, S I, 54); (5) *al-Nafaḥāt al-aradjiyya wa 'l-nasamāt al-banafsadjiyya fī sharḥ al-Khazradjiyya*), MS. in Rabat, 291, 2 and in Cairo², ii, 245 (cf. Brockelmann, S I, 545); (6) *Miḳbās al-fawāʾid fī sharḥ mā khafiya min al-ḳalāʾid*, a commentary on the *Ḳalāʾid al-ʿiḳyān* by al-Fatḥ Ibn Khāḳān [*q.v.*]; MS in Rabat, al-Djalāwī collection 149.

The rest of his works, which appear to have been lost, comprise: (7) *al-Istishfāʾ min al-alam bi-dhikrā* (alternatively *bi-dhikr*) *āthār ṣāḥib al-ʿalam*, a genealogical work devoted to the descendants of the Moroccan saint ʿAbd al-Salām b. Mashīsh [*q.v.*]; (8) Commentary in three volumes on the *Ḥamāsa* of Abū Tammām, entitled *ʿUnwān al-nafāsa fī sharḥ al-ḥamāsa*; (9) *al-Ṣanīʿ al-badīʿ fī sharḥ al-ḥilliyya dhāt al-badīʿ*, or Commentary on the poem entitled *al-Kāfiyya al-badīʿiyya* by Ṣafī al-Dīn al-Ḥillī [*q.v.*] devoted to the praises of the Prophet; (10) *al-Djūd bi 'l-mawdjūd fī sharḥ al-maḳṣūr wa 'l-mamdūd* of Ibn Mālik [*q.v.*]; (11) *al-Rawḍa al-djamiyya fī ḍabṭ al-sana al-shamsiyya* or *Urdjūza fi 'l-tawḳīt*; (12) *Miʿrādj al-wuṣūl ilā samāwāt al-uṣūl*, or a poetic version of the *Waraḳāt* of the Imām al-Ḥaramayn al-Djuwaynī [*q.v.*]; (13) *al-Ḥusām al-maslūl fī ḳaṣr al-mafʿūl ʿala 'l-fāʿil wa 'l-fāʿil ʿala 'l-mafʿūl*; (14) *Anfaʿ al-wasāʾil fī ablagh al-khuṭab wa-abdaʿ al-rasāʾil*; (15) *al-Durra al-maknūza fī tadhyīl al-urdjūza* (appendix to the *Urdjūza* by Ibn Sīnā on medicine); (16) *al-Ḥulla al-siyarāʾ fī ḥadīth al-barāʾ*.

Ibn Zākūr thus touched upon more than one aspect of Arabo-Islamic culture: grammar, literature, stylistics, metrics, *sīra*, biographical literature, genealogy, *ḥadīth*, *uṣūl*, medicine, astronomy. To judge from those of his writings which have come down to us, he belongs to the school of al-Fatḥ Ibn Khāḳān with regard to his prose, and to that of Abū Tammām for his poetry.

IBN ZAMRAK, Abū ʿAbd Allāh Muḥammad b. Yūsuf b. Muḥammad b. Aḥmad b. Muḥammad b. Yūsuf al-Ṣurayḥī, known as Ibn Zamrak (or Zumruk), Andalusian poet and statesman, born at Granada in 733/1333. Although he was of humble origin, he devoted himself to study and received his education from famous masters, notably al-Sharīf al-Gharnāṭī and Ibn al-Khaṭīb [*qq.v.*]. Thanks to the active patronage of the latter, the young poet obtained a post in the government administration of Granada. In 760/1359, when Muḥammad V was deposed and welcomed at Fez by the Marīnid sultan Abū Sālim, Ibn al-Khaṭīb and Ibn Zamrak followed him into exile. During this period, Ibn Zamrak pursued his studies, took part in the festivals at the court and, on occasion, wrote poetry. When, after various vicissitudes, Muḥammad V returned to Granada (763/1362), he appointed him private secretary (*kātib sirrih*) by a *ẓahīr* which was drawn up by Ibn Khaṭīb himself. During the following years, he often filled the rôle of court poet. In 773/1371-2, Ibn al-Khaṭīb, who until then had assisted the Naṣrid ruler in carrying out the complicated policy of Granada, in particular that concerning Morocco (which was in a state of chaos following the assassination of Abū Sālim in 762/1361), defected and joined the Marīnid sultan ʿAbd al-ʿAzīz at Tlemcen; it was then that Ibn Zamrak succeeded his teacher and patron in the post of chief minister. Ibn al-Khaṭīb, arrested in Fez, had to appear before a court of enquiry in Granada presided over by Ibn Zamrak, where he was accused of heresy, subjected to torture, and finally put to death in prison. At this stage there was no criticism of Ibn Zamrak, who continued to fulfil his duties as chief minister and court poet. But after the death of Muḥammad V (793/1391), his son and successor, Yūsuf II, dismissed Ibn Zamrak and imprisoned him for nearly two years in the citadel of Almeria; restored again to office, the poet-minister was once again dismissed by the next king, Muḥammad VII, being replaced by Muḥammad b. ʿĀṣim. He was re-appointed in 795/1393, but shortly afterwards, at a date not known, was assassinated on the sultan's orders.

The *Dīwān* of Ibn Zamrak has not been preserved, but a considerable number of poems, collected by Ibn al-Khaṭīb and reproduced by al-Maḳḳarī, have survived: they consist of elegies, panegyrics, and congratulations written on the occasion of religious

festivals or of important events at the court. In some of his poems there can be traced the undoubted influence of Ibn Khafādja [*q.v.*], if not obvious plagiarism from him. In the panegyrics, the descriptive themes of the verses in which he celebrates the beauty of Granada and its gardens and palaces are of particular interest; some of these verses are still permanently preserved since they form a part of the decoration of the walls of the Alhambra.

The character of Ibn Zamrak provides the central theme in the novel by the Egyptian writer and teacher Suhayr al-Ḳalamāwī entitled *Thumma gharabat al-shams* (Cairo 1949).

Bibliography: The fundamental study of E. García Gómez, *Ibn Zamrak, el poeta de la Alhambra*, in *Cinco poetas musulmanes*[2], Madrid-Buenos Aires 1944, 169-271, has been used as a basis for this article. To the sources mentioned in it there should be added: Maḳḳarī, *Azhār al-riyāḍ*, Cairo 1359/1940, ii, 7-206; Aḥmad Bābā, *Nayl al-ibtihādj* in the margins of the *Dībādj* of Ibn Farḥūn, Cairo 1351, 282-3; Ibn al-Khaṭīb, *al-Katība al-kāmina*, ed. Iḥsān ʿAbbās, Beirut 1953, 282-8. The *mawlidiyyāt* of Ibn Zamrak have been studied by A. Salmi, in *Hespéris*, xliii (1956), 335-435, *passim*. (F. DE LA GRANJA)

IBN AL-ZARḲALA [see AL-ZARḲALĪ].

IBN ZAYDĀN, ʿABD AL-RAḤMĀN B. MUḤAMMAD B. ʿABD AL-RAḤMĀN B. ʿALĪ B. ʿABD AL-MALIK B. ZAYDĀN B. ISMĀʿĪL (the last named was the famous ʿAlawid sultan who died in 1140/1727), Moroccan official and historian, born in Rabīʿ II 1290/June 1873 in the imperial palace at Meknès. He received a thorough education from the best teachers, first in his native town and then at Fez, in the mosque of al-Ḳarawiyyīn. In 1324/1906, he succeeded his father in the office of *naḳīb* [*q.v.*] of the ʿAlawid *shurafāʾ* for the town of Meknès and its surroundings, including the small mountain district of the Zarhūn. He made the Pilgrimage to Mecca in 1913 and took advantage of the occasion to complete his education by attending the courses of the most distinguished teachers of the great Muslim cities of the Middle East. On his return journey he also visited Tunis, Ḳayrawān and Algiers.

After the establishment of the French protectorate in Morocco, he accepted the post of assistant director of the military college of Dār al-Bayḍāʾ at Meknès (now the Military Academy of independent Morocco). He died on 16 November 1946 and was buried at Meknès in the burial chamber (*ḍarīḥ*) of his great ancestor the sultan Mawlāy Ismāʿīl.

Ibn Zaydān's works, though of great importance, are still not all published. They may be considered as the best source not only for the history of Meknès, but also for that of the ʿAlawid dynasty. Ibn Zaydān thoroughly appreciated the importance of sources and he succeeded in building up a large library (with a catalogue) containing a considerable number of manuscripts and archive documents. In particular his official position enabled him to acquire and to publish some hundreds of *ẓahīrs* [*q.v.*]. All his works are written in a clear language and set out in a very modern manner with plans, reproductions, portraits and, above all, with very complete indexes, which make them valuable and practical reference works. Among those published so far, or about to be published, may be mentioned: (1) *Itḥāf aʿlām al-nās bi-djamāl akhbār ḥāḍirat Miknās*, 5 vols. have appeared of the 8 announced, Rabat 1929-33 (portrait of the author in vol. i); the work consists of several hundred biographies, the most important of which are those of the early sultans of the present dynasty and of their most famous ministers. (2) *al-Durar al-fākhira bi-maʾāthir al-mulūk al-ʿalawiyyīn bi-Fās al-zāhira*, Rabat 1937; contains new facts and documents on the beginnings, at Fez, of the ʿAlawid dynasty. (3) *al-ʿIzz wa 'l-ṣawla fī maʿālim naẓm al-dawla*, 2 vols., Rabat (Royal Press) 1961-2; through the documents here published and annotated, this constitutes an excellent source on the functioning and the life of the sultan's palace and on the mechanism of the Moroccan government. (4) *al-Manāhidj al-sawiyya fī maʾāthir mulūk al-dawla al-ʿalawiyya*, 2 vols., to be published at the Royal Press, Rabat. Among the unpublished works is a *dīwān* of poems written in honour of the birth of the Prophet (*mawlūdiyyāt*).

DEVERDUN)

IBN ZAYDŪN, ABU 'L-WALĪD AḤMAD B. ʿABD ALLĀH B. AḤMAD B. GHĀLIB AL-MAKHZŪMĪ, famous Andalusian poet born at Cordova of an aristocratic family, in 394/1003. His early years coincided with the especially troubled period at the end of the Umayyad caliphate. He probably took part in the events which led to the establishment of the Djahwarid oligarchy in Cordova, since Ibn Khāḳān refers to him as *zaʿīm al-fitna al-ḳurṭubiyya*. Soon after the governor Abu 'l-Ḥazm ibn Djahwar had seized power, he made Ibn Zaydūn his companion, and then his vizier, even conferring on him the title of *dhu 'l-wizāratayn*.

His patron was, however, turned against him by a clique which had formed around another of Ibn Djahwar's ministers, Ibn ʿAbdūs, by an accusation of intrigue and treachery—he was accused of plotting to restore the Umayyads—but in reality because of politics and personal rivalry, and was cast into prison. After attempting in vain to move Ibn Djahwar by his poems, he succeeded in escaping from prison and fleeing from Cordova, returning only after Ibn Djahwar's death. The latter's son, al-Walīd, restored him to his former office, and even made him his ambassador to the other petty kings of Andalusia. He once again suffered from the slanders of his enemies and again left Cordova to enter, after various journeys, the service of the ʿAbbādids of Seville, whose fortunes were at this time in the ascendant. He enjoyed high favour at the court of ʿAbbād b. Muḥammad al-Muʿtaḍid (d. 460/1068), and even more so at that of the latter's son, Muḥammad b. ʿAbbād al-Muʿtamid (d. 488/1095), himself a poet, with whom he held some famous poetic contests. Through his intrigues, Ibn Zaydūn probably helped al-Muʿtamid to conquer Cordova, which then became the capital of the ʿAbbādids, and where he again took up residence for a time. The poet-vizier of al-Muʿtamid, Abū Bakr Ibn ʿAmmār (d. 479/1086), taking a dislike to Ibn Zaydūn, succeeded in getting him sent to Seville, ostensibly so that he might, with his influence in Seville circles, quell a riot. Ibn Zaydūn died during this mission, in 463/1070.

Ibn Zaydūn's romantic and literary life was dominated by his stormy relations with the poetess Wallāda [*q.v.*], the daughter of the Umayyad caliph

al-Mustakfī. This poetess was not without talent but was incurably flirtatious and caused both happiness and unhappiness to Ibn Zaydūn, who wrote on the subject of her favours and her inconstancy the sincerest of all his poetic works. Her deception went even further, since it seems certain that Ibn Zaydūn's enemy, Ibn ʿAbdūs, intrigued against him through jealousy; and then, when Ibn Zaydūn had gone away, Wallāda easily found consolation with his rival.

Ibn Zaydūn's poetry fits admirably the description of "neo-classical", so much so that he was given the name of "the western Buḥturī". Although his *dīwān* contains a number of short occasional poems, it contains many of perfectly classical structure. The genre which he cultivates the most is probably panegyric, dedicated to one or other of his successive masters. The enmity with which he was surrounded inspired him in addition to write virulent satirical poems. Among the most moving poems are some elegies, notably those which lament the death of the mother of Abu 'l-Walīd Ibn Djahwar and the daughter of al-Muʿtaḍid.

But the most personal poems are of course those concerning his affair with Wallāda. Critics have not failed to point out the particularly languishing and plaintive character of his love poetry, as well as of the numerous poems in which he celebrated the enchanted scenes of his love. It is moreover in these poems that he appears most typically western. Some have thought to see in this languor an influence of the Christian milieu; it is more likely that they reflect the influence of the locality, and merely crystallize a general tendency of the poetry of his period.

There should be mentioned the existence in this work of a strophic poetry of *muwashshaḥ* type, as well as a whole series of poetical enigmas in which there appears a symbolism on the names of birds (*muṭayyarāt*).

Although Ibn Zaydūn cannot be denied a certain talent in the expression of emotion, and notably of his passion for Wallāda and for his country, it must be admitted that this talent is not adequate to deal with solemn *ḳaṣīda*s, in which his writing remains stilted and conventional; his panegyrics remain very artificial, in spite, or because, of a somewhat heavy use of contrived styles. The short poems, on the other hand, give an impression of improvisation and real originality.

In addition to his *dīwān*, Ibn Zaydūn wrote a number of epistles, the two most famous of which are the *Risāla hazliyya*, in which he puts into the mouth of Wallāda a satire on his rival Ibn ʿAbdūs (commentary by Ibn Nubāta—d. 768/1366—*Sarḥ al-ʿuyun fī sharḥ Risālat Ibn Zaydūn*), and the *Risāla djiddiyya*, addressed from his prison to Abu 'l-Walīd Ibn Djahwar. The epistles of Ibn Zaydūn continue the tradition begun by al-Djāḥiẓ in his *Tarbīʿ*, and carried on among others by al-Khuwārizmī, al-Tawḥīdī and al-Hamadhānī.

It appears that these *rasāʾil* had more success in the East than his poems, whose originality was questioned there.

Bibliography: The most important biographical notice is Ibn Khāḳān, *Ḳalāʾid* (1283 ed.), 70-83; see also Brockelmann, I, 274, S I, 485. Editions of the *dīwān*: Kāmil Kīlānī and ʿAbd al-Raḥmān Khalīfa (Cairo 1932); Muḥammad Sayyid Kaylānī (Cairo 1956); ʿAlī ʿAbd al-ʿAẓīm (Cairo 1957); Karam Bustānī (Beirut 1963). Studies: see especially A. Cour, *Un poète arabe d'Andalousie*, Constantine 1920 (reviews by H. Massé, in *Hespéris*, 1921, 183-93 and A. Schaade, in *Isl.*, xiii (1923), 180-9), and A. al-Iskandarī, *Ibn Zaydūn* (in Arabic), in *MMIA*, xi (1931), 513-22, 577-92, 656-69. (G. Lecomte)

IBN ZAYLĀ, Abū Manṣūr al-Ḥusayn b. Muḥammad b. ʿUmar b. Zaylā (according to Brockelmann, I, 458, and b. Ṭāhir b. Zaylā al-Iṣfahānī in S I, 829), died, while still young, in 440/1048. A pupil of Ibn Sīnā and a member of his immediate circle, he wrote a commentary on the Story of Ḥayy b. Yaḳẓān [*q.v.*], which Mehren used (MS BM Or. 978(3)) and the greater part of which he translated to accompany his edition of this brief work (*Traités mystiques*, fasc. i, 1889). Mehren mentions also a Hebrew translation of this commentary published by D. Kaufmann, Berlin 1886. Ibn Zaylā is quoted also by H. Corbin in *Avicenne et le Récit visionnaire*, ii, 148 and 150-4, and often quoted and discussed by A. M. Goichon in *Le Récit de Ḥayy ibn Yaqẓān commenté par des textes d'Avicenne* (see index). Ibn Abī Uṣaybiʿa (ii, 19) lists among the works of Ibn Sīnā a *Kitāb Taʿālīḳ*, a Book of glosses, or of notes which his pupil Abū Manṣūr b. Zaylā had written down according to his instructions. It was to his questions and to those of Bahmanyār that Ibn Sīnā replied in his *Mubāḥathāt* (Brockelmann, S I, 817). A mathematician and an excellent musician, Ibn Zaylā wrote *al-Kitāb al-kāfī fi 'l-mūsīḳī* ("What should be known about music"), published in Cairo in 1964 by Zakariyyāʾ Yūsuf, with an introduction giving also (p. 2) references to the other authors who have mentioned Ibn Zaylā: al-Bayhaḳī, *Taʾrīkh ḥukamāʾ al-Islām*, no. 50, 99-100; Ḥādjdjī Khalīfa, i, 862; al-Ziriklī, *Aʿlām*, ii, 278; ʿU. Kaḥḥāla, *Muʿdjam al-muʾallifīn*, iv, 13; Ḳadrī Tūḳān, *Turāth al-ʿArab al-ʿilmī*, 3rd. ed., 400; H. G. Farmer, *A history of Arabian music*, 220. In addition to his better known works, Ibn Zaylā wrote also an abridged version of the sections on the natural sciences in the *Shifāʾ* of Ibn Sīnā, a book on the soul, and various letters.

Bibliography: In the article.

(A.-M. Goichon)

IBN AL-ZAYYĀT, Muḥammad b. ʿAbd al-Malik, vizier of the ʿAbbāsid period. Belonging to a family of merchants who held official positions at the court, Ibn al-Zayyāt attracted attention for his qualities as a secretary and a man of letters, was appointed vizier by the caliph al-Muʿtaṣim in about 221/833, and, with the chief *ḳāḍī* Ibn Abī Duʾād, contributed to the direction of the general policy of the empire.

Remaining vizier during the caliphate of al-Wāthiḳ (227-32/842-7), he encouraged the caliph to impose heavy fines on several secretaries, in particular on the assistants of two Turkish leaders who were taking over important governorships in the provinces, and he acquired an unpleasant notoriety by inflicting on the culprits a particularly cruel torture, that of the *tannūr*, an iron cylinder with spikes inside it. He quarrelled with the chief *ḳāḍī* Ibn Abī Duʾād, apparently merely for reasons of personal rivalry, and it is not known what part he played in the prosecution of the *miḥna*.

Although the caliph al-Mutawakkil retained him in his service when he came to power, this was only temporary: some weeks later, in Ṣafar 233/September-October 847, he dismissed him and inflicted on him the torture which he himself had invented. Ibn al-Zayyāt died soon afterwards. During his vizierate he had tried in vain to restrain the influence of the Turkish leaders, and left behind mainly a reputation for harshness and cruelty.

(D. SOURDEL)

IBN AL-ZAYYĀT, ABŪ YAʿḲŪB YŪSUF B. YAḤYĀ B. ʿĪSĀ B. ʿABD AL-RAḤMĀN, Moroccan man of letters and jurist, known and esteemed as a hagiographer. A native of Tadla (Tādilā), he spent most of his life at Marrākush and in the region surrounding it. He was one of the companions of the famous Moroccan saint Abu 'l-ʿAbbās al-Sabtī (524-601/1130-1204). He died in 628 or 629/1230-1 when he was *ḳāḍī* of the Regrāga. His body is said to have been transported to Marrākush and buried in the *ḳubba* of Sīdī Muḥammad al-Farrān and Sīdī Muḥammad al-Barbūshī, outside the ramparts of the town, near to the gate known as Bāb al-Khamīs.

Ibn al-Zayyāt al-Tādilī was himself as devout as the saintly personages whose *fioretti* he collected in the famous hagiographical collection *al-Tashawwuf ilā ridjāl al-taṣawwuf* (ed. A. Faure, Rabat 1958). Completed in 617/1221, this valuable compilation of lives of saints is, together with *al-Minhādj al-wāḍiḥ fī taḥḳīḳ karāmāt Abī Muḥammad Ṣāliḥ*, of Aḥmad Ibrāhīm al-Mādjirī, the *Maḳṣad* of ʿAbd al-Ḥaḳḳ al-Bādisī and the *Uns al-faḳīr* of Ibn Ḳunfudh al-Ḳusanṭīnī, the earliest source on the religious history of Morocco. The *Tashawwuf* is devoted to the saints (*ṣāliḥūn*) who lived or stayed in Marrākush or in southern Morocco between the 5th/11th and the beginning of the 7th/13th centuries. Ibn al-Zayyāt is thought to have written a second such collection covering all the holy men of the country, but of this no trace has been found. There do, however, exist copies of the very interesting notice he wrote on the great Moroccan saint Abu 'l-ʿAbbās al-Sabtī. This text is found fairly frequently appended to manuscripts of the *Tashawwuf*. The *ḳāḍī* ʿAbbās b. Ibrāhīm al-Marrākushī transcribed it in the second volume of his *Iʿlām bi-man ḥalla Marrākush wa-Aghmāt min al-aʿlām*, Fez 1936, 240-65 (see A. Faure, *Abū-l-ʿAbbās al-Sabtī, la justice et la charité*, in *Hespéris*, xliii (1956), 448-56).

In the field of literature there has been attributed to Ibn al-Zayyāt a commentary on the *Maḳāmāt* of al-Ḥarīrī, which also is lost.

Bibliography: For the bibliography of Ibn al-Zayyāt, see Aḥmad Bābā, *Nayl al-ibtihādj bi-taṭrīz al-Dībādj*, Fez 1900, 386; Ibn al-Muwaḳḳit, *al-Saʿāda al-abadiyya fī 'l-taʿrīf bi-mashāhīr al-ḥaḍra al-marrākushiyya*, Fez 1918, i, 147; E. Lévi-Provençal, *Chorfa*, 220. On the early sources for the religious history of Morocco, see ʿAbd al-Hakḳ al-Bādisī, *al-Maḳsad* (Lives of the saints of the Rif), annotated Fr. tr. by G. S. Colin in *AM*, xxvi (1926), 1 ff. On the documentary value of the *Tashawwuf*, see *Hespéris*, xli (1954), 482; A. Faure, *Le Tashawwuf et l'école ascétique marocaine des XIe-XIIe-XIIIe siècles de l'ère chrétienne*, in *Mélanges Louis Massignon*, Damascus 1957, ii, 119-31.

(A. FAURE)

IBN AL-ZIBAʿRĀ, ʿABD ALLĀH B. AL-ZIBAʿRĀ B. ḲAYS B. ʿADĪ B. SAʿD B. SAHM, noted poet of the Ḳuraysh, famous for the terseness of his style (Ibn Rashīḳ, *ʿUmda*, i, 124, 19), who satirized in his *hidjā'* [*q.v.*] the Prophet and his followers. Among his poems preserved by Ibn Isḥāḳ there is one (Ibn Hishām, 417 f., who justly doubts its authenticity) which refers to the first raid after the *hidjra*. After Badr, where he killed ʿAbd Allāh b. Salama al-ʿAdjlānī (Wāḳidī [Wellhausen], 139), he lamented the death of the Meccan leaders (Ibn Hishām, 521 f., who says that others ascribe these verses to Aʿshā bani Tamīm). Soon after this battle Ibn al-Zibaʿrā was sent along with ʿAmr b. al-ʿĀṣ [*q.v.*], Hubayra b. Abī Wahb and Abū ʿAzza, who also had satirized the Prophet, to the Banū ʿAbd Manāt and other confederates to ask them for assistance against him (Wāḳidī, 101). He glorified the victory of the Meccans at Uḥud in poems, two of which are given together with the rejoinders of Ḥassān b. Thābit by Ibn Isḥāḳ (Ibn Hishām, 616 f. and 619 f., cf. also 636). Another poem (given by Ibn Hishām, 703-5, together with the rejoinders of Ḥassān b. Thābit and Kaʿb b. Mālik) refers to the campaign of the "trench" (*al-khandaḳ*). When the Prophet had signed at Ḥudaybiya the treaty with the Meccans, ʿUthmān b. Ṭalḥa, the doorkeeper of the Kaʿba, ʿAmr b. al-ʿĀṣ, and Khālid b. al-Walīd went to him and embraced Islam. ʿUthmān was, like ʿAmr b. al-ʿĀṣ, a clansman of Ibn al-Zibaʿrā, who blamed him in a poem (Ibn Hishām, 718). To the period between Ḥudaybiya and the fall of Mecca belong some verses against the Meccan Mawhab b. Rabāḥ, who had attacked Suhayl b. ʿAmr in connexion with the case of Abū Baṣīr (see Ibn Hishām, 751 f., and Wāḳidī, 261 f.). When the Prophet, after he had conquered Mecca, ordered the execution of some persons who had harmed him by their poems and songs (Ibn Hishām, 819), Ibn al-Zibaʿrā fled with Hubayra b. Abī Wahb to Nadjrān, and returned only after Ḥassān b. Thābit had assured him of the Prophet's clemency. The authenticity of the poem which he addressed to Muḥammad on this occasion is (according to Ibn Hishām, 828) uncertain. Other verses ascribed to him cannot be dated; *e.g.*, the verses in which he praises Khalaf b. Wahb al-Djumaḥī (*Aghānī*[3], vii, 114), an ancestor of Abū Dahbal [*q.v.*]. Then we are told that he wrote on the hangings of the Kaʿba some verses derogatory to the Ḳuraysh; the Banū Sahm were forced to hand him over to the Ḳuraysh, who punished him and set him free only after he had composed an oft-quoted poem in honour of Ḳuṣayy (ʿAynī, *Shawāhid*, iv, 140; Ibn Hishām, ii, 25, etc.); but some verses of this poem occur also in a poem of Maṭrūd b. Kaʿb (al-Sharīf al-Murtaḍā, *Amālī*, iv, 179; cf. also Yaʿḳūbī, i, 282). He criticized the Ḳuraysh on another occasion (Djumaḥī, 57; *Aghānī*[3], iv, 140; Suhaylī, *Rawḍ*, i, 94) probably because they were unwilling to risk their profits by fighting against Muḥammad. Sometimes verses of other poets are ascribed to him, *e.g.*, Kaʿb b. Mālik (Yāḳūt, iv, 169; cf. Ibn Hishām, 705 and *Aghānī*[1], xv, 29, 21); and Umayya b. Abi 'l-Ṣalt (no. xi, Schulthess). On the other hand, verses of Ibn al-Zibaʿrā were ascribed to other poets, *e.g.*, his poem in praise of the Banū Khālida bint Arkam (see al-Mubarrad, *Mā 'ttafaḳa lafẓuh*, ed. A. Memon, Cairo 1350, 27, with the editor's footnote). Other verses (*Aghānī*[3], i, 62; 64) show that he enjoyed the patronage of Abū Rabīʿa, the grandfather, and ʿAbd Allāh, the father of the poet ʿUmar b. ʿAbd Allāh b. Abī Rabīʿa. He also praised the Banū al-Mughīra b. ʿAbd Allāh b. ʿUmar b. Makhzūm, the strongest family within the powerful Banū Makhzūm (al-Djāḥiẓ, *Bayān*, i, 46, 20); for his connexion with this family, see also Ibn Ḥadjar, *Iṣāba*, i, 149, s.v. Busr b. Sufyān). In the other poems which refer to the fights between the Meccans and the Muslims, our poet never hints at religious or ideological differences, but considers these fights only as the outcome of troubles between clans of the same tribe. He is proud of his own clan and extols its virtues. The new religion did not change his attitude; for the last information about him is that he and Ḍirār b. al-Khaṭṭāb al-Fihrī visited in

the reign of ʿUmar their old rival Ḥassān b. Thābit and irritated him by reciting the poems they had composed in olden days against him, but had then to listen to the latter's recital of his rejoinders (*Aghānī*[3], iv, 140; Djumaḥī, 60). It was just this clannishness which gave his verses an actuality even long after his death. His poems against the Banū Hāshim were still popular with the Umayyads, and Yazīd b. Muʿāwiya recited one of these poems when he was told that Medina had been taken by his troops (Dīnawarī [Guirgass], 277; Ibn ʿAbd Rabbih, *ʿIḳd*, 1316, ii, 233, with additional verses in which the caliph addresses himself). Even in the days of al-Muʿtaḍid (reigned 279/892-289/902) this story was mentioned in an edict amongst the sins of Yazīd (Ṭabarī, iii, 2174).

IBN AL-ZUBAYR, Abū Djaʿfar Aḥmad b. Ibrāhīm b. al-Zubayr b. Muḥammad al-Thaḳafī al-ʿĀṣimī, Andalusian traditionist, reader of the Ḳurʾān, man of letters and historian, born at Jaén (Djayyān) in Dhu 'l-Ḳaʿda 627/September-October 1230, d. Granada on 8 Rabīʿ I 708/26 August 1308. He seems to have been particularly interested in Ḳurʾānic 'readings', but his biographers speak very highly of his knowledge of the Arabic language and describe him as "the *muḥaddith* of al-Andalus and of the Maghrib". His propensity for redressing wrongs got him into trouble in his native town, then at Malaga, whither he had had to flee; his action against a sorcerer called Ibrāhīm al-Fazārī, who had a strong influence over the local authorities, obliged him to leave the town and go to Granada where he is said to have succeeded in having condemned to death the magician, who had been given a mission to carry out by the ruler of Malaga. He was at first received with honour by the *amīr* of Granada, but later had some disagreements with him. Then his situation improved and he was probably able to devote himself freely to his teaching activities, while holding the offices of *khaṭīb* and of *imām* at the Great Mosque, and of *ḳāḍī* in charge of marriages. He ended his days in Granada, respected by all the inhabitants. He left a number of works whose titles are mentioned by his biographers: *Milāk al-taʾwīl fi 'l-mutashābih al-lafẓ fi 'l-Tanzīl*, *al-Burhān fī tartīb suwar al-Ḳurʾān*, *al-Iʿlām bi-man khutima bi-h al-ḳuṭr al-andalusī min al-aʿlām*, *K. al-Zamān wa 'l-makān*, *Radd al-djāhil min iʿtisāf al-madjāhil*, a *Muʿdjam*, a *taʿlīḳ* on the *Kitāb* of Sībawayh and finally, the only one which has in part survived, the *Ṣilat al-Ṣila*, a continuation of the *Takmila* of Ibn Bashkuwāl [*q.v.*], the last part of which was published by E. Lévi-Provençal, at Rabat in 1937; this work contains Andalusian biographies of the 6th and 7th/12th and 13th centuries.

Bibliography: Introd. to the ed. by Lévi-Provençal; Ibn al-Khaṭīb, *Iḥāṭa*, i, 72; Ibn Farḥūn, *Dībādj*, Fez ed., 57; Ibn al-Ḳāḍī, *Durrat al-Ḥidjāl*, ed. Allouche, Rabat 1934-6, no. 8; Dhahabī, *Ḥuffāẓ*, iv, 275; Ibn Ḥadjar, *Durar*, i, 84-8, no. 232; Suyūṭī, *Bughya*, 126-7; Ḥādjdjī Khalīfa, i, 363, ii, 115, v, 626; Dozy, *De Abbadidis*, ii, 166; Pons Boigues, *Ensayo*, no. 268; Brockelmann, S II, 376-7; *DM*, iii, 132.

(Ch. Pellat)

IBN AL-ZUBAYR, Abū ʿAbd Allāh al-Zubayr b. Bakkār ... b. al-Zubayr b. al ʿAwwām, genealogist. He was born in Medina in 172/788. Falling foul of the ʿAlid faction he went to Baghdād, where he is known to have been in 235/850. In 242/856 he was appointed *ḳāḍī* of Mecca and died there in 256/870. Over 30 titles of works by him are quoted but of them only two are extant: *al-Muwaffaḳiyyāt*, a collection of anecdotes compiled for Muwaffaḳ, son of the Caliph Mutawakkil, and the celebrated [*Djamharat*] *Nasab Ḳuraysh wa-akhbārhā*. In spite of its fame the second half only of *Nasab Ḳuraysh* has survived (ed. Maḥmūd M. Shākir, Cairo 1381/1961).

Bibliography: Brockelmann, I, 141, S I, 215; Sezgin, i, 317; Yāḳūt, *Irshād*, iv, 218-20; Dhahabī, *Ṭabaḳāt al-ḥuffāẓ*, *ṭabaḳa* 8, no. 124; there is a very full introduction to Shākir's edition.

(J. F. P. Hopkins)

IBN AL-ZUBAYR [see ʿAbd Allāh b. al-Zubayr; Muṣʿab b. al-Zubayr].

IBN ZUHR, patronymic of a family of scholars who came originally from Arabia (Iyād) and settled, at the beginning of the 4th/10th century, at Djafu Shāṭiba (Játiva) in the east of Spain. Ibn Khallikān says of the members of this family that they were "all *ʿulamāʾ*, *ruʾasāʾ*, *ḥukamāʾ* and viziers who reached high ranks in the entourages of princes".

I. Zuhr al-Iyādī was the father of Marwān, who was the father of Abū Bakr Muḥammad, who was famous as a jurisconsult; he died at Talabīra (Talavera) in 422/1030-1.

II. Abū Marwān ʿAbd al-Malik b. Muḥammad b. Marwān b. Zuhr al-Iyādī came from Seville. He was well versed in the Ḳurʾānic sciences and in *fiḳh*, following in this the example of his father. His own interests were in the study of the different types of sciences. He left for the East with the intention of performing the Pilgrimage, went to Ḳayrawān, and then to Cairo, where he spent a long time studying medicine. Ibn Khallikān relates a slightly different itinerary, stating that he went first as far as Baghdād and stopped on the way back in Egypt and at Ḳayrawān. Ibn al-Abbār says that he became a famous and excellent physician. Returning to Spain, he settled at Dāniya (Denia), where he was welcomed by Mudjāhid [*q.v.*], who was reigning there at that time. His fame spread to all the provinces in the peninsula. Ibn Abī Uṣaybiʿa relates that he held unorthodox opinions (*ārāʾ shādhdha*) in medicine, for instance he forbade hot baths (*ḥammām*) because they had a poisonous action (*yaʿfin al-adjsām*) and because they interfered with the composition of the humours. He died at Denia, according to Ibn al-Abbār and Ibn Khallikān, at Seville, according to Ibn Abī Uṣaybiʿa, in about 470/1078 as Ibn al-Abbār surmises.

III. Abu 'l-ʿAlāʾ Zuhr b. ʿAbd al-Malik b. Muḥammad, son of the above; generally known by the mediaeval western scholars by his *kunya* only: Aboali, Abuleli, Ebilule, or followed by Zuhr: Abulelizor, Albuleizor.

(1) Life. Born in Seville, he went to Cordova where he met Abū ʿAlī al-Ghassānī, who taught in the Great Mosque and who advised him to study the science of *ḥadīth* with Abū Bakr ibn Mufawwaz and Abū Djaʿfar ibn ʿAbd al-ʿAzīz. He "heard" (*samiʿa*) from Abū Muḥammad ʿAbd Allāh b. Ayyūb the reading of that category of *ḥadīths* which have been transmitted by the guarantors in a chain and with "a

touching of hands" (*al-ḥadīth al-musalsal fi 'l-akhdh bi 'l-yad*). This means that he received in the subject the most thorough education. Many scholars, before taking up one of the natural sciences or philosophy, began with a serious study of the religious sciences. Abu 'l-ʿAlāʾ was also distinguished in belles lettres (*adab*). He was in correspondence with al-Ḥarīrī, the author of the *Maḳāmāt*. But he had a predilection for medicine. While still quite young, during the reign of al-Muʿtaḍid, the ʿAbbādid ruler of Seville (433-60/1042-68), he had studied this art which he learned from his father. He became famous in it and "eclipsed all who had preceded him with the breadth of his knowledge of it and with the wisdom he showed in making use of it, so much so that the people of the Maghrib made him and his family, in this matter, a subject of boasting" (Ibn al-Abbār). Al-Muʿtamid Ibn ʿAbbād gave his patronage to Abu 'l-ʿAlāʾ, who was always grateful to him for this, although he supported the Almoravid Yūsuf b. Tāshfīn (who became master of the country in 484/1091). It is not clear whether he was Yūsuf's vizier. Wüstenfeld says so (*Geschichte*, 89-90), but the biographers are silent on this precise point. They mention only that he took part in the administration of public affairs at an exceptionally high level. The manuscript of the *Tadhkira* gives him this title of *wazīr* (so that the western writers called him Alguazir Albuleizor). Abu 'l-ʿAlāʾ died at Cordova in 525/1130, from a *naghla*, "a senile wart turned malignant" (G. Colin. Ibn Abī Uṣaybiʿa tells us that this is the name given in Spain to a *dubayla*, which, according to Dozy, is "an ulcer, the pus of which is ichorous in whatever part of the body it appears", and which G. Colin, who distinguishes it from a *naghla*, identifies with a gastric ulcer, while H. Jahier (in his translation of Ibn Abī Uṣaybiʿa, Algiers 1958), translates as "phlegmon gangréneux" without questioning the assimilation of the two terms). Abu 'l-ʿAlāʾ was buried in Seville.

(2) Works. Ibn Abī Uṣaybiʿa mentions 9 works by him. Two are devoted to medical observations (*mudjarrabāt*). The others are: "The book of the properties of drugs" (*K. al-Khawāṣṣ*); "The book of simple medicaments" (*K. al-Adwiya al-mufrada*); the "Explanation through witnesses of the libel" (*K. al-Īḍāḥ bi-shawāhid al-iftiḍāḥ*) against Ibn Riḍwān (d. 460/1068) and his refutation of the "Book of introduction to medicine" of Ḥunayn b. Isḥāḳ; the "Solution of the doubts of al-Rāzī concerning the books of Galen" (*K. Ḥall shukūk al-Rāzī ʿalā kutub Djālīnūs*); a "Treatise refuting Avicenna" on some passages in his "Book of simple medicaments" (*Maḳāla fi 'l-radd ʿalā Abī ʿAlī Ibn Sīnā* ...); an expansion of the *Risāla* of Yaʿḳūb b. Isḥāḳ al-Kindī on the composition of medicaments (*Maḳāla fī basṭihi li-risālat... al-Kindī fī tarkīb al-adwiya*). And finally the following title: "The book of delicate medical questions" (*K. al-Nukaṭ al-ṭibbiyya*), which G. Colin considers to indicate the work which he has edited under the title of *Tadhkira* (taken from the *explicit* of the Paris MS: *kamalat al-Tadhkira*); it is a brief treatise, written for his son, in which each *nukta* is introduced by *tadhakkar* ("remember").

(3) As a physician. Abu 'l-ʿAlāʾ owed his fame to his skill as a practising physician. He diagnosed without questioning his patients, but merely by examining the urine and taking the pulse. Ibn Abī Uṣaybiʿa, who relates this, probably did so in order to emphasize his great experience and perspicacity. In fact, if this report is true, it should be pointed out that Abu 'l-ʿAlāʾ was wrong to abandon a method which had become part of Arab medical practice and which consisted of finding out about the patient's forbears and ancestry and about the conditions under which he lived. Be that as it may, it is reported that he used for his treatment some "extraordinary" medicines (*nawādir*), which may be taken to mean either that they were rare or that they were wonderfully efficacious. He had a wide knowledge of the classical writers. It was during his lifetime that the Canon of Avicenna was introduced in the West. A merchant coming from ʿIrāḳ offered him a copy; but Abu 'l-ʿAlāʾ, having read it, found fault with it and put it aside to use the margins for writing out his prescriptions. G. Colin rightly points out that though he may not have agreed with Avicenna on every point yet he did not consider him entirely worthless, since he took the trouble to refute his book on simple medicaments.

In the *Tadhkira* the practitioner's ideal is seen more clearly. Unlike the physicians of his time, whom he accuses of using medicine with insufficient precautions, he counsels prudence (*ḥazm*) in treatment. In the field of medicine based on the humours and on therapeutics based on the qualities of the remedies (cold, hot, dry and wet) and on their degrees, he shows the error of attempting to restore the equilibrium of the temperament by administering the remedy in too great a dose and thus setting off a reaction in the opposite direction. The corrective strength of the medication must be in proportion to the pathogenic tendency (*bi-ḳadr dhalik al-mayl*). "How often have doctors helped on the causes of death!", he exclaims. From this arises his basic principle in treating a patient: it is necessary, so to speak, to try on the patient the simple or composite remedy, using it at first "at the beginning of the lowest degree" (*fī awwal al-daradjat al-ūlā*). Then, according to the results obtained, the physician will gradually increase its strength. It is wrong to hurry, even if one is certain of not making a mistake. As for the medicaments themselves, care should be taken to mix them with substances which are capable on the one hand of conveying them to the diseased organs, and on the other hand of correcting any harmful side-effects which they may have. These practical recommendations based the progress of the medical art on the precise observation of the effects of a treatment prudently administered, and thus experimental, which is in itself already a positive method.

IV. Abū Marwān ʿAbd al-Malik b. Abi 'l-ʿAlāʾ Zuhr, son of the above, usually referred to under the name of Abū Marwān Ibn Zuhr (the Abhomeron Avenzoar of the mediaeval West). He was born in Seville. His biographers do not give his date of birth but, from various indications, G. Colin places it in about 484-7/1092-5. He died at Seville in 557/1161.

(1) Life. He was taught medicine by his father and excelled in it an early age. He had received also a solid literary and juridical education. He does not seem to have travelled to the East, but he cerainly went to North Africa. He was in the service of the Almoravid dynasty and received wealth and favours from these rulers. It was for one of them, Ibrāhīm b. Yūsuf b. Tāshfīn, that he wrote the *Kitāb al-Iḳtiṣād* (Ibn al-Abbār gives it as *K. al-Iḳtiḍāʾ*, a title which G. Colin corrected), completed in 515/1121. In 535/1140, he was in prison at Marrākush, the town being in the power of Ibrāhīm's brother, ʿAlī b. Yūsuf b. Tāshfīn (cf. Ibn al-Abbār, no. 1717). The reason for this disgrace is not known, but Abū Marwān, in his *Taysīr*, refers to this ruler as "the

wretched ʿAlī", and in his "Book of foods" he mentions "the time of suffering which I was forced to endure by the *amīr*". During the Almohad period, ʿAbd al-Muʾmin took him into his personal service and "had confidence in him in medical matters" (Ibn Abī Uṣaybiʿa). He was appointed vizier. Ibn Rus͟hd [*q.v.*] became his friend (but was not his pupil) and it seems that they studied some subjects together and collaborated to a certain extent. Abū Marwān died from the same disease as his father. An anecdote (given by Ibn Abī Uṣaybiʿa) relates that when Abū Marwān predicted to a colleague named al-Fār that he would die of convulsions (*s͟hanād͟j*) because he ate too many figs, the other replied that he would die of a *nag͟hla* because he did not eat enough of them. Both prognostications proved correct.

(2) Works. According to Ibn Abī Uṣaybiʿa, Abū Marwān wrote six works: the *Taysīr fi 'l-mudāwāt wa 'l-tadbīr* ("Practical manual of treatments and diets"), followed by a formulary, the *D͟jāmiʿ*; *K. al-Ag͟hd͟hiya* ("Book of foods"); *K. al Zīna* ("Book of embellishment", written for his son Abū Bakr, on purgatives); *Maḳāla fi ʿilal al-kulā* ("Treatise on diseases of the kidneys"); *Risāla fī ʿillatay al-baraṣ wa 'l-bahaḳ* (letter to a doctor in Seville on white leprosy, or vitiligo, and pityriasis); *Tad͟hkira*, for his son Abū Bakr (G. Colin thinks that Ibn Abī Uṣaybiʿa must have attributed this work to Abū Marwān in error, when it was really by Abu 'l-ʿAlāʾ). To this list should be added the *K. al-Iḳtiṣād fi iṣlāḥ al-anfus wa 'l-ad͟jsād* mentioned by Ibn al-Abbār. Of these six works there have survived the *K. al-Iḳtiṣād*, which dates from 515/1121; the *Taysīr*, written between 1121 and 1162; and the "Book of foods" (between 1130 and 1162).

The first is an "abridged summary" (*d͟jumla mukh͟taṣara*) which combines "the methods of therapeutics (*ṭibb*) and of prophylaxis (*rutba*)". It was intended to be read in public before the ruler, and was therefore divided into equal sections of medium length (*iḳtiṣād* is the term for this type of division), in the same way as the Ḳurʾān is divided for the same purpose; since the Ḳurʾān has thirty of these sections, Abū Marwān's work was intended to consist of the same number, but only half of them (15) have survived. It begins with a general introduction, in which the author distinguishes between *ṭibb* and *rutba* and then between the medicine of the body and the medicine of the soul. There follows the enumeration of the three souls: the rational, in the brain; the animal, in the heart; the natural, in the liver. The two last are normally subordinated to the first. Then Avenzoar reviews the treatments of the different organs, beginning with the tongue, since it is thanks to it that man is able to praise God. The description of the diseases takes second place to the details of therapeutic measures.

The *Taysīr* begins, after an introduction which includes some "recettes cabalistiques" (G. Colin), with a descriptive study of ailments and their treatment. It follows approximately an order which had become traditional, starting with the head and ending with the feet. But the plan is very flexible. Following his father, Abū Marwān stresses the value of experiment. His observations lead him to some original views: a description of mediastinal tumours (*al-awrām allatī taḥdut͟hu fi 'l-g͟his͟hāʾ allad͟hī yaḳsim al-ṣadr ṭūlan*, book i, 16, ch. VI); of pericardial abscesses (*awrām g͟his͟hāʾ al-ḳalb*, book i, 12, ch. VII), which he was the first to describe. Also interesting are the chapters on intestinal erosions (*saḥd͟j*), paralysis of the pharynx, and inflammation of the middle ear. He was one of the first to recommend tracheotomy, and artificial feeding via the oesophagus or the rectum. He points out the harm caused by marsh vapours. His study of scabies should also be mentioned. He described the agent of this disease (*sarcoptes scabiei*), and he was among the first, though not actually the first, to do so: as has been pointed out by G. Sarton, he was preceded in this by Aḥmad al-Ṭabarī (second half of the 4th/10th century); cf. the German translation of some passages from the *K. al-Muʿālad͟ja al-buḳraṭiyya* of al-Ṭabarī, by Muḥammad Rihāb, in *Archiv für Geschichte des Medizin*, xix (1927), 134 and *Isis*, x, 119.

The *K. al-Ag͟hd͟hiya* deals with the various diets, with condiments, culinary preparations, and drinks. It also covers medicaments (and it is here that we find what G. Colin refers to as cabalistic medicine), as well as rules of hygiene (cf. Renaud, in *Hespéris*, xii).

(3) As a physician. Ibn Abī Uṣaybiʿa relates several anecdotes intended to illustrate Abū Marwān's skill and perspicacity. He succeeded in administering a purgative to ʿAbd al-Muʾmin, who was averse to this treatment, by making him eat some grapes picked from a vine which the skilful doctor had watered with water mixed with purgative drugs. On another occasion, he cured a man who had an enormous belly and had intestinal trouble by pointing out that he drank water from a ewer of doubtful cleanliness: he broke the ewer and there was seen to emerge from it a frog which had slid in and grown fat there and was the cause of the illness. Ibn Rus͟hd wrote in his *Colliget* that for anyone wishing to study the treatises on therapeutics (*kanānis͟h*), the best of all is the *Taysīr*, which he had asked his friend to compile and which he had transcribed. While praising the *Taysīr* only for its practical application, Ibn Rus͟hd underlines, perhaps unwittingly but nevertheless very clearly, the type of medicine practised by Avenzoar, which was less a general science (on this point Avenzoar is not original and reproduces the system of Galen) than a very practical art of healing. Finally it should be mentioned that Abū Marwān, as an article of faith and perhaps also through conviction, seems to adhere to the As͟hʿarī doctrine that secondary causes are not necessary. A good medicine cures if God wills it. He himself, stricken by the malady from which he was to die and urged by his son to try new remedies, declared: "If God wished to change this my bodily frame, He will not give me power to use remedies other than those which will carry out His decree and His will".

V. Abū Bakr Muḥammad b. ʿAbd al-Malik b. Zuhr al-Ḥafīd ("the grandson"), son of the above; born Seville in 504/1110-11 (or 507), d. 595/1198-9 He learned the Ḳurʾān by heart, and studied traditions and Arabic language and literature. He had read with ʿAbd al-Malik al-Bād͟jī the *Mudawwana* of Ṣaḥnūn on the doctrine of Mālik and the *Musnad* of Ibn Abī S͟hayba. He was outstanding in everything. He received his medical education from his father and he in his turn distinguished himself in the practice of this art. He was also a poet, famous for his *muwas͟hs͟haḥāt*. He practised archery and played chess. Ibn Abī Uṣaybiʿa describes him as a man of physical, moral and intellectual accomplishments. He enjoyed the confidence of the caliph Yaʿḳūb al-Manṣūr who summoned him to Africa as his personal physician. When this ruler decided to have all books of logic and philosophy destroyed, he put Abū Bakr in charge of this operation, allowing him as an

exception to retain the works which were his own personal property. Abū Bakr carried this out faithfully. But Ibn Abī Uṣaybiʿa, who relates the matter, probably wishing to illustrate the spirit in which the great physician performed this, gives immediately afterwards an anecdote which may be summarized thus: Abū Bakr had discovered two of his students in the possession of a book of logic; he was angry and confiscated the book. But later, when he had completed the medical education of the two students, he directed them to study carefully the religious sciences, and it was only after this that he returned to them their book of logic, with the remark: "Now you are equipped to read this book and others like it".

The vizier Abū Zayd ʿAbd al-Raḥmān b. Yūdjān, a jealous and spiteful man, had him poisoned. He was mourned by the caliph.

Abū Bakr had been above all a practising physician. He did however write a treatise on ophthalmology. Ibn Abī Uṣaybiʿa and Ibn Khallikān have preserved a number of his poems, for which he had been as famous as for his medical skill.

VI. Abū Muḥammad ʿAbd Allāh b. al-Ḥafīd, son of the above, born at Seville in 577/1181-2, and died of poison at Salé in 602/1205-6, at the age of twenty-five. His body was later taken to Seville and buried beside his ancestors at the Gate of Victory. He had learned medicine from his father and he too had been initiated into the secrets of medical practice. Also with his father, he had studied the *Kitāb al-Nabāt* of Abū Ḥanifa al-Dīnawarī. He was attached to the service of the caliph al-Nāṣir b. al-Manṣūr. On his death, he left two sons, who both lived at Seville. The younger, Abu 'l-ʿAlāʾ Muḥammad, studied the works of Galen.

IBN ZŪLĀḲ (or zawlāḳ), Abū Muḥammad al-Ḥasan b. Ibrāhīm . . . al-Laythī, born 306/919, died 386/996, Egyptian historian, the author of a number of biographical, historical and topographical works on Egypt in the time of the Ikhshīdids and early Fāṭimids. These works, though almost entirely lost, underlie a good deal of subsequent historiography relating to this period. He is said to have written continuations to the works of al-Kindī [*q.v.*] on the governors and judges of Egypt, a book on the Mādharāʾī [*q.v.*] family of officials, and others on the reigns of the Ikhshīd, Kāfūr, al-Muʿizz and, according to some, al-ʿAzīz. A biography of Djawhar, mentioned in an Ismāʿīlī bibliography, is probably, as Ivanow suggests, an extract from the book on al-Muʿizz. These works are quoted extensively by Maḳrīzī, both in the *Khiṭaṭ* and the *Ittiʿāẓ*, by Ibn Saʿīd, by Ibn Ḥadjar in his *Rafʿ al-iṣr* (i, Cairo 1957, 2), and by other later authors. A manuscript biography of the Egyptian grammarian Muḥammad b. Mūsā al-Kindī al-Ṣayrafī [see ibn al-ṣayrafī], preserved in the Egyptian library, is ascribed to him (Cairo catalogue, v, 1348/1930, 14).

IBN ZURʿA, Abū ʿAlī ʿĪsā b. Isḥāḳ b. Zurʿa, Jacobite Christian philosopher, apologist and translator, born at Baghdād in Dhu 'l-Ḥidjdja 331/August 943, d. on 6 Shaʿbān 398/16 April 1008 (the respective dates of 371/981 and 448/1056 given by Ibn Abī Uṣaybiʿa should not be accepted, since Ibn Zurʿa is mentioned by Ibn al-Nadīm (circa 377/987), and Ibn Abī Uṣaybiʿa himself speaks of his relations with Yaḥyā b. ʿAdī, d. 364/975). He studied literature, physics, mathematics and then philosophy under the direction of Yaḥyā b. ʿAdī [*q.v.*]; he seems also to have studied medicine, since Ibn Abī Uṣaybiʿa includes him among the famous physicians. Nevertheless he was forced to earn his living by engaging in commercial activities and trading in particular with Byzantium, which, in the opinion of Abū Hayyān al-Tawḥīdī, hindered greatly his philosophical work. Furthermore, his competitors denounced him to the authorities, accusing him of secret intrigues with Byzantium, so that he was arrested and sentenced, and his possessions were confiscated. These disasters ruined his already poor health and hastened his death.

Ibn Zurʿa translated or abridged, probably from the Syriac, several works of Aristotle and in particular the *Historia Animalium*; he is, because of this, esteemed as a translator. However, his fame is based on a number of treatises on philosophy, theology and of apologetics, which are mostly lost. Of the list of his works given by Ibn al-Nadīm and completed by al-Ḳifṭī and Ibn Abī Uṣaybiʿa, it appears that there has survived only one translation (the Sophistical Refutations of Aristotle, *Sūfisṭīḳā*, ms. Paris, ar. 2346; see ʿA. Badawī, *Manṭiḳ Arisṭū*, iii, 737-1016), and ten or so treatises. Four of these have been published by P. Sbath (*Vingt traités philosophiques et apologétiques d'auteurs arabes chrétiens du IX^e au XIV^e siècle*, Cairo 1929); a treatise on the intellect (68-75); a letter to a Muslim friend on the existence of God (6-19); a refutation of the *Awāʾil al-adilla fī uṣūl al-dīn* of Abu 'l-Ḳāsim ʿAbd Allāh b. Aḥmad al-Balkhī (52-8), the *Risāla ila 'l-Yahūdī Bishr b. Finḥās* (19-52). Six others exist in manuscript, especially in Paris (BN 132, 173, 174) and in the Vatican (113, 123, 127, 135): Replies to the five questions of Abū Ḥakīm Yūsuf al-Buḥayrī; Replies to twelve other questions by the above; Treatise on union; a defence of the Jacobite doctrine; Questions concerning the attitude of the body during prayer, concerning vows, fasting and almsgiving; a Treatise in which he defends those who devote themselves to logic and philosophy. It should be stated that the attribution of these works to Ibn Zurʿa is not absolutely certain; at least two other texts have been falsely attributed to him: the

Maḳāla fī māhiyyat ittiḥād al-Naṣārā of Abū ʿAlī Naṣīf b. Yumn, and a fragment of the *Kitāb al-Madjāmiʿ* of Ibn al-Muḳaffaʿ (Severus).

The surviving works of Ibn Zurʿa have formed the subject of a thesis (unpublished) presented at the Sorbonne in 1952 by Cyrille Haddad: *ʿĪsā ibn Zurʿa, philosophe arabe et apologiste chrétien du Xᵉ siècle*. This study shows that Ibn Zurʿa follows in general his teacher, Yaḥyā b. ʿAdī, but departs from him on points of detail, makes great use of Aristotelian logic, of Platonic or Plotinan doctrine, of the Bible and of the Fathers of the Church, in order to present, in a fairly heavy style, a cool but scholarly and rational apologetic, which only rarely has recourse to *argumentum ad hominem*.

Bibliography: Ibn al-Nadīm, index (Cairo ed., 369-70); Abū Ḥayyān al-Tawḥīdī, *Imtāʿ*, i, 33; Ibn al-Ḳifṭī, ii, 245 ff.; Ibn al-ʿIbrī, iii, 277; Ibn Abī Uṣaybiʿa, i, 235 ff.; Bayhaḳī, *Tatimma*, 66-9; Suter, 77; Graf, *Geschichte der christl. ar. Lit.*, ii, 52 ff.; Cheikho, *Cat. des mss des auteurs arabes chrétiens depuis l'Islam*, Beirut 1924; Brockelmann, I, 208, S I, 371; *DM*, iii, 133-4.

(Ed.)

IBO [see NIGERIA].

IBRĀHĪM, the ABRAHAM of the Bible, plays in Islamic religious history an important role as the founder or reformer of the monotheistic Kaʿba cult. He is mentioned, in greater or less detail, in 25 *sūra*s of the Ḳurʾān. Moses is the only Biblical character who is mentioned more frequently, though this does not mean that Abraham is considered second to him in importance.

In two *sūra*s, which are to be dated from the first Meccan period, there is a reference to the "leaves, scrolls" (*ṣuḥuf*) of Abraham and Moses, by which presumably texts of revelation are meant (LXXXVII, 18f.; LIII, 36f.). In the latter passage Abraham is indicated as he "who paid his debt in full". In a whole series of *sūra*s of the second and third Meccan period it is related how Abraham attacked the idol-worship of his father (named Āzar in *sūra* VI, 74) and his people and advocated belief in one single God (XXXVII, 83-98; XXVI, 69-89; XIX, 41-50; XLIII, 26-8; XXI, 51-73; XXIX, 16-27; VI, 74-84). Moreover, in one passage Abraham is explicitly referred to as a "speaker of truth" (*ṣiddīḳ*) and a prophet. In some *sūra*s of the first(?) to third Meccan periods the story of the visit to Abraham of the men sent by God is related in connexion with the announcement of the punishment to be imposed on Lot's people (LI, 24-34; XV, 51-60; XI, 69-76; XXIX, 31f.; cf. Genesis, xviii). In *sūra* XXXVII the account of Abraham's struggle against the idolatry of his countrymen leads into the story of the sacrifice of Isaac (without mentioning the latter by name, verses 100-11; the reference to the announcement of Isaac appears only subsequently, verse 112 f.). In a large number of the other passages mentioned above dating from the Meccan periods, reference is made to Abraham's descendants. Some of these speak generally of a young man (*ghulām*), who is not given a name (LI, 28; XV, 53; XXXVII, 101); in one place Isaac is mentioned alone (XXXVII, 112f., see above); in five places he is mentioned together with Jacob, who in this connexion appears as another son of Abraham and not as his grandson (XIX, 49; XXI 72; XXIX, 27; VI, 84; XI, 71; cf. XXXVIII, 45-7; XII, 6, 38). On the occasions when the name of Ishmael is mentioned too, it appears without any reference to the person and history of Abraham (XIX, 54f.; XXXVIII, 48; XXI, 85; VI, 86).

In the *sūra*s of the Medinan period, Abraham as a figure in religious history becomes still more prominent, together with Ishmael, who from then on no longer leads an isolated and shadowy existence, but rather supports his father in the effort to build up the Kaʿba in Mecca as a centre of pilgrimage and make it into a place of pure monotheistic belief (II, 124-41; III, 65-8, 95-7; IV, 125; XXII, 26-9, 78). Ishmael as well as Isaac, of whom he takes precedence, is now referred to as Abraham's son and Jacob is no longer considered as another son but—in accordance with the Biblical genealogy—as Abraham's grandson (II, 132f.; II, 136 = III, 84; II, 140; IV, 163). Islam is referred to simply as "the religion of Abraham" (*millat Ibrāhīm*), and Abraham is given the epithet *ḥanīf* [*q.v.*], to which is frequently added the remark "and he was not a pagan" (II, 135; III, 67, 95; IV, 125; XXII, 31, 78). In *sūra* IV, 125, in which also Abraham is described as *ḥanīf*, it is stated in addition that God took him as a friend (*khalīl*, cf. Isaiah xli, 8. Hence the later designation of Hebron, the alleged burial place of Abraham, as al-Khalīl).

In his dissertation *Het Mekkaansche Feest*, C. Snouck Hurgronje brought together and interpreted all these facts which are documented in the Ḳurʾān in a synthesis which traces their development (Leiden 1880, 29-47 = *Verspreide Geschriften*, i, 1923, 22-33). He concluded that it was not until after the Hidjra that Muḥammad, on the occasion of his controversy with the Jews, pronounced the Old Testament patriarch a *ḥanīf* and the first Muslim, and maintained that he, together with Ishmael, the ancestor of the Arabs, built the Kaʿba and introduced the ceremonies of the Pilgrimage. Abraham — always according to Snouck Hurgronje—became only at this juncture the most important forerunner of the Arabian Prophet: Islam was able to claim, as being the religion of pure monotheism already propagated by Abraham, priority over both Judaism (founded by Moses) and Christianity (founded by Jesus).

This thesis of Snouck Hurgronje became more widely known through a supplement which A. J. Wensinck added to the article IBRĀHĪM in *EI*[1] and provoked contradiction and denial, especially from Muslims. In the Arabic translation of *EI*[1] these criticisms were expressed in a detailed commentary on the article IBRĀHĪM. Some non-Muslims as well expressed doubts about Snouck Hurgronje's reasoning and conclusions. They were criticized by Youakim Moubarac, a pupil of Louis Massignon, in a special work (1958), in an attempt to mediate between Islam and Christianity; his criticism however went too far. More moderate and scientifically better grounded is the opinion of Edmund Beck (in *Le Muséon*, lxv, 1952). Snouck Hurgronje's reasoning has indeed certain weaknesses. In three *sūra*s which are attributed to the third Meccan period (XIV, XVI, VI) there is already anticipated the role of Abraham which is characteristic of the Medinan period: in *sūra* XIV, 35-41, Abraham appears, after Ishmael and Isaac have been born to him in spite of his great age, as the ancestor of the inhabitants of Mecca and prays to God that He will "make this place secure". And the passages XVI, 120-3, VI, 79, 161 speak of the religion (*milla*) of Abraham as that of a *ḥanīf* who was not a pagan (cf. also X, 105, in which however Abraham is not named). Snouck Hurgronje avoided the difficulty by

regarding these passages as later, Medinan, interpolations. This is however a rather questionable method. But even if it is granted that he is right on this point (the individual *sūras* are admittedly often made up of passages from different periods), it must be admitted that already long before the Hid̲j̲ra Muḥammad had esteemed Abraham as the champion of a pure monotheistic faith, so that in the period following the Hid̲j̲ra it was not an entirely new function which was attributed to him. E. Beck summarizes the results of his reflections on this as follows: "(1) Muḥammad had regarded Mecca as connected with Abraham already in the Meccan period, before associating Ishmael with this patriarch. (2) Also the conception implied by the term *millat Ibrāhīm* did not arise exclusively from the polemic with Jews (and Christians) which took place in the early Medinan period. The idea and the expression are derived from a development which reaches back far into the Meccan period. The development itself occurred organically, favoured and accelerated by the Jewish and Christian opponents, whose arguments Muḥammad was able skilfully to turn to his own purpose". The above conclusions of E. Beck are however little more than a slight modification of Snouck Hurgronje's thesis. They do not remove the divergences which exist between the opinions of Muslims and non-Muslims over the figure of Abraham as presented in the Ḳurʾān. The former consider that Abraham actually was in Mecca and, together with Ishmael, built the Kaʿba there and spread the pure monotheistic faith. Non-Muslims regard this merely as a religious legend. At the present stage of the dialogue there can be no reconciliation of the two points of view.

In the statements collected above on the history of Abraham as presented in the Ḳurʾān there have been indicated only the most important basic themes. There are many details which could be mentioned. Among these are the rescue of Abraham from the fire into which his heathen compatriots had thrown him (XXXVII, 97 f.; XXI, 68-70; XXIX, 24); his intercession on behalf of his pagan father (XIX, 47; XXVI, 86; LX, 4-6; IX, 114); his quarrel with the autocratic king (Nimrod, II, 258); the killing of the four birds (II, 260; cf. Genesis, xv, 9 ff.). Much more material exists in the commentaries on the Ḳurʾān, the histories of the prophets (*Ḳiṣaṣ al-anbiyāʾ*) and works of universal history. It is in part borrowed from Jewish sources and may for the most part be termed scholarly or pseudo-scholarly edifying supplementation. Episodes which are described with excessively fantastic details are the arguments between the believer Abraham and the pagan king Nimrod, the story of the sacrifice of Abraham's son, which was averted at the last minute (on which there remains disagreement on whether the son was Isaac or Ishmael), and the sojourn in Mecca of Hagar and Ishmael. In some cases the Islamic legend of Abraham has even influenced the later Jewish tradition. There is no need to go further into these byways here, particularly since Grünbaum, Eisenberg, Sidersky and Schützinger have already dealt with them exhaustively (see bibl.). It may be mentioned in passing that the Biblical name of Abraham's father (*Tĕraḥ*) is correctly transmitted in the above-mentioned secondary literature (*Tʾrk̲h̲*), whereas in the Ḳurʾān (VI, 74) he is called Āzar. (On this name, see J. Horowitz, *Koranische Untersuchungen*, Berlin and Leipzig 1926, 85 f.)

(R. PARET)

IBRĀHĪM I B. AL-AG̲H̲LAB B. SĀLIM B. ʿIḲĀL (184-96/800-12), founder of the Ifrīḳiyan dynasty of the Ag̲h̲labids, was a Tamīmī of the clan of the Saʿd b. Zayd Manāt. This clan, as a result of the Muslim conquests, had settled at a very early date in K̲h̲urāsān, where they were enemies especially of the Muhallabids, whom Ibrāhīm was later to encounter again in Egypt and then in Ifrīḳiya. It was thus that al-Ag̲h̲lab, the eponymous ancestor of the Ag̲h̲labids, was born at Marw al-Rūd̲h̲. He embraced the cause of the ʿAbbāsids, of whom he was one of the most fervent supporters with Abū Muslim al-K̲h̲urāsānī. It was in their service that he first visited the Mag̲h̲rib in the army of Ibn al-As̲h̲ʿat̲h̲. The latter appointed him to be in charge of the Zāb (144/761), that is, the region of the Aurès to the south of the present-day Constantinois. In 148/765, Ibn al-As̲h̲ʿat̲h̲ was driven out by his own troops, and al-Ag̲h̲lab replaced him at Ḳayrawān, beneath the walls of which he was killed during one of the numerous insurrections which continually rent the country.

His family returned towards Egypt. Ibrāhīm at this time was ten years of age. He began his education with a thorough study of *fiḳh* and was one of the most brilliant pupils of al-Layt̲h̲ b. Saʿd (d. 179/795). But being descended from one of the most illustrious officers of the ʿAbbāsid army, he necessarily followed the tradition of his family. He thus joined the *d̲j̲und* of Egypt and took a fatal part in the upheavals which were disturbing the country. He took part in 174/790 in the pillage of the public treasury, taking only his exact due "without anything extra", according to al-Balād̲h̲urī. This action caused him to be banished by the Muhallabid

governor of Egypt and obliged to live under supervision in the Zāb, which was governed by another Muhallabid, i.e. by a traditional enemy of the family.

Helped by the troubles which were continually disturbing Ifrīḳiya, Ibrāhīm managed to consolidate his position in the Zāb, where the memory of his father was still fresh. He learned above all not to exceed the bounds of the law. Mellowed by his trials, he held himself aloof from the insurrections and, as the result of a power vacuum in the Zāb (a consequence of those insurrections), he came to possess real *de facto* authority there. In 179/795, Harthama, who had come from Baghdād to restore law and order in the country, transformed this *de facto* authority into a proper investiture. Probably two years later, Ibrāhīm was promoted by al-Rashīd, who was apparently satisfied with his services, from the rank of deputy-governor to that of governor of the Zāb responsible directly to himself.

Soon a new insurrection was to give him the keys of Ḳayrawān. In Ramaḍān 183/October 799, Tammān, the Tamīmī governor of Tunis (belonging to the clan of the Malik b. Zayd Manāt, who were hostile to the Saʿd b. Zayd Manāt) had driven Ibn al-ʿAkkī out of Ḳayrawān. From the Zāb, Ibrāhīm rushed in to restore the legitimate governor to his rights. This restoration of the *status quo* did not in fact receive the support of the caliphate or that of the Ifrīḳiyans. Therefore, for various reasons of Baghdādī and Ifrīḳiyan policy, Ibrāhīm was invited to take the place of Ibn al-ʿAkkī, and al-Rashīd, in return for a favourable financial arrangement, was persuaded to confer on him the title of hereditary *amīr*. In this way Ifrīḳiya acquired, peacefully and painlessly, the status of an autonomous emirate.

This easy accession to power was not, however, without difficulties for Ibrāhīm. He had to contend with the hostility of the *fuḳahāʾ* and members of the *djund*. He had to suffer many affronts, and use much moderation, cunning and energy in order to consolidate his régime. On his accession he built, two miles south of Ḳayrawān, a fortified residence, al-ʿAbbāsiyya [*q.v.*], which, garrisoned by a strong guard of black soldiers, was to save the dynasty on more than one occasion. The first rebellion broke out at Tunis (186/802), then there was another at Tripoli (189/805). But the most serious uprising was that of the *djund*, which was put down only with the help of reinforcements opportunely sent by the caliph. And when Ibrāhīm I died (21 Shawwāl 196/5 July 812), his son and successor ʿAbd Allāh was besieged in Tripoli.

Ibrāhīm I was remembered as a cultured, energetic and just ruler. Al-Nuwayrī writes: "He was a *faḳīh*, scholar, orator and poet. He was also a man of judgement and energy . . . Never before his reign had Ifrīḳiya been ruled by an *amīr* so just in his conduct, so exemplary in his policy, so benevolent to his subjects and so energetic in the organization of affairs".

IBRĀHĪM II, Aḥmad b. Muḥammad b. al-Aghlab b. Ibrāhīm b. al-Aghlab, born 10 Dhu 'l-Ḥidjdja 235/27 June 850, was, after Ibrāhīm I, the most outstanding personality of the Aghlabid dynasty, being distinguished as much for his exceptional qualities as for his barely credible crimes. Raised to power by the enthusiasm of the people, in place of the legitimate successor who was still a minor and of whom he was to have been the regent, he began his reign (261/875) with just measures and wise administration. With this aim, he did not shrink from unpopular but salutary measures such as withdrawing from circulation valueless fragments of coin (*ḳiṭaʿ*) which had become current, an action which very nearly gave rise to a serious riot in Ḳayrawān (*thawrat al-darāhim*). He was able on this occasion to act calmly and, while holding to his decision, to avoid bloodshed.

But, affected by a mental illness which was gradually to get worse, he very soon in fact deliberately built up a system of complete despotism in matters of government, and, abusing this right, caused much bloodshed. He certainly committed, to achieve his policy and also gratuitously, many crimes, and even more were attributed to him. He was thus regarded by posterity as a monster, and was remembered chiefly as the grim hero of a series of horrible stories in which the victims were his daughters, his sons, his servants, his favourites, his slave girls and many others. In this terrifying portrait of him given by the majority of the chroniclers, a large part was certainly played by Ismāʿīlī propaganda, which was particularly active at the end of his reign.

The despotism of Ibrāhīm II did not fail to provoke violent reactions. The Berbers, more exposed to it than the others, were the first to revolt (268-9/881-3) throughout the kingdom and were severely punished. The bodies of the victims were borne away by cartloads and thrown into common graves. Twelve years later (280/893), it was the turn of the great "feudal lords" to take up the struggle. The cause of this insurrection was the *amīr*'s policy of subjugating powerful figures, and the most important victims were the proud warriors of the citadel of Balazma, the key to the *massif* of the Kutāma, from which there began the movement which was to overthrow the Aghlabid dynasty. Ibrāhīm II, who at first imagined this to be a repetition of the great rebellion of the *djund* which had very nearly taken the throne from Ziyādat Allāh I, was seized with panic. In fact, he easily overcame his adversaries, who did not even attempt to unite their force. He next came into conflict with the Nafūsa Berbers (283-4/896-7), whose ranks were completely routed. Then, after having had his cousin, the governor of Tripoli, executed in atrocious circumstances, he made a show of invading Egypt (whence in 267/880-1 there had set out the abortive expedition of Abu'l-ʿAbbās Ibn Ṭūlūn against Ifrīḳiya) before returning to Tunis.

Some years later (289/902), he abdicated in favour of his son ʿAbd Allāh II, who had been recalled from Sicily, and went, surrounded by *ahl al-baṣāʾir* "perspicacious people", and wearing the patched habit of penitent ascetics, to seek and find martyrdom under the walls of Cosenza (17 Dhu'l-Ḳaʿda 289/23 October 902). The *amīr*, whose arrival spread panic throughout southern Italy, planned, it is said, nothing less than to take Byzantium by way of Rome. His reign was one of power and folly. With

the growth of the illness which was consuming him, he gradually deteriorated as a ruler, and by his errors prepared the way for the triumph of the Fāṭimids.

IBRĀHĪM, eighteenth Ottoman Sultan, was born on 12 Shawwāl 1024/4 November 1615, the youngest son of Aḥmad I [*q.v.*]. He spent all his early life in close confinement, in constant fear of being put to death (as four of his elder brothers were); so that when Murād IV [*q.v.*] died and Ibrāhīm, the sole surviving prince of the dynasty, was called to ascend the throne, only the combined persuasions of his mother Kösem and the Grand Vizier Ḳara Muṣṭafā Pasha [*qq.v.*] induced him to emerge (16 Shawwāl 1049/8 February 1640).

The capable Ḳara Muṣṭafā remained in power for the first four years of Ibrāhīm's reign. He promoted peaceful relations with Persia and, by the treaty of Szön (15 March 1642), renewed the peace with Austria; while in 1051/1642 Azov (Azaḳ [*q.v.*]) was recovered from the Cossacks. He carried through a reform of the coinage [see SIKKA] and a new land-survey (*taḥrīr* [*q.v.*]) in an attempt to stabilize the economy, and took strict measures to restore the authority of Istanbul over refractory provincial governors (repression of the revolt of Naṣūḥ Pasha-zāde Ḥüseyn Pasha, 1053/1643).

During at least the first years of his reign, Ibrāhīm was capable of concerning himself with the well-being of his empire. The Grand Vizier addressed to his utterly inexperienced new master a memorandum on public affairs (F. R. Unat, *Sadrazam Kemenkeş Kara Mustafa Paşa lâyihası*, in *Tarih Vesikaları*, i/6 (1942), 443-80); Koči Beg [*q.v.*] also submitted a précis of advice on government (MS Revan 1323, ? autograph); and documents in the Sultan's own hand, preserved in Topkapısarayı, show him urging the Grand Vizier to attend, e.g., to the provisioning of Istanbul (Ç. Uluçay, *Sultan Ibrâhim deli mi, hasta mı idi?*, in *Tarih Dünyası*, no. 12 (1950), at p. 498; cf. *IA*, art. *Ibrâhim*, 880 b). But perhaps as a result of the terrors and tension of his early years he was subject to perpetual headaches and to attacks of physical prostration; furthermore, since fears that he might be impotent put the survival of the dynasty in doubt, he was encouraged, by his mother and his entourage, to abandon himself to the pleasures of the harem (and soon fathered several children in rapid succession, the future sultans Meḥemmed IV, Süleymān II and Aḥmed II [*qq.v.*] among them). Thus he came increasingly under the influence of concubines and favourites, and of the charlatan Djindji Khodja [see ḤUSAYN, DJINDJI KHODJA], who purported to cure the Sultan's fits.

Djindji Khodja and his allies the *rikābdār* Yūsuf and Sulṭān-zāde Meḥmed Pasha became more and more powerful, controlling appointments and dismissals, enriching themselves by bribes and finally procuring the execution of the upright but tactless Ḳara Muṣṭafā (21 Dhu 'l-Ḳaʿda 1053/31 January 1644). Sulṭan-zāde Muṣṭafā now became Grand Vizier, while Djindji Khodja was appointed *ḳāḍīʿasker* of Anadolu and Yūsuf Kapudān Pasha. The new Grand Vizier did nothing to restrain the Sultan's eccentricities and extravagance.

It was at this juncture that the seizure by Maltese corsairs of a ship carrying pilgrims to Egypt provoked the Sultan, urged on by Yūsuf, to invade Crete (Djumādā I 1055/June 1645), and thus to embark on the exhausting war with Venice, which was to last for 24 years [see IḲRĪTISH; ḲANDIYA]. Yūsuf Pasha's initial success in forcing the surrender of Canea (Ḥanya) aroused the jealousy of the Grand Vizier; and the intrigues between them and the attempts of each to win over the wayward Sultan led successively to the deposition of Muṣṭafā (Shawwāl 1055/December 1645) and to the execution of Yūsuf (Dhu 'l-Ḥidjdja 1055/January 1646).

Ibrāhīm's addiction to the women of the harem now found its culmination in his taking one of his concubines (Telli Khāṣṣeki) in legal marriage (after which he is said to have ordered the Palace of Ibrāhīm Pasha on the Hippodrome, which was made over to the lady, to be carpeted with furs). The imposition of heavy taxes, not for the prosecution of the war but for the satisfaction of such eccentric whims, aroused increasing discontent both in the provinces (revolt of Varvar ʿAlī Pasha at Sīvas, put down by Ipshīr Muṣṭafā Pasha [*q.v.*]) and in Istanbul. Various Janissary officers persuaded some members of the *ʿulemāʾ* to join in a plot, at first directed against the Grand Vizier Aḥmed Pasha, who on 18 Radjab 1058/8 August 1648 was strangled and torn to pieces (whence his later nickname "Hezār-pāre"); and on the same day Ibrāhīm was seized and put into close confinement in the Palace, while his seven year old son Meḥemmed (IV) was placed on the throne. Ten days later, however, fearing that Ibrāhīm's partisans might procure his restoration, the new Grand Vizier, Ṣofu Meḥmed Pasha, accompanied by the Shaykh al-Islām (who had given a *fetwā* sanctioning the execution), had him strangled (28 Radjab 1058/18 August 1648).

(M. Tayyib Gökbilgin)

IBRĀHĪM B. ʿABD ALLĀH, full brother of Muḥammad [*q.v.*] called al-Nafs al-Zakiyya, who rebelled with him against the ʿAbbāsid caliph al-Manṣūr in 145/762-3. Their father ʿAbd Allāh, the son of al-Ḥasan (al-Muthannā) b. al-Ḥasan b. ʿAlī b. Abī Ṭālib and of Fāṭima bint al-Ḥusayn b. ʿAlī,

was thus Ḥasanid through his father and Ḥusaynid through his mother, which earned him the by-name of al-Maḥḍ (of pure blood). He was considered as the *shaykh* of the Hāshimites (ʿAlids and ʿAbbāsids) as well as of the Ḥasanids, since he enjoyed great authority after his father al-Ḥasan died during the reign of the caliph al-Walīd I. Ibrāhīm's mother, Hind bint Abī ʿUbayda, before marrying the ʿAlid ʿAbd Allāh, had been the wife of ʿAbd Allāh the son of the caliph ʿAbd al-Malik; she was renowned as a poet and the sources have preserved some of her verses.

The intrigues of the ʿAlids to raise one of the members of their family to the caliphate had begun very early, during the Umayyad period. At a gathering of the Hāshimites held at al-Abwāʾ, after the murder of al-Walīd II [*q.v.*], ʿAbd Allāh had got all those present (except Djaʿfar al-Ṣādiḳ [*q.v.*], who was at that time the most influential of the Ḥusaynids) to agree that his son Muḥammad should be recognized as claimant to the caliphate; the *bayʿa* had thus been given to this young man, then thirty-two years of age. After this, the two brothers Muḥammad and Ibrāhīm carried out a vigorous campaign of propaganda, travelling throughout the lands of the empire, especially the farthest east, including Sind. When the ʿAbbāsid al-Saffāḥ ascended the throne, the frustrated ʿAlids were forced to accept the *fait accompli*, but they did not give up their plans; the two brothers continued their proselytizing in secret, changing its objective and making the ʿAbbāsids the target of their accusations. Al-Saffāḥ scarcely heeded their activity, but his successor al-Manṣūr took offence at it; as Muḥammad and Ibrāhīm had not come to meet him during the Pilgrimage of 136/754 and had not rendered homage to him, he decided, in 140/758, to imprison in a *dār* in Medina the aged ʿAbd Allāh, and shortly afterwards some other ʿAlids, then to transfer all these prisoners to Kūfa, where they were thrown into a foul dungeon. He hoped thus to lure Muḥammad and Ibrāhīm from their hiding-place, but, on the advice of their father, they did not allow themselves to be inveigled into suspending their revolutionary activities.

Al-Manṣūr having intensified the search, Muḥammad decided to resort to action against the ʿAbbāsids and began a revolt on 1 Radjab 145/25 September 762, at Medina. For details of this action, during which he was killed on 14 Ramaḍān 145/6 December 762, see the article MUḤAMMAD AL-NAFS AL-ZAKIYYA.

Ibrāhīm had been for some time in Baṣra, where the movement had many supporters; Muḥammad having told him in advance of his plans, he too began a revolt (1 Ramaḍān 145/23 November 762); his movement at Baṣra was more extensive and lasted longer than that at Medina. Al-Manṣūr, alarmed by the insurrection, had gone from Baghdād, which he was then engaged in building, to Kūfa, in order to keep control over the inhabitants. He brought in troops from al-Djazīra and from Syria, resorting to stratagems to make them appear more numerous than they really were, and instructed ʿĪsā b. Mūsā [*q.v.*] to interrupt his activities in the Ḥidjāz, after his victory over Muḥammad, and to march immediately with his army against Ibrāhīm. The latter, master of Baṣra thanks to the governor there, who was in sympathy with the rebels, had seized the treasury and had sent armed bands to occupy other towns and districts (al-Ahwāz, some towns of Fārs, Wāsiṭ). When the news of Muḥammad's death reached Baṣra, the rebels paid homage to Ibrāhīm, who advanced towards Kūfa, where many of his supporters urged him to go, but he gave up this plan and withdrew; then, instead of awaiting at Baṣra an attack from ʿĪsā b. Mūsā, he went to Bākhamrā (1 Dhu 'l-Ḳaʿda 145/21 January 763), where a battle took place between the ʿAbbāsid forces and the rebels. ʿĪsā's vanguard was at first routed, but this first failure soon turned to victory for the government troops. Ibrāhīm, left alone with a few faithful followers after the majority of his supporters had been scattered, was mortally wounded, and died on 25 Dhu 'l-Ḳaʿda 145/14 February 763 (according to one source it was in Dhu 'l-Ḥidjdja). He was then 47 years of age. The revolt of the two brothers had thus occupied almost the whole of the second half of the year 145.

There were several causes for the failure of the revolt: Muḥammad's hasty decision to open his campaign of insurrection at Medina, where he could find neither the means nor the forces necessary for his enterprise; the prompt reaction of al-Manṣūr and the chance offered to him of first extinguishing the revolt begun in Medina and then of attacking Baṣra with a larger number of troops; the lack of enthusiasm of the supporters of the ʿAlids. This last point is proved by the following facts: the Medinans, taken unawares, had at first sworn homage to Muḥammad, but they turned again to the caliph at the approach of ʿĪsā; the supporters from other towns did not rally either to Medina or Baṣra; the majority of the *fuḳahāʾ* limited themselves to giving verbal approval or to providing a contribution in money, as Abū Ḥanīfa is said to have done; the Kūfans were afraid and remained inactive; the Syrians drove out Mūsā, the brother of Muḥammad and Ibrāhīm, who had been sent to govern their territory; at Wāsiṭ, the supporters preferred to await the result of the conflict; before and during the battle of Bākhamrā, there were defections, and finally an almost general dispersal. But it may be that the reason for the ʿAlid failure is to be sought not only in these last-minute occurrences but earlier, in the situation created by the accession of the ʿAbbāsids, which the ʿAlids had not properly assessed. Both sides had based their propaganda on the merits and the right to power of the family of the Prophet, and had promised to observe scrupulously the true religion, but the ʿAbbāsids, now in power, were in fact keeping their promises. The ʿAlids therefore were hard put to it to find motives for opposition to these new rulers. While great social, political, and to a certain extent also religious, reforms were in progress, it was unlikely that the people, who had put their confidence in the ʿAbbāsids for the solution of their problems, would take part in a struggle waged against these rulers by members of their own family in the cause of a strict legitimism—all the more since it was only the Ḥasanid branch of the ʿAlids which proposed to challenge them, the other great branch, that of the Ḥusaynids, having no intention of doing so. Another reason for the lack of enthusiasm of the Muslims in general for the Ḥasanid cause was probably the fact that on the questions which were troubling the Muslim world the Ḥasanid position was either not clear or open to criticism. The sources are by no means explicit on this, but there were quarrels between Ibrāhīm and his Zaydī supporters, evidently because the latter suspected, and in fact very soon realized, that their aims were not the same as those of the Ḥasanids. The Zaydīs at this period formed what was in effect a political party with social objectives

(see L. Veccia Vaglieri, *op. cit.* in bibliography); thus the groups describing themselves as Zaydīs who joined Ibrāhīm in Baṣra demanded as a condition of their joining the campaign that, if Muḥammad and Ibrāhīm should die, the command should go to ʿĪsā, the son of the martyr Zayd b. Ḥusayn [*q.v.*]; they soon fell into disagreement with Ibrāhīm, and wished to put a leader of their own at the head of the rebels, renouncing this project only when they feared that al-Manṣūr would take advantage of this quarrel; they nevertheless reserved the right to re-open the matter after the victory. They next raised objections on a detail of ritual, on the tactics to adopt during the battle, and on the way in which provisions and money should be requisitioned. Nevertheless some Zaydīs remained with the ʿAlid until the end of the battle, and, when he was wounded, bravely defended his body.

Ibrāhīm appears to have been more intelligent than his brother Muḥammad, or so it would seem from the fact that when the founders of Muʿtazilism, Wāṣil b. ʿAṭāʾ and ʿAmr b. Ubayd, came to Medina with a group of followers of their movement to meet the ʿAlid claimant to the caliphate, ʿAbd Allāh (with the agreement of his advisers) preferred that they should meet Ibrāhīm rather than Muḥammad, since, given the intelligence of the questioners, the interview promised to be an awkward one. The *Maḳātil* (193 f.) confirms that Ibrāhīm made a very good impression on them. He was better educated than his brother, if not in the religious sciences at least in the field of literature, since it is reported that he was fond of poetry, that he compiled a collection of the poems of his host and supporter Mufaḍḍal al-Ḍabbī [*q.v.*], and that he himself wrote poems. He was active and courageous: during the period which he spent in hiding he boldly faced great dangers (Ṭabarī, iii, 284-90). The sources extol his piety and his respect for ritual observances: still more interesting are reports of episodes which show him to be free from fanaticism and of a merciful nature.

Bibliography: The sources which devote most space to the revolt of 145 are Ṭabarī and Abu 'l-Faradj al-Iṣfahānī in his *Maḳātil al-Ṭālibiyyīn*; Ṭabarī, iii, 143, 147, 152, 158, 163 f. (al-Manṣūr's concern at the plotting of the two brothers and the measures which he took), 169-90 (transfer of the ʿAlid prisoners to Kūfa and their sufferings), 282-318 (the revolt of Ibrāhīm); *Maḳātil*, ed. A. Ṣaḳr, Cairo 1365, 205-29, 232-309 (discussion between Ibrāhīm and the Muʿtazilīs, 293 f.), 315-89 (revolt of Ibrāhīm); the protests of the Zaydīs: 334, cf. 332, 333-5, 344, 370, 405 f., 408. (L. Veccia Vaglieri)

IBRĀHĪM b. **ADHAM** b. Manṣūr b. Yazīd b. Djābir (Abū Isḥāḳ) al-ʿIdjlī was born in Balkh, in Khurāsān, into a family from the Kūfa area belonging to the tribal group Bakr b. Wāʾil. The date given for his death in the most dependable sources is 161/777-8.

He was one of the most prominent of the Ṣūfīs of the 2nd/8th century, celebrated in later legend especially for his asceticism. R. A. Nicholson characterizes him as "essentially an ascetic and quietist of a practical type", who had not crossed the borderline which divides asceticism from mysticism. Ibrāhīm caught the imagination of subsequent generations of Ṣūfīs especially because of his generosity, illustrated by many tales of kind acts to friends, and his feats of self-denial, which were in such contrast to the luxury in which he is supposed to have spent his early life.

The earlier Arabic sources, mainly Abū Nuʿaym al-Iṣfahānī and Ibn ʿAsākir, permit the sketching of an outline of his life: He was born into the Arab community settled in Balkh in about 112/730, or perhaps earlier, and migrated from Khurāsān to Syria some time before 137/754. During the rest of his life he led a somewhat nomadic existence mostly in this region, going as far north as the Sayḥān River and as far south as Ghazza. He disapproved of begging and worked with his hands for his livelihood, reaping, gleaning or grinding corn, or tending orchards, for example. In addition to this he probably engaged in military operations on the border with Byzantium; the frontier fortresses of the Thughūr (to the north of Syria, in modern Turkey) are mentioned repeatedly in the anecdotes. We are told that he took part in two land and two naval expeditions against Byzantium; he died on the second naval expedition of "[a disease of] the belly" (Abū Nuʿaym, vii, 388). The manner of his death is confirmed by the circumstantial account of it given by Ibn ʿAsākir (196). He was buried on a Byzantine island, according to some accounts near a fortress called Sūḳīn, or Sūfanan. Another account places his death in Egypt. In various other less reliable accounts his tomb is said to be in Tyre, in Baghdād, in Damascus, in 'the city of Lot' (= Kafr Barīk), in the Cave of Jeremiah near Jerusalem and finally and most persistently of all, in Djabala on the Syrian coast.

Ibrāhīm b. Adham is known widely in legend as the ruler of Balkh who abdicated his throne to take up the ascetic life. There seems to be no historical basis for this belief. The first source to give him royal status is al-Sulamī (d. 412/1021), the legendary nature of whose account is sufficiently demonstrated by the fact that it includes a description of Ibrāhīm's encounter with the immortal prophet Khiḍr; how-

ever, from al-Sulamī onwards this legend is found firmly rooted in the accounts of Ibrāhīm's life. Thus the anecdotes generally associate his conversion, or repentance, with his abdication; the accounts of this may be grouped under about ten different themes, e.g. that he repented after reflecting on the utter contentment of a beggar whom he saw sitting in the shade of the palace, or that he was warned by Khiḍr, in the guise of a fakir, of the transitory nature of this world. The best known of the themes is also the earliest, being found in al-Kalābādhī (108), which (in Arberry's translation) reads: "... he went out to hunt for pleasure, and a voice called him, saying 'Not for this wast thou created, and not to this wast thou commanded'. Twice the voice called him; and on the third occasion the call came from the pommel of his saddle. Then he said: 'By God, I will not disobey God henceforth, so long as my Lord protects me from sin.' "

Here it may be remarked that the postulation that the story of Ibrāhīm's conversion was modelled on the story of the Buddha (first put forward by Goldziher, see *JRAS*, 1904, 132-3) has been questioned more than once (see for example L. Massignon, *Essai sur les origines* ..., Paris 1922, 63; cf. R. C. Zaehner, *Hindu and Muslim mysticism*, London 1960, 21-2) and perhaps ought no longer to be accepted.

Ibrāhīm's migration from Balkh to Syria is well attested, and the many different "conversion" legends explain his motive for it. However, another interesting possibility is opened up by a brief reference in Ibn ʿAsākir (168); it reports that "Ibrāhīm b. Adham left Khurāsān with Djahḍam, fleeing from Abū Muslim, then he went to live in the Thughūr ...". Al-Bukhārī (iv/1, 23) supplies corroboration that Djahḍam [b. ʿAbd Allāh, of al-Yamāma] left Khurāsān at this time, and there would be no chronological inconsistency between the year of the revolt of Abū Muslim [*q.v.*]—129/747—and what is known of Ibrāhīm's life. Space does not permit full discussion of this question here; suffice it to say that a study of the material available discloses no reason for rejecting this account in Ibn ʿAsākir.

So much for the literature in Arabic. The literature on Ibn Adham underwent certain changes when it passed into other languages: much of the factual material was lost, while the more legendary and fanciful themes were taken over and often greatly embellished. This process can be observed in Persian, by far the richest source being Farīd al-Dīn ʿAṭṭār's *Tadhkirat al-awliyāʾ* [see ʿAṬṬĀR]; much of the literature on Ibrāhīm in Indian and Indonesian languages seems to have come via Persian. The non-Arabic sources are of almost no value as sources of factual data: certain seemingly authentic details (e.g. the day and month of Ibrāhīm's death in Persian sources, the names given to certain individuals in Malay sources) can only be imaginary. Another feature of the non-Arabic literature is the occurrence of full-length autobiographies, as opposed to anecdotes, round the figure of Ibn Adham, sometimes preceded by an account of his father, Adham. Such highly embellished biographies have been written in Turkish, by Darwīsh Ḥasan al-Rūmī, known only from an abridgement, or collection of excerpts, in Arabic; in Urdu, by a Muḥammad Abu'l Ḥasan; in "Cashmiri language"—but the manuscript seems to have disappeared; and in Malay, possibly to be attributed to a Shaykh Abū Bakr from Ḥaḍramawt. A published abridgement of the Malay version seems to be the source for short versions in Javanese, Sundanese and Bugis. Besides these accounts, anecdotes of Ibrāhīm b. Adham can be found scattered through Islamic, particularly Ṣūfī, literature. No doubt Ṣūfī Orders have played their part in perpetuating his memory; the author knows of no evidence that the Adhamiyya Order, of which Ibrāhīm is the eponym (though of course not the founder), exists at the present time.

Bibliography: Four brief early sources (in Arabic): al-Bukhārī (d. 256/870), *Kitāb al-Taʾrīkh al-kabīr*, Ḥaydarābād 1361, i/1, 273; Ibn Ḥibbān al-Bustī (d. 354/965), *Kitāb Mashāhīr ʿulamāʾ al-amṣār*, ed. Fleischhammer, Cairo/Wiesbaden 1959, 183; *Aghānī*[1], xii, 111, 113; al-Kalābādhī (d. circa 385/995), *Kitāb al-Taʿarruf*, ed. A. J. Arberry, Cairo 1934, 108 (translated A. J. Arberry, *The doctrine of the Ṣūfīs*, Cambridge 1935). A manifestly legendary flavour appears for the first time in al-Sulamī (d. 412/1021), *Kitāb Ṭabaḳāt al-Ṣūfiyya*, ed. J. Pedersen, Leiden 1960, 13 ff.

By far the most informative sources are Abū Nuʿaym al-Iṣfahānī (d. 430/1038), *Ḥilyat al-awliyāʾ*, Cairo 1937-8, vii, 367-95, viii, 3-58, and Ibn ʿAsākir (d. 571/1176), *al-Taʾrīkh al-kabīr*, Damascus 1330, ii, 167-96; the sayings and anecdotes recorded by Abū Nuʿaym give the best insight into Ibrāhīm's character and personality. The richest source in Persian is Farīd al-Dīn ʿAṭṭār's *Tadhkirat al-awliyāʾ* (ed. R. A. Nicholson, London and Leiden 1905, i, 85-106); translations of relevant portions of this have been supplied by A. Pavet de Courteille, J. Hallauer, Claud Field, Bankey Behari and A. J. Arberry in different publications. For an example of works in Persian composed in India see Allāh Diyah ... Čishtī al-ʿUthmānī (d. after 1658 AD), *Siyar al-aḳṭāb*, Lucknow 1877, 29-45.

On the Arabic abridgement of the Turkish biography see W. Ahlwardt, *Die Handschriften ... zu Berlin*, viii, Berlin 1896, 47-9; on the Urdu poem see Garcin de Tassy, *Histoire de la littérature hindouie et hindoustanie*, i, Paris 1870, 101; on the Malay version see *Studies in Islam*, v/1, New Delhi 1968, 7-20.

Useful compilations of data on Ibn Adham can be found in an article by R. A. Nicholson in *ZA*, xxvi (1912), 215-20; in H. Ritter's *Das Meer der Seele*, Leiden 1955 (see index); and under IBRĀHĪM B. ADHAM in *EI*[1]. For reference to pictorial representations of this saint see W. G. Archer, *Indian painting in the Punjab Hills*, London 1952, 79, 83, 84, 92. (RUSSELL JONES)

IBRĀHĪM B. ʿALĪ [see AL-SHĪRĀZĪ].

IBRĀHĪM B. ʿALĪ B. ḤASAN AL-SAḲḲĀʾ, Egyptian teacher and preacher, whose father's family came from the village of Shabrākhūm (formerly the *markaz* of Zifta, now that of Ḳuwaysna in Lower Egypt). He himself was born in 1212/1797 in Cairo, where he was to spend his whole life. After he had followed the course of studies at the *kuttāb* and then at al-Azhar (Shāfiʿī rite) until 1234/1819, his whole career was spent as a teacher at al-Azhar. His biographers give the titles of his works and mention his zeal for work and for reading, but in fact little is known of his life, since the history of the members of al-Azhar in the 19th century has still to be written, and the researches of Mme. ʿAfāf Luṭfī Sayyid are only now beginning to provide information on this subject. He owed his fame to his gifts as an orator, being preacher at al-Azhar Mosque for over twenty years. He preached sermons on all the customary occasions and celebrations and gave

an oration in Arabic at the ceremony of the opening of the Suez Canal (Port Said, 16 November 1869, according to ʿAbd al-Raḥmān Rāfiʿī, *ʿAṣr Ismāʿīl*, i, 102). His *Ghāyat al-umniyya fi 'l-khuṭab al-minbariyya* (lith.) is a collection of sermons for all the Fridays and feast days of the year and for some extraordinary occasions (eclipses, etc.): it has a certain interest for the study of religious feeling in the 19th century. He performed the Pilgrimage in 1263/1847. On 15 Ramaḍān 1280/23 February 1864 he was granted a pension of 2,020 piastres (Abdin Palace archives, communicated by Mme. ʿAfāf Luṭfī Sayyid). He was an invalid for the last ten years of his life and died on 14 Djumādā II 1298/14 May 1881, being given a semi-official funeral.

His grandson (through his daughter) Ḥasan b. Muḥammad al-Saḳḳāʾ, born in 1262/1846, was also an *ʿālim* and preacher at al-Azhar. He died on 24 Djumādā I 1326/24 June 1908 and was buried near his grandfather.

Bibliography: Ziriklī, *Aʿlām*, i, 48; Aḥmad al-Ḥusaynī, *Muḳaddimat murshid al-anām li-birr umm al-Imām* (MS Cairo, Dār al-kutub, fiḳh shāfiʿī no. 1522, ii, 638-48, 675); Brockelmann, II, 490, S II, 747 (incomplete list of works, see also the two following references); ʿAlī Bāshā Mubārak, *al-Khiṭaṭ al-djadīda*, xii, 118; *al-Muʿdjam al-aṣghar li-tarādjim wa-muʾallafāt ʿulamāʾ al-Azhar* (manuscript catalogue of the works by members of al-Azhar existing in the library of al-Azhar in Cairo), notice no. 27. For the members of al-Azhar in general, see two articles by Mme. ʿAfāf Luṭfī Sayyid: *The role of the Ulama in Egypt during the early nineteenth century*, in P. M. Holt (ed.), *Political and social change in modern Egypt*, Oxford 1968, and *The beginning of modernization among the rectors of al-Azhar*, in W. R. Polk and R. L. Chambers (ed.), *The beginning of modernization in the Middle East: the nineteenth century*, Chicago 1968. (J. Jomier)

IBRĀHĪM B. AL-**ASHTAR**, son of the famous Mālik b. al-Ḥārith al-Nakhaʿī [see AL-ASHTAR] and himself a soldier attached to the ʿAlid party. It is said that he had already fought at Ṣiffīn [*q.v.*] in the ranks of ʿAlī, but his historical importance is based on his action in support of al-Mukhtār b. Abī ʿUbayd [*q.v.*]. In fact he seems to have hesitated before joining the agitator, and the chroniclers themselves consider that it was necessary for the latter to forge a letter which purported to be written by Muḥammad ibn al-Ḥanafiyya to Ibrāhīm before the latter agreed to recognize al-Mukhtār as the agent of ʿAlī's son. Ibn al-Ashtar, whose name is mentioned together with that of the famous *Khashabiyya* ([*q.v.*] and not *Ḥusayniyya* as might be supposed from their appeal to exact vengeance for al-Ḥusayn b. ʿAlī), is famous for the defeat which he inflicted on the Umayyad troops and for the fact that he killed with his own hand ʿUbayd Allāh b. Ziyād [*q.v.*] and some other important adversaries, during the battle fought at al-Djāzir, near al-Madāʾin, on 10 Muḥarram 67/6 August 686; the heads of the victims were sent to al-Mukhtār, who in his turn sent them to ʿAbd Allāh b. al-Zubayr.

After the death of al-Mukhtār (14 Ramaḍān 67/3 April 687) during an attempt at a sortie, during the siege of Kūfa by the troops of Muṣʿab b. al-Zubayr and in the absence of Ibn al-Ashtar (who had been sent by his leader to al-Mawṣil), the Zubayrid party received the support of this brave general; in spite of the efforts of ʿAbd al-Malik b. Marwān to detach him from his enemies, he remained faithful to them, and it was while fighting in the ranks of Muṣʿab that he was killed at Maskin, in Djumādā I 72/October 691, on the eve of the battle of Dayr al-Djāthaliḳ [*q.v.*]; al-Masʿūdī wrote a striking description of the last moments of Ibn al-Ashtar, whose body, sent over to the enemy, was later burned.

Ibrāhīm b. al-Ashtar is sometimes confused with Abū ʿImrān Ibrāhīm b. Yazīd b. Ḳays al-Nakhaʿī, a *faḳīh* and traditionist of Kūfa (50-96/670-715); see Ibn Ḥadjar, *Tahdhīb*, s.v.

Bibliography: Ṭabarī, index; Ibn al-Athīr, *sub annis* 67, 72; Balādhurī, *Ansāb*, index; Masʿūdī, *Murūdj*, v, 222, 223, 224-5, 242-6; Ibn al-Kalbī-Caskel, *Djamhara*, tab. 264 and Register, s.v.; *Aghānī*, Beirut ed., xvii, 252; *Dāʾirat al-maʿārif*, ii, 122-3. (Ed.)

IBRĀHĪM B. **DHAKWĀN** AL-ḤARRĀNĪ, vizier of the ʿAbbāsid caliph al-Hādī. The caliph, on his accession, had appointed as vizier and chamberlain the powerful al-Rabīʿ, but he soon replaced him by Ibrāhīm al-Ḥarrānī, who had been his adviser when he was governor of Djurdjān. Some historians however do not give Ibrāhīm the title of vizier, but refer to him only as director of finance.

Bibliography: D. Sourdel, *Vizirat*, index. (D. Sourdel)

IBRĀHĪM B. **HILĀL** [see AL-ṢĀBIʾ].

IBRĀHĪM B. **KHĀLID** [see ABŪ THAWR].

IBRĀHĪM B. AL-**MAHDĪ**, ʿAbbāsid prince, born end of 162/July 779, d. in Ramaḍān 224/July 839. The son of the caliph al-Mahdī [*q.v.*] and of a concubine of Daylamī origin named Shikla, he was in Baghdād at the time when the caliph al-Maʾmūn [*q.v.*], who was then living at Marw, nominated as his successor ʿAlī al-Riḍā. The inhabitants of Baghdād and the ʿAbbāsid aristocracy, in revolt against this decision which seemed to them to be contrary to the legitimist principle established by the first caliphs of the dynasty, then rejected the authority of al-Maʾmūn and proclaimed in his place, as the caliph, his uncle Ibrāhīm, who took the regnal name of al-Mubārak and received publicly the usual oath of allegiance in the Great Mosque on 5 Muḥarram 202/24 July 817. Ibrāhīm's reign was in fact only a short one; revolts broke out at first within the army, then his generals Saʿīd b. Sadjūr and ʿĪsā b. Muḥammad were beaten near Wāsiṭ on 26 Radjab 202/7 February 818 by al-Ḥasan b. Sahl [*q.v.*], governor of ʿIrāḳ in the name of al-Maʾmūn. After their defeat ʿĪsā openly went over to al-Maʾmūn, while other leaders worked in secret to prepare for his return. When al-Maʾmūn decided to return to Baghdād, Ibrāhīm had to renounce his claims; he resigned from office in Dhu 'l-Ḥidjdja 203/June 819, shortly before the definitive return of the caliph, who entered the capital on 14 Ṣafar 204/11 August 819. Ibrāhīm succeeded in hiding for several years, and it was only during the year 210/825-6 that his retreat was discovered and he was put in prison, to be in fact pardoned soon afterwards.

Ibrāhīm b. al-Mahdī, who had become drawn into a risky adventure, was not well suited for political responsibilities. He was a cultured man, interested in singing and music. From 210/825-6 till his death, he led, at Baghdād then at Sāmarrā, the life of a poet-musician, at the mercy of the moods of his patrons, eventually playing at the court the role of an official panegyrist.

Bibliography: Barbier de Meynard, *Ibrahim fils de Mehdi*, Paris 1869 (offprint from *JA*); D. Sourdel, *Le vizirat ʿabbāside*, index; Ṭabarī, iii, index; Yaʿḳūbī, index; Ibn Ṭayfūr, *Kitāb Baghdād*,

IBRĀHĪM B. MASʿŪD [see GHAZNAWIDS].

IBRĀHĪM B. AL-MUDABBIR [see IBN AL-MUDABBIR].

IBRĀHĪM B. MUḤAMMAD B. ʿALĪ B. ʿABD ALLĀH B. AL-ʿABBĀS ABŪ ISḤĀḲ, better known as Ibrāhīm al-Imām. Born in al-Ḥumayma in 82/701-2, the son of a freedwoman, he was brought up with his brother, Mūsā, and his half-brothers Abu 'l-ʿAbbās, Abū Djaʿfar and al-ʿAbbās.

When the pro-ʿAbbāsid *daʿwa* formed round his father it had its headquarters in Kūfa among the Ḥārithī tribe of Banū Musaliyya and its *mawālī*, but soon transferred its activity to Khurāsān while maintaining the connexion with Kūfa and al-Ḥumayma. The tendency of Muslim chroniclers to identify a movement with its leader and give him the credit for its achievements makes it difficult to assess the part played by certain figures of the ʿAbbāsid revolution. In the new militant phase which began when he took over on his father's death in 125/742-3, Ibrāhīm, with his practical approach, his generosity and his popularity among the Hāshimīs, seemed to be the man to meet the demands of the hour. Nevertheless, the role of *dāʿīs* such as Abū Hāshim Bakīr b. Māhān and Sulaymān b. Kathīr al-Khuzāʿī, who had been working for the *daʿwa* since the days of Muḥammad, must not be forgotten. In that very year in Mecca several *dāʿīs* urged Ibrāhīm to proclaim the rising, but in vain. In 127/744-5, on the advice of the dying Bakīr, Ibrāhīm al-Imām appointed the latter's son-in-law, Abū Salama Ḥafs b. Sulaymān, chief *dāʿī* in Kūfa.

Realizing that the situation had come to a head, Sulaymān al-Khuzāʿī requested Ibrāhīm through Abū Salama to send a representative to lead the movement in his name. Only when Sulaymān al-Khuzāʿī and others declined did his choice fall, in 128/745-6, on his *mawlā* Abū Muslim [*q.v.*], who was ordered to remain in constant touch with Abū Salama and obey the orders of Sulaymān al-Khuzāʿī. That he received from Ibrāhīm instructions to kill all Arabs indiscriminately is not unanimously agreed by the historians. This allegation, not mentioned by several early historians and not in harmony with the tactics and circumstances of the ʿAbbāsid *daʿwa*, is probably due to anti-ʿAbbāsid propaganda. Probably under the impression that Ibrāhīm would send a man from his own ʿAbbāsid family, Sulaymān al-Khuzāʿī was at first reluctant to accept Abū Muslim; he yielded later to persuasion, but without compromising his position, so that every important decision remained his. Though the ʿAbbāsid revolution was a complex phenomenon, the main appeal seems to have been made to the Arabs, especially in Marw and its villages. The *dāʿīs* realized that the Arabs held the lever of power and constituted the only striking-force in Khurāsān, and that to win them over was to seize power. The *dāʿīs* could not act until the struggle between Naṣr b. Sayyār and Ibn al-Karmānī had reached a stalemate and Arab tribesmen adhering to both factions were disgruntled and wanted change. In this nucleus of the ʿAbbāsid *daʿwa* the Yamanī partisans invited their fellow-tribesmen to join the movement, as did the Rabīʿīs and the Muḍarīs (*Akhbār al-ʿAbbās* ..., fol. 118b.). Discontented Arabs generally joined in the protest against Umayyad fiscal policy, by which taxes were imposed on Arab settlers and collected through the *dihḳāns* [*q.v.*], and against Umayyad military policy, which kept the Muḳātila in the frontier area for prolonged periods (i.e. *Tadjmīr al-buʿūth*), while at the same time demanding an increased share in the *ghanīma* (Shaʿbān, *The social* ... *background* ..., 140 ff.).

Upon Ibrāhīm's orders, the rising was launched publicly on 15 Ramaḍān 129/30 May 747. Abū Muslim entrenched himself in the Khuzāʿī village of Safidhandj, won over the Yamanī ʿAlī b. al-Karmānī by recognizing him as governor of Khurāsān, and used him subsequently to paralyse the activities of the Khāridjī Shaybān al-Ṣaghīr so that the ʿAbbāsid partisans found it easy to drive Naṣr b. Sayyār out of Marw. Having gained control of Khurāsān, Ibrāhīm appointed Ḳaḥtaba b. Shabīb al-Ṭāʾī commander of the army of Khurāsān, which was advancing into ʿIrāḳ.

It was at that very moment when the ʿAbbāsid cause was prospering and advancing westwards that Ibrāhīm was arrested in al-Ḥumayma. Accounts vary on how Marwān II succeeded in tracing the head of the secret organization. Ibrāhīm's arrest was probably due to Naṣr's efforts. He was imprisoned in Ḥarrān, where he died in Muḥarram 132/August 749, allegedly either murdered or poisoned by Marwān's orders. Possibly, however, he fell victim to the plague which ravaged Syria in that year. His death at a critical moment left the stage to two powerful rival *dāʿīs*, Abū Salama and Abū Muslim. The rivalry between them seems to have played a part in saving the caliphate for Ibrāhīm's heir and brother Abu 'l-ʿAbbās [*q.v.*]. Ibrāhīm's sons, ʿAbd al-Wahhāb and Muḥammad, do not seem to have aspired to the caliphate, but to have devoted their lives to the *djihād* against the Byzantines and the pilgrimage to Mecca.

Bibliography: Of primary importance for a better understanding of Ibrāhīm and his time are the still unpublished works such as the relevant parts of Balādhurī's *Ansāb al-ashrāf*, MS Istanbul Aşir Ef. 597-8, and MS Paris, fols. 768a-775a; the anonymous *Akhbār al-ʿAbbās* ... *wa-wildihi*, MS in the Institute of Higher Islamic Studies, Baghdad, fols. 113b-203b, throwing light on the secret dealings of the ʿAbbāsid propaganda; Ibn Aʿtham al-Kūfī's *Futūḥ*, MS Istanbul, Aḥmed III 2956, invaluable for its information on the Arab settlers in Khurāsān; Abū Zakariyyāʾ al-Azdī's *Taʾrīkh al-Mawṣil*, MS Chester Beatty, fols. 38 ff., a local history with a universal tendency, which contains brief but illuminating information on Arab support for the ʿAbbāsids. These works clarify certain vague or brief accounts in Ṭabarī (see index), otherwise one of the important sources on Ibrāhīm. Other relevant works are: Yaʿḳūbī, *Taʾrīkh*, ii, 393, 398 f., 409 f.; Djāḥiẓ, *Faḍl banī Hāshim*, ed. Sandūbī, 79; Pseudo-Ibn Ḳutayba, *al-Imāma wa 'l-siyāsa*, ii, 221 f., 217 f.; Dīnawārī, 338 ff.; 344-6, 357; *Fragmenta hist. arab.*, ed. De Goeje, 183-98; Masʿūdī, *Murūdj*, vi, 61, 69 ff., 89, 97 f.; idem, *Tanbīh*, 338-9; P. A. Gryaznevič (ed.), *Arabskiy Anonim XI veka*, Moscow 1960, fols. 255b, 284a, 289b, 295a; see also Ibn Saʿd, *Ṭabaḳāt*, viii, 60; *Aghānī*³, ii, 74. Later historians draw mainly on these earlier ones when writing on the period. However, useful additional data will be found in Balʿamī, tr. H. Zotenberg, 1867; Ibn al-Athīr, v (index); Ibn ʿAsākir, *Taʾrīkh Dimashḳ*, ii, 287 ff., 291, 292; Dhahabī, *Taʾrīkh al-Islam* ..., MS British Mus., fols. 4a-5b; Ibn Khallikān, *Wafayāt*, Eng. tr. De Slane, i, 575-6, ii, 103; Maḳrīzī, *al-Nizāʿ* ..., p. 5; idem, *Muntakhab al-tadhkira*, MS

Paris ar. 1514, fols. 88b-89a; *Akhbār al-duwal al-munkaṭiʿa*, MS British Mus. 3685, fol. 101b; Ibn al-Dāya, *Mukāfāt*, Cairo 1914, 79; Ibn Khaldūn, *Muḳaddima*, Cairo 1957, i, 579; idem, *ʿIbar*, iii, 217 ff., 253, 278; al-Ḳalḳashandī, *Maʾāthir al-ināfa* ..., ed. A. Farrādj, Kuwait 1964 (index); unidentified MS attributed to Ibn al-Djawzī, British Mus., Add. 7320, fols. 80-92.

IBRĀHĪM B. SAYĀBA, minor poet of the second half of the 2nd/8th century who died circa 193/809. Of obscure origin and a *mawlā* of the ʿAbbāsids, he held, according to Ibn al-Muʿtazz, the office of secretary to al-Mahdī but, having once been suspected of *zandaḳa*, he was dismissed and obliged to beg for a living. Like so many of his contemporaries, he led a disorganized and even dissolute life, but he was not lacking in wit, to judge by the anecdotes of which he is the hero. Ibn al-Muʿtazz described him as a born (*maṭbūʿ*) poet, while the author of the *Aghānī* has a different opinion of him: according to him, he wrote verses of little value which Ibrāhīm al-Mawṣilī and his son Isḥāḳ set to music out of friendship towards him, so that he acquired a certain degree of fame and succeeded in becoming acquainted with persons in high society; he was in fact known to al-Faḍl b. al-Rabīʿ after having been on fairly intimate terms with Yaḥyā b. Khālid al-Barmakī, to whom he addressed notably (it is not clear in what circumstances) an epistle of which al-Djāḥiẓ (*Bayān*, iii, 215) states that all the inhabitants of Baghdād at that time knew it by heart.

Bibliography: Djāḥiẓ, *Bayān*, and *Bukhalāʾ*, indexes; Djahshiyārī, 203 (incorrectly: Ibrāhīm b. Shabāba); Ibn Ḳutayba, *ʿUyūn al-akhbār*, i, 293; Ibn al-Muʿtazz, *Ṭabaḳāt*, 36-7; *Aghānī*, xi, 5-8 (Beirut ed., xii, 80-4). (ED.)

IBRĀHĪM B. SHĀHRUKH (ABU ʾL-FATḤ MĪRZĀ IBRĀHĪM SULṬĀN BAHĀDUR), Tīmurid prince, second son of Shāhrukh [*q.v.*], born 28 Shawwāl 796/26 August 1394. In 812/1409, Ibrāhīm was appointed governor of Balkh and Ṭukhāristān up to the borders of Kābul and Badakhshān, and in 817/1414 he was appointed governor of Fārs, a position which he held for over twenty years up to his death on 4 Shawwāl 838/3 May 1435. In 823-4/1420-1, and in 832/1429, he took part in Shāhrukh's campaigns in Ādharbāydjān. In 824/1421 he annexed Khūzistān to the Tīmūrid empire.

Ibrāhīm had two sons: Ismaʿīl (died *ca.* 835/1432), and ʿAbd Allāh, born 27 Radjab 836/19 March 1433, who, though still an infant, succeeded his father as governor of Fārs, and was later appointed governor of Samarḳand.

Bibliography: ʿAbd al-Razzāḳ b. Isḥāḳ Kamāl al-Dīn Samarḳandī, *Maṭlaʿ-i saʿdayn wa madjmaʿ-i baḥrayn* (ed. Muḥammad Shafīʿ), ii/1, Lahore 1941, 149-50, 285, 400 ff., 470-1, 604 ff.; ii/2-3, Lahore 1949, 642, 648, 650, 675-6; *ibid.*, London, School of Oriental and African Studies MS. no. 46684, f. 92a. (R. M. SAVORY)

IBRĀHĪM B. SHĪRKŪH, AL-MALIK AL-MANṢŪR NĀṢIR AL-DĪN IBRĀHĪM B. AL-MALIK AL-MUDJĀHID ASAD AL-DĪN SHĪRKŪH II, cousin of Salāḥ al-Dīn (Saladin), succeeded his father Shīrkūh [*q.v.*], prince of Aleppo and Damascus, in Radjab 637/January-February 1240. When he became master of the province of Ḥimṣ, to which at that time there belonged Tadmur, Raḥba and Māksīn, the pressure of the Khuwārizmians in northern Syria was very great. When Ibrāhīm learned of the defeat of the Aleppan army at Buzāʿa in Rabīʿ II 638/October-November 1240, he set off northwards with reinforcements of troops from Damascus. In Radjab 638/January 1241, the Khuwārizmians marched against Aleppo but did not attack the town and, after unsuccessful attempts to encircle it, withdrew towards the east. Ibrāhīm overtook them and defeated them in Shawwāl 638/April 1241; he gained further victories over them in Ṣafar 640/August 1242 and again at the end of 641 and beginning of 642/April-June 1244. The Khuwārizmians seem to have been driven out of Syria.

Ibrāhīm b. Shīrkūh became involved in the family quarrels between Ṣāliḥ Ayyūb of Cairo and Ṣāliḥ Ismāʿīl of Damascus. In the spring of 642/1244 hostilities broke out between Cairo and Damascus; and Nāṣir Dāwūd, the Ayyūbid prince of Karak, and Ibrāhīm allied themselves with Ṣāliḥ Ismāʿīl, who had the support of the Knights Templar. Ibrāhīm went in person to ʿAkkā to ratify the agreement with the Franks. The ruler of Egypt, on his side, acquired the services of the Khuwārizmians, who were ready to hire themselves to whoever offered most. On 14 Djumādā I 642/18 October 1244, there took place, to the north-east of Ghazza, the battle of Ḥarbiyya, or Forbie, at which the Franco-Syrian allies were defeated. In the following year, Ṣāliḥ Ayyūb laid siege to Damascus in Dhu ʾl-Ḥidjdja 642/May 1245; six months later the town capitulated and Ismāʿīl received Baʿalbakk in compensation. The Khuwārizmians, dissatisfied with Ṣāliḥ Ayyūb, in 644/1246 offered their services to Ismāʿīl to re-take Damascus. Ibrāhīm b. Shīrkūh and Nāṣir Yūsuf of Aleppo, in the pay of Ṣāliḥ Ayyūb, then set off southwards with a large army. The Khuwārizmians raised the siege of Damascus and moved northwards; they were defeated near the lake of Ḥimṣ on 8 Muḥarram 644/26 May 1246. Ibrāhīm reached Damascus and encamped at Nayrab, to the west of the town, where he became ill and died on 11 Ṣafar 644/28 June 1246. He is buried at Ḥimṣ beside his father. His son, Abu ʾl-Fatḥ Mūsā, succeeded him, with the titles of al-Malik al-Ashraf Muẓaffar al-Dawla, and recognized the authority of Ṣāliḥ Ayyūb.

(N. Elisséeff)

IBRĀHĪM b. al-SINDĪ b. Shāhak, *mawlā* of the ʿAbbāsids, who seems to have defended their cause with talent and perseverence, but of whose life very few precise details are known. His father, al-Sindī b. Shāhak, whose origins are obscure, was probably a former slave from Sind who had risen to hold important offices; he is said to have been *ḳāḍī* (Ibn Ḳutayba, *ʿUyūn*, i, 70) and governor (*wālī*) in Syria (al-Djāḥiẓ, *Ḥayawān*, v, 393), but his main role seems to have been that of a police officer giving especial allegiance to Hārūn al-Rashīd, who entrusted him in particular with carrying out his decisions concerning the Barāmika [*q.v.*]. It is even possible that after the execution of Djaʿfar al-Barmakī he was in charge of the mint (Father Anastase, *Nuḳūd*, Cairo-Baghdād 1939, 48, 49, 57); he does not seem to have been chief of police strictly speaking, but to have been only a subordinate of the *ṣāḥib al-shurṭa* in a district of Baghdād under al-Rashīd and under al-Amīn, of whom he was a trusted adviser. The poet Kushādjim, Maḥmūd b. al-Ḥusayn b. al-Sindī (d. 330/941-2), was his grandson (*Fihrist*, Cairo, 240; M. Canard, *Sayf al-Dawla*, 291). On al-Sindī, see also Ps.-Djāḥiẓ, *Couronne*, 40; Djahshiyārī, *Wuzarāʾ*, 236-7; Ṭabarī, iii, 281 ff.; Djāḥiẓ, *Ḥayawān*, iv, 423, 425, v, 339, 393; *Fakhrī*, 145; Masʿūdī, *Tanbīh*, ed. Ṣāwī, 302; idem, *Murūdj*, index; Ibn Khallikān, i, 135, 173; Ibn Bābuya, *Ithbāt al-Ghayba*, ed. Möller, 37; D. Sourdel, *Vizirat*, index.

Ibrāhīm b. al-Sindī is known primarily because his friend al-Djāḥiẓ mentions him in several of his works. He describes him (*Bayān*, i, 335) as "an incomparable man: an eloquent orator, a genealogist, *faḳīh*, grammarian and prosodist, traditionist, transmitter of poetry and a poet..., an astrologer and a physician". Al-Djāḥiẓ classes him among the great *mutakallimūn*, but he stresses his knowledge of the dynasty and of the *ridjāl al-daʿwa* (which probably means of the propagandists). In another passage (*Rasāʾil*, ed. Hārūn, 77), he states that Ibrāhīm "defended his masters, declared their titles to fame (*ayyām*), exhorted the people to obey them, teaching them their *manāḳib*" and, by virtue of his eloquence, was "more useful to them than ten thousand drawn swords". Whereas his brother Naṣr (*Bayān*, i, 335) seems to have transmitted faithfully religious and historical traditions, according to al-Djāḥiẓ (*loc. cit.*), Ibrāhīm's reports, based on several transmitters who were well acquainted with the history of the Ḳuraysh and the ʿAbbāsids, contain information different from that which was to be found in al-Haytham b. ʿAdī and Ibn al-Kalbī [*qq.v.*], but which was not embellished (? *muṣawwar*). It would indeed be useful to have more precise information on the propaganda which was current in the middle of the 3rd/9th century. Apart from the data supplied by al-Djāḥiẓ, it is known only that at one time Ibrāhīm held an administrative post at Kūfa (Ibn Ḳutayba, *ʿUyūn*, iii, 121; al-Thaʿālibī, *Thimār*, 355).

(Ch. Pellat)

IBRĀHĪM b. al-WALĪD b. ʿAbd al-Malik, Abū Isḥāḳ, son of the caliph al-Walīd I [*q.v.*] and of a slave (Suʿār in al-Yaʿḳūbī, Dayrā in al-Masʿūdī), was appointed as *walī al-ʿahd* by his brother Yazīd [*q.v.*] three days after the latter succeeded to the caliphate (20 Djumādā II 126/9 April 744). According to al-Ṭabarī, this appointment was made on the insistence of the Ḳadariyya [*q.v.*], who wanted to ensure an heir to the throne who would be favourable to them. When Yazīd succeeded in imposing his authority in Urdunn, Ibrāhīm was appointed governor (*amīr*) of this district. After the death of Yazīd (7 or 19 Dhu 'l-Ḥidjdja 126/20 September or 2 October 744), who, according to an allegation made only by al-Yaʿḳūbī, was thought to have been poisoned by Ibrāhīm, the caliphate of the latter was recognized only in the southern part of Syria; in the north, the inhabitants of Ḥimṣ opposed the entry of his cousin, ʿAbd al-ʿAzīz b. al-Ḥadjdjādj [*q.v.*], whom he had appointed as *amīr*, so that he was obliged to lay siege to the town.

Earlier, on the death of al-Walīd II, Marwān b. Muḥammad [*q.v.*], the governor of Armenia and of Ādharbaydjān, had gone with an army into Djazīra and had received there in secret the *bayʿa* of the inhabitants. He planned, in order to avenge the murder of al-Walīd, to march against Yazīd, but instead concluded a peace with the new caliph. Following this agreement, the reward for which was the governorship of the Djazīra in addition to Armenia and Ādharbaydjān, Marwān was preparing to return to Armenia, when the death of Yazīd and Ibrāhīm's accession to the throne led him to continue his march. He entered Syria at the head of the *djund*s of Djazīra and Armenia to depose the new caliph. At Ḥalab (according to Ibn al-Athīr at Ḳinnasrīn), he defeated Ibrāhīm's two brothers, Bishr [*q.v.*] and Masrūr, and took them prisoner; then he raised the siege of Ḥimṣ begun by ʿAbd al-ʿAzīz b. al-Ḥadjdjādj (or, according to some sources, he drove him out of the town, into which he had already gained entry), who fled to Damascus, and received the *bayʿa* of its inhabitants. As Marwān was marching with 80,000 men towards Damascus, Ibrāhīm sent against him an army under the command of his cousin Sulaymān b. Hishām b. ʿAbd al-Malik. In the battle which followed at ʿAyn al-Djarr, a place near Damascus, this army suffered a crushing defeat (7 Ṣafar 127/18 November 744) and its leader fled to Damascus. The *amīr*s of Damascus decided to kill the two sons of al-Walīd II, al-Ḥakam and ʿUthmān, who were prisoners, because Marwān, before the battle of ʿAyn al-Djarr, had proposed to recognize their right to the caliphate (as sons of al-Walīd II) and they feared that if one of them became caliph he would take revenge on the murderers of his father. After the death of these claimants to the throne, the situation had changed, and Marwān was able from then on to advance his own candidature. When he approached Damascus, the inhabitants hastened to swear allegiance to him. The sources differ in their reports of Ibrāhīm's behaviour on Marwān's entry into Damascus: al-Yaʿḳūbī states that he hastened to recognize Marwān as the new caliph (15 Ṣafar 127/26 November 744) in Damascus itself; according to the other historians he fled to Tadmur (Palmyra) with

Sulaymān b. Hishām and it was not until some time afterwards that he asked for and obtained *amān* from Marwān; this earned him the by-name of *al-makhlūʿ*. In any case, from the time that Ibrāhīm gave his support to Marwān, he became a member of the caliph's suite and was treated with respect. He died on the day which marked the end of the Umayyad dynasty, *i.e.*, in the battle of the Zāb [*q.v.*] (11 Djumādā II 132/25 January 750); it is said that his body was found among those of the fugitives who were drowned in the river. There exist also other versions: according to Ibn al-Athīr, he was killed in Syria by ʿAbd Allāh b. ʿAlī [*q.v.*]; according to al-Masʿūdī, Marwān, having seized Damascus, drove Ibrāhīm out and later, having taken him prisoner before the battle of the Zāb, killed him and crucified his body. Al-Dīnawarī states simply that Marwān killed him on the day of his entry into Damascus.

Al-Masʿūdī does not list Ibrāhīm's reign in the series of the Umayyad caliphates, evidently because his accession to the throne had not been unanimously recognized. Indeed it must be emphasized that Ibrāhīm did not play an important role in the period of anarchy which followed the death of al-Walīd; the sources are completely silent on him before his accession to the caliphate and they do not attribute any importance to him during his brief reign.

IBRĀHĪM B. YAʿḲŪB AL-ISRĀʾĪLĪ AL-ṬURṬŪSHĪ, Spanish Jewish traveller, born in Tortosa, to judge by his *nisba*, is known for having made, *circa* 354/965, a long journey in western, central and eastern Europe. It is not clear why he made this tour: it has been suggested that he was trading in horses or in slaves, and it is not impossible that he was on an official intelligence mission for the Umayyad caliphate of Spain, he being chosen for this in view of the help which he could expect to receive from the Jewish colonies in Europe.

Similarly, all that is known of the route of the journey and of some of the places where he stopped is conjecture. Taking account of the details given in the itineraries in the Slav countries, and thereby correcting slightly the schema advanced in *Annales E. S. C.* (see *Bibl.*), the following tentative itinerary may be accepted: Bordeaux, Noirmoutier, Saint-Malo, Rouen, Utrecht, Aix-la-Chapelle, Mainz, Fulda, Soest, Paderborn, Schleswig, Magdeburg (where he was received at the court of the emperor Otto I), Prague, Cracow, Augsburg, Cortona and Trapani. This much is definite, that Ibrāhīm's journey covered, to use his own expression, two main groups of countries: Frankish and Slav, the former occupying the traditional Latin region of western Europe: Italy, countries to the west of the Rhine and southern Germany.

It must be supposed, in view of the number of times Ibrāhīm is cited by later writers, that there once existed an account of his journey, now lost and known mainly through al-Bakrī [*q.v.*] and al-Ḳazwīnī [*q.v.*], either directly or through the intermediary of al-ʿUdhrī [*q.v.*]. Al-Bakrī used Ibrāhīm as a source for the Slav countries of Europe, chiefly Poland, Bohemia and the Slav Obodrites of Schwerin-Mecklenburg, in addition to some details on Spain: an indication either that Ibrāhīm's work was more than a simple account of the European journey, or that he wrote other works besides this one. Al-Ḳazwīnī has preserved, for the Slav countries, the passages concerning Poland and the "Town of Women"; he is particularly indebted to Ibrāhīm, whether he cites him or not, or cites him through al-ʿUdhrī, for a collection of notes on the towns of western and southern Europe.

The date of the original work and the quality of the fragments which survive, notably those about the Slavs, show how greatly to be regretted is the loss of so much of it. To judge by these fragments, the account of the journey must have combined direct and oral information. Most famous among passages of the former type are the description of the abbey of Fulda, that of the salt-pans of Soest, the reflections on commerce at Augsburg or at Prague, the indication of the fact that there were found as far away as Germany Sāmānid *dirhams* struck at Samarḳand in 301-2/914-5. The oral information naturally includes more legend, but it is nevertheless often of considerable value, as is shown by the information collected on the Bulgars or the details concerning whale-fishing off the coast of Ireland. Finally, to reverse the point of view, the work provides an excellent illustration of how the developing Europe of that period could appear to a foreign visitor.

The fragments of Ibrāhīm b. Yaʿḳūb on the Slavs have been edited and translated (into Polish and Latin with very full documentation) by T. Kowalski (see *Bibl.*). A French translation of the passages on western Europe has been made by A. Miquel (see *Bibl.*). A French translation of the whole by M. Canard is in preparation.

IBRĀHĪM B. ʿALĪ AL-AḤDAB, Ḥanafī *shaykh* of Lebanon (born at Tripoli in 1243/1827, died at Beirut on 22 Radjab 1308/3 March 1891), who is a distinguished representative of Arabic culture in the 19th century. After following the traditional studies, he became a teacher (1264-8/1848-52), then went to Istanbul (where he addressed a long panegyric to the sultan ʿAbd al-Madjid), was for several years adviser to Saʿīd Djunbulāṭ and tutor to his children, and finally became a magistrate

in Beirut in 1276/1859. A collaborator in the revue *Thamarāt al-funūn* and an important figure in a kind of literary circle, he engaged from this time onwards in an intense literary activity which produced several collections of poems, works of *adab* and of grammar, *rasāʾil*, *maḳāmāt*, plays, newspaper articles, etc. Part of his work seems to be lost; other works are still in manuscript, but a dozen or so have been published, in particular the *Farāʾid al-laʾāl fī Madjmaʿ al-amthāl*, a poetic version of the collection of proverbs by al-Maydānī (Beirut 1312/1894, 2 vols.). The list given by Brockelmann (S III, 533) is incomplete and inaccurate (in particular the *Tafṣīl al-yāḳūt*... is the work of Ibrāhīm's son Saʿīd), but that of Djabbūr ʿAbd al-Nūr (*Dāʾirat al-Maʿārif*, vii, 170-4) seems to be nearly exhaustive. Though he was overshadowed by the great names of the *Nahḍa* [*q.v.*], Ibrāhīm al-Aḥdab nevertheless played a significant role because of his sound Arabic culture, which enabled him to uphold tradition while it did not prevent his following, though still tentatively, the movement of renewal which was a feature of the 19th century.

Bibliography: Introduction to the *Farāʾid al-laʾāl* by the author's two sons, Saʿīd and Ḥusayn; ʿAbd al-Razzāḳ al-Bayṭār, *Ḥilyat al-bashar fī taʾrīkh al-ḳarn al-thālith ʿashar*, i, Damascus 1961; the bibliographical works of Ziriklī, Kaḥḥāla, and Dāghir; the most extensive study is that mentioned above by Dj. ʿAbd al-Nūr, who is preparing (1967) a monograph entitled *al-Shaykh Ibrāhīm al-Aḥdab*. (ED.)

IBRĀHĪM BEY AL-KABĪR AL-MUḤAMMADĪ (i.e., the *mamlūk* of Muḥammad Bey Abu 'l-Dhahab) was raised to the beylicate in 1182/1768-9, and held the appointments of *amīr al-ḥadjdj* in 1186/1772-3 and *daftardār* in 1187/1773-4. When Abu 'l-Dhahab went on campaign against Shaykh Ẓāhir al-ʿUmar (Muḥarram 1189/March 1775), he left Ibrāhīm as his deputy in command of Cairo. On his death, the ascendancy in Egypt passed to his retainers (the Muḥammadiyya) headed by Ibrāhīm and Murād Bey, the former becoming *shaykh al-balad*. The characters of the two men were strongly contrasted, Murād being headstrong, bold and ruthless, while Ibrāhīm was of a conciliatory but less decisive nature. Murād's plot to assassinate Ismāʿīl Bey, the *khushdāsh* and client of the late ʿAlī Bey [*q.v.*], who had hitherto abstained from the competition for power, produced a faction-fight in Cairo. Ibrāhīm and Murād found themselves abandoned by many of the other grandees, and fled to Upper Egypt, while Ismāʿīl Bey was appointed *shaykh al-balad* (Djumādā II 1191/July 1777). Ismāʿīl was, however, unable to maintain himself in power. Murād and Ibrāhīm re-entered Cairo, and the latter resumed the position of *shaykh al-balad* (Muḥarram 1192/February 1778). The political situation remained unstable, since the Muḥammadiyya owed their return to a conspiracy organized by Ḥasan Bey al-Djuddāwī, the head of the ʿAlawiyya (*i.e.*, the *mamlūks* of ʿAlī Bey). Murād again fomented factional hostility; the ʿAlawiyya were expelled from Cairo and proscribed (Djumādā I 1192/June 1778). The duumvirs, however, failed to dislodge them from Upper Egypt, where they were joined by Ismāʿīl Bey, and in 1195/1781 Murād ceded much of the south to them. Late in 1197/1783 factional struggles among the Muḥammadiyya in Cairo culminated in open hostilities between Murād and Ibrāhīm. In Shawwāl 1198/September 1784 Ibrāhīm was evicted from Cairo, and Murād assumed sole power. They were reconciled, and Ibrāhīm was restored as *shaykh al-balad* in Rabīʿ II 1199/February 1785. Meanwhile the state of security and condition of agriculture in Egypt had seriously declined. The Pilgrimage caravan was ill-provided, and in both 1198/1783-4 and 1199/1784-5 failed to visit Medina. At this point the imperial Ottoman government intervened with the despatch of an expeditionary force to Egypt under Djezāʾirli Ghāzī Ḥasan Pasha [*q.v.*], bearing a demand for arrears of tribute and dues to the Holy Cities, and a formal censure because of the failure of the Pilgrimage caravan to reach Medina. The duumvirs, after vacillation, decided on resistance (21 Ramaḍān 1200/18 July 1786), but their forces under Murād's command were defeated, and on 8 Shawwāl/4 August Ibrāhīm left Cairo. It was entered four days later by Ḥasan Pasha, who summoned Ismāʿīl Bey and Ḥasan Bey al-Djuddāwī from Upper Egypt, and (on 14 Muḥarram 1201/6 November 1786) appointed the former *shaykh al-balad* and the latter *amīr al-ḥadjdj*. Meanwhile Ibrāhīm and Murād in their turn had sought asylum in the south, from which Ḥasan Pasha was unable to evict them. Before leaving Cairo (on 23 Dhu 'l-Ḥidjdja 1201/6 October 1787) he published an imperial order excluding them from Cairo, but permitting them to live in Upper Egypt. A prolonged struggle, between Ismāʿīl on the one hand and Murād and Ibrāhīm on the other, now began. The exactions of the grandees in Cairo and the cutting of communications with Upper Egypt by the rebels contributed to the miserable economic and political condition of Egypt in these years. In Muḥarram 1202/October 1787 and Muḥarram 1205/October 1790 there were popular risings in Cairo. Ismāʿīl Bey's death (Radjab 1205/March 1791) in a great epidemic of plague tipped the balance in favour of Ibrāhīm and Murād, who returned to Cairo in Dhu 'l-Ḳaʿda 1205/July 1791, while Ḥasan Bey al-Djuddāwī fled to Upper Egypt. The restored rule of the duumvirs lasted for seven years, until the French invasion under Bonaparte (Muḥarram 1213/July 1798). The defeat of Murād at Shubrakhīt and Inbāba, followed by the flight of Ibrāhīm to Syria (21 July 1798), marked the end of the duumvirate. Ibrāhīm never regained his ascendancy in Egypt, and was only one of several competitors for power in the interval between the evacuation of the French and the installation of Muḥammad ʿAlī Pasha as viceroy (1801-5). Distrusting Muḥammad ʿAlī, he remained in Upper Egypt when many of the Mamlūk grandees went to Cairo, and thus he escaped the massacre in the Citadel (5 Ṣafar 1226/1 March 1811). He and his companions withdrew into Nubia, and made a permanent encampment (*ordu*, whence the Sudanese place-name al-ʿUrḍi) at the modern Dongola [*q.v.*]. Here, in Djabartī's words, "they cultivated millet and fed on it, wearing the shirts the slave-traders wear in their own country". The news of his death reached Cairo in Rabīʿ II 1231/March 1816.

Bibliography: Djabartī, *ʿAdjāʾib al-āthār* (Būlāḳ ed.); especially the annals for 1189 (vol. i) and 1190-1212 (vol. ii) covering the period of his ascendancy; also vol. iv, pp. 263-4 for his obituary. (P. M. HOLT)

IBRĀHĪM DERWĪSH PASHA (1812-96), Ottoman general, was the son of a certain Ibrāhīm Agha, one of the *aʿyān* [*q.v.*] of Lofča (Lovets, in Bulgaria). Entering the army as a volunteer, he was soon commissioned; he was promoted to *biñbashî* in 1252/1836-7 and to *mü̲shîr* ("general") on 28 April 1862. He was in command of operations in Montenegro [see ḲARADAGH], and in 1865, as commander

of the Fourth Army, accompanied Aḥmad Djewdet Pasha [*q.v.*] in the pacification of the Ḳozan area of the Taurus. After failing to prevent the spread of the revolt in Herzegovina in 1875, he was dismissed. His most illustrious service was performed during the Russo-Turkish war of 1877-8, when, as commander of the army defending Lāzistān, he repeatedly beat off Russian attacks and successfully held Batumi [*q.v.*] until the armistice—the only Ottoman general undefeated in this war. He then occupied a succession of posts: governor of Diyārbakr and of Selānik, Minister of Marine, Chief of the General Staff, and special commissioner to Egypt. He died on 22 June 1896 and is buried by the *türbe* of Sultan Maḥmūd on Divanyolu.

(M. C. Şihabeddin Tekindağ)

IBRĀHĪM EDHEM PASHA, Ottoman Grand Vizier under the sultan ʿAbd al-Ḥamīd II; born probably in Chios in 1818 (?) of Greek parents, he was bought as a slave by Khusrev Pasha [*q.v.*] and sent to France in 1827 to receive technical training. After graduating in Paris as a mining engineer in 1839, he returned to Istanbul and was nominated to the *Shūrā-yi ʿAskerī* (High Military Council) with the rank of Colonel. After serving a few years in Anatolia as chief engineer of mines, he was called to Istanbul in 1263/1847 to be appointed to the Palace army staff. Promoted *Mīrliwā* (Brigadier-general) in 1264/1848 and *Ferīḳ* (Lieutenant-general) three years later, he was removed from his military post in 1271/1855 owing to a palace intrigue, although maintaining his position as a member of the *Medjlis-i Tanẓīmāt* (Council of Reforms), to which he had been nominated in Muḥarram 1271/October 1854. On 26 Rabīʿ I 1273/24 November 1856 he was appointed Minister of Foreign Affairs with the rank of vizier in the cabinet of Muṣṭafā Reshīd Pasha [*q.v.*]. On his dismissal on 8 Ramaḍān 1273/2 May 1857 he returned to the *Medjlis-i Tanẓīmāt*. On 29 Djumādā I 1276/24 December 1859 he became Minister of Commerce in the cabinet of Meḥmed Rüshdü Pasha. Dismissed on 9 Muḥarram 1278/17 July 1861, he was reappointed three times to the same office in the following fifteen years. Meanwhile he served as Minister of Public Works, of Public Instruction, and of Justice, as governor of Tırhala and Yanya, as a member of the *Shūrā-yi Dewlet* (High Council of State) etc. Appointed ambassador to Berlin on 5 Rabīʿ I 1293/31 March 1876 he remained only a few months abroad, being nominated Ottoman deputy delegate to the Conference of Constantinople which was entrusted with the settlement of the Balkan Crisis. His firm attitude at the conference won him the confidence of the new sultan ʿAbd al-Ḥamīd II who appointed him on 9 Dhu 'l-Ḥidjdja/26 December president of the *Shūrā-yi Dewlet* and on 21 Muḥarram 1294/5 February 1877 Grand Vizier in place of Midḥat Pasha [*q.v.*]. His grand vizierate was marked by the opening of the Ottoman Parliament on 19 March and by the rejection of the London Protocol on 9 April, resulting in the Russian declaration of war on the Ottoman Empire. He was dismissed from the Grand Vizierate on 7 Muḥarram 1295/11 January 1878 largely because he had lost the confidence of the Chamber as a result of the defeats of the Ottoman armies fighting the Russians. On 9 Rabīʿ I 1296/3 March 1879 he was nominated ambassador to Vienna and on 20 Rabīʿ II 1300/28 February 1883 he became Minister of the Interior in the cabinet of Küčük Saʿīd Pasha [*q.v.*], to be dismissed finally on 14 Dhu 'l-Ḥidjdja 1302/24 September 1885. He died in Istanbul on 2 Ramaḍān 1310/20 March 1893 and was buried near the mosque of Mihrimāh Sulṭān at Üsküdār.

Ibrāhīm Edhem Pasha did not distinguish himself as an able statesman; he could even be held responsible for the disastrous Turco-Russian war of 1877. Nevertheless his contribution to the modernization of Turkey is worthy of mention. The foundation of a modern printing press (*Maṭbaʿa-i ʿĀmire*) near the Topkapî Palace during his period as Minister of Public Instruction in 1863 and the introduction of the decimal system of measurement into Turkey during his presidency of the Council of Public Works in 1869 are important achievements in this respect. His articles on geology published in the *Medjmūʿa-i Funūn* (1862) greatly helped the diffusion of Western science among the Turkish intellectuals. His sons ʿOthmān Ḥamdī [*q.v.*], Ismāʿīl Ghālib [*q.v.*] and Khalīl Edhem Eldem [*q.v.*] contributed also to the development of arts and scholarship in Turkey.

IBRĀHĪM ḤAḲḲĪ PASHA (1863-1918), Ottoman statesman, diplomat, and Grand Vizier (1910-11), was born in Beshiktāsh. He was the son of Remzī Efendi, who had been *mutaṣarrîf* of Saḳîz (Chios) and President of the Beshiktāsh municipal council. Ibrāhīm Ḥaḳḳī began his secondary education in a local school and then went to the Civil Service Training School (*Mekteb-i Mülkiyye*) where he completed his higher education. At the same time he had been learning French and English from private tutors. He graduated in 1882 and joined the secretariat of the Ministry of External Affairs as an unpaid apprentice. In the following year he was appointed translator at the Palace—translating novels for ʿAbd al-Ḥamīd II—and in 1886 he also began teaching history and law at various institutions in the capital. He was appointed legal adviser to the Sublime Porte in 1894. Thus his talents had brought him into the top ranks of the Ottoman bureaucracy at an unusually young age. As legal adviser he served on numerous administrative commissions at home and on diplomatic missions abroad, acquiring experience in all aspects of public life.

After the Young Turk Revolution, Ḥaḳḳī Bey served brief terms in Meḥmed Kāmil Pasha's cabinet as Minister of Education and Minister of the Interior before he was appointed ambassador to Italy. This was a period of great political instability in Istanbul, marked by the formation and fall of five ministries in the first eighteen months after the revolution.

When Ḥusayn Ḥilmī Pas̲h̲a [*q.v.*] resigned on 28 December 1909, there was speculation as to who would succeed him. Ḥakkī Pas̲h̲a was amongst the candidates under consideration and he was appointed on 12 January 1910 because of his political neutrality, which made him acceptable to the Unionists as well as to the conservatives. Not being a partisan of any political group Ḥakkī Pas̲h̲a was able to bargain with all sides and demand absolute freedom of action in forming his cabinet. One of his first acts as Grand Vizier was to appoint Maḥmūd S̲h̲awkat (Şevket) Pas̲h̲a—the Generalissimo who administered martial law and dominated Turkish politics—Minister of War, thus bringing him under cabinet control.

Ḥakkī Pas̲h̲a's grand vizierate of twenty months was a period of external peace. Internally, however, the conflict between the Committee of Union and Progress [see ITTIḤĀD WE TERAKKĪ D̲J̲EMʿIYETI] and the opposition continued unabated. Ibrāhīm Ḥakkī was a moderating influence inside the country; outside he played an active role, visiting the capitals of Europe in 1910 and discussing various problems with foreign statesmen. He resigned on 30 September 1911 after the Italian ultimatum and declaration of war. He was blamed for permitting the Ottoman Empire to be caught unprepared and diplomatically isolated, and he accepted his responsibility gracefully. Ḥakkī Pas̲h̲a returned to the university, unable to play an active or open political role while his opponents threatened to impeach him for his diplomatic failure with Italy.

However, when the Unionists regained power in January 1913 they decided to place their relations with the Great Powers on a new footing and to find solutions to political and economic problems which embittered these relations. Ḥakkī Pas̲h̲a was sent to London, where he spent the next seventeen months negotiating a settlement. In his capacity as legal adviser to the Porte he also wrote memoranda on the capitulations. In July 1915 Ḥakkī Pas̲h̲a was appointed ambassador to Berlin, the most important diplomatic post at the time. The appointment was significant because the Porte was embarking on a more active policy vis-à-vis her ally Germany. Furthermore the man chosen to inaugurate this change was an ex-Grand Vizier and one of Turkey's most experienced diplomats. It is also significant that a civilian was replacing a soldier (Maḥmūd Muk̲h̲tār Pas̲h̲a). In Berlin Ḥakkī Pas̲h̲a negotiated and helped to draft the Turco-German Treaties in 1917, replacing the capitulations by new legal provisions corresponding to the modern European law of nations. After the Bolshevik Revolution, Ḥakkī was one of the Turkish plenipotentiaries who negotiated and signed the Treaty of Brest-Litovsk in March 1918. He died in Berlin on 29 July 1918 and was buried in the cemetery of Yaḥyā Efendi in Bes̲h̲iktās̲h̲ on 7 August.

Ibrāhīm Ḥakkī Pas̲h̲a's bureaucratic and academic approach to politics is summed up in his comparison of ʿAbd al-Ḥamīd to Louis XI. In 1908 he remarked to a foreign observer: "Louis XI shut Cardinal Balau in an iron cage but he founded the French State as it exists today. Now the incidents of his reign have passed away, but France remains. In the same way, when history comes to consider the reign of Abdul Hamid, she will overlook the little things and recognise that he preserved Turkey as a country" (Allen Upward, *The east end of Europe*, London 1908, 338-9). His attitude towards the Unionists was the same; though he did not join their party or even subscribe to their ideology, he recognized that they alone were capable of leading the country. Though this was a rational approach to politics, it was completely out of touch with the political sentiments of the time. This explains Ḥakkī Pas̲h̲a's lack of success as a politician, but his contribution as an administrator and diplomat was second to none.

IBRĀHĪM AL-**ḤALABĪ** [see AL-ḤALABĪ].

IBRĀHĪM AL-**ḤĀMIDĪ** [see al-ḤĀMIDĪ].

IBRĀHĪM B. ISḤĀḲ, B. IBRĀHĪM B. BIS̲H̲R AL-**ḤARBĪ**, ABŪ ISḤĀḲ, traditionist, jurist and man of letters (198-285/811-98). He was a pupil in *ḥadīt̲h̲* of Aḥmad b. Ḥanbal, which did not prevent al-Subkī from listing him among the S̲h̲āfiʿīs. Among his teachers were the Baṣran Musaddad b. Musarhad, who was always closely linked with Ḥanbalism (Brockelmann, S I, 310), ʿAffān b. Muslim, also a traditionist, and al-Ḳāsim b. Sallām, a man of letters and exegetist. His philological learning often brought him into contact with the grammarian T̲h̲aʿlab as well as with Muḥammad b. ʿAbd al-Wāḥid, a pupil of the latter (Brockelmann, S I, 283). He had as a transmitter also Mūsā b. Hārūn, one of the informants of al-Ṭabarī. He vigorously opposed Muʿtazilism and, in particular, the doctrine of the created Ḳurʾān. This resolute supporter of the *Sunna*, defender of predestination and enemy of the famous vizier Ibn Abī Dūʾād, was a man of great piety, whose asceticism was much admired by his contemporaries. He is said to have carried "patience" and resignation to destiny to the limits of heroism.

Posterity, which devoutly preserved legends about him, attributes to him a large number of works: a *Kitāb Manāsik al-ḥad̲j̲d̲j̲*, a *Kitāb al-Hadāyā*, and *Kitāb al-Ḥammām*, as well as twenty-four collections of *ḥadīt̲h̲s*. He is reported to have collected, in addition to the *ḥadīt̲h̲* of the "ten" indubitably destined for Paradise because of a promise of the Prophet, traditions going back to the most famous persons of early Islam, whether Umayyads, ʿAbbāsids or simply Companions. There have survived by him a philological work (*G̲h̲arīb al-ḥadīt̲h̲*) and a treatise on ethics (*K. Ikrām al-ḍayf*). Neither of these two works has been published. Ibrāhīm nevertheless appears beside Ibn Abī S̲h̲ayba, Ibn al-Munādī, Ibn Ṣāʿid, and Ibn Maʿīn as one of the promoters of the Sunnī reaction against the Muʿtazilī philosophy and ideal.

Bibliography: Brockelmann, S I, 188; main source: Yāḳūt, *Udabaʾ*, i, 112. On his connexion with S̲h̲āfiʿism: Subkī, *Ṭabaḳāt*, i, 26; contrary opinion in Ibn Kat̲h̲īr and Yāfiʿī, who made him a Ḥanbalī (*Mirʾāt al-d̲j̲inān*, ii, 210 and *Bidāya*, ix, 79). The *Taʾrīk̲h̲ Bag̲h̲dād* of al-K̲h̲aṭīb, vi, 27, has nothing on this matter (cf. *Tad̲h̲kira*, ii, 162).

(J.-C. VADET)

IBRĀHĪM ḤILMĪ PAS̲H̲A [see KEČIBOYNUZU IBRĀHĪM ḤILMĪ PAS̲H̲A].

IBRĀHĪM AL-IMĀM [see IBRĀHĪM B. MUḤAMMAD].

IBRĀHĪM KHĀN, the ancestor of the Ibrāhīm-Khānzāde family, was the son of Selīm II's daughter Esmākhān Sulṭān (d. 993/1585) by her first marriage, to the Grand Vizier Soḳollu Meḥmed Pasha [*q.v.*]. According to a late tradition (*Ḥadīḳat al-djawāmiʿ*, ii, 38), perhaps based on the misconception that the sons of princesses were not allowed to live [see DĀMĀD], his birth was at first concealed. He first appears as *ḳapidji-bashi*, in Muḥarram 1003/September 1594. By 1019/1610 he was *beglerbegi* of Bosna—a promotion which was indeed contrary to Meḥemmed II's enactment that sons of princesses should not rise beyond the degree of *sandjaḳ-begi* (cf. *Ḳānūn-nāme-i Āl-i ʿOthmān*, *TOEM* supp. 1330, p. 29); his appointment to this and other high governorates was, it is said, a reward for his presenting to the Sultan the property on which his father's palace in the At-Meydān stood, a site needed for the building of the Mosque of Aḥmed I (Barozzi-Berchet, *Relazioni* ..., 181). He died after 1031/1621-2.

His descendants, the Ibrāhīm-Khānzāde, formed, like the Ewrenōszāde and the Ṭūrkhānzāde, one of the historic families of the Empire, although they never filled important positions in the state. His grandson ʿAlī Beg is mentioned frequently by the chroniclers (Rāshid, ii, 361; Hammer-Purgstall, ix, 563, no. 2696; de La Motraye, *Voyages*, i, 326). Towards the end of the 11th/17th century the legend arose that if the Ottoman dynasty were to die out the Ibrāhīm-Khānzāde family would succeed, and that hence the Sultans were bound to respect the life of every member of it (de La Motraye, *Voyages*, i, 261 f.; G. C. von den Driesch, *Historische Nachricht...*, Nürnberg 1723, 137; D. Cantemir, *The History ... of the Othman Empire*, London 1734, 107; C. W. Lüdeke, *Beschreibung des Türkischen Reiches ...*, Leipzig 1771-8, i, 292, ii, 63). They had their residence in the suburb of Eyyub on the Golden Horn, and until recently acted as *mütewellī* of the *waḳf*s of their ancestor Soḳollu Meḥmed Pasha (Djewdet, *Taʾrīkh*, vi, 198).

Tayyib Gökbilgin, art. *Ibrâhim Han*, in *IA*, with further details on Ibrāhīm's career and other members of the family, based on references in unpublished chronicles and in Ottoman archive sources.

(J. H. MORDTMANN*)

IBRĀHĪM LŌDĪ was the last of the Lōdī Sultans of Delhi, who was defeated and slain on the battlefield by Bābur [*q.v.*] in the historic first battle of Pānīpat in 932/1526. His death opens a new chapter in the annals of India as it marks the end of the Dihlī Sultanate [*q.v.*] and the beginning of the Moghul rule which was to last for more than four centuries.

The eldest son of Sikandar Lōdī (*reg.* 894/1489-923/1517) he succeeded to the throne on 8 Dhu 'l-Ḳaʿda 923/22 November 1517, one day after his father's death. Since he was distrustful and ungenerous, the nobles did not like the idea of Ibrāhīm coming to the throne but were obliged to accept him as the ruler. In token of their displeasure they contrived to divide the kingdom into two parts and to set up Ibrāhīm's younger brother Djalāl Khān as the ruler of the Sharḳī province of Djawnpūr [*q.v.*]. Sensing trouble in this move of the nobles, Ibrāhīm took immediate steps to end this diarchy and deprive Djalāl Khān of his newly acquired power. Apprised of Ibrāhīm's designs, Djalāl Khān raised the banner of revolt but could not withstand the might of the Sultan's army and fled to Gawālior, where he took refuge with Bikramadjīt, son of the great Mān Singh who had bravely withstood Sikandar Lōdī so long. This prompted Ibrāhīm to attack and besiege Gawālior. However, while the siege was still in progress Djalāl Khān was captured and taken to Hānsī, where he was imprisoned along with other rebellious Afghan nobles. Djalāl Khān subsequently died in prison.

Suspecting disaffection on the part of the grandees of the empire, Ibrāhīm indulged in acts of capricious tyranny, thus alienating the sympathies of most of the experienced and loyal servants of his father and "driving them into the arms of an invader". Two leading nobles, Miyāṅ Bhōa, a former chief minister of Sultan Sikandar, and Aʿẓam Humāyūn Sarwānī, the ruler of Kālpī, were put to death in prison at the instigation of the Sultan. Their fate alarmed other nobles, who began to look to their own safety. Many of them rebelled, so that chaos and anarchy reigned in the land. While the Sultan was still busy suppressing the rebellions, the Pandjāb under Dawlat Khān Lōdī, son of Tātār Khān Lōdī, also revolted; this prompted the Sultan to summon the refractory governor to Delhi. Sensing trouble, Dawlat Khān instead sent his son Dilāwar Khān to the Court; but this merely roused the anger of the Sultan, who put Dilāwar in prison for some time. There he saw many other nobles suffering torture and indignity, and having seen the small reward accorded to loyalty he apprised his father, on his return to the Pandjāb, of Ibrāhīm's true designs. Convinced of the doom that might befall him if Ibrāhīm continued to occupy the throne, Dawlat Khān invited Bābur to attack India, little realizing that his act would prove a turning point in the history of the sub-continent, sounding the death-knell of the Pathan empire and ushering in the establishment of a new alien dynasty.

On learning of Bābur's advance Ibrāhīm marched out with a huge army said to number more than a million to meet the invader. The two armies met at Pānīpat; Bābur's artillery, and his superior tactics and strategy played havoc with the enemy. Ibrāhīm put up a heroic resistance but was no match for the skilful and experienced Turk. He died with his crown on his head and adorned with all the insignia of royalty. He had ruled for some nine years.

After the battle Bābur ordered his men to search for Ibrāhīm's body. It was found lying amidst the corpses of his nobles and his personal body-guard. His severed head was brought to Bābur, and he was given a hero's burial. His tomb, a plain white-washed structure, still stands near the place where he died. It became in course of time a place of pilgrimage for the local villagers, who looked upon the last Lōdī Sultan as a martyr and began to venerate him as a saint.

We have it on Bābur's testimony (cf. *Bābur-nāma*, Eng. trans., 541, 478) that the queen-mother did not take the death of her son with good grace. Although generously treated by Bābur, she plotted to poison him; but her plans miscarried and Bābur was saved. The conspirators were all executed and Ibrāhīm's mother was deported to Kābul. However, apprehensive of the fate awaiting her, she committed suicide by drowning herself in a river while on the way to Kābul. Ibrāhīm's son, still a minor, was also despatched to Kābul to join his grandmother, but his fate is unknown.

(A. S. Bazmee Ansari)

IBRĀHĪM al-MAWṢILĪ, Abū Isḥāḳ, one of the greatest musicians and composers of the early ʿAbbāsid period, b. 125/742 in Kūfa, d. 188/804 in Baghdād. His father Māhān (a name which Ibrāhīm changed into Maymūn) and his mother Dōshēr hailed from Arradjān in Fārs, and had come with their patrons to al-ʿIrāḳ. When he lost his father, his mother took him to her brothers, in whose care he was brought up, but he ran away because his relatives would not permit him to study music. He went first to Mosul—hence his *nisba* Mawṣilī, though other explanations are also given—and then to Rayy, where he learned the Persian style of singing; an envoy of the caliph al-Manṣūr was so pleased by his singing that he gave him money which enabled him to finish his training under Djuwānawayh, a Magian at Ubulla. Soon Ibrāhīm attracted the attention either of Muḥammad b. Sulaymān b. ʿAlī or of his brother ʿAlī; shortly afterwards he was called to the court of the caliph al-Mahdī, a great patron of music. Here he met the musicians Fulayḥ b. Abi ʾl-ʿAwrāʾ al-Makkī and Siyāṭ and profited from the latter's instruction (*Aghānī*³, vi, 152); the caliph's sons Mūsā (afterwards, as caliph, al-Hādī) and Hārūn (afterwards al-Rashīd) asked him to join their banquets; but when al-Mahdī heard of these bouts he imprisoned Ibrāhīm. Ibrāhīm consoled himself by setting to music a poem which Abu ʾl-ʿAtāhiya had composed not long before under similar circumstances. Yet Ibrāhīm remained all his life addicted to wine. When al-Hādī became caliph in 169/785 he summoned Ibrāhīm and was very generous to him. It is said that he received, besides his monthly remuneration of 10,000 *dirhams*, large gifts (*Aghānī*³, v, 161, 3). In addition he had an income from landed property (*ibid.*, v, 193) and from music lessons. Amongst his pupils were his favourite Sulaym b. Sallām, Mukhāriḳ, furthermore ʿAllawayhi and ʿAmr b. Bāna, who both later went over to Ibrāhīm b. al-Mahdī; Barṣawmā, the flutist, and Zalzal, the lute-player, who had both been discovered by Ibrāhīm, and al-Muʿallā (b. Ayyūb) b. Ṭarīf, who was not a professional artist but who, like his brother Layth, held responsible posts in the administration (see Ṭabarī, Index).

He was the first musician to train white slave-girls in the art of singing, who fetched much higher prices than black or yellow girls (*Aghānī*³, v, 164 f.). He reached the summit of his career in the reign of Hārūn al-Rashīd, who formed a real affection for this gifted artist; he had to wait upon the caliph daily, but was later permitted to stay at home on Saturdays (*Aghānī*,³ v, 33). He had also to accompany him on his journeys.

It was upon Hārūn's orders that Ibrāhīm, together with his colleagues Ibn Djāmiʿ and Fulayḥ b. Abi ʾl-ʿAwrāʾ, made a selection of 100 songs (*al-aṣwāt al-miʾa al-mukhtāra*), which form the framework of the *Kitāb al-Aghānī* of Abu ʾl-Faradj al-Iṣfahānī [*q.v.*]. This collaboration of Ibrāhīm and Ibn Djāmiʿ is noteworthy, because they held different opinions about the principles of their art. Ibn Djāmiʿ tried to introduce some changes into the art of singing, the rhythms, and the modulations, whilst Ibrāhīm clung to the old Ḥidjāzī style which he declared to be classical. These differences were the beginning of the war between the classicists, led by Iṣḥāḳ b. Ibrāhīm al-Mawṣilī [*q.v.*], and the modernists led by Ibrāhīm b. al-Mahdī [*q.v.*], a war that was to end only in the days of al-Mutawakkil with the triumph of the classicists. Ibrāhīm died in 188/804 at the age of 63 years of a disease of the stomach. Posterity remembered him as one of the greatest singers, whose melodies were so entrancing that they were ascribed to the inspiration of the devil himself.

Bibliography: The main source for Ibrāhīm, his son Isḥāḳ, and the singers, musicians and composers of their time is the *Kitāb al-Aghānī* (see Index; article on Ibrāhīm in *Aghānī*³, v, 154-258); *Taʾrīkh Baghdād*, vi, 175-8; *Fihrist*, 140; Ibn Khallikān, no. 9; H. G. Farmer, *History of Arab music*, index; E. Neubauer, *Musiker am Hofe der frühen Abbasiden*, Frankfurt am Main, 1965, 182 f.

(J. W. Fück)

IBRĀHĪM MÜTEFERRIḲA, Ottoman statesman, diplomat, founder of the first Turkish printing press, and a pioneer of reform policy, was born in Kolozsvár (Cluj) in Erdel (Transylvania) of Christian parents. His family name and his Christian name are not known. He was probably born between 1670 and 1674. So far no Ottoman source has been found which provides information on the Christian phase of his life; but on the basis of a statement made by the Catholic Hungarian nobleman Czézárnak de Saussure, who met Ibrāhīm in Turkey in 1732, when he was there in the company of Ferenc Rákóczi, Ibrāhīm is believed to have been educated at the college of Kolozsvár to become a Calvinist minister. In the light of this assumption Ibrāhīm has traditionally been represented as a Calvinist convert to Islam; but on the basis of the short autobiographical account given by Ibrāhīm in his unpublished *Risāle-i Islāmiyye* (MS: Esad Ef. 1187), N. Berkes has concluded that Ibrāhīm was not a Calvinist but a Unitarian. Unitarianism was very strong in Transylvania at the time when the Ottomans controlled Hungary and were also supporting Transylvanian independence from the Habsburgs. With the termination of the Ottoman protection of Transylvania and of Unitarianism and the ascendancy won by the Catholic church when the Habsburgs occupied Kolozsvár, the Transylvanian Unitarians were no longer allowed to study the works of Servetus and Dávid. The belief that Ibrāhīm had been a Calvinist is probably due to the fact that during the years when he was a theological student the college where he studied belonged no more to the persecuted and clandestine Unitarians but had been given over to the Calvinists. Ibrāhīm relates in his treatise how he secretly studied anti-trinitarian texts (and possibly Servetus' *Biblia Sacra*) and realized that the coming of the Prophet Muḥammad had been predicted in those parts of the Bible which had been purged or falsified by the upholders of the doctrine of the Trinity. He relates also how he attained *hidāya*, thus implying that he had been converted to Islam before he actually "turned Turk".

Czézárnak de Saussure again seems to be responsible for the origin of the traditional account of his conversion to Islam. According to this account, neither convincing in itself nor supported by any evidence coming from Ibrāhīm or from any other

original source, he was captured by Turkish troops during an encounter between Austrian and Turkish forces and later was sold as a slave; having fallen into the hands of a cruel master, and unable to expect that his poor relatives would ransom him, he perforce turned Muslim. More probably, Ibrāhīm fled from Habsburg rule in Transylvania and in 1691 joined the forces of Tököly Imre, who, in alliance with the Ottoman army, was fighting against the Habsburgs to procure his restoration in Transylvania. Ibrāhīm probably worked for Tököly as a liaison officer with the Turks. In fact, this remained his chief function in his subsequent career in the Turkish service.

How Ibrāhīm acquired Ottoman and Muslim culture and whether or not he studied at the *Enderūn* [*q.v.*] is not known. But he seems to have been taken into Ottoman service and to have become a member of the bureaucracy, later receiving promotion. His *Risāle-i Islāmiyye*, written about ten years after his embracing Islam, is not a treatise written to defend Islam, as Karácson and others following him have claimed, but seems to have been written to prove the link between his early Unitarianism and his passage to Islam. It does not yet contain any idea of the need for reform in the Ottoman institutions, a theme to which he seems to have turned only later. On the contrary, the treatise is a passionate condemnation of Catholicism and of the temporal power of the Papacy. It also reiterates his firm belief in the eventual victory of Islam over the Catholic world, since Muḥammad's monotheistic Islam was destined to be a superior religion, whose coming was predicted by Jesus himself. The argument must have been appealing to the Ottomans, who had entered into the second phase of their struggle against the Catholic world.

Ibrāhīm's career in Ottoman service and his diplomatic work seem to have begun after the composition of this treatise. He was elevated to the position of permanent *müteferriḳa* [*q.v.*], and became a special counsellor and envoy of the Ottoman Sultan. Ibrāhīm seems to have abandoned his interest in religion and theology by the time he entered this service. He took part particularly in diplomatic negotiations with Austria and Russia. In 1127/1715 he was sent to Vienna for negotiations with Prince Eugène. In 1128/1716 he served as the Ottoman commissioner with the Hungarians who were assembled in Belgrade to promote their struggle, supported by the Ottomans, for independence. In 1132/1720 he was appointed liaison officer to Prince Ferenc Rákóczi, who had come to Turkey in 1717 from France, and with French support, to wage a joint struggle against Austria. Ibrāhīm seems to have occupied his position until Rákóczi's death in 1735, although his function probably became merely honorary when Rákóczi's activities came to an end following the failure of his attempts to arouse the support of the Hungarians under Habsburg rule. Ibrāhīm continued to be sent with further diplomatic missions. In 1150/1737 he was dispatched to the Palatinus of Kiev for negotiations in connexion with the Polish treaty; he was one of the promoters of a Turkish-French alliance against Austria and Russia during the years 1150-2/1737-9; in 1151/1738 he conducted negotiations on behalf of the Ottoman government and the anti-Austrian Hungarians for the surrender of the fortress of Orsova to the Ottoman forces. He also took an active part, together with the Comte de Bonneval [see AḤMAD PASHA BONNEVAL] in promoting Turkish-Swedish cooperation against Russia. In 1156/1743 he was sent also to Dāghistān on a diplomatic mission.

Ibrāhīm's fame in recent years relies less on his state service and diplomatic activities than on his major contributions to the Turkish intellectual and cultural awakening. He took a leading and active part in the attempts at reform initiated in the early part of the 12th/18th century. Following the Treaty of Passarowicz (1131/1719) the idea of introducing European military practices was born. Ibrāhīm was probably one of those who not only promoted the idea but also supplied information which he had obtained from his observations. Very likely it was he who inspired the first memorandum given to Aḥmed III arguing the necessity of military innovation and the employment of European officers to train the Ottoman army.

But the enterprise which has made his name memorable is his establishment of a Turkish printing press. The idea seems to have been in the air in 1719; and when Meḥmed, known as Yirmisekiz Čelebi, was sent to France on a diplomatic mission, he is shown by French sources to have been already convinced of the necessity and the permissibility of the innovation. The Grand Vizier Ibrāhīm Pasha, Meḥmed Čelebi, and the latter's son Saʿīd Efendi (later Pasha and also an envoy to France), and the Shaykh al-Islām encouraged and supported Ibrāhīm in opening the press in 1140/1727. In an essay entitled *Wasīlat al-ṭibāʿa* Ibrāhīm made a plea for the enterprise with a brilliant exposition of the losses incurred by Islamic learning from the absence of the art of printing among the Muslims and of the great benefits its establishment would bring to the Muslims and to the future of the Ottoman state. He was not interested in printing theologically controversial writings and met no opposition from the "religious institution". The alleged opposition to the opening of the printing press does not seem to have been motivated by religion but rather by the economic interests of copyists and calligraphers. Ibrāhīm's major interest in printing was still in line with his political and diplomatic career as well as with his interest in Islamic reform. The works he printed in his press were all related to secular matters, such as language, history, geography, and the natural and physical sciences [for details see MAṬBAʿA]. In addition to his pioneer work as a printer he was also an editor, a compiler, a translator, and a writer. He also prepared a number of maps, printed the majority of them, and prided himself on being a geographer and cartographer.

In 1144/1731 Ibrāhīm wrote his *Uṣūl al-ḥikam fī niẓām al-umam* in order to show the causes of the decline of the Ottoman power in Europe before the Christian states, to describe the modern forms of government, their military methods and organization, and finally to propose ways to remove the existing aberrations of the Ottoman system and to reform them (printed Istanbul 1145/1732; Fr. tr. by Baron Reviczki, *Traité de la tactique*, Vienne 1769). He placed prime importance upon the use of modern sciences, particularly upon the knowledge derived from new geographical explorations and upon the importance of the use of intelligence information to be obtained about the conditions of the European nations and their military forces. If he was not the first to draw attention to the consequences of the geographical discoveries and of the encirclement of the Ottoman empire by sea power, he was certainly the first to warn the Ottoman authorities of the future consequences of the modernizing trend in

Russia under the leadership of Peter the Great. Ibrāhīm died in 1158/1745 and was buried in Ghalaṭa.

Bibliography: a bibliography of the books printed at Ibrāhīm's press will be found under MAṬBAʿA. On Ibrāhīm Müteferriḳa: Czézárnak de Saussure, *Lettres de Turquie (1700-39) et Notices (1740)*, ed. K. Thály, Budapest, 1909; G. Toderini, *Letteratura turchesca*, Venice 1787, iii; A. Vandal, *Une ambassade française en Orient sous Louis XV*, Paris 1887, 28 ff.; I. Karácson, *Ibrāhīm Müteferriḳa*, in *TOEM*, i (1326), 178-85; F. Babinger, *Stambuler Buchwesen im 18. Jahrhundert*, Leipzig 1919; Ihsan [Sungu], *İlk Türk matbaasına dair yeni vesikalar*, in *Hayat*, iii (1928), 413-4; Selim N. Gerçek, *Türk matbaacılığı*, Istanbul 1939; A. Berkes, *Ilk Türk matbaası kurucusunun dinî ve fikrî kimliği*, in *Belleten*, xxvi/104 (1962), 716-37; idem, *The development of secularism in Turkey*, McGill 1964, 36-46. (NIYAZI BERKES)

IBRĀHĪM PASHA (?1493-942/1536), Grand Vizier of Süleymān I, known to the chroniclers as 'Maḳbūl' ("the favourite") and 'Maḳtūl' ("the executed"), was probably born near Parga, on the coast of Epirus. Enslaved as a child, he was brought up in the "Palace School", and then attached to the service of Prince Süleymān while he was governor of Maʿnīsa (according to other accounts he was taken in a raid by Iskender Pasha and presented to Prince Süleymān at Kefe; or was taken by pirates and sold to a widow near Maʿnīsa, etc.); he gained the confidence and friendship of the Prince, and upon Süleymān's accession (926/1520) became his *Khāṣṣ-oda bashi* [see GHULĀM, p. 1088a]. The following year the Sultan was causing to be built for him the famous palace on the north-west side of the Hippodrome (see Z. Orgun, *Ibrâhim Paşa sarayı*, Istanbul 1939, and ISTANBUL). Already the influence of "Ibrāhīm Agha" was greater than that of the viziers, and on 13 Shaʿbān 929/27 June 1523, in succession to Pīrī Meḥmed Pasha [*q.v.*], he was appointed Grand Vizier and *beglerbegi* of Rūmeli (see Pečewī, i, 20). He was only about thirty years old; and this unprecedented promotion—direct from the Palace Service to the two highest offices of the state held in plurality—deeply offended Aḥmed Pasha [see AḤMAD PASHA KHĀʾIN], who could reasonably have expected the promotion, and who was allowed to withdraw from the capital as governor of Egypt. Ibrāhīm Pasha's marriage to Süleymān's sister Khadīdje in Radjab 930/May 1524 was celebrated with spectacular pomp, but four months later he had to set out for Egypt in order to compose the difficulties provoked by Aḥmad Pasha's revolt [see MIṢR]. He was absent for a year, and was then recalled hurriedly as the result of a Janissary disturbance, perhaps provoked by his rivals. He was appointed *serdār* [*q.v.*] on the great campaign into Hungary in 932/1526 [see MOHAČ]. From Buda (T. Budīn [*q.v.*]) Ibrāhīm Pasha brought back to stand before his Palace three bronze statues of Hercules, Diana and Apollo (this action provoked the famous epigram of Fighānī [*q.v.*], which cost the poet his life). The next year Ibrāhīm put down the revolts which had broken out in Anatolia (see Danişmend, *Kronoloji*, ii, 121-5; DJALĀLĪ [in Supplement]; and ḲALENDER SHĀH). In 935/1529 he was *serdār* (for his *berāt* see Ferīdūn, *Munshaʾāt*², i, 544-6; his *khāṣṣ* was increased to the value of 3 million *aḳčes*, see Pečewī, i, 129) on the campaign in which Budīn was re-taken and Vienna (Beč [*q.v.*]) besieged. In 938/1532 the third Hungarian campaign resulted only in the surrender of the fortress of Güns (Hung.: Köszeg; T.: Kösek [*q.v.*]). The following year Ibrāhīm Pasha acted with quasi-plenipotentiary powers in the negotiations with Ferdinand's ambassador Cornelius Schepper, whose reports (A. von Gévay, *Urkunden und Aktenstücke*, 2 vols., Vienna 1840-42, part 6; *Missions diplomatiques de ... Scepperus* = *Mém. de l'Ac. Roy. des Sciences de Belgique*, xxx (1857)) give a vivid picture of Ibrāhīm's excessively—and dangerously—arrogant attitude.

In the autumn of the same year, upon the outbreak of war with Persia, Ibrāhīm Pasha took command of the Ottoman army; after wintering at Aleppo, he occupied Tebrīz on 25 Muḥarram 941/6 August 1534, where next month the Sultan joined him; Baghdād was occupied on 24 Djumādā I 941/1 December 1534. It was during this campaign that Ibrāhīm's authority and pretensions reached their height: in one firman sent him there figures among his *alḳāb*: "*ḳāʾim-maḳām-i salṭanat*" (Topkapı Sarayı archives, no. 2759); and the army criers (*dellāl*) ended their proclamations with the words: "*Serʿasker-Sulṭān emridür*" (Pečewī, i, 189; when the very wealthy and influential Bash-Defterdār Iskender Čelebi protested, Ibrāhīm Pasha procured first his dismissal and later his execution). The Sultan and the Grand Vizier arrived back at Istanbul in Radjab 942/January 1536, and during the next month Ibrāhīm was conducting with the French ambassador the negotiations for the capitulations (Charrière, *Négotiations* ..., i, 255 ff.).

Then quite unexpectedly, after no hint that the Sultan had withdrawn his favour, Ibrāhīm was strangled, on the night of 22 Ramaḍān 942/14-15 March 1536, in his bedroom in the *ḥarem* of Topkapı Sarayı (Pečewī, i, 191); his body was buried at the Djānfedā Zāwiyesi behind the Arsenal (*Ḥadīḳat al-djawāmiʿ*, i, 28; ii, 39). Various explanations were advanced for his fall: his arrogation of the titles of sovereignty; his responsibility for the execution of Iskender Čelebi; extravagance on the campaign of 941/1534; an irreligious attitude; the intrigues of Khurrem Sulṭān [*q.v.*] ("Roxelana"), given freer play after the death of Ibrāhīm's protector the Wālide Ḥafṣa Sulṭān; and possibly jealousy felt by his wife Khadīdje Sulṭān, the sister of Süleymān I, for his other wife Muḥsine.

Ibrāhīm Pasha had a son by Khadīdje, named Meḥmed Shāh. His parents embraced Islam, the father taking the name Yūnus and being made a *sandjaḳ-begi*, while two brothers of Ibrāhīm were admitted to the Palace (Albéri, *Relazioni* ..., iii, 103). Numerous foundations were made by himself and by his wife Muḥsine in Istanbul (*Ḥadīḳat al-djawāmiʿ*, i, 28), Ghalaṭa, Mecca, Hezārghrad, etc. His palace on the At-Meydān was later used as a training school for *ʿadjamī oghlans* [see GHULĀM, 1087a]. His gardens at Sütlüdje on the Golden Horn long remained a popular place of resort (ʿAṭā, i, 111).

IBRĀHĪM PASHA, the eldest son of Muḥammad ʿAlī [*q.v.*], general, and viceroy of Egypt. He is often described as Muḥammad ʿAlī's "adopted" son. Amīna, a relative of his foster-father, the governor (*čorbadjī*) of Kavalla in Macedonia, was certainly a divorced woman when Muḥammad ʿAlī married her in 1787, and it cannot be denied that Muḥammad ʿAlī had a certain preference for his son Ṭūsūn, who died on 28 September 1816; there was certainly also a rivalry between Ibrāhīm and Ṭūsūn. The year of his birth is decisive, however, and this is usually given as 1789 (but occasionally also as 1786). In the older authorities like Djabarti we find no hint that he was not Muḥammad ʿAlī's real son.

When his position in Egypt had been somewhat secured, Muḥammad ʿAlī in 1805 sent for his two sons Ibrāhīm and Ṭūsūn, and in 1809 for his wife and the younger children, Ismāʿīl and two daughters. In 1806 Ibrāhīm was sent with the Ḳapudān Pasha to Istanbul as a hostage for the tribute promised by his father; after the departure of the English fleet from Alexandria in 1807 the Porte sent him back. In 1807 Ibrāhīm became *defterdār*. After the great massacre of the Mamlūks in 1811 he was sent by his father to Upper Egypt. He drove the remnants of the Mamlūks into Nubia, subdued the Bedouins, and restored order and security in the country. Under his governorship, in accordance with Muḥammad ʿAlī's policy of expropriating the cultivable land of Egypt, all *iltizāms* [*q.v.*] and estates in *waḳf* were confiscated, and the registration of land was completed in 1812 (G. Baer, *A history of landownership in modern Egypt*, London 1962, 4, 6). He remained in charge of the administration of Upper Egypt till the beginning of 1816. In the meanwhile he had been given the title of Pasha by the Porte in recognition of the services of his father.

In 1816, his father sent him to Arabia to make a final reckoning with the Wahhābīs, against whom his brother Ṭūsūn had been fighting successfully from 1811 to 1813 and, from 1813 to 1815, Muḥammad ʿAlī himself also. After three years of heavy fighting the goal was achieved, al-Dirʿiyya [*q.v.*], the capital of the Wahhābīs, was destroyed and ʿAbd Allāh Ibn al-Suʿūd with his relatives were sent as prisoners to Egypt. In December 1819, Ibrāhīm made his triumphal entry into Cairo. Soon afterwards the Sultan appointed him governor of Djudda. In the meanwhile, Muḥammad ʿAlī's third son, Ismāʿīl, had conquered Nubia and Sinnār (1820-21), while another expeditionary force invaded Kordofān. The exploitation of the ancient goldfields and the capture of slaves, who were to form the basis of Muḥammad ʿAlī's new army, were the two objects of this expedition. Ibrāhīm Pasha was sent to Sinnār as commander-in-chief, and expedited the procurement of slaves and their transmission to Egypt. Falling ill with dysentery, he returned to Cairo early in 1822 (R. Hill, *Egypt in the Sudan 1820-1881*, London 1959, 11-12).

In the following years, Ibrāhīm Pasha took part in training the new troops (*niẓām djadīd*), who were entrusted to the French Colonel Sèves. Ibrāhīm was an industrious pupil of the European instructor and the latter, under the name of Sulaymān Pasha [*q.v*], became his main support in his later campaigns.

During the Greek War of Independence, when Muḥammad ʿAlī was appointed to conquer the Morea by a firman of the sultan dated 16 January 1824, he sent his son Ibrāhīm Pasha there, with an excellent army trained on the European model and ample supplies of war material, at the end of July 1824. The capture of Navarino and his entry into Tripolitsa practically brought the Peninsula under his control. February to April 1826 were devoted to the siege and capture of Missolonghi. After the intervention of the Great Powers had been rejected by the Porte and Muḥammad ʿAlī, the naval battle of Navarino [*q.v.*] took place, in which, in October 1827, the greater part of the Egyptian-Turkish fleet was destroyed by the allied fleets of Great Britain, France and Russia, and finally Muḥammad ʿAlī was forced by the British Admiral Codrington, who appeared before Alexandria, to recall his son and the Egyptian troops. Ibrāhīm arrived in Alexandria on 10 October 1828.

In 1831 Ibrāhīm Pasha was entrusted by his father with the conduct of the Syrian campaign. On 1 November he arrived with his troops in Palestine. After a six months' siege he obtained the surrender of ʿAkkā, on 27 May 1832, after previously gaining victories over the Pasha of Tripoli and Aleppo on the plain of Zarʿā south of Ḥimṣ. Ibrāhīm's subsequent march march through Syria and Asia Minor was made possible by his victories over the advance guard of the Turkish army under Muḥammad Pasha of Aleppo at Ḥimṣ on 8-9 July, over the main Turkish army under Ḥusayn Pasha in the pass of Baylān at Alexandretta (29 July), and over the Turkish army under Rashīd Pasha at Ḳonya (21 December). These victories showed the superiority of the Egyptian army, Ibrāhīm's skill as a leader, and the cleverness of his policy of uniting the various groups in Syria under one banner by the cry of "liberation from the Turkish yoke" and of winning to his side the influential Amīr Bashīr II Shihāb of Lebanon. Ibrāhīm Pasha advanced as far as Kūtāhiya. There in May 1833, not without pressure from the European powers, a treaty was signed between the Porte and Muḥammad ʿAlī, by which Syria and Adana were ceded to the latter. Ibrāhīm received from the Sultan the title of *muḥaṣṣil* of Adana, and his father appointed him to administer the new territory. The application of a centralized administrative and bureaucratic control, which was Muḥammad ʿAlī's instrument of government in Egypt, aroused the resentment of the diverse populations of Palestine, Lebanon and Syria (cf. W. R. Polk, *The opening of south Lebanon, 1788-1840*, Cambridge, Mass., 1963, 106-40). Sporadic but increasingly serious armed revolts broke out, provoked particularly by Ibrāhīm's measures of conscription and

of impounding arms. The enhanced status of the Christians alarmed the Muslims and Druzes, and disturbed the traditional *modus vivendi*: in particular, the employment of Maronites to suppress the Druze revolt in Ḥawrān (1838) had evil consequences in the two decades following Ibrāhīm's withdrawal.

When the war was begun again by Turkey in 1839, Ibrāhīm on 24 June won a decisive victory over the Turkish army under Ḥāfiẓ Pasha at Nizib west of Biredjik, and the Turkish fleet under Fewzī Pasha went over to Muḥammad ʿAlī. The intervention of the powers, whose negotiations led to the Treaty of London on 15 July 1840 (the so-called Quadruple Alliance), altered the situation. Hoping for support from the French, Muḥammad ʿAlī rejected the demand that he should evacuate Syria as far as ʿAkkā and confine himself to the hereditary pashalic of Egypt. No support was given to him, and the coasts of Syria and Egypt were blockaded by the allied fleets. Ibrāhīm was in a difficult position between the forces which they landed and the hostile people of the Lebanon, who were stirred up against him. After the capture of ʿAkkā by the British Admiral Napier and the latter's negotiations with Muḥammad ʿAlī in Alexandria, the latter was forced to agree to the evacuation of Syria on 22 November 1840. On 29 December, Ibrāhīm left Damascus with his troops and returned to Egypt via Ghazza, sending a portion of the army home via ʿAḳaba under Sulaymān Pasha.

In the years that followed, Ibrāhīm Pasha was mainly concerned with the administration of Egypt. His interest in and knowledge of agriculture is praised. He was several times in Europe, sometimes visiting watering-places to improve his health. Owing to his father's senility, Ibrāhīm formally assumed the governorship of Egypt on 2 September 1848, having received the sultan's firman some weeks earlier. He predeceased his father, however, on 10 November 1848, and was succeeded by his nephew, ʿAbbās Ḥilmī I [*q.v.*]. Through his son Ismāʿīl (*regn.* 1863-79) he was the progenitor of the former khedivial and royal family of Egypt.

Bibliography: No full-length study of Ibrāhīm Pasha has yet been made, and the primary sources for his career have not been systematically investigated. These include: (A) ʿAbd al-Raḥmān al-Djabartī, *ʿAdjāʾib al-āthār*, Būlāḳ 1290; (B) Archival materials, especially in Cairo and Istanbul (see P. M. Holt (ed.), *Political and social change in modern Egypt*, London 1968, 28-51). Selections of documents have been published: (i) on the Syrian phase by Asad H. Rustum in [anon.], *Ḥurūb Ibrāhīm Bāshā al-Miṣrī fī Sūriyā wa 'l-Anaḍūl*, Cairo [1927], and *A corpus of Arabic documents relating to the history of Syria under Mehemet Ali Pasha*, Beirut 1929-34; (ii) from the archives of the European states on various phases of Muḥammad ʿAlī's rule in a series of volumes published under the auspices of King Fuʾād I (see *Précis de l'histoire d'Égypte par divers historiens et archéologues*, iii, Cairo 1933, 375-6); (C) the writings of expatriates and travellers, many of whom were French (see Jean-Marie Carré, *Voyageurs et écrivains français en Égypte*, Cairo 1956, 169-323). Information on Ibrāhīm Pasha may be found scattered in numerous modern works concerned primarily with Muḥammad ʿAlī Pasha, of which the following are a selection: H. Dodwell, *The founder of modern Egypt*, Cambridge 1931; ʿAbd al-Raḥmān al-Rāfiʿī, *ʿAṣr Muḥammad ʿAlī*, Cairo 1951; Helen Anne B. Rivlin *The agricultural policy of Muḥammad ʿAlī in Egypt*, Cambridge, Mass., 1961.

Ottoman archive material is used by Şinasi Altundağ, *Kavalalı Mehmet Ali Paşa isyanı: Mısır meselesi 1831-1843*, Ankara 1945.

For Ibrāhīm Pasha in Syria, see Asad J. Rustum, *The royal archives of Egypt and the origins of the Egyptian expedition to Syria 1831-1841*, Beirut 1936, and *The royal archives of Egypt and the disturbances in Palestine, 1834*, Beirut 1938.

(P. Kahle-[P. M. Holt])

IBRĀHĪM PASHA, ČANDARLÎ [see djandarlî].

IBRĀHĪM PASHA, DĀMĀD, (?-1010/1601), Ottoman Grand Vizier. Ibrāhīm Pasha, according to Pečewī (ii, 284), was of Bosnian origin. The Venetian sources refer to him as "di nazione schiavone" (Alberi, iii, 241-2, 290, 367-8) or "di Chersego" (Alberi, iii, 432; cf. also Soranzo, 10: "nativo della Provincia di Herzecovina"). Perhaps the most exact indication is that of Minadoi, who describes Ibrāhīm Pasha (*Historia*, 266) as "di natione schiavona, del luoco detto Chianichii, una breve giornata discosto da Ragusi". Minadoi obtained his information from "Chrestoforo de Boni", who was interpreter to the Venetian consul in Syria, Giovanni Michele, and, like Ibrāhīm Pasha, a man of Slavonic descent from the region near Ragusa. De Boni had become acquainted with Ibrāhīm Pasha when the latter was operating against the Druzes of the Lebanon in 993/1585 (Minadoi, *Historia*, 277). As to the birth date of Ibrāhīm Pasha, no precise evidence would seem to be available. Minadoi (*Historia*, 266), writing not long before 1588 (the date of the first edition of his work), sets the age of Ibrāhīm Pasha at about thirty-two years. The statements made in the *relazioni* of the Venetian baili at Istanbul (Alberi, ii, 357 and iii, 290, 367-8, 432) suggest that Ibrāhīm Pasha was born circa 1550 A. D.

Ibrāhīm Pasha entered the imperial palace as a child of the *devshirme* [*q.v.*]. He rose to the office of *rikābdār* and, on the accession to the throne of Murād III in 982/1574, became *silāḥdār* and thereafter, in 988/1580, Agha of the Janissaries. He was made Beglerbeg of Rūmeli in 990/1582 and, while holding this appointment, had a large share in the organization of the festivities which Murād III, in the summer of the same year, gave in order to celebrate the circumcision of his son, the future Meḥemmed III. The year 990/1582 saw also the betrothal of Ibrāhīm Pasha to ʿĀyishe, a daughter of Murād III, and his advancement to the rank of vizier.

Ibrāhīm Pasha was sent out in 991/1583 to become Beglerbeg of Miṣr (Egypt). On his return from Egypt through Syria in 993/1585 he undertook a campaign against the Druze chieftains of the Lebanon. Soon after his arrival in Istanbul—an event that he marked by a lavish presentation of gifts ("*pīshkesh-i ʿaẓīm*") to the Sultan—he received in marriage the princess ʿĀyishe. The exact progression of Ibrāhīm Pasha in rank and in office during the next few years is not wholly clear. There is mention of him as fifth vizier (Venetian *relazione* of 1583: Alberi, iii, 241), as fourth vizier (Venetian *relazione* of 1585: Alberi, iii, 290) and as third vizier (Ṣolāḳzāde, 609 —narrating events of 993/1585). Two Venetian *relazioni* a little later in time note that Ibrāhīm Pasha *had been* second vizier (cf. Giovanni Moro (1590) in Alberi, iii, 367 and Bernardo Lorenzo (1592) in Alberi, ii, 357).

Ibrāhīm, during these years, served for a short while as Kapudān, i.e., High Admiral of the Ottoman fleet (Ḥādjdjī Khalīfa, *Tuḥfat al-kibār*, 140; Daniş-

mend, *Kronoloji*, iii, 543 gives the following dates: Radjab 995/July 1587—Djumādā I 996/April 1588). The Venetian bailo Giovanni Moro, in his report to the Signoria submitted in 1590, observes (Alberi, iii, 357) that the Sultan, dissatisfied with the state of affairs at the arsenal (*tersāne*), resolved to appoint Uludj Ḥasan Pasha as Ḳapudān, "senza che Ibraim ne sapesse parola". A brief reference in Selānikī (*Taʾrīkh*, 254) describes Ibrāhīm as dismissed (*maʿzul*) from office (here unspecified) in Djumādā I 996/April 1588 (Danişmend, *Kronoloji*, iii, 111, 113 amends this date to Djumādā I 997/April 1589).

The accession of Sultan Meḥemmed III in 1003/1595 brought Ibrāhīm Pasha once more to the rank of second vizier (Ḥādjdjī Khalīfa, *Fedhleke*, i, 10). At this time the Ottoman empire was involved in the great war (1001-1015/1593-1606) with Austria. The departure of the Grand Vizier Ferhād Pasha [*q.v.*] on a campaign against Wallachia in Shaʿbān 1003/April 1595 saw Ibrāhīm Pasha, as second vizier, appointed to be *Ḳāʾim-maḳām* of the Grand Vizier at Istanbul.

On the death of the Grand Vizier Ḳodja Sinān Pasha in Shaʿbān 1004/April 1596 Ibrāhīm Pasha was raised to the Grand Vizierate. He was to hold the office for a little less than seven months. During this brief period of time the Ottomans captured from the Christians the important fortress of Eğri [*q.v.*], i.e., Eger (Erlau) in Hungary (Muḥarram-Ṣafar 1005/September-October 1596) and defeated the forces of the Emperor Rudolf II at the battle of Ḥāč Ovasī (Mezö-Keresztes) fought in Rabīʿ I 1005/October 1596. After the battle Čighālazāde Sinān Pasha [*q.v.*] was made Grand Vizier, but the office was bestowed once again on Ibrāhīm Pasha a few weeks later in Rabīʿ II 1005/December 1596. He was dismissed, for the second time, from the Grand Vizierate in Rabīʿ I 1006/November 1597 and re-appointed to it, for the third time, in Djumādā II 1007/January 1599, holding the office now until his death two and a half years later.

Ibrāhīm Pasha, as Grand Vizier and as *serdār*, i.e., general-in-chief, took command of the Ottoman armies engaged in the Hungarian war. The campaign of 1008/1599 had amongst its main objectives the repair and strengthening of the frontier fortresses and included also measures to win the local Hungarian population, which had suffered much in the course of the long war, to a more favourable attitude towards the Ottomans. Ibrāhīm Pasha, having wintered at Belgrade, led his forces in 1009/1600 against the Christian fortress of Kanizsa [*q.v.*] and, after a short siege, accepted its surrender in Rabīʿ II 1009/October 1600. This notable success marked, however, virtually the end of his career. He died at Zemūn, near Belgrade, on 9 Muḥarram 1010/10 July 1601.

Ibrāhīm Pasha is described in the sources as a man of handsome appearance (Alberi, iii, 241-2; Minadoi, 266: "bello di sembianti"), generous (Alberi, iii, 432), subtle of intellect, but deceitful (Alberi, iii, 290 — cf. also Pečewī, ii, 229-231) and even "leggiero di cervello e vario" (Alberi, ii, 357), not a sagacious figure nor apt for high command (Alberi, iii, 432: "non e riputato prudente, ne atto a supremo commando"—relazione of Matteo Zane, dated 1594)—though his undeniable success in the Hungarian campaigns of 1596, 1599 and 1600 would seem to call into doubt this last judgement of Matteo Zane.

(V. J. Parry)

IBRĀHĪM PASHA, KARA, Ottoman Grand Vizier under Meḥemmed IV, was born in 1030/1620, in a village near Bayburt, of a Muslim family. He first appears as a *lewend* [*q.v.*] serving under Abaza Ḥasan Pasha [*q.v.*]; when Abaza Ḥasan's rebellion was crushed (1069/1658) he took service under a succession of prominent figures, firstly Firārī Muṣṭafā Pasha and finally Ḳara Muṣṭafā Pasha, whose *ketkhudā* he became. Helped by the Pasha's influence and enjoying the confidence of the Sultan he now began to rise rapidly in the service of the state. He was appointed firstly *küčük* and then *büyük mīr-akhōr*, in Rabīʿ II 1082/August 1671 (Rāshid, i, 255); then when his patron Ḳara Muṣṭafā became Grand Vizier (1087/1676) he himself was made third vizier (Siliḥdār, i, 653). Ḳara Muṣṭafā, however, beginning to resent Ibrāhīm's growing intimacy with the Sultan, had him appointed Ḳapudān Pasha (17 Ramaḍān 1088/13 November 1677) in order to remove him from the court; but Ibrāhīm immediately procured himself the further post of *ḳāʾimmaḳām* to the Grand Vizier, thus ensuring his continued presence at the capital. The Grand Vizier succeeded in having him dismissed from both posts and demoted to fifth vizier (10 Shawwāl 1089/25 November 1678: the date given in *Sefinetü 'l-vüzera*, ed. Parmaksızoğlu, Istanbul 1952, 39, is erroneous), but Ibrāhīm's influence over the Sultan was not weakened; he became successively fourth and third vizier, and, on the outbreak of the war with Austria, Ḳara Muṣṭafā found it prudent to re-appoint him *ḳāʾimmaḳām*. During the siege of Vienna, he remained at Belgrade to support the operations, but when word of the failure of the expedition was received, immediately returned to Edirne. He now began to intrigue actively against Ḳara Muṣṭafā, and finally succeeded in procuring his former patron's execution and his own appointment as Grand Vizier (Dhu 'l-Ḥidjdja 1094/December 1683, see Siliḥdār, ii, 119-21). However he was quite incapable of coping with the dangerous situation developing on the various battle-fronts, and not once did he take the field himself, so that on 20 Muḥarram 1097/17 Decem-

ber 1685 (so Rās͟hid, ii, 6) he was dismissed. He asked permission to go on the Pilgrimage, but his enemies warned the Sultan that this was merely a cover for him to stir up trouble in Anatolia, by returning to the "Dj̲elālī" activities that had occupied his early years; his property was confiscated, he was exiled to Rhodes (Rabīʿ II 1097/March 1686), and he was soon after executed (S͟haʿbān 1098/June 1687).

Bibliography: The two principal sources for Ḳara Ibrāhīm Pas͟ha's career are Rās͟hid (i, 255, 334, 392, 429, 437, 439, 441, 445, 469 f., 475, 484 f.; ii, 6) and Fîndîklîlî Meḥmed Ag͟ha Siliḥdār (i, 653, 656, 663, 669, 671, 716, 718, 726 f., 738, 749 f.; ii, 7 f., 12, 17, 119 f., 129, 189, 201 f., 209 f., 215, 225 f., 228 f., 237, 242 f., 279, 288, 294); Rās͟hid, as official historiographer, is concerned to gloss over Ibrāhīm Pas͟ha's failings, whereas Siliḥdār does not hesitate to record his weaknesses. See also *Ḥadīḳat al-wuzarā*ʾ, 110-1; *Sidj̲ill-i ʿOt͟hmānī*, i, 110; Hammer-Purgstall, vi, *passim*. This article is abridged from that in *IA*, fascs. 49-50, pp. 906-8, where further references are given.

(İ. Parmaksizoğlu)

IBRĀHĪM PAS͟HA, NEVS͟HEHIRLI, favourite and Grand Vizier of Aḥmad III [*q.v.*], was born at Mūs͟hḳara (now Nevşehir), the son of a certain ʿAlī Ag͟ha; since he is said to have been about 70 years old when he died in 1143/1730, his birth may be dated to about 1073/1662. In 1100/1689 he came to Istanbul to find employment, and his relatives procured him entry to the Palace service, as *ḥelwādj̲ī*, as *baltadj̲ī*, and then as *kātib*, in which capacity, at Edirne, he became known to prince Aḥmad. When Aḥmad came to the throne (1115/1703), Ibrāhīm was made secretary to the Chief of the Eunuchs (*Dār al-Saʿāda Ag͟hasî*), holding this post for six years; but his rivals, jealous of his intimacy with the Sultan, procured his banishment for a time to Edirne. In 1127/1715 he took part, as *mewḳūfātčî* [*q.v.*], in Dāmād ʿAlī Pas͟ha's campaign in Greece, and was entrusted with the *taḥrīr* [*q.v.*] of the re-conquered Morea. Next year, as *defterdār* of Nīs͟h, he was present on the Peterwardein campaign; he did much to prevent a complete disaster after the Grand Vizier was killed, and was charged with breaking the news of the defeat to Aḥmad III. Ibrāhīm henceforth held a succession of posts in close attendance on the Sultan, and in Rabīʿ I 1129/February 1717, when second vizier, he was married to Aḥmad's favourite daughter Fāṭima, the 13-year-old widow of ʿAlī Pas͟ha. He attempted to use his influence with the Sultan to persuade him to make peace, but was unable to prevail against the Grand Vizier K͟halīl Pas͟ha; however, the loss of Belgrade [*q.v.*] (Ramaḍān 1129/August 1717) obliged the Ottomans to pursue negotiations: an armistice was signed on 1 February 1718 and Ibrāhīm, as the protagonist of the "peace policy", was finally persuaded to accept the Grand Vizierate, on 8 Dj̲umādā II 1130/9 May 1718. His first care was to see that the peace negotiations were prosecuted, and his efforts were rewarded by the signature of the Treaty of Passarowitz (Pasarofča) two months later.

Ibrāhīm wanted Turkey to engage in no more foreign adventures, but applied himself to measures of economy and reconstruction; he attempted to limit the army payrolls to effective troops only, to raise new taxes, and to stabilize the currency. At the same time, however, he and his master, encouraged perhaps by the report of Yirmisekiz Čelebi Meḥmed Efendi [*q.v.*] on his embassy to Paris and his descriptions of Versailles and Fontainebleau, engaged in the building of romantically-named *kös͟hk*s, fountains and palaces ("Emnābād", "Nes͟hāṭābād", etc.) along the Bosphorus [see Bog͟haz-ići], at Eyyūb and at Kāg͟hidk͟hāne ("Saʿdābād", the "Sweet Waters of Europe"), which were the scene of elegant parties of pleasure, of music, and of poetry, whose spirit is most vividly portrayed in the works of Nedīm [*q.v.*]. This genuinely cultured but reckless and extravagant indulgence is epitomized in the "tulipomania" which won for Ibrāhīm's Grand Vizierate the name of "Lāle dewri" [*q.v.*]. One important reflexion of this tendency to "Westernization" is the introduction into Turkey of the printing of Islamic works [see Ibrāhīm Müteferriḳa; Maṭbaʿa]. The populace however, resenting this extravagance and distressed at the territorial losses accepted under the recent treaty, found ample cause for criticism of Ibrāhīm in his favouritism of his relatives and dependents and in his cultivation of the foreign ambassadors.

When Dürrī Efendi returned from an embassy to Persia to report that the country was in utter turmoil, attacked both by the Afg͟hāns and by the Russians, Ibrāhīm summoned the notables (Radj̲ab 1134/May 1722) to propose that the Ottoman state must intervene in order to protect its eastern frontiers. Such a policy threatened in fact to bring the Ottoman Empire into conflict not with Persia but with Russia, over the possession of the territories west of the Caspian; in July 1723, however, the mediation of the Marquis de Bonnac led to an agreement with Peter the Great for the partition of Persia (S͟hawwāl 1136/June 1724), so that the war which broke out in 1723/1135 (and was to last in effect until 1149/1736) was limited to hostilities between Turkey and Persia. The occupation of Hamad͟hān, Gandj̲a, Tabriz, Rewān, etc., obliged Ṭahmāsp II [*q.v.*] to sue for peace, and the short-lived Treaty of Hamad͟hān was concluded on 17 Ṣafar 1140/4 October 1727. A Persian invasion obliged the reluctant Aḥmad to declare war in 1730; but although the court encamped at Üsküdār, the lack of any vigorous activity, as a final cause of discontent, provoked a rising in Istanbul, headed by Patrona K͟halīl [*q.v.*]. The Sultan at first restrained Ibrāhīm Pas͟ha from crossing to Istanbul to attempt to suppress the disturbances, but he finally realized that the only hope (in the upshot, vain) of preserving his own position was to sacrifice his favourite: on 17 Rabīʿ I/30 September he placed him in confinement and took back his seal of office; a *fetwā* for his execution having been issued by the S͟hayk͟h al-Islām and other prominent *ʿulemā*ʾ, he was executed; and his body was paraded before the rebels and torn to pieces.

Ibrāhīm's earlier career had convinced him that it was impolitic for Turkey to become embroiled with the now technically superior European powers. He was a man of culture, a constant reader of Naʿīmā [*q.v.*], and he promoted the translation into Turkish of such works as ʿAynī's *ʿIḳd al-dj̲umān*, ʿAbd al-Razzāḳ's *Maṭlaʿ al-saʿdayn*, etc.; he was a generous patron of poets, artists, and calligraphers. He founded many *waḳf*s, especially in Istanbul, Ürgüp, and his native Mūs͟hḳara, which, by erecting new buildings and encouraging the settlement of adjacent tribesfolk [see Iskān], he raised to be a township, with the name of "Nev-s͟hehir".

IBRĀHĪM PEČEWĪ [see PEČEWĪ].

IBRĀHĪM SHĀH SHARḲĪ, the third of the *salāṭīn al-sharḳ*, the name given to the rulers of the state of Djawnpur [*q.v.*], *regnabat* 804-44/1402-40. He and his elder brother Mubārak Shāh 'Ḳaranful', whom he succeeded on the Djawnpur throne, were the adopted sons of the eunuch Malik Sarwar, the first sultan, and they are generally supposed to have been Ḥabshīs [*q.v.*]. Ibrāhīm succeeded to a kingdom of considerable extent, from Koyl (later ʿAlīgaṙh) and Iṭāwā [*q.v.*] in the west to Bihār and Tirhut [*qq.v.*] in the east, an area of about the size of Austria. It was Ibrāhīm who did most to make Djawnpur the important state it became, both by force of arms and in the cultural sphere. He set his sights high, aiming at the capture of Dihlī itself, marching on it in 809/1407 and annexing Kannawdj and Sambhal [*qq.v.*] on the way, and was deterred from making a final assault on Dihlī only by the receipt of the news that Muẓaffar Shāh I of Gudjarāt was marching to the aid of the Dihlī sultan. He was unsuccessful in his attacks on other possessions of the Dihlī sultanate, including Bayānā, south-west of Āgrā, and Kalpī [*q.v.*], which he had the misfortune to attack in 834/1431 just as Hūshang Shāh Ghūrī [*q.v.*] of Mālwā had the same idea. From this time he intervened on several occasions in the affairs of the Bengal sultanate [*q.v.* in Supplement], according to one account coercing the Hindū usurper Rādjā Ganesh to bring up his son in the Islamic faith with the support of the Pāṇḍūā *shaykh* Nūr Ḳuṭb al-ʿĀlam [*q.v.*]; and on his invasion of Bengal in 836/1432 the Bengal sultan sought help from Tīmūr's son Shāh Rukh. He enforced order throughout his own dominions, and in spite of his failure to bring the Djawnpur sultanate any fresh territories he was respected as the wielder of the greatest power in northern India.

His reign is especially distinguished for his great patronage of art and letters, which earned for Djawnpur the title of 'Shīrāz of the east'; the liberal conditions of his court attracted scholars and litterateurs from all over the Islamic world, and important literary works, as well as works in *kalām* and *fiḳh*, were produced in Djawnpur. He graced his capital with many fine buildings, of which the Aṭalā *masdjid* is the principal survivor [see DJAWNPUR].

Bibliography: See DJAWNPUR and SHARḲIDS. (J. BURTON-PAGE)

IBRĀHĪM SHINĀSĪ [see SHINĀSĪ].

IBRĀHĪM AL-YĀZIDJĪ [see AL-YĀZIDJĪ].

(AL-) **IBRĀHĪMĪ**, MUḤAMMAD AL-BASHĪR, Algerian reformist scholar and writer, born 13 Shawwāl 1306/12 June 1889 at Bougie. He showed at an early age signs of great intelligence and his childhood and youth were spent in concentrated study. Already at the age of fourteen he had studied, at the school run by his uncle, Muḥammad al-Makkī al-Ibrāhīmī, the Ḳurʾān and the main classical literary and philological works. In 1912, on his way to the Ḥidjāz, he stayed for three months in Cairo, where he followed courses at al-Azhar and at the Dār al-Waʿẓ wa'l-Irshād which Rashīd had just opened on the island of Rawḍa. At Medina, Bashīr Ibrāhīmī pursued more advanced work in *tafsīr* and in *ḥadīth*, began to study genealogies, and carried out research in public and private libraries. And it was at Medina that he became the friend of Ibn Bādīs [*q.v.*]. For three months the two young scholars devoted their attention to considering projects for religious reform and for the renewal of Arabic studies in Algeria.

After spending two years (1917-18) at Damascus as a professor at the Madrasa Sulṭāniyya, Ibrāhīmī returned to Algeria, where he immediately set to work, with Ibn Bādīs, to propagate reform and lay the foundations of an Arabic national culture. Their efforts led to the foundation of the Association of Algerian Muslim ʿUlamāʾ in 1931, to the organization of a system of free Arabic education, and to the formation of a reformist Arabic press (the principal organs of which were *al-Shihāb* and *al-Baṣāʾir*).

On the death of Ibn Bādīs in April 1940, Ibrāhīmī became the leader of the Algerian reformist movement, to which he imparted (at least after the end of the Second World War) the character of a movement pursuing nationalist aims. The claims he made for his people, over a period of about ten years, may be summarized under three headings: the separation of the Muslim religion from the state, the independence of the Muslim judicial system, and the official recognition of the Arabic language. He also worked ceaselessly for the spread of free education in Arabic, under the auspices of the Association of ʿUlamāʾ.

In order to meet its constantly increasing educational obligations and to enable its best pupils to proceed to a higher education in Arabic, the Association of ʿUlamāʾ sought financial and academic help from the other Arab countries, which led them to send the *shaykh* Ibrāhīmī on a mission to the East in order to carry out on the spot the necessary enquiries and negotiations (1952). He did not return to his own country until 1962.

During his stay in the East, Ibrāhīmī acted as spokesman for Algeria conceived as an Arab and Muslim nation. He was also able to take part in the religious and intellectual life of the countries in which he stayed (Egypt, Syria, Irak, the Ḥidjāz, Kuwait, Pakistan) and was finally recognized everywhere as one of the outstanding figures of contemporary Islam. In 1961 he was elected as an active member of the Cairo Academy of the Arabic Language.

On his return to Algeria, *shaykh* Ibrāhīmī lost the support of the first leaders of independent Algeria because of his political views, which were based on the Islamic principle of the *shūrā* [*q.v.*], and his advocacy of "a city of justice and liberty". He died in Algiers on 19 Muḥarram 1385/20 May 1965.

Bashīr Ibrāhīmī was, with Ibn Bādīs and Ṭayyib

al-ʿUḳbī, one of the chief architects of Muslim reformism in Algeria. A distinguished orator and writer, and a scholar in the traditional Islamic disciplines, he may be considered as one of the last great representatives of classical Arabic culture.

Ibrāhīmī's works are quite substantial, but, apart from his editorials from *al-Baṣāʾir*, collected under the title of *ʿUyūn al-Baṣāʾir* (Cairo 1963, 693 pp.), they are still unpublished. They include (1) ten or so short works on linguistic questions (*al-Tasmiya bi'l-maṣdar*; *al-Ṣifāt allatī dj̲āʾat ʿalā wazn faʿal*; *al-Nuḳāyāt wa'l-nufāyāt*, or terms of the form *fuʿāla*; *al-Iṭṭirād wa'l-s̲h̲ud̲h̲ūd̲h̲*; *Baḳāyā faṣḥ al-ʿarabiyya fi 'l-lahdja al-ʿāmmiyya al-djazāʾiriyya*; *Risāla fī makh̲āridj al-ḥurūf wa-ṣifāti-hā bayn al-ʿarabiyya al-fuṣḥā wa'l-ʿāmmiyya*; a supplement to treatises on proverbs, *amt̲h̲āl*; etc.); (2) some religious studies (*Ḥikmat mas̲h̲rūʿiyyat al-zakāt fi 'l-islām*; *S̲h̲uʿab al-īmān*); (3) a play: *Kāhinat awrās* ("*La Kahena*"); (4) an immensely long *urdjūza* (36,000 verses). This "epic" (*malḥama*), as it is described by the author, covers the history of Islam and of Algeria, as well as the various aspects of the social and religious life of the Muslim community of Algeria.

Bibliography: autobiographical note, in *RAAC* xxi (1386/1966), 135-54, under the brief title *Ana*; A. Merad, *Le Réformisme musulman en Algérie de 1925 à 1940*, Paris-The Hague 1967, index.

(A. MERAD)

IBRAIL, from the Rumanian Brăila, town of Wallachia (Ţara Românească) on the left bank of the Danube, about 20 km. south of the point where it is joined by the Siret; an important trading town situated at the junction of several trade routes. In the 8th/14th and 9th/15th centuries, Brăila had connexions with Braşov in Transylvania and Lemberg in Poland. Its port was visited not only by boats from the commercial towns on the Danube but also by ships from the Black Sea and the Mediterranean. Even in the 10th/16th century, when the Bosphorus and the Black Sea were controlled by the Porte, an average of 70 or 80 ships anchored regularly there. During Meḥemmed II's campaign against Vlad Ţepeş, prince of Wallachia, an Ottoman fleet disembarked troops at Brăila (866/1462), but the town was not taken until Rabīʿ II 945/September 1538, following the campaign of Süleymān I against Moldavia. Radu Paisie, prince of Wallachia, was obliged to surrender it to the Sultan (946/1539), who appropriated also a fairly extensive territory surrounding the town. Once Brăila had become part of the Ottoman Empire, its new masters concerned themselves with its organization. There exists a 10th/16th century collection of regulations covering various aspects of economic and social life, taxes, land laws, etc. Under the Ottomans Brăila became a centre of supplies from which products from Wallachia were sent to Istanbul. For three centuries its history merges with that of other Danube commercial ports annexed by the Ottomans: it became the main object of the Rumanian princes in their struggles against the Porte. In 982/1574, the Moldavian prince Ioan cel Cumplit burned the town but was unable to take the fortress. In Radjab 1003/March 1595, Mihai Viteazul of Wallachia, at war with the Porte, forced the garrison to capitulate, but his assassination caused Brăila to be returned to the Sultan. Prince Mihnea, taking arms against the Sultan, occupied it for a brief period in 1069/1659. During the Russo-Turkish wars Brăila was taken and then returned again to the sultan. During a further war it was taken by the Russians on 6 June 1828 and finally ceded to Wallachia by the Treaty of Adrianople in 1830. It later became the centre of the activities of Bulgarian emigrés which paved the way for the independence of Bulgaria.

(N. BELDICEANU)

ʿIBRĪ [see YAHŪD].

ʿIBRĪ, a town in Oman (ʿUmān [*q.v.*]) in eastern Arabia. ʿIbrī is the capital of al-Ẓāhira, the highland district stretching from the inland slopes of the mountain range of al-Ḥadjar westwards to the sands of al-Rubʿ al-K̲h̲ālī. The town lies in the great wadi coursing down from the mountains to the sands near the point where its name changes from Wādī al-Kabīr to Wādī al-ʿAyn. Higher up in the wadi are the towns of al-ʿArāḳī and al-Dariz. Just east of ʿIbrī is the settlement of al-Sulayf, while farther east is the massif of Djabal al-Kawr, beyond which one comes to Nazwā, until recently the capital of the Imāmate of Oman. South of ʿIbrī is Fahūd, one of the principal centres of the new oil industry in Oman. ʿIbrī is a central and commanding point on the main interior route from the Trucial Coast and al-Buraymī [*q.v.*] to the districts of al-S̲h̲arḳiyya and Djaʿlān. In going from ʿIbrī to al-Buraymī, a distance of some 150 km., one passes through the cluster of villages known as Aflādj Banī Ḳitab.

The name ʿIbrī for the town is said to be derived from the tribe of the ʿIbriyyūn, who trace their descent back to the Azd and ultimately to the prophet Hūd [*q.v.*] (ʿĀbar). The ʿIbriyyūn, however, now have their headquarters in al-Ḥamrāʾ near Nazwā and have no strong connexion with ʿIbrī. The dominant tribe in ʿIbrī is the Yaʿāḳib, who, though they claim a Southern Arab origin, now belong to the G̲h̲āfirī (Northern Arab) faction in Oman. Among the other residents of ʿIbrī are members of the tribe of Banū Kalbān.

ʿIbrī, besides its strategic importance, has considerable importance as a market for the nomads of al-Ẓāhira, where the Durūʿ [*q.v.*] are the strongest tribe. The nomads sell the famous camels of Oman and buy the products of local handicrafts and imports from abroad. Agriculture flourishes, with the date and fruit groves being

perhaps the largest in Oman on the inland side of the mountains. Among the fruits are mangoes, peaches, apricots, quinces, bananas, oranges, pomegranates, plums, and guavas.

As a former district capital under the Ibāḍī imāmate, ʿIbrī is said to have the biggest Ibāḍī mosque in Oman. The town has also been occupied at times by Wahhābīs. In 1251/1836, when the British naval officers Wellsted and Whitelock approached ʿIbrī as the first Europeans to visit this region, the place was full of Wahhābīs and the travellers were forced to turn back. In 1375/1955 the British journalist J. Morris, who came to ʿIbrī in the train of Saʿīd b. Taymūr, Sultan of Muscat, encountered none of the old xenophobia.

IBRISHĪM [see ḤARĪR].

IBRUH, Sp. Ebro. Most writers in Arabic on the topography of Spain mention the river Ebro, but they are generally limited to the conventional information that it rises in the mountains of Nabarra or the Rūm, passes through Tudela (Tuṭīla) and Zaragoza (Saraḳusṭa), and reaches the Mediterranean a little below Tortosa (Ṭurṭūsha). The Muslims never controlled the headwaters of the Ebro and were consequently vague about them. The same is true of the Duero, to the extent that Zuhrī states that the Ebro and Duero share a common source. Sometimes other riverain towns, as Calahorra (Ḳalahurra), Mequinenza (Miknāsa), and Flix (Iflīsh), and affluents, as the Gállego (Djallaḳ, Djilliḳ, Djillaḳ), Segre (Shiḳar), and Cinca (Nahr al-Zaytūn), are mentioned. Both ʿAbd al-Munʿim al-Ḥimyarī and Ibn Saʿīd know the river without giving its name. Bakrī is aware of the etymological connexion between Iberia (Ibāriya) and Ebro. Zuhrī states that gold is found in it (without saying where) and adds the enigmatic information that for 100 miles, from Tudela to Mequinenza, and again from Flix to Tortosa, they employ lanterns (*yataʿāṭawna ʾl-surudj*) on the river bank.

The name is spelt *alif, bā, rā, hā*. In manuscripts the *alif* is preceded by *hamza* without bearer, which is the Maghribī manner of indicating *madda*. The inference is that the vowel of the first syllable was felt to be *fatḥa*, i.e. Ābru(h), Abru(h), and this indeed corresponds with the Spanish Ebro. On the other hand those who connected the name with Iberia presumably pronounced it Ibru(h). The spelling Ībruh seems not to occur.

Bibliography: Standard geographical writers s.v.; Zuhrī, *K. al-Djughrāfiya*, Algiers Bib. Nat. MS. no. 1552, ff. 41a, 51b, 68b (ed. M. Hadj-Sadok, in *BÉt. Or.*, xxi (1968), index).

(J. F. P. Hopkins)

AL-**IBSHĪHĪ**, Bahā al-Dīn Abu ʾl-Fatḥ Muḥammad b. Aḥmad b. Manṣūr, Egyptian writer (790-after 850/1388-after 1446), author of a famous anthology. He was born in a village in the Fayyūm, Abshūya (whence the reading al-Abshīhī for his *nisba*, which is also pronounced al-Ibshayhī), but he lived most of his life at Maḥalla al-kubrā or in the neighbouring small town of Nahrarīr. He went quite often to Cairo, where he was able to receive lessons from Djalāl al-Dīn al-Bulḳīnī, the son of the Shāfiʿī doctor of the same name (Brockelmann, S II, 139). He is said to have had as a student al-Biḳāʿī (*ibid.*, 177), the opponent of Ibn al-Fāriḍ, and Ibn Fahd (*ibid.*, 225). His reputation is based on the *Mustaṭraf fī kull fann mustaẓraf*, one of the most famous anthologies of Arabic literature (more than ten eds. at Būlāḳ and Cairo; Fr. tr. G. Rat, Paris-Toulon 1899-1902) but, according to al-Sakhāwī, *Ḍawʾ*, vii, 109, he wrote also a work of edification entitled *Aṭwāḳ al-azhār ʿalā ṣudūr al-anhār* and began a treatise on epistolography; he may also be the author of the *Tadhkirat al-ʿārifīn wa-tabṣirat al-mustabṣirīn* (manuscript at Damascus; see Ḥ. al-Zayyāt, *Khazāʾin al-kutub fī Dimashḳ*, 80, no. 24). In the *Mustaṭraf* the author appears mainly as an anthologist, anxious to make known "literary characteristics, edifying discourses, wise maxims". He acknowledges as his predecessors al-Zamakhsharī (*Rabīʿ al-abrār*) and Ibn ʿAbd Rabbih (*al-ʿIḳd al-farīd*). He also draws material from works of *ḥadīth* (*Muwaṭṭaʾ*, Tirmidhī) or of theology (Ibn al-Djawzī). The rather haphazard arrangement is not, however, entirely illogical. A first section deals with the human mind and the natural lights of reason: religion, wisdom, good customs, various talents (chapters i to xvi). There then follows a sort of treatise on society and its most characteristic categories (xvii-xxii); the work then deals with pure morality (to ch. lii); there follow, as a diversion, various thoughts on the marvels of nature and the profane arts of poetry and music. The *Mustaṭraf* is thus "a vast encyclopaedia of *omni rescibili*, which enjoyed an immense popularity" (M. Rat, preface to his translation, x). It is a *vade mecum* for the honest Muslim, which does not hesitate to mingle the fields of *adab* and of pure ethics (*akhlāḳ*), which in principle remain distinct from each other. On matters of faith, the work is very discreet, merely mentioning the most essential ritual observances. In social ethics, honour is given to both the "poverty" of the saint and the honest labour of the artisan. In the field of ethics, it advocates obedience to the established authorities, patience and endurance. It speaks rapturously of generosity, which culminates in *īthār*, "abnegation", the rather ostentatious virtue of momentarily renouncing the self. This generosity, which excludes pride (*kibr*), is nevertheless accompanied by a very strong feeling of personal dignity (*ʿuluww al-himma*). As regards style, the author does not hesitate to pass from the sublime to the trivial, and his work is at the same time a sort of *Fürstenspiegel*, a manual of literature and a collection of anecdotes often enlivened by proverbs in the popular language of Cairo; the *Mustaṭraf* has provided valuable information on the state of the spoken language in Egypt in the 9th/15th century (Goldziher, in *ZDMG*, xxxv, 528, a review of the work by Spitta Bey: *Grammatik des arabischen des vulgär Dialektes von Aegypten*, 1880). The naturalness with which al-Ibshīhī links the various categories of Arabic literature to an oral and popular culture gives to his rather clumsy work the value of direct testimony. A Turkish translation (Istanbul 1261-3/1845-7) made by Ekmekčizāde Aḥmad, under the auspices of Meḥmed Esʿad (Imāmzāde?), demonstrates the popularity which was enjoyed until modern times by a work which succeeded in assembling "in a brilliant style, Ḳurʾānic quotations, prophetic sentences, philological difficulties, comic anecdotes" (Turkish preface); a short treatise (1-29) by the translator refers to the fundamental values of Islam (the divine unity, the five pillars of worship, respect for the poor and for the saint).

The *nisba* al-Ibshīhī belonged also to other persons: (1) an Egyptian Mālikī jurist and man of

letters, Aḥmad b. Muḥammad b. Mūsā (834-98/1430-92). He owed his literary education to the Mālikī Abu 'l-Ḳāsim al-Nuwayrī and his juridical education to the classical Mālikī writers: Abū Zayd, Sīdī Khalīl, the Ḳāḍī ʿIyāḍ. He was an expert in Ḳurʾānic reading, and may have been the pupil of Ṭāhir b. ʿArabshāh (Brockelmann, S II, 21). (2) A Shāfiʿī traditionist, Shihāb al-Dīn Aḥmad b. Muḥammad b. ʿAlī (d. 892/1487), who gained a certain fame for his scholarship and the many journeys he made. He was known also by the names of Ibn Ḥarfūsh and Ibn Ṣahṣāḥ. He had dealings with al-Sakhāwī, who accused him of plagiarism and of producing an unauthorized version of his work of *ḥadīth*, *al-Maḳāṣid al-ḥasana* (Brockelmann, S II, 31; Sakhāwī, *Ḍawʾ*, i, 187).

Bibliography: Brockelmann, II, 56, S II, 55.

(J.-C. Vadet)

IBSHĪR MUṢṬAFĀ PASHA [see IPSHĪR MUṢṬAFĀ PASHA].

IBTIDĀʾ, introduction, prologue, a term in rhetoric. In Ḳazwīnī's *Talkhīṣ al-miftāḥ* (published under the title *Matn al-talkhīṣ*, Cairo n.d., 125 and 127), its extended version, the *Īḍāḥ* (ed. Muḥ. ʿAbd al-Munʿim Khafādjī, vi, 147-50, 154), and the various works based on the *Talkhīṣ*, the *ibtidāʾ* is mentioned, along with the *takhalluṣ*, "transition" [*q.v.*], and the *intihāʾ*, "conclusion" [*q.v.*], as one of the three sections of the poem or composition which should receive particular attention and should conform to certain criteria of style and content. In the opening line of a poem complicated syntax should be avoided and the two hemistichs should be closely related in sense; in the case of a panegyric, it should not contain anything that could be interpreted as an evil omen or an improper allusion to the ruler or dignitary to whom the poem is addressed, etc. In poetry as well as in prose the author may earn distinction by observing the *barāʿat al-istihlāl*, "the skilful opening", by which is understood an introduction that contains an allusion to the main theme of the work.

This theory, in particular the reference to the *barāʿat al-istihlāl*, reflects a tendency on the part of Ḳazwīnī and his followers to emphasize the importance of thematic unity and restrict the use of the conventional prologue of ancient poetry, the *nasīb* [*q.v.*]. They explain the term *tashbīb*, originally a near synonym of *nasīb*, as synonymous with *ibtidāʾ* in its widest sense (see also H. A. R. Gibb, in *BSOAS*, xii (1948), 576).

Works on rhetoric outside Ḳazwīnī's tradition offer essentially the same theories under headings like *al-mabdaʾ*, *al-mabādiʾ wa 'l-iftitāḥāt*, *ḥusn al-maṭlaʿ*, etc. Of special interest are the chapters in Ibn al-Athīr's *al-Mathal al-sāʾir* (ed. Muḥ. Muḥyi 'l-Dīn ʿAbd al-Ḥamīd, ii, 235-58) and Ibn Ḥidjdja's *Khizāna* (Cairo 1304, 3-20), which give much attention to the *ibtidāʾ* in prose. In dealing with the Ḳurʾān, some authors regard the letters found at the beginning of some *sūra*s as models of *ibtidāʾ*. For the *ibtidāʾ* in oratory see KHUṬBA.

See also NAḤW.

(S. A. Bonebakker)

IČ-OGHLANÎ (T.), literally "lad of the interior", i.e. "page of the inner service (*Enderūn* [*q.v.*])", Ottoman term for those boys and youths, at first slaves, recruits through the *devshirme* [*q.v.*], and occasionally hostages, later (from the 11th/17th century) also free-born Muslims, who were selected for training in the palaces of Edirne and Istanbul in order to occupy the higher executive offices of the state. For details, see GHULĀM, iv; ḲAPÎ-ḲULU; SARĀY-I HÜMĀYŪN.

(Ed.)

IČIL (IČEL), mountainous province in southern Turkey, situated on the western spurs of the Taurus on the Mediterranean opposite Cyprus. The chief town is today the port of Mersin; its administrative districts are Mersin, Anamur, Gülnar, Mut, Silifke and Tarsus. The province is bounded in the north by the province of Konya, in the north-east by that of Niğde, in the east by Adana and in the west by Antalya. The main river is the Göksu [*q.v.*] (Kalykadnos/Saleph), which rises in the Bolkar Dağı and flows below Silifke into the Mediterranean.

In antiquity the borders of "Stony Cilicia" (as this territory, also called Isauria, was called to distinguish it from the neighbouring "Flat Cilicia", i.e. the plain of Adana) were considered to be in the west the promontory of Korakesion (Alanya), in the east the valley of the Lamus (Lâmas suyu). In the Byzantine period the territory formed, from the 9th century, a part of the military frontier against the Arabs under the name of Seleukeia. In the time of the Crusades the kingdom of Little Armenia fortified the towns there, among them Anamur, Sechin and Kelenderis on the coast and Ermenak [*q.v.*] and Lauzad inland. The Seldjuks, under ʿIzz al-Dīn Kaykāʾūs I and especially under ʿAlāʾ al-Dīn Kayḳobād I, occupied by about 625/1228 the majority of these castles (many of them today are either without names or not yet identified) as far as Silifke, whose citadel Camardesium was occupied by the Knights of St. John. The newly-conquered "Seldjuk-Armenia" was given the name of "Wilāyat-i Arman", or Armanistān; the province was also called the "Wilāyat of Ḳamar al-Dīn", after its first Seldjuk governor. The immigration of numerous Oguz tribes soon made the "Province of Armanāk" into a pronouncedly Türkmen territory which, after the division of the Seldjuk state belonging to the western half of Rūm, soon became the main territory of the Türkmen princes of Ḳaramān, who gradually succeeded in capturing all the fortresses (especially Ermenak and finally also the town of Silifke) from the Seldjuks and the remaining Armenians and Crusaders. From this province as a centre, which, as the "inner part" of their principality, was called *Ič il(i)*, the Ḳaramānids built up their dominion. There are references from the 8th/14th century to the Varsaḳ-Türkmens as being their neighbours and allies, among whom, in 853/1449-50, the militant Ṣafawid Shaykh Djunayd [*q.v.*] disseminated his propaganda (emirs: Ḥamza b. Ḳara ʿĪsā, 837/1427; Uyuz Beg, circa 875/1470; Yūsuf Beg Varsaḳ, governor of Kemākh for Shāh Ismāʿil, fell in the battle of Čaldiran [*q.v.*] in 920/1514). In Zeyne, a *ḳaṣaba* of Ič il, there died in 862/1457-8 the founder of the Samarḳandiyya order, ʿAlāʾ al-Dīn ʿAlī. Ič il also provided the Ḳaramānids with a refuge when they came into conflict with the Ottomans from the end of the

8th/14th century. From 799/1397, and especially from the middle of the 9th/15th century, they retired to "Ṭash il(i)", as the heartland of Ḳaramān was now often called, or "Ič il" (the two terms are often used as synonyms. It is not yet clear whether *ṭash ili* means originally "outside land" or "stone land"). Its last strongholds, the fortresses of Silifke, Ermenak and some others, recovered with the aid of the Crusaders under Mocenigo, did not fall to the Ottomans until after Meḥemmed II's victory over Uzun Ḥasan, in the autumn of 878/1473. The Cypriots had lost in 852/1448 their last town on the mainland (Korykos); and the Mamlūks also, to whom ʿAlāya [see ALANYA] had belonged for some time from 830/1427, retreated from the coast of Ič il. In 888/1483, the district was allotted as a *sandjāḳ* to the newly created Ottoman *wilāyet* of Ḳaramān, its administrative centre being Silifke. After the conquest of Cyprus in 979/1571, the Ottomans placed Ič il under their new *eyālet* of Ḳibrîs, in which they resettled *yurük*s [*q.v.*] from there. The *Djihānnumā* refers to "Ičil proper" (or Silifke) as being a mainland *sandjāḳ* of Cyprus. When Evliyā Čelebi travelled through the *sandjāḳ* in 1082/1671, it belonged to the *eyālet* of Adana. Evliyā's itinerary, which still awaits detailed investigation, contains remarks on the summer pastures of the Türkmens of Ič il (Toḳar, Küčük Čimen, Seki yaylalarî). The tribesfolk, among whom, as Faruk Sümer has shown, well-known Oguz tribal groups were to be identified, were still predominantly nomadic. During the efforts to sedentarize them, refractory *yürük*s were again settled in Cyprus in 1124 and 1126/1712 and 1714. In the 18th century, the *sandjāḳ* appears repeatedly as an *arpalîḳ* [*q.v.*] of dismissed Grand Viziers. From 1831, Ič il belonged to the *eyālet* of Adana. Under the Turkish Republic the *kaza* of Ermenak was attached to the *vilâyet* of Konya and the rest of "Stony Cilicia" was, together with Mersin, made into a new *vilâyet*, Içel.

Bibliography: *İA*, s.vv. *İçel* (Besim Darkot), *Karamanoğullari* and *Silifke* (Şihabeddin Tekindağ), with references to the geographical literature and to the Arabic, Persian and Turkish sources.

(B. FLEMMING)

ICONOGRAPHY [see ṢŪRA].

ʿĪD, festival. The word is derived by the Arab lexicographers from the root *ʿwd* and explained as "the (periodically) returning". But it is in fact one of those Aramaic loanwords which are particularly numerous in the domain of religion; cf. for example the Syriac *ʿīdā* "festival, holiday".

The Muslim year has two canonical festivals, the *ʿīd al-aḍḥā* [*q.v.*] or "sacrificial festival" on 10 Dhu 'l-Ḥidjdja and the *ʿīd al-fiṭr* [*q.v.*] "festival of breaking the fast" on 1 Shawwāl. The special legal regulations for these are dealt with in the following articles. Common to both festivals is the *ṣalāt al-ʿīd(ayn)*, the festival of public prayer of the whole community, which is considered *sunna*. In many ways it has preserved older forms of the *ṣalāt* than the daily or even the Friday *ṣalāt* (although in other points it has come to resemble the latter) and in its general style much resembles the *ṣalāt* for drought and eclipses. It consists only of two *rakʿa* [*q.v.*] and contains several more *takbīr* [*q.v.*] than the ordinary *ṣalāt*. After it a *khuṭba* [*q.v.*] in two parts is delivered. It has no *adhān* [*q.v.*] and no *iḳāma* [*q.v.*]; as in the oldest times, the only summons to it is the words *al-ṣalāt djāmiʿat^an^*. It should be celebrated in the open air on the *muṣallā* [*q.v.*], which is still often done, though now mosques are frequently preferred. The time for its performance is between sunset and the moment when the sun has reached its zenith.

At both festivals, which in practice last three or four days, the Muslim puts on new or at least his best clothes; people visit, congratulate, and bestow presents on one another. The cemeteries are visited, and people stay in them for hours, sometimes spending the whole night in tents. These more popular practices are more usual at the *ʿīd al-fiṭr* than at the *ʿīd al-aḍḥā*; the festival of breaking the fast is much more joyfully celebrated because the hardships of Ramaḍān are over, so that at the present day the "minor festival" has in practice become of much greater importance than the "major festival".

ʿĪD AL-AḌḤĀ (also called *ʿīd al-ḳurbān* or *ʿīd al-naḥr*) "sacrificial feast" or AL-ʿĪD AL-KABĪR "the major festival", in India *baḳar ʿīd* (*baḳra ʿīd*), in Turkey *büyük bayram* or *kurban bayramı*. It is celebrated on 10 Dhu 'l-Ḥidjdja, the day on which the pilgrims sacrifice in the valley of Minā [see ḤADJDJ], the first of the three *ayyām al-tashrīḳ* (see Gaudefroy-Demombynes, *Le Pèlerinage à la Mekke*, Paris 1923). The old Arab custom of sacrificing on this day in Minā was adopted by Islam not only for pilgrims but also for all Muslims as *sunna*. It becomes a necessary duty (*wādjib*) only by reason of a vow (*nadhr*).

This *sunna* is obligatory (*muʾakkada ʿala 'l-kifāya*) on every free Muslim who can afford to buy a sacrificial victim. Sheep (one for each person) or camels or cattle (one for one to ten persons) are sacrificed. The animals must be of a fixed age and be free from certain blemishes (lack of an eye, lameness etc.). The period of the sacrifice begins with the *ṣalāt al-ʿīd* and ends with sunset on the third of the three *ayyām al-tashrīḳ*. The following practices are recommended to the sacrificers: 1. the *tasmiya*, *i.e.*, the saying of the *Basmala* [*q.v.*]; 2. the *ṣalāt ʿala 'l-nabī*, the blessing on the Prophet; 3. the turning towards the *ḳibla*; 4. the threefold *takbīr* before and after the *tasmiya*; 5. a request for the gracious acceptance of the sacrifice. If the latter is offered on account of a vow, the sacrificer must eat none of it but must give it all away for pious purposes. If the sacrifice, as is usually the case, is a free will offering, the sacrificer enjoys a portion (a third) of the animal and gives the rest away. Among the Druses, the festival is now celebrated in memory of the sacrifice offered by Cain and Abel (R. Kriss and H. Kriss-Heinrich, *Volksglaube im Bereich des Islam*, Wiesbaden 1960-2, i, 199).

On the public prayer and the usages at the festival on this holiday see ʿĪD.

Bibliography: In addition to the works mentioned for the article ʿĪD, the books of *fiḳh* in the chapter on *uḍḥiyya*. (E. MITTWOCH)

ʿĪD AL-FIṬR, "festival of the breaking of the fast" or *al-ʿīd al-ṣaghīr* "the minor festival", Turkish *küçük bayram* or *şeker bayramı*, is the festival celebrated on 1 Shawwāl and the following days. If the Muslim has not paid the *zakāt al-fiṭr* [see ZAKĀT] before the end of the period of fasting, he is legally bound to do this on 1 Shawwāl at the latest and is recommended to do it before the public prayer (*ṣalāt*) which is celebrated on this day [see ʿĪD].

As this festival marks the end of the hardships of the period of fasting, it is, although called the "minor", celebrated with much more festivity and rejoicing than the "major festival"; cf. ʿĪD.

AL-ʿIDĀDA [see AL-ASṬURLĀB].

IḌĀFA [see NISBA].

IḌĀFA, infinitive of the verb *aḍāfa (ilā)* "to unite (with)", has became a term in Arabic grammar. In the *Kitāb* of Sībawayhi it has at first a very wide meaning: it is inserted into the theory of the *djarr* (genitive) [the Kūfans say *khafḍ*] set out in Chapter 100. There we find: "*al-Djarr* is found only in nouns that are *muḍāf ilayhi*", that is: "that have received an adjunction", the *muḍāf* being that which is "added". It is the *iḍāfa*, the fact of having united one term with another, that requires the *djarr* (*Mufaṣṣal*, § 110), but the "operator" of this putting into the *djarr*, the *ʿāmil*, is the *ḥarf al-djarr* (preposition), *murād* (intended) (Ibn Yaʿīsh, 304, lines 11-12; *Sharḥ al-Kāfiya* i, 250, line 3 a.f.), expressed or understood (*muḳaddar*). Thus the *iḍāfa* always implies a *ḥarf al-djarr*; as far as Sībawayhi is concerned, see his distinctions in Ch. 100. The theory of the *djarr* sets *iḍāfa* within very wide boundaries: as soon as there is a noun in the genitive (*madjrūr*), there is *iḍāfa*: *marartu* *bi-zaydin*, "I passed by Zayd"; the verb *marartu* (1st term: *muḍāf*) is linked, united with "Zayd" (2nd term: *muḍāf ilayhi*), and the instrument of this *iḍāfa* is the *ḥarf al-djarr*: the preposition *bi-* (see Sībawayhi, i, 178, lines 1-10). Note that Sībawayhi extended the *iḍāfa* even to the *nisba*: ii, Ch. 318; equally Ibn al-Sarrādj, 126.

The determination of one noun by another noun in the *djarr* also comes into this framework: *ghulāmu zaydin*, "Zayd's young slave": *ghulāmu* (1st term: *muḍāf*) is linked, united with "Zayd" (2nd term: *muḍāf ilayhi*), and the instrument of this *iḍāfa* is a *ḥarf al-djarr*, *muḳaddar*, unexpressed, but leaving its trace: the *djarr* of the *muḍāf ilayhi*. In fact, *ghulāmu zaydin* is thought of as implying the *ḥarf al-djarr*: *li-*, which is present in: *al-ghulāmu 'lladhī li-zaydin*, "the young slave belonging to Zayd" (cf. Ibn Yaʿīsh, 303, line 23). According to the context, the Arab grammarians assume the presence of: *li-*, *min* or even *fī*.

Iḍāfa in its general sense continued to be employed for the theory of the *djarr*, e.g.: *Mufaṣṣal*, § 110 and Ibn Yaʿīsh, 303-4. In common usage the word was limited to expressing the relationship of the determining of one term by another term, the determinative complement (the Hebrew "construct state"). European grammars thus translate *iḍāfa* as: "annexation", as did S. de Sacy (*Gr. Ar.*^{2}, Paris 1831, ii, § 235); the term was also listed by J. Marouzeau in the *Lexique de la terminologie linguistique*^{3}, 21.

Arab grammarians called the determination by the determinative complement: *iḍāfa maḥḍa*, "pure" (Ibn al-Sarrādj, 60), *iḍāfa maʿnawiyya*, "semantic" (*Mufaṣṣal*, § 111; Ibn al-Ḥādjib, *Sharḥ al-Kāfiya*, i, 252;), *iḍāfa maḥḍa wa-maʿnawiyya* (*Alfiyya*, verse 390), *iḍāfa ḥaḳīḳiyya*, "true" (Ibn Yaʿīsh, 305, line 12). It expresses different relationships: possession, material, etc. (see de Sacy, *ibid.*, § 98-9, or W. Wright, *Ar. Gr.*^{3}, ii, § 76). The two terms, closely joined, cannot be separated one from another: the first (*al-muḍāf*) does not take the article or nunation: in the dual and the sound plural the terminations *-ni*, *-na* are omitted: the second term (*al-muḍāf ilayhi*) is in the *djarr*, e.g.: *ibnu 'l-maliki*, "the son of the king", in the dual: *ibnā 'l-maliki*, "the two sons of the king", and in the plural: *banū 'l-maliki*, "the sons of the king". Both are definite or indefinite together: *ibnu 'l-maliki*, "the son of the king"; *ibnu malikin*, "a king's son". Semantically there is a difference: *taʿrīf* in the first case, that is, the indication of a definite being; *takhṣīṣ* in the second: the indication of the category of a given being (see, among others, al-Djurdjānī, *Taʿrīfāt*, 18). This *takhṣīṣ* can be (for us) the equivalent of an adjective, e.g.: *ḥimāru waḥshin*, "a wild ass", but this does not alter the character of the Arabic construction.

Another *iḍāfa* also exists. One can say, with an adjective, *al-radjulu 'l-ḥasanu wadjhuhū* or *radjulun ḥasanun wadjhuhū*, "the man (or: a man) with a beautiful face"; one says more frequently (using the *djarr*), in the same sense: *al-radjulu 'l-ḥasanu 'l-wadjhi*, or *radjulun ḥasanu 'l-wadjhi*. One can use an active participle (followed by the *djarr* in place of the verbal construction with the *naṣb*), e.g.: *bashshir ... wa-'l muḳīmī 'l-ṣalāti* (Ḳurʾān, XXII, 36/35), "announce the good news ... and to those that accomplished the prayers"; ... *hadyan bāligha 'l-kaʿbati* (*ibid.*, V, 96/95). "... a sacrificial beast that arrives at the Kaʿba". The second type requires the use of the *djarr*; the Arab grammarians consequently included it in the *iḍāfa*, but they declared it *ghayr maḥḍa*, "impure" (Ibn al-Sarrādj, 60), *lafẓiyya*, "verbal, formal" (*Mufaṣṣal*, § 111; Ibn al-Ḥādjib, *Sharḥ al-Kāfiya*, i, 252; *Alfiyya*, verse 390); it is a simple way of expressing the same sense more lightly, *lā tufīd illā takhfīf fi 'l-lafẓ*, as Ibn al-Ḥādjib says (*Sharḥ al-Kāfiya*, i, 256), and presupposes no *ḥarf al-djarr*; but what is its *ʿāmil*? (see *Sharḥ al-Kāfiya*, i, 251, line 13 f.).

In Arabic this *iḍāfa lafẓiyya* must be carefully distinguished from the true one: the construction contains an important difference: the first term, as we have seen, can take the article; in addition, the function is different: determination in the true *iḍāfa*, qualification in the *lafẓiyya*, and, one must add, a limited qualification: *radjulun ḥasanu 'l-wadjhi*; first a man is qualified by "beautiful", by the complement in the *djarr*, then this beauty is limited, here, to the "face" (cf. Ibn Yaʿīsh, 306, lines 20-2). The construction is important: with an adjective it is a normal method of description in Arabic. It is used in ancient Semitic. But, where Arabic distinguishes the two *iḍāfa*s in grammatical construction, ancient Semitic uses the same method for both: the construct state, the genitival relationship (see C. Brockelmann, *Grundriss der vergleichenden Grammatik der semitischen Sprachen*, ii, Berlin 1913, § 171 f; for Hebrew see, especially, P. Joüon, *Grammaire de l'hébreu biblique*, Rome 1923, § 129 i).

J. P. Broch, § 110-30, see first § 110-15, a good account, to be completed by the *Sharḥ* of Ibn Yaʿīsh (ed. G. Jahn), 303-56 (first 303-18); Raḍi 'l-Dīn al-Astarābādhī, *Sharḥ al-Kāfiya*, by Ibn al-Ḥādjib, Istanbul 1375, i, 250-75; Ibn Mālik, *Alfiyya*, verses 385-423 and the *Sharḥ* of Ibn ʿAḳil (ed. Muḥyi 'l-Dīn ʿAbd al-Ḥamīd), ii, 35-74; Ibn Hishām Djamāl al-Dīn, *Sharḥ Shudhūr al-dhahab* (Maṭbaʿat Muḥ. ʿAlī Ṣabīḥ), 340-9; *Dict. of Techn. Terms*, ii, 888-9; W. Wright, *Ar. Gr.*[3], ii, 198-234. (H. Fleisch)

ii.—Iranian languages

The term *iḍāfa* (*ezāfe*) is used loosely in New Persian for the enclitic particle *-i* (strictly *kasra-yi iḍāfa*) which serves to connect a nominal form with a following determinant, be it descriptive, appositional, or genitival, *e.g.*, *āb-i garm* 'warm water', *rūd-i nīl* 'the river Nile', *kitāb-i pisar* 'the boy's book', or in any combination of these, *e.g.*, *āb-i garm-i rūd-i nīl* 'the warm water of the river Nile'. Following a final vowel the particle appears as *-yi*, the semi-vowel being written with the letter ی after ا *-ā* and و *-ū*, but abbreviated to the form of a *hamza* (when written at all) after ه *-a* and ی *-ī*, *e.g.*, *kitābhā-yi pisar* 'the boy's books', *sū-yi man* '(in) my direction, towards me', *khāna-yi buzurg* 'the big house'. In early Persian the particle was often written as ی, or by various other conventions, in all phonetic contexts.

By origin the particle is a relative pronoun. Already in both Old Iranian languages known, Old Persian and Avestan, there are examples of the use of the relative (*h*)*ya-*, besides its normal function, as a kind of article, agreeing entirely with its antecedent and linking to it a simple determinant instead of a full clause, *e.g.*, OP *kāsaka*(*h*) *hya*(*h*) *kapautaka*(*h*) 'the blue (NP *kabūd*) stone, lapis lazuli', *gaumāta*(*h*) *hya*(*h*) *maguš* 'Gaumata the Magian (nominative)', *gaumātam tyam magum* (accusative); Av. *daēvō yō apaošō* 'the demon Apaosha', *tām čarətām yām darəγām* 'the long (NP *dīr*) race-course (acc. fem.)', *tāiš šyaoθanāiš yāiš vahištāiš* 'for the best actions (instrumental plur. neuter), *daēnām ... yām hudānaoš* 'the conscience (acc. fem.) of the sensible man' (R. G. Kent, *Old Persian*, § 261; H. Reichelt, *Awestisches Elementarbuch*, §§ 749 ff.).

This innovation became so characteristic of the relative *y-* stem that wherever derivatives of it survived in Middle and later Iranian dialects it was mainly, if not solely, in some articular use. Thus Soghdian *yw* (< *yam*, if not from the demonstrative *ayam*), Khwārezmian *ī* (masc.), *yā* (fem.), and Digoron Ossetic *i* are used as definite articles (see H. W. Bailey, *Asica*, in *TPhS*, 1945, 17 ff.). In Middle Persian the particle *ī*(*g*), spelt *ʿy* and *ʿyg* in Manichaean script, served both as a relative, *e.g.*, *den ī āwarē* 'the religion which you bring', *winĕh ig ašmā kird* 'the sin which you committed', and as a connective, *e.g.*, *bōy īg narm* 'a mild scent', *frazend ī wahman* 'the son of Vahman'; it was not yet, however, essential to the construction, *e.g.*, *bōyestān āfrīdag* 'blessed garden', *dibīrān nēwān* 'good scribes'. In the other Western Middle Iranian language, Parthian, the place of *ī*(*g*) was very early taken by the particle *čē* (see M. Boyce, *The use of relative particles in Western Middle Iranian*, in *Indo-Iranica, Mélanges Morgenstierne*, Wiesbaden 1964, 28-47).

In New Persian the old relative has entirely given way to the particle *ki*. In some modern Western Iranian dialects, however, particles similar to Persian *-i* function as both relative and *iḍāfa*. In Northern Kurdish, for example, where a distinction of gender is also preserved: *kar-ē dēza* 'the grey ass', *žin-ā wī* 'his wife', *aw kar-ē ta dīt* 'that ass which you saw', *žin-ā ta dīt* 'the woman whom you saw'. In the Hawrāmī dialect of Gōrānī there is a distinction between an epithetic *iḍāfa ī*, *kitēb-ī syāw* 'a black book', and a genitival *ū*, *har-ū šwānay* 'the shepherd's ass'. The New Persian construction, and *-i* form, has been borrowed by many other dialects. (D. N. MacKenzie)

(iii) Turkic languages.

The Turkish *izâfet* construction (*izâfet terkibi*) is made up of two components: (1) the governed noun (*muzâf ileyhi*) or complementing element (*mütemmim, tamlayan/tamamlayıcı unsur*); (2) the governing noun (*muzâf*) or complemented element (*tamamlanan unsur*). In the Turkish *izâfet*, in contrast to the Arabic or Persian usage, the governed noun regularly precedes the governing noun.

The Turkish *izâfet* is based: (1) on the possessive relationship, and (2) on the qualifying relationship between two nouns.

The possessive *izâfet*, which in modern Turkish grammars is referred to as *iyelik grupu/takımı* (possessive group/annexation), *isim takımı/tamlaması* (noun annexation/complement), may be divided into two categories: (1) definite *izâfet* (*tâyinli izâfet, belirli isim takımı/tamlaması*); (2) indefinite *izâfet* (*tâyinsiz izâfet, belirsiz isim takımı/tamlaması*). The differences between the two categories are: (1) in the definite *izâfet* the governed noun is placed into the genitive: *bahçe-nin kapı-sı* 'the gate of the garden', in the indefinite *izâfet* it stands in the indefinite (suffixless) case: *bahçe kapı-sı* 'garden-gate'; (2) as seen from the foregoing example, the definite *izâfet* establishes a loose, temporary relationship between the components; in the indefinite *izâfet* this relationship is close, permanent, similar to that of the components of a compound noun; (3) in the definite *izâfet* both components keep their stress, while in the indefinite *izâfet* only the first component is stressed. In both categories the governing noun takes the possessive suffix of the third person, except that if the first component is the genitive of the personal pronoun of the first or second person, the second component takes the possessive suffix of the first or second person: *ben-im ev-im* 'my house', *siz-in ev-iniz* 'your house' (colloquially also *benim ev*, etc.).

In the qualifying *izâfet* two nouns are juxtaposed without change. The first component indicates the thing of which the second component is made, or to which it is compared: *ipek gömlek* 'silk shirt', *çelik irade* 'iron will'. In recent Turkish grammars this type of *izâfet* is dealt with in the chapter on *sıfat takımı* (adjective annexation) or *sıfat tamlaması* (adjective complement).

Syntactically the *izâfet* construction is treated as a unity, declensional endings being added to the second component: *müdürün şapkası-nı* 'the hat (= acc.) of the director', *misafir odası-n-da* 'in the guest-room', *taş köprü-den* 'from the stone bridge'. The plural suffix can be added to the first component only in the possessive *izâfet*: *öğretmen-ler-in vazifesi* 'the duty of the teachers' and *öğretmen-ler klübü* 'teachers' club'. If meaning requires a further possessive suffix to be attached to the indefinite *izâfet*, the first possessive suffix is dropped: *para çanta-sı* 'purse', but *para çanta-m* 'my purse', *para*

çanta-nız 'your purse', *Enver'in para çanta-sı* 'Enver's purse'.

An *izâfet* can be a component of another *izâfet* construction: *üniversite profesörü-nün asistanı-nın tetkik seyahati* 'the study trip of the assistant of the university professor'.

Already in the Old Turkish inscriptions of the 8th century A.D. the whole system of *izâfet* is developed, except that the genitive suffix is less frequently used than today, and the possessive suffix in the indefinite *izâfet* is also often omitted: *Tabghač budun sabï* 'the words of the Chinese people', *Ötüken yïsh* 'the Ötüken Forest'.

IḌAM [see ḤAMḌ, WĀDĪ AL-].

IʿDĀM [see ḲATL].

ĪDAR, name of a fortified town in northern Gudjarāt, 100 km. north-east of Aḥmadābād, and of its surrounding territory, largely mountainous. The former *rādjā*s of Īdar were in the 8th/14th century a constant thorn in the flesh of the first governors in Gudjarāt of the Dihlī sultanate, and military action was almost always required to collect the tribute the governors exacted. After Gudjarāt became an independent sultanate Aḥmad Shāh I was similarly troubled, and the strength of Īdar, so near his newly founded capital of Aḥmadābād, was a cause for concern. He consequently built another new garrison town, Aḥmadnagar (now called Himatnagar), some 20 km. below Īdar as a base of operations against it, and waged continuous warfare on the *rādjā* from 829/1425 to 831/1428, when the *rādjā* at last sought peace and promised tribute. The agreement was generally honoured, although in later years there were many more occasions when the tribute was withheld with consequent renewed hostilities. Aḥmad's son Muḥammad I renewed the attack in 850/1446, on which occasion the ruler bought peace by giving Muḥammad his daughter in marriage.

In the reign of Muẓaffar II the powerful Mahārānā Sāngrām of Čitawr had established a usurper on the throne of Īdar. Such interference in the affairs of a feudatory state could not be tolerated even by the mild Muẓaffar, and the rightful heir was restored by a Gudjarāt army. Sāngrām was, however, incensed at insults offered to his name by the Gudjarātī *fawdjdār* [*q.v.*] at Īdar, and raided the border towns, including Īdar, in 925/1519, before being defeated by a large Gudjarāt army and compelled to pay reparations.

In Mughal times there were often similar clashes at first between the Īdar rulers and the Mughal army commanders, who expelled the Hindū rulers from time to time; and in 984/1576 the *rādjā* did not submit to the Mughal armies until defeated in pitched battle. After this, affairs quietened down, although in 1018-9/1609-10 we hear of the *rādjā* of Īdar being called upon, under the usual agreement with tributary rulers, to furnish a contingent of 2000 horse for the defence of Gudjarāt against the depredations of the Niẓām Shāhī armies under Malik ʿAnbar. In later times, when the Mughal empire was breaking up and the province of Gudjarāt was under the *ṣūbadārī* of Mahārādjā Abhaysingh, the latter gave Īdar in *djāgīr* to his brothers, establishing a new Rādjpūt dynasty of rulers there. The later history of Īdar is not relevant to the affairs of Islam in India.

Bibliography: See GUDJARĀT. For the history of Īdar state under the Marāthās, see *Imperial Gazetteer of India*, xiii (1908), 325-8.

(J. Burton-Page)

IDĀRA, the common name in modern Arabic, Persian, Turkish, etc. for administration. The term appears to have acquired its technical significance during the period of European influence. Muslim administration is discussed in the articles on administrative departments and services (BĀB-I-ʿĀLĪ, BAYT AL-MĀL, BARĪD, DĪWĀN, DĪWĀN-I HUMĀYŪN, ISTĪFĀʾ, ḲALAM, ḲĀNŪN, RAWK, TAḤRĪR etc.); on officers and functionaries (ʿĀMIL, ʿAMĪD, DAFTARDĀR, ḤĀDJIB, KÂHYA, KHĀZIN, MUSHĪR, MUSHRIF, MUSTAWFĪ, NĀʾIB, NĀẒIR, RAʾĪS AL-KUTTĀB, SHĀDD, WAKĪL, WĀSIṬA, WAZĪR, etc.); on scribes (KĀTIB) and civil servants (MAʾMŪR); on administrative documents, records, and accounts (DAFTAR, DIPLOMATIC, INSHĀʾ, MUḤĀSABA, RASĀʾIL, SIDJILL). Provincial administration is discussed in articles on officers (AMĪR, BEGLERBEGI, ḲĀʾIM-MAḲĀM, MUDĪR, MUTAṢARRIF, SANDJAK-BEY, WĀLĪ, etc.) and on territorial sub-divisions (EYĀLET, ḲAḌĀʾ, KŪRA, NĀḤIYA, NIYĀBA, MAMLAKA, RUSTĀḲ, SANDJAḲ, TASSŪDJ, USTĀN, VILÂYET, etc.). On police matters see ʿASAS, DĀRŪGHA, SHIḤNA, SHURṬA; on the introduction of the modern apparatus of government, see ḤUKŪMA, TANẒĪMĀT. (Ed.)

ʿIDDA, from the verb *ʿadda*, "to count, enumerate" (days or menstruations), Arabic term for the duration of widowhood or, rather, the period of abstention from sexual relations imposed on a widow or a divorced woman, or a woman whose marriage has been annulled, before she may re-marry. In pre-Islamic Arabia the institution is thought to have been unknown with regard to a divorced woman. The Ḳurʾānic provisions on which it was based were not always respected during the early years of Islam (J. Schacht, *Origins*, 181) although at a very early date the jurists gave their sanction to them by considering completely void any marriage contracted during an *ʿidda* not yet completed. This basic element in the law of marriage is equally important for determining paternity.

The difficulties of *fiḳh* in this matter arise from the fact that there exist two methods of calculating the period of delay: the first, in months and days, applying mainly to widows; and the second, applying to the divorced woman or woman whose marriage has been annulled, based on the occurrence of three menstrual periods. The origin of this system is found in the Ḳurʾān (II, 234 and 228), whose rules on the matter were too clear and unequivocal to permit the great jurists to alter or modify them.

To the above two circumstances (the expiry of a fixed period and the occurrence of a third menstruation) which mark the end of the *ʿidda* there should be added a third: childbirth. In fact the *ʿidda* of a woman who is pregnant at the time that the marriage is dissolved ends with her accouchement. We shall deal first with this case, which is the simplest.

(1) For a woman who is pregnant, whatever the reason for the ending of her marriage (the death of her husband, divorce, annulment), the *ʿidda* lasts until her accouchement and ends with it, even if it

follows very closely after the end of the marriage. Scarcely any except the "Twelver" S̲h̲īʿīs and the Zaydīs prolong the *ʿidda*, in the case of a widow only, beyond the accouchement until the expiry of the period of 4 months and 10 days stipulated by the Ḳurʾān for all widows indiscriminately. They maintain that this period of delay is established not merely to avoid a confusion in establishing birth, but also out of respect for the memory of the deceased; they do not consider it fitting that a widow should be able to re-marry too soon after her husband's death merely because in the meantime she has given birth to a child.

(2) For widows who are not pregnant and for divorced women who are either too young to menstruate or who have reached the menopause, the *ʿidda* is counted in months and days.

(a) A widow must observe a retreat of 4 months and 10 days after her husband's death. This figure, the reasons for the adoption of which are not very clear, is that which appears in the Ḳurʾān (II, 234); widows are obliged to observe this retreat whether or not the marriage has been consummated and whether or not they have reached the age of puberty, the only condition being that the marriage has been validly concluded. Here again the idea of avoiding uncertainty of birth gives place to that of social and family propriety.

(b) Divorced women who are either too young or too old to menstruate are obliged to observe a retreat of three lunar months (Ḳurʾān, LXV, 4).

(c) Divorced women and those women whose marriage has been annulled and who are of menstruating age "shall wait by themselves for three *ḳurūʾ*" (Ḳurʾān, II, 228).

The word *ḳurūʾ* (pl. of *ḳurʾ*) in the Ḳurʾānic text has given rise, from the beginning of Islam, to a controversy among the commentators. Some understand it to mean the inter-menstrual periods, or, according to their terminology, the periods of "purity" which come between those of menstruation. This was the opinion which prevailed in the S̲h̲āfiʿī and Mālikī schools and among the Dj̲aʿfarī S̲h̲īʿīs. But the Ḥanafīs, the Ḥanbalīs and the Zaydīs consider the word *ḳurʾ* to be synonymous with menstrual indisposition, *ḥayḍ* [*q.v.*]. Thus there are slight variations in the calculation of the duration of the *ʿidda*, according to whether the word *ḳurūʾ* is given the first or the second meaning.

Although widows are forced to abstain from sexual relations whatever the circumstances, i.e. even when their marriage has not been consummated, the law is different for divorced women and for those whose marriage has been annulled. Muslim law insists that they observe an *ʿidda* only when the marriage has been consummated, and even, in S̲h̲āfiʿī law, truly consummated, this school rejecting the theory of *k̲h̲alwa* in which consummation is presumed to have occurred if a husband and wife have been alone together in a place where it would have been possible for them to have had sexual intercourse. Since all the other schools admit the presumption of consummation as a result of *k̲h̲alwa*, the question arose as to whether this presumption is an absolute one. According to the majority of Ḥanafī, Mālikī and Ḥanbalī writers, *k̲h̲alwa* does not cause consummation to be presumed, and so does not involve an obligation to observe *ʿidda*, except when there exists no insurmountable obstacle to the consummation, such as the emasculation of the husband or a vaginal occlusion in the wife.

The writers are always careful to mention the various hypotheses which lead successively from one method of calculation to the other. There is, for example, the case of the wife under the age of puberty who reaches puberty during the period of the *ʿidda*, calculated in months; there is also that of the divorced woman whose divorce can still be revoked who becomes a widow during the *ʿidda*, the marriage not having yet been finally dissolved; she is subject from the date of her husband's death to the retreat prescribed for widows.

It would take too long to list all the eventualities provided for. It should merely be mentioned that the woman who has been definitively divorced (*bāʾin*) must always observe a period of retreat counted by menstruations, even if her husband happens to die during her retreat, since her widowhood then occurs after the dissolution of her marriage. It is only in a case where the divorce is pronounced *in articulo mortis* (*maraḍ al-mawt*) that the wife, whose right to the inheritance is then not lost, must observe the longer of the two periods of retreat.

(3) Date of commencement of the *ʿidda*. When a marriage has been legally concluded, the *ʿidda* begins from the moment the marriage ends, that is from the husband's death or from the pronouncing of the divorce, even if the wife does not know of it. Formerly (before the modern laws on the publicity which must be given to divorces) it sometimes happened that a wife did not know that she had been divorced. In such a case she might observe the whole of her *ʿidda* without being aware of it. The annulment of a marriage on the other hand, or a husband's decision to separate himself from his wife for a particular reason, must be reported to the wife. In such a case it is from the moment that she hears of it that the *ʿidda* begins.

(4) The *ʿidda* calculated by menstrual or inter-menstrual periods gives rise to many practical difficulties which the jurists have not always been able to solve satisfactorily. These difficulties arise from the fact that, in the last resort, reliance has to be placed on the statements of the interested party herself. She might be tempted to lie, either in order to prolong the waiting period, claiming to have had no menstruation, or at least no third one, or, on the other hand in order to shorten it by maintaining that her menstrual periods were very brief and came very close together. The first type of behaviour was particularly frequent among Ḥanafī populations. In fact, Ḥanafī law allows the irrevocably divorced woman (*bāʾin*) to retain the whole of her *nafaḳa* (maintenance) throughout the period of her *ʿidda*. This explains why those who had no prospect of re-marrying delayed in announcing the occurrence of the third menstrual period which, by concluding the *ʿidda*, thus deprived them of all *nafaḳa*. It is only in modern legislation that this device is prevented by fixing a maximum period of one year, after which the wife, although still considered to be in retreat if she has not announced her third menstrual period, has nevertheless no longer the right to maintenance (Egypt, Sudan). Certain countries (Ottoman and Jordanian law, Syrian code) fix a definite maximum of nine months or a year to the retreat itself. Deception of this nature is much less frequent among the S̲h̲āfiʿīs and the Mālikīs, who allow the *bāʾin* divorced woman only the right to remain in the husband's house during the period of retreat, without any right to food or clothing—a fairly miserly concession which does not encourage them to prolong the period of their retreat.

Deception practised for the opposite reason, how-

ever, was foreseen by the classical writers. This is when a divorced woman, having already received another offer of marriage and fearing that the prospective husband will be discouraged by having to wait too long, pretends that the menstrual and inter-menstrual periods are shorter than they actually are. In Ḥanafī law (the opinion of Abū Ḥanīfa has prevailed on this matter) the *ʿidda* may never be for a period of less than 60 days. The minima fixed by the other schools vary from 30 to 39 days. It should be noted in this connexion that in Mālikī law the woman's word alone is not sufficient, even though she adheres to the minimum of 30 days fixed by this school for the total of the three menstrual periods. In these circumstances she must be examined by two women.

(5) The *ʿidda* for a female slave is governed by special rules, of which a brief indication is sufficient. A female slave who is merely a concubine must observe a period of retreat equal to one menstruation or of one month, according to whether she is or is not of menstruating age, commencing from the time when she becomes the property of a new master if he intends to have sexual relations with her, or if there occurs a change in her legal status. This is known as *istibrāʾ* [*q.v.*]. But a slave may well be married, in which case she must observe, in the same circumstances in which the *ʿidda* is imposed on a free woman, a *ʿidda*, the duration of which, by application of the "rule of the half-rate", should be half as long as that of a free woman. In other words, the *ʿidda* of a slave who is a widow would last for two months and five days, and that of a divorced woman not of menstruating age for one and a half months. As it is not possible to halve the period of three menstruations which is insisted on for the divorced free woman, it was decided that the *ʿidda* of a divorced slave who is of menstruating age should consist of two inter-menstrual periods (S̲h̲āfiʿī and Mālikī law) or of two menstruations (Ḥanafī and Ḥanbalī law), the only exception being an *umm walad*, who as such is treated as a free woman.

(6) The rights and the obligations of a woman who is observing a *ʿidda* vary according to whether she is a widow or divorced. A widow never has the right to full maintenance (*nafaḳa*), even if she is pregnant. On this point all the schools agree. There is in any case no person from whom she could claim maintenance except the heirs, and it is not considered right that they should be responsible for a debt which by definition cannot have been incurred before the death of the deceased. The widow is however not really treated so unfairly; it should be remembered that she is entitled to a share in the estate of her deceased husband. Though she has no right to *nafaḳa* (food and clothing), she is however expected to complete her *ʿidda* in her husband's house, thus in a sense she is housed. In addition she must go into mourning and wear no jewellery or cosmetics (as a moral obligation). Her right to leave the house is less strictly controlled than that of a divorced woman, it being considered that she might be forced to go out to earn her living since she has no *nafaḳa*. The rules for the *bāʾin* divorced woman (the position of the woman whose divorce is revocable is exactly the same as that of the married woman) vary according to the different schools. The Ḥanafīs hold that her former husband must be responsible for her maintenance (food, clothing, housing) throughout the period of the *ʿidda*, even when she is not pregnant; only in a case where the marriage has been ended through her own fault (adultery, apostasy, etc.) is she to be deprived of *nafaḳa*. The other schools are much less liberal, either (like the Ḥanbalīs) refusing any rights to the irrevocably divorced woman, or (like the Mālikīs and the S̲h̲āfiʿīs) granting her only the right to be housed—unless she is pregnant, in which case, because of the verse of the Ḳurʾān: "If they are with child, expend upon them until they bring forth their burden" (LXV, 6), the husband must provide her with complete *nafaḳa* (food, clothing, lodging). A *bāʾin* divorced woman does not of course inherit from her husband unless he has divorced her during his last illness (except in S̲h̲āfiʿī law). The majority of the schools do not insist on a *bāʾin* divorced woman's going into mourning or observing the detailed (moral) regulations concerning cosmetics and dress which are imposed on a widow. It is only in Ḥanafī law that she is subject to such a (moral) obligation, probably in compensation for her being allowed *nafaḳa*, a concession which is granted to her only by this school.

It should be remembered that it is the right and the duty of every woman who is observing a *ʿidda* to do so in the house of her former husband.

(7) Any marriage entered into during the *ʿidda* for a former union is absolutely void (*fāsid* [*q.v.*] in Ḥanafī law). The husband and wife must separate of their own accord; if not, the nullity of the marriage is pronounced by a judge. Because such a marriage is always *fāsid* in Ḥanafī law, and is considered so by the other schools only when it has been entered into in good faith, the wife receives (provided that the marriage has been consummated) the whole of the customary nuptial gift (*mahr*); any children born are legitimate. After this second marriage has been dissolved, the S̲h̲āfiʿīs and the Ḥanbalīs stipulate that the wife shall observe two *ʿidda*s: the portion of the first *ʿidda* which still remained to be completed at the time of her second marriage, and a new *ʿidda* of three menstrual or inter-menstrual periods. The Ḥanafīs, however, insist only on one *ʿidda* of three menstrual periods, against which may be set the amount of the first *ʿidda* already completed. Doctrine on this combination of the two *ʿidda*s is obscure and diverse, not only from one school to another, but also within the same school. Nevertheless, in all cases, at the end of this second *ʿidda* the wife may re-marry the second husband (the one from whom, she had been separated), but a new marriage contract is necessary and the payment of a new dower. This is the solution recognized by the majority of the schools; only the Mālikīs and the S̲h̲īʿīs, basing their rule on a decision attributed to the caliph ʿUmar (but which he is said to have reversed), state that after a marriage has become null and void through being entered into during a not yet completed *ʿidda*, the wife "is to be eternally forbidden" to the second husband.

(8) Modern legal codes, from the Ottoman Family Law of 1917 to the Iraqi Code of Personal Status of 1959, have devoted much attention to the institution of the *ʿidda*, but without departing significantly from the principles of classical Muslim law. All of them have preserved the two Ḳurʾānic waiting periods: 4 months and ten days for a widow and 3 menstrual or inter-menstrual periods for a divorced woman of menstruating age, except that in the Tunisian Code of Personal Status (art. 35) the three menstruations have been replaced by a fixed period of three months. The few modifications made to the classical law (particularly by the Ḥanafī countries) are concerned with the calculating of the duration of the *ʿidda* by menstruations. They tend to fix a maximum and a

minimum period within which the three menstruations of the wife must occur. It is thus that it is laid down by the Ottoman law of 1917 (art. 140) and the Jordanian law of 1951 (art. 102) that the *ʿidda* may not be prolonged beyond nine months. In Egypt, the Sudan, and finally in Syria, they have preferred not to fix a maximum limit to the *ʿidda* of the divorced woman who is of menstruating age, while stipulating nevertheless that she may not claim maintenance for longer than twelve months (Egyptian Law no. 25 of 1929, art. 17; Sudanese Judicial Circular no. 28 of 1927, art. 5), and even, in Syria (Code Statut personel, art. 84), for longer than nine months, after the ending of the marriage. The effect of these measures has been to put an end in practice to the abuse of the law by certain divorced women claiming to have had no menstruation for many years in order to continue to receive maintenance. In some countries the minimum duration of the *ʿidda*, calculated in menstruations, has been fixed at three months.

Bibliography: The subject is always given a separate chapter in the great treatises of *fiḳh*. There may be consulted, for Ḥanafī law, Zaylaʿī, *Tabyīn al-ḥaḳāʾiḳ*, Cairo 1313, iii, 26-38; for Shāfiʿī law, Shīrāzī, *al-Muhadhdhab* (ed. Ḥalabī), ii, 142-55; for Mālikī law, Dardīr Dasūḳī, *al-Sharḥ al-kabīr* (ed. Ḥalabī), ii, 468-502; and the exhaustive study in comparative law by Ibn Ḳudāma, *al-Mughnī* (3rd ed. Cairo), vii, 448-88. For Shīʿī law, see Syed Ameer Ali, *Mahommedan Laws*, Calcutta 1928, 340, 353-4. A good summary of the subject is presented in Ḳudūrī, *Mukhtaṣar*, tr. Bercher and Bousquet, *Le Statut personnel en droit musulman hanafite*, 156 ff. For the law previous to the formation of the juridical schools, see J. Schacht, *The origins of Muhammadan jurisprudence*, 181, 197-8, 225-6; Y. Linant de Bellefonds, *Traité de droit musulman comparé*, Paris-The Hague 1965, ii, nos. 712 to 721 and 880 to 885. IDFŪ [see ADFŪ].

IDGHĀM (*iddighām*), infinitive of the verb *adghama* "to make (a thing) enter (another)"; in Arabic grammar: *al-idghām idkhāl ḥarf fī ḥarf*, "*al-idgham* is making a *ḥarf* enter a *ḥarf*" (*LA*, xv, 93, lines 18-9/xii, 203b, lines 2-3); one says: *adghamtu ʾl-ḥarfa* and *iddaghamtuh*, according to the pattern *iftaʿaltuh* (*ibid.*), whence the use of *idghām* and *iddighām* in the same sense; the first is a term of the Kūfans, the second of the Baṣrans (Ibn Yaʿīsh, 1456, lines 17-8), although the latter also frequently use the verb *adghama*, e.g.: Sībawayhi, ii, 459, lines 4, 11, etc., but see Notes, 2. The Arab grammarians define more exactly this idea of *idkhāl ḥarf fī ḥarf*: "*al-idghām* is the use of two *ḥarf*s from the same *makhradj*, the first *sākin*, the second *mutaḥarrik*, without separation" (Ibn al-Ḥādjib, *Shāfiya*, in *Sh.Sh.*, iii, 233 end-234). Ibn Yaʿīsh adds (1456, line 19): "and they become, because of the force (*shidda*) of their union, like a single *ḥarf*". We call it the contraction of two similar consonants in a geminate (see H. Fleisch, *Études de Phonétique arabe*, in *MUSJ*, xxviii (1949-50), 258, and *Traité de philologie arabe*, i, § 50h). In this geminate (*ḥarf mushaddad*), the Arab grammarians recognize a duality of *ḥarf*s and not one single *ḥarf* (that we should call long; see *Traité*, § 4); for the doctrine of Raḍī al-Dīn al-Astarābādhī, see *Sh.Sh.*, iii, 235, lines 12-3 and 16. In vocalization of texts the *ḥarf mushaddad* receives the sign *tashdīd* or *shadda* (W. Wright, *Ar. Gr.*³, i, 14c).

The Arab grammarians see the cause of *iddighām* in a dislike of repeating the same consonant consecutively when the separator is a short vowel. Sībawayhi speaks clearly on this subject (ii, Ch. 408 and 559), texts cited and translated in *Études de Ph.*, mentioned above, 256-7 (see also *Sh.Sh.*, iii, 238, line 20 f.). At any rate, the tendency to *iddighām* is certainly strong in Arabic: the language resorts to it regularly, whenever there is the possibility of suppressing the intervening short vowel (see *Muf.*, § 731): in verbs with 2nd and 3rd radical consonants the same (*muḍāʿaf* verbs), whenever the 3rd consonant does not take a consonantal conjugational suffix: **madada* > *madda*, "to lengthen, stretch out", etc.; in the IXth and XIth forms: *ifʿalla* and *ifʿālla*. In nouns: in the active participle: **mādid* > *mādd*; in the broken plural *faʿālilu*: **mawādidu* > *mawāddu*, "matters", etc. (see *Traité*, i, § 28). The Arabic language also practises *iddighām* when the same consonant ends one word and begins the next. This is called: *al-iddighām fi ʾl-infiṣāl* (as opposed to *al-iddighām fī kalima*; cf. Sībawayhi, ii, 455, line 15). If the first *ḥarf* is *sākin* and the second *mutaḥarrik*, the Arab grammarians prescribe *iddighām* (*Muf.*, 731; *Shāfiya* in *Sh.Sh.*, iii, 234, lines 1-2; *Sh.Sh.*, iii, 236, lines 3-4), e.g.: *lam yaruḥ ḥātim* > *lam yaruḥḥātim*, "Ḥātim has not gone". When both are *mutaḥarrik*, *iddighām* is called permissible (numerous examples, *Traité*, § 12); it is even praised when it allows the avoidance of a succession of five or more short syllables, e.g.: *djaʿala laka* > *djaʿallaka*, "he placed for you" (Sībawayhi, ii, 455, line 16 f.; *Sh.Sh.*, iii, 248, line 4 f.).

The Arab grammarians distinguish: *iddighām al-mithlayn*, *iddighām al-mutaḳāribayn*. The contraction of two consonants into a geminate requires that they be the same; this is *iddighām al-mithlayn*, and, properly speaking, *al-iddighām*. When the consonants are close: *mutaḳāribayn*, as long as they remain close, they are still not the same, and *iddighām* is never possible; they must be made *mutamāthilayn*, like each other. It is here that the Arab grammarians hit on the phenomenon of assimilation, but they did not characterize it as such; they saw it simply as a *ḳalb*, a change, necessary for the operation of *iddighām* (*Shāfiya* in *Sh.Sh.*, iii, 264, line 7; *Muf.*, § 735). Assimilation has no proper term in their terminology. They extended the use of the term *iddighām* (which was valid only for two identical *ḥarf*s) when they stated that two close *ḥarf*s had contracted, and they called this: *iddighām al-mutaḳāribayn*, but explanations were necessary: some idea of phonetics was required to make known the *ḥurūf mutamāthila* (identical) and the *ḥurūf mutaḳāriba* (close). This is the reason for Sībawayhi's opening the *Bāb al-iddighām* with Ch. 565 on phonetics; he gives his reasons at the end of this chapter. Since Sībawayhi, accounts of phonetics are to be found under *iddighām*, as preliminaries to it: Ibn al-Sarrādj, *al-Mūzadj fi ʾl-naḥw* (Beirut 1965/1385), 165 f.: al-Zadjdjādjī, *al-Djumal* (Paris 1957), 375 f.; al-Zamakhsharī, *Muf.*, § 732 f. Ibn al-Ḥādjib, *al-Shāfiya*, inserted phonetics in the account of *iddighām*, as did his commentator, Raḍī al-Dīn al-Astarābādhī in the *Sh.Sh.*: *iddighām*, iii, 233-92; phonetics: 250-64.

Notes: 1). *al-iddighām . . . yakūn fi ʾl-mithlayn wa-ʾl-mutaḳāribayn*: the formula is found in the *Shāfiya* (*Sh.Sh.*, iii, 234, line 1), but the doctrine, in almost the same terms, is found in the *Kitāb* of Sībawayhi (ii, Ch. 566, 567). It should be noted that the Arab grammarians say: *iddighām al-mithlayn* or *al-mutamāthilayn* for two identical *ḥarf*s in the same

word and in *infiṣāl* and *iddighām al-mutaḳāribayn* in the case of *infiṣāl*, the *t* of the form *iftaʿala* being considered *fī ḥukm al-infiṣāl* (*Muf.*, § 731; see Ibn Yaʿīsh, 1458, lines 4-6).

2). *idghām*, *iddighām*; the Arabic word, without vocalization, can be read in either way; the verbs *adghama* and *iddaghama* can also be read in either way in all their "tenses", when unvocalized. How can one distinguish, in editions, the first, original vocalization from that which is due to the initiative of the editor? The edition of the *Kitāb* (Paris) vocalizes: *Bāb al-idghām* (ii, 452); was this Sībawayhi's pronunciation?

Bibliography: in the text; works cited in abbreviation: Sībawayhi, *Kitāb*, ed. Paris 1881-5; *Muf.*, Zamakhsharī, *al-Mufaṣṣal*[2], ed. J. P. Broch (Christiania 1879) and *Sharḥ* of Ibn Yaʿīsh, ed. G. Jahn (Leipzig 1882); *Sh.Sh.*, Raḍī al-Dīn al-Astarābādhī, *Sharḥ al-Shāfiya* (Cairo 1358/1939). The easiest account to consult is that of the *Muf.*: § 731 for the conditions of *iddighām* and § 735 f. (with the corresponding commentary of Ibn Yaʿīsh). Sīrāfī, at the end of the *Sharḥ* of the *Kitāb*, adds two chapters, one on the *iddighām* of the Kūfans (he gives phonetic terms peculiar to al-Farrāʾ), and the other on the *iddighām* of the *Ḳurrāʾ*. (H. Fleisch)

IDHĀʿA, modern Arabic term for "broadcasting" (broadcaster = *mudhīʿ*, microphone = *midhyāʿ*).

Broadcasting in the Islamic world was inaugurated in Turkey in 1925, three years after the establishment of regular transmissions from London. In most Islamic lands however its growth was delayed by their dependent political and under-developed economic status. In Egypt, for example, broadcasting began in 1934 and at the time of the 1952 revolution its output was only 15 hours daily, with a total transmitting power of 73 KW. With the subsequent upsurge of national sentiment and economic development it rose by 1966 to 130 hours daily with a transmitting power of nearly 6,000 KW (statement by Deputy Premier for Guidance and Culture in *al-Idhāʿa wa'l-Talafisyūn*, 28 March 1966).

In 1964 Turkey was again an innovator in the Islamic world when she set up an independent Broadcasting Corporation, not subject to direct government control. This Corporation was financed by licences and advertising, but deficits were underwritten by the government. Elsewhere in the Islamic world broadcasting output was under direct government control, many hours being dedicated to the exposition of government policy, official statements, and verbatim reports of speeches by the Leader. Long recordings were broadcast of the trial of the leaders of the Muslim Brotherhood in Egypt in 1954-5 and of that of former ministers in Iraq in 1958-9; the session of sentencing in November 1958 was relayed "live", as were the opening and closing sessions of Subandrio's trial in Indonesia in 1966. Though advertising on the air is permitted in many countries, underdevelopment makes it a less valuable source of revenue than in Europe or America. The main broadcasting categories are the same as elsewhere. The Ḳurʾān plays a great role in religious broadcasting, and in the UAR continuous recitation from 4-9 hrs. and from 12-21 hrs. was introduced in April 1964. Friday services are also broadcast, and religious talks and recitations, particularly in Ramaḍān. In Saudi Arabia broadcasting was long limited almost entirely to news and instructive and religious talks. States with large Christian minorities broadcast also occasional Christian services. The UAR, Turkey, and some other countries have cultural programmes adapted to differing intellectual levels. Standards of news broadcasts are related to those of the local press and news agencies; those of light entertainment to the existence of a cinema industry.

Many Muslim lands consist of vast territories in which the population is concentrated in limited areas, widely separated by tracts of desert or, in the case of Indonesia, by sea. Illiteracy is in general high, and in many cases independent nationhood is a recent acquisition. Broadcasting is thus exceptionally valuable as a means of diffusing information and ideas, creating a common national spirit, and spreading an educated form of speech. But the geographical characteristics at the same time necessitate an exceptionally heavy capital expenditure to ensure the clear reception which is essential for effective broadcasting. In Indonesia a network of regional stations, carrying their own programmes, has been set up, but in general the organization is highly centralized. The density of listening sets was enormously increased in the decade from 1955 to 1965 by the introduction of transistor sets. In the Middle East, which is predominantly Muslim, sets were estimated by the BBC (*Handbook*, 1967) to have risen in that period from two to twelve million—roughly one to every ten of the population. In the South Asian Muslim world the figure was far lower.

Most Muslim states cater for their national minorities in the minority language concerned; as Iraq for Kurds; Iran for Turcomans, Assyrians, Armenians, Kurds, Azarbaijanis and Arabs in Ahwaz; Morocco and Algeria for Berbers. Mali broadcasts in French, Bambara, Sonraie, Peul, Sarakole, Wolof, Tamachek (Tuareg Berber), and Hassani Arabic. Most cater also for resident foreign minorities, as the UAR for English, French, Germans, Italians, and Greeks. Some also direct broadcasts in the home language to their nationals abroad; as Lebanon to South America and West Africa, Jordan to South America, and the Turks to their emigrant workers in Germany.

Where a language is being modernized or given a more national flavour, as with Turkish and Urdu, broadcasting has a special importance; and in the Arab world for spreading a universally used form of Arabic.

Most Muslim states direct broadcasts, in the language of the people addressed, to one or more great powers directly concerned with the area and to neighbouring states. To be successful, such broadcasting involves heavy expense for the engagement of suitable, probably foreign, staff, and for powerful transmitters and if possible medium relay stations. Standards of language and content must rival those of the receiving country and, to be politically effective, the ideas expressed must appeal to at least a significant section of the population. Where these conditions are fulfilled, and only then, broadcast campaigns have effectively stimulated latent feelings or acted as detonators to set off an explosion of popular feeling. Radio warfare has been waged between Indonesia and Malaysia, and between the UAR and Iran. It has occurred frequently within the Arab world, where it is facilitated by the common language. It took place between Morocco and Algeria during the fighting in autumn 1963, but the most frequent protagonist has been the UAR, with its powerful transmitters, its developed news services, its relatively developed culture and, in the political field, the appeal of its pan-Arab and socialist policies to an important section in every Arab state. The UAR

in fact comes sixth in the list of external broadcasters with 589 hours weekly in some 30 languages, including 13 African. This compares with 1381 hours from the USSR; 909 from the Voice of America; and 663, in about 40 languages, from the BBC. Iran, apart from local languages, broadcasts in Russian, French, English, Urdu, Turkish and Arabic. Pakistan and Turkey each broadcast in twelve or more languages. Of lesser powers, Somalia after acquiring two 50 KW transmitters from the USSR in 1960, three years after independence, set out "to make its voice heard in the world" with six hours of daily transmissions in Somali; 1½ in Arabic; ¾ in English; ½ hour each in Italian, Amharic and Swahili; 10 minutes in Galla, and occasional broadcasts in Danḳalī.

The example of broadcasting from abroad to Islamic lands was set by the great powers, just before and during the second world war. The Italian Fascist régime introduced broadcasting in Arabic in 1935. Great Britain did the same in January 1938 and Nazi Germany in mid-1938; the latter specialized in scurrilous and violent propaganda. Later the USA and, in 1943, the USSR added their voices. Broadcasts in Arabic from Paris began before 1939; they include dialect transmissions for Algerians in France. Those for overseas reached their maximum during the Algerian fighting, after France ceased to control local broadcasting in other Arabic-speaking countries of North Africa. Later they were much reduced. By 1966, 45 states, Muslim and non-Muslim, were directing broadcasts in Arabic to Arab countries; 20 in Persian to Iran; 17 in Indonesian to Indonesia. The BBC alone broadcast for 12 hours daily in Arabic (ten from April 1967) and received some 80,000 letters from Arab listeners in the course of that year. The first Arab state seriously to organize external broadcasting was Syria, under the Shishakli regime (1950-4). Syria and the UAR introduced Hebrew broadcasts to Israel, which in turn broadcasts in Arabic to its Arab minority and to its neighbours.

Professedly indigenous clandestine stations come and go, particularly during crises. A few have been genuine, but in general they have been directed from abroad by communist, Western or outside Muslim states.

The cost of installing and producing television has limited its introduction in the Muslim world, though in Asia, and in Africa north of the Sahara, most Muslim states had by 1966 at least some service, and many encouraged the purchase of sets by customs remissions or other means. Except in the UAR the service was virtually restricted to the capital or a few large cities. In Iran private companies supported by advertising revenue provided services in Teheran and Abadan. In certain areas (Saudi Arabia and Libya) American Forces or Oil Company transmissions were receivable locally before the introduction of national systems. The latter have been made possible by oil revenues and, in the former case, by the weakening of religious objections.

(N. Barbour)

ĪDHADJ or Māl-Amīr, town of western Persia, situated on a tributary of the upper reaches of the Dudjayl or Kārūn river, in southern Luristān, at 49° 45′ E. and 31° 50′ N. In mediaeval times it was generally reckoned to be part of the province of al-Ahwāz or Khūzistān [*q.v.*], and under the ʿAbbāsids was the capital of a separate administrative district or *kūra*. It lay on a plain at an altitude of 3,100 feet, and though reckoned by the geographers to be in the *garmsīr* or hot zone, the nearby mountains gave it a pleasant and healthy climate; the winter snow from these mountains was gathered and exported from Īdhadj to the torrid, low-lying parts of al-Ahwāz (cf. Muḳaddasī, 414; Yāḳūt, *Buldān*, i, 416; Mustawfī, *Nuzhat al-ḳulūb*, tr. Le Strange, 74). The district was also frequently subject to earthquakes.

Īdhadj (the vocalisation Aydhadj is also found) was a populous and prosperous place in pre-Islamic times. There are many Elamitic remains in the vicinity, mostly dating from the end of the second millenium B.C. (see the detailed description of pre-Islamic antiquities by M. Streck in *EI*[1], s.v. Māl Amīr). In Sāsānid times, the district was included in the territories of the Ispahbadh of Fārs (Yaʿḳūbī, *Historiae*, i, 201). A fire-temple of the local Zoroastrians remained in use till the time of Hārūn al-Rashīd; V. Minorsky surmised that this may have been the Parthian sanctuary of Shāmī, to the north of Īdhadj (*Abū-Dulaf Misʿar ibn Muhalhil's travels in Iran* (*circa A.D.* 950), Cairo 1955, text 27, tr. 60, 108).

When the Arabs invaded al-Ahwāz in 17/638, they penetrated via Rāmhurmuz to Īdhadj and made peace with the local lord, Tīrawayh, leaving him in possession of power. But the town had to be conquered again in 21/642 after the battle of Nihāwand, and in 26/646-7 a rising of the people of Īdhadj and the local Kurds had to be suppressed by the governor of Baṣra, Abū Mūsā al-Ashʿarī (Balādhurī, 382; Ṭabarī, i, 2553, 2614, 2829). During ʿAbd al-Malik's caliphate, there was a revolt there by one Khurrazādh b. Bās (Balādhurī, 383). Towards the very end of the Umayyad period, Abū Djaʿfar, the later caliph al-Manṣūr, was governing Īdhadj on behalf of the ʿAlid pretender ʿAbd Allāh b. Muʿāwiya [*q.v.*]. Al-Manṣūr's son, the later al-Mahdī, was born there of a local woman, and some later descendants of al-Mahdī retained the *nisba* of "al-Īdhadjī". In 270/883 a force of local volunteers, cavalry and infantry, was raised by the governor of Īdhadj, Aḥmad b. Dīnār, to reinforce al-Muwaffaḳ's army for the final assault on the Zandj rebels (Ṭabarī, iii, 527, 2085; Samʿānī, *Ansāb*, 54b; Yāḳūt, *Buldān*, i, 416). In 295/907-8 the region was the theatre of operations during the rebellion against al-Muktafī of the governor of Fārs and Kirmān, ʿAbd Allāh b. Ibrāhīm al-Mismaʿī; it was probably during these campaignings that al-Mismaʿī destroyed a famous bridge near Īdhadj which carried the road to Iṣfahān, thus impeding the advance of the caliphal general Badr al-Ḥammāmī. This important bridge, which was doubtless originally of Sāsānid construction, was later rebuilt at great cost by one of the viziers (apparently Abū ʿAlī al-Ḳummī or Abu 'l-Faḍl b. al-ʿAmīd) of the Būyid Rukn al-Dawla (Minorsky, *Abū-Dulaf Misʿar ibn Muhalhil's travels in Iran*, text 27, 30-1, tr. 60, 64-5, 108, 114-18; Ibn al-Athīr, viii, 9; Yāḳūt, *Buldān*, iv, 189, s.v. "Ḳanṭarat Khurrazādh", based on Abū

Dulaf; the same in Ḳazwīnī, *Āthār al-bilād*, ii, 201). Īdhadj seems to have flourished in Būyid times, and coins were minted there.

However, the greatest period of Īdhadj's florescence was from the 6th/12th to the 8th/14th centuries under the Hazāraspid dynasty of Atabegs of Great Lur (550-827/1155-1423) [see HAZĀRASPIDS and LUR-I BUZURG]. These Atabegs, of Kurdish origin, made their peace with the incoming Mongols and enjoyed virtual independence under the Mongol Khāns and then the Īl Khāns; at times their power extended to Iṣfahān and the shores of the Persian Gulf. Īdhadj and the nearby town of Sūsan were the winter residences of the Hazāraspids, their *yaylāḳs* or summer-quarters being further to the north on the upper Zanda Rūd and the Kārūn headwaters. It is at this time that the name for Īdhadj of Māl-Amīr or Māl-i Amīr "the Amīr's property" comes into use, and gradually replaces the older designation. The newer term may be connected with the residence there of the Hazāraspids, as is probably the name of the Īdhadj-Iṣfahān road, *Djādda-yi Atābeg* "the Atabeg's road", in use till modern times. Ibn Baṭṭūṭa passed through the town twice in the course of his travels, once in 727/1327, during the reign of the Atabeg Nuṣrat al-Dīn Aḥmad, and again in 748/1347, during the reign of Muẓaffar al-Dīn Afrāsiyāb II b. Aḥmad. He praises Aḥmad's piety and asceticism, and says that he built 460 hospices for travellers in his territories, of which 44 were in the capital Īdhadj or Māl al-Amīr (he uses both these names); Afrāsiyāb, on the other hand, was a drunkard (*Travels*, ii, 30-42, tr. Gibb, ii, 287-94).

The Tīmūrid Ibrāhīm b. Shāh Rukh [*q.v.*] ended the line of Atabegs in 827/1423, and the region of Māl-Amīr fell into the hands of Bakhtiyārī chiefs. The town itself now became deserted and drops out of history, but its site is marked by a large mound and several lesser ones (see Jéquier, *Description du site de Mâlamîr*, in *Mémoirs de la Délégation en Perse*, Paris 1901, iii/1, 133-43).

The district of Īdhadj was agriculturally prosperous during mediaeval Islamic times, since there was a fair rainfall and dry-farming was possible. Its specialities included grapes, citrus fruits, melons, pistachio nuts and a variety of cardamom whose juice was used as a remedy for gout. The existence there of many mines is mentioned by Ḳazwīnī, but the substances involved are not specified.

IDHN (A.), very general term, meaning simply "authorization".

We shall concern ourselves here only with *fiḳh*, but, even within this restricted field, shall examine only (a) the authorization necessary to enable certain types of incapable persons (i.e., those who are partially incapable) to conclude isolated legal transactions, when such transactions could, according to circumstances, either cause the position of the incapable person to become worse or better; and (b) the general authorization to carry out commercial transactions in a normal way, granted by a guardian to a minor who has reached years of discretion, or by a master to a slave.

(a) Semi-incapable persons, in general minors who are no longer children, and spendthrifts and the like, have the right to enter alone (i.e., without authorization) into transactions concerning inheritance which can result only in advantage (*naf' maḥḍ*) for them, for example, the acceptance of a gift free of encumbrances. They have not the power, even if authorized (any more than has their guardian), to conclude transactions which involve a definite loss (*al-taṣarrufāt al-ḍārra al-maḥḍa*). The most typical example of these completely forbidden transactions is that of making gifts. There remain the legal transactions which are as likely to bring a loss as a gain. This category includes the majority of contracts dealing with their patrimony: selling, renting, loan, etc. In these cases the *walī* in the case of a minor, or the judge in that of a spendthrift, must intervene. Their intervention is envisaged by the Ḥanafī *fuḳahā'*, and also by the Mālikīs, as occurring after the transaction, according to the principle *al-idjāza fi 'l-intihā' ka 'l-idhn fi 'l-ibtidā'* (Sarakhsī, *Mabsūṭ*, xxiv, 182), "ratification afterwards is equal to authorization beforehand". But there is nothing, theoretically, which forbids the guardian or the judge to grant his authorization in advance, or at the same time as the transaction is concluded by the incapable person. When the usual procedure of ratification afterwards is followed, the transaction, before the approval of the guardian or the judge has been given, is considered to be *mawḳūf*, "in suspense", neither invalid nor truly valid; it can only be made fully effective by ratification. The Shāfi'is do not permit semi-incapable persons to complete such transactions (sales, renting, etc.), which are the exclusive province of the *walī*. They consider that these transactions can be neither authorized nor ratified; they must be concluded by the guardian himself on behalf of the minor. The Ḥanbalīs reject the process of ratification afterwards and insist on prior authorization if a *walī* allows a minor to carry out a transaction which he is capable of carrying out himself.

(b) A minor who is no longer a child (except in Shāfi'i law), and also a slave, may be authorized to take part in a commercial transaction; he then becomes *ma'dhūn*: *al-ṣaghīr al-ma'dhūn* or *al-'abd al-ma'dhūn*. In this case the authorization is, necessarily, given beforehand. It is very rarely given expressly but usually tacitly, when the *walī* or the master allows the minor or the slave to trade without raising any objection. The early *fuḳahā'* questioned the regularity of such a tacit authorization. The opinion which prevailed was that in such cases silence equalled consent, except in the case of a judge, who must always give his express approval. The Shāfi'i school, with its rigid principles, could not admit that a minor could be authorized to trade; their attitude to a slave was of course different. This school has remained in general faithful to its first doctrine; however the exigencies of modern life led certain Shāfi'is of Khurāsān, and even, it is said, the famous Imām al-Haramayn, to attempt to modify it, tending to consider valid an authorization to trade granted to a minor.

The question of the extent of the authorization given to a minor or to a slave and whether a *walī* or a master can impose a limit on it is decided differently by the different schools. The Ḥanafīs and Mālikīs consider that this authorization is the equivalent of a complete withdrawal of prohibition, which is not subject to qualification. The Shāfi'is and the Ḥanbalīs (so far as concerns a slave at least) regard it as a type of procuration and consider it to be the duty of the granter of the procuration to fix the limits of it, as in the general law regarding procurations.

Bibliography: The *idhn* or *idjāza* granted in respect of one single transaction to a minor who was reached years of discretion is studied in

the works of *fiḳh* in the chapter on incapacity (*ḥadjr*). Examples are Kāsānī, *Badāʾiʿ al-ṣanāʾiʿ*, Cairo 1327, vii, 171 ff., and Ḥaṭṭāb and Mawwāq, commentaries on Khalīl, Cairo 1329, v, 61 ff. Among modern writers, see Ṣubḥī Maḥmasānī, *Naẓariyyat al-ʿāmma li 'l-mawdjibāt wa 'l-ʿuḳūd*, Beirut 1948, ii, 106-7. The "authorized" minor and slave generally form the subject of a special chapter in the works of *fiḳh*: e.g. Marghīnānī, *Hidāya*, iv, 3 (ed. Ḥalabī). On the "authorized" slave, see Santillana, *Istituzioni di diritto musulmano*, ii, 352-6. See also Ḳudūrī, *Mukhtaṣar*, tr. Bousquet and Bercher, 224-30; and Y. Linant de Bellefonds, *Traité de droit musulman comparé*, Paris-The Hague 1965, i, no. 108-9 and 309-11.

(Y. Linant de Bellefonds)

ĪDJĀB (A.), literally "making definite, binding, due (*wādjib*)", is in Islamic law the technical term for the offer which, together with the acceptance (*ḳabūl* [see BAYʿ]), is one of the two essential formal elements which for the juridical analysis constitute a contract, which is construed as a bilateral transaction. Offer and acceptance can be expressed verbally (also in the form of compliance with an order, e.g. by the words "sell me" and "I sell you herewith"), or by the conclusive acts of the parties, e.g. the silent exchange of goods if that is the local custom, at least if the objects exchanged are of small value. There is an obvious contrast between the etymological meaning of the term and the function of what it designs, because the offer can always be withdrawn before it has been accepted (and, according to a Meccan doctrine which was later taken up by al-Shāfiʿī, the so-called *khiyār al-madjlis*, even after it has been accepted, as long as the two parties have not separated). This leads to the conclusion that the bilateral construction of contracts, which is quite isolated among the laws of antiquity, was preceded by a unilateral one, which is well known from other systems of law. If this is so, the change from the unilateral to the bilateral construction must have been made at some early date in the formative period of Islamic law.

Bibliography: al-Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, *s.v.*; C. Snouck Hurgronje, *The Achehnese*, ii, 320; I. Goldziher, in *RSO*, i (1907), 209; J. Schacht, *Introduction*, 22, 145; idem, *Origins*, 159-61. (J. Schacht)

ĪDJĀR, IDJĀRA, derived from *adjr* (remuneration), synonymous terms meaning a contract to hire. There are also used, but less frequently, the terms *istiʾdjār* and *kirāʾ*. The hirer is called, in the hire of things, *muʾdjir* or *ādjir* or *mukārī*; in the hire of services, *adjīr*; the person hiring is, in all cases, called *mustaʾdjir*; the thing or service hired, *maʾdjūr*, or, rarely, *muʾdjar*, *mustaʾdjar*. The remuneration is uniformly called *udjra* or *adjr*; if it is fixed in the contract, it is *adjr musamma*ⁿ; if it has to be determined by the judge, *adjr al-mithl*.

Īdjār or *idjāra* is the contract by which one person makes over to someone else the enjoyment, by personal right, of a thing or of an activity, in return for payment. There are distinguished two main types of *idjāra*: the hire of things (*idjārat al-aʿyān*) and the hire of services (*idjārat al-aʿmāl*). The latter category embraces two sub-divisions: the hire of services proper, i.e. a contract to work, and the hire of skill, more specifically called *istiṣnāʿ* (in the case of the craftsman). Within the same category there are distinguished the case in which the lessee has the exclusive use of the services of the lessor, who is then called *adjīr khāṣṣ*, and the case of the *adjīr mushtarak*, who may hire his services to various people.

Hiring is a purely consensual contract, like sale [see BAYʿ]. It should be noted, however, firstly that the parties are not required to have reached their majority (*bulūgh*); it is sufficient that they should be free men, of sound mind and capable of discernment (*ʿāḳil* and *mumayyiz*); and secondly that, in principle, the payment is due only on the fact of enjoyment of the service or the possibility of such enjoyment.

It is not necessary that the lessor (of things) should be the owner of them; it is enough that he should possess the right to dispose of them (*taṣarruf*).

Anything which may be valid for payment in a sale (a possession whose ownership is transferred: money, a tangible thing) may be valid as payment for hire. But the enjoyment of a thing may also count as payment for hire, in which case the contract usually is regarded as consisting of two reciprocal *idjāras*.

The period of the *idjāra* must be stated, but no limit is necessarily fixed. This rule has allowed the mechanism of the *idjāra* to be used to evade the principle of the inalienability of a *waḳf*; in various forms, known under the names of *idjāra ṭawīla*, *idjāratayn*, *ḥikr*, a contract, duly authorized by the *ḳāḍī*, is made with the *mutawallī*, who gives the "hirer" the right to remain—in fact, indefinitely—in possession of the property, to plant on it or construct buildings on it, acquiring the ownership of them with all that that implies.

(E. Tyan)

IDJĀRA, the granting of protection (*djiwār* [*q.v.*]) to a stranger according to ancient Arab practice. This form of protection was especially important for those who travelled about, but it was also used in other cases. The *djār* (pl. *djīrān*) is mostly the person protected, but may also be the protector (as in Sūra VIII, 48/50; *Mufaḍḍaliyyāt*, 760, 18). To ask for protection is *istadjāra* (Sūra IX, 6). The granting of protection was announced publicly (cf. Zaynab's *idjāra* of her former pagan husband in Ibn Hishām, 469); and thus, when ʿUthmān b. Maẓʿūn wanted to renounce the *djiwār* of al-Walīd b. al-Mughīra for that of God, al-Walīd made him declare his renunciation publicly to show that he was not alleging inadequate protection on the part of al-Walīd (*ibid*, 243). It was a point of honour to protect the *djār* as effectively as one protected one's own kin (cf. Abū Tammām, *Hamāsa*, 422; Nöldeke, *Delectus*, 40), and shortcomings in this could be made a serious taunt. Normally a request for *djiwār* had to be accepted (Sūra IX, 6; Ibn Ḥanbal, *Musnad*, ii, 99), and the granting of *djiwār* by one member of a group would be accepted by other members; in connexion with Zaynab's *idjāra* Muḥammad said that protection granted by the least of the Muslims (*adnā-hum*) was binding on all. Two men refused *djiwār* to Muḥammad on his return from al-Ṭāʾif on the grounds that their position in the tribe of Ḳuraysh was not such that they were entitled to do this, since one was a *ḥalīf* and the

other belonged to a clan outside the central group (al-Ṭabarī, i, 1203). The Ḳurʾān (XXIII, 88/90; cf. LXXII, 22) applies this conception to God, and says 'He grants protection (*yudjīru*) but none grants protection against Him (*lā yudjāru ʿalay-hi*)'. Among contemporary nomads such as the Ruwalāʾ there is a similar term *ḳaṣīr*, but this indicates a mutual relationship between members of different tribes by which each grants protection against his fellow-tribesmen (A. Musil, *Manners and customs of the Rwala Bedouins*, New York 1928, 267-9; H. R. P. Dickson, *The Arab of the Desert*, London 1949, 126-32).

Originally the claim for protection would seem to have been dependent on actual physical contiguity. This may be the touching of a tent-pole, or even coming within some yards of the tent, or the touching of a child of the family; but even lesser contacts may make protection obligatory, for example, when the camel-saddles of two men touch, or when a man uses a vessel belonging to another (cf. S. Fraenkel, *Das Schutzrecht der Araber*, in *Orientalische Studien Th. Nöldeke gewidmet*, Giessen 1906, 293-301). There does not seem to be a hard and fast line between the *djār* and the *dakhīl*, the suppliant who "enters" to seek protection. The latter is more prominent in Musil's description of the Ruwalāʾ (*op. cit.*, 441-8; but cf. mention of neighbour, 460) and also in H. R. P. Dickson's (*op. cit.*, 133-9). The rights of the *dakhīl* vary from tribe to tribe (cf. Dickson, 139), but are usually only for a limited period.

The eating of someone's food constitutes a claim for protection, so long as some of the food remains in one's body, and this period is considered to be three days. This applies particularly to the person who has the status of *ḍayf*, "guest". Hospitality is highly regarded by the desert Arabs, and a stranger travelling in the desert (unless obviously an enemy) is offered lodging and the best food available. If he chooses to do so, he may remain for three days, and for a further three days (while the food remains in him) he is under his host's protection (Musil, *op. cit.*, 455-70; Dickson, *op. cit.*, 118-22, 190-1).

Proximity to a sacred place gives protection. In the *ḥaram* or sacred area round a sanctuary animals and plants were protected as well as human beings (Wellhausen, *Reste*², 78). Ḳuṣayy and Hāshim respectively speak of their descendants as *djīrān Allāh* (Ibn Hishām, 83, 87); and it is also said that, when men become Muslims, they become God's *djīrān* under His *dhimma*, "protection". A person who takes refuge at the grave of a great man or saint is known as *djār al-ḳabr*, and often is effectively protected since otherwise the dead personage would be dishonoured (cf. Goldziher, *Muh. St.*, i, 237-8, Eng. tr. i, 215-7, with further references).

(W. Montgomery Watt)

IʿDJĀZ, literally "the rendering incapable, powerless", since the second half of the 3rd/9th century technical term for the inimitability or uniqueness of the Ḳurʾān in content and form. The numerous descriptive definitions do not, after the 4th/10th century, show significant divergencies. Tahānawī, *Kashshāf iṣṭilāḥāt al-funūn*, Calcutta 1854-62 (written *ca.* 1158/1745), somewhat surprisingly, does not include the term; but the opening passage of his article on *muʿdjiza*, pp. 975-7, implies the character of *iʿdjāz* as action or failure to act not to be accounted for by habitual natural process coupled with a "challenge", *taḥaddī*, which is not taken up and at any rate does not result in anything "matching" the object of the challenge, *ʿadam al-muʿāraḍa* (see below). The Muslim theologian who most recently devoted an extensive treatise to this topic, Muṣṭafā Ṣādiḳ al-Rāfiʿī (d. 1937), *Iʿdjāz al-Ḳurʾān wa 'l-balāgha al-nabawiyya* (Cairo 1345/1926), explains (7th ed., Cairo 1381/1961, 156): the *iʿdjāz* is two things combined, viz. the insufficiency of human strength to attempt a "confirmatory miracle", *muʿdjiza*, and the persistence of this inadequacy through the ages. Theological formulae tend to represent a summation of analytical labours and to embody the results of disputes extending in many cases over centuries; in that of the *iʿdjāz*, the decisive discussions took place between *ca.* 750 and 1000 A.D.

Two factors combined to make the uniqueness of the Ḳurʾān crucial within the never fully systematized dogmatics of Islam: the necessity to prove the mission of the Prophet and the necessity to secure an incontrovertible authority for Muslim doctrine, law and mores. These interlocking needs could, in the atmosphere of the period, be met only by establishing the transcendental or miraculous character of the document of revelation and the singularity or miraculousness of the historical Muḥammad b. ʿAbd Allāh revealing it. The concept of the miracle as testimony, *muʿdjiza* [*q.v.*], designed to confirm the veracity of a prophet and carefully defined *per se* as well as over against the *karāmāt* [*q.v.*], the *charismata* which God allows to happen through His lesser "friends", was developed to identify the Ḳurʾān as the *muʿdjiza* of Muḥammad. It implied the supernatural nature of the Revelation which had, from the beginning, been the primary postulate and justification of Muḥammad's preaching.

To view the Ḳurʾān *in toto* as a miraculous intrusion (or a series of intrusions) of the divine and, hence, the unrepeatable into human experience spurred rather than blocked the question regarding the precise nature of the properties which set it apart from all other literature—this word being taken in the widest possible sense and including the books embodying earlier revelations. Supported by the complementary doctrine of Muḥammad's *ummiyya* or illiteracy, the prophecies of future events, mundane and eschatological, paralleled by information about the remote past, together with the statements about the Lord Himself, were adduced as features both beyond the reach of Muḥammad's human horizon and unmatchable by others.

Appreciation of the applicability of these criteria to the Torah and the Gospel on the one hand and, on the other, the historical fact of Muḥammad's pagan compatriots denying to his revelation a divine source and attributing it rather to the inspiration of the demons on whom poets as well as soothsayers would rely led to an ever-increasing emphasis on the stylistic qualities of the Book, whose linguistic form had to be dissociated from the *kuhhān*'s rhymed prose, *sadjʿ* [*q.v.*], even more sharply than from the poets' verse. It seems that on the level of systematic discussion, it was the Muʿtazilī al-Naẓẓām [*q.v.*] (d. 232/846) who in considering the *iʿdjāz* first separated the formal aspects of the Book from its contents. The word *iʿdjāz*, traceable in the early part of the 3rd/9th century and developing into a technical term towards its end, has tended more and more to evoke the associations of the rhetorically unsurpassable.

The weakness of the aesthetic argument—that in every area of human endeavour there will be one supreme achievement; that it was difficult to maintain the incomparability of every single passage

of the Book; that an element of opinion was being injected into the valuation of the revealed text and thereby, to the more critical or the less pious, a direct challenge presented to denigrate or even match it — had however become apparent even sooner. Those weaknesses had already been countered (although a measure of refinement and elaboration of the argumentation was to follow in the 4th/10th century) by the concept of the *taḥaddī*, or challenge. Based essentially on Ḳurʾān XVII, 90 and X, 90, where it is declared that men and *djinn*, even were they to combine their efforts, are incapable of producing anything equalling as much as a single *sūra* of the Book, the *iʿdjāz* was substantiated by the pagan Arabs' failure to take up the challenge, a failure explicable solely by the realization on the part of those greatest masters of the word which the world had ever seen, motivated as they were by hatred of the new faith, by loyalty to the old and by artistic pride, that such an undertaking would be beyond them. (So already Djāḥiẓ, *Ḥudjadj al-nubuwwa*, in *Rasāʾil al-Djāḥiẓ* ed. Ḥ. al-Sandūbī, Cairo 1352/1933, 143-4; tr. C. Pellat, *Arabische Geisteswelt*, Zürich and Stuttgart 1967, 78-80, who deals with the subject in a routine manner, suggesting that he is treating a familiar line of reasoning).

But once again, historical fact—for attempts to match the Ḳurʾānic style were indeed undertaken—and a keener sense of the vulnerability of a proof based on historical incident and subjective judgement would modify the argument. Reliance on *taḥaddī* was supplemented by the doctrine of the *ṣarfa*, the "turning away". (Cf. as an intellectual precedent to the concept of *ṣarfa*, Lactantius (ca. 240-ca. 340 A.D.), *Div. Inst.*, IV, 2, 5: *aversos esse arbitror divina providentia, ne scire possent veritatem*, "God must have turned the ancient philosophers away from the right way of finding the truth"). With the abandonment of the claim to literary inimitability as such and the recognition of the ability *in potentia* of the Arab rhetoricians of Muḥammad's day victoriously to rise to the *taḥaddī*, the miracle was perceived as consisting in God's preventing the competent from taking up the challenge altogether. So already al-Naẓẓām; cf. Bouman, *Conflit*, 22. Although the *ṣarfa* implies the relinquishing of its supernatural aspect, the conviction of the Book's stylistic supremacy continued in the consensus of the community to be upheld as an empirical fact by some theologians such as Bāḳillānī (d. 404/1013), who were not prepared to accept it as a necessity *a priori*. His contemporary, the Muʿtazilī *ḳāḍī* ʿAbd al-Djabbār al-Astarābādī (d. 415/1025), in his extensive discussion of the *iʿdjāz* insists on the intrinsic excellence of the Ḳurʾān and particularly on the outstanding quality of its *faṣāḥa*; it is this level of stylistic perfection which prevented a *muʿāraḍa* in spite of the indubitable occurrence of the *taḥaddī* (cf., e.g., *Mughnī*, ed. Amīn al-Khūlī, Cairo 1380/1960, xvi, 247; esp. also the long discussion, 264 ff.); no special act of God by way of a *ṣarfa* was required to inhibit the pagan Arabs from attempting to match Revelation (this is implied throughout and set forth explicitly at 322 ff.).

Muslim tradition identifies a comparatively small number of outspoken critics of the Book. Djaʿd b. Dirham (executed in 105/723) is generally named as its first detractor. Deprecation was, on occasion, accompanied by the attempt to match the revealed text by something artistically equivalent or better. The existence, though repressed from common memory, of revelations similar in form to that of the Ḳurʾān promulgated by the counter-prophet Maslama (Musaylima) set an uncomfortable precedent. It is possible that the celebrated Iranian convert, the great stylist Ibn al-Muḳaffaʿ [*q.v.*] (d. 140/757 or 142/759), actually did try his hand at such a *muʿāraḍa*, but found it impossible to complete his task—a fate shared by some other writers to whom tradition imputes the same ambition. (Cf. M. Guidi, *La Lotta tra l'Islam e il Manicheismo*, Rome 1927, XVI, 64-5, 72; I. Goldziher, *Muhammedanische Studien*, ii, 401-4; Ṭabarī, *Chronique*, tr. from the Persian version of Balʿamī by H. Zotenberg (reprint, Paris 1958), iv, 450-2.) Bashshār b. Burd (d. 166/783) is quoted as freely comparing to its disadvantage Ḳurʾānic with contemporary verse and as having boasted of having personally surpassed *sūra* LIX; a similar statement is attributed to Abu 'l-ʿAtāhiya (d. 213/828) with reference to *sūra* LXXVII. Among the Muʿtazila, Abū Mūsā ʿĪsā b. Ṣabīḥ, better known as al-Murdār (not al-Muzdār as Rāfiʿī consistently writes, *op. cit.*, e.g., p. 161), a contemporary of Bishr b. al-Muʿtamir (d. between 210/825 and 225/840), whose student he was, and of Abu 'l-Hudhayl al-ʿAllāf (d. *ca.* 225/840), is singled out as a sceptic in regard to the uniqueness of the Holy Book. The bitterest scoffer at the Ḳurʾān would seem to have been Ibn al-Rāwandī (d. 250/864 or, more likely, 297/910 or 299/912), parts of whose attacks on the mission of the prophets in general and on Muḥammad in particular have been preserved in the refutation by the Muʿtazilī al-Khayyāṭ (d. between 287/900 and 297/910). The victory of the dogma of the eternity *a parte ante* or the uncreatedness of the Divine Word helped to consolidate a climate of opinion in which the consensus peaceably secured the recognition of the *iʿdjāz* as an integral part of the faith. This is not to say that critical remarks on individual images would no longer occur. Nor that the stylistic insuperability of the Book would have found universal acceptance among theologians: Ibn Ḥazm (d. 456/1064), in his *Kitāb al-Faṣl fi 'l-milal*, Cairo 1317-21, iii, 15 ff.; tr. M. Asín Palacios, *Abenházam de Córdoba y su historia crítica de las ideas religiosas*, Madrid 1927-32, iii, 248 ff.; see also *Faṣl*, i, 106 ff., tr., i, 222 ff., as well as al-Djuwaynī (d. 478/1085), the *imām al-ḥaramayn* and teacher of al-Ghazālī, in his *al-ʿAḳīda al-niẓāmiyya*, ed. M. Kawtharī, Cairo 1948, 54-5; tr. H. Klopfer, *Das Dogma des Imâm al-Ḥaramain al-Djuwainî und sein Werk al-ʿAqîdat an-niẓâmîya*, Cairo-Wiesbaden 1958, 89-90, to mention only two outstanding figures from widely separated regions and school affiliations, refuse, the one to acknowledge its aesthetic qualities as a major proof of its uniqueness, the other to recognize its unqualified aesthetic superiority altogether. Whether the "competition" with the Ḳurʾān (or perhaps only with LXXVII, 30-3) of which al-Maʿarrī (d. 449/1057) has been accused ever was undertaken must remain uncertain; that the poet embarked on a systematic counterfoil appears exceedingly doubtful. The last *muʿāraḍat al-Ḳurʾān* of which a somewhat vague report has come down to us is due to one Muhadhdhib al-Dīn al-Ḥillī (d. 601/1205; cf. Goldziher, *op. cit.*, ii, 404).

The critical appraisal of the Ḳurʾān's artistry had been paralleled, if not preceded, by reflexions on certain grammatical peculiarities of the Book. The awareness of differences in linguistic usage during the 3rd/9th and 4th/10th centuries came more and more to be coupled with the postulate that grammar was to be judged by the Ḳurʾānic text rather than the Ḳurʾānic text by the tradition of classical grammar;

cf. al-Mubarrad (d. 285/898), *al-Kāmil*, ed. W. Wright, Leipzig 1864-92, 485; Tawḥīdī (d. 414/1023), *Kitāb al Imtāʿ wa ʾl-muʾānasa*, ed. A. Amīn and A. al-Zayn, Cairo 1939-44, iii, 185; and the explicit statement by Ibn al-Munayyir (d. 683/1284): *taṣḥīḥ ḳawāʿid al-ʿarabiyya bi ʾl-Ḳurʾān, apud* M. Ullmann, *Untersuchungen zur Rağazpoesie*, Wiesbaden 1966, 222-3; similarly Ḳasṭallānī (d. 923/1517) *apud* Goldziher, *Die Richtungen der islamischen Koranauslegung*, Leiden 1920; re-issued 1952, p. 50, n. 3.

The major works marking the development of the *iʿdjāz* concept and the researches supporting it have been put together by Abdul Aleem, *ʿIjazuʾl-Qurʾan* (sic), in *IC*, vii (1933), 64-82, 215-83, and G. E. von Grunebaum, *A tenth-century document of Arab literary theory and criticism. The sections on poetry of al-Bâqillânî's* Iʿjāz al-Qurʾân, Chicago 1950 (with bibliography). The first systematic treatments carrying the word *iʿdjāz* in their title which have been preserved—the oldest, by Muḥammad b. Yazīd (or Zayd) al-Wāsiṭī (d. 306/918-9), is lost—are concerned above all with the literary uniqueness of Revelation, the leading interest of both ʿAlī b. ʿĪsā al-Rummānī (d. 384/994) and Muḥammad al-Khaṭṭābī (d. 386/996 or more probably 388/998). Outside the circle of "specialists", too, the tracing of poetic imagery in the Ḳurʾān preoccupied the literary theorists who, like Ibn al-Muʿtazz (d. 295/908), would invoke Ḳurʾānic precedent to justify modern stylistic trends and for whom the existence of figurative speech in Revelation constituted an important motivation for the study and ever more minute classification of tropes and figures in general. The treatment of the *iʿdjāz* by Bāḳillānī, the first it would seem to aspire to systematic comprehensiveness, decisively influenced the later writers, whether mostly concerned with style like ʿAbd al-Ḳāhir al-Djurdjānī (d. 470/1078) in his *Dalāʾil al-iʿdjāz*, or with theology proper like Fakhr al-Dīn al-Rāzī (d. 606/1209) in his *Mafātīḥ al-ghayb* and his *Nihāyat al-īdjāz fī dirāyat al-iʿdjāz* and Ibn Ḳayyim al-Djawziyya (d. 751/1350) in his *Fawāʾid*. By their time, the term *ʿilm al-iʿdjāz* had, in common parlance, become very nearly synonymous with *ʿilm al-bayān* or *ʿilm al-maʿānī* to designate the science of rhetoric; cf. Abdul Aleem, *op. cit.*, 82. Broadly speaking, nothing new has been added to the traditional argumentation since the 5th/11th century. The discussion of the *iʿdjāz* in Muḥammad ʿAbduh's (d. 1905) *Risālat al-tawḥīd* (esp. ch. xii; Eng. tr. by I. Musaʿad and K. Cragg, *The theory of unity*, London 1966, 118-22; competent summary of all references to the Ḳurʾān in Stieglecker [see Bibl.], 404-8) differs from older presentations essentially by omitting grammatical and aesthetic detail.

In contrasting the stylistic perfection of the Ḳurʾān with the stylistic imperfections of the older Scriptures the Muslim theologian found himself unknowingly and on purely postulative grounds in agreement with a long line of Christian thinkers whose outlook on the Biblical text is best summed up in Nietzsche's brash dictum that the Holy Ghost wrote bad Greek. The knowledge of the Western theologian that the Biblical books were redacted by different writers and that they were, in many cases, accessible to him only in (inspired) translation facilitated admission of formal imperfections in Scripture and therewith lessened the compulsive insistence on its stylistic authority. Christian teaching, leaving the inspired writer, under the guidance of the Holy Spirit, free in matters of style, has provided no motivation to seek an exact correlation between the revealed text on the one hand and grammar and rhetoric on the other; cf. L. Gardet and M.-M. Anawati, *Introduction à la théologie musulmane*, Paris 1948, p. 26, n. 4. It thereby relieved the theologian and the critic from searching for a harmony between two stylistic worlds, which at best would yield an ahistoric concept of literary perfection and at worst would prevent anything resembling textual and substantive criticism of Revelation as adumbrated by the Oratorian monk R. Simon as early as 1638, but which could not possibly be accepted within Islam even today under the pressure of a concept of *litteratim* inspiration which would confine dissenters to questioning the completeness or genuineness of the transmitted text but inhibit examination of its dictation, word for word and letter for letter. In Christianity, besides, the apology for the "low" style of the Bible is merely part of an educational problem—what to do with secular erudition within Christianity; whereas in Islam, the central position of the Ḳurʾān, as the focal point and justification of grammatical and literary studies, was, theoretically at least, never contested from within the believing community.

In another respect, however, Islam has come very close to Christian teaching (or, at any rate, Christian sentiment). In identifying the Ḳurʾān, i.e. the *fact* of revelation, as the *muʿdjiza* of the Prophet it approaches very nearly the insight into the nature of the revelation which made Jesus refuse "to grant the sign, the miracle, the external proof asked of Him, which would have taken its place outside Revelation: this proof, moreover, would have been ineffective, and would not have provoked genuine faith, but at the most a gross superstition" (R. Mehl, *La condition du philosophe chrétien*, Paris-Neuchâtel 1947, 119; Eng. tr. by E. Kushner, *The condition of the Christian philosopher*, Philadelphia 1963, 127), which it must be admitted is precisely what happened whenever in Christianity or in Islam this insight of the central figure of the faith has been disregarded.

(G. E. von Grunebaum)

IDJĀZA (A.) authorization, licence. When used in its technical meaning, this word means, in the strict sense, the third of the eight methods of receiving the transmission of a *ḥadīth* [*q.v.*] (the various ways are set out precisely in W. Marçais, *Taqrīb*, 115-26). It means in short the fact that an authorized guarantor of a text or of a whole book (his own work or a work received through a chain of transmitters going back to the first transmitter or to the author) gives a person the authorization to transmit it in his turn so that the person authorized can avail himself of this transmission. But beyond this narrow definition there is in fact involved the principle, fundamental in Islam, of the pre-eminent value attached to oral testimony, a principle which has been maintained through all the fictions to which *idjāza* and the other methods of transmission have given rise from a very early date and which still today continue to influence Muslim traditional thinking. It is this that gives its ideological and historical importance to the very full documentation contained

in the *isnāds* ("chaînes de témoignages fondamentales", L. Massignon), in the *samāʿs* ("certificates of hearing") and in the *idjāzas*—often having indications of dates and places and details of the names of the persons who formed links in the transmission—which precede, frame or follow not only the texts of *ḥadīth*, of *fiḳh* or of *tafsīr*, but also theological, mystical, historical and philological works, and even literary collections, of both prose and poetry. Separate from the texts there appear the systematic lists of authorities (*muʿdjam*, *mashyakha*, *thabat*, *fahrasa* [*q.v.*], *barnamādj*), which form in themselves a well developed branch, still flourishing and so far insufficiently exploited, of the work of the traditional Muslim scholars. In spite of the very serious reservations which had been made from the beginning, notably by the *imām* al-Shāfiʿī (d. 204/820), with regard to transmissions not guaranteed by the direct study of the text transmitted and the effective meeting between a transmitter and a receiver capable of understanding the text, yet practice, supported when necessary by appropriate statements of casuistic reasoning, has always tended towards the acceptance of fictions and increasing indulgence: a general *idjāza* without the hearing of the texts, an *idjāza* conferred on young children who have not yet reached the age of reason, even to those still unborn, an *idjāza* obtained as the result of a short interview during journeys whose aim was not exclusively study or the Pilgrimage, an *idjāza* requested and granted by letter without any personal contact between the authority and the candidate. Among the fictional *idjāzāt*, which were moreover of social and political significance, were those conferred at their request on rulers or on high state dignitaries. Examples of *idjāza* in verse exist from the second half of the 3rd/9th century (al-Khaṭīb al-Baghdādī, *Kifāya*, 350), and these very soon became couched in turgid rhetoric (see below).

Among the "Twelver" Shīʿīs the *idjāza* obtains its authority from the infallible *imāms* whose *ḥadīths* are scrupulously transmitted by their faithful supporters (see H. Laoust, *Les schismes dans l'Islam*, Paris 1965, 303).

In Persian and in Ottoman Turkish (in the latter as a composite word, *idjāzet-nāme*, *icazetname*) the term has come into modern use to mean "certificate of fitness" (to teach).

Youssef Eche (al-ʿIshsh), Damascus 1949; an unpublished treatise by al-Silafī (d. 576/1180), *K. al-Wadjīz fī dhikr al-mudjāz wa 'l-mudjīz* (MS Chester Beatty Arabic 4874, fols. 1-20), analysed by G. Vajda in *Bull. de l'Inst. de Rech. et d'Hist. des Textes*, no. 14, 1966; Mīrzā ʿAlī Taḳī, *al-Idjāzāt, containing Licenses to learned men*, Lucknow 1286/1869. On the subject of the superior value as proof of the spoken over the written word: L. Massignon, *Études sur les "Isnad" ou chaînes de témoignages fondamentales dans la tradition musulmane hallagienne*, in *Mélanges Félix Grat*, i, Paris 1946, 385-420 (= *Opera Minora*, ii, Beirut 1963, 61-92); R. Brunschvig, *Le système de la preuve en droit musulman*, in *Recueils de la Société Jean Bodin*, xviii, *La Preuve*, Brussels 1964, 169-86. On the *idjāza* and the related documents in general: I. Goldziher, *Muh. St.*, ii, 188-93 (this study is the basis of his article in *EI*[1]; reservations made by F. Sezgin, *GAS*, I, 1967, 53-84, must be taken into account); W. Ahlwardt, *Verzeichnis*, i, 54-95; W. Marçais, *Le Taqrîb de En-Nawawî*, Paris 1902, 115-26; J. Pedersen, *Den Arabiske Bog*, Copenhagen 1946, 23-30, 144; excellent general outline on *idjāza* and *samāʿ* by Ṣ. al-Munadjdjid, *Idjāzāt al-samāʿ fi 'l-makhṭūṭāt al-ḳadīma*, in *RIMA*, i (1955), 232-51; ʿAbd al-ʿAzīz al-Ahwānī, *Kutub barāmidj al-ʿulamāʾ bi 'l-Andalus*, *ibid.*, 91-120 (also idem, *Naṣṣ Barnāmadj Ibn Abi 'l-Rabīʿ*, *ibid.*, 252-71). Shīʿī *idjāzāt* form the subject of a double volume (25-26) of the great theological encyclopaedia *Biḥār al-anwār* of Muḥammad Bāḳir Madjlisī (d. 1110/1699); see also Abdullah Fayyad, *al-Ijazat alʿ-ilmiyya ʿind al-Moslimeen*, Baghdad 1967; Sakhāwī (d. 902/1497) includes in his *Iʿlām* a list of *muʿdjams* and *mashyakhas*, tr. in F. Rosenthal, *A history of Muslim historiography*, [2] Leiden 1968, 451-3; a more complete list, to the 14th/20th century, is given in Muḥammad ʿAbd al-Ḥayy b. ʿAbd al-Kabīr al-Kattānī, *Fihris al-Fahāris wa 'l-athbāt* ..., Fez 1346/1927 (cf. Brockelmann, S II, 891), a most valuable source of information which is in need of systematic indexing. Among the lists of transmissions may be mentioned (in addition to the *Barnāmadj* of Ibn Abi 'l-Rabīʿ mentioned above) the printed works of Abū Bakr Ibn Khayr al-Ishbīlī (d. 575/1180), *Fahrasa*, "Index Librorum ...", edd. F. Codera and J. Ribera, *BAH*, vols. ix-x, Saragossa 1894-5, and the five works, collected in one volume at Ḥaydarābād 1328/1910, of five scholars of the 12th-13th/18th-19th centuries, al-Kūrānī, al-Nakhlī, al-Baṣrī, al-Fullānī, al-Shawkānī (full titles *apud* J. Robson in *BSOAS*, xiv (1952), 580, no. 6). Recently Orientalists have begun to take an interest in the analysis of the lists of authorities and the certificates of "audition"; among others may be mentioned A. J. Arberry, *Sakhawiana* (Chester Beatty Monographs, no. 1); idem, *A twelfth-century reading list* (same series, no. 2), London 1951; G. Vajda, *Les certificats de lecture et de transmission dans les manuscrits arabes de la Bibliothèque Nationale de Paris*, Paris 1957 (bibliographical details at p. VI, n. 2); idem, *Le dictionnaire des autorités de ʿAbd al-Muʾmin al-Dimyāṭī*, Paris 1962; J. Sublet, *Les Maîtres et les études de deux traditionnistes de l'époque mamlouke* (*al-Mashyakha al-bāsima* of Ibn Ḥadjar al-ʿAṣkalānī), in *BEO*, xx (1967). (G. Vajda)

Most *idjāzas* are plain statements of fact, but sometimes rhymed prose (*sadjʿ* [*q.v.*]) is used and the beneficiary is described in extravagant epithets (*idjāza ṭannāna*, Suyūṭī, *Bughya*, 246, 4 from below). In some later *idjāzas* we find lengthy introductions and the whole document becomes an exercise in rhetoric. Ḳalḳashandī regards this as normal, as appears from his brief discussion of the *idjāza* in the *Ṣubḥ al-aʿshā* (Cairo 1331/1913, xiv, 322-35) and the examples of *idjāzas* for various purposes (*futyā*, *tadrīs*, *ʿirāda*, *riwāya*) which he sets up as models (other examples of this pompous style in A. J. Arberry, *The Chester Beatty Library*: *A handlist of the Arabic manuscripts*, Dublin 1955, i, plate 14, iv, plate 124; of an *idjāza* as part of a *samāʿ*, S. A. Bonebakker, *Some early definitions of the tawriya*, The Hague 1966, 65). As early as the 3rd/9th century the poetic form was used (see al-Khaṭīb al-Baghdādī, *al-Kifāya fī ʿilm al-riwāya*, Ḥaydarābād 1357/1938, 350-1; idem, *Taʾrīkh Baghdād*, v, 164-5). The traveller Ibn Djubayr records that he obtained an *idjāza* in both prose and verse (*nathr wa-naẓm*, ed. Wright-de Goeje, 201, 18).

That the poetic form was popular for the idjāza as well as for the request for an idjāza (istidʿāʾ) is shown by examples quoted in Makkarī's *Analectes* (i, 628, 715, 743 ff.). *Idjāza* poems also occur in Ṣafī al-Dīn al-Ḥillī's *Dīwān* (Damascus 1297/1879, 481-3, for his own poems) and a late example is found in Shirwānī's *Ḥadīkat al-afrāḥ* (Būlāk 1282/1866, 76).

Idjāza as a technical term in prosody occurs as a synonym of various terms for faults in the rhyme [see art. KĀFIYA]. As a term in rhetoric it is used when a poet builds some lines or even a whole poem on a single line or hemistich suggested by somebody else, often a ruler (but cf. Dozy, *Suppl.* s.v. *adjāza*). It is also used when two poets compose alternately a hemistich or one or more lines of the same poem, often in the form of a contest, in which case we also find the term *tamlīṭ* (or *mumālaṭa, imlāṭ, TA*, v, 227 below). Other terms occur either as synonyms or to indicate different forms of *tamlīṭ*. The interpretation of these terms given by Ibn Ẓāfir in his *Badāʾiʿ al-Badāʾih* (Būlāk 1278/1862 and on the margin of ʿAbbāsī, *Maʿāhid al-tanṣīṣ*, Cairo 1316/1898) does not seem to have been generally accepted.

IDJĀZA [see ḤADJDJ].

AL-ĪDJĪ, ʿAḌUD AL-DĪN ʿABD AL-RAḤMĀN B. RUKN AL-DĪN B. ʿABD AL-GHAFFĀR AL-BAKRĪ AL-SHABĀNKĀRĪ, Shāfiʿī jurist and Ashʿarī theologian. Born probably after 680/1281 in Īg, the chief town of Shabānkāra, he began his theological education mainly among the pupils of al-Bayḍāwī. The last Īlkhān, Abū Saʿīd (716-36/1316-36), invited him to his court in Sulṭāniyya and appointed him *kāḍī al-mamālik*, probably on the suggestion of his vizier Ghiyāth al-Dīn Muḥammad b. Rashīd al-Dīn (728-36/1328-36), with whom al-Īdjī had formed an acquaintance; in 730/1330 al-Īdjī's reputation as a scholar is mentioned for the first time in a contemporary source (*Taʾrīkh-i Guzīda*, 808, 6 ff.). Later, probably after the execution of Ghiyāth al-Dīn and the death of Abū Saʿīd (736/1336), al-Īdjī appears as chief *kāḍī* in Shīrāz, at the court of the Īndjū Abū Isḥāk; it was here that Ḥāfiẓ met him (*Dīwān*, ed. Ḳazwīnī-Ghanī, 363, 7). When the Muẓaffarid Mubāriz al-Dīn was planning to conquer Abū Isḥāk's kingdom for himself, al-Īdjī attempted, as the latter's agent, to negotiate between the two, but without result; at this time Mubāriz al-Dīn was his guest for a few days in Shabānkāra. Once again al-Īdjī returned for a short time to Shīrāz; however, during the siege of the town (754/1353) he went over to Mubāriz al-Dīn and withdrew to Shabānkāra. There Shāh Shudjāʿ, Mubāriz al-Dīn's son, visited him a year later. In 756/1355, evidently in connexion with the insurrection against the Muẓaffarids of Malik Ardashīr, the last Atabeg of Shabānkāra, al-Īdjī was imprisoned in the fortress of Diraymiyān (at Īg) and died there in the same year.

Al-Īdjī's works have no claims to originality, being intended as systematic handbooks for teaching in *madrasas*. Their popularity is evident from the great number of commentaries. A dedication to Ghiyāth al-Dīn shows that two of his books were composed before 736/1336: the *Fawāʾid al-Ghiyāthiyya*, an abridgement of the section on rhetoric from al-Sakkākī's encyclopaedic *Miftāḥ al-ʿulūm*, and the commentary to Ibn al-Ḥadjar's (d. 646/1249) *Mukhtaṣar* of his own *Muntaha 'l-suʾūl wa 'l-amal fī ʿilmay al-uṣūl wa 'l-djadal*. Al-Īdjī's fame was based, already during his own lifetime, on his *K. al-Mawāḳif fī ʿilm al-kalām*, which is still today used as a basis for the teaching of theology at al-Azhar. Although (subsequently?) dedicated to Abū Isḥāk, it was probably composed before 730/1330, for it is mentioned in the *Taʾrīkh-i Guzīda*, which was written in that year (808, 15; this reference may however be a later addition by the author). The book sets out in the style of a *summa theologica*, in concise language, the traditional ideas of 6th/12th century Islamic theology; it is based mainly on the *Muḥaṣṣal* of Fakhr al-Dīn al-Rāzī (d. 606/1209) and the *Abkār al-afkār* of Sayf al-Dīn al-Āmidī (d. 631/1233), in places also on the former's *Nihāyat al-ʿuḳūl fī dirāyat al-uṣūl*. For further works, see Brockelmann, II, 267 ff., and A. Ateş in *IA*, v, 921 ff. s.v. *Īcī* (with detailed summaries).

Bibliography: For his biography, see the sources given in Brockelmann, II, 267; S II, 287; and Kaḥḥāla, *Muʿdjam al-muʾallifīn*, v, 199. (J. VAN ESS)

ʿIDJL, ancient Arabian tribe, reckoned part of Bakr b. Wāʾil [*q.v.*]. Their common ancestor ʿIdjl b. Ludjaym was proverbially noted for his stupidity (Goldziher, *Muh. St.*, i, 48n.; Eng. tr. i, 52n.). The tribe as a whole had a reputation for niggardliness (Masʿūdī, vi, 138f.; Yāḳūt, i, 183). They originally lived in al-Yamāma and in the region about the roads from Kūfa and Baṣra to Mecca. Among the settled localities belonging to them were Arāka, Djawkhāʾ and al-Khaḍārim; while their waters included Bukayʿ, Tukayyid, al-Ruwaytha, Zumīm, Sāk, Shubrum, Ẓabya, al-Ḳayyāra, Maḥḍara, and al-Hadjīra. Some of Banū ʿIdjl settled at Djaylān in al-Baḥrayn among Persian immigrants from Iṣṭakhr who practised agriculture (Yākūt, ii, 179; Goldziher, i, 103; Eng. tr., i, 100). At a later date there were members of Banū ʿIdjl in the region of Aleppo (al-Ḳalkashandī, *Nihāya*, 350).

The relations of ʿIdjl with cognate tribes are discussed in the article on Bakr b. Wāʾil [*q.v.*]. They fought against Ḳays b. ʿĀṣim and Tamīm at Nibādj and Taytal, and also at Musalliḥa. The most important battle in which they were engaged, however, was that of Dhū Ḳār [*q.v.*]. According to some accounts their leader Ḥanẓala b. Thaʿlaba played an important part before the battle encouraging the Arabs to fight, while during the battle he commanded the right wing of the Arabs. The conversion of a ʿIdjlī to Islam is mentioned by al-Wāḳidī (ed. M. Jones, i, 198). Some of the tribe had become Christian, and these took the Persian side at the battle of Ullays in 12/634. Men of ʿIdjl and Ḥanīfa were in a force at Ḳalʿat al-Nusayr (or Numayr) near Nihāwand in 22/643. Horsemen of ʿIdjl supported Yaḥyā b. ʿUmar in his rising at Kūfa in the middle of the 3rd/9th century.

The connexion of parts of ᶜIdjl with Persian culture is noteworthy, and may partly explain the type of heresy to which they were prone. At Kūfa al-Mughīra b. Saᶜīd al-ᶜIdjlī was executed as a heretic in 119/737 and Abū Manṣūr al-ᶜIdjlī [see MANṢŪRIYYA] in 124/742. The well-known Abū Muslim [*q.v.*] is thought to have been a slave attached to ᶜIdjl.

AL-ᶜ**IDJLĪ**, ABŪ DULAF [see AL-ḲĀSIM B. ᶜĪSĀ].

AL-ᶜ**IDJLĪ**, ABŪ MANṢŪR [see MANṢŪRIYYA].

IDJMĀᶜ, the third, and in practice the most important, of the bases of Islamic religious law, according to the classical theory [see UṢŪL]. It is in theory the unanimous agreement of the Umma on a regulation (*ḥukm*) imposed by God. Technically it is "the unanimous doctrine and opinion of the recognized religious authorities at any given time".

Statement of the problem: The idea of *idjmāᶜ* as a source of law, as proving in an intangible and definitive way the validity of a *ḥukm* (W. M. Watt, *Islam and the integration of society*, London 1961, 203), was a result of the need to perpetuate a truth given by the Ḳurʾān and corroborated by the *Sunna* of the Prophet. Arguments arose among the faithful after the death of the Prophet who, during his lifetime, was the "proof" (*ḥudjdja*) and point of reference in legislative matters. The need began to be felt for a binding principle which would ratify a custom, as yet vague and undefined, which was being called upon to systematize itself at the same time as it was expanding and coming under attack from both Shīᶜīs and Khāridjīs. The idea became defined and was given its theoretical formulation with the elaboration of the *uṣūl al-fiḳh*, i.e. in the 2nd/8th century. The definition of *idjmāᶜ* as a source of law then raises the question of the probative validity (*ḥudjdjiyya*) of this concept.

Denied by the Khāridjīs (al-Baghdādī, *Uṣūl*, 19) and by al-Naẓẓām (*ibid.*, 19-20), this validity became the object of long discussions in the classical treatises on *uṣūl al-fiḳh*. Whether it is the Ḥanafī *idjmāᶜ* extending the consensus of the *Umma* to all the Believers or the *idjmāᶜ* of Ibn Ḥazm limiting it only to the Companions of the Prophet, the procedure is always the same; it consists of basing the *ḥudjdjiyya* of the *idjmāᶜ* on a passage from "Ḳurʾān or Tradition giving a reason in plain language" (Hourani, 19). This procedure clearly illustrates the exigencies of Islamic jurisprudence.

The rationalism of the Muᶜtazilīs, with its tendency to ethics rather than logic, amounts, where *idjmāᶜ* is concerned, to no more than a deontology addressed to the personal convictions of the believer.

The primacy of reason (*al-ᶜaḳl ḳabl al-samᶜ*), repeatedly expressed by ᶜAbd al-Djabbār (*Mughnī*, xii, 378 and *passim*; *Sharḥ*, 45 and *passim*; Ibn Mattawayh, *Muḥīṭ*, 17 ff.; Abu'l-Ḥusayn, *Muᶜtamad*, ii, 460) is circumscribed by the principle of 'that which is best' (*al-aṣlaḥ*), which can limit even the divine will. In the field of *idjmāᶜ*, rationalism was obliged to make way for the strictest fideism, since reason is no more capable of deciding the inerrancy (*ᶜiṣma*) of a group of people than of guaranteeing that an individual is always exempt from error in his words and his deeds. ᶜAbd al-Djabbār thus takes over the objection of al-Naẓẓām, who, though frequently named elsewhere (*Mughnī*, xvii, 72, xv, 361, 392 and *passim*), is not mentioned in connexion with *idjmāᶜ* (compare *Mughnī*, xvii, 158 and *Muᶜtamad*, 458). Thus the *ḳāḍī* affirms unequivocally: "As for demonstrating the legal validity of *idjmāᶜ* by a process of reason, that is impossible" (*fa-amma 'l-istidlāl ᶜalā ṣiḥḥat al-idjmāᶜ min djihat al-ᶜaḳl, fa-baᶜīd*; *Mughnī*, xvii, 199); for, he continues, "no proof (*dalīl*) can demonstrate that a certain group is free of error in its words and its deeds, just as nothing can prove this for each of the matters of religious obligation (*mukallafūn*); and there is no difference between the man who imposes by means of reason (*man awdjaba ᶜaḳlan*) the legal validity of *idjmāᶜ* and the man who decides the probative value of divergence (*man awdjaba kawn al-khilāf ḥudjdjatan*) or ascribes probative value to the statement of each *mukallaf* (*man djaᶜala kawn kull mukallaf ḥudjdjatan*). This affirmation is even more erroneous than that of *taḳlīd*, whose nullity (*buṭlān*) we have already demonstrated" (see also *Mughnī*, xvii, 206, 216). We may note in passing that the Muᶜtazilī view coincides with that of Ibn Ḥazm and his school. By more devious and never explicit routes, his pupil Abu'l-Ḥusayn adopted the same viewpoint. After presenting the five Ḳurʾānic proofs universally admitted by the *uṣūliyyūn* and the proof deduced from the classic tradition "My community will never agree upon an error" (*Muᶜtamad*, 458-76), he sets out (in order to refute them) two arguments which one might have thought to be dictated by common-sense but which would in fact, for the logician, merely lead the line of reasoning back to a vicious circle in one case and to a *petitio principii* in the other (*Muᶜtamad*, 476-7). To avoid these two impasses it was necessary, in the field of *idjmāᶜ*, to dissociate the domain of faith from that of reason. ᶜAbd al-Djabbār saw this and stated it; Abu'l-Ḥusayn suggested it.

The Muᶜtazilī attitude, which always attracted al-Ghazālī, may be seen on the subject of *ḥudjdjiyyat al-idjmāᶜ* in the force he gives to the *ḥadīth* of the Prophet, "My community will never agree upon an error", supporting this with a para-syllogistic argument (*Mustaṣfā*, i, 110-2). Drawing his inspiration from Aristotelian logic, al-Ghazālī applies to the argument drawn from the *Sunna* a syllogism, in which the second premise, statement of a particular truth, is replaced by an arbitrary hypothesis depending on a *petitio principii*, that the normal course of events (*ᶜāda*) is a source of knowledge.

A connected and no less important problem is that of the relationship between *idjmāᶜ* and *tawātur* [*q.v.*]. The *ḥudjdjiyya* of *tawātur* is objective, since it concerns *ḥissiyyāt* and consists in the convergence of sayings and in the authentication of chains of authorities. It is in this sense, according to al-Ghazālī for example, that *tawātur* provides a guarantee as reliable as *ḥissiyyāt* and *ᶜaḳliyyāt* (al-Ghazālī, *Iḳtiṣād*, 112-3), whilst the *ḥudjdjiyya* of *idjmāᶜ* consists in this same convergence but with the addition of a faith (*taṣdīḳ*) which goes beyond the bounds of objectivity and amounts to the deep conviction of every Believer, as much as to objective credibility. It will be understood, then, that for al-Ghazālī, *idjmāᶜ* is "the most important source of religion" (*Mustaṣfā*, i, 112; al-Āmidī, *Iḥkām*, i, 316).

In modern times, parallel with a classical and conservative trend represented by ᶜAbd al-Wahhāb Khallāf, there is developing a modernist trend inherited from the reformism of Muḥammad ᶜAbduh (Hourani, 39-43) by the Pakistani, Kamāl Fārūḳī. In his recent work (*Islamic jurisprudence*, Karachi 1962), K. Fārūḳī does not re-examine the theoretical problem of the proofs on which the validity of

idjmāʿ is based. Like Muḥammad ʿAbduh, he thinks that the scriptural proofs establish, though in a limited sense, the legal authority for the consensus of the *Umma* (Hourani, 43). But beyond this, he attempts to reconsider the concept of *idjmāʿ* as a result of a critical analysis of the concept of *ʿiṣma*. In showing that the *ʿiṣma* [*q.v.*] (infallibility) of the *Umma* is circumscribed and defined by divine infallibility, K. Fārūḳī illustrates the relative nature of the former and tries to adapt the concept of the legal validity of *idjmāʿ* to the necessities of the modern world and the exigencies of the socio-political system of which the Believer is a part.

Development: As the concept of *idjmāʿ* developed, the dispersion of the faithful from Medina became greater and the Muslim world expanded, the solutions to the problem became more diverse. The concept of "favourable acceptance" became more worked out and the idea of a certain *de facto* agreement led to a theoretical definition of *idjmāʿ* differing according to the schools

The point of departure for this development is given by the *Kitāb Ikhtilāf Mālik wa 'l-Shāfiʿī* (*Kitāb al-Umm*, vii, 177-83). Al-Shāfiʿī called into question the idea of the consensus of Medina by showing the obscure and imprecise nature of the concept of "the usage of Medina". He substituted the assertion of a basic truth, upon which, as far as law was concerned, the infallibility of the unanimous pronouncements of the *Umma* rested, for the Mālikī *idjmāʿ*, which merely affirmed an existing fact. The principle was stated in legal terms, although not based on law.

The *Risāla* of al-Shāfiʿī, this scholar's only work on the subject, should be regarded as the résumé of a system of thought developed through oral discussions. This is the characteristic of the primitive religious law which was "a doctrine of essentially oral transmission" (H. Laoust, in *EI*², s.v. Aḥmad b. Ḥanbal, 274a). We must make a jump of three centuries to reach the degree of systematization which is achieved by the *Mustaṣfā* of al-Ghazālī.

With the *Iḥkām fī uṣūl al-aḥkām* of Ibn Ḥazm, we find ourselves faced with a work on *uṣūl al-fiḳh* in which *idjmāʿ* is treated as a juridical source needing a foundation and raising technical problems to be solved. For Ibn Ḥazm, *idjmāʿ* is limited to that of the Companions of the Prophet. A system which rejects the use of analogical reasoning and insists on the exclusive use of proof texts can only allow *idjmāʿ* which is derived from a revealed text about a word or deed of the Prophet. Here *idjmāʿ* seems to have been re-absorbed by Ḳurʾān and *Sunna*. In this perspective the technical problems posed by the formation of *idjmāʿ* diminish. The necessity for a continuous thread reaching back to the *idjmāʿ* of the Companions resolves the problem of its constitutors and that posed by a divergence of opinions within one generation; the expression *ūlu 'l-amr*, often used by Ibn Ḥazm, shows that *amīrs* and scholars ought to guide us by imposing upon us only those things which God or the Prophet have commanded. The problem of the succession of generations is resolved and, in the same way, the difficulty presented by the necessity of verifying the opinions of the whole of the *Umma* in every generation disappears.

The Ḥanafīs al-Bazdawī (d. 482/1089) and al-Sarakhsī (d. 490/1096) denounce the weakness of the argument on which the Ẓāhirī *idjmāʿ* was based, the precedence of the witness of the Companions (al-Sarakhsī, *Uṣūl*, i, 313). For the latter, the chief merit of the Companion is to be a Believer. According to al-Bazdawī (*Uṣūl*, iii, 181), "by the *Umma* is understood only those who have not adopted pernicious doctrines (*ahwāʾ*) and innovations (*bidaʿ*); and, if the *Umma* should find itself subject to error when the revelation is interrupted, then the divine promise to assure that the *Umma* should persevere in the truth would become void. It is, therefore, necessary to assert that the *idjmāʿ* of the *Umma* is certainly a source of truth (*ṣawāb*) by virtue of divine generosity, and that its object is to preserve the religion of Allāh". For these theologians *idjmāʿ* draws its validity from itself; it is held to be an autonomous juridical source (al-Sarakhsī, *Uṣūl*, i, 295).

The definition of the Imām al-Ḥaramayn, the teacher of al-Ghazālī, is narrower. According to him, the *faḳīh* alone is competent in the matter (*Kitāb al-Waraḳāt*). His disciple, al-Ghazālī, explains it in detail: *idjmāʿ* is the agreement of the community of Muḥammad, in particular on all religious questions (*Mustaṣfā*, i, 110). This community of Muḥammad forms a whole within which two categories must be distinguished; those who are definitely concerned in *idjmāʿ* (*al-wāḍiḥ fi'l-ithbāt*; *Mustaṣfā*, i, 115), i.e., every *mudjtahid* whose juridical opinion is held to be valid (*ahl al-ḥall wa'l-ʿaḳd*), and those of whom note is certainly not taken (*al-wāḍiḥ fi'l-nafy*), i.e., children who have not yet reached intellectual maturity (*tamyīz*), foetuses and lunatics. Between these two well-defined categories there is an intermediate zone of uncertainty, on the subject of which various problems arise: the questions of the rôle of the ordinary believer (*al-ʿāmmī al-mukallaf*), the "innovator", who takes a position contrary to *idjmāʿ*, the "Followers" (*tābiʿūn* [*q.v.*]), younger contemporaries of the Companions and those opposed to them, the minority who oppose the majority who make up *idjmāʿ*.

From all the solutions put forward, it is possible to extract a constant of Sunnī thought; *idjmāʿ* is the agreement of all the believers in general, and in particular that of those qualified, to whom was entrusted the task of taking the decisions in juridical matters.

Method: Once the question of the constitutors of *idjmāʿ* has been settled, the question of the method by which they reach agreement may be asked. This agreement can be made by word or deed, it can be explicitly stated or silent. The Ḥanafīs, who distinguish between the "concession" (*rukhṣa*) and the strict rule (*ʿazīma* [*q.v.*]), consider tacit *idjmāʿ* to be valid only with regard to a concession, while for establishing a strict rule *idjmāʿ* definitely stated or expressed by an act is necessary. The Ḥanafīs, indeed, are the only ones to allow tacit *idjmāʿ* (see the *Kashf al-asrār*, a commentary on the *Uṣūl* of al-Bazdawī, iii, 946: ". . . the concession is based on necessity and it is necessity which makes *idjmāʿ* out of tacit agreement"), while the Ẓāhirīs, in their literalism, refuse it categorically. The Shāfiʿīs, like al-Djuwaynī, al-Ghazālī and al-Āmidī, allow it as *idjmāʿ* but with certain reservations. "It is *idjmāʿ*", al-Ghazālī tells us, "provided that this tacit agreement is accompanied by indications of approval on the part of those who are silent" (*Mustaṣfā*, i, 121). It is difficult indeed to give the same probative value to silence as to a definite statement (*ibid*, 121).

But what is the value of an agreement which, without being formulated, is expressed by an act? Can it be held as valid inasmuch as this act, carried out by the majority of Believers, takes for granted at least the *idjmāʿ* of the élite, just as an act of the Prophet indicates his approval of that act? Put in another way, does the infallibility of the *Umma*

guarantee its conduct as well as its statements? The Shāfiʿīs refuse to adopt this position for, they say, it is impossible to verify whether or not the totality of a people carries out an act unanimously. This assumes a complete record of the Believers and of their conduct. Although silence may sometimes be considered an indication of approval of a statement, and consequently regarded as tacit agreement, *idjmāʿ* based on an act cannot be considered valid because of the difficulty of verification. Silence, indeed, may be ascertained directly through the absence of any opposing statement, whilst the unanimous execution of an act cannot be ascertained except by a continuous control, which would obviously be impossible to effect. Here again the Ḥanafīs differ from the rest of the Sunnīs and allow the validity of agreement about an action when the action concerns the whole body of the Believers, as for example agreement about the prohibition of adultery or usurious sale.

The opinion of the community, whether silent, signalled by an act (or by an abstention), or stated in words, takes place in time. Since *idjmāʿ* is the juridical source which mitigates the interruption of revelation with the death of the Prophet and allows the formulation of solutions to new problems which might arise, it is conditioned by the passing of the various periods during which the consensus is formed. This conditioning process raises an important question: does the formation of the consensus require the disappearance of the generation or not? For the Mālikīs and the Ẓāhirīs this is no problem, but what about the Shāfiʿīs, Ḥanafīs and Ḥanbalīs? According to al-Āmidī, his master al-Shāfiʿī, Abū Ḥanīfa, the Ashʿarīs and the Muʿtazilīs did not consider the extinction of the generation a necessary condition for the formation of *idjmāʿ*. For Ibn Ḥanbal, this formation is subject to the total disappearance of the generation (cf. al-Āmidī, *Iḥkām*, i, 367 ff.).

It follows from this that for the first group *idjmāʿ* is valid even if it is not unanimous and simply expresses the opinion of the majority (*idjmāʿ al-akthar*). As with the question whether the statements of the "Followers" should be taken into consideration, so the group which does not consider necessary the disappearance of the generation does take into consideration the statement of the Follower, if he had been a *mudjtahid* and had opposed the Companions before the latter had formed their *idjmāʿ*.

Al-Sarakhsī (*Uṣūl*, i, 315) refuses to place any importance on the disappearance of the generation. Given that the generations overlap and that it is impossible to distinguish the end of one from the beginning of the next, the statements of one generation cannot be rounded off without, in so doing, "finally closing the gate of *idjmāʿ*". Al-Ghazālī (*Mustaṣfā*, i, 121) to all intents and purposes had resolved the question by stating: "For *idjmāʿ* to be formed, it is enough that agreement should have taken place, even if only for an instant".

Rôle: The opinions of the jurists concerning the role played by *idjmāʿ* are varied. For some of them it could decide all religious questions. This is the opinion of al-Ghazālī. There are, however, religious questions which are not subject to a legal ruling and on which *idjmāʿ* cannot provide a decision, because they depend directly upon the revelation which provides the basis for *idjmāʿ*. Arguments based on *idjmāʿ* can only be used to demonstrate religious truths which do not themselves prove the legal validity of *idjmāʿ*, e.g., the statement that the vision of God in the next world is not spatial, or the denial of the existence of a second God.

For al-Djuwaynī *idjmāʿ* is agreement on a *ḥukm sharʿī*. In general, the opinion of the jurists is guided by this *ḥadīth* attributed to the Prophet: "You are better judges than I in temporal affairs, I am a better judge than you in what concerns your religion". Besides, it is agreed that an error in a temporal matter cannot incur the charge of impiety (*kufr*), but is simply considered as due to ignorance (*djahl*).

To sum up, the role of *idjmāʿ* is to decide in juridical questions of theory or practice concerning, in one way or another, the behaviour of the Believer, in so far as he is subject to the rules of conduct laid down by God and His Prophet. That is to say that *idjmāʿ* has a part to play as *dalīl sharʿī* in the field of *muʿāmalāt* [*q.v.*] but has no probative value in those of *ʿibādāt* or *iʿtiḳādāt*. These latter, indeed, provide the basis for *idjmāʿ* and *ḳiyās*, that *ḳiyās* which, together with *idjtihād*, is for the Ḥanafī a means to arrive at *idjmāʿ*, provided the *mudjtahid* possesses the moral guarantees demanded by *idjmāʿ*: integrity and honesty. For these, his mind must not be iniquitous (*fāsiḳ*) or blinded by the passion (*hawā*) which inspires pernicious doctrines (al-Bazdawī, *op. cit.*, iii, 957). However, *idjtihād* and *raʾy* are only required in special cases. In these cases, it falls to the *mudjtahid* to settle the affair, whilst when it is a question of *uṣūl al-dīn*, the ordinary Believer should be heard along with the *mudjtahid* (al-Bazdawī, *op. cit.*, iii, 959).

The Shāfiʿīs are more guarded for, al-Ghazālī says (*op. cit.*, i, 123), any solution given by means of *idjtihād* or *ḳiyās* is only a probable opinion and liable to error and divergence, which destroys the infallibility of the *Umma* and its unanimity. Besides, agreement cannot be reached through *ḳiyās* since, in their deliberations, the *mudjtahids* may adopt different principles. It is otherwise for the Muʿtazilīs; according to Abu'l-Ḥusayn, for example, *idjtihād* is the rational striving of the *mudjtahid* as an intelligent person (*ʿāḳil*), not the preserve of the recognized *mudjtahid* as such (*Muʿtamad*, ii, 489, 490-1; *Mughnī*, xvii, 224-8). This seems to have been the opinion of their master Wāṣil (al-Āmidī, *Iḥkām*, i, 326) opposed by al-Āmidī (*wa-fīhi khilāf*).

From all this, then, it appears that the main principle is that of unanimity; *ḳiyās* and *idjtihād* are for the Sunnīs—with the exception of the Ẓāhirīs who allow only *dalīl*—an approach to *idjmāʿ*, provided that their conclusions are unanimous. *Idjmāʿ* is a source of truth only when it appears as the agreement of the statements of the whole community. The infallibility of the *Umma* resides in its unanimity.

With K. Fārūḳī and his followers contemporary Islam is in the process of seeking a theoretical justification for the calling into question of classical *idjmāʿ* (Hourani, 59-60); not innovation, but renewal of an obsolete idea which, to be effective, must be freed from the straitjacket of formal concepts in which it had been imprisoned by the discussions of the *mudjtahids* of the classical period.

IDJTIHĀD (A.), literally "exerting oneself", is the technical term in Islamic law, first, for the use of individual reasoning in general and later, in a restricted meaning, for the use of the method of reasoning by analogy (*ḳiyās* [*q.v.*]). The lawyer who is qualified to use it is called *mudjtahid*. Individual reasoning, both in its arbitrary and its systematically disciplined form, was freely used by the ancient schools of law, and it is often simply called *raʾy* [*q.v.*], "opinion, considered opinion". An older, narrower technical meaning of the term *idjtihād*, which has survived in the terminology of the school of Medina, is "technical estimate, discretion of the expert". It was left to Shāfiʿī [*q.v.*] to reject the use of discretionary reasoning in religious law on principle, and to identify the legitimate function of *idjtihād* with the use of *ḳiyās*, the drawing of conclusions by the method of analogy, or systematic reasoning, from the Ḳurʾān and the *sunna* of the Prophet. This important innovation prevailed in the theory of Islamic law.

During the first two and a half centuries of Islam (or until about the middle of the ninth century A.D.), there was never any question of denying to any scholar or specialist of the sacred Law the right to find his own solutions to legal problems. It was only after the formative period of Islamic law had come to an end that the question of who was qualified to exercise *idjtihād* was raised. From about the middle of the 3rd/9th century the idea began to gain ground that only the great scholars of the past, and not the epigones, had the right to *idjtihād*. By the beginning of the fourth century (about A. D. 900), the point had been reached when the scholars of all schools felt that all essential questions had been thoroughly discussed and finally settled, and a consensus gradually established itself to the effect that from that time onwards no one might be deemed to have the necessary qualifications for independent reasoning in law, and that all future activity would have to be confined to the explanation, application, and, at the most, interpretation of the doctrine as it had been laid down once and for all. This "closing of the door of *idjtihād*", as it was called, amounted to the demand for *taḳlīd* [*q.v.*], the unquestioning acceptance of the doctrines of established schools and authorities. A person bound to practise *taḳlīd* is called *muḳallid*. See further Section II.

Bibliography: J. Schacht, *Origins*, 6 n. 3, 99 f., 116, 127 f.; idem, *Introduction*, 37, 46, 53, 69 ff., and bibliography. (J. SCHACHT)

II. According to the classical doctrine of Islamic legal theory, *idjtihād* means exerting oneself to form an opinion (*ẓann*) in a case (*ḳaḍiyya*) or as to a rule (*ḥukm*) of law (*Lisān*, iv, 109, lines 19 ff.). This is done by applying analogy (*ḳiyās*) to the Ḳurʾān and the *sunna*. The *mudjtahid* is one who by his own exertions forms his own opinion, being thus exactly opposed to the *muḳallid*, "imitator", who, as Subkī in his *Djamʿ al-djawāmiʿ* says, "takes the saying of another without knowledge of its basis (*dalīl*)". For thus applying himself he would, according to a tradition from the Prophet, receive a reward even though his decision were wrong; while, if it was right, he received a double reward [see KHAṬAʾ]. The duty and right of *idjtihād* thus did not involve inerrancy. Its result was always *ẓann*, fallible opinion (cf. R. Brunschvig, in *Studi orientalistici in onore di Giorgio Levi Della Vida*, i, Rome 1956, 61-82). Only the combined *idjtihād* of the whole Muslim people led to *idjmāʿ*, agreement, and was inerrant. On the controversy as to the possibility of error in *mudjtahids* see Taftāzānī on the *ʿAḳāʾid* of Nasafī, ed. Cairo 1321, 145 ff. But this broad *idjtihād* soon passed into the special *idjtihād* of those who had a peculiar right to form judgments and whose judgments should be followed by others. At this point, and from the nature of the case, a difference arose between theology (*kalām*) and law (*fiḳh*). Even to the present day many theologians assert that *taḳlīd* does not furnish a saving faith; see for example, the *Kifāyat al-ʿawāmm* of Faḍālī, *passim*, and the translation in D. B. Macdonald's *Development of Muslim theology*, 315-51. But all canon lawyers for centuries have admittedly been *muḳallids* of one degree or another. When later Islam looked back to the founding of the four legal schools (*madhāhib*), it assigned to the founders and to some of their contemporaries an *idjtihād* of the first rank. These had possessed a right to work out all questions from the very foundation [cf. UṢŪL], using Ḳurʾān, *sunna*, *ḳiyās*, *istiḥsān*, *istiṣlāḥ*, *istiṣḥāb*, etc., and were *mudjtahids* absolutely (*muṭlaḳ*). Later came those who played the same part within the school (*fī 'l-madhhab*), determining the *furūʿ* as the masters had settled the broad principles (*uṣūl*) of *fiḳh* and had laid down fundamental texts (*nuṣūṣ*). If the view so stated was found implicitly in a *naṣṣ* of the founder of the *madhhab*, it was called a *wadjh*. Still later and inferior were those who had a right only by their knowledge of previous decisions to

answer specific questions submitted to them; these were called *mudjtahidūn bi 'l-fatwā*, "for giving legal opinions". All *mudjtahids* had been in a sense *muftīs*, givers of *fatwās*; but these were *muftīs* only. Such was the formal and generally accepted position. But from time to time individuals appeared who, moved either by ambition or by objection to recognized doctrines, returned to the earliest meaning of *idjtihād* and asserted the right to form their own opinion from first principles. One of these was Ibn Taymiyya (d. 728/1328; cf. H. Laoust, *Contribution à une étude de la méthodologie canonique de ... B. Taymīya*, Cairo 1939). Another was Ibn Rushd ([*q.v.*]; Averroes, the philosopher, d. 595/1198; cf. R. Brunschvig, in *Études ... Lévi-Provençal*, Paris 1962, i, 41, 56-63). Another was Suyūṭī ([*q.v.*]; d. 911/1505), in whom the claim to *idjtihād* united with one to be the *mudjaddid*, or "renewer of religion", in his century. At every time there must exist at least one *mudjtahid*, was his contention (Goldziher, *Characteristik ... us-Sujūṭī's*, 19 ff.), just as in every century there must come a *mudjaddid*. Another, but a very heretical one, was the Emperor Akbar ([*q.v.*]; Goldziher, *Vorlesungen*, 311). In Shīʿite Islam there are still absolute *mudjtahids*. This is because they are regarded as the spokesmen of the Hidden Imām (cf. C. Frank, in *Islamica*, ii (1926), 171-92). Their position is thus quite different from that of the *ʿulamāʾ* among Sunnīs. They freely criticize and even control the actions of the Shāh, who is merely a *locum tenens* and preserver of order during the absence of the Hidden Imām, the ruler *de iure divino* (cf. J. Eliash and N. R. Keddie, both in *Studia Islamica*, xxix (1969)). But the Sunnī *ʿulamāʾ* are regarded universally as the subservient creatures of the government (Goldziher, *Vorlesungen*, 215-8, 233, 285).

(D. B. Macdonald*)

III. The question of *idjtihād* and *taḳlīd* continued to be discussed by the Muslim scholars, particularly in the sub-continent of India. Inspired less by this discussion than, to a certain degree, by the doctrine of Ibn Taymiyya and of his disciples, there arose, from the 12th/18th century onwards, individuals and schools of thought who advocated a return to the pristine purity of Islam, such as the Salafiyya [*q.v.*], who may be called Reformers, and others, from the last decades of the 19th century onwards, who laid the emphasis on renovating Islam in the light of modern conditions, and who may be called Modernists [see iṣlāḥ]. Both tendencies reject traditional *taḳlīd* and some Modernists, in particular, combine this with extravagant claims to a new, free *idjtihād* which goes far beyond any that was practised in the formative period of Islamic law. But the recent reshaping of institutions of the *sharīʿa* by secular legislation in several Islamic countries takes its inspiration from modern constitutional and social ideas rather than from the essentially traditional problem of the legitimacy of *idjtihād* and *taḳlīd*. Whereas this problem has largely lost its relevance in the field of "civil" law, it has retained its full importance as far as the religious duties of Islam in the narrow meaning of the term, such as fasting, are concerned.

IDJTIMĀʿ [see istiḳbāl].

IḌMĀR is the infinitive of the verb *aḍmara/yuḍmiru*, "to conceal". The Arab grammarians use it when speaking about an unexpressed grammatical element, supposedly existent and active; it can thus be translated as "imply". The opposite is *iẓhār*, from the verb *aẓhara* "to reveal". A good example of the two is supplied by Ch. 50 of Sībawayhi. One can say (i, 107): *al-ṣabiyya al-ṣabiyya*, "the small boy, the small boy!" with *iḍmār* of a verb in the *djazm* requiring the *naṣb* of the substantive, or, with *iẓhār* of this verb: *lā tuwaṭṭiʾ al-ṣabiyya*, "do not tread on the small boy". This verb *aḍmara* is used thus in all the "tenses": perfective, inperfective, etc. (so too with *aẓhara*). The infinitive *iḍmār* is particularly to be noted; it appears in the title of 14 chapters of the *Kitāb*. Since Sībawayhi, this verb has formed part of the grammatical vocabulary, e.g.: al-Zamakhsharī, *Mufaṣṣal*[2] (ed. Broch), *yantaṣib bi-an muḍmara* (§ 411), "is put into the *naṣb* by means of *an* understood". In this sense of "imply" *iḍmār* joins *taḳdīr*; but *taḳdīr*, as the instrument of a method—the system of *ḳiyās*—has a wider use; it extends as far as the admission of a supposition (see H. Fleisch, *Traité*, i, 7).

The verb *aḍmara*, in the *Kitāb*, has a particular use, derived from the sense of "to conceal", signifying: "express by a personal pronoun", e.g.: i, 344, line 13, for *aḍmara*; i, 190, lines 10-11, for *muḍmar*, *tuḍmir*. This use is continued, e.g.: *al-iḍmār ḳabl al-dhikr* (al-Djurdjānī, *Taʿrīfāt*, 18). In the *Kitāb*, *iḍmār* refers to the personal pronouns: *huwa*, *hiya*, etc. (i, 188, lines 1-2); by means of them "you conceal (*tuḍmir*) a noun", known beforehand to the listener (*ibid.*, lines 8-9). Sībawayhi also uses for this purpose: *ʿalāmat al-iḍmār*, "the sign of expression by means of personal pronouns", e.g.: the titles of chaps. 205, 210, 213. For the separate pronouns, the *ʿalāmat al-iḍmār* is said to be *ẓāhira*, "expressed"; for the affixed pronouns, *al-iḍmār* has no *ʿalāma ẓāhira* (i, 188, lines 4-8). He calls the demonstrative pronouns (i, 187, lines 22-3) *al-asmāʾ al-mubhama*.

Ibn al-Sarrādj (*al-Mūdjaz fi 'l-naḥw*, Beirut 1385/1965) refers to the personal pronouns as *al-maknī* (*al-makniyyāt*) (74); they are divided into: *muttaṣil* (affixed) and *munfaṣil* (separate). He does not omit *ḍamīr* (32) or *muḍmar* (55, 65), and he includes (76) in *al-mubhamāt* the demonstrative and the relative pronouns. The principal divisions had been established; but afterwards *al-muḍmar* was preferred to *al-maknī* (the Kūfan term, according to Ibn Hishām, *Sharḥ Shudhūr al-dhahab*, 147, ed. Maṭb. Muḥ. ʿAlī Ṣabīḥ). Al-Zamakhsharī says in the *Muf.*: *al-muḍmar* (*al-muḍmarāt*) (§ 160, 165) for the personal pronouns, and *al-mubham* (*al-mubhamāt, al-asmāʾ al-mubhama*) (§ § 159, 262, 293) for the *asmāʾ al-ishāra* (demonstrative pronouns) and *al-mawṣūlāt* (relative pronouns); *al-ḍamīr* is very frequently found as a synonym for *al-muḍmar* (personal pronoun) [see ḍamīr in *EI*[1]]. This is the usage of Ibn Mālik in the *Alfiyya*;

see the *Lexique grammatical* of A. Goguyer (*La Alfiyya d'Ibnu-Mālik*, Beirut 1888), 263 (for *al-ism al-mubham*), 297 (for *ḍamīr* and *muḍmar*). The modern grammar of R. al-Sh̲artūnī, *Mabādiʾ al-ʿarabiyya*, which still used *al-muḍmar* in § 60 (vol. for the 2nd year, Beirut 1904), now recognizes only *al-ḍamīr* (pl. *al-ḍamāʾir*) for the personal pronoun, in its 9th ed. (1961), vol. no. 4, which is at present in use in the Lebanon.

In prosody (*ʿarūḍ*), *iḍmār*, "to hide", has taken on a technical meaning: "*al-iḍmār* is the quiescence (*sukūn*) of the *tāʾ* of *mutafāʿilun* in the *Kāmil*" (*LA*, vi, 164, line 3/iv, 492b, line 11). This *mutfāʿilun* is called in the scansion of the *adj̲zāʾ*: *mustafʿilun*. The *ḥaraka* of the *tāʾ* is thought of as something concealed that can be made to reappear (*ibid.*, line 9/lines 22-3). As it is not a question of *ḥad̲h̲f* (suppression), but of *iḍmār* of the *ḥaraka*, it normally follows, according to the above-mentioned way of understanding *iḍmār* as "to conceal", that in recitation of the *Kāmil* this *mutfāʿilun* (*mustafʿilun*) should not be pronounced exactly like the *mustafʿilun* of the *Radj̲az* or the *Basīṭ*, but that one should have a means of making good the element of duration (the *mora*) lacking in *mutafāʿilun*, which has become *mutfāʿilun*, in order to maintain an adequate measure.

Bibliography in the text; see also W. Wright, *Ar. Gr.*³, i, 105 B and D. The *Lexique grammatical* of the *Kitāb* of Sībawayhi, in preparation by G. Troupeau, will give details of the use of *iḍmār* in this work. (H. Fleisch)

IDOL, IDOLATRY [see ṢANAM, WAT̲H̲ANIYYA].

IDRĀK means, in general, sensory perception and then, more generally, comprehension (synonym of *fahm*), in Persian *dar-yāftan* (Tahānawī). The philosophical usage of the word often derives from any one of the etymological meanings of the root *DRK*, which connotes the idea of attaining, of a thing reaching its term or arriving at maturity, of re-joining, meeting, catching, grasping.

There occurs in a passage of the *Futūḥāt* of Ibn al-ʿArabī (Cairo ed., ii, 579) the participle *mudrak* in a context which demonstrates the force of the meaning which the root has in the language. It is necessary, by means of *tanzīh* (the negative way), to dissociate God from any possibility of His being *grasped* through premises: in fact no human action can attain and reach God; He cannot be the end of a process of thought which will thus bring about a real knowledge. The divine essence and human knowledge are on two different planes. But Ibn al-ʿArabī has in fact just stated (p. 578) that, in order for something to be known, there must be an adequation between the quality attributed to an object and the object which is thus described (*ḳiyām al-ṣifa bi ʾl-mawṣūf*). Consequently this adequation is a characteristic inherent in *idrāk*: the intelligence (and also, to a certain extent, the senses), in reaching its object, puts itself on the same level as it, on an equal footing with it; this is *adaequatio rei et intellectus*.

The whole philosophical problem of *idrāk* is to find out what this adequation is, how and where it is achieved. *Idrāk* is absolutely perfect in the case of the *mudrik li-d̲h̲ātihi*, which grasps itself intuitively. Apart from this case, states Ibn Sīnā (*K. al-Mubāḥat̲h̲āt*, ed. ʿA. Badawī, in *Aristū ʿind al-ʿArab*, Cairo 1947, i, 124), it depends on the degree of abstraction of the knowledge which it confers, since it involves a certain relation to that which is taken from it or to that which is attributed to it (*lahu iḍāfatu-mmā ilā mā yunzaʿu ʿanhu aw yulḳā ʿalayhi*). In fact *idrāk* is an attainment (*taḥṣīl*) or a "taking" (*ak̲h̲d̲h̲*) of the form of a thing. This form can be grasped without reference to matter and all its concomitants (*lawāḥiḳ*), the references (*ʿalāʾiḳ*) to matter being entirely withdrawn (*nazʿ*^{an} *kāmil*^{an}). On the other hand, in sensory knowledge, *idrāk*, although the grasp of matter in itself may be taken away from it, reaches the form together with its material concomitants and its references to matter. Thus we grasp not the idea of man, but the actual Zayd or ʿAmr. Form exists for the senses only when it is connected with an existing matter. Through the imagination (*k̲h̲ayāl*), form is even further divorced from matter, since it can be imagined in the complete absence of perceptible matter, without a relation of dependence between them (*ʿalāḳa*). However, the imagination does not detach form from the concomitants of matter since it grasps it only in its individuality: one does not imagine man in general, but always according to a particular definition of quantity, quanlity and position (*ʿalā taḳdīri-mmā wa takyīfi-mmā wa waḍʿi-mmā*). The estimative faculty (*wahm*) grasps a yet slightly more abstract form: it attains the idea which is in itself quite immaterial, but grasps it in so far as it appears accidentally in a material thing. Thus Aristotle said that man is seen in Callias. The imagination, which represents individual reality in the form of an image linked to the *lawāḥiḳ* of the matter, remains connected with *wahm* as does the image of Callias to the idea of man perceived in it. The *idrāk* in *wahm* is therefore very complex. At the highest point, on the other hand, the *idrāk* of the intelligence is simple, since it has to deal with a form which is either in itself separate from all matter, or else remains detached from matter and from all its concomitants.

Consequently, each faculty has its own *idrāk*. The grasp of the intellect is a perfect intuition in which that which is understood is immediately identified with the person who understands. Sensory apprehension, however, requires an instrument (*āla*), for example the eye, and sometimes an intermediary such as the air. It is not that *idrāk* uses this instrument or this intermediary to attain perceptible truth outside the soul, but that through them the senses receive a certain individual impression which transforms them and endows them with a certain conformity to that which is perceived. Thus *idrāk*, on the level of sensation, achieves an adequation in spite of the obstacle of perceptible matter, since that which perceives in actuality is similar to that which is perceived in actuality (*fa-yakūn al-ḥāss bi-ʾl-fiʿl mit̲h̲l al-maḥsūs bi ʾl-fiʿl*). *Idrāk* is thus, at this level, what is known as sensory intuition, and it prepares the way for the perfect spiritual grasp which is intellectual intuition.

In order to justify the possibility of an adequation of the knower and the known in sensory perception, Ibn Sīnā distinguishes the close (*ḳarīb*) perceptible, that is the modification of the percipient soul by the action which is exerted on it (*fa-inna ʾl-iḥsās infiʿālu-mmā wa-ʾstiḥāla ilā mus̲h̲ākalat al-maḥsūs bi ʾl-fiʿl*), and the distant (*baʿīd*) perceptible, which is outside (*k̲h̲āridj̲*) the soul, the form by which external things are "informed" and which corresponds to the form by which the soul is "informed" at the time the feeling takes place. He uses in both cases the same expression: *al-mutaṣawwar bi ʾl-ṣūra*. He points out, however, that the information in things occurs through a movement which engenders them or produces in them this or that attribute, by means of a change (*tag̲h̲ayyur*) which leads to a passing from

one opposite to another (for example, a cold body becomes warm), whereas the information which makes the soul aware of the perceptible form is not the result of a movement of this sort but is a perfecting of the soul (*istikmāl*), that is the making actual of a potential of the soul which does not cause it to pass, in its essence, from one opposite to another. Thus the soul grasps directly the perceptible forms, without these forms having to engender themselves in it from their opposites. "The result of this is that the soul feels itself and not the idea ... when we mean the most immediate act of perception, in which there is no intermediary" (*fa-hiya taḥissu dhātahā, lā'l-thaldj idhā ʿanaynā akrab al-iḥsās, alladhī lā wāsiṭata fīhi*). Consequently, even at the level of perception, *idrāk* has, according to this doctrine, a character of immediacy which confirms its intuitive value.

Al-Kindī, in his "Treatise on Definitions" (*Rasāʾil al-Kindī al-falsafiyya*, ed. Abū Rida, Cairo 1950, i, 165, 167), had already defined the intellect (*ʿaḳl*), the imagination (*tawahhum, fanṭāsyā, takhayyul*) and perception as the faculties which "grasp" (*mudrika*) forms: "Perception is the existence (*inniyya* = Dasein) of the grasp (*idrāk*) by the soul of forms endowed with matter, in their matter (*ṣuwar dhawāt al-ṭīn fī ṭīnatihā*). It can be seen that the idea of *idrāk* is not yet developed as it is to be in Ibn Sīnā, cf. *Shifāʾ, al-ṭabīʿiyyāt*, vi, *ʿIlm al-Nafs*: this way of expressing it can lead one to infer that the sensory *idrāk* has the power of grasping forms in their matter itself, i.e. that it involves an intentionality which directs it outside. Ibn Sīnā regards *idrāk* as an action which remains within the soul, which ends in an affection of the soul and gives it a perfection (cf. the lexicographical meaning of "reaching its maturity"). It is the perceptible form in the soul which is intentional, the close form being turned towards the distant form; it is not *idrāk* itself. An intentional *idrāk* would express rather this other meaning of the root: "to rejoin, meet, overtake".

Al-Ghazālī, on the other hand, attributes to *idrāk* a dynamism which extends its scope to the things themselves. The heart (*ḳalb*) has, he says, three sorts of "expeditionary troops" (*djunūd*): the will, the motive power of the limbs of the body, and the third, which is "that which grasps things and informs itself of them, as spies do (*al-mudrik al-mutaʿarrif li'l-ashyāʾ ka'l-djawāsīs*)". These are the five senses. "These troops are spread (*mabthūtha*) throughout specific organs, and this is expressed by the terms learning (*ʿilm*) and *idrāk*" (*Iḥyāʾ*, Cairo, iii, 5). In fact al-Ghazālī conceives the feelings as linked to two fundamental vital functions: the acquisition of what is useful and the avoiding of what is harmful. Hence his military metaphors. The subjective side (the "close form" of Ibn Sīnā) in perception is thus completely directed towards an encounter with the things on the frontier of the body, and *idrāk* is no longer the grasp of something affecting the soul which reflects its external cause; it is the direct grasp of the nature of this cause in the form in which it manifests itself in the place where it is and whence it acts on the body. The form of an edible fruit is grasped neither in the soul nor in the eye, but on the tree so that one is able to go and pick it there. If the form is felt in the soul, one no longer has a cognitive sensation but the grasp of an affective state, pleasure (*ladhdha*) or pain (*alam*). From this point of view, *idrāk* is divided, at the sensory level, into what may be called on the one hand external, localized and cognitive perceptions, and on the other hand perceptions which are internal, non-localized or badly localized and affective.

This difference in the conception of *idrāk* arises from the fact that the *falāsifa* present it in relation to the degree of abstraction from what it grasps, in a hierarchy of knowledges which culminates in intuition of the intellect. On the other hand, al-Ghazālī, having a theologian's approach, considers primarily the concrete situation of conscious man in this world below (*dunyā*), a situation directed towards the religious values of *dīn*, according to a perspective in which true knowledge is more a means than an end.

Al-Tahānawī (Beirut ed., ii, 484) summarizes the question of *idrāk* in these terms: "For the philosophers (*ḥukamāʾ*), this word is synonymous with knowing, in the sense of a form which, deriving from a thing, presents itself to the intellect, without specifying whether this thing is abstract or material, particular or universal, present or absent, whether it is realized in the *mudrik* himself, or in an instrument. In this meaning, *idrāk* embraces four divisions: the act of perception (*iḥsās*), of imagining (*takhayyul*), of supposing (*tawahhum*) and of understanding (*taʿaḳḳul*). Some limit the word *idrāk* to the particular meaning of *iḥsās*, and it is then more particular than the word 'knowing' ...".

Finally, al-Tahānawī mentions that in the terminology of the Ṣūfīs *idrāk* is of two sorts: the *idrāk basīṭ* (simple), which is the grasp of the existence of God together with the forgetting both of this grasp and of the fact that it is the existence of God which is grasped (this is therefore *idrāk* in a state of ecstasy involving a total loss of consciousness of self); *idrāk murakkab* (composite) accompanied by the awareness of this grasp and of the fact that it is the existence of God which is grasped. It should be mentioned that the mystics do not speak, any more than the philosophers do, of a grasp of God's essence, which is impossible, but of a grasp of His existence. To the extent to which perception produces an awareness of the existence of a thing, this *idrāk murakkab* of the mystics would be analogous to a sensory knowledge. This recalls the question of the vision of God after death. Probably the eyes do not grasp it: *lā tudrikuh al-abṣār*, but there could occur a grasp without qualification which would therefore be reduced to a grasp of the existence [of God]. And indeed, some have claimed that although the colour black is visible, this is not because it is black in colour, but because it exists. Thus, although the existence is already the specific object of sensory vision, it is possible *a fortiori* to conceive of a non-sensory *idrāk* which would be a "vision" of the existence of God (on this question, cf. Fathalla Kholeif, *A study on Fakhr al-Din al-Razi and his controversies in Transoxiana*, Beirut 1966, 118 f. and p. 16 of the Arabic text).

Bibliography: In the article.

(R. Arnaldez)

IDRĀKĪ BĒGLĀRĪ, a native of Ṭhaṭṭa [*q.v.*], the old capital of lower Sind, belonged to the Arghūn tribe of Turkomans (cf. ʿAlī Shēr Ḳāniʿ, *Maḳālāt al-shuʿarāʾ*, Karachi 1958, 80). No biographical details about him are available beyond the fact that 'Idrākī' was his poetical name. As to his *nisba* Bēglārī, it is not clear whether it was a surname or whether he adopted it on account of his close association with the Bēglār family of lower Sind. His patron, Shāh Abu 'l-Ḳāsim Sulṭān (d. 1039/1621) b. Shāh Ḳāsim Khān-i Zamān, was well-known for his valour and literary accomplishments. A

nobleman of great influence during the days of the last independent ruler of Sind, Mirzā Ghāzī Bēg (d. 1021/1612), he composed poetry under the pen-name of Bēglār (cf. *The Persian poets of Sind*, 49). The Bēglārs, according to Idrākī himself (cf. *Bēglār-nāma*, 25), originally hailed from Samarḳand and claimed descent from Ḥusayn b. ʿAlī, the grandson of the Prophet. As Idrākī was a Turkoman, he could not belong to the tribe of the Bēglārs. It would, therefore, be reasonable to assume that Idrākī, considering himself a disciple in poetry of Shāh Abu 'l-Ḳāsim Sulṭān, adopted this *nisba*, perhaps just to please and flatter his patron. He himself admits that praising the Amīr had always been his only profession and that he was "one of his retainers". It appears that Idrākī was a poor man of humble origin, possessing talent but lacking patronage. Circumstances appear to have compelled him to attach himself to the family of the Bēglārs as a "court poet" in order to make a living. This is why we find no details about his life; even his real name has not been recorded by any historian of Persian literature in Sind. It would be safe to say that it was at Naṣrpūr, the seat of the Bēglār family, that Idrākī lived most of his life and that he also died there. It is regrettable that while the graves of the Bēglār Amīrs have been preserved and even bear inscriptions, Idrākī's grave has not been traced so far—a further indication that he was not considered a socially important personnage.

His fame rests mainly on his two outstanding poetical works: (1) *Čanēsar-nāma* (Karachi 1956), a *mathnawī* (composed in 1010/1601-2) dealing with a romantic tale of Sind, in which Līlā, the consort of Čanēsar, a ruler of the Sūmrā dynasty, willingly agrees to let her rival Kawńrau, the unmarried daughter of a local landlord, pass a night with her husband, to be finally discarded by the royal prince as a faithless wife. Mīr Ṭāhir Muḥammad "Nisyānī" wrongly attributes the *Čanēsar-nāma* to Mīr Abu 'l-Ḳāsim Sulṭān (cf. *Taʾrīkh-i Ṭāhirī*, Hyderabad 1964, 36, 236). This raises the question: was Idrākī a hired poet and is this why we find no details about his life? (2) *Bēglār-nāma* (ed. Hyderabad (West Pakistan), printed but not yet published), a detailed account of the life and achievements of the father of Shāh Abu 'l-Ḳāsim Sulṭān, the author's patron, Khān-i Zamān Amīr Shāh Ḳāsim Khān b. Amīr Sayyid Ḳāsim Bēglār (d. 954/1547), a nobleman and military commander, who flourished during the reign of Mirzā Shāh Ḥusayn Arghūn [*q.v.*]. Amīr Shāh Ḳāsim himself was attached to the court of Mirzā ʿĪsā Khān Tarkhān I (d. 980/1572), the founder of the Tarkhān dynasty of Sind. The book, apart from recounting the military achievements of Amīr Shāh Ḳāsim, also throws valuable side-lights on historical events in Sind, with particular reference to the Arghūns and the reigns of Mirzā ʿĪsā Tarkhān I and his successors. It was composed in 1017/1608-9 (cf. *Bēglār-nāma*, 262), when the Khān-i Zamān had reached the age of 70. He died two years later in 1019/1610-11. Later the author made some unimportant additions to the text referring to events up to 1034/1624.

(A. S. Bazmee Ansari)

IDRĪS, person mentioned twice in the Ḳurʾān (second Meccan period): XIX, 57/56-58/57, "And mention in the Book Idrīs; he was a true man (*ṣiddīḳ*), a Prophet. We raised him up to a high place", and XXI, 85-86, "And [make mention of] Ismāʿīl, Idrīs, Dhu 'l-Kifl—each was of the patient, and We admitted them into Our mercy; they were of the righteous" (tr. A. J. Arberry). Among the explanations suggested for this name, obviously foreign and adapted, like the name Iblīs [*q.v.*], to the pattern *ifʿīl*, may be mentioned that of Casanova (in *JA*, cciv, 358, followed by Torrey, *The Jewish foundation of Islam*, New York 1933, 72) which connects it with ʿEzra (under the Greek form Ἔσδρας), and that which considers it to be a corruption of Andreas and referring either to the apostle Andrew (T. Nöldeke, in *ZA*, xvii, 84 ff.) or to a person with the same name, the cook of Alexander the Great who achieved immortality by accident, according to the romance of Alexander (R. Hartmann, *ibid.*, xxiv, 314 ff.). In any case, the brief references in the Ḳurʾān have been sufficient for later Muslim legend, often filled out with material from apocryphal Biblical and Rabbinical sources, to identify him with characters in the Bible and the Apocrypha who ascended into Heaven: most frequently with Ḥanōkh (Enoch, Arabic spelling Akhnūkh), more rarely with Elijah (Ilyās) or al-Khiḍr (Khaḍir). On the other hand, as a result of the syncretism practised by the Hermetists, the astrologers and the alchemists, whose speculations are not easy to distinguish from one another and whose ideas tend to become identical, especially among the "Sabeans", Idrīs has been introduced into the genealogy of the "Hermes" (*Hirmis* [*q.v.*], pl. *Harāmisa*); this thread can be traced from Abū Maʿshar (*K. al-Ulūf*), whose sources have not yet been identified, to Ibn Abī Uṣaybiʿa, not to mention still later compilations. Similarly Idrīs has been credited with a number of wise sayings, and Muslim mystic thought, particularly that with a philosophico-theosophical tendency, gives him a place among its mythical illuminati; Ibn al-ʿArabī describes him as "the prophet of the philosophers"; a number of works were attributed to him (Ibn Sabʿīn [*q.v.*] wrote a commentary on one, cf. Ḥādjdjī Khalīfa, ed. Flügel, iii, 599, no. 7170); he is credited also with various inventions, arts of divination like geomancy and *zāʾiradja* [*q.v.*], and with useful arts, particularly that of writing (which again connects him with Hermes and with the Babylonian god Nabū) and that of making garments (an attribute grafted by Balʿamī onto the Iranian myth of Gayōmarth); this reputation assured him a place among the patron saints of the craftsmen's guilds and the representative figures of the *futuwwa* [*q.v.*].

Sunnī legend generally places Idrīs between Adam and Noah; it makes him the recipient of a number of revelations in the form of holy books (*ṣuḥuf*); it relates how he entered into Paradise while still alive, never to leave it again (this is an idea which, in the Jewish Aggada, is attached to the 3rd century Palestinian rabbi, Yehoshuʿa ben Levi); the Prophet is said to have met him during his ascension to Heaven. The Shīʿī legend concerning him (Ibn

Bābūya, d. 381/991) is a combination of Biblical stories of Elijah (I Kings XXI, XVII and XIX; II Kings I, 9-15, in this order) and of Elisha (II Kings VII) adapted to the theory of ghayba [q.v.].

(G. Vajda)

IDRĪS I (al-Akbar) b. 'Abd Allāh, son of 'Abd Allāh b. al-Ḥasan b. al-Ḥasan b. 'Alī [q.v.], given the by-name al-Aṣghar in the 'Alid genealogies, and founder of the Idrīsid dynasty in the Maghrib. After the defeat and death of his nephew al-Ḥusayn b. 'Alī b. al-Ḥasan at Fakhkh [q.v.], near Mecca, on 8 Dhu 'l-Ḥidjdja 169/11 June 786, Idrīs, who had fought on his side and had managed to escape the massacre, remained in hiding for some time, then, accompanied by a devoted freedman, Rāshid, reached Egypt. With the help of the head of the courier-service, Wāḍiḥ, a partisan of the 'Alids, he then succeeded in crossing Egypt and continuing his journey towards the Maghrib. He thus reached Tlemcen, then the province of Tangiers, where he finally settled at Walīla (Volubilis). Having entered the Maghrib in 170/786-7, he settled at Walīla under the protection of the chief of the Berber tribe of the Awraba, Abū Laylā Isḥāḳ b. Muḥammad b. 'Abd al-Ḥamīd, on 1 Rabī' I 172/9 August 788. This tribe, like a number of others in the province of Tangiers, professed Mu'tazilism. Six months after his arrival this chief had Idrīs proclaimed as ruling imām on Friday 4 Ramaḍān 172/5 February 789, by his own and allied tribes. Idrīs is then said to have founded Madīnat Fās, originally just a military camp, on the right bank of the wādī Fās. After many expeditions to impose his authority on the neighbouring tribes, the majority of them professing Christianity, Judaism or practising the cults of sun- or fire-worship, he returned to Walīla. He thus succeeded in consolidating his power over the valley of the Wargha and in forcing the tribes of the Tāmesnā and the Ghayyātha of Tāzā to respect its frontiers. It is certain that the expeditions to the Sūs al-Aḳṣā, to Māssa and to Tlemcen with which he is credited should be attributed to his son Idrīs II. He died at Walīla, poisoned, it is said, on the orders of Hārūn al-Rashīd, by a certain Sulaymān b. Djarīr al-Djazarī, known as al-Shammākh, at the beginning of the year 175/May-June 791, after a reign of less than three years. He was buried in the ribāṭ built outside the town, on the site of the present mausoleum of Mawlāy Idrīs.

(D. Eustache)

IDRĪS II (al-Aṣghar, or more correctly al-Azhar), b. Idrīs I. On his death, Idrīs I left a

concubine named Kanza, of the Berber tribe of the Nefza, who was seven months pregnant and gave birth at Walīla in Rabīʿ II 175/August 791 to a son, also named Idrīs. To distinguish them, the first was called al-Akbar and his son al-Aṣghar, or, as a hypocorism, al-Azhar. Rāshid (see preceding article) had persuaded the Berbers to wait for the birth of the child and, if it was a son, to proclaim him as imām. When this happened, Rāshid acted as regent and served the young prince as tutor and mentor. In 186/802, Ibrāhīm b. al-Aghlab instigated the revolt of Bahlūl b. ʿAbd al-Wāḥid among the Maṭghara and had Rāshid assassinated. The regency passed to Abū Khālid Yazīd b. Ilyās who, at the beginning of 187/803, had Idrīs II, then aged eleven, proclaimed imām in the mosque of Walīla. The young prince succeeded in making peace with the Aghlabid ruler. In 189/805, he welcomed some Arab supporters who came from Ifrīḳiya and from al-Andalus. Walīla then seemed too small for him, and Idrīs II's wish to become independent of the Berbers led him to seek a site on which to found another capital; in 190 and 191/806-7 he made some unsuccessful attempts. In 192/808, having executed Isḥāḳ b. Muḥammad b. ʿAbd al-Ḥamīd, the chief of the Awraba, who was accused of having been in communication with the Aghlabid, he once again had allegiance sworn to him; he was now seventeen. Then, at the end of the year, he settled on the right bank of the wādī Fās, which was inhabited by some Zanāta, the Banū Izghaten, and where his father had founded the fortified military camp of Garwāwa, the beginnings of Madīnat Fās. He had the walls strengthened, then in 193/809 he moved to the left bank, where he had bought the land from the Banu 'l-Khayr, a fraction of the Zawāgha, in a place called al-Maḳarmada, and founded an eastern quarter, hence known as Ifrīḳiya and ʿUdwat al-Ḳarawiyyīn. At the beginning of 197/end of 812, he launched an expedition against the Maṣmūda of the High Atlas and seized Neffīs, then another against the Nefza of the country around Tlemcen. He remained for some time in this town, where he restored the mosque of Agādīr and had his name inscribed on the *minbar* (199/815). He entrusted the town and its province to his cousin, Muḥammad b. Sulaymān b. ʿAbd Allāh, and returned to Fās. At the end of 202/spring-summer 818, there arrived in Morocco a great number of *rabaḍiyya*, common people of Cordova expelled by al-Ḥakam I. Idrīs, wishing to end the Berber predominance in the right bank district, invited them to come and live there: this was to be the ʿUdwat al-Andalus. After many battles during his reign against the Barghawāṭa, the Khāridjī and pagan Berber tribes, Idrīs died as the result of an accident, at Fās or Walīla, in Djumāda II 213/September 828, at the age of 38, after an effective reign of 22 years. He was buried at Walīla, beside his father. It was not until the 9th/15th century, in Radjab 841/1437-8, that for reasons connected with the defence of Islam against the Christian invaders and the prestige of the holy town of Fās, founded by Idrīs, his body was removed and opportunely rediscovered there in the mosque of the Chorfa, where his tomb still remains the object of veneration by the Moroccans.

IDRĪS, historian of Yemen [see AL-SHARĪF ABŪ MUḤAMMAD IDRĪS B. ʿALĪ].

IDRĪS B. AL-ḤASAN, Ismāʿīlī historian [see Supplement].

AL-**IDRĪSĪ**, Abū ʿAbd Allāh Muḥammad b. Muḥammad b. ʿAbd Allāh b. Idrīs al-ʿĀlī bi-amr Allāh, called also al-Sharīf al-Idrīsī because of his exalted lineage, owes his fame to a work of descriptive geography entitled *Kitāb Nuzhat al-mushtāḳ fi 'khtirāḳ al-āfāḳ*, which was produced on the orders of Roger II, the Norman king of Sicily, as a key to a large silver planisphere which the author himself had made. For this reason the work was also called *Kitāb Rudjār* (the Book of Roger) or *al-Kitāb al-Rudjārī*. According to information found at the end of the six complete manuscripts which have survived, the book was completed in 548/1154, and this is the only certain date known in the life of al-Idrīsī. Biographical notices on him are rather rare, and according to F. Pons Boigues this is to be explained by the fact that the Arab biographers considered al-Idrīsī to be a renegade, since he had lived at the court of a Christian king and written in praise of him in his work. Some western writers state that he was born at Ceuta in 493/1100 and that he studied at Cordova (hence the by-name al-Ḳurṭubī). He states in his book that he travelled a great deal in Spain and in North Africa. The circumstances with led him to settle in Sicily at the court of Roger II are not known, nor are the details of the last days of his life and of his death, which some state to have occurred in 560/1165.

The Sicilian Arab poet, Ibn Bashrūn (or Bishrūn), his contemporary, states that al-Idrīsī had written for William I another geographical work entitled *Rawḍ al-uns wa nuzhat al-nafs*, of which up to now no certain trace has been found. According to Reinaud and Rommel this information is indirectly confirmed by the fact that the content of the citations from al-Idrīsī given by Abu 'l-Fidāʾ in his *Taḳwīm* does not tally with the corresponding passages of the Book of Roger. It is worthy of note that Abu 'l-Fidāʾ refers to a work which he calls in his introduction *Kitāb al-Sharīf al-Idrīsī fi 'l-mamālik wa 'l-masālik*.

At the beginning of this century, J. Horovitz discovered in Istanbul the manuscript of a work by

al-Idrīsī entitled *Uns al-muhadj wa rawḍ al-furadj* or, according to another reference found at the end of the manuscript, *Rawḍ al-furadj wa nuzhat al-muhadj*. C. F. Seybold, in his article on al-Idrīsī in *EI*[1], states that this is a summary of al-Idrīsī's second geographical work written for William I, whereas J. H. Kramers thought that it was an extract from the "great Idrīsī" written in 588/1192 and rewritten a century later, since it contains the addition of a brief description of an eighth climatic zone south of the Equator and a reference to the author Ibn Saʿīd, who was alive *circa* 670/1270. This abridgement is known usually as the "little Idrīsī", the name given to it by K. Miller, and later adopted generally.

In addition to the complete text of the Book of Roger there exists an abbreviated text in which here and there sections have been cut, apparently without any precise motive. The fact that this text has been thus abbreviated has made it difficult to evaluate: to give only a few examples, it has been called in turn "estratto spoglio" (Schiaparelli), "résumé superficiel" (Seybold), "incomplete abridgement" (Kramers) and "extraits maigres" (Lelewel). This abridgement, which was included among the first secular Arabic works printed by the Medici press in Rome [see MAṬBAʿA] in 1592, has the title *Kitāb Nuzhat al-mushtāḳ fī dhikr al-amṣār wa 'l-aḳṭār wa 'l-buldān wa 'l-djuzur wa 'l-madāyin wa 'l-āfāḳ*. This Medici edition was translated into Italian in 1600 by the Italian polygraph B. Baldi, this unpublished translation being now in the University of Montpellier, and into Latin in 1619 by the Maronites Gabriel Sionita and Joannes Hesronita. This Latin translation was published in Paris with the title *Geographia Nubiensis, id est accuratissima totius orbis in septem climata divisi descriptio continens praesertim exactam universiae Asiae et Africae, rerumque in iis hactenus incognitarum explicationem*. The manuscripts of this abridgement do not mention the author, which is why a copyist's error in transcribing *arḍunā* ("our country") instead of *arḍuhā* in a passage on Nubia led to the work's being attributed simply to a "Nubian". Many studies have been published based on various parts of the Medici text.

Of the Book of Roger there exist two abridgements. The first, entitled *Djany al-azhār min al-rawḍ al-miʿṭār*, discovered in Cairo in 1893 by Vollers, was abridged by a certain Ḥāfiẓ Shihāb al-Dīn Aḥmad al-Maḳrīzī. The fact that he had the same name as the historian al-Maḳrīzī caused this manuscript to be erroneously attributed to the historian; it was for a long time thought to be an abbreviation of a geographical encyclopaedia entitled *Rawḍ al-miʿṭār fī khabar al-aḳṭār* compiled by Ibn ʿAbd al-Munʿim al-Ḥimyārī [*q.v.*]. The second abridgement of the Book of Roger, whose author, an Arabic-speaking Armenian, named it simply *Kitāb al-djughrafiya* (sic!) *al-kulliyya ay ṣūrat al-arḍ*, was discovered at the beginning of this century by E. Griffini in a private collection in Tunis.

The maps (some of them in colour) which illustrate the text and which are found in a certain number of manuscripts as well as in the Istanbul manuscript of the "little Idrīsī" are of especial interest. There is, in general, one for each section of the seven climatic zones, plus a planisphere in the introductory chapter. The majority have been published by K. Miller in his *Mappae arabicae*.

The critical edition of the Book of Roger, which has been hoped for since the end of the 18th century, is now finally being undertaken by an international group of scholars, each dealing with the part on which he is a specialist, under the auspices of the Istituto Italiano per il Medio e l'Estremo Oriente at Rome and under the direction of a committee consisting of G. Tucci, E. Cerulli, †G. Levi Della Vida, F. Gabrieli, L. Veccia Vaglieri, A. Bombaci and L. Petech. An editorial committee is based at the Istituto Universitario Orientale of Naples.

There should also be mentioned a second original work which is attributed to al-Idrīsī: a treatise on simples entitled *Kitāb al-Djāmiʿ li-ashtāt al-nabāt* or *Kitāb al-Mufradāt* or *Kitāb al-Adwiya al-mufrada*, the manuscript of which was discovered in 1928 by H. Ritter in the Fatih library in Istanbul. Although the manuscript is incomplete and has many lacunae, the importance of this work, which is often mentioned by Ibn al-Bayṭār and which was thought to be lost, has been demonstrated by M. Meyerhof, who states that al-Idrīsī succeeds in giving synonyms for each drug in a great number of languages, sometimes as many as twelve.

Bibliography: A detailed critical bibliography with an introduction on al-Idrīsī's works is given in G. Oman, *Notizie bibliografiche sul geografo arabo al-Idrīsi (XII secolo) e sulle sue opere*, in *AIUON*, n.s., xi (1961), 25-61 and *Addenda*, *ibid*., xii, 193-4. Biographical notices are given in Ḥādjdjī Khalīfa, ed. Flügel, vi, 333-4; M. G. de Slane, *Géographie d'Edrîsi traduite* ..., in *JA*, 3rd series, xi (1841), 362-87; M. Amari, *Storia dei Musulmani di Sicilia*[2], iii/3, 677-702; F. Pons Boigues, 231-40. Information of a general nature: Abu 'l-Fidā', *Taḳwīm*, tr., CXIII-CXXII and CCCX-CCCXVI; M. Amari, *Il libro di Re Ruggiero ossia la Geografia di Edrisi*, in *Boll. della Società Geografica Italiana*, 1st series, vii (1872), 1-24; L. Schiaparelli, *L'Italia descritta nel Libro del Re Ruggero compilato da Edrisi*, Turin 1883; J. H. Kramers, *Geography and commerce*, in *The legacy of Islam*, Oxford 1931, 79-107; M. Nakhli, *La géographie et le géographe Idrissi*, in *IBLA*, 1942, 153-7; Muḥ. al-Fāsī, *al-Sharīf al-Idrīsī akbar ʿulamāʾ al-djughrāfiyā ʿind al-ʿArab*, in *al-ʿUdwatān*, i, Tangiers 1952, 9; J. H. Kramers, *La Littérature géographique classique des musulmans*, in *Analecta Orientalia*, ii, Leiden 1956, 172-204; J. Kratchkovsky, *Les géographes arabes des XI*e *et XII*e *siècles en Occident*, Fr. tr. by M. Canard in *AIEO Alger*, xviii-xix (1960-61), 1-72.

The question as to whether *Nuzhat al-mushtāḳ* existed in only one redaction or was later worked over is discussed by G. Pardi, *Quando fu composta la Geografia di Edrisi?*, in *Rivista Geografica Italiana*, xxiv (1917), 380-2. The only complete translation of the Book of Roger is that by P. A. Jaubert, *Géographie d'Edrisi traduite de l'arabe en français d'après deux manuscrits de la Bibliothèque du Roi et accompagnée de notes*, Paris 1836-40, 2 vols. The complete Arabic text has not yet been edited. There exist many partial studies which we have attempted to arrange geographically: Europe: J. Lelewel, *Géographie du Moyen-Âge*, Brussels 1852. The Iberian peninsula: J. A. Conde, *Descripcion de España de Xerif Aledris, conocido por el Nubiense*, Madrid 1799; R. Dozy and J. De Goeje, *Description de l'Afrique et de l'Espagne*, Leiden 1866; D. E. Saavedra, *La Geografia de España del Edrisi*, in *Boletin de la Real Sociedad Geografica de Madrid*, xviii (1885), 224-42; C. E. Dubler, *Los caminos a Compostela en la obra de Idrīsī*, in *And.*, xiv (1949), 59-122; idem, *La laderas del Pirineo según Idrīsī*,

in *And.*, xviii (1953), 337-73; R. Blachère, *Extraits des principaux géographes arabes du Moyen-Âge*, Paris-Beirut 1932, 190-200. British Isles: A. F. L. Beeston, *Idrisi's account of the British Isles*, in *BSOAS*, xiii (1950), 265-80; P. Wittek, *Additional notes to Idrīsī's account of the British Isles*, in *BSOAS*, xvii (1955), 365-6; D. M. Dunlop, *The British Isles according to medieval Arabic authors*, in *Islamic Quarterly*, iv (1957), 11-28; idem, *Scotland according to al-Idrīsī*, in *The Scottish Historical Review*, xxvi (1947), 114-8; W. B. Stevenson, *Idrisi's map of Scotland*, in *The Scottish Historical Review*, xxvii (1948), 202-4. The Northern Isles: D. M. Dunlop, *R-slanda in al-Idrīsī*, in *The Scottish Historical Review*, xxxiv (1955), 95-6. Germany and France: W. IDRĪSIDS (ADĀRISA), Moroccan dynasty of descendants of ʿAlī b. Abī Ṭālib, founded in 172/789 by Idrīs I [*q.v.*], who was succeeded by his son, Idrīs II [*q.v.*]. The decadence of the dynasty was to commence with the latter's death. He left twelve sons: Muḥammad, Aḥmad, ʿUbayd Allāh, ʿĪsā, Idrīs, Djaʿfar, Ḥamza, Yaḥyā, ʿAbd Allāh, al-Ḳāsim, Dāwūd, ʿUmar. His eldest son, Muḥammad (no. 3 in the table), succeeded him and, on the advice of his grandmother Kanza, divided the kingdom among the eldest of his brothers, he himself retaining the capital of Fās. Al-Ḳāsim received Ṭandja and its dependencies, including the town of al-Baṣra; ʿUmar received the countries of the Ṣinhādja and of the Ghumāra of the Rif; Dāwūd the country of the Hawwāra, to the east of Tāzā; Yaḥyā, Dāy and its dependencies; ʿĪsā, Wazekkūr and the northern Tāmesnā, with Salā (Shālla); Ḥamza, al-Awdiya, the territory of Walīla; ʿUbayd Allāh, the south with the country of the Lamṭa and its dependencies. The other princes who were too young to rule remained under the tutelage of their eldest brother and of their grandmother. At the same time, Tlemcen (Agādīr) remained the fief of Muḥammad b. Sulaymān, the cousin of Idrīs II.

This division immediately produced rivalries. ʿĪsā, ruler of Wazekkūr, revolted against Muḥammad, who appealed to his brother al-Ḳāsim, ruler of Ṭandja, to go and punish the rebel. Meeting with a refusal, he entrusted the task to ʿUmar, ruler of the Rif, who attacked Wazekkūr and drove out ʿĪsā, who was forced to take refuge in Salā. ʿUmar then marched on Ṭandja to punish the insubordination of al-Ḳāsim; the latter, defeated, had to flee towards Aẓayla (Arzila), near which he settled. As a reward, ʿUmar was given the governorship of Ṭandja and ruled over his own domain and that of his brother until his death, at Fadjdj al-Faras in the country of the Ṣinhādja, in Shawwāl 220/September-October 835. His body was transported to Fās for burial. On Muḥammad's orders, his apanage passed to his son ʿAlī b. ʿUmar.

Muḥammad survived his brother by only seven months and, after a reign of over eight years, died, in Rabīʿ II 221/March-April 836, at Fās and was buried there. He had appointed to succeed him his son ʿAlī (no. 4), aged nine years. The Awraba and the Berber coalition swore an oath of allegiance to him, and the chiefs of the tribes acted as regents until he came of age. He was endowed with great qualities and succeeded in organizing the country, pacifying it and ensuring the stability of the state. He reigned at Fās for thirteen years and died in Radjab 234/January 849.

He was succeeded by his brother Yaḥyā (no. 5), during whose peaceful reign there came to settle in Fās many immigrants from al-Andalus and Ifrīḳiya. The town, which soon became too small for its population, was to have many new buildings added, in particular the two great mosques of Fās, that of the Ḳarawiyyīn and that of al-Andalus, both founded in 245/859. Yaḥyā died in 249/863 and was succeeded by his son, Yaḥyā II (no. 6), who showed no aptitude for rule and proceeded to share out his domain yet again: the Banū ʿUmar retained their territory, but Dāwūd added a great deal to his, to the east of Fās, where he had for some time occupied the right bank when engaged in fighting his great-nephew; the family of al-Ḳāsim received the west side of Fās together with the government of the territories of the Luwāta and Kutāma tribes; Ḥusayn, Yaḥyā's maternal uncle, received the territory to the south of Fās,

up to the Atlas mountains. Yaḥyā led a dissolute life and was forced, as the result of a scandal, to flee from his palace and take refuge in the district of the Andalusians, where he died in 252/866, the circumstances of his death being unknown. He had married a daughter of his cousin ʿAlī b. ʿUmar (no. 7), ruler of the Ghumāra, and when ʿAbd al-Raḥmān b. Abī Sahl al-Djudhamī, a powerful citizen of Fās, took advantage of the general discontent to seize the power for himself, Yaḥyā's widow appealed for help to her father, who seized the quarter of the Ḳarawiyyīn and restored order. Thus the power passed from the family of Muḥammad to that of ʿUmar. During ʿAlī b. ʿUmar's reign a Ṣufrī Khāridjī, ʿAbd al-Razzāḳ, revolted in the mountain district of Madyūna to the south of Fās. After several battles, ʿAlī was defeated and forced to leave the town to take refuge with the Awraba. ʿAbd al-Razzāḳ occupied the Andalusian quarter, but the quarter of the Ḳarawiyyīn refused to submit to him and summoned as ruler Yaḥyā (III) b. al-Ḳāsim (no. 8), named al-Miḳdām.

With this prince the power changed again to another family. He succeeded in taking the Andalusian quarter, from which the usurper fled; he reigned for a long period over the whole kingdom and fought against the Ṣufrīs. He was killed in 292/905, during a battle, by Rabīʿ b. Sulaymān, a general of Yaḥyā b. Idrīs b. ʿUmar (no. 9).

The civil war then became complicated by threats from outside: the kingdom was attacked by the Fāṭimids of Ifrīḳiya. Yaḥyā IV was defeated by the Fāṭimid general Maṣāla b. Ḥabūs in 305/917 and was forced to recognize the sovereignty of the Mahdī and to pay him tribute. He retained the governorship of Fās and its province, and that of the remainder of the country was given to Mūsā b. Abi 'l-ʿĀfiya, chief of the Miknāsa and cousin of the general. Yaḥyā was thus thwarting the ambition of the Zanātī to dominate the whole country, and Maṣāla, arriving a second time in 307/919-20 and being warned against Yaḥyā by Mūsā, took him prisoner and deposed him. He then fell into the hands of his enemy and had to go into exile at Aẓayla. Maṣāla immediately appointed a governor at Fās and then departed, leaving the country to be ruled by the Zanāta. In 313/925, al-Ḥasan b. Muḥammad b. al-Ḳāsim (no. 10), named al-Ḥadjdjām, revolted, defeated Mūsā and succeeded in taking Fās; but two years later, in 315/927, through the treachery of the governor of Fās, he fell into the hands of Mūsā and was killed.

Having become the sole ruler of the western Maghrib, Mūsā pursued the Idrīsids as far as their fortress at Ḥadjar al-Naṣr in 317/929, and then threw off the authority of the Fāṭimid caliph at the instigation of the Umayyad ruler of Spain who, after seizing Malīla in 314/927, had just taken Sabta (Ceuta) in 319/931. The Fāṭimid caliph then sent his general Ḥumayd b. Yaṣāl, and Mūsā was defeated. The Idrīsid family took advantage of this to raise the siege of their fortress and to destroy the Zanāta troops. Once the Fāṭimid forces had left, however, Mūsā once again recognized the suzerainty of the Umayyad caliph and, this time, the Fāṭimid general Maysūr, who was sent to punish him, put him to flight and the Idrīsids pursued him until he was killed. The Idrīsids then established themselves in the Rif and in the north-west of the country, where they ruled, sometimes acknowledging as suzerain the Umayyad caliph, and sometimes the Fāṭimid. Al-Ḳāsim Gannūn (no. 11) ruled in the name of the latter until 337/948-9. His son, Abu 'l-ʿAysh Aḥmad (no. 12), ruled in the name of the Umayyad ʿAbd al-Raḥmān III, al-Nāṣir, but refused to give up Ṭandja to him; he was besieged in the town and obliged to withdraw, and the country was occupied by the Umayyads, Abu 'l-ʿAysh retaining only the regions of al-Baṣra and Aẓayla. He then gave up the power to his brother al-Ḥasan b. al-Ḳāsim Gannūn (no. 13) and set off to take part in the Holy War in Spain.

In 347/958, the Fāṭimid general Djawhar arrived to fight against the Umayyads, conquered them and subjugated the whole country. The Idrīsid prince was forced again to recognize the authority of the Fāṭimid caliph. The Umayyads, after first suffering a defeat in 362/972, sent the general Ghālib to lay siege to the Idrīsids at Ḥadjar al-Naṣr. Al-Ḥasan, forced to surrender in 363/974, was taken to Cordova. Ghālib then expelled all the Idrīsids from their territories and took them or their sons as hostages to the Andalusian capital. Next, in 368/979, Buluggīn b. Zīrī came from Ifrīḳiya to conquer the western Maghrib, defeating the Umayyads and imposing Fāṭimid suzerainty on the country. In the meantime, al-Ḥasan, who had at first been made welcome, was banished from Cordova, and took refuge in Egypt. Several years later he returned, with Fāṭimid sup-

THE IDRĪSID DYNASTY

1.	Idrīs I b. ʿAbd Allāh	172/789	to 175/791
	[Rāshid, regent	175/791	to 186/802]
	[Abū Khālid Yazīd, regent	186/802	to 192/808]
2.	Idrīs II b. Idrīs I	192/808	to 213/828
3.	Muḥammad b. Idrīs II	213/828	to 221/836
4.	ʿAlī b. Muḥammad	221/836	to 234/849
5.	Yaḥyā I b. Muḥammad	234/849	to 249/863
6.	Yaḥyā b. Yaḥyā	249/863	to 252/866
7.	ʿAlī II b. ʿUmar	252/866	to ?
8.	Yaḥyā III b. al-Ḳāsim	?	to 292/905
9.	Yaḥyā IV b. Idrīs b. ʿUmar	292/905	to 307/919-20
	[Fāṭimid governor, Mūsā b. ʿAbi 'l-ʿĀfiya]		
10.	al-Ḥasan al-Ḥadjdjām b. Muḥ. b. al-Ḳāsim	313/925	to 315/927
	[Mūsā b. Abi 'l-ʿĀfiya]		
11.	al-Ḳāsim Gannūn b. Muḥ. b. al-Ḳāsim	326/937-8	to 337/948-9
12.	Abu 'l-ʿAysh Aḥmad b. al-Ḳāsim Gannūn	337/948-9	to 343/954-5
13.	al-Ḥasan b. al-Ḳāsim Gannūn	343/954-5	to 363/974 and 375/985

port, in order to seize power once again. He was defeated and taken prisoner by the Umayyad general sent by al-Manṣūr, then assassinated on the road to Cordova in 375/985. Thus, after more than two centuries, the Idrīsid dynasty died out. Later, a branch descended from the Banū ʿUmar succeeded in establishing at Malaga a kingdom which lasted for slightly more than twenty years [see ḤAMMŪDIDS]. In Morocco today there exists a large number of s̲h̲arīfs descended from the Idrīsids [see S̲H̲URAFĀʾ].

(D. EUSTACHE)

IDRĪSIYYA [see ṬARĪḲA].

IḌṬIRĀR, "compulsion, coercion", as opposed to *ik̲h̲tiyār*, "freedom of choice". Although the term itself, in its *maṣdar* form, does not belong to the language of the Ḳurʾān, the verbal use of the VIIIth form is of relatively frequent occurrence there. The idea is that of an absolute necessity (*ḍarūra*), by means of physical (secondarily moral) compulsion.

I.—*Iḍṭirār* takes on its technical sense in connexion with the theory of human actions. It thus belongs to the vocabulary of the "science of *kalām*" (the "theology" or rather the "defensive apologia" of Islam). It makes its appearance quite early: in the résumés of the thought of His̲h̲ām b. al-Ḥakam, the S̲h̲īʿī (Rāfiḍī), discussed by the Muʿtazilī schools. His̲h̲ām b. al-Ḥakam distinguishes human actions carried out under compulsion (*iḍṭirār*) and those carried out of "free choice" (*ik̲h̲tiyār*); the latter are not "compulsory", but "voluntary" and the results of an "acquisition" (*iktisāb*). This last idea, accepted by Ḍirār b. ʿAmr and his school (called *ahl al-it̲h̲bāt*, "people of the firm proof", by al-As̲h̲ʿarī), prefigures the As̲h̲ʿarite *kasb* or *iktisāb*. In the present state of our knowledge of the texts it is difficult to state whether it originates, as the *Maḳālāt al-Islāmiyyīn* (ed. Cairo 1369/1950, i, 110) says, in the vocabulary of His̲h̲ām, or that of Ḍirār, when he summarizes and discusses him. In the same way, one cannot say with certainty whether or not His̲h̲ām influenced Ḍirār (or they influenced one another) in the technical use of *iḍṭirār* as the "opposite correlative" (*muḳābal*) of *ik̲h̲tiyār*. In any case, we find the pair *iḍṭirār-ik̲h̲tiyār* among the Muʿtazilīs of Bag̲h̲dād, especially in D̲j̲aʿfar b. Ḥarb (d. 236/850-1); whereas Burg̲h̲ūt̲h̲, the disciple of the Baṣran Ḍirār, preferred to use *ṭawʿ* (cf. W. Montgomery Watt, *Free will and predestination in early Islam*, London 1948, 91 and 98). Strictly speaking, the Muʿtazilīs call man "the creator of his actions" only if he acts of "free choice".

The As̲h̲ʿarite reform takes over the vocabulary and adapts it to its own theories. The *Lumaʿ* of al-As̲h̲ʿarī (text and English trans. *ap.* R. J. McCarthy, *The theology of al-As̲h̲ʿarī*, Beirut 1953, 39/57 and 41-42/58-60) sets out to prove that all human actions are directly created by God, those produced by an acquired motion (*ḥarakat al-iktisāb*) as well as those produced by a compulsory motion (*ḥarakat al-iḍṭirār*). The system of reference here is thus no longer *iḍṭirār-ik̲h̲tiyār*, but rather *iḍṭirār-iktisāb*. Al-As̲h̲ʿarī states that the two ideas differ in that *iḍṭirār* has as its basis necessity (*ḍarūra*) and *iktisāb* has as its basis acquisition or attribution (*kasb*), which is not necessary. But their relationship with the creative power of God is the same (*ibid.*, 42/60). Al-Bāḳillānī deals with a very similar problem in his chapter on the "ability to act" (*istiṭāʿa*), in connexion with the agent who is "compelled (*muḍṭarr*) to act" (*Tamhīd*, ed. McCarthy, Beirut 1957, 293).

In one of his best analyses of human action (*Iḥyāʾ ʿulūm al-dīn*, ed. Cairo 1352/1933, iv, 219-20), al-G̲h̲azālī distinguishes three kinds of actions: natural (cleaving water with one's body), voluntary (breathing), chosen (*ik̲h̲tiyārī*) (writing). The first is necessary (*ḍarūrī*) in the strict sense, in that it cannot not take place; it comes about *bi-'l-iḍṭirār*. But all three are alike, he says (*ibid.*, 219), with respect to the actual nature (*ḥaḳīḳa*) of the compulsion (*iḍṭirār*) or the coercion or obligation (*d̲j̲abr*) that determines them. Al-G̲h̲azālī's conclusion, in fact, in conformity with the As̲h̲ʿarite system but following a more highly developed psychological analysis, is that, even in the case of "chosen" action, the decision of the will necessarily follows the judgment of the intellect, and that, accordingly, man is "compelled to free choice", *mad̲j̲būr ʿala 'l-ik̲h̲tiyār* (*ibid.*, 220). A "natural" action occurring through *iḍṭirār* is purely determined; divine action is itself purely free; human actions are in an "intermediate position", compelled to free choice. This is why the "people of the truth" (*ahl al-ḥaḳḳ*) defined "free" actions of man by means of acquisition (*kasb*).

In conclusion: in later As̲h̲ʿarite *kalām* the term *iḍṭirār* is reserved rather for an action that, of itself, cannot not take place. If human "free choice", which is only "acquisition", also remains without true ontological freedom, and is thus "compulsory", this is in a different sense: it is then called *mad̲j̲būr*. That which is known in Western philosophy as "determinism" should, on the whole, be rendered as *d̲j̲abr* or *ḍarūra* (this latter word is common in the vocabulary of *falsafa*).

II.—Another use of *iḍṭirār* ("opposite correlative": *iktisāb*) is found, in an analogical sense, in the study of the different kinds of knowledge. In this way, G̲h̲aylān already distinguished between necessary (*ḍarūrī* or *iḍṭirārī*) knowledge, which asserts directly and compulsorily on the mind, and acquired (*iktisābī*) knowledge (see W. Montgomery Watt, *op. cit.*, 41-2, 132 and ref.). We find the same distinction in the As̲h̲ʿarite school, *e.g.*, al-Bāḳillānī, *Tamhīd*, 7-8. Necessary (*ḍarūrī*) knowledge is that which every man is compelled to admit, such, says al-Bāḳillānī, is the sense of *iḍṭirār*. In the classic theme of the "channels (or "sources") of knowledge" (*asbāb al-ʿilm*) the idea of "necessary knowledge" is regularly rendered by *ḍarūrī*.

Bibliography: in the article. (L. GARDET)

AL-ʿIFĀR (sometimes given in Western sources as ʿAFAR), a small tribe in Oman in eastern Arabia.

The *nisba* is ʿIfārī. The tribesmen, who are nomads, range through the *sayḥ* or steppe east of the south-eastern corner of al-Rubʿ al-Khālī. One of the landmarks in this district is Ḳārat al-Kibrīt (the Sulphur Hill). West of the hill is Wādī al-ʿUmayrī, one of a number of valleys which run down to the quicksands of Umm al-Samīm [*q.v.*]. North of al-ʿIfār is the tribe of al-Durūʿ [*q.v.*], while to the east are sections of al-Djanaba [*q.v.*] and the tribes of Āl Wahība [*q.v.*] and al-Ḥikmān. Other sections of al-Djanaba and the tribe of al-Ḥarāsīs [*q.v.*] border on al-ʿIfār to the south.

The tradition of al-ʿIfār holds that the tribal ancestress was ʿAfrāʾ (a name still used in Arabia for a dust-coloured she-camel), a sister of ʿĀmir and Kathīr. ʿAfrāʾ, who had no husband, was got with child by an *ʿāfūr* (a sand devil, with no doubt an echo of *ʿifrīt*). ʿĀmir was bent on killing his wayward sister, but Kathīr intervened to save her, and she gave birth to a son who was named ʿIfār. This tradition points to a blood relationship between al-ʿIfār and the tribes of al-ʿAwāmir [*q.v.*] and Bayt Kathīr, the latter of which is the dominant tribe in the hinterland of the region of Ẓufār [*q.v.*] to the southwest of the range of al-ʿIfār. The people of al-ʿIfār believe that their forebears came from Ḥabarūt in western Ẓufār.

The three main sections of al-ʿIfār are Bayt Ḥamūda, al-Mazāniwa (pronounced *mzānwa*, with the singular Muzayniwī), and al-Maḥāḳiḳa (pronounced *mḥāgga*, with the singular Muḥayḳiḳī). The members of the tribe belong to the Hināwī (Southern Arab) faction in Oman, but they enjoy the special privilege of being allowed to travel unmolested, along with anyone accompanying them, in Ghāfirī (Northern Arab) territory. The tribesmen of al-ʿIfār, like their neighbours of al-Djanaba and al-Ḥarāsīs, call themselves Sunnīs. Other powerful neighbours, such as Āl Wahība and al-Durūʿ, are Ibāḍīs or mainly so.

Bibliography: Interviews with members of al-ʿIfār, supplemented by brief references in Admiralty, *A handbook of Arabia*, London 1916-7; G. Rentz, etc., *Oman and the southern shore of the Persian Gulf*, Cairo 1952; W. Thesiger, *Arabian sands*, London 1959. (G. RENTZ)

IFLĀḲ [see EFLĀḲ].

AL-IFLĪLĪ [see IBN AL-IFLĪLĪ].

IFNI, formerly called Santa Cruz de Mar Pequeña, a former Spanish enclave, about 600 square miles in area, on the coast of southern Morocco, situated between 28° 54′ 3″ and 29° 38′ 10″ N. Spanish rights in the area, where Spain held a trading post from about 1476-1524, were based upon the treaty of Tetuan (1860). They were recognised by France in 1912, but actual occupation was not affected until 1934. Its capital, Sidi Ifni, was formerly the seat of a single centralized administration for *Africa Occidental Española*, but in January 1958, following the repulse, in the previous November, of an invasion by Moroccan irregulars, it became a separate province from Spanish Sahara, each having its own military governor. Ifni is semi-desert in the south and its undeveloped resources are insufficient to maintain its population of about 40,000. With no significant exports, it was an economic liability to Spain and entirely dependent upon Morocco, where nearly half the male population found work as migrant labour. There has been no effective Hispanization. Claims to the territory advanced since 1958 by Morocco appear to have been supported by the leaders of the indigenous population, the seven tribes of the predominantly sedentary, Berber-speaking, Ait Ba-Amran. In December 1965, a resolution of the United Nations General Assembly called upon Spain to accelerate the decolonization of Ifni. Further pressure followed. Agreement between the Spanish and Moroccan governments for the transfer of sovereignty to Morocco was reached in January 1969.

IFOGHAS, confederation of Touareg tribes consisting of about 17,000 persons who live in the southern Sahara between latitudes 17° and 21° N. at the north-east extremity of the republic of Mali. They inhabit the fairly low mountains of the Adrar [*q.v.*] and especially its valleys and its surrounding depressions. The Adrar is a dense massif, of crystalline and granitic rocks, less than 1.000 metres high, which slopes to the west and is bordered to the west and the south by small sandstone plateaus. The wādīs flow almost every summer during the rainy season (136 mm. at Kidal) and sometimes join the Tilemsi to the west. The valleys and depressions are fairly rich in vegetation (acacias, tamarisks and tropical types of plant); the water there is fairly shallow and the pasturage relatively rich.

The region was probably at first inhabited by Songhaï negroes, to whom are attributed the ruins of some villages. It is then thought to have been for a long time disputed between the Touareg, the Moors and the Songhaï. The Touareg Ifoghas became and remained masters of the country, which was an important crossroad of caravan routes to the Niger (Gao), Agadès, the Ahaggar and the oases of the north, particularly Touat.

The Ifoghas, like the other Touareg, are fair-skinned, speaking *Tamahaḳḳ* (a Berber dialect) and are nomadic shepherds and caravaneers. They are however less poor than the Touareg of the north (Ahaggar and Azdjer); their line of descent is not through the women and their social structure is somewhat different: they have neither "warriors" nor slave tribes. They travel in small groups with their goatskin tents and their sheep and goats over fairly short distances, entrusting most of their camels, which travel farther afield, to keepers. In spite of the advent of lorries, they still trade by caravan with the oases of Touat and Tidikelt, from which they obtain dates, and increasingly with the Sahel area, whence they obtain millet and rice. Their only fixed points are the very small palm-grove of Tessalit, in the north-west, and the administrative centre of Kidal in the south; Kidal is the only market, its stall-holders being Mzābīs and "Arabs" from the north.

IFRĀGHA (or AFRĀGHA), the Arabic form of Fraga, name of a small town (pop. *ca.* 9000) in NE Spain 30 kms WSW of Lérida. The old part of the town is situated on the steep left bank of the R. Cinca some 18 kms above its confluence with the Ebro. Practically no traces of Muslim rule survive.

Fraga fell into Arab hands presumably when Mūsā

b. Nuṣayr took Saragossa in 96/714. Thereafter it may be assumed to have shared the fortunes of Saragossa, being rarely mentioned by name in the histories. At the beginning of the 6th/12th century it was still nominally in Almoravid territory under the governorship of Yaḥyā b. Ghāniya [see GHĀNIYA, Banū]. In 528/1134 Alfonso I "the Battler" (who had already taken Saragossa in 512/1118) tried to take Fraga but was soundly beaten by Yaḥyā. In 543/1149 the town was seized by Ramón Berenguer IV, Count of Barcelona, and Muslim rule there came to an end.

Idrīsī places Fraga with Jaca, Lérida, and Mequinenza in the province of Zaytūn, a name which he applies also, as does al-Ḥimyarī, to the Cinca. Al-Ḥimyarī also gives a few details on the battle in 528/1134. Yāḳūt gives correctly the date of the fall of Fraga to the Catalans but his short entry is otherwise a singular concentration of errors. Ḳazwīnī describes the warren of tunnels in which the inhabitants took refuge in time of trouble.

BANŪ **ĪFRAN** (or IFRAN, IFRĀN, UFRĀN ŪFRĀN etc.). the most important branch of the large Berber tribe of the Zenāta (Zanāta [*q.v.*]). According to the writings, now lost, of three Berber genealogists used by Ibn Khaldūn, namely Sābiḳ b. Sulaymān al-Maṭmāṭī, Hanīʾ b. Masdūr al-Kūmī and Kaḥlān b. Abī Luwā, the Banū Īfran are descended from Iṣlitan (also Yaṣlitan), son of Misrā, son of Zākiyā, son of Wardīran (or of Warshīk), son of Adīdat. According to the same tradition, Zākiyā was the brother of Dammar (Demmer), the eponymous ancestor of the Berber tribe of that name, while the sister-tribes of the Banū Īfran, descended from Iṣlitan, were the Maghrāwa, the Banū Īrniyān and the Banū Wasīn. Along with this tradition, which seems to have been generally adopted in Berber circles during the Middle Ages, Ibn Khaldūn also transmitted another, which appears to be far more authentic, since it derives from an Īfranid informant. It was taken by Ibn Khaldūn from the *Djamhara* of Ibn Ḥazm [*q.v.*], who reproduced it from the account given by the Spanish historian Yūsuf al-Warrāḳ (or Muḥammad b. Yūsuf Ibn al-Warrāḳ), d. 363/973. This last-named scholar took his account from Ayyūb, son of Abū Yazīd Makhlad b. Kaydād [*q.v.*], whom he had met in Cordova, where Ayyūb had been sent by his father on a mission to the Umayyad caliph ʿAbd al-Raḥmān III. Now this second tradition regarding the origin of the Banū Īfran, which may be called the "tribal" tradition, does not differ greatly from the first as known from the writings of al-Maṭmāṭī, al-Kūmī and Kaḥlān b. Abī Luwā. According to Ayyūb, the Banū Īfran were descendants of Īfrī, son of Iṣlitan, son of Misrā, son of Zākiyā, son of Warsīk (or Warshīk), son of Adīdat, son of Adīdat, son of Djānā, the eponym of all the Zanāta tribes. We may add that the Īfranid tradition transmitted by Ayyūb also regards the Banū Maghrāw (Maghrāwa), the Banū Īrniyān and the Banū Wasīn as sister-tribes of the Banū Īfran, and Dammar as the brother of Zākiyā. Lastly, according to the Ibāḍī historian Abū Zakariyyāʾ al-Wardjlānī (after 504/1110-1), the Banū Īfran and the Banū Wasīn were kinsmen, and together formed the tribe (or rather confederation) known as the Banū Tīdjart. According to Ibn Khaldūn, the name Īfrī, the eponym of the Banū Īfran, derives from the Berber word *ifri* meaning "cavern" (in modern Berber dialects *ifri/afra/ufru*, and the corresponding diminutives *tifrit* etc., mean "grotto", "cavern", "hiding-place").

The earliest mention of the Banū Īfran (who were unknown to the Greek and Latin writers of antiquity and even to Byzantine authors of the 6th century, writing in Greek or Latin) occurs in the period of the Muslim conquest of North Africa, that is to say the second half of the 1st/7th century. At that period, they were the largest and most powerful tribe of the great Zanāta family. According to Ibn Khaldūn, there were branches of them in Ifrīḳiya, the Aurès and the central Maghrib. Later, towards the end of the 1st/7th century, the Banū Īfran appear as one of the most important tribes of eastern Barbary. With the Maghrāwa and several other Berber tribes of the Zanāta branch and that of the Butr, they then joined the great Berber confederation headed by the tribe of the Djarāwa commanded by the Kāhina [*q.v.*], at once queen and prophetess. At this period the Djarāwa apparently inhabited the Aurès, and the main body of the Banū Īfran occupied the regions adjacent to what is now Tunisia. The Banū Īfran were so closely attached to the person of the Kāhina that a Berber tradition quoted by Ibn ʿIdhārī makes Īfran, the ancestor of this tribe, the father of the Kāhina. It is moreover very probable that the Banū Īfran originally were merely a confederation of sections of various east-Berber tribes, apparently formed in the second half of the 6th or the first half of the 7th century A. D. In fact, the name Banū Īfran is as yet not mentioned among those of the east Berber tribes dealt with in the *Iohannis* of Corippus (6th century), a well-known low-Latin source which gives an almost complete list of the peoples inhabiting the eastern part of Barbary at the time of the country's reconquest by the Byzantine Empire.

The Banū Īfran properly speaking, the nucleus of the future confederation of that name, were originally, it seems, no more than a somewhat insignificant tribe who had succeeded in placing themselves at the head of a number of fractions of Berber tribes at the time of the Byzantine domination or during the disturbed period of the first Arab invasions of Tripolitania and Ifrīḳiya proper. The region originally inhabited by this people was in western Tripolitania, the hypothetical homeland of all the Zanāta tribes (*arḍ Zanāta*, "land of the Zanāta" according to the accounts of Arab traditionists of the 2nd/8th and 3rd/9th centuries, used by Ibn ʿAbd al-Ḥakam in his description of the conquest of the Maghrib). The Zanāta tribe then occupied not only the interior of western Tripolitania but also the country surrounding the town of Sabra (the ancient Sabratha), on the coast, where they are mentioned in 123/741. The territory occupied by the Zanāta was bordered on the East by the *arḍ Hawwāra* "land of the Hawwāra", which included all the central part of Tripolitania. Now it was on the borders between these two lands, in the modern district of Yefren, that the Berber tribe of the Banū Īfran (or Yafran) dwelt, being thought by some to form part of the Zanāta and by others to belong to the Hawwāra. Nothing is known of the earliest history of these Banū Īfran, who first appear in Arabic sources at about the middle of the 3rd/9th century as the eastern neighbours and rivals of the Nafūsa. It is quite probable however that these Banū Īfran of western Tripolitania were merely the remnants of the large Zanāta confederation of the same name who had continued to live in the Yefren after the emigration of the main body of that confederation further to the West, towards what is

now Tunisia, probably at the time of the conquest of Tripolitania by the Arabs. As has been said, Ibn Khaldūn connects the name of Īfrī, the ancestor and eponym of the Banū Īfran, with the Berber word *ifri* "cavern". If this etymology is correct it may be supposed that the confederation of the Banū Īfran (or rather its nucleus) owed its name to the fact that the Zanāta elements which it included originally lived in cave dwellings. Now it is known that the mountainous districts situated in the interior of western Tripolitania and south-eastern Tunisia, Djabal Demmer (Dammar), Djabal Nafūsa and Ghariyān, abound in cave dwellings both old and new (cf. J. Despois, *Djebel Nefousa*, 202-6), and there is nothing against the hypothesis that it was in this part of the *arḍ Zanāta* that the Banū Īfran had its origin. A thorough analysis of Berber and particularly Īfranid traditions seems to confirm this identification of the tribe's original home. Thus it seems possible to connect the Iṣlitan (Yaṣlitan, sister-tribe of the Banū Īfran) with the town of Zliten, situated on the coast of Tripolitania, east of the ruins of Leptis Magna, in the country that belonged in the Middle Ages to the Hawwāra. The name of Misrā, the grandfather of Īfrī in the same traditions, must be connected with that of the Misrāta tribe, held by mediaeval Berber genealogists to belong to a branch of the Hawwāra and occupying the most easterly part of the coastal zone of the *arḍ Hawwāra*, in central Tripolitania. The principal centre of this tribe, in the Middle Ages, was the town of Suwayḳat Ibn Mathkūd, today called Misurata. It is not far from these two places in Tripolitania that the district of Yefren, the home of the Īfran/Yafran in the 3rd/9th century, is situated. The name of the great-grandfather of the Banū Īfran, that is to say Zākiyā, seems to indicate that among the Berber tribes which formed the confederation of the Banū Īfran there were also some fractions of the Luwāta [*q.v.*], a tribe which, at the time of the conquest of North Africa by the Arabs, occupied the ancient Marmarica and Cyrenaica. It seems indeed that the name Zākiyā is repeated in the name Arzāḳiya, which was according to al-Bakrī the principal locality in the oasis of Awdjila/Djalo, situated in the heart of the Luwāta country. It is very probable that this name is composed of two elements, *-zāḳiya*, which is merely a variant of the Zākiyā of the Berber genealogists, and *Ar-*. This second element recurs in the name of the ancient Libyan tribe of Arzugitani (Ar-zug-itani), identical with the Zauekes of Herodotus and the Zawāgha of the Arab historians. It is probably related to *War-*, the element preceding several Berber tribal and personal names (cf., *e.g.*, Warzaydān, from the Arabic proper name Zaydān), the significance of which has not yet been fully explained (see T. Lewicki, *Études ibāḍites nord-africaines*, 45-6).

Tripolitania.—The Banū Īfran of western Tripolitania, a fraction of the large confederation of that name, which remained in the same place after the emigration of the main body of that people to what are now Tunisia and the Aurès, in the 3rd/9th century were a tribe of sufficient strenth to fight the Nafūsa, then the most powerful Berber people in western Tripolitania. We know that they were Ibāḍīs, without however being supporters of the Rustamid *imāms* of Tāhert. They supported the cause of the Ibāḍī leader of Tripolitania, Khalaf b. al-Samḥ, who had revolted against the Banū Rustam. Later, in the 5th/11th century, the Khalafī sectarians still formed part of the population of Yefren, along with the Nukkārīs (it will be seen later that, in the first half of the 4th/10th century, Nukkārism became the national religion of the eastern branch of all the Īfranid tribes). In the 6th/12th century, the Yefren sectarians were converted to the more moderate doctrines of the Ibāḍī-Wahbīs, former supporters of the Rustamid *imāms*. Nominally subject to the various dynasties which in turn ruled eastern Barbary, the people of *waṭan Yafran*, "land of Yafran", endeavoured to preserve their independence under chiefs who bore the title *muḳaddam* and belonged to the family of ʿAwn b. Ḥarīz, for a considerable time with success.

Ifrīḳiya.—The Īfranid tribes which emigrated to Ifrīḳiya were joined also by groups deriving from the Berber tribe of the Maghīla [*q.v.*], the Machlyes of Herodotus. At one time these groups played a considerable part in the confederation of the Banū Īfran, but later they broke away to form a separate tribe. It was from these Maghīla, united with the Banū Īfran, that Abū Ḳurra al-Īfranī (in some sources called al-Maghīlī) originated, the leader of the Banū Īfran in Ifrīḳiya and the central Maghrib, and also the supreme leader of the North African Ṣufrīs at the beginning and towards the middle of the 2nd/8th century. He was in command of the Īfranid tribes apparently from the year 111/729-30. In 151/768-9 he had successfully retained leadership of the Banū Īfran for forty years, thus making his appearance in history only a quarter of a century after the death of the Kāhina and the fall of the confederation of Berber tribes which she had governed and whose principal support the Banū Īfran, with the Djarāwa and the Maghrāwa, had been. In 124/741-2, when the Ṣufrī leader ʿAbd al-Wāḥid marched on Ḳayrawān, Abū Ḳurra al-Maghīlī, according to Ibn ʿAbd al-Ḥakam, was in command of the vanguard of his army. At this period the main body of the Banū Īfran was probably still in Ifrīḳiya, near the Aurès, which formed the centre of the Kāhina's state. It may be supposed that this tribe took part in the Ṣufrī rising of the Warfadjdjūma, who occupied the town of Ḳayrawān in 139/757. When, in 141/758-9, the Ibāḍī *imām* of Tripolitania, Abu 'l-Khaṭṭāb ʿAbd al-Aʿlā b. al-Samḥ al-Maʿāfirī, expelled the Warfadjdjūma from Ḳayrawān and made Ifrīḳiya a province of his state, the Ṣufrī Berber tribes of that country, fleeing from their Ibāḍī enemies, presumably began to move towards the central Maghrib. This movement must have assumed the nature of a mass migration after 144/761-2, that is to say after the reconquest of eastern Barbary by the Arab general Ibn al-Ashʿath, who thus became the common foe of all Berber sects—Khāridjīs, Ibāḍīs and Ṣufrīs—in North Africa. It was apparently at this period, between 140/757-8 and 144/761-2, that the main body of Īfranid tribes, commanded by Abū Ḳurra al-Īfranī al-Maghīlī, emigrated to the central Maghrib.

Little is known of the history of the branches of the Banū Īfran who continued to inhabit Ifrīḳiya after the emigration of the tribes led by Abū Ḳurra. Ibn Khaldūn claims that there were two Īfranid tribes in this province, the Marandjiṣa and the Banū Wārkū (Wārko). These tribes inhabited the country lying between Ḳayrawān and Tunis, in the Bilād al-Djarīd and the Aurès massif. It seems that these tribes were soon converted to Ibāḍism, having adopted the doctrines of the Nukkārī sect. It was from the Banū Wārkū (the name of this tribe is perhaps the same as Arkū, in al-Idrīsī the name of a locality on the route leading from Lorbeus to al-Masīla) that Abū Yazīd Makhlad b. Kaydād traced his origin, the leader of the Nukkārī revolt which almost destroyed

Fāṭimid domination in North Africa. A branch of the Wārkū inhabited Sadāda (now Sdada) in the Bilād al-Djarīd, in immediate proximity to the Banū Wasīn (also Wisyān), a sister-tribe of the Banū Īfran according to the Berber genealogists; incidentally these were Ibāḍī-Wahbīs. The Banū Wārkū gave assistance to Abū Yazīd Makhlad b. Kaydād, and after his death and the failure of the Nukkārī revolt, they had to endure the revenge of the Fāṭimid government. From then onwards their name disappears completely from North African chronicles. The Ibāḍī chronicles tell of a war between the Banū Wasīn and the Banū Īfran which occurred in 362/972-3, probably in the Bilād al-Djarīd and the Zāb. In the circumstances, it seems probable that this refers to the Banū Wārkū. The Marandjiṣa, a sister-tribe of the Banū Wārkū, lost much of their influence after the failure of Abū Yazīd's revolt. Nevertheless, they were not exterminated, and they are mentioned in Arabic sources until the end of the 8th/14th century. They still lived as nomads, travelling through the region between Ḳayrawān and the town of Tunis, but they also engaged in agriculture. It seems fairly probable that the Zanāta who lived near al-Sibkha (Sebkha Sidi Hani) in the 3rd/9th century and are mentioned by the Ibāḍī historians were a branch of the Marandjiṣa. Similarly, the Īfranid fraction to whom Cape Ifrān (lying to the East of Carthage and mentioned by al-Idrīsī) owes its name appears to have belonged to the Marandjiṣa branch. The situation of the Marandjiṣa declined after the conquest of Ifrīḳiya by the Almohads (1159-60), who imposed taxes upon this tribe and compelled it to supply the sultan with a certain number of fighting men. Later, they became dependent upon Arab tribes. It was only in the second half of the 8th/14th century that the situation of the Marandjiṣa became more prosperous under the domination of the Ḥafṣid sultans.

Wargla.—It seems that, when Abū Yazīd's revolt was crushed, a fraction of the Banū Īfran, probably belonging to the branch of the Banū Wārkū from the Bilād al-Djarīd, fled to the oasis of Wardjlān (Wargla), with which the places in the Bilād al-Djarīd maintained close trade relations. Indeed the Ibāḍī chronicles mention, in the oasis of Wargla, a village named Ifrān (also Īfran, Īfrān or Farān), the name of which seems to derive from the name of the Banū Īfran tribe. This village, which was situated about 20 km. north of the present town of Wargla, on a site today not inhabited, between Khefīf and ʿArīfdjī, appears for the first time in the sources shortly after 409/1018-19.

Central Maghrib.—The Īfranid tribes which emigrated to the central Maghrib towards the middle of the 2nd/8th century and remained under the command of Abū Ḳurra al-Īfranī al-Maghīlī founded a Ṣufrī state, probably between 140/757-8 and 148/765-6, whose capital became the town of Tlemcen, built by the newcomers on the site of an ancient Roman town. Abū Ḳurra was proclaimed Ṣufrī caliph (*imām*) there in 148/765. An interesting feature is that, in the time of al-Bakrī (1067-8), one of the five gates of Tlemcen still bore the name Bāb Abī Ḳurra, probably from the name of the founder of Tlemcen. Abū Ḳurra's domain extended from Tlemcen to the mountain of the Banū Rāshid and as far as Tāhert. Among the Berber tribes inhabiting this State, alongside the Banū Īfran, were the Maghīla, Abū Ḳurra's tribe, now settled in the environs of Tlemcen. This tribe, which also was Ṣufrī, was smaller than that of the Banū Īfran; it co-operated with the latter in their war against Ibn al-Ashʿath in 148/765. It seems also that a fraction of the Djarāwa, a tribe which, with the Banū Īfran and the Maghrāwa, had once formed the nucleus of the Kāhina's state, had followed the Īfranid tribes of Abū Ḳurra in their flight to the central Maghrib. This tribe gave its name to the mediaeval town of Djarāwa, situated 10 miles S.-E. of the mouth of the Mulūya and surrounded by numerous villages whose population was formed by the Banū Īfran, among other tribes. It seems also that it was at this period that the Maghrāwa came and settled in Tlemcen and its environs, a sister-tribe of the Banū Īfran and like them formerly included in the confederation of the Kāhina.

Immediately after its foundation, Abū Ḳurra's kingdom was attacked by the Arab army sent by Ibn al-Ashʿath [*q.v.*]. This army was placed under the command of al-Aghlab al-Tamīmī who, after setting up his headquarters at Ṭubna in the Zāb, tried to attack first Tlemcen, then Tangier, but was compelled by the Berbers to withdraw. Soon the Ṣufrī and Ibāḍī Berber tribes formed a coalition in which the Banū Īfran, still under the command of Abū Ḳurra, played a considerable part. In 150/767 Abū Ḳurra's army appeared before the walls of Ḳayrawān, while in 151/768 he himself came with 40,000 Īfranid horsemen to lay siege to the town of Ṭubna.

Not a great deal is known of the Īfranid state of Tlemcen after the siege of Ṭubna. It is however very probable that friendly relations were maintained with the Ibāḍī kingdom of Banū Rustam [*q.v.*] in Tāhert, which bordered on Tlemcen. The first ruler of Tāhert, ʿAbd al-Raḥmān b. Rustam, who governed the town from 160/776-7 or 162/778-9, even allied himself with the Banū Īfran by marriage, since he probably married a daughter of the ruling family of Tlemcen. From this union was born ʿAbd al-Wahhāb, the second Ibāḍī *imām* of Tāhert. This marriage must have taken place in about 148/765-6 at the latest, since in 167/784-5, at the time of the death of ʿAbd al-Raḥmān b. Rustam, ʿAbd al-Wahhāb was already an adult and a member of the council of six empowered to choose the future *imām* from its own members. Curiously enough, another member of the same council was Abū Ḳudāma Yazīd b. Fandīn al-Īfranī, a cousin and supporter of ʿAbd al-Wahhāb, who later became his implacable enemy and one of the founders of the Nukkārī heresy. He conducted a long war with ʿAbd al-Wahhāb, probably relying mainly on the Banū Īfran; in the end he died in battle, killed by Aflaḥ, son of ʿAbd al-Wahhāb, in about 188/803-4 or shortly afterwards. At that time, the Īfranid state of Abū Ḳurra had already ceased to exist for some years. It seems moreover that control of Tlemcen, which was then inhabited by the Banū Īfran and the Maghrāwa, had passed after the death of Abū Ḳurra into the hands of Maghrāwa leaders belonging to the dynasty of the Banū Khazar, this dynasty being destined to play a considerable part in the history of the Maghrib. In 173/789-90 (or according to certain historians, in 174/790-1), at the time of the conquest of that country by Idrīs I [*q.v.*], the founder of the dynasty of the Idrīsids, Muḥammad Ibn Khazar b. Ṣūlāt, the ruler of the town of Tlemcen, came before the conqueror and, thanks to his prompt submission, obtained security for himself and for all the Zanāta tribes of the central Maghrib. It was Sulaymān, brother of Idrīs I and later hereditary ruler of that town, who became the Idrīsid governor of Tlemcen; it seems however that, save for this fact, conditions in the central Maghrib were little changed. The Zanāta

tribes in the country continued to recognize the supremacy of the Maghrāwa, which had long replaced the supremacy of the Banū Īfran. Thus the Maghrāwa, who in the days of the confederation of Berber tribes ruled by the Kāhina had once been the most powerful of these tribes after the Djarāwa, now recovered their importance. But the rivalry between the Īfranid and the Maghrāwa leaders was long to continue in the central Maghrib as well as in the Maghrib al-Akṣā, and it was only with the conquest of the whole of the Maghrib by the Almoravid army that this discord was finally brought to an end, with the disappearance of the states created by the Banū Īfran and the Maghrāwa. The Īfranid tribes of the central Maghrib, for their part, certainly succeeded in retaining much of their independence after 173/789-90, though of course under the control of Sulaymān and the Maghrāwa leaders. At the time of the Idrīsid domination of the Maghrib, the Banū Īfran were already Sunnī, having abandoned their earlier Ṣufrī beliefs at some point of time now difficult to determine. In any case the Ibāḍī Berber genealogist al-Birzālī, who supplied Ibn Ḥazm (5th/11th century) with information regarding the Zanāta tribes in the Maghrib, believed that the Banū Īfran had always been Sunnī and appeared to know nothing of their Ṣufrī past.

The Īfranid kingdom of the central Maghrib makes its appearance in the historical sources after the expulsion of the Idrīsid rulers from Tlemcen by the Fāṭimids, which took place in 319/931. The Sunnī Īfranid tribes of the country took no part in the Nukkārī revolt of Abū Yazīd Makhlad b. Kaydād al-Īfranī, although it is not impossible that their leaders may have helped him to get in touch with the Umayyad government in Cordova and that it was from their territory that Abū Yazīd's son Ayyūb set out for Spain, when entrusted by his father with a political mission to ʿAbd al-Raḥmān III. In any case, during the war between Abū Yazīd and the Fāṭimids, the numbers and strength of the Banū Īfran in the central Maghrib remained unchanged. At that time their leader was Muḥammad b. Ṣāliḥ al-Īfranī, whose power was restricted solely to the Īfranid tribes in the neighbourhood of Tlemcen, while the town itself had, since the fall of the local Idrīsid rulers, once again become the capital of the Maghrāwa and was then governed by Muḥammad Ibn Khazar, a member of the same dynasty of Maghrāwa leaders as those who controlled Tlemcen in 173/789-90. When the Fāṭimid caliph al-Manṣūr (334-41/946-53) gave Muḥammad Ibn Khazar command over this part of the Maghrib, war broke out between the Banū Īfran and the Maghrāwa, in the course of which Muḥammad b. Ṣāliḥ al-Īfranī was killed by an Īfranid leader who remained in the service of the Fāṭimid government and of this branch of the Maghrāwa. His son Yaʿlā b. Muḥammad al-Īfranī succeeded him as ruler of the Banū Īfran. In order to secure his support against the Maghrāwa, who had been overcome by the Fāṭimid government, Yaʿlā b. Muḥammad openly placed himself at the service of the Umayyad caliph of Spain, ʿAbd al-Raḥmān III, who was trying to win the friendship of the Zanāta leaders in the central Maghrib and to rally them to his cause. He established his capital in the town of Fakkān (also Āfakkān or Ifkān), which he founded, in 338/949-50, at a place where the Zanāta tribes held their markets, situated at the confluence of the Wādī Fekkan and the Wādī Ḥammām, five leagues S.S.W. of the modern town of Mascara. Then, rebelling against Fāṭimid rule, he took the town of Tāhert, assisted by his kinsman al-Khayr b. Muḥammad, whom Ibn ʿIdhārī speaks of as al-Khayr b. Muḥammad Ibn Khazar al-Zanātī and who seems to have been the son of the Maghrāwa leader Muḥammad Ibn Khazar (according to Ibn Ḥawḳal, al-Khayr was a member of the clan of Banū Warzamār "kings of the Zanāta"); al-Khayr abandoned his father's policy of hostility to the Īfranid dynasty and became an ally of Yaʿlā b. Muḥammad and of the Umayyads in Spain. Shortly afterwards, in 343/954-5, Yaʿlā b. Muḥammad captured from the Fāṭimids the town of Oran, which was taken by storm and devastated. Soon the whole country, from Tāhert to Tangier, was under the domination of the Īfranid leader, who thus re-established the supremacy of his tribe over all the branches of the Zanāta inhabiting the central Maghrib, including the Maghrāwa; he caused the public prayer (*khuṭba*) to be recited in the name of ʿAbd al-Raḥmān III in every mosque in the country. In the same year, or possibly in 344/955-6, Yaʿlā b. Muḥammad received a diploma whereby ʿAbd al-Raḥmān III appointed him governor of the country of the Zanāta, the central Maghrib and Tlemcen. At his own request he was also entrusted by the Umayyad caliph with the government of Fez for his kinsman Muḥammad b. al-Khayr b. Muḥammad, apparently the son of his Maghrāwa ally al-Khayr b. Muḥammad Ibn Khazar al-Zanātī.

But this was Yaʿlā b. Muḥammad's last success. In 347/958-9 the Fāṭimid army, commanded by Djawhar, secretary to the caliph al-Muʿizz, conquered the central Maghrib and captured the town of Fakkān, Yaʿlā b. Muḥammad's capital, which was laid waste. Yaʿlā b. Muḥammad was killed, and the Banū Īfran's domination of this part of North Africa was for a time destroyed. The command of the Zanāta tribes of the central Maghrib, so relentlessly harried by the Fāṭimids, once again reverted to the Maghrāwa, that is to say to Muḥammad b. al-Khayr b. Muḥammad Ibn Khazar, who was governing Fez in the name of the Umayyad caliphs of Spain. This leader even succeeded in reconquering the town of Tlemcen from the Fāṭimid state, between 360/970-1 and 370/980-1. It seems however that the dynasty of Yaʿlā b. Muḥammad eventually recovered from the defeat of 347/958-9 and continued to reign over the Īfranid tribes of the central Maghrib. Rulers drawn from this family were still in control there, with Tlemcen as their capital, in the first half of the 5th/11th century. At the time of the invasion of the Banū Hilāl, the master of Tlemcen was prince Bakhtīt, whom Ibn Khaldūn describes, in one passage in his book, as an Īfranid and, in another, as a descendant of Muḥammad Ibn Khazar, that is to say as a Maghrāwa. Be that as it may, he had as his vizier an Īfranid general, who died in a battle against the Banū Hilāl in 450/1058. At that period the Banū Īfran shared their rule over the Zanāta in the central Maghrib with the Maghrāwa and two other large Berber tribes, the Wāmannū and the Banū Īlūman. Bakhtīt was succeeded by his son al-ʿAbbās, who was reigning in Tlemcen at the time of the conquest of the central Maghrib by the Almoravid army.

Al-Maghrib al-Akṣā.—After the death of Yaʿlā b. Muḥammad in 347/958-9, one of his sons, Yaddū, took refuge in the Sahara to escape from the Fāṭimid army. Later he returned to the central Maghrib, where he lived for a time. At this period he appears among the Zanāta leaders in the entourage of Djaʿfar b. ʿAlī b. Ḥamdūn, governor of the Maghrib for the Umayyad caliphs of Spain, from the year 365/975-6. Yaddū was then regarded as the most influen-

tial of the Zanāta leaders. In 369/979-80, the family of Yaʿlā b. Muḥammad, still loyal to the Umayyads of Cordova, had to flee before the army of Bulukkīn b. Zīrī, the Fāṭimid governor of Ifrīkiya, who not only seized the central Maghrib but also penetrated as far as Fez and even Sidjilmāsa. But Yaddū b. Yaʿlā, who was among the fugitives, returned to the central Maghrib only after Bulukkīn had left for Ifrīkiya, as did some other rulers of the dynasty of Yaʿlā who succeeded in restoring the state of Tlemcen. He settled in al-Maghrib al-Akṣā and in 376/986-7 was appointed governor of the province for the Umayyad dynasty, with his base at Fez, formerly the territory of the Maghrāwa (from the time of the rule of Muḥammad b. al-Khayr). It was probably at this time that a certain number of families of the Banū Īfran settled in Fez, whose descendants were still living there, with other sections of the Zanāta tribes, in 462/1069-70, when the army of the Almoravid Yūsuf b. Tāshfīn seized the capital of al-Maghrib al-Akṣā. However, the Umayyad government, fearing that Yaddū b. Yaʿlā's power might become too great, decided to offer support simultaneously to Zīrī b. ʿAṭiyya, one of the *amīrs* of the Maghrāwa. As a result, the old rivalry between the Banū Īfran and the Maghrāwa, previously allayed by the alliance concluded between Yaʿlā b. Muḥammad and al-Khayr b. Muḥammad Ibn Khazar and his son Muḥammad, was revived after 40 years of harmony. In 379/989-90 or 381/991-2, Yaddū b. Yaʿlā openly revolted against the Umayyad government, which had appointed Zīrī b. ʿAṭiyya to govern Fez. The result of this conflict was the war waged by Yaddū against the combined forces of the Umayyads and the Maghrāwa. The latter finally prevailed, and Yaddū was obliged to seek refuge in the Sahara, where he died in 383/993-4. His successor as ruler of the tribe was Ḥabbūs, son of his brother Zīrī b. Yaʿlā. Ḥabbūs was murdered by his cousin, the Īfranid *amīr* Abū Yaddās b. Dūnās, who was however compelled to flee soon afterwards. Ḥammāma, brother of Ḥabbūs, then assumed the leadership of the Banū Īfran. He led the tribe against the town of Shāla (Salé) in the province of Tadla, capturing the town from Zīrī b. ʿAṭiyya, together with part of Tadla that depended on it, and setting up there a new Īfranid kingdom. Under the direction of the dynasty of the Banū Yaʿlā, this kingdom lasted until the conquest of Morocco by the Almoravids. Ḥammāma died after 406/1015-6 and was succeeded by his brother Abu 'l-Kāmil Tamīm, who, having to fight against the anti-Muslim kingdom of the Barghawāṭa, was obliged to make peace with the Maghrāwa of Fez. However, war broke out once again in 424/1033, and Abu 'l-Kāmil even succeeded in capturing Fez; it was only in 429/1037-8 that he was driven out by the Maghrāwa. Forced by the Maghrāwa *amīr* to withdraw to his kingdom of Tadla, he lived there until his death in 446/1054-5. It was apparently in the reign of Abu 'l-Kāmil that the Īfranid dynasty of Salé also took possession of the large commercial town of Aghmāt, whose ruler was of Maghrāwa origin. But soon the conquest of this part of the Maghrib by the Almoravid army, which captured Aghmāt in 449/1057-8 and invaded the country of Tadla in the following year, ended the existence of the kingdom of Salé. The Īfranid rulers of the country perished and their state was annexed to the kingdom of the Almoravids.

The Banū Īfran of Tadla were not the only Īfranid branch to be established in the western part of what is now Morocco. Certain Īfranid families seem to have begun to penetrate into this region long before the state of Salé was founded. Thanks to the account left by Zammūr, who in 352/963 went as ambassador for the king of the Barghawāṭa (in the province of Tamesna) to the Umayyad caliph al-Ḥakam al-Mustanṣir, we know that, among the Muslim-Berber petty tribes under the authority of the kings of the Barghawāṭa, there was also an Īfranid tribe. This seems to be a reference to a fraction of the Banū Īfran who emigrated from the central Maghrib after the collapse of the Īfranid State of Yaʿlā b. Muḥammad in 347/958-9.

Spain.—The first wave of Īfranid emigrants came to Spain in 347/958-9, after the death of Yaʿlā b. Muḥammad and the fall of his kingdom. This group, led by Ibn Ḳurra, son of Yaʿlā b. Muḥammad's uncle, was given a very cordial welcome in Cordova. Another branch of the Banū Īfran settled in Spain towards the end of the 4th/10th century. This consisted of a fraction led by the Īfranid ruler Abū Yaddās b. Dūnās who, after killing his cousin Yaddū b. Yaʿlā and attempting unsuccessfully to seize command of all the Īfranid tribes of al-Maghrib al-Akṣā, fled to Spain with his three brothers and a numerous body of supporters. According to Ibn Khaldūn, this emigration occurred in 383/993-4 or 382/992-3. Abū Yaddās is said to have acted in concert with the Umayyad government of Cordova, which was anxious to remove the family of Yaddū b. Yaʿlā from supreme command over all the Īfranid tribes of al-Maghrib al-Akṣā and to replace it by another ruling family, more closely linked with the interests of the Umayyad dynasty. The Umayyad government welcomed the emigrants. All the fighting men of Abū Yaddās were enrolled in the Berber forces in Spain, and their leader was granted a considerable sum of money and several fiefs (*iḳṭāʿ*). Later, in 400/1009-10, Abū Yaddās, together with all the Berber forces, is found supporting the cause of the caliph al-Mustaʿīn in the war he fought with his predecessor al-Mahdī. He died in a battle on the banks of the Guadiaro; descendants of his held high rank in the Zanāta forces in Spain. At the period of the *mulūk al-ṭawāʾif*, Yaḥyā b. ʿAbd al-Raḥmān, the son of Abū Yaddās's brother al-ʿAṭṭāf, entered the service of the Hammūdid dynasty and was given command of Cordova. But it was Abū Nūr, son of Abū Ḳurra, another brother of Abū Yaddās, who played a considerable part in Muslim Spain in the first half of the 5th/11th century. In 405/1014-5 he succeeded in driving from the town of Ronda the governor, ʿĀmir b. Futūḥ, who was ruling there in the name of the Umayyad dynasty, and established himself there as an independent prince. In addition to Ronda, his principality included the town of Takurunna (Tacoronna). If Ibn al-Khaṭīb is to be believed, Abū Nūr obtained this territory from Sulaymān b. al-Ḥakam b. Sulaymān b. al-Nāṣir, who divided certain provinces of al-Andalus between the leaders of six Berber tribes which had settled in Spain. In 443/1051-2, with various other Berber leaders, Abū Nūr was forced to recognize the supremacy of the ʿAbbādids of Seville. He died soon afterwards, in 450/1058-9, and was succeeded by his son Abū Naṣr, who reigned until 457/1065, when he was murdered by a traitor acting with the connivance of the ʿAbbādid government.

It is quite probable that a section of the Banū Īfran settled in the neighbourhood of Mazarrón, in the province of Murcia. There is there a "diputación" called Ifre, a name which C. E. Dubler has connected with that of the Banū Īfran (or Ifrīn, the vocalization adopted by this scholar). It seems however that the

modern Iîre owes its name not to Īfran but to Īfrī —the eponym of this tribe, according to the traditions of the mediaeval Berber genealogists. Moreover, it is not impossible that the modern Spanish place-name derives, not from the name of the tribe of the Banū Īfran or its eponym, but directly from the Berber word *ifri* "cavern".

Sicily.—It is possible that some families of Īfranid origin may have lived in Sicily, which was closely linked with Ifrīḳiya from the 3rd/9th century, and that certain warriors belonging to the Banū Īfran and deriving from branches of the Marandjīṣa and the Banū Wārkū may have made their way there with Aghlabid or Fāṭimid troops. Among the inhabitants of the town of Corleone mentioned in a mediaeval source, there is in fact a reference to a man bearing the name Ibn Abī Yafran and probably of Īfranid stock.

(T. Lewicki)

IFRANDJ or Firandj, the Arabic term for the Franks. This name, which probably reached the Muslims via the Byzantines, was originally used of the inhabitants of the empire of Charlemagne, and later extended to Europeans in general. In medieval times it was not normally applied to the Spanish Christians [see andalus, djillīḳiyya and below], the Slavs [see ṣaḳāliba] or the Vikings [see madjūs ii], but otherwise was used fairly broadly of continental Europe and the British Isles. The land of the Franks was called ifrandja (Persian and Turkish *Firangistān*).

The earliest Muslim notions of the geographical configuration of Western Europe were derived from Ptolemy's *Geographikê Hyphêgêsis*, best known in the Arabic adaptation by al-Khuwārizmī. The earlier Muslim geographical writers have little to add to this. Ibn Khurradādhbih (ca. 232/846) knows that Ifrandja, with other 'lands of polytheism', adjoins Spain (*tudjāwir al-Andalus*) (*B.G.A.*, vi, 90), and is part of Europe, which he calls Arūfa (*ibid.*, 155). He mentions Frankish slaves and coral among imports arriving across the Mediterranean (*ibid.*, 92) and, in addition, gives a curious and often cited account of a group of Jewish merchants called Rādhāniyya [*q.v.*], who are said to have traded between the ports of Ifrandja and of the Middle East (*ibid.*, 153-4. C. Cahen, *Y a-t-il eu des Rahdānites?*, in *REJ*, ive sér, iii (cxxiii), 1964, 499-505, expresses some well-grounded doubts about this story). Other early geographers are equally brief on Ifrandja, though Ibn Rusta (ca. 290-300/903-13) mentions the British Isles (*B.G.A.*, vii, 85) and gives the fullest of several accounts of Rome (*ibid.*, 127-30: see further rūmiya). This is based on the report of a returned prisoner of war called Hārūn b. Yaḥyā [*q.v.*] who, to his description of Rome, appends a brief note on Ifrandja and Britain. The latter 'is ruled by seven kings'—obviously a belated allusion to the already defunct Anglo-Saxon heptarchy. Rather fuller information was available to Masʿūdī, who refers to the Franks both in the *Murūdj* (iii, 66-7, 69-72; ed. and tr. Ch. Pellat, §§ 910-1, 914-6) and in the *Tanbīh* (*B.G.A.*, viii, 22 ff.; 176 ff., etc.). The Franks are, he says, descended from Japhet; they are a numerous, courageous, well-organized and well-disciplined people, with a vast and unified realm. They have some 150 cities, with Bawīra (? Barīza) as capital. Alone among Muslim authors of his time, Masʿūdī gives a list of the Frankish kings from Clovis to Louis IV, based, he tells us, on a book prepared by a Christian bishop for the Andalusian heir-apparent (later Caliph) al-Ḥakam in the year 328/939. He came across a copy of this book in Egypt in 336/947.

Diplomatic contacts between the Franks and the Caliphate were few, and have left little trace. The famous exchange of embassies between Charlemagne and Hārūn al-Rashīd is known only from a Frankish source; if it happened at all, it was of insufficient importance to attract the attention of the Arabic chroniclers, since they make no mention of it. Barthold has indeed rejected the whole story as inauthentic (*Sočineniya*, vi, Moscow 1966, 342-64, = *Khristianskiy Vostok*, i (1912), 69-94; for an opposing view see F. W. Buckler, *Harunu 'l-Rashīd and Charles the Great*, Cambridge 1931; cf. F. F. Schmidt in *Isl.*, iii (1912), 409-11; Barthold, *Soč*, vi, 432-61 = *Khrist. Vostok*, iii (1915), 263-296; W. Ebermann, in *Islamica*, iii (1927), 233-5; S. Runciman, *Charlemagne and Palestine*, in *English Historical Review*, l (1935), 606-19; Madjīd Khaddūri, *al-Ṣilāt al-diblūmāṭīḳiyya bayna Hārūn al-Rashīd wa-Sharlamān*, Baghdad 1939; G. Musca, *Carlo Magno ed Harun al-Rashid*, Bari 1963). The first definite report of a Frankish embassy to Baghdad dates from the year 293/906 when, according to *al-Dhakhāʾir wa 'l-tuḥaf*, by al-Awḥadī, an embassy arrived at the court of al-Muktafī from Bertha, daughter of king Lothair II of Lorraine and wife of Adalbert the Rich, Marquis of Ivrée (M. Hamidullah, *Embassy of Queen Bertha to Caliph al-Muktafi billah in Baghdad 293/906*, in *J. Pak. Hist. Soc.*, i (1953), 272-300; idem, in *Islam Tetkikleri Enstitüsü Dergisi*, ii (1956-7), 115-45; G. Levi Della Vida, *La corrispondenza di Berta di Toscana col Califfo Muktafi*, in *Rivista Storica Italiana*, lxvi (1954), 21-38 = idem, *Aneddoti e svaghi arabi e non arabi*, Milan-Naples 1959, 26-44). The envoy, a

eunuch from North Africa, brought a variety of gifts, and a letter in the Frankish script, 'resembling the Greek writing, but straighter'. After some search, a Frank was found working in the clothing store, who read the letter and translated it into Greek, which was then translated by Isḥāḳ b. Ḥunayn from Greek into Arabic. Some eighty years later Ibn al-Nadīm drew on this passage for his note on the Frankish script, included in his discussion of writing, and adds that he had often seen this script on Frankish swords (*Fihrist*, ed. G. Flügel, Leipzig 1871, 20; on the high reputation of European swords among the Muslims see A. Zeki Validi [Togan], *Die Schwerter der Germanen nach arabischen Berichten des 9-11 Jahrhunderts*, in *ZDMG*, xc (1936), 19-37).

By far the most important known visitor from the Muslim lands to Europe in this period was Ibrāhīm b. Yaʿḳūb [*q.v.*], a Spanish Jew from Tortosa who travelled extensively in Frankish Europe ca. 354/965, probably on some sort of official mission for the Umayyad Caliph of Cordova. Ibn Yaʿḳūb's own account is lost, but is known from quotations by later geographers, especially Bakrī and Ḳazwīnī. This is the only personal description of Western Europe by a named traveller from the Muslim world, until the first Ottoman reports.

During the 11th century, the advance of Christendom against Islam in the Western, Central and Eastern Mediterranean brought a new relationship. For more than two centuries, Franks and Muslims were in close and regular contact—often in battle, but often also in trade, diplomacy, even, on occasion, in alliance. Knowledge of the Franks and their country was now, for the Muslims, a matter of practical necessity, and not just of intellectual curiosity. It is therefore the more remarkable that they should have continued to show so little interest. In the East, the Muslim chroniclers have much to say about the military and, to a lesser extent, the political activities of the Crusaders, whom they usually call Ifrandj. They show however very little concern with the internal affairs of the Crusading states, still less with the differences between the various national contingents, and none at all with their places of origin or reasons for coming. There are some personal impressions of contact with the Crusaders in the East, such as those of Ibn Djubayr and Usāma b. Munḳidh, but these are exceptional and without influence on later writers. Only one work is mentioned which purports to be an account 'of the Franks who had come to the lands of Islam in these years', by Ḥamdān b. ʿAbd al-Raḥīm al-Athāribī, a 6th/12th century author (Ibn Muyassar, *Akhbār Miṣr*, ed. H. Massé, Cairo 1919, 70; cit. F. Rosenthal, *A history of Muslim historiography*², Leiden 1968, 62). Characteristically, it has not survived, even in quotation. The main increases in Muslim knowledge of Europe come not from the East but from the West, from Spanish, Sicilian and North African authors like Abū ʿUbayd al-Bakrī, al-Idrīsī, Ibn Saʿīd, and Ibn ʿAbd al-Munʿim al-Ḥimyarī [*qq.v.*]. These provide fuller and more accurate geographical information, which forms the basis of most later eastern accounts in Arabic.

The first extant Muslim work on Frankish history —apart from Masʿūdī's king-list—is that included by Rashīd al-Dīn in his universal history, the *Djāmiʿ al-tawārīkh*. His informant was a Frankish traveller, probably a monk, who had come to the Mongol court in Persia as an envoy from the Papal Curia. Through him, Rashīd al-Dīn was able to use the work of a European chronicler whom Jahn has identified as Martin of Troppau, also known as Martin Polonus (d. 1278). From this source, supplemented by oral information, Rashīd al-Dīn was able to compile a brief history of the Holy Roman Emperors to Albert I and of the Popes to Benedict XI, both correctly described as living at that time.

Apart from other works associated with or based on the *Djāmiʿ al-tawārīkh*, no other Muslim author appears to have written on Frankish history until the 10th/16th century. Even the great Ibn Khaldūn has little to say about Christian Europe, but merely remarks, with obvious caution, that he had 'heard of late' that the philosophic sciences were flourishing in those parts, 'but God knows best what goes on there' (*Muḳaddima*, ed. Quatremère, iii, 93; tr. Rosenthal, iii, 117-8). In earlier days, Muslims no doubt had good reason for withholding from the Franks the scholarly interest which they had shown in the Greeks, Persians, and Indians. By the 8th/14th century however this attitude was dangerously out of date. Even the rapid growth of commercial and diplomatic relations after the Crusades evoked only a limited practical interest. In about 741/1340, Shihāb al-Dīn al-ʿUmarī included two Western kings, of Spain and France, in his list of the sovereigns with whom the Sultan of Egypt corresponded, with a few details and the correct style and form of address for each. A later revision, the *Tathḳīf* adds a few more names, and Ḳalḳashandī provides a much fuller list of European states and rulers, with some information about each (ʿUmarī, *al-Taʿrīf bi 'l-muṣṭalaḥ al-sharīf*, Cairo 1312, 60-5; Ḳalḳashandī, *Ṣubḥ al-aʿshā*, viii, 33-53).

The Ottomans had dealings with Franks of various kinds from an early date—as merchants, as enemies, as neighbours, as diplomatic visitors. In Greece they conquered Frankish principalities; at Varna in 1444 they captured Frankish knights whom they paraded, in their splendid attire, across the lands of Islam as far as Herat (cf. the verses cited by Z. V. Togan in *Türk Dili ve Edebiyati Dergisi*, iii (1939), 535). By the 16th century they were involved in extensive and complex dealings with European states. Ottoman interest in Christian Europe, though far from overwhelming, is noticeably greater than among earlier Muslim peoples. This interest was nourished by closer contacts, by the flow of European visitors and renegades, and, in time, by a growing awareness of European power and wealth.

One expression of this interest is the study of European history, which, however limited in scope and impact, nevertheless marks a change from the almost total disregard of earlier times. In 980/1572 two writers, a translator and a *kātib*, completed, on the orders of the Reʾīs Efendi Ferīdūn Beg [*q.v.*], a Turkish version of a history of France, from the legendary Faramund to 1560. It survives in a unique manuscript (Babinger, 107). This was followed by the famous *Taʾrīkh al-Hind al-Gharbī* [*q.v.*], an account, adapted from European sources, of the discovery of the New World, and, in the 17th and 18th centuries, by a number of other historical and geographical works which give some account of Europe, drawn mostly from European sources [see DJUGHRĀFIYĀ VI; KĀTIB ČELEBI: MÜNEDJDJIM-BASHĪ; IBRĀHĪM MÜTEFERRIḲA]. During the 18th century some additional, if rather stereotyped information was provided by a sequence of Ottoman ambassadors who went on missions to the capitals of Europe. Similar reports on journeys to Europe, mostly by official envoys, were also written in Morocco and Persia (on Turkish reports see Babinger,

323 ff. and Koray[2], 196-7; on Persian reports, Storey, i/2, 1066-71, 1153, 1195; on Moroccan travellers, H. Pérès, *L'Espagne vue par les voyageurs musulmans de 1610 à 1930*, Paris 1937, and *Hespéris-Tamuda, passim*; see further SEFĀRETNĀME, SAFĪR). From India, two remarkable travellers left accounts of visits to Europe: Shaykh Iʿtiṣām al-Dīn and Abū Ṭālib Khān [*qq.v.*]—the first in 1765-6, the second between 1799 and 1803. Both works have been translated into English.

Between the 16th and the 19th centuries, 'Frank' came to be the common term, in most Muslim countries, for Christian Europeans in general. It was however limited, as Sāmī Frasheri explains (*Ḳāmūs al-aʿlām*, s.v. Firenk), to Catholics and Protestants; 'Russians, Greeks, Bulgarians, Serbs and other orthodox peoples are not called Frank'. It has also, on occasion, been applied to various things believed to have been introduced by the Franks, such as syphilis, cannon, European dress, and modern civilization [see TAFARNUDJ].

SPAIN

In the writings of the Arabs of Spain and the Maghrib the term Ifrandj (also often Ifrandja with the additional meaning of "land of the Ifrandj") denotes any of the Christian peoples with whom the writers are acquainted. The more usual term is *Rūm*, or for Peninsula Christians *Djalāliḳa* [see DJILLĪḲIYA] or *Bashkunish* [*q.v.*]. There appears to be no distinction between *Ifrandj* and *Rūm*, and though particular writers may be suspected of using them in specific ways it is impossible to be certain; writers certainly vary among themselves and it would be unsafe in any particular case, without corroborative evidence, to draw any definite conclusions solely on the basis of the use of the term *Ifrandj*. Thus Ibn al-Abbār says that in 614/1217 the *Ifrandj* took Alcácer do Sal (*Ḥulla*, ii, 290). The account in the *Rawḍ al-miʿṭār* (s.v. *Ḳaṣr Abī Dānis*) has *Rūm*. The author of the *Rawḍ al-ḳirṭās* (*sub anno* 614) simply has *al-ʿaduww* (which is a common usage). The Christians concerned here were Portuguese assisted by German crusaders. The natural supposition that *Ifrandj* in principle means "the Franks" is not supported by the actual usage of historical writers. For instance Ibn al-Khaṭīb (*Aʿmāl*, ii, 23) refers to a Christian king in north-western Spain as one of the kings of *Ifrandja*, but also to a raid on *bilād al-Rūm* which is clearly the Narbonne region (*Aʿmāl*, ii, 11-2). The earliest use of the word *Ifrandj* by a Spanish writer seems to be that of Ibn al-Ḳūṭiyya (d. 367/977) who applies it to the inhabitants of the Saragossa region (p. 133).

This vagueness of terminology reflects a vagueness of knowledge, itself perhaps the result of a lack of curiosity, shared even by those who profess to give specifically geographical information. The rather scanty and confused corpus of material furnished by this class of writers does however show clear signs of a notion that *Ifrandj* = Franks. One strand of the web of tradition, distinguished by the use of the term *al-arḍ al-kabīra* for the continent north of the Pyrenees, has its earliest representation in the *Ṭabaḳāt al-umam* of Ṣāʿid al-Andalusī (Cairo n.d., 85). Ṣāʿid equates *Ifrandja al-ʿuẓmā* with *al-arḍ al-kabīra* but distinguishes it from *Ifrānsa*. Ṣāʿid's contemporary Bakrī (fl. 460/1067) and others after him such as ʿAbd al-Munʿim al-Ḥimyarī use similar phraseology but omit the reference to *Ifrānsa* (Bakrī, *Djughrāfiyat al-Andalus wa-Urūbba*, ed. ʿAbd al-Raḥmān al-Ḥadjdjī, Beirut 1968, 66-7; *al-Rawḍ al-miʿṭār*, s.v. *Ifrandja*). This is seemingly a native tradition owing nothing to the Orient, but another major strand is that found in its earliest form in Masʿūdī (*Murūdj*, iii, 67; ed.-tr. Pellat, § 911). Notable features of Masʿūdī's account are that the *Ifrandj* are distinct from the *Djalāliḳa*—*i.e.*, they are not inhabitants of the Peninsula—and their capital is Paris. Both Bakrī (137 f.) and ʿAbd al-Munʿim (s.v. *Ifrandja*) use Masʿūdī's material with some additions of unknown provenance but neither writer handles his material in such a fashion as to convince the reader that it has been brought up to date or collated with the other information. Thus although the article *Ifrandja* in *al-Rawḍ al-miʿṭār* gives a reasonably coherent account of France, the article *Burdīl* (Bordeaux), otherwise accurate, places that city in Djillīḳiya; and Barcelona is stated (s.v. *Barshalūna*) to be the residence of the king of *Ifrandja*. None of the extant travellers' accounts—Ghazāl, Ṭurṭūshī, Rabīʿ b. Zayd *alias* Recemundo—provides any information on the *Ifrandj*/Franks.

The picture of Western Europe which emerges is that of a vast, cold, but fertile land extending northwards to the limits of habitation and hemmed in on the east by mountains and forests in or beyond which dwell the *Ṣaḳāliba*. The Christian *Ifrandj*, though unhygienic in their habits, are hardy and good fighters. For long they owed allegiance to one king, whose capital is, or was, Paris or Lyons. So vague and fragmentary is this picture that one may with justification suspect that the extant literature does not represent fully the information on western Europe available to the Muslims of Spain.

AL-IFRĀNĪ (IFRANĪ, UFRĀNĪ, etc.) ABŪ ʿABD ALLĀH MUḤAMMAD B. AL-ḤADJDJ MUḤAMMAD B. ʿABD ALLĀH, called al-Ṣaghīr, Moroccan historian and biographer, born at Marrākush *ca.* 1080/1669-70.

His father belonged to the Berber tribe of the Ifrān or Ufrān, which was settled in southern Morocco around the Wādī Darʿa. Very little is known of his life; he pursued his studies in his native town, then at Fez, and lived either in one of the main cities of Morocco or in the *zāwiya* [*q.v.*] of the *S͟harḳāwa* [*q.v.*] of Abu 'l-D̲j̲aʿd (Boujad). Towards the end of his life he was an *imām* and preacher (*k̲h̲aṭīb*) in the Yūsufī *masd̲j̲id* (or Madrasat Ibn Yūsuf) at Marrāku*s̲h̲*; he died in either 1156/1743 or 1157/1745 (G. Deverdun, *Un registre d'inventaire et de prêt . . . daté de 1111/1700*, in *Hespéris*, 1944, 59 and ʿAbd al-Ḥayy al-Kattānī, *Fihris al-fahāris*, ii, 15).

Al-Ifrānī is known primarily as the author of the great chronicle of the Saʿdid sultans of Morocco entitled *Nuzhat al-ḥādī bi-ak̲h̲bār mulūk al-ḳarn al-ḥādī*, published with Fr. tr. by O. Houdas, *Nozhet elhadi, Histoire de la dynastie saadienne au Maroc (1151-1610)*, Paris 1888-9 (= PELOV, 3rd ser., vol. ii) (and lith. Fez. 1307). This is by far the most important source for the history of the first of the S̲h̲arīfī dynasties of Morocco, since it is based not only on the content of the contemporary chronicles but also, to a certain extent, on original archive material. It covers altogether the period from 917/1511-2 to the end of the 11th/17th century and deals, though very unequally, with the reigns of the various Saʿdid princes, the longest and most detailed account being of course that of the reign of the sultan Aḥmad al-Manṣūr [*q.v.*].

In addition to his history of the Saʿdids, al-Ifrānī wrote various other historical, biographical or literary works. The principal ones are, in the order in which they were written: (1) *al-Maslak al-sahl fī s̲h̲arḥ taws̲h̲īḥ Ibn Sahl*, a commentary on a poem by the famous Spanish poet Ibrāhīm Ibn Sahl [*q.v.*], (lith. Fez 1324); (2) a monograph on the ʿAlawid sultan of Morocco, Mawlāy Ismāʿīl, *Rawḍat al-taʿrīf* or *al-Ẓill al-warīf fī mafāk̲h̲ir mawlānā Ismāʿīl ibn al-S̲h̲arīf*; (3) a collection of biographies of the Moroccan saints of the 11th/17th century, *Ṣafwat man intas̲h̲ar min ak̲h̲bār ṣulaḥāʾ al-ḳarn al-ḥādī ʿas̲h̲ar*; this (lith. Fez n.d.) is an essential work for the history of the S̲h̲arīfī and marabout movement in Morocco from the end of the Middle Ages.

Bibliography: Further to the references given above: Ḳādirī, *Nas̲h̲r al-mat̲h̲ānī*, Fez 1310, i, 3; al-ʿAbbās b. Ibrāhīm al-Marrāku*s̲h̲*ī, *al-Iʿlām bi-man ḥalla Marrāku*s̲h̲* wa-Ag̲h̲māt min al-aʿlām*, v, Fez 1939, 53-9, (complete list of the works of al-Ifrānī); Ibn al-Muwaḳḳit, *al-Saʿāda al-abadiyya*, Fez 1336, i, 112-5; Brockelmann, II, 457, S II, 681-2; R. Sūda, *Dalīl muʾarrik̲h̲ al-Mag̲h̲rib al-aḳṣā*, Tetuan 1369/1950, 178-9, 280; Allouche and Regragui, *Catalogue des manuscrits arabes de Rabat, IIe série*, ii, (1921-1953), Rabat 1958, index.

(G. DEVERDUN)

IFRĀṬ, IFRĀṬ FI'L-ṢIFA [see MUBĀLAG̲H̲A].

IFRĪḲIYA, the eastern part of the Mag̲h̲rib, whence the name adopted by some modern historians for Eastern Barbary.

The term *Ifrīḳiya* is undoubtedly—whatever the Arab writers say—borrowed from the Latin *Africa*, so the origin of the Arabic word must be sought in the etymology of the Latin term, a question which, from the most ancient times to today, has continued to defeat scholars. What is certain is that the term *Africa*, and the other forms derived from the same radical *Afer* (pl. *Afri*), are attested in the Latin sources well before the fall of Carthage; it is known in particular that the elder Scipio (235-183 B.C.) had received after his victory over Hannibal at Zama (202 B.C.) the by-name of "Africanus"; the adjective *africus* is also attested many times in a period before the fall of Carthage (146 B.C.), whose territory, annexed by Rome, was called *Provincia Africa*, "or, through omission of the substantive, simply *Africa*" (Gsell, *Hist. ancienne*, vii, 2). This *Provincia Africa* was the country of the Afri, a term which, after having been applied to the natives of the territories of Carthage and even sometimes used to distinguish them from the *Poeni* or the *Carthaginienses*, had ended by embracing also the latter—as may indeed be inferred from the by-name of the conqueror of Hannibal. These are the only definite facts on the matter.

After this there are few precise indications on the origin of the term *Africa*, and there is no unanimity of opinion on the matter. Fournel, in 1875, declared unequivocably: "I have no hesitation in saying that it is absolutely unknown" (*Berbers*, i, 23); Gsell, some decades later, stated: "It is better to admit our ignorance on the origin of this name" (*Hist. ancienne*, vii, 5); and we are no further forward today. Nevertheless, from ancient times to today, there have been advanced a number of theories, in varying degrees ingenious or convincing, which may be classified into two main groups.

1. The mythical etymologies. From remotest antiquity, a certain number of explanations, all based on the genealogical myth of divine or heroic origin entertained in the ancient world, have been put forward. For example *Africa* was considered to be the country of the children of Afer, the son of a "princess Libya, either a native, or a daughter of Jupiter, or of Neptune, or of Epaphus" (d'Avezac, *Afrique*, 4); or else the son of the Libyan Hercules; or of Cronos and Philyra; or of Abraham and Keturah; or the grandson of Abraham and the leader of an expedition to Libya, etc. (for the sources, see Gsell, *Hist. ancienne*, vii, 4).

The Arabs, certainly not completely ignorant of these legends, which were probably fairly widespread in the country they had just conquered, themselves showed no less imagination. They adopted mainly a system of explanation probably influenced on the one hand by the ancient myths and based in addition on the model which had allowed them to propound the existence of an Arab race, that is by supposing the existence of an eponymous ancestor named generally *Ifrīḳīs* (= Africus), or sometimes *Ifrīḳīs̲h̲*, who gave his name to the Ifrīḳiyans and to their country. This explanation, later taken up with variants by most of the Arab chroniclers and geographers, represents in fact one single tradition which had been collected and disseminated by His̲h̲ām b. Muḥammad al-Kalbī (d. between 204 and 206/819-21) [see AL-KALBĪ].

It should however be noted that Ibn ʿAbd al-Ḥakam (187-257/803-71), who belonged to a family of serious *faḳīh*s and *muḥaddit̲h̲*s and who was the author of the earliest written source on the history of the conquest of Ifrīḳiya, does not mention this explanation in his work, probably advisedly. Ibn al-Kalbī is considered by serious traditionists as not to be trusted (Yāḳūt, xix, 287-8). Ibn K̲h̲aldūn, with his well-known critical approach, mentions it in his *Muḳaddima* (16) only as an example of the "false tales" (*al-ak̲h̲bār al-wāhiya*) with which his predecessors had padded out their works. And when he reproduces it later (*ʿIbar*, ii, 95, 108, 170), he does

so without taking any responsibility for it, or clearly indicating his reservations about it (ii, 170).

Ifriḳis or Ifrīḳish is of course always presented by the chroniclers relating the legend as a purely Arab hero. His history is always in some degree linked with the origin, still obscure, of the Berbers [*q.v.*], whom the Arabs generally described as Canaanite or Himyarite orientals. Ifriḳis, whose genealogy is given with a number of variants, is presented as a powerful king of the Yemen, contemporary with Solomon; he is said to have conquered the Maghrib, to which he gave his name, and established permanently there certain south Arabian tribes. Al-Balādhurī (d. circa 279/892), following Ibn al-Kalbī, refers to him as Ifriḳis b. Ḳays b. Ṣayfī al-Ḥimyarī, and the same descent is given in Ibn Khaldūn. But he is also sometimes given, among others, the name of Ifrīḳis b. Abraha b. al-Rā'ish (al-Mas'ūdī, *Murūdj*, index; al-Bakrī, *Masālik*, 21; Yāḳūt, i, 228).

The Arab chroniclers put forward also another explanation, equally mythical, in which however the hero who gave his name to Ifrīḳiya becomes a Biblical character. According to this explanation, which echoes the Greco-Jewish legend related by Josephus (Tissot, *Exploration*, i, 389, note 5), this hero was Ifriḳ (= Epher), son of Abraham and his second wife Faṭūrā (= Keturah) (al-Bakrī, *Masālik*, 21); or else Fāriḳ b. Bayṣar b. Ḥām b. Nūḥ (Noah) (Yāḳūt, i, 228). Other genealogies, equally Biblical, are suggested by Ibn Abī Dīnār (*Mu'nis*, 19).

2. The philological etymologies. Other explanations, based on the Arabic root *FRḲ* (= to separate) which is detected in "Ifrīḳiya", have also been advanced by al-Bīrūnī (d. after 442/1050, cited by Yāḳūt, i, 228), al-Zabīdī (*TA*, vii, 46), and Ibn Abī Dīnār (*Mu'nis*, 19); they explain that Ifrīḳiya was so called "because it separates Egypt from the Maghrib" (*faraḳat bayna Miṣr wa 'l-Maghrib*), according to Leo Africanus (tr. Epaulard, 3), because it is separated from Europe, and partly from Asia, by the Mediterranean.

A number of other etymologies, all by philological derivation, some ancient and others suggested by modern scholars, have been worked out from Latin, Greek or Semitic roots.

The name "Africa" is made to derive: from the Latin word *aprica* (= the Hot), an etymology suggested by Isidorus ("Africam quidam inde nominatam existimant, quasi apricam, quod sit aperta caelo vel soli et sine horrore frigoris") and Servius (see Tissot, *Exploration*, i, 289, note 2; Gsell, *Afrique*, vii, 3, note 8), and mentioned also by Ibn Abī Dīnār who, linking the Latin word to an Arabic root, writes: "Ibn al-Shabbāṭ, citing various sources, assures us that Ifrīkiya was called *Ibrīḳiya* [= Aprica], a word derived from *barīḳ* [brightness], because its sky is cloudless" (*Mu'nis*, 19); or from the Greek word *a-phrike* (= deprived of cold) (see d'Avezac, *Afrique*, 4); or from the semitic root *FRḲ*.

M. d'Avezac (*Afrique*, 4-5), after mentioning that the word *Africa* had been regarded as representing "a territory rich in spices, the country of palm-trees, the region of dust, the divided country, the land of Barqah", adds: "But how artificial these various conjectures appear beside the very simple statement of Suidas, that Africa was the ancient name of Carthage itself . . . and the basic etymology of this early name of Carthage is simply and naturally supplied by the language of Carthage itself, referring to Afryqah as a "separated" settlement, a colony of Tyre; and the Arabs came, by a regular derivation, to refer to the region dependent upon this ancient Afryqah as Afryqyah".

This explanation, which was adopted by de Slane and rejected by Fournel, Tissot, and Gsell, involves two main difficulties: (a) Firstly, it is not absolutely certain that Carthage had the name of "Afryqah" in ancient times. The isolated attestation of Suidas (Carthago, quae Africa et Byrsa dicta fuit) is that of a late author (9th-10th centuries A.D.) whom many consider unsound. It is therefore not conclusive (Fournel, *Berbers*, i, 24, n. 2; Gsell, *Afrique*, vii, 3, n. 2). (b) Furthermore, to the difficulties of derivation is added the fact that the word Afer or its derivatives, which are probably not Latin words, have not been found in any Punic inscription, either in the time of Gsell (*Afrique*, vii, 4) or today.

It was therefore natural to consider other etymologies taken from Berber words: from *ifri* (cave); or from the Īfran [*q.v.*]; or from the name of the tribe of the Awrigha.

The last etymology was first suggested by Carette, prompted by the derivation of the word Libya, used by the Greeks, and which originally referred to the country of the *Lebou* or *Luwāta*. Reasoning along the same lines, he wrote on the origin of the term *Africa*: "It was probably for the Phoenician colonists of Carthage what the name of Libya had been for the Greek colonists of Cyrene . . ., a name borrowed from the people with whom they first came in contact, and already traditionally in use in the country; a name earlier even than that of Libya, since the settlement of the Carthaginians was earlier than that of the Cyreneans" (*Recherches*, 309-10). After adding that "this origin of the name of Africa is not based on any documents", but that it nevertheless seemed to him "probable", he attempts, with the help of some rather tenuous proofs, to establish that the Awrigha must, in the remotest antiquity, have inhabited the territory occupied by Carthage. Under the domination of the latter, "this tribe of the Aourir'a [= Awrigha] may have been destroyed or dispersed, except for one single group, the Haouâra . . ." (*Recherches*, 311).

This explanation was adopted by Vivien de Saint-Martin and by Tissot, who identified the Awrigha with the "Afāriḳa" of the Arab geographers, and with the "Ifuraces" of Corippus. We know today that this identification is hazardous. Furthermore, Carette's explanations are based only on the most fragile of hypotheses. In the absence of definite facts, and if one is not (with the prudence of Fournel or Gsell) to admit that one knows nothing, it seems that the least hazardous hypothesis remains that which makes the term Africa (= *Ifrīḳiya*) derive from the Semitic root *FRḲ*. Indeed, since the Romans could neither have found the word in their own language nor have borrowed it from the Greeks (who called Ifrīḳiya "Libya"), they can have received it only from their predecessors, the Carthaginians, whose heirs they had become through the fortunes of war. The "Land of Africa" or the *Provincia Africa* —the Ifrīḳiya of the Arabs—referred first of all in fact to the territory which had been conquered from Carthage and fallen under the authority of Rome. This is the only fact which is indisputably established.

Since the Arabic script does not indicate all the vowels, there exists some uncertainty about the spelling of the word Ifrīḳiya. The compilers of some dictionaries reproduce the word without vocalization, and give no indication of how it is to be read (*Ḳāmūs*, iii, 275; *Ṣiḥāḥ*, iv, 1543). In Ibn Durayd (d. 321/933),

the word is vocalized thus: *Ifrīḳiyya* (*Djamhara*, i, 126), without any indication whether this vocalization is that of the author or of the editor. Ibn Manẓūr (*LA*, x, 307) states that it should be read *Ifrīḳiya* (*mukhaffafat al-yā'*); and al-Zabīdī (*TA*, vii, 46) adopts the same spelling. He stipulates that it should be read (*bi 'l-kasr ... wa-hiya mukhaffafa*). These two writers also add that the plural of Ifrīḳiya is *Afāriḳ*, and quote two verses of al-Aḥwaṣ (which are not an absolutely conclusive proof). In Ibn Abī Dīnār, the word is sometimes spelt Ifrīḳiyā (in the title for example), and sometimes Ifriḳiya (*Mu'nis*, 19).

Today's usage is mainly as follows: Ifrīḳiyā is used when referring to the African continent, and Ifrīḳiya when referring to the mediaeval Arabo-Muslim territory which bore this name.

The limits of Ifriḳiya. The boundaries of this territory are very indefinite. The details given by the various Arabo-Muslim geographers and historians do not always agree, and it is clear that the exact frontiers of Ifrīḳiya were never very precisely understood.

In general, the first Arab historians of the conquest confused Ifrīḳiya with the territory which came under the power of the exarch Gregory, whose authority was considered to extend from Tripoli to Tangiers (Ibn ʿAbd al-Ḥakam (d. 257/871), *Futūḥ*, 42-3; al-Balādhurī (d. circa 279/892), *Futūḥ*, i, 267). One page before this, however, the same al-Balādhurī makes ʿAmr b. al-ʿĀṣ write, in a letter addressed to ʿUmar: "We have reached Tripoli, a town separated from Ifrīḳiya by nine days' march". Al-Warrāḳ (4th/10th century), the source of al-Bakrī (*Masālik*, 21), considered that "the boundaries of Ifrīḳiya extend, in length, from Barḳa in the east to Tangiers the Green, called also Mauritania, in the west. In width, its boundaries extend from the sea to the sands which mark the beginning of the country of the Black People (*al-Sūdān*)" (see also Yāḳūt, i, 228; al-Ḥimyarī, *Rawḍ*, fol. 75; Ibn Abī Dīnār, *Mu'nis*, 20). Thus all these writers regarded Ifrīḳiya as comprising the whole of the Maghrib. This idea, as a result of political vicissitudes, became progressively modified in other authors.

The geographer Ibn Khurradādhbih (d. circa 272/885), who divides the inhabited world into four parts, adopts the Greek terminology to describe the African continent; he calls it *Lūbya* (= Libya) and includes in it Egypt, Abyssinia, the country of the Berbers, etc. (*Masālik*, 24-5). He reserves the term Ifrīḳiya for the Aghlabid kingdom, of which he lists the main towns (*Masālik*, 6-7). This tendency to limit Ifrīḳiya proper, at the most to the kingdom which was that of the Aghlabids, re-appears in most of the other geographers (Ibn al-Faḳīh (d. circa 290/903), *Buldān*, 30-1; al-Iṣṭakhrī (d. circa 350/961), *Masālik*, 33; Yāḳūt (d. 626/1229), i, 228; Marrākushī (d. circa 647/1249), *Muʿdjib*, 273, 433-42). This kingdom extended from the east of Bougie to a few parasangs from Barḳa (al-Yaʿḳūbī, *Buldān*, 215).

Saḥnūn (d. 240/855), however, considered that "the boundaries of Ifrīḳiya extend from Tripoli to Tobna" (*apud* al-Dāwūdī, *Amwāl*, in *Mél. Lévi-Provençal*, ii, 409). For al-Muḳaddasī (d. circa 375/985) "the first district (*ḳūra*) on coming from Egypt is that of Barḳa; next come Ifrīḳiya, the districts of Tāhart, of Sidjilmāsa and of Fās, then Sūs al-Aḳṣā" (*Aḥsan al-taḳāsīm*, 4-5), and he mentions, among the towns of Ifrīḳiya, Djazīrat Banī Zaghnāya (Algiers), Mattīdja (Mittidja) and Ashīr, that is to say, regions over which the Aghlabids never had any authority. It should finally be noted that Yāḳūt fixes its western limits, according to some, at Bougie or at Miliana, whereas Ibn Abī Dīnār states that in his time (end of the 11th/17th century) the word Ifrīḳiya was hardly used any more, except of the plain of the Medjerda as far as Bēja (*Mu'nis*, 20). This last usage has still not entirely disappeared from the Bedouin language of Tunisia.

In short, Ifrīḳiya was sometimes confused with the whole of the Maghrib and sometimes considered as a geographically separate region. It may be said that the geographical Ifrīḳiya consisted essentially of the ancient (Numidia) Proconsularis and Byzacena, which formed the nucleus of it, to which were later added Tripolitania, the Numidia of the Aurès, and even a part of Sitifian Numidia. Upon this geographical concept was superimposed an administrative concept. Because of this Ifrīḳiya tended to be confused, in the writings of the chroniclers, with the territory which in the Middle Ages was ruled in turn from Ḳayrawān, from Mahdiyya or from Tunis, a territory which expanded or contracted according to the vicissitudes of history. This explains the often ambiguous use of the term, the implication of which becomes clear only in relation to the context and the period.

(M. TALBI)

ʿIFRĪT, sometimes connected with *nifrīt*, wicked, is an epithet expressing power, cunning and insubordination. In spite of its aberrant form, the word seems to be of Arabic origin. The lexicographers consider it to derive from the verb *ʿafara*, "to roll someone in the dust" and, by extension, "to bring low".

The word is used rarely in Arabic poetry of the time of the *Hidjra* and is found only once in the Ḳurʾān. To Solomon's request that he should be brought the throne of the queen of Sheba, "an *ʿifrīt* of the *djinns* said, 'I shall bring it to you before you can rise from your place'" (XXVII, 39). From all the evidence, and as is also confirmed by the beginning of verse 40 of the same *sūra*, the epithet is not there used of a special category of *djinns* but in the sense of "rebellious". A *ḥadīth* attributed to Muḥammad and reported by Abū Hurayra uses the same expression: "*ʿifrīt min al-djinn*" (Muslim, *Ṣaḥīḥ*, Cairo 1334, ii, 72; cf. al-Damīrī, *Ḥayawān*, Cairo 1319, i, 173).

After its use in the Ḳurʾān, the word became more widely used: in its substantive form, it came to mean a class of particularly powerful chthonian forces, formidable and cunning. It would, however, be difficult to state exactly its implication because of the ambiguity of the term *djinn*, which is applied to everything hidden and veiled from sight, and includes demons as well as *mārid*. The latter word, which is also found only once in the Ḳurʾān (XXXVII, 7), is used there also as an adjective and means strictly "rebel" (cf. Ḳurʾān, IV, 117, XXII, 3). But it in its turn ended by being used of one particular class of fantastic beings from the nether regions, which are difficult to distinguish from the *ʿafārīt*. The Islamic theologians must soon have felt the necessity of providing a clearer definition of these rather obscure and shifting notions. The majority of the commentators considered both the one and the other to be rebellious and wicked demons. Al-Djāḥiẓ provides more precise definitions. According to him, the *shayṭān* is a renegade *djinnī* who sows discord and does evil; one who is strong enough to perform difficult tasks, carry heavy burdens and overhear what passes in the upper regions (cf. Ḳurʾān, XXXVII, 6-10, LXXII, 8-9) is a *mārid*; one who is more powerful still is an *ʿifrīt* (*Ḥayawān*, Cairo 1356, i, 291). In fact, the difference between these infernal beings is not a qualitative one at all; it is solely a matter of their varying abilities to perform marvels.

From this general point of view, the popular tales are in agreement with al-Djāḥiẓ. But they often represent the *mārid* as superior to the *ʿifrīt*; he is even forty times stronger than him (*Sayf b. Dhī Yazan*, Cairo n.d., iii, 155). He has at his command a thousand auxiliaries, *ʿawn*; each auxiliary has under his orders a thousand *shayṭāns*, each of whom is in command of a thousand *djinnīs* ("Thousand and one nights", no. 995). Nevertheless this superiority is not always asserted. It can happen that the *ʿifrīt* dominates its rivals from afar (*Sayf*, ii, 131, 286 f.). The story-tellers even add a subtle remark which is certainly surprising: the *djinnī* and the *ʿifrīt* are endowed with the same strength; but the *djinnī* surpasses the *ʿifrīt* in its power to assume different forms, which the latter is incapable of doing (*Sayf*, iii, 155). However, in the "Thousand and one nights" the *ʿifrīt* appears to humans in the most varied forms (nights nos. 14 and 22). The same is true of the *mārid*, which transforms itself into a bird, a snake, a woman, etc. It would in fact be difficult to establish a real distinction between the two main types of the Arab chthonian genies. Moreover it is not unusual for editors to use indiscriminately the terms *ʿifrīt* and *mārid* (nights nos. 3, 4, 672, 674, 675; *Sayf*, i, 45, 49, 97, 127), which leads to the conclusion that they are synonymous. In fact they certainly come from the same mould, so that it is possible for the same description to serve for both.

In the popular tales, the *ʿifrīt*, like the *mārid*, is a *djinnī* of enormous size (night no. 1; *Sayf*, i, 47). It is formed basically of smoke (night no. 3; *Sayf*, ii, 2), which allows it to contract and to insert itself into a jar (night no. 3). When it is wounded, smoke emerges from its wounds (*Sayf*, i, 50, 97), although, in the Ḳurʾān, the *djinns* are created of "clear fire" (LV, 15). It has wings which it unfolds when it takes flight (night no. 179; *Sayf*, i, 50). It haunts ruins (night no. 991) and lives under the ground (nights nos. 6 and 184; *Sayf*, i, 47), which is its true habitat. In spite of its great power, it is possible for man to enslave it, with the help of God and by means of magic. The sharpest weapons have no effect on it (*Sayf*, ii, 287); in order to wound or kill it, it must be bewitched (*Sayf*, i, 43, 162).

On the moral plane, the *ʿafārīt* are not fundamentally evil. One of them takes pity on an unfortunate husband terrorized by his wife (night no. 991), another allies himself with an *ʿifrīta*, to give help to a young girl who is being forced to marry a hideous hunchback (nights nos. 21 and 22). However, it is wickedness that predominates among this species of renegades. They carry away men's daughters (*Sayf*, i, 96) and will stop at no misdeed. It is from among them that the magicians choose their acolytes. But there are also believing *ʿafārīt*, who do good and carry out God's purposes.

Like all the djinns, the *ʿafārīt* are divided into males and females, but the *ʿifrīta* (nights nos. 2 and 22) sometimes seems to be more powerful than the male (*Sayf*, i, 94). They marry among themselves, and it is possible for them to marry humans (nights nos. 2 and 659). Their social organization is an imitation of that of the Arabs. They are divided into tribes and clans and ruled by kings who sometimes go to war (nights nos 652-9): Their conception of honour is inspired by that of the Bedouin; they are obliged especially to carry out blood vengeance (*Sayf*, ii, 160, 167).

The term *ʿifrīt* may be used of humans, and even of animals. It then expresses cunning, ingenuity and strength (*al-Ḳāmūs al-muḥīṭ* and *LA*, art. *ʿafara*). In contemporary Islam it always has the meaning of "powerful and formidable demon". In Egypt, together with this general meaning (Lane, *Manners and customs of the modern Egyptians*, London 1895, 232), which gives supremacy to the *mārid* (A. Amin, *Ḳāmūs al-ʿādāt*, Cairo 1953, 355), it means also the ghost or spirit of a person deceased (Lane, *ibid.*, 236). In the Arabic dialect of Syria, it means both a chthonian genie and a man who is intelligent and resourceful.

Bibliography: In addition to the works mentioned in the article, the main works on *djinna* may be consulted: Shiblī, *Akām al-murdjān fī aḥkām al-djān*; Ḳazwīnī, *ʿAdjāʾib al-makhlūḳāt*; N. T. Niʿma, *al-Djinn fi 'l-adab al-ʿarabī*, Beirut 1961; J. Henninger, *Geisterglaube bei den vorislamischen Arabern*, in *Studia Instituti Anthropos*, xviii (1963). It should be mentioned in passing that Wensinck

rejects the Latin etymology of the word *djinn* and considers, with Wellhausen, that it is of Arabic origin (*The etymology of the Arabic djinn*, 506, in *Verslagen en Mededeelingen der Koninklijke Akademie van Wetenschappen*, 5e reeks, Deel IV, Amsterdam 1920). See the discussion in J. Chelhod, *Les structures du sacré chez les Arabes*, Paris 1965, 70.

IFRUḲLUS [see buruḳlus].

ĪGHĀR, verbal noun of the fourth form of the root *w.gh.r.* (?), meaning here an exemption or a privilege with respect to taxes. The classical ʿAbbāsid administration used this term both for the privilege, and for the land which was covered by this privilege, of having to pay only one single tax payment, directly to the Treasury and not through tax-collectors. The districts of Mardj and Karadj in western Iran are regularly referred to as al-Īghārayn even after they had lost the official status which earned them this name. In the following centuries the term *īghār* disappeared, becoming absorbed in that of *iḳṭāʿ* [*q.v.*] which gradually broadened in connotation.

IGHARGHAR, Eghergher in Tuareg, is a Saharan wādī to the north of the massif of Hoggar (Ahaggar). Its most important tributary is, on the west, the Taghmert n-Akh. The basin of the Igharghar runs from the volcanic massif of Atakor, in the south, to the plateaus of primary sandstone of the "Tassilian enceinte" (Emmidin and Tassili of the Azdjer), surrounded by the granitic and metamorphic mountains of Tefedest and Turha. The Igharghar and its tributaries flow, usually intermittently, at the most once a year and their waters do not usually reach as far as Amguid. To the north of Amguid a secondary flow seems however to take place along the gorges which cross the *hamada* of Tinghert. Then the bed of the Igharghar disappears in the dunes of the great eastern Erg. It may perhaps have had a longer course during the wet spells of the Quaternary Age via the Gassi Touil and the Oued Righ to as far as the Melghir salt lake. The valley of the Igharghar, affording very poor pasturage, is not a route of much importance. Amguid is a minor administrative centre and the small agricultural centres (*arem*) such as Idelès, upstream, are rare and often temporary.

IGHRĀḲ, IGHRĀḲ FI'L-ṢIFA [see mubālagha].

ĪHĀM [see tawriya].

IḤDĀTH, *maṣdar* of *aḥdatha*, from the root *ḥ.d.th.*, which expresses the idea of an innovation in time. *Ḥadīth* is the opposite of *ḳadīm*, "ancient", whence "eternal" *a parte ante*; *ḥudūth* is the opposite of *ḳudma*.

In the Ḳurʾān the fourth form (*yuḥdith, muḥdath*) is used with the direct object *dhikr*. Commenting on XX, 113, Fakhr al-Dīn al-Rāzī considers why the Word of God produces a *dhikr* and not a *taḳwā*; the reason, he suggests, is that "*taḳwā* denotes the act of not doing evil, and it consists in remaining in a fundamental negativeness" (*wa-dhālika 'stimrār ʿala 'l-ʿadam al-aṣlī*); "as for the production of *dhikr*, it is something new coming into being after not having existed (*ammā ḥudūth al-dhikr fa-amr ḥadath baʿd an lam yakun*)". *Ḥadath* clearly contrasts here with *istimrār*, an unchanging permanence; remembering, in fact, denotes a change of state which causes a transition from oblivion to memory. In his commentary on XXI, 2, where we find *dhikr muḥdath*, he explains that God renews men's memory (*yudjaddid lahum al-dhikr*) at every moment (*waḳtan fa-waḳtan*), verse after verse and sūra after sūra. It may be called a continuous revelation, that is to say constantly renewed, parallel to continuous creation. One cannot, however, follow the Muʿtazila, who, on the basis of this verse, argue thus: the Ḳurʾān is *dhikr*, *dhikr* is *muḥdath* (created) and so the Ḳurʾān is created. The Ḳurʾān, which uses many terms to signify creation, does not use *aḥdatha* in this sense.

In the *ḥadīth* on Medina, according to the explanation of the *LA*, the expression *aḥdatha ḥadathan* means to introduce or to encourage an innovation, in the sense of a heretical innovation, *bidʿa*; this is interesting in that it brings together the two roots *ḥ.d.th.* and *b.d.ʿ.*, and, consequently, *iḥdāth* and *ibdāʿ* (*cf. infra*).

In his *Taʿrīfāt*, al-Djurdjānī is very close to the lexicographical sense. *Iḥdāth* is the act of bringing into existence a thing that is preceded by a time (*īdjād shayʾ masbūḳ bi-'l-zamān*). *Muḥdath*, then, is contrasted with *sābiḳ*, that which precedes and is a time. The idea of a production in time can be applied to everything that appears, in this world, for the first time in a moment of time, or to the creation in time of the universe (a doctrine rejected by the philosophers). Ibn Manẓūr writes (*LA*): "*Ḥudūth* is the generation (*kawn*) of something that did not exist". This root is then applied to the creation of beings by God; this is made clear in the sentence: *lam yakun, thumma kāna*, "it was not, *then* it was". These expressions do not, in themselves, necessarily imply creation *ex nihilo*, for, in the view of the *falāsifa*, *kawn*, in the Aristotelian sense of γένεσις, is the actualization of a material potentiality; this presupposes the existence of a matter. Ibn Rushd writes: "If something is produced without change it must be produced from a non-thing (*law kāna yaḥduth shayʾ min ghayr taghayyur la-ḥadatha min lā-shayʾ*)". He defines *takawwun* (establishment in being) as a production that follows a change (*ḥudūth tābiʿ li-taghayyur*). Immediate and absolute *ḥudūth* or *iḥdāth* is inconceivable to him.

For the senses in which Ibn Sīnā uses *iḥdath*, in comparison with *ibdāʿ*, *ṣunʿ* and *takwīn*, A.-M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, should be consulted, as should also *La distinction de l'essence et de l'existence d'après Ibn Sīnā* (see the index under Ḥ.d.ṯ.) and the *Livre des Directives et Remarques* (trans. of the *Ishārāt*, notes to pages 373, 377, 386), both by the same author. Apart from the general sense of "produce", Ibn Sīnā gives many precise philosophical senses. He distinguishes between *al-iḥdāth al-zamānī*, the act of bringing into existence a thing which did not exist at an earlier time (*fī zamān sābiḳ*), and *al-iḥdāth al-ghayr zamānī*, the bringing into existence of a thing that does not contain that existence in its essence, not at one time to the exclusion of another, but at any time. Since time is not generated through generation in time, but through immediate creative production (*ibdāʿ*), the Creator (*muḥdith*) is anterior not in time, but by essence. Then again, every effect (*maʿlūl*) is *muḥdath*, for it draws its existence from something else. In this sense, *iḥdāth* consists in bringing into existence an essence which, in itself, is merely possible, and the *muḥdath* is thus the contingent, not in the

sense that it could equally exist or not exist, but in the sense that, when it exists, it does not exist of itself. This relation of ideas is well demonstrated in a commentary of Fak͟hr al-Dīn al-Rāzī on the famous verse 117 of the *sūrat al-baḳara*: "Immediate Creator (*badīʿ*) of the heaven and the earth, and when he has decided something he has only to say to it: Be! and it is". Al-Rāzī writes, in a style rather like that of Avicenna: "Everything that is not the necessary Being is possible (*mumkin*) by its essence; everything that is possible by its essence is brought into being (*muḥdat͟h*; here, not in time); and every *muḥdat͟h* is created (*mak͟hlūḳ*) as a creature of the necessary Being". Then, showing that it is impossible to take this verse literally, he interprets it by a *taʾwīl* and says that it indicates "the speed with which divine power enters upon the bringing into being of things: God creates (*yak͟hliḳ*) them, but not with reflexion, taking precautions or experimentation". *Kun*, then, relates to Avicenna's sense of *ibdāʿ*, conformably with the first word of the verse, *badīʿ*. In fact, however, there is no need to distinguish between two kinds of action, in the case of the creation of the world by God; it may be said that *iḥdāt͟h*, with reference to the Creator, is an *ibdāʿ*, inasmuch as it denotes the immediate action of the first Cause. When the first cause, however, produces, through an intermediary, secondary causes, *iḥdāt͟h* is the term that applies, and it must then be distinguished from *ibdāʿ*.

When we leave *falsafa*, the inheritor of the metaphysics of matter and form, and move to As͟hʿarite theology, which is founded on the idea of the discontinuity of time and that of the reality of bodies, creation *ex nihilo* is more easily justified as the only logical solution of the contingency of creatures. Al-Bāḳillānī distinguishes the knowledge of the *ḳadīm*, the object of which is God, from the knowledge of the *muḥdat͟h*, the object of which is the world (*ʿālam*). The beings of the world are divided into bodies which are compound, substances each of which is an atom (*d͟jawhar munfarid*), and accidents (*aʿrāḍ*), which exist in bodies and in substances. Everything that is not God is *muḥdat͟h*. Bodies, being compounded (*muʾallaf*), are necessarily produced in being; the same, however, is true of substances and accidents. The demonstration of this, in which al-Bāḳillānī makes a division into two, accident and substance (in his reasoning he no longer mentions substances, and replaces them by bodies, doubtless because the argument, which can be more easily grasped at the level of the compound, is for him equally valid for the simple), is as follows: accidents are realities which come into existence (*ḥawādit͟h*); when one is produced, motion, for example, another, rest, is destroyed. Bodies cannot, however, exist before their accidents exist, for, in their composition, the parts that compose them have certain accidental relationships of proximity of distance. Thus, if bodies do not precede accidents, which are *muḥdat͟hāt*, they are themselves necessarily created. It is apparent that atoms, also, cannot exist without being in a place, in rest or in motion and in some relationship with one another, all of which determinations are accidents, since they are variable. Thus these singular substances do not precede accidents, and they are created. Al-Bāḳillānī defines *muḥdat͟h* as a being that derives from not-being (*al-mawd͟jūd ʿan al-ʿadam*). Now, as an accident cannot subsist by itself in two successive moments of time, *iḥdāt͟h* is, broadly speaking, a continuous creation, just as much for *aʿrāḍ* as for *d͟jawāhir*. Substance is not a being that, once it exists, subsists by the laws of its nature alone. God makes it exist (*īd͟jād*) and subsist (*ibḳāʾ*), as al-Rāzī shows in many passages of his *Mafātīḥ al-g͟hayb*, especially in the commentary on the sūra *Sabā*. Thus we may say that, in the minds of the theologians, *iḥdāt͟h* is, relative to creation, both *īd͟jād* and *ibḳāʾ*. ʿAbd al-Ḳāhir al-Bag͟hdādī presents the same ideas as al-Bāḳillānī in his *K. Uṣūl al-Dīn*.

The radical opposition of *ḳadīm* and *muḥdat͟h* is of Muʿtazilī origin. This school understands *īd͟jād* in the strict sense of the creation of existence, to the exclusion of essence. The Muʿtazila wish thus to banish from creation all exemplarism. The way that this problem of theirs is dealt with, however, is outside the terms of reference of a study of *iḥdāt͟h*.

It should be noticed that the idea of *iḥdāt͟h* can be distinguished from that of *k͟halḳ*, in that it refers rather to the newness of the thing created, whereas *k͟halḳ* denotes the actual act of the creator. In absolute terms, a *muḥdat͟h* whose *muḥdit͟h* does not exist can be conceived of. But, as Ibn Ḥazm points out, if the Creator (*K͟hāliḳ*) is the one that gives being (*mūd͟jid*), "God constantly causes every existing thing to exist throughout its existence". Ibn Ḥazm agrees with al-Naẓẓām in stating, in opposition to As͟hʿarite atomism, that continuous creation is not a succession of *iḥdāt͟h*, in which, at every moment, a creature's existence is renewed after having been destroyed, but an action that continues uninterruptedly as long as the creature is to survive: "*wa-'llāh mūd͟jid li-kull mā yūd͟jid fī kull waḳt abadan wa-in lam yufnihi ḳabl d͟hālik*" (*Fiṣal*, v, 55).

(R. Arnaldez)

IḤRĀM, *maṣdar* of the verb *aḥrama*, is an "act of declaring (or making) sacred or forbidden". The opposite is *iḥlāl* "act of declaring permitted". The word *iḥrām* had become a technical term for the state of temporary consecration of someone who is performing the *ḥad͟jd͟j* or the *ʿumra*; a person in this state is referred to as *muḥrim*. The entering into this holy state (also called *iḥlāl*) is accomplished, for men and women, by the statement of intention, accompanied by certain rites and in addition, for men, by the donning of the ritual garment. When making the intention, the pilgrim states the juridical type of pilgrimage which he wishes to perform [see ḤAD͟JD͟J, iii, § B]. To be in a state of *iḥrām* is considered an indispensable condition (by the Ḥanafīs) or *rukn* (by the three other schools) of both the great and the lesser Pilgrimage. For the *ḥad͟jd͟j* the entering into this state may normally take place during the months of S͟hawwāl, D͟hu 'l-Ḳaʿda and the beginning of D͟hu 'l-Ḥid͟jd͟ja (up to and including the night of the 9th/10th). For the *ʿumra* it may take place at any time of the year, except for the middle days of the *ḥad͟jd͟j*.

The places (*mīḳāt* or *muḥall*) traditionally stipulated for the assumption of the *iḥrām* are: (a) For those coming from Syria, Egypt or the west: originally al-D͟juḥfa, now replaced by a locality near it, Rābig͟h (about 200 km. north-north-west of Mecca). (b) For those coming from ʿIrāḳ or further: D͟hāt ʿIrḳ, about 94 km. north-east of Mecca, at the foot of Mount ʿIrḳ, which dominates Wādī 'l-ʿAḳīḳ; this is the site of the present-day Ḍarība. (c) D͟hu 'l-Ḥulayfa (the present-day Abar ʿAlī, about ten kilometres from Medina) for the Medinans. (d) For those coming from the Yemen by the Red Sea coastal route: Yalamlam, a mountain of the Tihāma, 54 km. (?) or two stages (?) south of Mecca. (e) For the people of the Nad͟jd: Ḳarn al-Manāzil (to the east of ʿArafāt). (f) The people of Mecca and other Muslims

who are already in Mecca assume the *iḥrām* for the *ḥadjdj* in Mecca itself, but they are obliged to leave the holy ground (*ḥaram*) of Mecca if they propose to assume it for the *ʿumra*. In this case they will go for preference to al-Djiʿrāna or to Tanʿim (the present-day masādjid ʿĀʾisha).

Pilgrims travelling by boat put on the holy garments while on board, when their boat draws level with the appropriate *mīḳāt*. Those travelling by air do so at the place from which they board the plane for Djudda.

The garment for men consists of two pieces of white seamless cloth. One (*izār*) is worn round the loins and falls to the knees like a wide loin-cloth. The other (*ridāʾ*) is draped round the upper half of the wearer's chest. This type of garment, which must formerly have been in common use, is still worn today by the Afars (or Danāḳil) in the deserts at the foot of the mountains of Ethiopia towards the Red Sea as well as by some Somali tribes of the country. The costume is completed by sandals (or, if need be, shoes which leave the ankles uncovered). Men's heads must be bare. In addition a sunshade may be used and papers or items of value may be carried in a leather shoulder-bag. There is no special garment for women, but propriety demands that they wear long sleeves, fairly long skirts and, nowadays, a kind of kerchief and head-veil.

The minutiae, and the differences between the juridical schools, are such that it is impossible to enumerate all the details here. Before entering that state of *iḥrām* the pilgrim usually performs a major ablution (*ghusl*) and has his hair and his nails cut and his armpits shaved. It is permitted at this stage to use a perfume which leaves no trace, as did the Prophet when he made his Farewell Pilgrimage. Two traditional *rakʿa*s are performed (*sunna*). After this the pilgrim recites many times the *talbiya* [*q.v.*].

The jurists lay down the following points: it is forbidden to the *muḥrim* to wear any sewn garments; he must refrain from arguments, from hunting, from sexual intercourse, from perfumes, and from cutting or trimming the hair of his head or body or his nails. He is however permitted to wash himself and scrape his skin in moderation, but without causing any hairs to fall out. Any contract of marriage made while in the state of *iḥrām* is not valid. Expiatory measures are prescribed for those who fail to observe any secondary requirements of the ritual. All the prohibitions belonging to this state of consecration cease with the return to normal life following the final de-consecration [see ḤADJDJ, ʿUMRA]. This includes the cutting or trimming of the hair and the resumption of normal clothes.

Preachers stress the fact that the *iḥrām* symbolizes the pilgrim's separation from the world and his intention to be with God alone; it also demonstrates the unity of the Muslim community and the equality of all its members, without any priestly hierarchy or any superiority arising from worldly attributes.

In an entirely different context, the expression *takbīr al-iḥrām* refers to the *takbīr* with which the ritual prayer begins, and which puts the worshipper into a temporary state of special relationship with God.

(A. J. WENSINCK-[J. JOMIER])

IḤṢĀN [see MUḤṢAN].

IḤSĀN, AḤMAD [see AḤMAD IḤSĀN].

IḤTISĀB [see ḤISBA].

IḤYĀʾ means, in the language of the *fuḳahāʾ*, "bringing to life", with the precise meaning of putting a piece of land to use. The word is in fact nearly always associated with *mawāt* [*q.v.*] lands, that is, land which is uncultivated or merely lying fallow, which belongs to nobody and which is, in general, far from centres of population. The appropriation of this land by an individual entails his first putting it to use. The writers base this method of acquiring property by putting it to use on a statement by ʿUmar and on *ḥadīth*s which they trace to the Prophet and in which it is said in particular: "*Mawāt* land belongs to whoever restores is to life" (cf. al-Bukhārī, *Ṣaḥīḥ*, ii, *Bāb man aḥyā arḍan mawātan*).

Before investigating what is entailed by the "putting to use" necessary for the legal acquisition of such lands, it is as well to define whether or not this operation (whatever the methods employed) must be preceded by an authorization from the public authority. Preliminary authorization is insisted on only in Ḥanafī law, following the opinion of Abū Ḥanīfa, which prevailed over that of his disciples, and in Imāmī Shīʿī law. The other schools consider it unnecessary, or at the most recommended, as in Shāfiʿī law. It is unnecessary even in Mālikī law, although this seems to insist on the previous authority of the *imām* when land near to inhabited places is concerned; but on careful examination of the texts which are the accepted authorities in this school, it is seen that what is required is not an actual authorization but a check by the *imām* to ensure that the land which it is planned to bring into use is not "common" land, in which case, since such land may not be acquired by an owner, any "putting of it to use" would be invalid. There is no danger of this however with land which is very far from habitation, hence there is no necessity for a previous authorization with regard to it.

Whether authorization is necessary, as in Ḥanafī and Imāmī law, or superfluous, as in the system of the other schools, the question arises as to whether the *dhimmī* has the same right as the Muslim to put waste land to use in order to become the owner of it. There is no uncertainty about this in Ḥanafī law: the Ḥanafīs say that there is no reason to deprive the *dhimmī* of using *iḥyāʾ* as a means of acquiring a property since he is allowed to use all the other means of acquiring property which are recognized by Muslim law. It may be that the liberalism of Ḥanafī law is to be explained by the fact that since this school insists that *iḥyāʾ* has to be subject to an authorization from the *imām*, the decision whether it should be granted to a *dhimmī* is left to him. In the other schools the question is a very controversial one. Although the Mālikīs adopt a solution very similar to that of the Ḥanafīs (that the *dhimmī* has the same rights in this as the Muslim), Shāfiʿīs, Ḥanbalīs and Imāmīs vary, according to the school, between supporting the liberal attitude and defending the principle whereby in Islamic countries waste land is reserved for Muslims.

What constitutes *iḥyāʾ*? What must the would-be

Pilgrim in *iḥrām* dress.

owner do in order to be considered to have put to use a piece of land hitherto considered as vacant or waste and hence acquire the ownership of it? There arises here the distinction between *taḥdjīr* or "delimitation" and putting to use properly so-called, *iḥyāʾ*. A person who has been authorized to put to use a piece of land (in Ḥanafī or Imāmī law) or who, on his own account (in the other systems), chooses a piece of waste land, with the intention of putting it to use, must begin by defining the limits of the land which he is undertaking to exploit. This is *taḥdjīr*, so called because the first procedure is to set stones along the length of each boundary in order to fix the extreme limits of the area to be brought into use. Any other method of delimitation—a fence for example, or a ditch—is equally valid. *Taḥdjīr* is not in itself "putting to use" and hence does not confer ownership; on this point the *fuḳahāʾ* of all the schools agree completely; but this delimitation nevertheless forms the first step towards an actual putting to use of the waste land. It should be stressed however that the importance of this first stage varies greatly according to whether Ḥanafī doctrine or that of the other schools is involved.

A. In Ḥanafī law, because for the actual *iḥyāʾ* the previous authority of the *imām* is always insisted upon, the simple formality of delimitation, even although carried out without authorization, confers on the person performing it a sort of *de facto* monopoly, since he could be supplanted only by an actual exploiter provided with the (very unlikely) authorization of the *imām*. This "monopoly" lasts for at least three years. This was in fact the period which, in accordance with the sayings of ʿUmar, was granted to the exploiter in order that he might complete the bringing into use of the land whose boundaries he had already marked out. Once this period had expired, unless the *imām* granted him a further extension of it, the land was taken from him to be given to a more diligent exploiter. But if the putting to use was completed within the three years, the occupant of the land became the absolute owner of it. Apart from this, Ḥanafī law is not very exacting over the conditions of this putting to use. The Ḥanafī writers (only the later writers it is true) consider that these conditions will depend on the exploiter's final intentions for the waste land. If the land is desert and he intends to cultivate it, he will have, first of all, to irrigate it, for example by digging a well; if he plans to live there, it will be enough for him to build the four walls of a house (Ḥanafī law does not insist that this house should have a roof). As the logical conclusion of the reasoning which makes the conditions of the putting to use depend on the use which is finally to be made of the land, it could be admitted that the mere erecting of a fence constitutes a real putting to use, when the possessor has decided to use the land considered as waste land simply for grazing sheep.

B. In the doctrine of the other schools, *taḥdjīr* has much less weight than in Ḥanafī law, because of the fact that the *iḥyāʾ* itself is not subject to an authorization. If confers on the person who has performed it only a priority of claim, and this only of a moral kind, in the sense that it has no legal sanction and that nobody is forced to respect it except as a matter of conscience (*diyāna*). The result is that if a person other than he who has marked the boundaries were to manage to put the land to use before him, this other person would be considered as the real owner of the land, and the right of priority of the person who had done no more than define the boundaries would lapse. All the same, this moral right was, at certain periods, strong enough for the Ḥanbalī Ibn Ḳudāma (*Mughnī*, v, 519) to have no hesitation in including it among the possessions left on the death of someone who has already marked the boundaries of, but not yet acquired ownership of, a piece of land. To make up for the uncertainty of *taḥdjīr* as conceived by the non-Ḥanafī writers, the latter are more exacting than the Ḥanafīs on the conditions of the putting to use. They recognize, it is true, that there exist no absolute rules concerning it and that what is understood by putting to use (*iḥyāʾ*) is governed by the usage and custom of each country, taking into account the geographical situation and the nature and quality of the land to be put to use. Nevertheless, one rule is common to them all, that which, based on the literal meaning of the word *iḥyāʾ*, classes as putting to use only those actions which "bring new life" to the dead land, the mere fact of having exploited it not being, properly speaking, a putting to use; thus Khalīl (*Mukhtaṣar*, book on *iḥyāʾ al-mawāt*) writes: "*Iḥyāʾ* does not consist of fencing in the land, grazing animals, or digging a well to water them"; but the digging of a well in order to irrigate the land would be an act of *iḥyāʾ*. On this point, the Mālikī rule is based, with a few very slight differences, on the same principles as that of the Shāfiʿī, Ḥanbalī and even Imāmī schools.

With the passage of time, the idea of *iḥyāʾ* or acquiring property by putting to use became of decreasing importance, in proportion as there disappeared *mawāt* lands, which almost everywhere were losing their character of *res nullius* to become state lands. This phenomenon was particularly evident in the Ottoman Empire. The Ottoman code of land laws of 1858 devoted only two articles to the restoration of waste land (articles 103 and 104), whereas a whole section of it was reserved for *mīriyya* or state-owned land. It is true that later, in 1877, the *Medjelle* [*q.v.*] was to lay down detailed rules on the matter (articles 1270 f.) on the basis of the rules of Ḥanafī law. Thus for *iḥyāʾ* proper, a previous authorization was still necessary (as in articles 103 and 104 of the Code of land laws), but for *taḥdjīr* authorization was not expressly demanded by the *Medjelle*; from this it was deduced in general that (in conformity with the old and less developed solution of Ḥanafī doctrine) the authorization was not indispensable, and that thus, in practice, it was possible to circumvent quite easily the principle that the putting to use must be preceded by an authorization from the *imām*.

Bibliography: All the works of *fiḳh* include a chapter on *iḥyāʾ al-mawāt*; in the great work by Ibn Ḳudāma, *al-Mughnī*, Cairo 1367, the question is dealt with on pages 513-5, and then on pages 538-44 of vol. v. Besides the general treatises of *fiḳh*, there may be consulted the following works, all very early: Abū Yūsuf Yaʿḳūb (d. 182/798), *Kitāb al-Kharādj*, Būlāḳ ed., 1302 (Fr. tr. by Fagnan, *Le Livre de l'Impôt foncier*, Paris 1921); Yaḥyā b. Ādam (d. 202/817-8), *Kitāb al-Kharādj*, Cairo 1347, 84 ff. (Eng. tr. by A. Ben Shemesh, *Taxation in Islam*, i, Leiden 1958); Ibn Salām (d. 224/839), *Kitāb al-Amwāl*, Cairo 1353; Māwardī, *al-Aḥkām al-sulṭāniyya*, Cairo 1909 (Fr. tr. by Fagnan, *Les Statuts gouvernementaux*, Algiers 1916). ʿIḲĀB (A.), punishment. On legal penalties, see DJAZĀʾ, ḤADD, TAʿZĪR, ʿUḲŪBA. On divine punishment, see ʿADHĀB; on the "punishment of the tomb", see ʿADHĀB AL-ḲABR.

AL-**ʿIḲĀB**, name of one of the most decisive battles in the long struggle between Islam and Christendom for possession of the Iberian Peninsula. It took place on Monday 15 Ṣafar 609/16 July 1212, and ended with a complete victory for a large all-Iberian Christian army, supported by considerable crusading forces from Western Europe and led by Alfonso VIII of Castile, over an equally numerous Muslim army led by Muḥammad al-Nāṣir, the fourth Almohade Caliph. It is known in Spanish annals as the "battle of Las Navas de Tolosa", although it took place some 9 km. to the north-west of the locality now bearing that name (province of Ciudad Real). The battle-field was the mound-strewn plain some 4.5 km. to the west of the present town of Santa Elena, between it and the village of Miranda del Rey. These rocky mounds (*ʿiḳāb*, sing. *ʿaḳaba*) gave the battle its Arabic name, while the plain itself—extending between mountains (*nava*)—gave it its Spanish one.

Al-ʿIḳāb was the historical sequel to the Almohade victory over Castile in the battle of Alarcos (al-Arak) 18 years earlier (9 Shaʿbān 591/18 July 1194). After that great victory, Yaʿḳūb al-Manṣūr, the third Almohade Caliph, captured the stronghold of Calatrava, the seat of the intrepid knights of the Order of Calatrava. In the following years Almohade forces ravaged the region of Toledo, so that Castile felt that it could not ultimately resist the Muslim pressure if it remained alone: to survive, it had to gain the support of the other Christian kingdoms of the Peninsula.

This was the aim that Alfonso VIII of Castile endeavoured to attain after Alarcos. He managed to arrange matters with his rivals Sancho VIII (the Strong), king of Navarre, and Pedro II of Aragon, but had no success with Alfonso IX of Leon. However, he was able to secure for Castile the support of the most prominent knights of the Peninsula, such as Alvaro Núñez de Lara, Diego López de Haro and his cousin Lope Díaz, together with their powerful following. At the same time he sent a delegation to Pope Innocent III, asking him to summon a Crusade against the Muslims of Spain. The Pope agreed, and promulgated bulls asking the bishops of Italy and Western Europe to preach the crusade and urge people to enlist against the Muslims, with a promise of complete forgiveness of their sins in return.

In the meantime things had considerably deteriorated on the Muslim side since the death of Yaʿḳūb al-Manṣūr (22 January 1199). He was succeeded by his 17-year-old son Muḥammad, surnamed al-Nāṣir. The real authority in the empire passed into the hands of his uncles, none of whom was capable of sustaining the responsibilities they had assumed. The only capable man near the throne was Abū Muḥammad ʿAbd al-Wāḥid, son of Abū Ḥafṣ Intī (al-Hintātī), one of the founders of the Almohade movement. When al-Nāṣir grew older, he endeavoured to concentrate power in his own hands with the help of a group of selfish and intriguing viziers such as Abū Zayd ʿAbd al-Raḥmān ibn Yuwaggān, Abū Saʿīd ibn Djāmiʿ and Abū Muḥammad b. Muthannā. Moreover, al-Nāṣir was a conceited young man, who endeavoured all the time to conceal his personal physical and intellectual shortcomings by an outward show of daring and will to do great things. To bring the Banū Ghāniyya rebellion to an end he exhausted the military forces of the empire in costly campaigns that extended from the Balearic Islands to the deserts of Libya.

Encouraged by the general support he had gained, Alfonso VIII felt able, early in 1209, to challenge once more the Almohade power. Before the expiration of his truce with the Almohades in 1210 he started raiding the provinces of Jaen and Murcia. Al-Nāṣir responded to the challenge and started preparing a campaign against Castile. He issued a general call to arms (*istinfār*) and already in the summer of 1210 the preparations for the coming campaign were in full swing. ʿAbd al-Wāḥid b. Abī Ḥafṣ, who had been his viceroy in Ifrīḳiya (Tunisia) since 1207, advised him against the campaign, because he realized, better than the Caliph and his viziers, the seriousness of the malaise from which the vast Almohade empire was suffering.

In fact the Almohade empire was rapidly waning under al-Nāṣir. The provincial governors were becoming ruthless feudal lords. In the northern provinces of Morocco the peasantry was mercilessly exploited. In the south the tribes were dangerously hostile because of the continual recruitment and death of the flower of their youth. The situation in the Andalusian provinces was still worse, because of the lack of understanding between the governors, most of whom were mediocre princes (*sayyids*) and the mercurial local chiefs, who rarely knew what they really wanted. The once flourishing peasantry and middle class of the towns were falling rapidly into poverty and despair.

Nevertheless, immense numbers of warriors hurried to participate in the forthcoming struggle. Numerous volunteers (*muṭṭawwiʿa*), *aʿrāb* (mercenaries of the Hilāliyya) and *aghzāz* (mercenaries of Turkish, Turcoman and Kurdish stock coming from Egypt: see GHUZZ ii) enlisted. The arrival of such numbers of combatants in Seville sent a wave of fear throughout the Peninsula. One of the Christian princes is said to have hurried to assure al-Nāṣir of his loyalty.

In June 1212 the Christian forces—led by the three kings of Castile, Navarre and Aragon—marched on Calatrava and captured it. Its defender Yūsuf b. Ḳādis hurried to Jaen to give account of his behaviour to the Caliph. Without giving him the opportunity to speak, al-Nāṣir had him executed on the spot. This rash action cost the Muslims dear, because the Andalusian contingents, dismayed by this injustice towards their most prominent general, decided to abstain from fighting when the battle came. The Muslims then advanced to Baeza and from there they laid siege to the fortress of Salvatierra, which was used as a base for operations by the Order of Calatrava. The fortress fell to the Muslims. Encouraged by this initial success, they advanced westwards. They left the site of the present Santa Elena behind and pitched their camp some 4-5 km. to the west. They occupied the mountain canyons that pierce the craggy eastern wing of the Sierra Morena and especially the strategic pass of Losa. Making good use of the hilly plain (that looks like a sea with waves), the Muslims arranged themselves in good order: the hosts of the *muṭṭawwiʿa* formed the left flank; the regular Almohade troops formed the main central force, while the contingents of the Andalusians formed the right flank, supported by some 15,000 *aʿrāb* and *aghzāz*. The total Muslim forces cannot have surpassed 200,000, half of whom were *muṭṭawwiʿa*. Right in the middle of the regular

troops stood the tent of the Caliph on a mound surrounded by huge chains fastened to iron poles. Outside these chains stood the force of the *ʿabīd*, the special guard of the caliph bearing their long javelins.

The Christian forces were by no means fewer in number than the Muslims, and they had more cavalry and were far better equipped and trained. They tried to make their camp on the heights of Moradal that dominate the mountain pass (Puerto) of the same name. From there they could overlook the whole Muslim camp, but the position was too arid to support such huge numbers for a long time. Descending to the plain near Úbeda and climbing again, they marched westwards to occupy the oval tableland called La Mesa del Rey, which also dominated the plain where the Muslims were and had the advantage of easy descents to the plain from both its east and west.

They began the attack early in the morning of Monday 15 Ṣafar 609/16 July 1212. Their left wing advanced on the *muṭṭawwiʿa* and tried to pierce their lines, but were driven back with losses. They then managed to attack from the east, and a picked force of their cavalry charged the Andalusian contingents. To their surprise, these began to flee. Their unexpected flight was followed by that of the *aʿrāb* and the *aghzāz*. Very soon the Almohade regular troops were left without cover, and all the weight of the Christian forces fell upon them. They steadfastly held their position, but were outnumbered and soon their ranks were penetrated. At the same time the Christians charged the *muṭṭawwiʿa* again and routed them, taking advantage of the panic that assailed the Muslims. Soon Count Álvaro Núñez de Lara and his knights opened a wide gap in the Muslim ranks and reached the circles of the *ʿabīd*, followed by the kings of Navarre and Aragon. Al-Nāṣir had barely time to flee with a few of his men, to Baeza and then to Jaen and Seville. The rest of the Muslim forces were cut to pieces, and the number of the slain was enormous. To complete the catastrophe, Alfonso VIII soon occupied Baeza and Úbeda and slaughtered there in cold blood some 60,000 Muslims.

This was the last great battle fought by the Muslims in Spain. Its repercussions on the future of Muslim Spain were worse than the defeat itself. It definitively broke the morale of the Muslims and dissipated the myth of the power of the North African troops. From that day onwards, Islam in Spain was always on the defensive, merely trying to delay the relentless Christian advance. The blow was beyond repair for the Almohade empire. The huge number of the fallen of the Almohade troops as well as the manifest incapacity of al-Nāṣir and his men sealed the fate of the Almohades. Al-Nāṣir could not survive his ignominious defeat for long. A short time after his return to Marrākush he shut himself up in his palace, to die ingloriously on 22 December 1213, some 17 months after al-ʿIḳāb.

(HUSSAIN MONÉS)

IḲĀLA, an agreement which cancels, wholly or in part, a previous agreement between the same parties. The question is treated by the *fuḳahāʾ* in the chapter on sale; the authors devote to it long expositions, because of the favour with which *fiḳh* regards all methods of mitigating the obligatory nature of a contract. As is said in a *ḥadīth*: "For him who annuls (*aḳāla*) a sale which the other party regrets [having concluded], God will annul his sins on the day of the Resurrection". When Muslim jurists consider the subject of sale, they ask themselves first what is the juridical nature of this agreement. Is the *iḳāla* a rescission by *faskh*, or a re-sale by the buyer to the first seller of the object which he had already acquired? The question is not without practical importance. If it is a question of a rescission by *faskh*, this can come into effect at any moment, either before or after the buyer's taking possession of the object; there does not exist in this case the possibility of a third person's pre-empting it, since the operation does not involve a new transfer of ownership; and, in principle, when the *iḳāla* refers to the whole of the previous agreement, the seller must return the same sum as he had received. But if the *iḳāla* is regarded as a re-sale by the buyer to the first seller, it must then lead to consequences diametrically opposite to those above, although the Mālikīs, who maintain this view, give a separate place to the *iḳāla* which is concerned with foodstuffs.

The Shāfiʿī, Ḥanbalī and Imāmī schools consider the *iḳāla* to be, indisputably, a *faskh*, a retroactive rescission of the sale; the Mālikī school considers it to be, in general, a re-sale; the Ḥanafīs, following the teaching of Abū Ḥanīfa, make a distinction: so far as concerns the relations between the two parties, it is a recission; but as far as third parties are concerned, it is a re-sale, which will not however be vitiated by the addition of a forbidden stipulation. This solution, obviously prompted by the desire to protect third parties, has been criticized on the grounds of principle. Ibn Ḳudāma, in his treatise on Muslim comparative law (*Mughnī*, iv, 121), expresses surprise that the nature of a juridical operation may change according to the point of view from which it is considered.

The schools agree in allowing the above rules to be transferred from the contract of sale to other contracts, not only to contracts which are "brothers" of sale: change, barter, amicable settlements, etc. but also to all contracts, when these are not by their nature *ghayr lāzim*, that is revocable unilaterally, in which case *iḳāla* is obviously unnecessary. It is impossible when the contract to which it puts an end is, of its very nature, not susceptible to cancellation, such as marriage or repudiation by agreement.

An *iḳāla* based on mutual agreement requires for its completion the same conditions of validity as any other agreement, that is an offer and a matching acceptance, both to be made at the same contractual meeting (*madjlis*).

(Y. Linant de Bellefonds)

IḲĀMA (a.), the second call to the *ṣalāt* which is pronounced by the *mu'adhdhin* in the mosque before each of the five prescribed daily *ṣalāts* as well as before the *ṣalāt* at the Friday service. This second call is given at the moment at which the *ṣalāt* begins. The formulae of the *iḳāma* are the same as those of the *adhān* [*q.v.*]. According to the Ḥanafīs, they are repeated as often as in the *adhān*; according to the other schools, they are pronounced only once with the exception of the words "God is great", which are repeated twice at the beginning as well as at the end of the *iḳāma*. Moreover, after the formula "come unto blessedness", there are repeated twice the words "*ḳad ḳāmat al-ṣalāt*" (now begins the *ṣalāt*). In the lawbooks the calling of the *iḳāma* is also recommended as *sunna* to every believer who is performing the *ṣalāt* alone.

According to E. Mittwoch (*Zur Entstehungsgeschichte des islamischen Gebets und Kultus*, in *Abh. Pr. Ak. W.*, 1913, phil.-hist. Kl., No. 2, 24) the calling of *iḳāma* was borrowed by the Muslims from the benedictions in Jewish prayer. According to C. H. Becker (*Zur Geschichte der islamischen Kultus*, in *Isl.*, iii, 389 = *Islamstudien*, i, 488-9), on the other hand, the custom developed out of the original *adhān* in the mosque, which was modelled on the Christian mass (see however al-Maḳrīzī, *Khiṭaṭ*, Būlāḳ 1270, ii, 271, lines 14-5).

Iḳāma originally denotes the action of the *mu'adhdhin* (the calling of the prescribed formulae) by which he causes the *ṣalāt* to begin. On this linguistic usage, see C. Brockelmann, *Iqāmat aṣ-Ṣalāt* (*Festschr. E. Sachau*, 1915, 314-20) and J. Weiss, in *Isl.*, vii (1916), 131-6; cf. the expressions: *aḳāma 'l-ṣalāt* and *uḳīmat al-ṣalāt* (gloss. to Shīrāzī, *Tanbīh*, ed. A. W. T. Juynboll, s.v.; Bukhārī, *Ṣaḥīḥ*, *Adhān*, No. 23 f.). In the works on *fiḳh*, however, *iḳāma* is also explained as the call itself which is intended to summon the believers to rise for the *ṣalāt*. See Bādjūrī (Būlāḳ 1307), i, 167, l. 12.

(T. W. Juynboll*)

IḲBĀL, Muḥammad, was born in 1873 (or more probably 1876) in Sialkot, Pandjāb. During his studies in Lahore he became acquainted with Sir Thomas Arnold, who was partly responsible for his coming to England in 1905. In Cambridge, Iḳbāl, already a noted romantic and Indian-nationalist poet in Urdu, studied philosophy under the Hegelian J. M. E. McTaggart, and law. In 1907 he visited Germany and obtained his Ph. D. in Munich with F. Hommel. His thesis *The development of metaphysics in Persia* shows already his interest in Islamic mystical philosophy, which he judged, then, from a more pantheistic viewpoint. From 1908 onwards Iḳbāl lived in Lahore, for a while teaching philosophy, but then concentrating upon his legal practice. The mental crisis which he experienced after his return from Europe, whose possibilities—but also weaknesses — he had recognized and analysed fairly well, resulted in a stronger interest in the revival of the Muslim peoples, which was kindled, as in many of his Indian contemporaries, by the unhappy fate of the Turks during the Balkan War. His notebook of 1910 (*Stray reflections*, ed. Javid Iqbal, Lahore 1961) contains already many of the ideas which he elaborated later, and the poems *Shikwā* (Complaint) and *Djawāb-i Shikwā* (*Answer*) teach the Muslims that they have fallen into disgrace because of their own laziness and lack of faith. These ideas were expressed more distinctly in the *Asrār-i khūdī* (Secrets of the Self) 1915, which he wrote in Persian in order to reach a wider readership. His stress upon the development of the ego instead of mystical annihilation as well as Nietzschean trends shocked his audience. A second *mathnawī* in Persian, complementing the first one, *Rumūz-i bīkhūdī* (Mysteries of Selflessness) 1918, determined the duties of the individual in the ideal Muslim community. Iḳbāl then turned to lyric poetry in Persian, and published in 1923 the *Payām-i Mashriḳ*, an answer to Goethe's *West-Östlicher Divan*. The following year, his Urdu poems were printed as *Bāng-i darā* (The Sound of the caravan-bell), and in 1927 a second collection of Persian lyrics, *Zabūr-i ʿAdjam* (Persian Psalms) with an appendix modelled upon Shabistarī's *Gulshan-i rāz*, was published. In 1928, Iḳbāl delivered at several Indian universities his *Six lectures on the reconstruction of religious thought in Islam*, an attempt at reconciling Muslim theology with European philosophy and science in a very personal way. At that time, the poet had started cooperating with the Muslim League; he presented his famous statement on the necessity of forming a separate Muslim state in Northwest India at their annual session in Allahabad 1930. In the following years, he took part in two Round Table Conferences in London, visited France (where he met Henri Bergson and Louis Massignon), Spain, Italy (meeting Mussolini), and attended a Muslim conference in Jerusalem. In the autumn of 1933 he was invited to Afghanistan to discuss the foundation of a university in Kabul, a journey which resulted in the Persian poems *Musāfir* (The Traveller); at the same time the Persian collection *Pas či bāyad kard* (What is to be done?—the title alluding to Tolstoy's famous book!) was written. However Iḳbāl's *magnum opus* in Persian is the *Djāvīdnāme*, 1932, dedicated to his son Djāvīd, a poetical account of a spiritual journey in the company of Djalāl al-Dīn Rūmī through the spheres, where he discusses philosophical and political problems with Muslim and non-Muslim leaders. In 1935, the most important collection of Iḳbāl's Urdu poetry came out, *Bāl-i Djibrīl* (Gabriel's Wing), which contains the famous hymn on the Mosque of Cordova. One year later followed the Urdu *dīwān Ḍarb-i Kalīm* (The Stroke of Moses) with its bitter critique of the political and religious situation. After a long period of ill-health, which, however, did not prevent him from conceiving a new evaluation of Islamic law, Iḳbāl (upon whom the British Crown had conferred a knighthood as early as 1922) died on 21 April 1938. A collection of Persian quatrains and a few Urdu poems, *Armaghān-i Ḥidjāz* (Gift of the Ḥidjāz), was published shortly after his death.

The very titles of Iḳbāl's poems indicate his main intention: he felt like the caravan-bell which leads

those who are going astray in the wilderness towards the right goal, embodied in the Kaʿba, or guides his people like Moses, producing water out of the rock. The form of his poetry, both in Urdu and in Persian, is classical, with the exception of a few verse schemes which he invented: he uses *gh͟azal*, *ḳaṣīda*, *sāḳīnāme*, and all his *mat͟hnawī*s are written in the metre of Rūmī's *Mat͟hnawī-yi maʿnawī*. His imagery likewise is traditional, and he applies the inherited patterns of similes and metaphors to modern subjects (Farhād as the representative of exploited workers, K͟husraw as the imperialist and capitalist). Many of his expressions can be traced back to classical Indo-Muslim poetry; but he needed these forms to gain an audience for his ideas. For poetry was, for him, not a means in itself but had to be, as he frequently asserted, "the heritage of prophecy", and its criterion is not its aesthetic beauty but its "life-yielding capacity". That is why he liked certain metres which could be easily memorized, and did not do away with the formal limits of Persian poetry with which his public was familiar. His poetry primarily concentrates upon one goal: to teach the Muslims how to regain strength by developing their personalities, be it as individuals or as nations. He has been accused of transplanting the Nietzschean superman into an Islamic environment; Iḳbāl's ideal man, however, can only be understood in his relation to God.

God is, for Iḳbāl, the greatest Ego, as witnessed by His personal name Allāh. He is "perfect personality which is compatible only with the conception of an Infinite Being" (F. von Hügel), which comprises everything and yet is distinct from everything. Each created being, too, has a small ego which it is called upon to develop. "Throughout the whole universe runs the gradually rising note of egohood", and every ego is constantly striving towards a fuller realization of itself. Thus reality is eternal becoming; even death does not mean a break in this development, but opens new doors of self-realization. Immortality, then, is not ours by right, but is only an aspiration: only those who have perfected their ego during their lifetime as much as possible can partake in it. This perfection does not lead, as in the Nietzschean superman, to a detachment from God but can rather be attained by constant love and prayer. Love, *ʿis͟hḳ*, is the force that moves everything created, the dynamic force of life as contrasted to *ʿilm*, the dry intellectual attempt to approach reality. Borne by this love, man turns towards God in prayer (Iḳbāl's prayer-poems are partly very daring); in the solitude of prayer (*k͟halwa*) he draws closer to God and then returns to the world as a manifestation of Divine qualities (*d͟jilwa*), changing the course of time. Life consists of constant changes of *k͟halwa* and *d͟jilwa*, man thus drawing closer and closer to God in order to become endowed with some of His attributes. In this movement he realizes that the so-called predestination (*ḳadar*) does not exist as a blind fate but rather consists of a cooperation between the human and the Divine will, whereby a new situation may be created when man chooses one of the innumerable destinies hidden in God. But though there can be a union of will (when God's hand becomes man's hand, cf. Sūra VIII, 17) there is no union of being: man remains man even in the moment of ecstasy and does not lose his identity in the ocean of the Divine, but rather takes God in his embrace: the heart of the faithful contains God, Whom Heaven and earth cannot contain. He remains *ʿabd*, God's servant—that is the highest stage mankind can reach, since it is the stage of the Prophet himself (who was addressed as *ʿabduhū* in the account of his *miʿrād͟j*, Sūra XVII, 1)—an idea probably influenced by the tradition of Aḥmad Sirhindī. Real union is not desirable either: only the constant quest, the *sūzis͟h-i nātamām*, the searching for higher values, for the unfathomable depths of the Divine, are important, even after death—"I am as long as I move", is Iḳbāl's confession. (One may compare al-G͟hazālī's chapter on *s͟hawḳ* in the *Iḥyāʾ*.)

The burden which heaven and earth did not accept (Sūra XXXIII, 72) is, for Iḳbāl, the burden of individuation, and on the way towards its full realization man has to cope with two problems, with Iblīs, and with time. Iblīs, the Mephistophelian power, is a favourite figure with Iḳbāl: it is he who gives man the taste for striving, entangles him in a steady struggle, thus contributing to his spiritual development, and will eventually prostrate himself before the man who has defeated him, thus making up for his refusal to prostrate before Adam (Sūra II, 32, etc.). This is at least one of the different aspects of Iḳbāl's Satanology.—As to time, Iḳbāl was influenced in his view of the two levels of time, created and uncreated time, partly by Ṣūfism, partly by Bergson; he often compared serial created time to a *zunnār*, a magician's girdle which should be torn in order to reach the Divine *nunc aeternum*, when the faithful can speak, according to the example of the Prophet: "I have a time with God to which even Gabriel has no access".

Iḳbāl studied European philosophy intensely; he was impressed first by Hegel, but soon came to prefer the vitalists. His interpretation of Nietzsche, whom he compares to an Eastern *mad͟jd͟hūb*, is very thought-provoking; he felt that the German philosopher stopped at the *lā ilāh* of the confession of faith without reaching the affirmation *illā 'llāh*—a symbol which he also uses for Bolshevist Russia, which scattered the "idols" of imperialism and capitalism but failed to affirm positively the power of the one God. What Iḳbāl liked most in Nietzsche are the anti-Christian and anti-Platonic trends; his hostile words against Plato in the *Asrār-i k͟hūdī* resound, though somewhat more mildly, through his whole work. Platonic mysticism was, for him, one of the main reasons of the decline of Islam. Iḳbāl was a sincere admirer of Goethe, whose *Faust* seemed to him "nothing short of Divine workmanship", and who inspired his *Payām-i Mas͟hriḳ*, parts of his Satanology, the two Preludes in the *D͟jāvīdnāme*, etc. He compared him once with Rūmī, who was his oriental spiritual leader throughout his life. He discovered, probably under the influence of S͟hiblī's *sawāniḥ-i Mawlānā Rūm*, the dynamic character of many of Rūmī's verses upon which he frequently relies. Very strong is likewise the influence of al-Ḥallād͟j, whose thoughts he learned to understand thanks to Massignon's books, and whom he made, in the *D͟jāvīdnāme*, a kind of forerunner of himself, blowing the trumpet of resurrection for the spiritually dead Muslims.

Iḳbāl's main source of inspiration was the Ḳurʾān, whose beauty he praised again and again, and which unfolds every day new worlds, new possibilities before the faithful. His interpretation of single verses, however, is sometimes very unusual and personal, because he tries to affirm their relation with the findings of modern science. The Ḳurʾān and the *s͟harīʿa* were thought of as capable of infinite development but at the same time as the unchangeable expression of the Divine will; hence a certain traditionism, for

example in his attitude towards women, which seems to contradict his outspoken belief in the dynamic nature of Islam. This latter belief is expressed in his numerous attacks on the theologians who cling only to the externals of religion and sink into the dust under the burden of commentaries, but never look at the original meaning of the Holy Writ. Though Iḳbāl often advocates id̲j̲tihād, he sometimes prefers taḳlīd, traditional behaviour, as a kind of safeguard amid changing social life, until the Muslim community has attained a new consciousness and is freed from the idols of the modern "-isms" which threaten the pure monotheistic faith. Unity is one of Iḳbāl's keywords: the Divine unity should be reflected in the unity of believers (notwithstanding geographical borders) who are bound by one Divine law, guided by one prophet, in whom prophethood has reached its culmination and end, and praying towards one centre, the Kaʿba. Islam is a spiritual force, opposed to blood kinship and earthrootedness; it is the witness of unity.

Iḳbāl combines many contradictory trends in himself; his verses could serve both conservatives and progressives as weapons. His knowledge of European philosophy was deep, his approach original, and furthermore, he intuitively expressed many ideas that were current, in the twenties, in European religious psychology and philosophy. In spite of his interest in Western and Islamic philosophy, he did not become a systematic philosopher; one would rather call him a "prophetic philosopher", or a "philosopher-poet", since poetry, which he wrote in masterly fashion in two languages, was not a means in itself, but a vehicle to propagate his mission, to restore the Muslims to new life. His work has been criticized, in the beginning, by several orientalists, and has been praised, especially after the foundation of Pakistan whose "spiritual father" he is called, more than that of any other writer; so that even the slightest sign of criticism became considered sacrilege. Thanks to a large number of translations in Oriental and European languages, a real understanding of his work is now possible, yet a scholarly evaluation of his links with the poetical-mystical tradition of the subcontinent still remains to be made.

(A. SCHIMMEL)

IḲFĀʾ [see ḲĀFIYA].

IK̲H̲LĀṢ. The IVth form adds to the double idea of the root—purity and salvation—that of "dedicating, devoting or consecrating oneself" to something. *Ik̲h̲lāṣ* is pre-eminently an interior virtue of the faithful Muslim, which implies both the unadulterated purity (and thus sincerity) of religious actions, pure (exclusive) worship given to God and pure (absolute) devotion to God and the Community of Believers. The perfection of one's adherence, and witness, to faith is gauged by *ik̲h̲lāṣ* and *iḥsān* (uprightness in good).

The Ḳurʾān often uses the participle *muk̲h̲liṣ*, "he who devotes himself to God", who gives Him the worship that is His due (II, 139; IV, 146; XXXIX, 2-3; XL, 14, 65; XCVIII, 5, etc.). The worship due to God consists principally in proclaiming Him to be One and Unique, the absolute Lord, with Whom no other creature can be associated. This is why sūra CXII, which proclaims God to be One in Himself and Inscrutable (*aḥad, ṣamad*), "Who does not beget and is not begotten", is most usually called *sūrat al-ik̲h̲lāṣ*. The opposites of this interior attitude of the faithful Believer are hypocrisy (*nifāḳ*) and the grave sin of *s̲h̲irk*, "associating others with God". Hypocrisy is, in any case, a *s̲h̲irk* of the heart, and any trace of *s̲h̲irk*, however faint, is an obstacle to purity of action. *Ik̲h̲lāṣ* cannot, then, be translated simply as "sincerity", as is often done. *Ik̲h̲lāṣ* presupposes sincerity (*ṣidḳ*), that is to say "agreement of the heart and the lips", but, in a way, goes beyond this in a unity and purity of interior gaze which is directed at God and God alone.

The importance given to *ik̲h̲lāṣ* in any attempt to interiorize religious values is characteristic of Muslim aspirations. We shall give three examples, which follow three quite different lines of thought.

1.—The moderate Ismāʿīlism of the *Ik̲h̲wān al-Ṣafāʾ* makes *ik̲h̲lāṣ* one of the conditions of faith (*s̲h̲arāʾiṭ al-īmān*), and one of the virtues of the Believer, together with complete reliance (*tawakkul*), endurance of trials (*ṣabr*) and acceptance (*riḍāʾ*) of the divine Decree. *Ik̲h̲lāṣ* is absolute purity and unity of intention, both in work accomplished (*ʿamal*) before God and in requests (*duʿā*) addressed to God (*Rasāʾil Ik̲h̲wān al-Ṣafāʾ*, ed. Cairo 1347/1928, iv, 131-2).

2.—Analyses of *ik̲h̲lāṣ* belong, above all, to Ṣūfī meditations and investigations. *Ik̲h̲lāṣ* is the secret of hearts that have drawn near to God by means of supererogatory works (*al-taḳarrub bi-'l-nawāfil*), especially retreats and forty-day fasts. A well-known *ḥadīt̲h̲ al-ik̲h̲lāṣ* goes back to Ḥasan al-Baṣrī [*q.v.*], who himself had it from Ḥud̲h̲ayfa b. al-Yamān (cf.

L. Massignon, *Passion*², 595-6). It is the secret imparted by Muḥammad to Ḥudhayfa, who questioned him about the "inner knowledge" (*ʿilm bāṭin*). The Prophet received the reply from God through the angel Gabriel: "It is a secret (*sirr*) of My secret (*sirrī*); I set it in the heart of My servant and none of My creatures can comprehend it". Al-Muḥāsibī sees in *ikhlāṣ* "the very principle of the spiritual continuity of the true *Sunna*" (*ibid.*, 596), and al-Ḥallādj wrote a *Kitāb al-Ṣidḳ wa-'l-ikhlāṣ*, in which he both separated and united "sincerity" (*ṣidḳ*) and the perfect worship of predestined hearts" (*ibid.*).

The great Ṣūfī manuals frequently refer to it and avail themselves of it to reorganize the "sayings of the Ancients". Three examples: (a) al-Kalābādhī makes *ikhlāṣ* a "stage" (*maḳāma*) of the soul and devotes to it a short chapter of his *Kitāb al-Taʿarruf* (ed. A. J. Arberry, Cairo 1353/1933, 70; Eng. trans. by the same, Cambridge 1935, 90-1). He reproduces a phrase of Djunayd, who defines *ikhlāṣ* as "that through which God is desired, in whatever act it may be", and he stresses the stipulation formulated by Ruwaym, that no consideration should be given to the act performed, but only to God. (b) Similar themes, with references to the "Ancients", in the *Ḳūt al-ḳulūb* of Abū Ṭālib al-Makkī (ed. Cairo 1351/1932, iv, 33-5), in which the stress is laid upon uprightness of intention (*niyya*) "for the Face of God" (*li-wadjh Allāh*). (c) Al-Ḳushayrī, in his *Risāla fī ʿilm al-taṣawwuf* (Cairo n.d., 95-6), quoting many Ṣūfī traditions, distinguishes between the *ikhlāṣ* of the mass of mankind (*al-ʿawāmm*) in which the soul, in the spiritual state that it attains, should not seek its own happiness, and that of the privileged (*al-khawāṣṣ*), in which the worship given to God should be so pure that no consideration can be paid even to the *ikhlāṣ*.

Almost every author might be mentioned. Al-Anṣārī, the great Ḥanbalī mystic, in his *Manāzil al-sāʾirīn* (ed. with Fr. trans. S. Laugier de Beaurecueil, Cairo 1962, 31/72), numbers *ikhlāṣ* among the ten "types of behaviour" (*muʿāmalāt*) demanded of the Ṣūfī. He defines it as the effort to "purify action of all admixture", that is to say, as Maḥmūd al-Firkāwī comments (ed. Beaurecueil, Cairo 1953, 34), to purify it of infatuation, hypocrisy, the appetite of the soul and other similar things. Al-Anṣārī distinguishes three degrees: (a) detaching oneself from correctly accomplished acts and not seeking satisfaction in them; (b) endeavouring to act well, but being ashamed of one's action and seeing it only in the light of divine Generosity; (c) "purifying action by freeing oneself from action".

The text, however, that had the most profound influence was undoubtedly al-Ghazālī's development in his *Iḥyāʾ* (Cairo ed., 1352/1933, iv, 321-8): four chapters devoted to the virtue and merit of *ikhlāṣ*, its nature (*ḥaḳīḳa*), what the *Shaykhs* have said about it and what obstructs it. This constitutes a small treatise on spiritual psychology, which readily adopts and develops, as often in the *Iḥyāʾ*, Abū Ṭālib al-Makkī's account. Having underlined the unity of intention that makes up *ikhlāṣ*, al-Ghazālī, too, stresses the complete disinterestedness that it implies.

3.—The influence of Abū Ṭālib al-Makkī and al-Ghazālī on Ibn Taymiyya needs no demonstration (cf. H. Laoust, *Essai sur les doctrines sociales et politiques de Taḳī-d-Dīn Aḥmad b. Taymīya*, Cairo 1939, 84 and 90, n. 1); similarly with the influence of certain Shīʿī views that he opposed in other connexions. If the direct heritage of al-Anṣārī is added to this, it is hardly surprising to find in the interiorist Ḥanbalism of Ibn Taymiyya frequent references to the virtue of *ikhlāṣ*, such as we have defined it. He proclaims its value against a completely exterior juridicism: first of all in the very act of obedience to the religious Law (*ibid.*, 472 and n. 2 with ref.). He emphasizes the idea of devotion, pure and absolute devotion to God, the Prophet, the Community. When he wishes to increase "effort (*djihād*) on the path of God" in order to extend on earth "the rights of God and man", he makes *djihād* the highest form of *ikhlāṣ* towards God (*ibid.*, 360, n. 3). Pure worship and absolute devotion are thus seen as the most profound attitude demanded of the Believer.

Ibn Taymiyya's disciples readily adopted the theme of *ikhlāṣ*, above all his direct disciple Ibn Ḳayyim al-Djawziyya, who saw in absolute devotion to God (*ikhlāṣ li-'llāh*) one of the fundamental virtues. Muḥammad b. ʿAbd al-Wahhāb later echoed this (*ibid.*, 531). Following these, several contemporary reformist trends (the *salafiyya*) emphasized it. *Ikhlāṣ* was for the Ṣūfīs an indispensable stage of the soul in its quest for union with God. Through Ibn Taymiyya's influence, and owing to his acceptance of Ṣūfī ideas, it became for the Muslim who wished to interiorize his faith an attitude existentially required by the very values of Islam.

IKHMĪM [see AKHMĪM].

IKHSHĪD, the title given to local Iranian rulers of Soghdia and Farghāna in the pre-Islamic and early Islamic period. Although Justi (*Iranisches Namenbuch*, 141a), Unvala (*The translation of an extract from Mafâtîh al-ʿUlûm of al-Khwârazmî*, in *J. of the K.R. Cama Inst.*, xi (1928), 18-19) and Spuler (*Iran*, 30-1, 356) derive it from O. Pers. *khshaeta-* 'shining, brilliant', an etymology from O. Pers. *khshāyathiya-* 'king, ruler' (M. Pers. and N. Pers. *shāh*) is more probable (Christensen, and Bosworth and Clauson, see below). This O. Pers. term *khshāyathiya-* penetrated beyond Transoxania as far as Mongolia, where we find the Orkhon Turkish title of *shadh*, a rank given to senior members of the princely family below the Ḳaghan.

At the time of the Arab conquest of Transoxania, the rulers of Soghdia were called Ikhshīds, and Muḳaddasī, 279, says that the Ikhshīd, king of Samarḳand, had his castle and residence at Māymurgh in the Samarḳand oasis. The Ikhshīds continued in Soghdia well into the early ʿAbbāsid period, having transferred their seat to Ishtīkhān after the Arab conquest of Samarḳand; the submission of the then Ikhshīd to the Caliph al-Mahdī is recorded by Yaʿḳūbī (cf. Barthold, *Turkestan*, 95, 202). The local ruler of Farghāna also had this title (Ibn Khurradādhbih, 40), and according to Ibn al-Athīr, v, 344, it was he who called in against the Arabs the Chinese army of Kao-hsien-chih, defeated by Ziyād b. Ṣāliḥ at Talas in 133/751. The title evidently carried great prestige in Central Asia, for it was adopted in the 4th/10th century by the Turkish commander Muḥammad b. Ṭughdj [*q.v.*], claiming descent from the ancient princes of Farghāna.

Bibliography: in addition to the references given above, see C. E. Bosworth and Sir Gerard Clauson, *Al-Xwārazmī on the peoples of Central Asia*, in *JRAS* (1965), 6-7. O. I. Smirnova gives a list of the Ikhshīds of Soghdia in the period 31-168/650-783 in her *Sogdiskie moneti kak novi istočnik dlya istorii Sredney Azii*, in *SO*, vi (1949), 356-67. (C. E. BOSWORTH)

IKHSHĪDIDS [see KĀFŪR and MUḤAMMAD B. ṬUGHDJ].

IKHTILĀDJ, spontaneous pulsations, tremblings or convulsions which occur in all parts of the body, in particular in the limbs, the eyelids and the eyebrows and which provide omens the interpretation of which as a divinatory sign is known as the *ʿilm al-ikhtilādj* or "palmoscopy".

Palmoscopy forms part of physiognomy and, like it, formed part of medical diagnosis by the physicians of classical antiquity, among them Galen, who established a distinction between "palpitation" and "trembling, shudder, convulsion".

As a divinatory practice, Islamic palmoscopy seems to have as its source the Περὶ παλμῶν of the Ps.-Melampos, as can be seen from the table of concordances established by T. Fahd comparing the contents of this treatise with that of an Arabic treatise of the type of *Tafsīr al-ikhtilādjāt* (cf. *La divination arabe*, 418-29).

However, the Ps.-Melampos was not the only source of Arabic palmoscopy. In fact there existed before it a Mesopotamian tradition, the written elements of which reached the Arabs through Persia. Ibn al-Nadīm, who was conversant with an Arabic translation of the short works attributed to Melampos (*op. cit.*, 391 f.), mentions, under the same heading (*Fihrist*, 314), two titles whose Iranian origin is beyond doubt: the first is *Kitāb al-Ikhtilādj ʿalā thalāthat awdjuh li-'l-Furs*, "The book of pulsations, with three interpretations, for Persians", which has not survived, but the contents of which might be similar to a paragraph of the Ps.-Djāḥiẓ, *Bāb al-ʿirāfa wa-'l-zadjr wa-'l-firāsa ʿalā madhhab al-Furs* (ed. K. Inostranzeff, in *Matériaux de sources arabes, pour l'histoire de la culture dans la Perse sassanide*, extr. from the *Zapiski* of the Oriental Section of the Archaeological Society, xviii, St. Petersburg 1907, 21-2); the second is *Kitāb al-Ikhtilādj wa-'l-zadjr wa-mā yarā al-insān fī thiyābih wa-djasadih wa-ṣifat al-khīlān wa-ʿilādj al-nisāʾ wa-maʿrifat mā yadullu ʿalayh al-ḥayyāt*, "The book of pulsations, omens and of what man sees from his clothing and his body; description of *naevi* and of the treatment of women; the knowledge of the signs provided by snakes". The content of this collection of omens recalls that of an Assyro-Babylonian *series* entitled *Shumma ālu ina mele shakīn* (cf. transliteration and tr. *apud* Fr. Nötscher, in *Orientalia*, O. S. xxxi (1928), xxxix-xlii (1929), li-liv (1930); for the detailed references, cf. *La divination arabe*, 399, notes 5 to 9).

The earliest manuscript examples of the treatises of *ikhtilādj* bear the name of Djaʿfar al-Ṣādiḳ, the reputed teacher of esoteric sciences in early Islam. This attribution is due to the fact that he had gathered round him a circle of Iranian and Byzantine *mawālī* who were engaged in translating into Arabic specimens of the literatures of their native countries (cf. T. Fahd, *Ǧaʿfar aṣ-Ṣâdiq et la tradition scientifique arabe*, in *Le shîʿisme imâmite*, Actes du Colloque de Strasbourg (mai 1968), Paris 1970, 131-42). In this way several traditions came together, and the spirit of compromise which was a characteristic of Islamic thought in the 2nd/8th century led to the adoption of a table of concordance combining the various opinions which the sources presented. Thus the three interpretations found in the treatise attributed by the *Fihrist* to the Persians became five and even six. It was felt necessary to attach each of these interpretations to a well-known name: Daniel, Alexander, the Persian scholars, the Hindus, the sages of Byzantium, Djaʿfar al-Ṣādiḳ.

Like all the ancient divinatory practices, palmoscopy underwent its own evolution within the framework of Islamic culture, in the same way as it did within other cultures, since there exist Greek, Slav, Rumanian, Arabic, Hebrew, Turkish, Indian and European treatises on palmoscopy, collected by Hermann Diels in his *Beiträge zur Zukungsliteratur des Okzidents und Orients*, in *Abh. des kgl. Ak. der Wissenschaft*, 1907/4 (Melampos); 1908/4 (other treatises). This evolution can be perceived in particular in the poem on palmoscopy by Aḥmad b. Naṣīr al-Bāʿūlī (probable reading al-Baʿūnī, d. 816/1413; cf. *La divination arabe*, 401, note 4), in *Kitāb al-Ikhtilādj wa-duʿāʾih* by a certain Muḥammad b. Ibrāhīm b. Hishām (translations of both *apud* Diels, *op. cit.*, 79-80 and 87-91) and in *Kitāb Kifāyat al-muḥtādj fī maʿrifat al-ikhtilādj* by Djalāl al-Dīn al-Suyūṭī (lith. Cairo, n.d.).

In Turkey palmoscopy developed in a special way. Here were produced, besides the many traditional treatises of *ikhtilādj*, others concerning the omens to be drawn from wounds accidentally received by a soldier on campaign and from injuries voluntarily received during archery (cf. Osman-Bey, *Les Imâms et les Derviches. Pratiques, superstitions et mœurs des Turcs*, Paris 1881, 177-82).

Finally it should be mentioned that in the chapter which Ibn al-Nadīm devotes to the Ḥarrānians, the term *ikhtilādj* is applied to a divinatory rite which consisted of interpreting the twitches of animals sacrificed to the gods (cf. *Fihrist*, 224, 409; al-Masʿūdī, *Murūdj*, iv, 68 f.).

Bibliography: In addition to the sources and studies mentioned above, see the many references given in T. Fahd, *La divination arabe. Études religieuses, sociologiques et folkloriques sur le milieu natif de l'Islam*, Leiden 1966, 397-402; for survivals in Islam of palmoscopic practices, see E. Doutté, *Magie et religion dans l'Afrique du Nord*, Algiers 1909, 366. (T. FAHD)

IKHTILĀF (A.), difference, also inconsistency; as a technical term, the differences of opinion amongst the authorities of religious law, both between the several schools and within each of them; opp. *idjmāʿ* [*q.v.*], *ittifāḳ*. The ancient schools of law, on the one hand, accepted geographical differences of doctrines as natural; on the other hand, they voiced strong objections to disagreement within each school, an opinion which was mitigated by their acceptance as legitimate of different opinions if based on *idjtihād* [*q.v.*]. The rising tide of traditions from the Prophet, in particular, threatened the continuity and uniformity of doctrine in the ancient schools, and reinforced their aversion to disagreement. The opportunity for disagreements on questions of principle arose only from the time of Shāfiʿī [*q.v.*] and his systematic innovation. But the several schools arrived at a compromise, and the consensus (*idjmāʿ*), which acted as the integrating principle of Islam, succeeded in making innocuous those differences of opinion which it could not eliminate. The four schools, then, are equally covered by *idjmāʿ*, their alternative interpretations of Ḳurʾān and *sunna* are equally legitimate, they are all equally orthodox. This view has found expression in a saying which occurs first in the *Fiḳh al-akbar* of Abū Ḥanīfa [*q.v.*] and was later attributed to the Prophet, to the effect that "difference of opinion in the community of Muslims is a concession (*raḥma*) on the part of Allāh". The work of Shaʿrānī (see below) expresses the attitude underlying this tradition with monotonous regularity.

The recording of these differences of opinion has produced a considerable literature since the begin-

nings of the study of *fiḳh*. The earlier works reflect the discussions between the several schools, the later ones are simply handbooks. To the earliest existing works belong the *Radd ʿalā Siyar al-Awzāʿī* and the *Ikhtilāf Abī Ḥanīfa wa 'bn Abī Laylā* of Abū Yūsuf [*q.v.*], both separately printed (Cairo 1357) and also commented upon by Shāfiʿī (*Umm*, vii, 303 ff. and 87 ff.), the *Kitāb al-ḥudjadj* of Shaybānī [*q.v.*], a part of which was printed in Lucknow 1888, and another part commented upon by Shāfiʿī (*Umm*, vii, 277 ff), on the differences of the scholars of ʿIrāḳ and of Medina, Shāfiʿī's *Kitāb ikhtilāf Mālik wa-'l-Shāfiʿī* (*Umm*, vii, 177 ff.), and his *Kitāb ikhtilāf ʿAlī wa-ʿAbd Allāh ibn Masʿūd* (*Umm*, vii, 151 ff.), on the points on which the ʿIrāḳians diverge from traditions of ʿAlī and Ibn Masʿūd. Tirmidhī ([*q.v.*]; d. 279/892) in his *Djāmiʿ* indicates for which doctrine each tradition serves as authority, so that his work is an important source for the comparative study of early *ikhtilāf*. Ibn Ḳutayba ([*q.v.*]; d. 276/889) in the *Kitāb mukhtalif al-ḥadīth* tries to reconcile the contradictions of traditions (cf. G. Lecomte, *Le traité des divergences du Ḥadīt d'Ibn Qutayba*, Damascus 1962), as before him Shāfiʿī had done in his *Kitāb ikhtilāf al-ḥadīth*. Ṭabarī ([*q.v.*]; d. 310/923) composed his *Kitāb ikhtilāf al-fuḳahā'* as a kind of systematic justification of his own *madhhab*; it consists mostly of extracts from the works of his predecessors and, as many of them have been lost, is very valuable as a source, but unfortunately only two fragments of this very extensive work have survived (ed. F. Kern, Cairo 1902, and J. Schacht, Leiden 1933). The early period of the works on *ikhtilāf* comes to an end with the *Sharḥ maʿānī 'l-āthār* of Ṭaḥāwī ([*q.v.*]; d. 321/933); the author argues from the Ḥanafī point of view but unfortunately does not mention the adherents of the numerous divisions of doctrine which he discusses. Of later handbooks may be mentioned *al-Ishrāf ʿalā masā'il al-khilāf* by ʿAbd al-Wahhāb al-Baghdādī (d. 422/1031; Mālikī); the *Bidāyat al-mudjtahid* of Ibn Rushd ([*q.v.*]; Averroes, the philosopher, d. 595/1198), parts of which have been translated (cf. R. Brunschvig, *Averroès juriste*, in *Études d'orientalisme ... Lévi-Provençal*, i, Paris 1962, 35-68); the *Mīzān al-kubrā* of Shaʿrānī ([*q.v.*]; d. 973/1565), derived from the *Raḥmat al-umma* of Muḥammad ibn ʿAbd al-Raḥmān al-Dimashḳī (wrote 780/1378), which is in turn derived from the *Ishrāf* of Ibn Hubayra ([*q.v.*]; d. 560/1165); and the modern *Kitāb al-fiḳh ʿala 'l-madhāhib al-arbaʿa*, i-iv, Cairo 1931-8 (not completed).

There have been movements aiming at abolishing the diversities of opinion in religious law within orthodox Islam, and even at bridging the differences dividing Sunnīs and Shīʿīs. The most important, though unsuccessful, effort in this last direction was undertaken under the auspices of the Persian ruler Nādir Shāh [*q.v.*]. Within the Sunnī field, the effort of King Ibn Suʿūd [see SUʿŪD, ĀL] to create, within his country, a "non-denominational" doctrine of Islamic law was defeated by the resistance of the traditional *ʿulamā'* (see J. Schacht, in *American Journal of Comparative Law*, viii (1959), 146 f. and *Studia Islamica*, xii (1960), 123, n. 3). In recent years, however, a chair for the study of Shīʿī law was created at al-Azhar, Shīʿī law was included in the courses of the Institute of Higher Arabic Studies (*Maʿhad al-Dirāsāt al-ʿArabiyya al-ʿĀliya*) of the Arab League, and a *Risālat al-Islām, Madjalla islāmiyya ʿālamiyya*, published by the Institute for the Coordination of the Schools of Islamic law in Cairo (*Dār al-taḳrīb bayn al-madhāhib al-islāmiyya bi 'l-Ḳāhira*), began to appear in 1368/1949.

IKHTIYĀR, choice. For the use of the word as a juridical term, see KHIYĀR and NAṢṢ; in literary criticism, see NAḲD; in the sense of "elder", see SHAYKH. The immediately following article deals with the philosophical and theological senses of the word.

As a philosophical term, *ikhtiyār* means free preference or choice, option, whence: power of choice, free will. The word itself is not Ḳur'ānic but is common in the vocabulary of *ʿilm al-kalām* and *fiḳh*. The VIIIth form of the verb is, however, used in the Ḳur'ān, always referring to a divine act. "I have chosen you (*ikhtartuka*)", says God addressing Moses (XX, 13); or: "We have chosen them (*ikhtarnāhum*)" (XLIV, 32); or again: "Your Lord creates what He wishes, and He chooses (*wa-yakhtār*)" (XXVIII, 68). The act of absolute choice, then, appears as an attribute of God.

From its very root (*khayr*, good), *ikhtiyār* implies primarily not a sovereign indifference above good and evil, but free choice of what is good. This nuance should, no doubt, be kept in mind for the precise understanding of the Ashʿarī thesis (*e.g.*, al-Ghazālī) that there is, strictly speaking, no *ikhtiyār* except in God; we shall return to this. The fact remains that the common usage of the word signifies simply the power of choice. It is thus distinguished, in its connotations, from *ḥurriyya* [*q.v.*], personal and political freedom of exultation or autonomy.

Two common usages of *ikhtiyār* should be noticed, one from the vocabulary of the *uṣūl al-fiḳh*, and the other concerning the question of the *imāma*; (1) with the meaning of opinion freely stated; (2) with the meaning of choice or election. Concerning the designation of the *Imām*, many schools subscribe to choice by election (*ikhtiyār*), others to determination by means of a text (*naṣṣ*). The first opinion, which depends on the precedent of Abū Bakr, is defended by most of the Muʿtazilīs, certain Ḥanbalīs, such as Abū Yaʿlā, the Ashʿarīs and Māturīdīs, and, under certain conditions (descent from ʿAlī), the Zaydīs. The second remains one of the principal features of Shīʿī thought; in quite different historical connexions, it is adopted by Ibn Taymiyya on behalf of Abū Bakr (cf. *Minhādj al-sunna al-nabawiyya*,

Cairo 1382/1962, i, 340-65, with reference to Ibn Ḥazm). In treatises on the *imāma*, it is customary to contrast the *ahl al-ikhtiyār* with the *ahl al-naṣṣ*, the supporters of free election with the supporters of textual determination.

It is, however, in the schools of *ʿilm al-kalām* that the question of the existence and the nature of free will in man is faced. It is one of the most discussed problems in the "Treatise on Actions".

The Muʿtazilīs of Baṣra, such as Muḥammad b. ʿĪsā Burghūth, a disciple of al-Nadjdjār, contrasted *ikhtiyāran*, that which is performed voluntarily, with *ṭawʿan*, that which is performed through obedience and submission. In the school of Baghdād, the first term is more frequently used as an opposite correlative (*muḳābal*) of *iḍṭirār* [*q.v.*], "constraint". According to the *Maḳālāt al-Islāmiyyīn* of al-Ashʿarī (ed. Cairo 1369/1950, i, 110), Djaʿfar b. Ḥarb set out as follows the thesis of the Rāfiḍī Hishām b. al-Ḥakam: human action depends on a double perspective; it is from free choice (*ikhtiyārī*) inasmuch as it is willed and "acquired" by the subject who performs it, it is constrained (*iḍṭirārī*) inasmuch as it cannot occur without the appearance of the cause that provokes it (cf. W. Montgomery Watt, *Free will and predestination in early Islam*, London 1948, 116). This distinction established within the same action is denied by the various Muʿtazilī branches. Briefly, it may be said that in their eyes man is the "inventor" (*mukhtariʿ*) or "creator" (*khāliḳ*) of his actions inasmuch as he is *mukhtār* (in the sense of "one who chooses") and endowed with *ikhtiyār*.

But Hishām b. al-Ḥakam had, on this very point, as it were, anticipated the Ashʿarī reaction. It should first of all be noted that the very word *ikhtiyār* is relatively little employed, or rather, it is used primarily to characterize divine action which operates *bi-'l-ḳudra wa-'l-ikhtiyār* (*e.g.*, al-Ashʿarī, *Istiḥsān al-khawḍ fī ʿilm al-kalām*, ed. with Eng. trans. R. McCarthy, *The theology of al-Ashʿarī*, Beirut 1953, 93/127; al-Bāḳillānī, *Kitāb al-Tamhīd*, ed. McCarthy, Beirut 1957, 36). God alone is truly a "free Agent", *al-fāʿil al-mukhtār*.

Quite quickly, however, *ikhtiyār* takes on the common sense of an act that can be performed or not performed by the subject. Al-Bāḳillānī stresses the difference between a deliberate movement (*ʿalā ṭarīḳ al-ikhtiyār*) of the hand and the "movement" which is the trembling of the hemiplegic (*Tamhīd*, 308, see also 286). This is a psychological statement that has to be placed within the vaster problem of the "creation" and "acquisition" of actions. In fact, generally speaking in the Ashʿarī and Ḥanafī-Māturīdī schools, it is not *al-ikhtiyār* that is the title of discussions on free human action but rather *al-ḳudra al-ḥāditha*, the "contingent ("commenced") power (of action)". The opposite correlative is no longer *ikhtiyār-iḍṭirār*, but as formerly with Ḍirār, the leader of the Muʿtazilīs of Baṣra, *iktisāb-iḍṭirār*. With the Ashʿarīs, the "acquisition of action", *iktisāb* (or, often, *kasb*), is understood as an "attribution" carried out directly by God, and with the Māturīdīs as a simple "qualification" (*ṣifa*) of the action. The problem dealt with is that of *istiṭāʿa*, the "capacity" to act created by God in the human subject. *Ikhtiyār* does not belong to the list of technical words established by al-Djurdjānī in his *Taʿrīfāt*.

The existential determinism of the *falāsifa* does not hesitate, either, to speak of *ikhtiyār* and of *ikhtiyārī* action, but without in any way committing itself to the ontological reality of human free will. *Ikhtiyār* must then most often be translated as "power of choice" (cf. A.-M. Goichon, *Lexique de la langue philosophique d'Ibn Sīnā*, Paris 1938, s.v.), and *ikhtiyārī* as "deliberate". Ibn Sīnā says that the concupiscent and irascible faculties, simple opinion and the judgment of the intellect are all capable of *ikhtiyār* (*Shifāʾ*, *Ilāhiyyāt*, Cairo 1960, ii, 387-8). "Choice" presupposes an elective action, and it thus depends on a knowledge, which can, however, be instinctive as well as intellectual, animal as well as human and superhuman as well as human. Every animate being and every intelligent being, from animals to the celestial spheres and the separate Intellects, is endowed with *ikhtiyār*. Al-Kindī speaks of the *ikhtiyār* of the celestial spheres, and of their *ikhtiyārī* obedience to God (*Rasāʾil al-Kindī*, ed. Abū Riḍa, Cairo 1369/1950, i, 246-7). The adjective *ikhtiyārī* is the opposite of "natural" (*ṭabīʿī*) and is applied to the freedom of spontaneity of the estimative faculty in animals in the same way as it is to the intelligent choice of a rational or spiritual nature (thus Ibn Sīnā, *Risāla fi 'l-ʿishḳ*, ed. Mehren, *Traités mystiques*, iii, Leiden 1894, 9-14). The act of choice becomes "evident" when it is linked with a voluntary action (Ibn Sīnā, *Nadjāt*[2], Cairo 1357/1938, 215), but it is not will that defines it. That which effects greater or less perfection of choice is not the degree of a freedom in which are joined intelligence and rational will, but the degree and quality of knowledge. The choice that depends on intelligence is the only one that can tend towards the "pure and true" good; it is no less caught up in the universal causal sequence.

It was probably the double line of influence, on the one hand of the tradition of *kalām* (especially al-Bāḳillānī) and on the other of Ibn Sīnā, that inspired the analysis of the act of choice sketched by al-Ghazālī at the beginning of the *Tahāfut al-falāsifa* (with regard to the man put before two identical cups or two similar dates), and particularly in the *Iḥyāʾ*, Cairo 1352/1933, iv, 219-20 [see IḌṬIRĀR]. Two points of view should be mentioned: (1) in human *ikhtiyār*, voluntary decision is subordinated to the judgment of the intellect, that is to say, it is "constrained" by it; (2) in consequence, an absolute free choice is exercised in God alone, for God does not act "for a motive" or "to attain an end" (*gharaḍ*, *ghāya*). The Ashʿarī, purely voluntaristic, idea of freedom makes the necessary "motive of preference" (*muradjdjiḥ*), chosen by the intellect, into a decisive argument against "man as creator of his actions". Human choice, which is always motivated, is not a truly *free* choice; it is "an intermediary" between natural constraint and the pure divine freedom, both *iḍṭirārī* and *ikhtiyārī*, as Hishām b. al-Ḥakam says.

Al-Ghazālī's analysis remains one of the peaks of Ashʿarī thought. Similar themes are found, with more or less precision, in all subsequent treatises and manuals. In modern times, the *Risālat al-tawḥīd* of Muḥammad ʿAbduh (Cairo 1353, 60) limits itself to the double affirmation of two contrasting truths: the divine Omnipotence, "which is proved", and the "evidence" of man "who is free (*mukhtār*) in his actions". It should finally be noted that nowadays, when Muʿtazilī theses are undeniably coming back into favour, the current philosophical vocabulary uses *ḥurriyya* more commonly than *ikhtiyār* for the problem of the ontological foundation of human freedom.

Bibliography: in the article. (L. GARDET)

IKHTIYĀRĀT or hemerologies and menologies (Gr. καταρχαί, Lat. *electiones*) means an

astrological procedure whose aim is to ascertain the auspicious (*sa'd*) or inauspicious (*naḥs*) character of the future. It deals with years, months, days and hours. This task, which was the duty of the official astrologer of the court as early as the Umayyad period, became increasingly important under the ʿAbbāsids as a result of the adoption of Iranian customs and Sāsānid calendars which established precisely how the prince's time should be spent during all the days of the week (cf. for example the Ps.-Djāḥiẓ, *Bāb al-ʿirāfa wa 'l-zadjr wa 'l-firāsa ʿalā madhhab al-Furs*, ed. K. Inostranzeff, in *Matériaux de sources arabes pour l'histoire de la Perse sassanide*, extr. from the *Zapiski* of the Oriental Section of the Archeol. Soc., xviii, St. Petersburg 1907, 59; F. Gabrieli, *Etichetta di corte e costumi sasanidi nel Kitâb Aḫlaq al-Mulûk di al-Ǧâḥiẓ*, in *RSO*, xi (1928), 292-305).

Divinatory hemerology was known to the early Arabs, as to all the peoples of antiquity (see *La divination arabe*, 483, notes 4-5); the best known example is that found in the legend of the Ghariyyān of al-Mundhir b. Māʾ al-Samāʾ, who once a year stood for two days beside these two sacred stones which were sprinkled with blood: one of these days was auspicious (*yawm naʿīm*); on this day he was generous to those who came to see him; the other was inauspicious (*yawm buʾs*); on this day his unfortunate visitors were sacrificed to his idols (on this legend and the Ghariyyān, see T. Fahd, *Le panthéon de l'Arabie centrale à la veille de l'hégire*, Paris 1968, 91-4). For the Islamic period, particularly under the ʿAbbāsids, there exist a large number of accounts which attest how frequently recourse was made to hemerology (cf. C. A. Nallino, *Raccolta*, v, 38 ff.; T. Fahd, *La divination arabe*, 484 f.).

The theoretical basis of hemerology underwent its greatest development during the ʿAbbāsid period. There exist many short works of *ikhtiyārāt*, bearing the names of such famous astrologers as al-Kindī (Brockelmann, S I, 392), Sahl b. Bishr, whose treatise survives in a Latin version (*ibid.*, 396), al-Kasrānī (*ibid.*, 392), Abū Maʿshar al-Falakī (*ibid.*, I, 222), Abū Saʿīd al-Sidjāzī (*ibid.*, S I, 389), Muḥammad b. Yaʿḳūb b. Nawbakht (*ibid.*, 869), Fakhr al-Dīn al-Rāzī (*ibid.*, I, 507, S I, 924) and several others. For its practical application, brief calendars, worked out according to various procedures, indicate the good or the bad actions which are to be advised or discouraged for a certain day of the week and a certain month of the lunar year (see examples in *La divination arabe*, 487).

In Iranian and Turkish milieus, more especial attention is paid to the first day of the Iranian year, the Nawrūz [*q.v.*]; the actions performed on this day presage what the whole year will be like (cf. H. Massé, *Croyances et coutumes persanes*, ii, 145 ff.; *La divination arabe*, 486, 489, note 1).

FAHD)

IKHTIYĀRĀT, in the sense of "anthologies" [see MUKHTĀRĀT].

IKHWĀN [see ṬARĪḲA].

AL-**IKHWĀN** ("the Brothers"), Arab tribesmen joining a religious and military movement which had its heyday in Arabia from 1330 to 1348/1912-30 under the rule of ʿAbd al-ʿAzīz b. ʿAbd al-Raḥmān Āl Suʿūd, popularly known as Ibn Suʿūd [see SUʿŪD, ĀL]. The movement, inspired by a resurgence of the Wahhābiyya [*q.v.*], bore a strong resemblance to the original welling up of Islam among the tribes of Arabia in the 1st/7th century. In both cases the strength of tribal ties, the amazingly rapid spread of religious fervour in an attempt to form a cohesive community rising above tribal divisiveness, the zealous desire to propagate Islam by the *djihād*, and the eagerness of the *mudjāhid*s to die as martyrs were strikingly similar. So likewise was the settlement of nomadic tribesmen in military cantonments, one of the distinctive features of the Ikhwān movement. Thanks in good measure to the prowess of the Ikhwān, most of the Arabian Peninsula was brought under the sway of a single Imām, Ibn Suʿūd. When the triumphant devotees of *tawḥīd* started to break out of the Peninsula to the north, however, the parallel with *fadjr al-Islām* faded. The Ikhwān came up against British military aircraft and armoured cars based in the mandates of Transjordan and ʿIrāḳ and British warships stationed in the Persian Gulf for the protection of Britain's allies. The fanatical bravery of the Ikhwān beat in vain against the machines of the 20th century. And in challenging this century and its profound changes, the Ikhwān at last revolted against their sovereign, Ibn Suʿūd, who with superior force stopped and confined them. The Ikhwān movement may thus be regarded as the last gasp of pristine Islamic militancy, reproducing in many ways the beliefs and tactics of 1,300 years ago.

The progress and decline of the Ikhwān movement form an important chapter in the history of the Kingdom of Saudi Arabia. During the close association between Ibn Suʿūd and the Ikhwān the state expanded to the west and north, occupying the regions of ʿAsīr, Djabal Shammar, and al-Ḥidjāz. Ibn Suʿūd as the new Protector of the Holy Cities acquired a position of prominence and dignity in the Islamic world. When the Ikhwān revolted, the response of the King and his government to the issues they raised determined the future course of the kingdom, which from then on emerged rapidly from its xenophobic isolation. The excesses of the Ikhwān harmed the reputation of Arabia in the Islamic world, yet their reckless courage and dedication to the principles of early Islam made a deep impression on many Muslims.

In the 12th and 13th/18th and 19th centuries Āl Suʿūd in their wars relied primarily on the sturdy town-dwellers of Nadjd, who stood firmer in battle than the mercurial Bedouin auxiliaries. In 1319/1902 Ibn Suʿūd recovered al-Riyāḍ, the capital of his forefathers, from Āl Rashīd of Ḥāyil in Djabal Shammar, and began the reconstruction of the dominion of his house. Although a townsman by birth and largely by upbringing, he had lived among the Bedouins and knew them well. As he became embroiled in the tribal feuds which for ages had rent Arabia, he searched for a way of turning the talents of the Bedouins to better use. The answer he hit upon was to mobilize them in settlements, where they could more easily be taught the doctrines of Islam, be made more reliable citizens, and be moulded into a formidable martial force. This revolutionary approach called for the Bedouins to depart from their old way of life, which came to be referred to as al-Djāhiliyya, and to embrace a new way, illumined by God's grace, so that the name *hidjra* (variant *hudjra*) was given to the settlements and the name Ikhwān to the settlers.

The Bedouin moving into a *hidjra* gave up his

house of hair for a mud hut. Often he sold his camels and *ghanam*, for he was now more of a farmer than a herder. He might even become a trader after a fashion by selling the products of his tillage.

The government supported the establishment of the *hidjras* through the selection of sites; the grant of land; the building of mosques, schools, and dwellings; the provision of seeds and tools and the giving of instruction in planting; the supply of arms and ammunition; and, above all, the sending of religious teachers (*muṭawwiʿ*, pl. *maṭāwiʿa*) to indoctrinate the Ikhwān with a knowledge of Islam as it was in the time of the Prophet and *al-salaf al-ṣāliḥ*. This was Islam as taught by Ibn ʿAbd al-Wahhāb [*q.v.*], but the Ikhwān often went to extremes. They were vehement in denouncing *bidʿa*s of all sorts. Electricity, which brought light without oil or wax, was iniquitous. The Ikhwān broke mirrors because they reflected images. In their personal appearance men must follow what was believed to be the Prophet's example. Moustaches must be trimmed almost out of sight and beards grown long. The traditional headcloth and headropes of the Bedouin must be replaced by a white turban.

Missionary work in the *hidjras* was carried on under the direction of Shaykh ʿAbd Allāh b. Muḥammad b. ʿAbd al-Laṭīf, a descendant of Ibn ʿAbd al-Wahhāb, who composed Ḥanbalī tracts for distribution among the Ikhwān. In Dhu 'l-Ḳaʿda 1332/September 1914 he joined other *ʿulamāʾ* in addressing a circular to "*kāffat al-Ikhwān min ahl al-hidjar*" in which moderation was urged upon them. No difference, the scholars said, could be found in the *Sharīʿa* between the wearing of headropes and the wearing of a turban. At the same time Ibn Suʿūd wrote another circular to the Ikhwān in which he pointed out that there were no basic contradictions in the four *madhhabs* of Sunnī Islam, even though he and his government adhered to Ḥanbalism. He remarked that the Ikhwān had in their colonies the books of the different *madhhabs*, as well as the writings of Ibn Taymiyya and Ibn Ḳayyim al-Djawziyya [*qq.v.*], the spiritual precursors of Wahhābism. As the Ikhwān movement developed, however, such pleas for moderation and tolerance were often ignored by its followers. Nevertheless, the religious teaching in the *hidjras* did go far towards making honest and law-abiding citizens out of the Ikhwān while they were at home and not on the warpath.

As soldiers the Ikhwān called themselves "knights of God's unity and brothers of those who obey God". They courted death in fighting for the faith. One of their war-cries was "The winds of Paradise are blowing. Where are you who hanker after Paradise?" As in times of old, they assigned a fifth of their booty to the Imām, Ibn Suʿūd. When they encountered the British, they did not shrink from facing their engines of war; with their rifles they would fire at planes flying overhead. Their raids might cover hundreds of miles, with long lines of camels, two riders to each, and horses preceded by banners inscribed with the *shahāda*. The raiders usually attacked their objective in a wild charge at dawn. The Arabs they marched against dreaded their approach, as they often put to death those whom they considered *kāfirs*, that is, those who did not profess their version of *tawḥīd*.

In or about 1330/1912 the first *hidjra* was founded in Nadjd at the wells of al-Arṭāwiyya northeast of al-Zilfī on the road from Kuwait to the district of al-Ḳaṣīm. When the Danish traveller B. Raunkiaer passed by the wells in Rabīʿ I 1330/March 1912, he saw no settlement. The new townsmen were made up of members of the tribes of Muṭayr and Ḥarb [*qq.v.*]. The redoubtable Fayṣal b. Sulṭān al-Dawīsh, the paramount chief of Muṭayr, became their leader. Another *hidjra*, occupied in the same or the following year, was al-Ghaṭghaṭ below the scarp of Djabal Ṭuwayḳ to the southwest of al-Riyāḍ. Here the nucleus consisted of members of the tribe of ʿUtayba [*q.v.*] under the command of Sulṭān b. Bidjād Ibn Ḥumayd, the chief of Barḳā, one of the two main divisions of the tribe. As a champion of the faith Ibn Ḥumayd came to be known as Sulṭān al-Dīn.

All told, scores of *hidjras* were built. Several lists of their names have been compiled, none of which is complete or wholly accurate. Oppenheim and Caskel give a total of 114, with many marked as being of uncertain identity (see G. Rentz's review in *Oriens*, x (1957), 77-89). Philby estimated that the total was about 200. In some of the larger ones, such as the first two, the population may have numbered as many as 10,000, while smaller ones had as few as 10 inhabitants. Although an effort was made to bring elements of different tribes together in a single *hidjra* in order to put an end to intertribal feuding, most of the settlement came to be associated with particular tribes. The lists recorded by Oppenheim and Caskel, though only approximate, give an idea of the tribes most active in the movement: Ḥarb 27 *hidjras*, ʿUtayba 19, Muṭayr 16, al-ʿUdjmān 14, Shammar 9, and Ḳaḥṭān 8. The *hidjras* were scattered throughout Nadjd and what is now the Eastern Province of Saudi Arabia. In the south they reached the fringes of al-Rubʿ al-Khālī, and in the north they came close to the Syrian Desert. Westwards they did not extend into the high mountains of al-Ḥidjāz and ʿAsīr.

By 1336/1918 the military organization of the Ikhwān had developed to the point where they began replacing the townsmen of Nadjd as the élite of Ibn Suʿūd's army, marching with his bodyguard under his banner. In that year Ibn Suʿūd advanced with the Ikhwān to the walls of Ḥāyil, Ibn Rashīd's capital, but failed to take the city for want of artillery. In 1337/1919 the Ikhwān on their own won the first great victory in a contest destined to end with the downfall of the Hāshimid regime of King al-Ḥusayn in al-Ḥidjāz. One of the main causes of the growing enmity between Ibn Suʿūd and al-Ḥusayn was their dispute over the borderland between Nadjd and al-Ḥidjāz and the allegiance of the tribes living there. The key oases were al-Khurma and Taraba [*qq.v.*], and the most important tribe was ʿUtayba. Ibn Suʿūd already had a strong segment of ʿUtayba with him under Ibn Ḥumayd in al-Ghaṭghaṭ. The Amīr of al-Khurma was the Sharīf Khālid b. Manṣūr Ibn Luʾayy of Dhawū ʿAbd Allāh [see HĀSHIMIDS]. Ibn Luʾayy, after falling out with his kinsman ʿAbd Allāh, son of King al-Ḥusayn, during the siege of the Ottoman forces in Medina, returned to al-Khurma, where he enrolled as a member of Ibn Suʿūd's Ikhwān and energetically spread their doctrines among the tribes. From 1336/1917 onwards, al-Ḥusayn sent three expeditions against Ibn Luʾayy, but all were repulsed. After the surrender of Medina, al-Ḥusayn mounted an even larger expedition and gave the command to his son ʿAbd Allāh. The people of al-Khurma called on Ibn Suʿūd for help, and he commissioned Ibn Ḥumayd to lead forward a contingent of the Ikhwān. Together Ibn Luʾayy and Ibn Ḥumayd made a surprise attack on ʿAbd Allāh's fortified camp at Taraba and thoroughly routed the Hāshimid forces, both regulars and irregulars. The road to Mecca lav

open, but for diplomatic reasons Ibn Su'ūd held the Ikhwān back.

In 1338/1920 soldiers of the Ikhwān took part in the capture of Abhā, the capital of highland 'Asīr, and manned the garrison established there to maintain Ibn Su'ūd's rule. The Ikhwān were so high-handed in their conduct that the people of 'Asīr revolted, and Ibn Su'ūd had to send his son Fayṣal with another detachment of Ikhwān under Ibn Ḥumayd to regain control of the region.

A conflict arose between Ibn Su'ūd and Sālim b. Mubārak Āl Ṣabāḥ, the ruler of Kuwait, over the borderland between their domains in 1338/1920. Ibn Su'ūd felt that Sālim was pressing his claims too far south, and Sālim protested at the building of a *hidjra* by the Ikhwān of Muṭayr at Ḳarya al-'Ulyā (pronounced *garyat al-'ilyā*). Sālim dispatched troops into the disputed area, and at Ḥamḍ near Ḳarya they were overwhelmed by Fayṣal al-Dawīsh and the Ikhwān. Fearing invasion, the people of Kuwait in two months built a long wall with four gates to protect their town. In Muḥarram 1339/October 1920 al-Dawīsh moved, not against Kuwait town itself, but against the neighbouring oasis of al-Djahrā', which Sālim defended with desperation and success. Losses on both sides were heavy. Britain, pledged to protect Kuwait, sent two warships to the port and two military planes from 'Irāḳ, which dropped a warning notice on the Ikhwān. Undeterred, al-Dawīsh proceeded to the outskirts of al-Zubayr in 'Irāḳ, where the British intervened again. The crisis between Kuwait and Ibn Su'ūd was solved by a delegation from Kuwait to Nadjd led by the heir apparent, Aḥmad Āl Djābir Āl Ṣabāḥ, who, unlike Sālim, was on good terms with Ibn Su'ūd. Sālim died in Djumādā II 1339/February 1921 while the delegation was conferring with Ibn Su'ūd, and Aḥmad as his successor restored amicable relations.

At a congress in al-Riyāḍ in 1339/1921, attended by many of the Ikhwān, Ibn Su'ūd was acclaimed Sultan of Nadjd, a title new to his family. His father 'Abd al-Raḥmān kept the old title of Imām. The new Sultan celebrated by crushing at long last his old enemies, Āl Rashīd. After a siege of nearly two months in which al-Dawīsh and the Ikhwān played a prominent part, Ḥāyil capitulated in Ṣafar 1340 /November 1921. The Ikhwān leaders criticized the generous terms which Ibn Su'ūd accorded to Āl Rashīd.

The occupation of Āl Rashīd's lands eliminated the buffer between Ibn Su'ūd's state and the new states of Transjordan and 'Irāḳ. A number of followers of Āl Rashīd, particularly from the tribe of Shammar, took refuge in 'Irāḳ and made it a base for raids against the subjects of Ibn Su'ūd. The Ikhwān, restrained from hurling themselves against the Hāshimids in al-Ḥidjāz, found substitute targets in their new neighbours, where al-Ḥusayn's sons 'Abd Allāh and Fayṣal had assumed the thrones of Transjordan and 'Irāḳ. In the eyes of the Ikhwān, backsliding Hāshimids were fair game wherever they might be. Further, there were many Shī'is in 'Irāḳ, especially among the sheep-herding tribes which ranged down towards Nadjd and Kuwait, and Shī'ism was abhorrent to the Ikhwān.

In 1340/1922 the Ikhwān reached well beyond Ḥāyil to the northwest, occupying the oases of al-Djawf and Sakākā at the south end of Wādī al-Sirḥān leading to Transjordan. A raiding party of Ikhwān attacked two villages of Banū Ṣakhr very near the Transjordanian capital of 'Ammān and withdrew before British planes could overtake them.

The British government, which held the mandates for Transjordan and 'Irāḳ and had a treaty with Ibn Su'ūd, to whom it paid a modest subsidy, sought ways of preventing the raids and counter-raids. The British felt that to determine the allegiance of tribes and to define boundary lines were essential steps. Representatives of 'Irāḳ and Nadjd were brought together to sign a treaty at al-Muḥammara on 7 Ramaḍān 1340/5 May 1922, which Ibn Su'ūd refused to ratify on the grounds that his representative had exceeded his instructions. Ibn Su'ūd, however, in a meeting with British and 'Irāḳī officials at al-'Uḳayr accepted on 12 Rabī' II 1341/2 December 1922 a protocol to the treaty drawing a boundary between Nadjd and 'Irāḳ. At the same time a convention drawing a boundary between Nadjd and Kuwait was concluded with the British Political Agent from Kuwait. These instruments also established a neutral zone between Nadjd and 'Irāḳ and another between Nadjd and Kuwait, in each of which both governments concerned would have equal rights. The idea of the neutral zone was to provide a common territory without permanent inhabitants to which nomads with their livestock from both sides could resort for watering and grazing. For countless centuries the Bedouins of Arabia had moved back and forth without artificial boundaries to stop them. It would take time for them to adjust to the new arrangements, especially since the lines sketched on maps were not marked on the ground. Furthermore, the definition of the new boundaries was imprecise in a number of points, leaving room for argument over the location of the lines. For the better part of a decade raiding across boundaries was to remain a common practice.

Aiming to ease the tension between Ibn Su'ūd and his three Hāshimid neighbours, the British invited the four to send representatives to a conference at Kuwait. King al-Ḥusayn of al-Ḥidjāz refused to do so, but delegates from the other three met intermittently from Djumādā I to Ramaḍān 1342/December 1923-April 1924 without solving any of their problems, including control of the tribes on all sides. The situation between al-Ḥusayn and Ibn Su'ūd grew worse when al-Ḥusayn was proclaimed Caliph in Radjab 1342/March 1924, an act regarded by the Ikhwān as further proof of Hāshimid heresy. Islamic circles in Egypt and India voiced vigorous criticism of al-Ḥusayn's administration of the affairs of the Holy Land and the Pilgrimage. In Dhu 'l-Ḳa'da 1342/June 1924 a congress of Ibn Su'ūd's notables met in al-Riyāḍ. The leaders of the Ikhwān accused al-Ḥusayn of barring them from the pilgrimage, and the *'ulamā'* affirmed that the Muslims of Nadjd had the right to fulfil this fundamental duty "by consent or by force". The congress closed with the cry: "*Tawakkalnā 'ala 'llāh—ila 'l-Ḥidjāz!*"

The Ikhwān did not move in time for the pilgrimage of 1342/1924, as their campaign against al-Ḥidjāz began in Muḥarram 1343/August 1924. The main thrust westwards was accompanied by diversionary expeditions against the Hāshimids on two other fronts. A flying column of Ikhwān raided villages of Banū Ṣakhr just south of 'Ammān, only to be thrown back with severe losses by British planes and armoured cars, while other Ikhwān made a series of irruptions into 'Irāḳ, where again the British opposed them with modern equipment.

In the west the Ikhwān advanced under the command of Ibn Lu'ayy and Ibn Ḥumayd. Early in Ṣafar 1343/September 1924 their vanguard, with no responsible officer in charge, surged into the town

of al-Ṭā'if and put to flight the defending forces under al-Ḥusayn's son ʿAlī. A brawl with the citizens led to the slaughter of some hundreds before Ibn Ḥumayd arrived in haste to restore order. This was the only instance of uncontrolled violence by the Ikhwān during the war in al-Ḥidjāz (Ibn Suʿūd immediately issued strict instructions against any repetition), but it was enough to strike terror into the hearts of al-Ḥusayn's subjects. Many, including the Amīr ʿAlī, abandoned Mecca, leaving it defenceless. In Rabīʿ I 1343/October 1924 the Ikhwān under Ibn Lu'ayy and Ibn Ḥumayd thronged into the Holy City, wearing the *iḥrām* dress and carrying their rifles with muzzles down. The occupation took place nearly two months before the arrival of Ibn Suʿūd from al-Riyāḍ. When the Ikhwān chose Ibn Lu'ayy as Amīr of Mecca, it became one of the ironies of history that the last Sharīf of the nearly thousand-year-old Hāshimid dynasty to govern the city should be an adherent of the Ikhwān of Nadjd.

Carrying out the tenets of Wahhābism, the Ikhwān destroyed many of the shrines in Mecca, thus provoking an unfavourable response in the Islamic world. Once again the Ikhwān showed resentment at Ibn Suʿūd's leniency when he treated the people of al-Ḥidjāz gently, and an ominous speech by Fayṣal al-Dawīsh in Mecca on *ʿĪd al-Fiṭr* indicated an inclination towards open revolt.

The leading citizens of al-Ḥidjāz had prevailed upon al-Ḥusayn to abdicate and had recognized his son ʿAlī as the constitutional monarch. The Ikhwān joined in the sieges of ʿAlī's main footholds, Djudda and Medina, but it was Ibn Suʿūd who accepted the surrender of Djudda in Djumādā II 1344/December 1925 and his son Muḥammad, rather than Fayṣal al-Dawīsh, who a little earlier accepted the surrender of Medina (Djumādā I/December).

While the siege of Djudda was going on, Ibn Suʿūd concluded with Britain in Rabīʿ II 1344/November 1925 the agreements of Baḥra and Ḥaddā' (places on the way from Djudda to Mecca), with Britain acting on behalf of ʿIrāḳ and Transjordan. Both agreements were designed to enforce more effective control over raiding, and the Ḥaddā' agreement drew a boundary line between Nadjd and Transjordan (with the exception of the district of Maʿān and al-ʿAḳaba, which Ibn Suʿūd claimed as part of al-Ḥidjāz).

To avoid trouble with the people of al-Ḥidjāz, Ibn Suʿūd sent most of the Ikhwān back to Nadjd or off on expeditions to rivet his control over districts in the south near the borders of the Yaman and in the north towards al-ʿAḳaba. In Mecca the Ikhwān influenced events again during the pilgrimage of 1344/1926, when they stoned the Egyptian caravan on the grounds that the *Maḥmal* and its military band were *bidʿas*. The Egyptians fired on the pilgrims from Nadjd and killed a number of them. This incident was partly responsible for Egyptian coolness towards the new regime in al-Ḥidjāz during the next 10 years.

The restlessness of the Ikhwān under the rule of Ibn Suʿūd came to the surface in a congress of their chiefs at al-Arṭāwiyya in 1345/1926. Ibn Suʿūd, now King of al-Ḥidjāz, was condemned for a number of his acts, such as sending his son Suʿūd on a visit to Egypt, the land of *shirk*, and his use of automobiles, telephones, and the telegraph. Ibn Suʿūd thereupon summoned his notables to a congress in al-Riyāḍ in Radjab 1345/January 1927. Some but not all of the Ikhwān chiefs came. The *ʿulamā'* issued a *fatwā* in Shaʿbān/February, which in general deferred to the authority of Ibn Suʿūd as Imām but at the same time made concessions to the Ikhwān. The entry of the *Maḥmal* into Mecca was, if possible, to be prohibited. Strong measures were to be taken to bring the Shīʿis of al-Ḥasā and al-Ḳaṭīf into the fold of true Islam. On the use of the telegraph however, the *ʿulamā'* declined to give an opinion, holding it to be a modern invention about which nothing could be found in the works of the religious authorities. Two months later another congress in al-Riyāḍ brought together 3,000 of the Ikhwān leaders, only Ibn Ḥumayd being absent, and Ibn Suʿūd received further support. Ibn Suʿūd strengthened his diplomatic position by signing the treaty of Djudda with Britain on 18 Dhu 'l-Ḳaʿda 1345/20 May 1927, even though dealings with Christian powers were anathema to men such as Ibn Ḥumayd and al-Dawīsh, who continued recalcitrant.

In Djumādā I 1346/November 1927 an incident in ʿIrāḳ north of the neutral zone between it and Nadjd set in train the revolt of the Ikhwān against their sovereign. Protocol No. 1 of al-ʿUḳayr had forbidden the building of forts in the vicinity of the boundary. When ʿIrāḳ began to construct a police post at the wells of Buṣayya, Ibn Suʿūd's government called this a violation of the protocol. Fayṣal al-Dawīsh's Ikhwān of Muṭayr took the matter into their own hands, descending on the post at night and virtually wiping out the ʿIrāḳī force. Other incidents followed in quick succession, with Muṭayr repeatedly defying Ibn Suʿūd's orders. The British struck back by bombing Nadjd territory. In Ramaḍān 1346/March 1928 Ibn Ḥumayd began to outdo al-Dawīsh in aggressiveness, calling for an all-out assault by the Ikhwān on the infidels of ʿIrāḳ. In Shawwāl/April Ibn Suʿūd, who was preparing to negotiate again with Britain, prevailed on the Ikhwān to suspend operations for a time, but the negotiations, which took place in Djudda in Dhu 'l-Ḳaʿda/May, failed to settle the problems of ʿIrāḳī military posts and Ikhwān raids, nor was the deadlock resolved in a second round of negotiations in Djudda in Ṣafar 1347/August 1928.

To cope with the internal crisis Ibn Suʿūd held a congress in al-Riyāḍ in Djumādā I 1347/October 1928, which Ibn Ḥumayd, al-Dawīsh, and Ḍidān b. Fahhād Ibn Ḥithlayn of al-ʿUdjmān refused to attend, though al-Dāwīsh did send his son ʿAbd al-ʿAzīz (ʿUzayyiz). Ibn Suʿūd went so far as to offer to abdicate, but the congress instead deposed the three rebel chiefs. The charge was spread at the time or soon after that the three planned to carve up Ibn Suʿūd's realm, with al-Dawīsh taking Nadjd, Ibn Ḥumayd taking al-Ḥidjāz, and Ibn Ḥithlayn taking al-Ḥasā, while a leader of Shammar who had joined the Ikhwān would get Ḥāyil and a leader of al-Ruwala would get al-Djawf.

The situation stayed relatively quiet until Ramaḍān 1347/February 1929, when Ibn Ḥumayd in a raid northwards massacred a number of Nadjd merchants escorting camels to sell in Egypt. This bloody deed solidified opinion in the towns of Nadjd behind Ibn Suʿūd, and tribes which had suffered at the hands of the Ikhwān supported the townsmen. Ibn Suʿūd called on the rebels to surrender and undergo trial in the *Sharīʿa* courts, but they refused. Finally Ibn Suʿūd overtook the rebels on the plain of al-Sabala (often written Sibila in English) not far from al-Arṭāwiyya, the fountainhead of the Ikhwān movement. Here in Shawwāl 1347/March 1929 Ibn Suʿūd broke the back of the revolt. Ibn Ḥumayd fled, only to be captured and imprisoned in al-Riyāḍ, while his *hidjra* at al-Ghaṭghaṭ was razed by Ibn Suʿūd's

brother ʿAbd Allāh. Fayṣal al-Dawīsh, gravely wounded, was carried to al-Arṭāwiyya.

In Dhu 'l-Ḳaʿda 1347/May 1929 Ḍidān Ibn Ḥithlayn was killed by order of Fahd, son of Ibn Suʿūd's governor of al-Ḥasā, ʿAbd Allāh b. Djalwī, and in revenge the Ikhwān of al-ʿUdjmān killed Fahd. Ḍidān's place was taken by his cousin Nāyif Aba 'l-Kilāb. Fayṣal al-Dawīsh, recovered from his wound, joined Nāyif in the east in Muḥarram 1348/June 1929. Among the stoutest opponents of the rebels was the tribe of al-ʿAwāzim [*q.v.*]. During the summer the rebels won successes, cutting the road from the coast to al-Riyāḍ via Abū Djifān and in another foray destroying a number of lorries bringing supplies to Ibn Suʿūd's son Suʿūd, who was in the field against them. In Rabīʿ I 1348/August 1929 al-Dawīsh's son ʿUzayyiz led a long raid into the country of Shammar and ʿAnaza, but he died from thirst in the desert after being defeated in a battle with Ibn Suʿūd's governor of Ḥāyil, ʿAbd al-ʿAzīz b. Musāʿid Āl Djalwī. Hundreds of the Ikhwān of Muṭayr fell in this battle. Fayṣal al-Dawīsh was hard put to find water for all his Ikhwān and grazing for his many thousands of camels, and the rebel cause was doomed when an important section of ʿUtayba under ʿUmar Ibn Rubayʿān chose Ibn Suʿūd's side. Relentlessly Ibn Suʿūd's forces closed in on the rebels, and in Shaʿbān 1348/January 1930 Fayṣal al-Dawīsh, Nāyif Ibn Ḥithlayn, and other chiefs surrendered to the British in Kuwait territory. The British negotiated terms of extradition with Ibn Suʿūd, and at the end of Shaʿbān/January the captive chiefs were handed over. Their lives were spared, but they went to gaol in al-Riyāḍ.

Thus peace was restored by 1348/1930 to the realm of Ibn Suʿūd, and the age of tribal raiding came to an end. The suppression of the revolt did not mean the total eclipse of the Ikhwān movement; it meant rather that it would be consigned to a subordinate role in the state. Some of the *hidjras* were abandoned, but others continued to flourish. Ikhwān chiefs who had remained loyal to Ibn Suʿūd received regular stipends, and the Ikhwān in the *hidjras* got an annual grant (*sharha*) of rice. Among the loyal chiefs was the Sharīf Khālid Ibn Lu'ayy, who commanded expeditions against the Yamanīs in Nadjrān in 1350/1932 and the Idrīsids in Tihāmat ʿAsīr in 1351/1933, during the second of which he fell ill and died. Other loyal chiefs held places of honour in the King's court. The religious zeal of the Ikhwān remained alive among large sections of the population of the kingdom, and it is still displayed by the *muṭawwiʿs* and the members of *Hay'āt al-amr bi 'l-maʿrūf wa 'l-nahy ʿan al-munkar*. As the military establishment of the kingdom developed, the Ikhwān detachments became the National Guard, popularly known as *al-Mudjāhidūn*. Now they move about in motor vehicles, which their predecessors once looked upon as works of *siḥr*.

(G. RENTZ)

AL-IKHWĀN AL-MUSLIMŪN, "the Muslim Brethren", Muslim movement, both religious and political, founded in Egypt by Ḥasan al-Bannā' [*q.v.*].

History. Many facets of the history of the Muslim Brethren are still unknown, which is to be expected since the movement engaged in many secret activities, on several occasions threatening the established régimes and being persecuted by them, many notorious militant members of it being now (1969) either in exile or living under police supervision in their own countries. The history of the movement may be divided into various periods:

(1) A formative period (1928-36) dominated by religious and social activities. After the foundation of the *Djamʿiyyat al-Ikhwān al-Muslimīn*, the "Association of the Muslim Brethren", in 1928 at Ismāʿīliyya [*q.v.*] in Egypt, sections were formed in the various localities of the Suez Canal zone, then gradually throughout Egypt, particularly after 1933, the year in which al-Bannā', who had remained a teacher, was moved to Cairo, where he transferred the headquarters of the brotherhood. Missionaries (*dāʿī*, pl. *duʿāt*) specially commissioned by the founder and "Supreme Guide" (*al-murshid al-ʿāmm*) preached in the mosques and other public places; the Brethren founded schools of various grades, organized courses of religious instruction, taught the illiterate, set up hospitals and dispensaries, undertook various enterprises to raise the standard of living in the villages, built mosques and even launched industrial and commercial enterprises.

(2) A period of political activity and of expansion, then of troubles (1936-52). After the signing of the Anglo-Egyptian treaty of 1936, Ḥasan al-Bannā' undertook the support of the cause of the Palestine Arabs, which enabled him to spread the movement throughout the Middle East and especially in Syria, and gained him in Egypt an ever-increasing prestige. During the second world war, in 1941, he was im-

prisoned for a time because of his violent anti-British propaganda. It seems that at this period the "Free Officers", who were to seize power on 23 July 1952, had a friendly relationship with the Brethren, but the two movements always remained independent of each other. It is probable that al-Bannā' had already organized, in addition to sporting and paramilitary groups, a secret army, and his plans certainly did not exclude the seizing of power by force. While awaiting a suitable opportunity, the Muslim Brethren continued their educational and social activities and became an increasing influence in Egyptian political life, but in the country itself and not in the parliament. After 1943 they had to reckon with competition from the communists, allied to the left wing of the Wafd, who like them were attempting to arouse the political awareness of the students and the populace. The Egyptian Left accused the Brethren of devoting in fact more energy to opposing it than to opposing the British, and of resorting to violent methods and even actual terrorism to do so. The Muslim Brethren provided volunteers who fought with the Arab armies in the Palestine War in 1948. After the Arab defeat, they appeared as an organized armed force which was capable of challenging the Egyptian government; the government of al-Nuḳrās̲h̲ī ordered the dissolution of their organization, the confiscation of all its possessions and the arrest of a large number of Brethren. Al-Nuḳrās̲h̲ī was assassinated on 28 December 1948 by a Brother; shortly afterwards, on 12 February 1949, al-Bannā' was himself assassinated; no investigation of this murder was ever completed. The Brotherhood continued to function in secret. A new supreme guide was elected, Ḥasan Ismā'īl al-Huḍaybī, a magistrate, but his authority was often challenged. In 1951, as a result of the law concerning organizations (23 April), the Brethren were able to resume their activities openly; in theory they were forbidden to do anything in secret or to make any military preparations, but they very soon managed to evade this prohibition. They took part in the harrying actions against the British bases in the Suez Canal zone. The part they played in the burning of Cairo on 26 January 1952 is still not clear.

(3) The Muslim Brethren under the Revolutionary régime (from July 1952). The secret movement of the "Free Officers" which seized power on 23 July 1952 had a programme which resembled in many respects that of the Brethren, particularly on social matters; in addition, many officers who took part in the movement were in fact members of, or sympathizers with, the society of the Muslim Brethren. This may perhaps explain why the new régime at the beginning sought the support and even the collaboration of the Brethren; when all the political parties were dissolved (16 January 1953), the régime agreed to consider the Muslim Brethren as a non-political association. But it appears that al-Huḍaybī demanded the right of control and veto over all the government's decisions, wishing to set himself up as the "moral tutor" of the revolution, a position which was of course refused to him. Soon the Brethren attacked the new régime, considering that its programme and its first achievements did not sufficiently conform to their Islamic ideal. In 1953 there began a muted but bitter struggle; the Brethren intensified their propaganda among the students and the trade unions, and some of them plotted within the army and even among the police. On 13 January 1954, their society was once again dissolved and several hundred of them, including all the leaders, were arrested; but because of the rivalry between General Muḥammad Nad̲j̲īb and Colonel D̲j̲amāl 'Abd al-Nāṣir, they were shortly afterwards released and were granted again the right to exist as a non-political organization. The Anglo-Egyptian treaty signed on 19 October 1954 was the cause of a fresh disagreement: the Brethren regarded it as too favourable to Great Britain and rejected even the principle of negotiation with the British, maintaining that an armed struggle against them was the only method possible. On 26 October 1954, Colonel D̲j̲amāl 'Abd al-Nāṣir narrowly escaped an attempt on his life by a member of the Muslim Brethren; the government reacted by arresting and trying more than a thousand Brethren and severe penalties were inflicted: six Muslim Brethren, among them the lawyer and writer 'Abd al-Ḳādir 'Ūda, were condemned to death and executed; the Supreme Guide, al-Huḍaybī, was condemned to death, but his sentence was commuted to life imprisonment. One would have expected that after this the Brotherhood would be crushed; indeed many of the members who did not approve of terrorist methods, had given their support to the new régime. In fact the Brotherhood continued to exist clandestinely. During the summer of 1965, a conspiracy hatched by the Muslim Brethren, the aim of which was to overthrow the régime of Colonel 'Abd al-Nāṣir, was discovered; several hundred arrests were made; the enquiries and the trials lasted for a year; in August 1966 there took place three executions, including that of Sayyid Ḳuṭb, a well-known writer among the Brethren, not to mention many sentences of hard labour and prison. It appears however that the Brotherhood continues to exist clandestinely and to constitute a certain threat to the Egyptian government (1969).

The Muslim Brethren outside Egypt. Similar movements appeared at the same time in other Arab countries, inspired by the example of the Egyptian Brotherhood, but it is difficult to tell whether they were organically attached to it, and if so in what degree, or whether they were independent. In Syria, in 1937, there was founded an association of Muslim Brethren which was to be less extensive and less active than the Egyptian association, but some of its members occupied official political offices in Syria, as members of Parliament and ministers, and in particular the Muslim Brethren of Syria exercised a not inconsiderable moral and intellectual influence, under the leadership of *s̲h̲ayk̲h̲* Muṣṭafā al-Sibā'ī (d. 1965). Less important, and in some cases more temporary, associations existed also in Palestine, Jordan, Lebanon and 'Irāḳ. It should be added that the Muslim Brethren in Egypt commanded, and, it seems, still command, wide sympathy in many Arab countries and also in non-Arab Muslim countries.

Doctrine. The essential message of the Muslim Brethren may be summarized thus: they consider Islam to be an "order" (*niẓām*) without equal, because it is revealed by God, which has a vocation to organize all aspects of human life: "Islam is dogma and worship, fatherland and nationality, religion and state, spirituality and action, Ḳur'ān and sword" (Ḥ. al-Bannā'); furthermore, this order is valid for all men of all time and all countries. The originality of the Muslim Brethren lies not in their doctrine, many elements of which may be found in the preaching of D̲j̲amāl al-Dīn al-Afg̲h̲ānī [*q.v.*], but in the fact that their founder, by simplifying it and making it more strict, made it the ideological basis of a powerful popular movement. The professions

of faith of the Brethren, and espeially those of Ḥ. al-Bannā', who was educated in the Ḥanbalī *madhhab*, are strongly inspired by the idea of a return to the faith of the "devout ancestors" (*salaf*) of the Community, although they are for the most part formulated on a plane and in terms very different from those of tradition and invoke on occasion the authority of non-Muslim scholars and philosophers in the cause of the struggle against atheism; the believer can know God only through the description which He has given of Himself in the Ḳur'ān and through the words of His Prophet; but the faith of the Muslim is also alluminated and nourished by the light thrown into his mind and his heart by the total commitment of his life to the service of Islam. In the same spirit, the Brethren were obliged to perform pious exercises based on the recital of the Ḳur'ān with meditation (*tadabbur*) and to make an assiduous study of *ḥadīths* and of the model provided by the history of the beginnings of the Muslim Community. Whatever the differences between them, all the professions of faith of the Brethren show the greatest mistrust of the traditional formulations of *kalām*, which they consider to be too much impregnated with the Greek spirit, which is foreign to primitive Islam, and whose speculations they accuse of having provoked in the past, and of encouraging at the present time, divisions and a sectarian spirit, which form an obstacle to the necessary unity of all Muslims which is indispensable in their struggle against the foreign imperialists.

The Brethren's dedication to the service of Islam has as its main objective the struggle against western invasion in all its forms. Abroad first, it is necessary to fight until all the Muslim countries are freed from any foreign domination. Next, within Egypt, the Muslim Brethren planned to re-Islamicize Egyptian life in the very many fields which had been impregnated by western influence, now considered to be waning; these extended from social habits, such as dress, greetings, the use of foreign languages, hours of work and of rest, the calendar, recreation, etc., to the educational, legal and political institutions, not to mention the field of ideas and sentiments. Matters relating to the family and to the position of women were not neglected; in addition there existed a parallel women's movement, the "Muslim Sisters". One of the main points of this programme was the abolition of the Egyptian legal codes, based on European codes, and the creation of a legislation based on the *sharī'a*; they considered the question of the evolution of *fiḳh* to be no longer relevant, since a society which is renewed and really living according to Islam ought to work out for itself a new system of legislation, based on the principles provided by the Revelation, according to the new and unforeseeable problems which it encounters (S. Ḳuṭb). The Muslim Brethren strove to work out a whole economic and social doctrine based on canonical ideas, such as the taxes provided for by the revealed Law (*zakāt*) and the prohibition on making profit from money (*ribā*), and in general reinterpreting and adapting to modern needs the rules concerning economic and social life provided by the Ḳur'ān, the Sunna and the edifying episodes in the history of the Community. Sayyid Ḳuṭb and Muṣṭafā al-Sibā'ī appear to be the writers who mainly systematized this doctrine; they defined an Islamic socialism (*ishtirākiyya islāmiyya*) which, while combining the advantages of capitalism and communism, differs radically from these two systems in both its nature and its aims. Private property is guaranteed as a right, but its possession is a social function delegated to the individual by the community, which holds these possessions from God, the only true owner. The State, acting as representative of the community, has the right and the duty to investigate the origin of the fortunes of individuals, to control its use, and to deduct from it the portion due to the poor. In addition to these principles, on which there was to be based a truly Muslim and social legislation and policy, there are exalted the virtues of disinterestedness, of mutual devotion and of brotherhood, which, according to these writers, existed in the Muslim countries before they were invaded by Western materialism, and which must now be taught again since they are the very ends towards which this Islamic régime is directed.

The second main objective of the Brethren was to create an authentically Muslim state; the ideal, which would be attained after many preparatory stages, was to restore a single State which would embrace all the Muslim peoples and would have at its head a caliph. Until this was achieved, a plurality of states was permissible. The leader of the State is elected by the community and responsible to it; the community acts through qualified representatives elected by it, the *ahl al-shūrā*, who elect the leader, have control over his acts, and legislate in collaboration with him. Every person in authority is required to act in consultation (*shūrā*) with his subordinates, and it is the duty of every citizen to offer his advice (*naṣīḥa*) to those in authority. The aim of this Islamic State is, internally, to see that the laws of Islam are properly observed, and, externally, to send out and to support missionaries who will present Islam to other nations, and to fight constantly, and with arms if need be, for justice and the common good of humanity (*amr bi 'l-ma'rūf wa-nahy 'an al-munkar*).

The ideas of the Muslim Brethren were, and still are, widely spread, even after the association disappeared officially, and they have today a great influence on Muslim literature in apologetics and in popular religion, particularly that written in Arabic.

Bibliography: To the works and reviews mentioned by J. M. B. Jones in the article AL-BANNĀ' should be added the following: Christina Ph. Harris, *Nationalism and Revolution in Egypt, the role of the Muslim Brotherhood*, London 1964; Anouar Abdel Malek, *Egypte société militaire*, Paris 1962 (see index); F. Bertier, *L'idéologie politique des Frères Musulmans*, in *Orient*, no. 8 (4ème trim. 1958), 43-57; H. Laoust, *Les schismes dans l'Islam*, Paris 1965, 375-9.—There exists so far no complete list of the writings of Ḥasan al-Bannā' (which, apart from his autobiography, *Mudhakkirāt al-da'wa wa 'l-dā'iya*, Cairo, n.d., consist of short brochures (his *rasā'il*), newspaper articles and lectures), nor of the periodicals produced by the Brotherhood, nor of the very numerous works of his propagandists; it would be possible however to compile an adequate list of documents using I. M. Husaini, *The Moslem Brethren* [see AL-BANNĀ'] and C. P. Harris, *op. cit.*, supplemented by Dāghir, *Maṣādir al-dirāsa al-'arabiyya*, Beirut 1956, 209-12; a recent re-issue: *Madjmū'at rasā'il al-imām al-shahīd Ḥasan al-Bannā'*, Dār al-Andalus, Beirut 1956 (500 pp.); various writings of al-Bannā' are re-issued sporadically in different Arab countries. Translations: some works of al-Bannā' have been translated into French in *Orient*: *Naḥw al-nūr*, *Vers la lumière*, tr. J. Marel, no. 4, 37-62; tr. of an art., *La*

nouvelle renaissance du monde arabe et son orientation, by A. Miquel, no. 6, 139-44; *Mus̲h̲kilātunā fī ḍawʾ al-niẓām al-islāmī, Nos problèmes à la lumière de l'ordre islamique*, tr. H. Loucel, no. 37, 103-27, no. 39, 151-67, no. 40, 211-27. For a study of the development of the doctrine of the Muslim Brethren, reference must also be made to the works of many other writers, of which it is possible to mention here only those who, not referred to in the studies above, seem to us the most important: Sayyid Ḳuṭb, *al-ʿAdāla al-id̲j̲timāʿiyya fi 'l-Islām*, Cairo, many eds. since 1952 (Eng. tr. by J. B. Hardie, *Social Justice in Islam*, Amer. Council of Learned Soc., Washington 1953); idem, *al-Salām al-ʿālamī wa 'l-Islām*, Cairo n.d. (183 pp.); idem, *Maʿrakat al-Islām wa 'l-raʾsmāliyya*, Cairo 1951 (160 pp.), idem, *Fī ẓilāl al-Ḳurʾān* (a commentary on the Ḳurʾān, Cairo 1953-9 approximately 30 fascicules (*ad̲j̲zāʾ*), 5th ed. 1967 (Beirut?)); idem, *Hād̲h̲ā al-dīn*, Cairo 1961 (98 pp.), re-issued 1967 (Beirut?); idem, *al-Islām wa-mus̲h̲kilāt al-ḥaḍāra*, Cairo 1962 (192 pp.), re-issued n. p. 1967; idem, *K̲h̲aṣāʾiṣ al-taṣawwur al-islāmī wa-muḳawwimātuh*, Beirut 1967 (238 pp.); on Sayyid Ḳuṭb, a brochure by an author of the same name, Muḥammad ʿAlī Ḳuṭb, *Sayyid Ḳuṭb aw t̲h̲awrat al-fikr al-islāmī*, Beirut 1967 (96 pp.); a list, probably still incomplete, of the works of Muḥammad Ḳuṭb, the brother of Sayyid, and of Muḥammad al-G̲h̲azālī, in *REI*, *Abstracta Islamica*, xv (1961), nos. 1432 to 1442 and 1402 to 1422; a list of the works of ʿAbd al-Ḳādir ʿŪda in I. M. Husaini, *op. cit.*, bibl. no. 80; Muṣṭafā al-Sibāʿī, *Is̲h̲tirākiyyat al-Islām*, Damascus 1959 (D̲j̲āmiʿat Dimas̲h̲ḳ Press, 175 pp.), 2nd enlarged ed. Cairo n.d. (al-Dār al-Ḳawmiyya Press, 264 pp.), and Damascus 1960 (al-Hās̲h̲imiyya Press, 433 pp.); idem, *al-Sunna wa-makānatuhā fi 'l-tas̲h̲rīʿ al-islāmī*, Cairo 1961 (Dār al-ʿUrūba, 523 pp.); idem, *al-Marʾa bayna 'l-fiḳh wa 'l-ḳānūn*, Damascus 1962 (D̲j̲āmiʿat Dimas̲h̲ḳ Press, 336 pp.).

(G. Delanoue)

IK̲H̲WĀN AL-ṢAFĀʾ, the name under which the authors of the famous *Rasāʾil Ik̲h̲wān al-Ṣafāʾ wa-k̲h̲illān al-wafāʾ* conceal their identity; these authors, however, often extend the term to cover all the initiates or adepts of their doctrine, whom they also call, more simply, *ik̲h̲wānunā* "our brothers", and *awliyāʾ Allāh* "the friends of God". The generally received translation is "Epistles of the Brethren of Purity", or "of the Sincere Brethren (and Loyal Friends)", that is to say, of those who are united, in the spiritual City, by the purity of their souls (all corporeal barriers having fallen) and the loyalty that flows from this, loyalty to one another, in fact to all men, and perhaps above all to the true *imām*.

In spite of the most interesting article by S. M. Stern (*New information*), it seems indisputable that the Epistles represent the state of Ismāʿīlī doctrine at the time of their composition. They present two other important problems in this respect: that of their authorship and that of the date of their composition.

Authorship.—Although they appear to have been suspect to orthodox Muslims, the Epistles circulated among them and had a profound influence on certain circles. It is strange to think that their origin was, and still is, in dispute (see Stern's articles, *The authorship* . . . and particularly *New information* . . .). They have sometimes been attributed to a Muʿtazilī; this is unacceptable, in view of the hostility that they display towards the *mutakallimūn*. The Twelver S̲h̲īʿis claim them, although they contain some clear criticisms of their doctrine of the hidden *imām*. The Ismāʿīlīs rightly consider them to be one of their fundamental works (see Ivanov, in *EI*¹, suppl., s.v. ISMĀʿĪLIYYA). Casanova, well before the Ismāʿīlīs had allowed the publication of works of Fāṭimid literature, was the first orientalist (1898) to assert that they were of Ismāʿīlī origin; this was confirmed by this literature when it came to be partially known. The authorship of the Epistles has sometimes been ascribed to ʿAlī, and to D̲j̲aʿfar al-Ṣādiḳ. Towards the end of the 5th/11th century, a Syrian Nizārī attributed them to the hidden *imāms* Muḥammad b. Ismāʿīl and ʿAbd Allāh b. Muḥammad; but he also names the *dāʿī* ʿAbd Allāh b. Maymūn al-Ḳaddāḥ and three other *duʿāt* as collaborators in their composition. The Mustaʿlī tradition of the Yemen has attributed them generally, since at least the 7th/13th century, to the *imām* Aḥmad.

In 1876, however, Dieterici (*Philosophie* . . ., 142), without recognizing the Ismāʿīlī character of the Epistles, quoted a passage of al-Tawḥīdī (on which Ḥād̲j̲d̲j̲ī K̲h̲alīfa relied, iii, 460) giving the names of their supposed authors. Stern recently revived the question in the two articles mentioned above. It is clear that the four persons mentioned by al-Tawḥīdī (Abū Sulaymān Muḥammad b. Maʿs̲h̲ar al-Bustī, called al-Maḳdisī, the *ḳāḍī* Abu 'l-Ḥasan ʿAlī b. Hārūn al-Zand̲j̲ānī, Abū Aḥmad al-Nahrad̲j̲ūrī and al-ʿAwfī, all friends of a Chancellery secretary, Zayd b. Rifāʿa) are the authors (or among the authors) of the Epistles; for al-Tawḥīdī was connected not only with Zayd b. Rifāʿa, but also with the *ḳāḍī* al-Zand̲j̲ānī, and the latter told him a story which is found word for word in the text of the Ik̲h̲wān. He knew, then, what he was talking about.

He calls the *ḳāḍī* al-Zand̲j̲ānī "the author of the doctrine" (*Kitāb al-muʾānasa*, ed. Aḥmad Amīn, Cairo 1942, 4 ff., 157 ff.). Al-Tawḥīdī's teacher, Abū Sulaymān al-Manṭiḳī, for his part, gives al-Maḳdisī as the author of the work. Stern, however, discovered two most instructive passages in an unpublished *Tat̲h̲bīt dalāʾil nubuwwat Sayyidinā Muḥammad*, the work of the Muʿtazilī chief *ḳāḍī* of Rayy, ʿAbd al-D̲j̲abbār al-Hamadānī (325-415/936-1025) (now published as *Tat̲h̲bīt dalāʾil al-nubuwwa*, ed. ʿAbd al-Karīm ʿUt̲h̲mān, Beirut n.d.—preface dated 1966; see p. 610 ff.). One gives almost the same persons as the authors of the Epistles, but does not include al-Maḳdisī; on the other hand, it does include Zayd b. Rifāʿa and adds another person, Abu Muḥammad b. Abi 'l-Bag̲h̲l, a secretary and astrologer. All these persons, inhabitants of Baṣra, are considered active Ismāʿīlīs, and the *ḳāḍī* al-Zand̲j̲ānī himself is represented as a particularly important leader (text in Stern, *New information*, 411).

Stern comes, however, to a conclusion that seems hard to accept. He notes that, in the 5th/11th century, the Epistles had a considerable influence on philosophical circles that were not connected with Ismāʿīlism, and that, on the other hand, there is no trace of any influence on contemporary Ismāʿīlī authors; he believes that they were adopted by the Ismāʿīlīs only a century or two after their publication. According to him, the authors mentioned by al-Tawḥīdī and the *ḳāḍī* ʿAbd al-D̲j̲abbār, although connected with Ismāʿīlism, represented a particular trend in it, which believed that Muḥammad b. Ismāʿīl lived concealed and would come again as the expected *mahdī*; he was supposed to be in actual communication with chosen intimates (the authors of the Epistles) and to have disseminated the Epistles

through them. Stern thinks that the secret organization described by the Epistles was illusory, utopian and idealized, merely that which the group of authors would have wished it to be. He believes also that these authors had no official function in the organization of the Ismāʿīlī *daʿwa* and had no influence on contemporary Ismāʿīlism.

If this were the case, the *ḳāḍī* ʿAbd al-Djabbār would not have considered them dangerous Ismāʿīlīs. What is more, the Ikhwān reject the idea of an expected *imām*. On the other hand, the secret organisation described by them is too precise and corresponds too well to what the Ismāʿīlī organization may at first have been to be a product of their imagination. It does not seem to be idealized, but quite in conformity with the spiritual condition of a revolutionary movement in full expansion, which sets the purity of its convictions above everything—this is what gives such a movement its efficacy; the mystique of the spiritual City which unites them and contrasts them with the terrestrial city is typical: on one side, the good, on the other, the evil. Why should so much information that could apply to Ismāʿīlism be found concerning a non-existent sect, and nothing concerning Ismāʿīlism itself, which was so active at that time? Moreover, the Epistles lead one to believe that the propaganda was addressed particularly to those whose culture made them most apt to receive it: philosophers and mystics, or those who could be of most use to the movement, Chancellery secretaries or governors. Now, this was probably historically the case with the Ismāʿīlī propaganda. In spite of the slight doubt caused by the small difference between the information given by al-Tawḥīdī and that given by the *ḳāḍī* ʿAbd al-Djabbār, it may well be thought that the persons mentioned by them, or some of them, certainly collaborated in the composition of the Epistles, and that they were initiates of the highest rank who played an important part, even if others, of equal importance, were more disposed to action. Perhaps they were among the four *abdāl*, or even the "forty" (cf. *Révélation et vision véridique*, 35-6). But perhaps they were not the sole authors, and assertions of Ismāʿīlī origins contain only a part of the truth.

If the authors sometimes mention their work in common (iv, 367), the 50th Epistle (on different modes of government), on the other hand, considered particularly important because of its central chapter on the hidden meaning of festivals and sacrifices, and the 48th (on proselytizing) are put directly into the mouth of an *imām*. It is thus conceivable that the *imām* should have inspired the whole or part of the contents of certain Epistles, that he should have taken part in their composition or that he should have given something similar to his "imprimatur"; in any case, the *imām* of this world and those of the other world inspire all the members of the spiritual City. It is, however, also probable that the authors mentioned by al-Tawḥīdī and the *ḳāḍī* ʿAbd al-Djabbār gave the Epistles only their more or less definitive form. They seem to have been begun much earlier, perhaps actually by the *dāʿī* ʿAbd Allāh b. Maymūn al-Ḳaddāḥ and his contemporaries, and then continued by their successors, under the aegis of several successive *imāms*, including Muḥammad b. Ismāʿīl, his son ʿAbd Allāh and his grandson Aḥmad. This would be in no way surprising, if we suppose that the Epistles constitute an attempt to arrange and fix the official doctrine of Ismāʿīlism. This point of view appears confirmed by the attempts at dating that have been, or can be, made.

Dating.—Dieterici (*Die Philosophie der Araber*, Leipzig 1876, i, 142 ff.), in view of the facts that their supposed authors are mentioned by Ḥādjdjī Khalīfa (iii, 460) following al-Faryābī (d. 319/931), and that verses of al-Mutanabbī (303-54/915-65) are too frequently quoted in them to have been incorporated subsequently, and in view, similarly, of the fact that al-Madjrīṭī who introduced them into Spain died in 395/1005, fixes the date of the composition of the Epistles approximately between 350 and 375/961 and 986.

Other information that can be drawn from the Epistles seems to support these conclusions. They several times name Abū Maʿshar al-Falakī (d. 272/886 aged more than one hundred) and quote a passage of one of his works. They mention Bābak and the Khurramiyya, who began to attract attention in 192/808, and the Sāmānids (ii, 280).

Although the Muʿtazilīs are not named, many criticisms are evidently directed at them. Finally, one passage (iii, 161) mentions the Ashʿarites, who too are often criticized. Al-Ashʿarī, born in 260/874, became orthodox in 300/913 and died in 323/935; there could have been no question of Ashʿarites' existing until several years after his conversion, if not after his death; for the passage leads us to believe that Ashʿarism had already begun to be talked about, but was not yet equated with orthodoxy.

All this is confirmed by the fact that (as we have seen) al-Tawḥīdī personally knew al-Zandjānī, one of the supposed authors, and that he mentions these authors in a conversation with the vizier Ibn Saʿdān in 370/981; this presupposes that at that date the Epistles had already been completed for some time. This is not incompatible, either, with the fact that the *ḳāḍī* ʿAbd al-Djabbār al-Hamadānī speaks of the activity of al-Zandjānī, for he was 45 years old in 370. The Epistles, then, may have been finished between 350/961 and 370/980, that is to say before the conquest of Egypt by the Fāṭimids (358/969), or shortly after. Several passages, however, (notably iv, 146, 190, 252-3, 269) presage an important event, the manifestation of the cause by the Ikhwān, and the approach of government by good men. Two of these passages lead us to believe that this event is foretold by all the methods of divination and astrology (iv, 190 and particularly 146). The information furnished by the Ikhwān concerning the imminent conjunction that was to lead to the event is interpreted by Casanova (*Une date astronomique*), who bases himself on a passage of Ibn Khaldūn (ed. Quatremère, 186) and on the tables drawn up by an astronomer for De Goeje (*Les Carmathes du Bahraïn et les Fatimides*[2], Leiden 1886): according to him, the Ikhwān had in mind a conjunction that they expected on 26 Djumādā I 439/19 November 1047, and the expected event occurred eleven years and 42 days later, on 13 Dhu 'l-Ḳaʿda 450/1 January 1059: the *khuṭba* was then given in Baghdād, for a short period, in the name of the Fāṭimid al-Mustanṣir. The conjunction itself occurred in the caliphate of al-Ẓāhir, and Casanova sees an allusion to the latter in the term *ẓāhir* used in the text of the Ikhwān. Information furnished by the *Djāmiʿa* (323) suggests that the question should be reopened; it is possible that the tables used by Casanova did not correspond with those that the Ikhwān had at their disposal. Even if the dates that he suggests, however, are the right ones, his interpretation, for reasons that it would take too long to discuss in detail here, is certainly erroneous. It suffices to say that the Ikhwān allude here not to the final victory, but to a preliminary success.

Two dates, then, seem acceptable for the foretold event: 358/969 (the conquest of Egypt) or Rabīʿ I 297/December 909 (the proclamation of ʿUbayd Allāh al-Mahdī by the *dāʿī* Abū ʿAbd Allāh in Ifrīḳiya). Several of the passages cited give us to understand that not only many adepts and propagandists but the *imām* himself are in concealment, and that the return to manifestation is near at hand; this prompts the choice of 297/909. One of these passages (iv, 187) even states that "government of good men will begin through the agency of virtuous good men who will join together in a land"; must this not be Ifrīḳiya? If this is so, it must be concluded that the composition of the Epistles took a good many years, and this time can be approximately fixed as between 287/900 (perhaps even well before) and 354/965. The only fact that appears strange, in this case, is that no allusion is made to the victory of 297/909. On the other hand, it may be considered normal that the passages that predict it should have been kept intact, as a proof (to be commented on orally) of the truth of their doctrine.

It also follows from this that the Epistles, unlike most subsequent Ismāʿīlī writings, circulated in the orthodox world at a moment when an expanding Ismāʿīlism anticipated a total victory, by degrees, but relatively rapidly.

Does the composition of the Epistles support this point of view?

The composition of the Epistles.—Only a close analysis would perhaps produce a reasonable certainty in this regard. Certain facts, however, demand attention at first sight.

The Epistles, as we have them, are 52 in number. In the text itself, however, it is ten times asserted that there are 51 Epistles. The 52nd itself (on magic) mentions the "fifty preceding Epistles" and designates itself the 51st. The extra Epistle, clearly added subsequently, is the 51st in our editions ("The Hierarchy [of the parts] of the whole world"), the normal position of which, besides, as its title indicates, would be in the second section (physical sciences). In fact, five pages of the nine that make up the Epistle are identical with pages of the 21st (the vegetable kingdom), and the remaining four pages add nothing new. This 51st Epistle (which itself mentions, at the end, a total of 51 Epistles, without adding it is the last) perhaps represents the first state of an Epistle left to be rewritten, then rediscovered and subsequently included in the penultimate position, since the Epistle on magic had to be the last.

Moreover, the work has traces of a certain vagueness, both in the order of chapters, and in the number of Epistles in each section. Thus the 8th Epistle in the 1st section (mathematical sciences), which deals with manual arts, was earlier placed at the beginning of the 3rd section (psychical and intellectual sciences)(i, 276 and 286); the 9th (1st section) seems, according to its introduction, to have been placed, at one time, after the 25th (2nd section); this might justify its contents. It seems also (ii, 19) that the second section consisted at first of 8 Epistles, instead of the 17 that it contains in its definitive version; that the 10th in this section was then the second; that the sixth (quiddity of Nature) was added later. Similarly, it seems that the first section, which contains 14 Epistles, consisted only of 5; that the 4th Epistle (geography) was added later; that the 5th (music) at first formed part of the 6th (numerical and geometrical relationships) and was subsequently detached; that there was at first one single Epistle on logic, afterwards split into five short Epistles. In short, it appears that, at the time of the composition of the 15th Epistle, only five Epistles from the 1st section and seven from the 2nd were already written; that certain of these were afterwards amplified and then split up; that these two sections were afterwards enlarged by the addition of new Epistles. The same was probably true of the other two sections. A trace of this, at least, is to be found: a piece of information in the last Epistle (iv, 285), applicable, according to the writer, to the 50th, in fact applies to the 49th; this suggests either that the 50th had not yet been written, or that the order of Epistles has been altered. It is probable that the first writers had not accurately foreseen their number, and that towards the end the authors made arrangements to round off this number to 51, so that it might be satisfactory from an arithmological point of view.

All this confirms the view that a very long time must have elapsed between the beginning of the composition and its being put into a definitive form.

As far as the form is concerned, its unity is remarkable. This need not surprise us, if we imagine that the different authors worked more or less together, and, moved by the same spirit, influenced one another. Moreover, their style is singularly affected by that of certain translations of Greek works. Certain differences, however, can be detected, which are probably not to be attributed solely to a difference of subject-matter. While most of the Epistles are characterized by clarity of thought and rigorous exposition, except when the discussion concerns points of doctrine that the Ikhwān wish to treat only in an esoteric manner, the 31st (causes of differences of languages), in spite of the interest of the content, is distinguished by a pedantic, obscure and over-subtle style, which is hardly to be found elsewhere except in the 41st (definitions and diagrams).

Another peculiarity of the 31st Epistle is that the author speaks in the first person singular; this occurs in no other Epistle, except by accident and for a reason that can be explained.

The same remarkable unity is to be found in the fundamentals. Most of the contradictions are merely apparent when we go more deeply into the problems. There are, nonetheless, some rare inconsistencies in the details. Nothing, however, has prevented the whole being given, by slow methodical elaboration, the unity and solidity that are fitting for an "inspired" work by means of which a sect expresses itself.

Content of the Epistles.—When, following an astral conjunction, a community assumes power and enjoys hegemony, it takes over, according to the Ikhwān, all the sciences of the communities that have dominated previously. This is particularly the case at the beginning of a new millennium, when one religious law comes to supplant that which preceded it. The Ikhwān, then, believe it legitimate to adopt all "the sciences and wisdoms" produced by the efforts (supported by divine inspiration) of the good philosophers (certain philosophers were also prophets, prophets being the best of the philosophers) and those that have been revealed by God in the course of the previous millennia. They claim, then, to present a compendium of all the sciences known in their time, taken, in the first place, from these ancient books, next from the "caliphs of the prophets" and their companions (iii, 384). This is what has led Orientalists to regard the Epistles as an Encyclopaedia. These sciences express the profound "realities" (*ḥaḳāʾiḳ*) of the universe, which support revelation

and religious laws, and, consequently, explain them in a rational way; for this reason they form part of the Ismāʿīlī dogmas: they constitute the "hidden meaning" of the "Revelation and the Law" which are their "visible" aspect. It is, clearly, a doctrine of emanation inspired by Neoplatonism—but one in which the *imām* plays in this world the essential part in the re-ascent of fallen souls—combined with Ptolemy's theory of the celestial spheres, and astrological laws are, consequently, of prime importance in it as the instrument for the realization of the divine will (for a more precise idea of the doctrine see ISMĀʿĪLIYYA). A few remarks will suffice here. The theory of great cycles of 7000 years—a cycle of manifestation alternating with a cycle of concealment (cf. Corbin, *Hist. phil. Isl.*, 129)—is not discussed. Two fairly clear allusions to it, however, are found (ii, 228, iv, 229; cf. *Imāmat*, 73-5); three allusions to our present cycle (ii, 344, iii, 319, 512); one allusion as well to the fall of the celestial Adam and also to the creation of the "first terrestrial Adam" (iii, 512). The respective roles of the legislator and of the successive *imāms* are not clearly defined; there is, however, an allusion to the great prophets who ushered in the millennia of our cycle (Adam, Noah, Abraham, Moses, Jesus, Muḥammad and the *ḳāʾim* who is none other than Muḥammad restored to life) in the account of the myth of the cave (iii, 315-8). Once the five Legislators (Noah, Abraham, Jesus, Moses, Muḥammad, iv, 18-9) are named, and elsewhere the "five prophets endowed with energy ... whose legislation is different" (ii, 470-1, iii, 486). It should also be noted that the role of the initiator of the prophet is clearly seen (iii, 509 [al-Khiḍr and Moses], iv, 90-8); the instruction of the initiator, however, is a human instruction, not divine like that of the *imām*; it is the *imām* and his principal lieutenants that bear the name of *ḥudjdja*, and not the initiator. Moreover, the legislators are superior to the other *imāms*, and Muḥammad is superior to all the other legislators. It is Muḥammad (the City of Knowledge) who initiates ʿAlī ("the Gate of the City"). Again, Salmān does not receive any particular precedence; he is mentioned once only, among the Companions of the Prophet, as being the seventh of these. In the Ikhwān, then, we find not the order *sīn ʿayn mīm*, but *mīm ʿayn*.

It should be noted, finally, that everything relating to the *imāms* is dealt with most discreetly, and thus in a completely esoteric manner (manifestation and concealment, true revelation, etc.); the *imāms* succeeding al-Ḥusayn are never mentioned by name.

The semi-esoteric character of the Epistles can be understood if one considers the object that their authors had in view.

The object of the Epistles.—In fact, they aim secondarily at securing man's happiness in this world (the perfection of the body favours the perfection of the soul), but have the essential object of securing the happiness of his soul in the next world, and first of all of allowing it to re-ascend there after death. The soul must, then, gradually disengage itself from the defilements of matter which weigh it down, that is to say which obscure it and prevent its having a true and universal vision of the realities of creation, and, consequently, its approaching its Creator. When it has, at last, regained the original purity of its essence, thus taking on "an angelic form", it loses interest in the body and its appetites; it is ready to rise through the celestial spheres when it is at last released from the body, and later to merge itself in the universal Soul, and then, with the latter, in the Intellect. The Epistles must, then, gradually inculcate this purifying knowledge. Since, however, the legitimate *imām* has the office of guiding the ascent of souls, it is to him that these must cling; drawing near to God involves drawing near to the *imām* in this world; "true" knowledge helps him to be recognized, and he is rightly the repository of this "true" knowledge.

The Epistles, then, incite not only to knowledge, but also to action; they include, in fact, a deep commitment to their practical implementation; they have as their object, apart from the satisfaction of the spirit, the propaganda that will secure this and rally men round the *imām*. Idealism of convictions is accompanied by realism in application.

All this greatly conditions the form of the Epistles.

The form of the Epistles.—This rigid conception of the purification and opening out of the soul, which is concurrent with its evangelistic character, involves a well defined pedagogical conception, even though a certain vagueness and arbitrariness appear if the classification of the sciences discussed in the 7th Epistle is considered. The progression must be at the same time moral and intellectual. Purification of the soul must begin with striving after the four virtues: attempting to aquire knowledge, having healthy opinions, acquiring good traits of character and performing pure deeds and good actions.

At the same time, the practical (*riyāḍiyya*) sciences, which are a preparation for the practice of a profession, are studied. Above these come the juridical sciences (in their external sense), which essentially comprise the Ḳurʾānic and Traditional sciences, as they are conceived by the Orthodox, but also, curiously enough, interpretation of the Ḳurʾān (which, nonetheless, is within the jurisdiction of the *imām* and considers inspired knowledge to be the highest and the widest); doubtless, however, this refers to simple commentary on the Ḳurʾān (*tafsīr*), intended for the general public. Finally, there are the "realities" or sciences that are at the same time "philosophical and prophetic", which lead the soul progressively "to the goal of the sciences and wisdoms" and to its first purity.

This is why the 51 Epistles (actually 52) that make up the account of the realities are supposed to follow a gradual progression; they lead, in theory, from the concrete to the abstract, and fall into four sections. According to the classification given in the 27th Epistle, the four sections should be as follows: mathematics (the root of all the other sciences), logic, physics, metaphysics. In fact, they appear somewhat differently in our Epistles, but this is probably in order that the work may have an harmonious equilibrium, with the four sections all of the same size. These are in fact the following: (1) mathematical section, which comprises essentially, in order of progression: arithmetic, geometry, astronomy, music, to which is added logic (which, according to the classification given in the 7th Epistle, should form a separate section), and several allied questions are also covered; (2) physical section ("bodily and natural sciences"); (3) section on the psychical and intellectual sciences (which, according to the classification given in the 7th Epistle, should belong under metaphysics); it deals in particular with the universal Intellect and Soul, with resurrection, and with many other things as well; (4) section on the metaphysical (the word used is *ilāhiyya* "divine") and legal sciences. In fact, they deal particularly with the behaviour of initiates and propagandists, but also,

cryptically, with the method of finding the *imām*—this, no doubt, is what justifies the name "metaphysical" for these Epistles; as for the name "legal" (*sharʿiyya nāmūsiyya*), it is probably due to the fact that they deal with moral behaviour which upholds positive law (which is, itself, unworthy to figure among the *ḥaḳāʾiḳ*): they form the "hidden" meaning of "visible" law. They conclude with the Epistle on astrological magic, the worth of which, in practical terms, lies in its helping in the recognition of the legitimate *imām*.

This supposed progression remains theoretical, for many of the Epistles are arranged in one section when they could equally legitimately be arranged in another. Moreover, the Ikhwān have to speak of the universal Soul in the first section, in order to be able to explain the material world as they conceive of it; thus they often go, contrary to their assertions, from the abstract to the concrete, that is to say in the order of creation.

The Ikhwān say that the "realities" form a veritable ocean; thus only the essential points are discussed, and that as briefly as possible. This is why, in addition, use is made of numerous fables and parables, which make the ideas more accessible to beginners and allow them to conceive more easily of the profound realities (iii, 29-30). Each Epistle is devoted to one science, in order to implant the desire of going further (i, 20, iii, 538, iv, 186, 331, 339 367), and contains at least one chapter which forms the deeper lesson of this science, the "pith". They are arranged according to the needs of different levels of students, and the 50th Epistle (really the penultimate) is particularly important; its essential chapter is called "*djāmiʿ* chapter" (it is this that relates to the deeper meaning of the four festivals of the Muslims and the philosophers [cf. *Sabéens et Ikhwān al-ṣafāʾ*, 96], which symbolize the *imāms* and their cycles of concealment and manifestation) (iv, 250-1).

The *risāla djāmiʿa*, according to the Ikhwān, forms a "separate Epistle", which is not counted in the total number of the Epistles, although it is the concluding one; all that is said in them is here condensed, but deepened and supported by proofs; the realities here appear clearly (i, 39, 43, iv, 250-1).

In fact, in the *djamiʿa*, the technical aspects of each "science" are left on one side; only the elements that form the "pith" of each Epistle are taken up and often supported by means of supposedly demonstrative arguments, which are in fact dialectical arguments of a Neoplatonic type; it is less esoteric than the other Epistles, in the sense that metaphysical conceptions are discussed in a more direct manner and are not diluted in other developments. Above all, many points that are left obscure, to which only vague allusions are made in the Epistles—such as the problem of the *imāms*, the question of the great cycles, the history of Adam, the fate of souls after death, etc.—are developed in the *djāmiʿa*. But they are not discussed exhaustively, or completely clearly; a large measure of esotericism remains, and it too was intended to be completed by oral instruction. (On the *djāmiʿa*, which has been falsely attributed to al-Madjrīṭī, cf. Djamīl Ṣalībā, publications of the Arab Academy of Damascus, 1949, and introduction).

The use of the Epistles.—The Epistles are designed for instructing "brothers", that is to say adepts, whether beginners or those who are already disciples (iv, 367, 394), but they are of use also to initiated propagandists for sustaining their knowledge and their curiosity (iv, 185-6).

The Epistles should be studied progressively, that is, as far as possible, in the order of the table of contents, so that everyone may find what is accessible to his understanding (i, 46, iv, 283). The 50th, for example, is suitable only for propagandists who are already advanced (iv, 251); this, however, is not always possible, for only certain rare privileged ones can have all the Epistles at their disposal (iv, 205, 250). They are, naturally, a remedy for those who are worthy of them, and they should not be deprived of them; for others, however, they constitute a danger, if they are unable to understand them or are unworthy and are likely to put them to evil use. It is foreseen that the Epistles may fall into the hands of such people, and this is why certain points are discussed esoterically and by means of allusions (i, 45, iv, 462). It seems that the Epistles were studied at "sessions" (*madjālis*); it is, however, foreseen that adepts who are already advanced may study them themselves, if they cannot attend "sessions", and may afterwards question qualified men about points that seem obscure to them; in addition, they will assist adepts less advanced than themselves by their reading. In general, the method consists of reading the Epistles to the less advanced, then commenting on them in the form of discussion, in order to teach them the ideas, the morality and the object of the Epistles (iv, 185, 186, 188, 250-1, 331, 339).

The source of the Epistles.—An attempt has been made, in *Sabéens et Ikhwān al-ṣafāʾ*, to show that the origins of the doctrine should probably be sought in direct contacts between the first Ismāʿīlis and the Sabaeans of Ḥarrān. The latter, following the Hellenistic tendency to syncretism, mingled, in a new synthesis, their religion, Babylonian in origin, with Mithraism and Greek religion and philosophy, a synthesis catalyzed by Hermetic influence. The Ikhwān, in their turn, considering that the sciences of the past, "philosophical" or "revealed", belonged, under the aegis of their *imām*, to Islam, achieved a new syncretism by establishing in Islam the elements of this Ḥarrānian synthesis and by giving, without perhaps being aware of the fact, a far more important place to Neoplatonism.

In the Epistles, then, many diverse elements are to be found. There are probably some traces of early Babylonian astrology, supplemented by Indian and Iranian astrological elements, the whole based on the tenets of Greek astrology. There are stories of Indian and Persian origin and quotations and stories taken from the Hebrew Bible, as well as from Rabbinic texts; there are also borrowings from the New Testament (Christian influence is, in any case, very strong). The influence of Greek writings, however, as might be expected, is the dominant one. Influences of Hermes Trismegistus are particularly evident (not only from the writings called "Hermetic", magical, astrological or alchemical—certain of which are perhaps Ḥarrānian—but also from the Hermetic philosophical writings, the influence of which pervades the whole work), as are those of the Pythagoreans (on arithmetic, music, arithmology, but also on the general spirit of the work), of Aristotle (especially in logic and "physics"), of Plato, and of the Neoplatonists (especially in metaphysics). No Neoplatonist author, however, is named by the Ikhwān, except Porphyry, of whose work only the *Isagoge* appears to have been known to them. Of all the Neoplatonists, probably Plotinus—although they differ from him on certain points—without their realizing it, and without their knowing him, exer-

cised the strongest influence on them; they, however, believed that they were following Aristotle; in fact, they quote a passage of the supposed "Theology of Aristotle", which is, actually, known to be a résumé of several of the *Enneads* (cf. ed. Badawī, Cairo 1955). Even the dialectical form seems to have influenced that of the Ikhwān, as it perhaps influenced, in a totally different direction, that of the *Mutakallimūn*.

They appear, however, to have known other Neoplatonist works which they do not quote. This influence is supplemented, in astronomy and astrology, by that of Ptolemy (but the Ikhwān knew what Pythagoras and Plato had said about the celestial spheres). Finally, Euclid and Nicomachus were used in geometry. The Ikhwān also had recourse, when necessary, to many other authors of whom they quote only a few, such as Galen (physics, alchemy and astrological magic) and Vettius Valens (in astrology). What seems most remarkable, however, is the synthesis that they achieved, in an original manner, for their metaphysics, adapting them to the dogmas of Islam, and modifying, where necessary, the information of their predecessors.

The Epistles of the Ikhwān occupy a place in the first rank of Arabic literature, for if pure Aristotelianism progressively ousted emanatism in the philosophers, their influence endures, not only in Shīʿism, but also in the mystic movements.

Bibliography: Texts: Ikhwān al-ṣafāʾ, *Dispute between man and animals*, tr. J. Platts, London 1869; *Khulāṣat al-wafāʾ fi ʾkhtiṣār rasāʾil Ikhwān al-ṣafāʾ*, Leipzig-Berlin 1886; *Kitāb Ikhwān al-ṣafāʾ wa-khullān al-wafāʾ*, 4 vols., Bombay 1888; *Rasāʾil*, 4 vols., Cairo 1928, 12 vols., Beirut 1957; *al-Risāla al-djāmiʿa*, 2 vols., ed. Dj. Ṣaliba, Damascus 1949. The *risāla* on the dispute between man and the animals was translated into Hebrew by Ḳalonymos ben Ḳalonymos (14th century), and printed many times (see Steinschneider, *Heb. Üb.*, ii, 860 ff. and *Bod. Heb. Cat.*, s.v.).

(Y. Marquet)

AL-IKLĪL [see NUDJŪM].

IḲLĪM, "clime, climate", or, more generally, "region". The *Lisān al-ʿArab* (root *ḳlm*) discusses whether the word is Arabic or foreign. Ibn Durayd, whom it quotes, rightly inclines to the second hypothesis; *iḳlīm* comes in fact from the Greek *klima*, literally: "inclination" and more precisely that of the earth from the Equator towards the pole, whence: region of the terrestrial sphere, and finally region in general. The *Lisān* seems to adhere to the strict definition: it states that "*iḳlīm* is one of the seven climates (*aḳālīm*) which are the different divisions of the earth".

Inherited from Greek tradition, the idea of climate refers to a zone extending, in longitude, from one bound to the other of the inhabited world and included, in latitude, between two parallels: the latitudes themselves are determined by the length of the day at the summer solstice or at the equinox; some writers consider that the limit between two climates allows a certain margin of uncertainty and that there is thus, between one climate and the next, a zone of transition rather than a sharp division: the general opinion is that the boundary remains in any case a theoretical one and does not correspond to any concrete reality (cf. al-Idrīsī, i, 3; al-Ḳazwīnī, *Kosmographie*, i, 148). Each climate is a collection, in varying proportions, of a number of towns, of mountains, waters and minerals; besides its position on the terrestrial globe, it is defined by the astral context under whose specific influence it comes. Tradition fixes the number of climates at seven: outside them are the countries to the south of the Equator and the countries of the far north; there are sometimes added to the seven classical climates seven other climates for the inhabited lands stated to be grouped, according to the authors, in the "eastern" or "southern" quarter of the earth.

The most prominent adherents to the tradition of the seven climates are the astronomers such as Muḥammad b. Mūsā al-Khuwārizmī, and the scholars

in general, such as al-Bīrūnī. But it is found also, as a view of the world in general, in the introduction or the main part of encyclopaedic works like those of the Ikhwān al-Ṣafā', Yāḳūt, al-Ḳazwīnī or Abu 'l-Fidā'. The great works of descriptive geography in the tradition of the atlas of al-Balkhī (al-Iṣṭakhrī, Ibn Ḥawḳal, al-Muḳaddasī) reject the tradition, as will be seen, but yet mention it, even if only briefly: this is the case at least with al-Iṣṭakhrī and Ibn Ḥawḳal, whereas al-Muḳaddasī, going much further, reserves a special chapter for the seven climates. More specialized, but also descriptive, the geography of the *Kitāb Āḳām al-mardjān* of Isḥāḳ b. al-Ḥusayn, although it does not make room for a general description of the climates, nevertheless constantly refers to them by noting, for each country or town, its position on the map and, notably, the climate to which it belongs; al-Idrīsī systematized the process by setting out the descriptive contents of his geography climate by climate, beginning each time with the West. An equally remarkable case is provided by al-Hamdānī in his introduction to his *Ṣifat Djazīrat al-ʿArab*: he knows the traditional division (pp. 24-6), but elsewhere (p. 10 f.) increases the number of the geographical unities thus defined and multiplies them by raising to 26 the total number of parallels which mark their limits.

On the whole, the central climates, those where there are large concentrations of Islamic peoples, are obviously better known than the others: it is noticeable that the precision of the latitudes decreases in proportion as the north is approached. From this point of view it may be considered that Islam (as was natural) was interested, among all the regions, chiefly in those with which it was essentially concerned. But although the precision with which maps are made is merely a consequence of the historical phenomenon of the expansion of Islam in these middle climates, it may also have been facilitated by the merchants, particularly for the knowledge of the eastern extremities of these same climates, which were vital for the important commerce of the time. Finally, it should not be forgotten either that the location of the towns as precisely as possible is a result of the necessity to fix in each of them the direction for the prayer: it is not by accident that al-Muḳaddasī gives his chapter on these questions the title *Dhikr aḳālīm al-ʿālam wa-markaz al-ḳibla*.

This knowledge derives, with much else, from the type of geography which consists of the description of the terrestrial sphere, which is called *ṣūrat al-arḍ*. A general knowledge of this "configuration of the earth", together with its climates and the degree of uncertainty or precision of its respective parts, very soon became an obligatory part of the knowledge of the educated gentleman. One of the most prominent themes is that of the central climate, the fourth, which represents "moderation in all things". Here the old Babylonian tradition combines with preoccupation with the political and cultural pre-eminence of ʿIrāḳ to produce the statement that in Mesopotamia are combined the most beneficial effects of a place's position on the map, of the astral influences and of the general configuration of the contours, the whole ensuring to its inhabitants the most solid qualities of character, perfect balance and the liveliest intelligence. Concerning this, the picture given by the Ikhwān al-Ṣafā' (i, 170-9) is most revealing: in it ʿIrāḳ holds both a middle position so far as regards the natural features represented by the rivers and the mountains, and a high position regarding the cultural benefits represented by the towns.

The passage in *adab* writings concerning the general theme of the seven climates and the special theme of the fourth is a widely attested phenomenon. Their importance is illustrated by the fact that, as we have said, they are not even completely absent from works of the school of al-Balkhī who, as we shall see later, have no use for them in the method which they follow. The integration of these themes in the general culture of the time led also to the appearance of the seven climes in the *Kitāb al-Buldān* of Ibn al-Faḳīh (pp. 5-7) or in a more specialized book like that of the Spanish geographer al-Rāzī: the statement (p. 51) that Spain is situated in the fourth climate, that of Baghdād, is the result of a local enthusiasm which, attributing to Spain its own advantages, celebrities and marvels, allows it to stand comparison with ʿIrāḳ.

Against this collection of texts, stemming from the Greek tradition as revised by Islam, must be set other works from the beginning of Arabic geography, which obviously rejected this tradition. The administrator-geographers, even when they make allowances for it like Ḳudāma (p. 230), tend to present their facts to conform with the exigencies of administration or politics: al-Yaʿḳūbī, who describes the world starting from Baghdād as centre, is uninterested in any division which is not by provinces, in other words which does not correspond to those concrete realities which are the history and geography of well-defined areas which may be administered as such. Ibn Khurradādhbih, the earliest of the Muslim geographers in the strict sense, is still more interesting: although he makes *iḳlīm*, according to a rather confused terminology, the equivalent or a subdivision of a *kūra*, it is certainly to a real entity, forming an administrative whole, to which he refers by these two words: it is a "country" grouped round a capital town, and combining with others to form a larger entity. Thus Ḥamāt, Shayzar, Maʿarrat al-Nuʿmān and the Lebanon are each considered as an *iḳlīm*, whereas Anṭarsūs, Bulunyās or al-Lādhiḳiyya are given the name of *kūra*, these divisions together forming, with many others, a wider area known as *aḳālīm Ḥimṣ* (pp. 75-6).

There exists another meaning of the word *iḳlīm*, this time originating in Iran. The word *keshwar* refers, in Persian tradition, to the seven great kingdoms of the world, of which six (India, China, the Turks, Rūm, Africa and Arabia) are distributed around the central kingdom, that of Iran. An obvious borrowing of this idea, but using the word *iḳlīm*, appears in al-Masʿūdī (ed. Pellat, i, § 189).

Finally, the school of al-Balkhī was to give the word a new meaning, fully adapted to the realities of practical geography. Although it borrowed the word itself from the Greek tradition, it took from the Iranian tradition the idea of a figurative representation of *iḳlīm* in the form of a bird or a familiar object, and the idea of a distribution of human groups around one centre, with the difference that this time the pivot of the world shifted from Media to Arabia. But a more important fact is that the school of al-Balkhī, in the spirit this time of administrative geography, is careful to define areas, land or maritime, regarded as wholes which in geography are clearly isolated. Thus al-Iṣṭakhrī and Ibn Ḥawḳal, describing (in order to repudiate it) the old division of the seven climates, produce twenty new *aḳālīm*, exclusively Muslim: Arabia, the sea of Fārs, the Maghrib, Egypt, Shām, the sea of Rūm, Djazīra

ʿIrāḳ, Khūzistān, Fārs, Kirmān, Sind, Armenia-al-Ran-Ādharbāydjān, Djibāl, Daylam, the sea of the Khazars, the desert of Persia, Sidjistān, Khurāsān, Transoxania. Al-Muḳaddasī was to perfect this geographical division of the *iḳlīm*: he considered, first of all, that geography is concerned with men, thus with the cultivable earth, and he refused to use the term *iḳlīm* for seas and deserts. He therefore reduced the number of the *aḳalīm*: he no longer listed sixteen earthly *aḳālīm* as his predecessors had done, but fourteen: six Arab (Arabia, ʿIrāḳ, Aḳūr = Djazīra, Shām, Egypt, Maghrib) and eight non-Arab (Mashriḳ, Daylam, al-Riḥāb, Djibāl, Khūzistān, Fārs, Kirmān, Sind). It will be seen that, first the group Armenia-al-Ran-Ādharbāydjān is listed under the single name of al-Rihāb (the "[high] plains") and that, secondly, Sidjistān, Khurāsān and Transoxania are grouped in the *iḳlīm* of the Mashriḳ, which means (ed. de Goeje, 7) the Sāmānid sphere of influence. The whole operation is to designate the *iḳlīm* as a geographical and historical entity which is, or has been at a certain time in the past, sufficiently independent of others to be the seat of a *de jure* or a *de facto* autonomous authority.

The final meaning of the word, that of "region", "country" in general, is attested by Abu 'l-Fidāʾ, who, in his tables, places side by side the scientific definition of *iḳlīm* (*al-iḳlīm al-ḥaḳīḳī*) and its current definition (*al-iḳlīm al-ʿurfī*).

(A. Miquel)

IḲRĀR, in *fiḳh*, means an acknowledgement, either judicial or extra-judicial. The Muslim jurists define *iḳrār* as *iʿtirāf*, "confession" (Ibn Ḳudāma, *Mughnī*, v, 137). The institution, as it has been built up by the jurists of Islam, is however much more flexible, more comprehensive and more independent of the exact anterior reality which it is considered to reveal, than the corresponding institution of the western systems, in the sense that it is used not only to reveal or to confirm a previously existing right, but also often in practice to produce a new juridical situation. As J. Schacht has pointed out, *iḳrār*, at least in matters concerning patrimony, "creates an abstract debt"; the efficient cause, *sabab*, of the obligation admitted is never demanded of the declarant, except in Shafiʿī and Ḥanbalī law in matters concerning a slave "authorized to trade". The slave is required to state the origin of the obligation which he considers himself to owe in order for it to be known whether it comes within the provisions of the authorization which he has received.

All these reasons make it seem preferable to substitute, as far as possible, when translating *iḳrār*, "recognition of rights" for the much narrower term "acknowledgement".

Whether it is judicial or extra-judicial, *iḳrār* is subject to the same juridical rules; this is why the *fuḳahāʾ*, in their writings, have not divided the study of it into two separate chapters, and although they return to the question in the chapter dealing with judgeship (*ḳaḍāʾ*), this is solely in order to point out the place of judicial acknowledgement among all the methods of proof admitted in law. A judicial acknowledgement is one which intervenes during an action. It consists of the recognition by the person against whom the petitioner alleges a fact, or a right, of the soundness of the request. At this juncture, the procedure goes no further. The judge cannot neglect this recognition and demand a further proof. But if the defendant denies the claim of the plaintiff, it is then a matter of an *inkār* [*q.v.*] or denial, which may lead to the procedure of an oath, which then has to be sworn by the defendant.

On the other hand, a distinction which must be made concerning *iḳrār* is that based on the object of the recognition. If this object is a right to a patrimony, it is then a matter of an *iḳrār bi 'l-ḥuḳūḳ*; but if it is a non-patrimonial right (marriage, paternity, repudiation, etc.), it is described as *iḳrār bi 'l-nasab*, *bi 'l-nikāḥ*, etc. This is not merely a question of terminology, since the two categories of recognition do not function quite according to the same rules.

I. Conditions of validity. These concern the declarant (*al-muḳirr*), the beneficiary (*al-muḳarr lahu*) and the object of the recognition (*al-muḳarr bihi*).

The author of the recognition must have reached the age of puberty and be of sound mind. A minor, an idiot or a person of low intelligence (*maʿtūh*) may recognize neither a patrimonial nor a non-patrimonial right. A spendthrift (*safīh*) may recognize only a non-patrimonial right.

With slaves, it is important to distinguish between one who has been authorized by his master to trade, and one who has not. For the latter, as a general rule, there can be no question of the recognition of debts, since he has no patrimony proper, and the acknowledgement of a previous debt would be manifestly untrue. Has he then the right to admit to an offence which is dealt with by a corporal punishment? According to almost all the writers of all the schools, his admission, under the circumstances, is valid, and he should receive the punishment applicable to this offence in spite of the loss (*e.g.*, the slave's life, or the mutilation of one of his limbs) which this could involve for the master; the Ḥanbalī's adopt more or less the same point of view but do however consider the admission of a murder to be unacceptable.

The situation of a slave "authorized to trade" is quite different. According to the non-Ḥanafī doctors, his recognition of a debt is valid if this debt is in connexion with the trade in which he has been authorized to engage; it is a charge on his own profits, and not on any goods which may have been entrusted to him by his master. Hence the non-Ḥanafī insistence on the necessity that the cause (*sabab*) of the debt should be defined. According to the Ḥanafīs, the debt recognized by the "authorized" slave is to be a charge on the whole of the goods in his possession. All the *fuḳahā*ʾ agree that an *iḳrār* obtained by force is null whether the object of the recognition be patrimonial or non-patrimonial. Indeed this leads, in Ḥanafī law, to a rather paradoxical situation, concerning in particular repudiation or enfranchisement. This school regards these two actions as still valid even if they have been obtained directly through violence, but the *iḳrār*, if its object is an earlier repudiation or an enfranchisement, and if it has been obtained by force, is nevertheless deemed to be invalid (al-Zaylaʿī, *Tabyīn*, v, 2). For a person in a state of intoxication, the general principles of the law demand that any recognitions of rights towards a third party which he may be persuaded to utter while in such an unconscious or semi-conscious state are to be regarded as not having occurred, and the majority of the schools accept this solution. The Ḥanafīs, on the other hand, rather inappropriately introducing moral considerations into a strictly juridical field, distinguish between drunkenness which is excusable and drunkenness which is voluntary or culpable. In the first case (if for example the declarant has become intoxicated inadvertently through taking too large a dose of a medicine containing alcohol), the drunkenness, in this case considered excusable, makes inoperable all the admissions of the person who is in this state. But if the admissions are pronounced while in a state of culpable or voluntary intoxication, all his admissions are considered in Ḥanafī law to be valid.

The recognition of rights, whatever its object, is a unilateral act which is an obligation on its author for as long as the beneficiary (who is of course never forced to accept it) has not in some way expressed his refusal (*radd*), also referred to as denial (*takdhīb*). If this happens, it becomes invalid, the disavowal of the beneficiary implying its dishonest character. This is what the writers mean by saying that *iḳrār* is irrevocable. There cannot therefore be any *inkār* after an *iḳrār*, but the reverse is possible: *al-iḳrār baʿd al-inkār ṣaḥīḥ* (al-Sarakhsī, *Mabsūṭ*, xvii, 157).

The rule of irrevocability admits at least two exceptions: (a) the first concerns the "rights of God" (*ḥuḳūḳ Allāh*). A person who confesses to an offence punishable by a *ḥadd*, *i.e.*, *zinā*, theft, the use of alcoholic liquor, etc., has always the right to retract, even after judgement has been passed, and right up to the moment when the punishment is inflicted. This does not apply to an offence punishable by retaliation, since retaliation is a "right of man", and the admission in this field is always irrevocable. (b) It is also permissible for the author of a recognition of "indirect relationship" (see below) to retract his statement; indeed this recognition is in fact equal to a testament, which is, of its nature, revocable.

As regards the beneficiary (*al-muḳarr lahu*), it is enough for the *iḳrār* to be valid that he should be indicated precisely (*yakūn maʿlūm*ᵃⁿ), that he should actually exist at the time or that he should simply be conceived (al-Kāsānī, *Badāʾiʿ*, vii, 223). The formula embraces not only all human persons who are alive, or conceived, including slaves, but also corporate bodies, mosques, charitable foundations, etc. This gives rise to some difficulties regarding the acceptance, since an *iḳrār* may always be refused. It is agreed that the acquiescence of corporate bodies does not have to be formal; those below the age of puberty who have reached the age of discretion may acquiesce in person. When the beneficiary of an *iḳrār* has not reached the age of reason, he may not consent to it in person; the question is important particularly with regard to the recognition of paternity. If the person recognized by another as being his son has not reached the age of reason (or if he is mentally defective), he may not acquiesce in this recognition, which will therefore be valid only in respect of the unilateral wish of the author of the recognition, and this definitively, that is without its being possible for the recognition to be questioned when the child reaches the age of reason, or when an insane person who has lucid intervals recovers his reason (al-Kāsānī, *op. cit.*, vii, 232).

Concerning the object of the *iḳrār*, *al-muḳarr bihi*, it may be stated without hesitation that all rights of whatever sort, "the rights of man" (*ḥaḳḳ al-ʿibād*) or "rights of God" (*ḥaḳḳ Allāh*), patrimonial or non-patrimonial rights, may form the object of a recognition subject to the conditions mentioned above. There does not exist in *fiḳh* a single exception to this rule, on condition, of course, that the right which is the object of the recognition appears feasible and is permitted by Muslim law.

But the problems raised by *iḳrār* are not exactly the same, according to whether its object is a patrimonial or a non-patrimonial right.

II. The recognition of patrimonial rights (*al-iḳrār bi 'l-ḥuḳūḳ*).

The authors deal mainly with the recognition of a monetary debt and list the formulas suitable for expressing such a recognition, the simplest being: "I owe you a thousand *dirhams*".

The formula naturally varies according to whether the right recognized is a right to property, a deposit, a share in a limited partnership, etc. The Muslim jurist is faced with two great problems in connexion with this type of *iḳrār*. The first is that of the indivisibility of the acknowledgement, the second that of the validity of an acknowledgement made during the final illness (*maraḍ al-mawt*) of the declarant.

A. The problem of the indivisibility of the acknowledgement is common to all the legislative systems. It is stated thus: upon the hypothesis that the author of the acknowledgement, after having recognized a principal fact or a right, produces a new fact which modifies the juridical effects of his first affirmation, it is necessary to know whether the beneficiary who accepts the acknowledgement is bound to take it as a whole (that which is to his disadvantage as well as that which is to his advantage), or whether he is permitted to retain only one part of it, avoiding the reservations.

The Muslim jurists, adhering to their method of proceeding by concrete cases, put the question slightly differently. Is the *istithnāʾ*, i.e., the exception, the restriction, which is introduced into an acknowledgement by the conjunction *illā*, "except", permitted, or is it considered non-existent, the acknowledgement remaining valid because it is irrevocable?

All the schools allow *istithnāʾ*, when the object of the restriction is of the same genre (*djins*) as that of the main obligation; this is easy to understand, since the acknowledgement then forms an indivisible

whole. Apart from this case, on which all the jurists agree, the Ḥanafīs authorize *istithnā'* (thus rendering the acknowledgement indivisible) when the objects of the restriction are things "which may be weighed, measured or counted". If this is not so, if, to take a classic example, the author of the recognition of a sum of money excludes from the object of his acknowledgement a slave or a garment, the restriction is null, considered not to have been formulated, the first part of the acknowledgement remaining perfectly valid. Shāfi'is and Mālikīs go much further in the direction of the principle of the indivisibility of the acknowledgement. According to their doctors, any *istithnā'* is valid and is binding on the beneficiary of the recognition, who must either accept it as a whole or reject it entirely. The Ḥanbalīs reject any *istithnā'* except one whose object is of the same genre as the main obligation. Ibn Ḳudāma (*Mughnī*, v, 142) explains their position thus:

"To admit every sort of *istithnā'* is to allow the author of the recognition to attach to the debt which he recognizes a claim against the beneficiary which has no connexion with the object of the recognition. This would absolve him (if the thing were permitted) from proving, by witnesses or other means, the sound foundation of his claim".

The preceding rules do not apply in matters concerning the term (*adjal*), which the author of the recognition includes in his acknowledgement. If the beneficiary contests the term, he is, say the Ḥanafīs and the Mālikīs, to be believed, but must take the oath; the Shāfi'is and the Ḥanbalīs on the other hand give precedence to the statement of the declarant; and it is incumbent upon the latter to state on oath that the debt was indeed due.

It is important not to confuse *istithnā'* with what the jurists refer to as *istidrāk*, which is a rectification. It is supposed that the author of the acknowledgement corrects himself in order to recognize a higher sum than the one he has just mentioned. It is easy however to avoid confusion, since *istidrāk* is introduced into the phrase by the expression *lā bal*, which means: "not this, but rather". Thus the author of the acknowledgement may say "I owe so and so a thousand *dirhams*, nay rather two thousand".

According to the Ḥanafīs, because of the rules of *ḳiyās* [*q.v.*], the second declaration should be added to the first so that the author of the recognition finally owes 3000 *dirhams*, since all recognitions of debt are irrevocable as soon as uttered; but in *istiḥsān*, in equity, it is admitted that he owes only the total given in the *istidrāk*, *i.e.* 2000 *dirhams* (al-Kāsānī, *op. cit.*, vii, 212).

B. *Iḳrār al-marīḍ*. The recognition of debts made by a sick person *in articulo mortis*, or by anyone in danger of death (a person drowning or under sentence of death) is especially suspect, in a legislative system which, like *fiḳh*, sets very narrow limits to any acts of liberality inspired by approaching death. It could be too easy for a sick person to arrange things to the advantage of an heir by means of an *iḳrār* or to dispose of more than a third of his fortune to a stranger, both of these being acts of generosity which he is not permitted to perform, directly, by testament.

Nevertheless, it is only the Ḥanafī and Ḥanbalī schools which lay down definite rules for the *iḳrār* in favour of an heir. According to these two schools, *iḳrār* uttered during the "death sickness" of the declarant in favour of an heir may always be annulled, just as a testament in his favour would be (unless it had the unanimous agreement of the co-heirs).

The Mālikīs turn in each individual case to discovering the intention of the declarant. If this intention, because of the circumstances, is suspect (*muttahama*), then the *iḳrār* is not valid, as such, but if it appears that the declarant really did owe the object of the *iḳrār* to his heir, they then consider the recognition to be perfectly in order. The Shāfi'is consider that, of the two diametrically opposite opinions professed by the Imām al-Shāfi'ī, the *rādjiḥ* (preferable) opinion is that which regards as valid (*ṣaḥīḥ*) any *iḳrār* made during a final illness, even one in favour of an heir (al-Ramlī, *Nihāyat al-muḥtādj*, iv, 51).

If the beneficiary of the *iḳrār* is not an heir of the dying person, all four schools allow him the *entire* benefit of the sum that is recognized as being due to him, even if this absorbs all the inheritance. The beneficiary will then be in competition, and for a share proportional to his claim, with those to whom the declarant had been in debt before his illness. Only Ḥanafī law gives to those who were creditors before the illness priority over those who are beneficiaries only of an *iḳrār* uttered during the final illness, by virtue of the saying *duyūn al-ṣiḥḥa muḳaddama 'alā duyūn al-maraḍ* "debts [contracted] in a state of health are to be preferred to those made during the last illness".

III. Recognition of extra-patrimonial rights. It is always slightly surprising to see how readily *fiḳh* admits the recognition of a non-patrimonial right by one person in favour of another, even when this right cannot have come into existence directly except under relatively stringent conditions, from which its simple acknowledgement is exempt. Marriage, paternity, direct or indirect relationship, repudiation, enfranchisement, etc., may be the object of an *iḳrār* which will take the name of the right thus recognized. We shall deal here only with the recognition of marriage, or, in other words, of the status of spouse (*iḳrār bi-'l-nikāḥ*) and with the recognition of relationship (*iḳrār bi 'l-nasab*). These are in fact the family rights which in the past most often formed the object of an *iḳrār*.

A man may recognize a woman as being his wife, and *vice versa*, on the sole condition that there exists between them none of the impediments to marriage laid down by Muslim law. This possibility allows proof by witnesses or by documents to be replaced by other methods when such proof is impossible or too difficult, but it will also allow in certain circumstances the circumvention of the detailed regulations which govern the contracting of marriage in Muslim law. Naturally the recognition is valid only if it is approved by the beneficiary. Here there becomes apparent a difference between the recognition made by a man and that made by a woman. When it is the man who takes the initiative in the recognition, the woman may acquiesce, even after the death of the person who claimed to be her husband, whereas if it is the woman who is the first to "admit" her marriage with a certain man, the man may approve it only while the woman is still living.

The above dispositions are those of the Ḥanafī school; all the other Sumnī schools and the Shī'ī schools hold more or less the same principles, except for the Mālikīs, who admit the *iḳrār bi 'l-nikāḥ* only between persons who come from a distant country and who because of this may have some difficulty otherwise in providing proof in any other way of a marriage between them which took place in that country.

The *iḳrār bi 'l-nasab*, the recognition of relationship, covers in reality two different institutions,

according to whether the relationship recognized is direct or indirect.

The relationship is direct when it does not imply, in order to be possible, the existence of a third person between the author of the recognition and the beneficiary. This can arise only in the case of the recognition of a child, a father or a mother. In all other cases (recognition of a brother, an uncle, a grandson) the relationship is indirect, since the author of the recognition could obtain the result he seeks only by attributing to a third person (his father, his grandfather, his son respectively in the examples given) the paternity of the person whom he recognizes.

This is why, while the recognition of direct relationship "establishes" (thabbata) sonship or paternity, as the *fuḳahā'* say, the recognition of indirect relationship has only very narrow effects, limited to the author of the recognition only, and resulting occasionally in a right to inheritance of the beneficiary.

a) Recognition of direct relationship. In all the schools, three conditions are necessary for its validity: the child who is recognized (or who recognizes) must not be the son of someone else; there must be a sufficient difference in age between the author and the beneficiary to make the recognition likely; finally the person recognized must agree to it, unless it is a question of a very young child or of an insane person. To these three conditions the Mālikīs add a fourth: they require that the circumstances of the birth were such as to make such a relationship plausible, in other words they consider that a child born in Morocco may not be "recognized" by a father who is definitely known never to have left Syria; but the other schools do not demand this condition nor (agreeing in this with the Mālikīs) do they demand that proof be shown of the marriage of which the child is the issue.

The recognition of direct relationship puts the beneficiary in exactly the same juridical situation as if the relationship resulted from the rule *al-walad li-'l-firāsh*, "the child belongs to the marriage-bed", or from the proof by *bayyina*, by witnesses; this applying in all the branches of law, whether concerning succession, impediments to marriage, incapacity to bear witness, or else in penal law.

b) The recognition of indirect relationship. This, unlike the above, does not form a situation valid *erga omnes*. The author of the recognition binds only himself, but it is excessive to write, as does al-Zaylaʿī (*Tabyīn*, v, 28), that "the recognition of a brother or of an uncle is the equivalent of a bequest". In Ḥanafī law, a person who has recognized someone as being his brother (the most usual example) obviously cannot attribute to the beneficiary the status of being the son of his own father without the latter's approval. Without such approval (the father being already deceased or having refused his consent), the beneficiary has no rights except as regards the author of the recognition; for this reason he will share with the latter the possessions which he inherits from his father; he may eventually claim from him maintenance, and will receive the whole of his inheritance if the author of the recognition dies without leaving any heirs. This recognition, unlike the preceding one, may always be revoked, as may a testament.

The contemporary legal codes, since the Syrian Code of Personal Status of 1953 (art. 134 & 135), devote a fair number of clauses to the recognition of direct relationship. This modern legislation appears to be very reasonable. The institution still retains today a large part of its practical interest, since it enables the gaps in the records of the registry office to be made good, the latter in any case not being held in very high regard in certain Muslim countries; furthermore, it makes possible the recognition of a natural child (it is enough to fail to mention the irregular conditions of its birth) and also the adoption (referred to as recognition) of a foundling.

It is surprising on the other hand to find, in these contemporary texts, clauses concerning the recognition of indirect relationship. This is hardly ever used today and it is doubtful whether it was really useful to include even brief rules about it in the laws and the codes the aim of which was adaptation to the conditions of modern life. Thus the Egyptian law of 6 August 1943 on inheritance devotes to it article 42; the Syrian, Tunisian and Moroccan codes of Personal Status refer to it, giving it moreover the same outline which the institution had in Ḥanafī law. It is only ʿIrāḳ which, in correcting the legislative whims of Ḳāsim, has not, in its Code of Personal Status, revoked the right to inheritance of a beneficiary of a recognition of indirect relationship (art. 88, modified by the law of 18 March 1963).

Bibliography: All the works of *fiḳh*, even the most modest, contain a chapter on *iḳrār*. In particular there may be consulted: Ḥanafī law: Sarakhsī, *Mabsūṭ*, Cairo 1324, all of vol. xviii; Kāsānī, *Badā'iʿ al-ṣanā'iʿ*, Cairo 1313, vii, 209 ff.; Zaylaʿī, *Tabyīn al-ḥaḳā'iḳ*, Cairo 1315, v, 2 ff.; Mālikī law: Khalīl, *Mukhtaṣar*, tr. Bousquet 1961, iii, 88 ff., and its *commentaries* by Ḥaṭṭāb and Mawwāḳ, Cairo 1329, v, 216 ff. and by Dardīr-Dasūḳī, ed. Ḥalabī, iii, 397 ff.; Shāfiʿī law: Ramlī, *Nihāyat al-muḥtādj*, Cairo 1286, iv, 33 ff.; Shīrāzī, *Muhadhdhab*, Cairo, ed. (Y. Linant de Bellefonds)

ʿIKRIMA, a distinguished member of the generation of Successors (*tābiʿūn*), and one of the main transmitters of the traditional interpretation of the Ḳur'ān attributed to Ibn ʿAbbās. He was a slave of Ibn ʿAbbās, to whom he was supposed to have been given when he was governor of Baṣra, and manumitted by his son ʿAlī; he is therefore also often called a *mawlā* of Ibn ʿAbbās. He is sometimes counted among the Successors of Mecca, sometimes among those of Medina. He travelled a good deal, and his presence is attested in Mecca and Medina, Egypt, Syria, Yaman, Kūfa and Baṣra, Nīsābūr, Iṣfahān, Samarḳand and Marw, sometimes in the company of governors; this lends at least some credibility to the opinion that he was a propagandist of the Khāridjīs, whose doctrines he certainly followed. But it is most unlikely that he travelled to the Maghrib and was responsible for the implantation of Khāridjī beliefs in Ifriḳiya, or even that he died in Ḳayrawān. (He is said to have been of Berber origin). On the contrary, he died in Medina at the age of 80 in 105/723-4 (the best attested date), on the same day as Kuthayyir

ʿAzza [*q.v.*], and the prayer for the dead was spoken on both of them together. It is related that on account of his Khāridjī opinions he was searched for by some governor of Medina and therefore had to live in hiding, but the vagueness of this information shows it to be spurious. According to the oldest sources, he transmitted traditions from Ibn ʿAbbās, ʿĀʾisha, and a very few others; later, the numbers of his authorities and of the transmitters from him increased almost indefinitely. Already in Ibn Saʿd, admiration of his knowledge is mixed with critical comments on his traditions; Bukhārī still endorses him unconditionally; the older Traditionists accepted him notwithstanding the objections which were being raised to him (four of the authors of the classical collections of traditions, Bukhārī, Muslim, Abū Dāwūd, and Nasāʾī, included his traditions in their works), and only some later critics declared him unreliable or to have been untruthful in relating from his master, no doubt on account of his Khāridjī, and therefore heretical, opinions; but the final appreciation (Ibn Ḥadjar, at the end) accepted him again. The *Fihrist* (p. 38, l. 2) mentions a book of his, derived from Ibn ʿAbbās, on the revelation of the Ḳurʾān; it is no doubt as little authentic as the other collections of interpreting notes on the Ḳurʾān attributed to Ibn ʿAbbās (Goldziher, 77).

IḲRĪṬISH, Arabic name of Crete, with the variants Aḳrīṭish (Yāḳūt), Iḳrīṭiya (Ibn Rusta), Iḳrītaṣ (*Ḥudūd al-ʿālam*) (Aḳrīṭa (Yāḳūt, ii, 865) refers to a locality in Asia Minor and has only a fortuitous resemblance with the name of the island of Crete).

Geography. The Arabic geographers describe it as one of the largest islands in the Mediterranean (Baḥr al-Rūm [*q.v.*]), whose situation they sometimes confuse with that of Cyprus. They give widely varying figures for its area; a circumference of 300 miles (Ibn Rusta) or taking 15 days on foot (Ibn Khurradādhbih; al-Ḥimyarī), 100 *farsakh* (al-Muḳaddasī; on this point see A. Miquel in his translation of this author, 42 and n. 47); see also other figures given by al-Ḥimyarī, following Orosius, and others in al-Ḳalḳashandī and al-Zuhrī.

It contains several towns (al-Muḳaddasī) and large villages (Yāḳūt). Al-Ḥimyarī preserves in a very corrupt form the ancient epithet given to it by the Greeks, "of a hundred towns", Hekatompolis (*Iliad*, ii, 649; Strabo, ed. Teubner, book x, 674-5, also Enenêkontapolis).

Ibn Ḥawḳal describes it as rich in agricultural products. Al-Zuhrī mentions wheat, barley, abundant fruits, fig-trees, vines, rhubarb and other plants, but notes that it lacks olive trees and that the local oil is made from turnips or from sesame. Al-Ḥimyarī mentions herds of goats and, in the mountains, wild sheep; also a gold mine. Antimony of good quality was found there (al-Ḥimyarī, al-Zuhrī). The latter states also that there was gathered there the resin from the lentisk tree, known as mastic (*al-maṣṭakī*), and that it was only in Crete and in India that one could find 'epithyme' (*cuscuta epithymis*), a medicinal plant growing as a parasite on thyme (for which see Ibn al-H'achcha, *Glossaire sur le Mans'uri de Razès*, ed. G. S. Colin and H. P. J. Renaud, Rabat 1941, nos. 3 and 594).

Ibn Ḥawḳal states that an active import and export trade was carried on there. According to al-Zuhrī, Crete exported antimony and mastic, walnuts, hazel-nuts, pomegranates and cheese. Abu 'l-Fidāʾ states that it exported to Egypt honey and cheese, and al-Ḳalḳashandī repeats this. The export of cheese to Egypt from Crete is confirmed by documents from the Geniza in Cairo (see S. D. Goitein, *Studies in Islamic history*, 1966, 274, and *Le commerce méditerranéen avant les Croisades*, in *Diogène* (1967), 57). It is known also that the abundance of milk and honey in Crete was one of the reasons given by Abū Ḥafṣ (see below) for retaining the Cordovans there (Theophanes continuatus, 74). On the other hand, Crete imported olive oil from North Africa and from Spain (al-Zuhrī), and, during the period when it was Muslim, received from Egypt arms and military equipment.

One of the resources of Crete, according to al-Zuhrī, was tunny-fish which, coming from the Atlantic at the beginning of May, entered the Mediterranean and reached the island of Crete, where they stayed until the beginning of June when they returned to their starting-place; they were caught and exported, dried, to all parts of the world.

At the time of the Crusades and of Venetian rule, Crete had active commercial relations with Europe on the one hand and with the other oriental countries on the other. For details of this see the index of Heyd, also, i, 276 for the products provided for commerce by the Greek islands, and ii, 441, where it is stated that Crete exported to Mamlūk Egypt wood and wine.

History. Crete was the object of Arab incursions as early as the time of Muʿāwiya. Al-Ḥimyarī mentions that it was conquered by ʿAbd Allāh b. Saʿd b. Abī Sarḥ, but gives no date; this statement is of doubtful reliability. After the capture and occupation of Cyzicus (Arwad) in 54/673-4, Crete was raided by Djunāda b. Abī Umayya al-Azdī. During the reign of al-Walīd (86-96/705-15) a part of it was conquered, but held only temporarily; again under Hārūn al-Rashīd (170-93/786-809) it was the object of an expedition by Ḥumayd b. Maʿyūf al-Hamdānī, who also led an expedition against Cyprus. But it was only during the reign of al-Maʾmūn (198-218/813-33) that it came under Muslim domination. Its conquerors were not Arabs from the East, but came from Andalusia.

After the revolt, in 202/818, of the inhabitants of Cordova against the Umayyad *amīr* al-Ḥakam I, which was ruthlessly suppressed, the whole population of the Suburb of Cordova (al-Rabaḍ) was exiled. A party of them (al-Rabaḍiyyūn) reached Morocco; others, more than 10,000 in number (15,000 according to Ibn al-Abbār; see al-Bakrī, tr. de Slane, 285, note), joined probably by sailors from the coast of Andalusia, became pirates in the central and eastern Mediterranean. These pirates landed on occasion in Alexandria and became, owing to the political troubles there, masters of the city, forming with the help of a part of the population a small republic

which lasted for about twelve years, from 200 to 212/816-27. According to al-Yaʿḳūbī there were about 3,000 of them, arriving in 4,000 ships—an unlikely number. Their leader was ʿUmar b. Ḥafṣ b. Shuʿayb b. ʿĪsā (and not Shuʿayb b. ʿUmar as is given in one single tradition in Yāḳūt) al-Ballūṭī, a native of Faḥṣ al-Ballūṭ [*q.v.*], who was called al-Ghalīẓ (the fat, the corpulent; Yāḳūt), also later al-Iḳrīṭishī. It was not until 212/827 that a new governor of Egypt sent by al-Maʾmūn, Ibn Ṭāhir, put an end to their domination. He laid siege to Alexandria in Ṣafar/May and forced it to capitulate, after a few days, in Rabīʿ I/June. According to Michael the Syrian (in Brooks, 432) the siege lasted nine months. Ibn Ṭāhir granted the Andalusians *amān* and allowed them to leave the town in their ships on condition that they took with them no slaves and no Egyptians and did not land in any country under Islamic rule.

They passed by the island of Crete, which, according to the Byzantine sources, they already knew from having made a raid there, and landed with 40 ships at the promontory of Charax in the same year 212/827 (or, according to Michael the Syrian, in 828). At the place where they had disembarked they built an entrenchment with a ditch (*khandaḳ*) from which the town which grew up there took its name (Greek Chandax)—whence the name Candia, the site of which, according to G. C. Miles, is under the present town of Herakleion. From there they made raids into the island and conquered, one by one, 29 towns, without encountering the resistance which might have been expected, either because of the absence of Greek troops or because of the indifference of a population dissatisfied with Byzantine rule.

Byzantine tradition (Theophanes continuatus, 74-5) claims that, after this, Abū Ḥafṣ had his ships burned in order to deprive his companions, who wished to see their wives and children again, of any hope of getting away from the island, praising to them the wealth of this country where milk and honey flowed abundantly and telling them that they would find wives there. This tradition is not confirmed in the Arabic sources and seems unlikely, since the Andalusians certainly had their families with them. It is very probably a legend. Nevertheless Amari supposes that Abū Ḥafṣ might have burned some ships which were in a bad condition, and this may have given rise to the tradition.

Once settled in the island, whose Christian population they reduced to subjection, the Andalusians organized themselves into an independent emirate, recognizing more or less the authority of the ʿAbbāsid caliph and led by Abū Ḥafṣ ʿUmar and, after him, his descendants. They engaged mainly in piracy and in selling the slaves and the booty which they acquired from this. They may have contributed to the conquest of Sicily if, as Amari supposes (*Storia*, i, 404, n. 2), the Spaniards mentioned in Ibn ʿIdhārī (*Bayān*, i, 95) as having helped Asad b. al-Furāt came from Crete.

In 828, they ravaged the island of Aegina; in the same year the Byzantines attempted to reconquer Crete. Soon after 828 an expedition under the Greek Photios, which was joined by reinforcements under Damianos, failed completely: Damianos was captured and Photios fled with great difficulty. Another expedition led by Crateros landed on the island, but after an initial success the troops were surprised in the night and massacred. Crateros, who succeeded in escaping, was captured on the island of Cos and hanged.

At the end of the reign of Michael II (820-9) or at the beginning of that of Theophilus, his son (October 829-842), the islands of the Aegean were re-captured from the Cretans, and this liberation is attributed to a certain Ôoryphas, who had been put in command of a large fleet. In 829-30, Theophilus entered into relations with the Umayyad ruler of Cordova, ʿAbd al-Raḥmān II, and attempted to gain his support against the Andalusians of Crete, on the pretext that they were rebels against the Umayyad authority who had given their allegiance to the ʿAbbāsid caliphate. The Umayyad merely gave the emperor complete freedom to expel the Andalusians from Crete (see E. Lévi-Provençal, *Un échange d'ambassades entre Cordoue et Byzance au IXe s.*, in *Byzantion*, xii (1937), 1-24, following an anonymous Arab chronicle).

During the reign of Theophilus there occurred several encounters between Byzantines and Cretans. In Shaʿbān 214/October 829, the Arabs destroyed a Byzantine fleet off the island of Thasos and laid waste Mount Athos, which remained for some time deserted. They also ravaged the coasts of the theme of Thracesion (the west of Asia Minor) and massacred the monks of Mount Latros; but after this they were annihilated by the *strategos* of the theme, Constantine Contomytes. The date of this event is not known, though Brooks puts it as late as 841.

During the reign of Michael III (842-67), Byzantium, after destroying in 843 a powerful Arab fleet which was sailing towards Constantinople (but which came from Syria and not from Crete), decided to attack Crete. The expedition, which took place in the same year, 843, was led by the logothete Theoctistes. It resulted in a temporary occupation of Crete (see Ahrweiler, 112 and 441), but Theoctistes returned to Constantinople because of rumours spread by the Arabs of political intrigues in the capital and, according to the continuator of Theophanes, the troops left in Crete were massacred by the Arabs.

The Byzantines continued to plan an expedition against Crete, which constituted a continual danger to the Greek coast and islands. As Crete obtained its arms from Egypt, a Byzantine fleet attacked Damietta in 853 and seized there a large supply of arms destined for Crete, while other squadrons were in action around Crete itself. The increase in the Byzantine maritime power at this time did not prevent the Cretans, in the last years of the reign of Michael III, from landing in Athos on two occasions in 862. In 866, Byzantium decided to undertake a new expedition against Crete, but the assassination of Bardas, the maternal uncle of the emperor, with the latter's connivance, interrupted these operations (Vasiliev, i, 258; cf. Ahrweiler, 112).

During the first period of the Macedonian dynasty, the Arabs of Crete remained active. In 872, their raids reached as far as the Dalmatian coast of the Adriatic, and in the following year they laid waste the islands of the Aegean with a fleet under the command of a renegade called Photios, probably accompanied by other renegades. Some ships even reached the island of Proconnesos in the Hellespont. But the Byzantine admiral Ôoryphas (a different person from the Ôoryphas mentioned above), inflicted a severe defeat on the Cretan fleet, of which several ships were burned. Nevertheless, Photios re-appeared on the coast of the Peloponnese. The same Nicetas Ôoryphas gave battle to him and, according to the Byzantine sources, took his revenge on the prisoners, inflicting horrible tortures on the renegades in particular. As a result of these Byzantine

victories, it appears that for about a decade the Cretans were forced to pay tribute to Byzantium. The *amīr* of Crete, according to the Byzantine sources, was Saīpis or Saet, a corruption of Shuʿayb.

At the beginning of the 4th/10th century, the raids by the Arabs of Crete who were in communication with those living on the coast of Syria continually caused great havoc, in particular in the Peloponnese, where they massacred the inhabitants or carried them off to sell them as slaves. They were in control of Patmos, one of the Sporades, and Naxos paid tribute to them (see John Cameniates, *De excidio Thessalonicensi*, ch. 68, 580-3, ch. 70, 583; Vasiliev, ii/1, 158-9, Russian ed., 134; cf. Ahrweiler, 104).

The Muslim Syrian squadron of Leo of Tripoli, which captured Thessalonika in 291/904, anchored on its return journey at Crete, where some of the prisoners were sold (John Cameniates, ch. 73; Vasiliev, ii/1, 177, Russian ed. 150), which demonstrates the agreement which existed between Crete and Syria.

At the time of the expedition of the admiral Himerios in 297/909-10, a Byzantine emissary, who was the author of the Life of Saint Theoctistes of Lesbos, was sent to Crete to find out the intentions of the *amīr* and to try to ascertain whether he would be giving his support to the Arabs of Syria (see Vasiliev, ii/1, 209, Russian ed., 177-8). It is not clear whether the same Himerios led an expedition against Crete in 911. This has been questioned (Ahrweiler, 113, n. 4). In any case, in the spring of 912, whether after the expedition against Crete or that against Syria, Himerios's fleet was pursued by that of the Arabs of Syria, probably helped by the Cretans, and destroyed to the north of Chios (Vasiliev, ii/1, 214; Russian ed., 182-3).

During the reign of Constantine Porphyrogenitus, between 930 and 940, the Cretans attacked the Peloponnese and central Greece and also Athos (where fortifications had to be built) and the coasts of Asia Minor(see Vasiliev, ii/1, 320 ff., Russian ed., 270 ff.). It is possible that they penetrated Attica and as far as Athens (see the works quoted by G. C. Miles in *Hesperia*, 1956 and the note in Vasiliev, 320). The emperor therefore decided to prepare an expedition against Crete in 949 in order to put an end to the activity of the pirates: the preparations for it are described in detail in the *De ceremoniis*, II, 45. But again the expedition was a failure; after the troops had landed they were taken by surprise and defeated, and a large number of ships were lost (see Vasiliev, ii/1, 333 ff.).

It was during the reign of Romanus II, the son of Constantine Porphyrogenitus, that Crete was reconquered by Nicephorus Phocas with a large fleet and army. The expedition left Constantinople in June or July 960. After landing, the army marched on the powerful fortress of Chandax and laid siege to it, while detachments spread across the island. The siege lasted throughout the winter of 960-1 and the fortress was captured by assault on 6 March 961.

The Cretans had not been able to obtain help. The *amīr* of Aleppo had no fleet and does not appear to have been approached. An embassy had been sent from Crete to the Ikhshīded *amīr* of Egypt, but he, realizing his weakness, advised them to seek help from the Fāṭimid caliph of North Africa, al-Muʿizz. The latter not only sent word to the emperor declaring that the truce concluded with Byzantium in 345/956-7 was at an end and demanding that he raise the siege of Crete; he further promised to send a fleet to aid Crete, and proposed to the *amīr* of Egypt that they should act together, the African and Egyptian fleets to meet at Cyrenaica on the first day of Rabīʿ II 350/20 May 961. Documents relating to this are to be found in *al-Madjālis wa 'l-musāyarāt* of the *ḳāḍī* Abū Ḥanīfa al-Nuʿmān, the friend of the caliph al-Muʿizz, published in the work by Ḥasan Ibrāhīm Ḥasan and Ṭāhā Aḥmad Sharaf, *al-Muʿizz li-Dīn Allāh*, Cairo 1948, 303-4, 321-2, analysed by Fahrat Dachraoui, *La Crète dans le conflit entre Byzance et al-Muʿizz*, in *Cahiers de Tunisie*, no. 26-7 (1959) and tr. by M. Canard, *Les sources arabes de l'histoire byzantine*, in *Revue des Études Byzantines*, xix (1961), 285-8.

Although Ibn al-Athīr and other historians state that the Fāṭimid caliph, as he had promised the Cretans' ambassador, sent troops, who gained a victory over the Byzantines and took them prisoner, this is very doubtful: at the date indicated Chandax had already been taken by Nicephorus Phocas and this help would have arrived too late. According to the Byzantine sources, the *amīr* of Crete having sent an appeal for help to the Arabs of Spain and Africa, a number of ships did land some men, who succeeded in scaling the walls of the place, but who, realizing that any help would be in vain, returned to their ships.

According to a tradition related by al-Nuwayrī (see Mariano Gaspar), the emperor Romanus II asked the *amīr* of Crete, ʿAbd al-ʿAzīz b. Ḥabīb, to put a stop to the Cretan raids on the islands in order to allow the inhabitants of the islands, who had fled, to return to their homes and to resume trade with Crete, promising in return to pay him an annual tribute. A treaty was concluded on this basis. Then the emperor proposed to the *amīr* to send to Crete a herd of brood-mares, whose progeny was to be shared between them, the males for the emperor and the females for the *amīr*. This was a ruse, which allowed the Byzantines to introduce into the island 500 horses with their grooms. Thereupon there arrived secretly the troops of Nicephorus Phocas, who landed at the place where the horses were, bringing with them saddles and bridles. They had only to mount the horses to be ready for battle and to take the defenders of the island by surprise. But, according to Yāḳūt, the army of Nicephorus Phocas consisted of 70,000 men, 5,000 of them being horsemen, and according to Ibn Khaldūn, he arrived with 700 ships.

The work by G. Schlumberger, *Un empereur byzantin au Xᵉ siècle, Nicéphore Phocas*, gives a detailed and vivid account of the siege of the town of Chandax. After the failure of a detachment sent into the interior, which was taken by surprise and massacred, Nicephorus began a complete blockade of the town by means of an entrenchment, which stretched from one end of the island to the other. Bombarded and cut off from the rest of the island, the town fell, though not without putting up a vigorous defence, after a siege which lasted throughout the winter of 960-1. The town was pillaged and the inhabitants who had not been killed were taken captive, among them being the last *amīr*, Kouroupas, his son Anemas and their family. The walls were demolished, and a fortress was built on a neighbouring height and provided with a garrison. The mosques were destroyed and all copies of the Ḳurʾān were burned (cf. *Kitāb al-ʿUyūn*, f. 276 v.). The Muslims who remained in the island were gradually converted to Christianity.

The capture of Crete resulted in unrest in Cairo, of which the victims were the Christians there (Yaḥyā b. Saʿīd).

According to al-Nuwayrī, the conversion of the Muslims was achieved by cunning and by force.

Some important inhabitants, invited to pay their respects to the emperor at Christmas, received lavish gifts and returned to the island very pleased. Following this a great many people travelled to Constantinople but then were arrested and forced to become Christian under the threat of death. On their return to the island they were warned that, if they wished to see their families again, they must persuade their fellow-Muslims to become Christian. In this way the island became entirely Christian.

It does not seem that Kouroupas, a prisoner in Constantinople and treated well, became a Christian, but his son Anemas was converted, since he became a member of the imperial guard and died in 972 in the war against the Russians.

Ibn Ḥawḳal states that before the Byzantine conquest Crete had been constantly in a state of war, and the Christians could neither enter it nor leave it. All the same there probably existed diplomatic contacts between Byzantium and the *amīr*s of Crete, as is illustrated by the mission of the author of the life of Saint Theoctistes (see above). But the two letters of the patriarch Nicholas the Mystic "to the *amīr* of Crete" (Migne, *P. G.*, cxi, 28-33 and 36-40; Vasiliev, Russian ed., 190-205) were, according to R. J. H. Jenkins (*The mission of St. Demetrianos of Cyprus to Bagdad*, in *Annuaire de l'Inst. de Phil. et d'Hist. Orientales et Slaves*, ix (1949), Brussels = *Mélanges H. Grégoire*), addressed to a caliph and not to an *amīr* of Crete; reference should now be made, however, to the French translation of the two letters in Vasiliev, ii/1, Brussels 1968, 389-411: at p. 411 it is suggested that the first letter (the second in the Russian edition) was addressed at the end of A.D. 904 or early in 905 to the Amīr of Crete, Muḥammad b. Shuʿayb, and related to the liberation of Greek prisoners.

That Crete was in communication with the caliph of Baghdād is demonstrated by the fact that in 248/862 the former vizier Aḥmad b. al-Khaṣīb was exiled to Crete by the caliph al-Mustaʿīn (see D. Sourdel, *Vizirat*, i, 290).

The sovereignty of the island was transmitted within the family of Abū Ḥafṣ ʿUmar. Thanks to the Byzantine and Arabic sources, and in particular also to numismatics, it has been possible to work out the succession of the *amīrs* of Crete from 827 to 961. The following has been suggested by G. C. Miles as a result of his own researches and those of other numismatists, with the probable dates of the reign of each of the *amīrs*.

Abū Ḥafṣ ʿUmar I b. Shuʿayb, 213/828-circa 241/855.

Shuʿayb I b. ʿUmar (the Saïpis or Saet of the Byzantines; Vasiliev, i, 57, n. and ii/1, 53-4), circa 241-66/circa 855-80.

(Abū ʿAbd Allāh) ʿUmar II b. Shuʿayb (the Babdel of the Byzantines; Vasiliev, i, 57), circa 266-82/880-95.

Muḥammad b. Shuʿayb (the Zerkounis of the Byzantines; Vasiliev, i, 57, *i.e.*, Zerḳūn, a Hispano-Arabic name, the diminutive of Azraḳ), circa 282-97/895-910.

Yūsuf b. ʿUmar II, circa 297-302/910-15.

ʿAlī b. Yūsuf, circa 302-13/915-25.

Aḥmad b. ʿUmar II, circa 313-28/925-40.

Shuʿayb II b. Aḥmad, circa 328-31/940-43.

ʿAlī b. Aḥmad, circa 331-7/943-9.

ʿAbd al-ʿAzīz b. Shuʿayb II (b. Ḥabīb in al-Nuwayrī, which may be a misreading of Shuʿayb, cf. Yāḳūt; he must be the Kouroupas of the Byzantines), circa 337-50/949-61.

Al-Nuʿmān (probably the name of Anemas) b. ʿAbd al-ʿAzīz, d. 361/972.

Also in Yāḳūt and al-Ḥimyarī are mentioned Cretan scholars, probably of Andalusian origin, with the *nisba* al-Iḳrītishī. One of them taught in Damascus, another in Egypt. Al-Ḥimyarī mentions an ʿUmar b. ʿĪsā b. Muḥammad b. Yūsuf, a descendant of Abū Ḥafṣ, who wrote, while a prisoner in Constantinople, a book on the meanings and the miracles of the Ḳurʾān. Al-Ṭabarī (iii, 1880) speaks of a Byzantine patrician, to whom he refers as Naṣr al-Iḳrītishī, and who was killed in battle in 259/872-3. The commander of the Cretan fleet, Nisir (Nisiris), see Vasiliev, ii/1, 209 n., does not seem to have belonged to the family of Abū Ḥafṣ.

Crete remained Byzantine until the capture of Constantinople by the Franks in 1204. It then fell to Count Boniface of Monferrat, who sold it to the Venetians (see Bar Hebraeus, *Chronography*, Oxford 1932, 358; cf. K. M. Setton (ed.), *A history of the Crusades*, ii, 190-1, and Heyd, i, 276 ff.). It was in dispute between Genoa and Venice, the latter reconquering it in 1207. A key-point of the Venetian possessions (Heyd, i, 470), it remained Venetian until it was conquered by the Ottomans in 1669.

Ottoman period

From the time of the occupation of Crete by the Venetians until it was conquered by the Ottomans, there were very few attacks against it by the Turks: an expedition by the bey of Aydîn, Umūr, circa 741/1341; an Ottoman attack in 873/1469; another, more serious, led by Khayr al-Dīn Barbarossa in 945/1538; and finally an assault on the fortress of Suda in 974/1567 while a fleet from Algiers was ravaging the region of Retimo.

All the same the existence of this Venetian bastion in the eastern Mediterranean constituted a permanent menace for Ottoman navigation. There had been peace with Venice since 1573, but some incidents in the Adriatic had led to a brief period of hostilities in 1048/1638-9, during the reign of Murād IV, and attention had then been drawn to the danger which Crete represented to the Turkish sea-routes, in particular to North Africa. It was during the reign of Ibrāhīm I that the decision was taken to seize the island; a large fleet was assembled at Istanbul during the winter of 1644-5, and when it set sail in Ṣafar 1055/April 1645, under the command of the Ḳapūdān-i deryā Yūsuf Pasha, rumours were spread that its objective was Malta. In June, Turkish troops disembarked near Canea: the town was taken, after a siege of 54 days, on 26 Djumāda II 1055/19 August 1645; this occupation was followed by those of Kissamo in Muḥarram 1056/March 1646, Aprikorno in July, Milopotamo in September and Retimo in November of the same year. But the Ottoman offensive slowed down, in spite of reinforcements sent from Istanbul and also from Tripoli, Tunis and Algiers; the siege of Candia was several times resumed and then abandoned, while on their side the Venetians set up a blockade of the Dardanelles in 1648-9 and during 1650; an Ottoman naval victory in May 1654 near the entrance to the Dardanelles was answered by a Venetian victory in June 1656 in the same waters, with an occupation of the islands of Tenedos, Lemnos and Samothrace, which were re-captured by the Turks in the following year.

In 1076/1666, the grand vizier Köprülüzāde Fāḍil Aḥmad Pasha decided to bring matters to a conclusion: in fact, more than two years were needed from the resumption of the siege of Candia in May 1667; the Venetians, having obtained very little support from western Europe, finally accepted the Ottoman peace proposals; on 9 Rabīʿ II 1080/6 September 1669, peace was concluded: the Venetians abandoned all their possessions in Crete except Suda and Spinalonga, which were occupied by the Ottomans in 1715. This long war in Crete, although it ended in a Turkish victory and their control of all the eastern Mediterranean, was in the end not a very glorious one; it underlined the growing weakness of the Ottoman empire and confirmed the decline of Venice.

Once under Ottoman domination, Crete became a province (*eyālet*) with Candia as its capital and divided into three *sandjāḳs*: Candia, Canea and Retimo. The Turkish authorities retained most of the local laws and interfered very little with the possessions and property of the Cretans; however some Anatolian Turks were transferred to the island, which finally came to contain an important Turkish minority; the internal affairs of the Greek community were left in its own hands and the use of the Greek language was continued. The population was made subject to the personal taxes usual in the Ottoman empire; land was subject to a tax of 1/5 of the production from it, and gardens and orchards of 140 aspers per *djarib*; these taxes were reduced in 1675 to 1/7 and 80 aspers respectively.

In 1821, the Greek revolt reached Crete: the governor of Egypt, Muḥammad ʿAlī, summoned by the sultan, restored order and placed the island under his own authority; he instituted mixed assemblies of Muslims and Christians in Candia, in Canea and Retimo, which were to deal with local affairs; later, another assembly was instituted at Sphakia (Isfakiya). In 1830 a new revolt broke out, and the Ottoman government proposed to Muḥammad ʿAlī that he should keep the island; but Muḥammad ʿAlī refused, and the Treaty of London in 1840 forbade him to make any claims on Crete.

Later, and especially after 1866, intermittent troubles broke out in the island: the Cretans demanded union with Greece, an idea which had the support of the Great Powers, especially France and Russia, whose aim was to make the question of Crete an international one, one of the elements of the "Eastern Question". In January 1869, the intervention of the Great Powers led to an alteration of the administrative system, by which the local responsibilities were more equally shared between Christians and Muslims; the governor (whose headquarters had been in Canea since 1850) was to be assisted by a council composed of 5 Muslims and 5 Christians; the official posts were divided among the two communities. A new revolt broke out however in 1878 and, finally, a con-

vention signed on 23 October 1878 stipulated that the governor of the island should be a Christian, appointed with the agreement of the Great Powers, and that an assembly of 80 members (49 Christians, 31 Muslims) should take all the decisions concerning the internal affairs of Crete, but that these decisions should be submitted for the approval of the sultan. This convention was not fully implemented. In 1896, the Cretans revolted again and this time received the support of the king of Greece; war broke out between Greece and Turkey; finally the latter, in December 1897, accepted the principle of autonomy for the island; on 6 November 1898 the Turkish troops left Crete and, on 19 November, Prince George of Greece was appointed as commissary extraordinary: Ottoman suzerainty was theoretically retained, but in fact Crete was already lost to the Ottomans. In 1900, Prince George tried (unsuccessfully) to proclaim the union of Crete with Greece. This union was proclaimed by his successor, Zaimis, on 6 October 1908, but was not recognized by the Young Turk government; the years 1909 and 1910 passed in an atmosphere of extreme tension. On 9 May 1910, the Cretan assembly swore allegiance to the king of Greece and on 10 October 1912 the Greek government, taking advantage of the Balkan War, officially ratified the union. In spite of the protests of the Turkish government, the treaties of London (30 May 1913) and of Bucharest (10 August 1913) confirmed the end of Turkish suzerainty over the island. Before these treaties, a certain number of Cretan Turks had already left the island; the last of them were transferred to Turkey after the Treaty of Lausanne in 1923 and the signing of the agreements on the transfers of populations between Greece and Turkey.

AL-IKSĪR, the elixir (from Greek τό ξήριον, pl. *akāsīr*, also *iksīrāt*, *e.g.*, Masʿūdī, *Murūdj*, viii, 175,6; Yaʿḳūbī, i, 106 ult.), originally the term for externally applied dry-powder or sprinkling-powder used in medicine. Thus, for example, Yūḥannā b. Māsawayh, in his *Kitāb Daghal al-ʿayn*, lists under the ophthalmic remedies six different elixirs (*akāsīr*; see *Isl.*, vi (1916), 252 f.). By the Arabic word *iksīrīn*, which is derived from the Syriac *ksīrīn*, an eye-powder is meant in al-Rāzī (*Kitāb al-Ḥāwī*, Ḥaydarābād 1374/1955, ii, 21) and in ʿAlī b. al-ʿAbbās al-Madjūsī (*al-Kitāb al-Malakī*, Būlāḳ 1294, ii, 284 f.), whilst in Pseudo-Thābit b. Ḳurra (*Kitāb al-Dhakhīra*, ed. G. Sobhy, Cairo 1928, 46, 141-3) a sprinkling-powder for the treatment of wounds is indicated.

By an early date the name *al-Iksīr* was transferred to the substance with which the alchemists believed it possible to effect the transformation of base metals into precious ones. *Iksīr al-kīmiyā'* (Djāḥiẓ, *Tarbīʿ*, ed. Ch. Pellat, 39, 7), *iksīr al-ṣanʿa* (Masʿūdī, *Akhbār al-zamān*, Cairo 1357/1938, 113, 115), or *iksīr al-falāsifa* (Djildakī, *Kitāb al-Anwār*) are mentioned, and the name is explained by a naive etymology: the substance is called *al-iksīr* because it breaks down (*kasara*) the inferior form and changes it into a perfect one (thus Djildakī; cf. also Pseudo-Madjrīṭī, *Ghāya* ed. H. Ritter, 8, and Yāḳūt, *Udabā'*, iv, 170). Usually, however, the alchemists use pseudonyms for the elixir, such as *ḥadjar al-falāsifa* (λίθος τῶν φιλοσόφων), *ḥadjar al-ḥukamā'*, *al-ḥadjar al-mukarram* (Ibn Khaldūn, *Muḳaddima*, iii, 229; Rosenthal, iii, 268), *al-ḥadjar al-karīm* (*ibid.*, 203, Rosenthal, iii, 240), *al-ḥadjar al-aʿẓam*, *al-ḥadjar alladhī laysa bi-ḥadjar* (λίθος ὅς οὐ λίθος), *al-bayḍa*, *al-kibrīt al-aḥmar* (Bīrūnī, *Djamāhir*, Ḥaydarābād 1355, 104). Al-Djildakī (*Kitāb Ghāyat al-surūr*, ms. Berlin 4183, fol. 100 b) even says of it that the perfect elixir is the homunculus of the philosophers and the child of wisdom (*al-iksīr al-tāmm alladhī huwa insān al-falāsifa wa-mawlūd al-ḥikma*). The elixirs are called *al-iksīr al-aḥmar* or *al-iksīr al-abyaḍ* according to whether they produce gold or silver.

The manufacture of the elixir is the central theme of Muslim alchemy. According to the authors of the *Corpus Djabirianum*, the elixir can be manufactured not only from mineral, but also from vegetable and animal substances. The elixirs produced from animal substances, *e.g.*, from the marrow, blood, hair, bone, urine and semen of lions, snakes, foxes etc., are even the best. One may also combine animal, vegetable and mineral substances and thus obtain different sorts of elixir. The production of the elixirs is done on the basis of fractional distillation whereby, after the most complicated processes, the four elements and the four basic qualities are released so that they can then work together on the base metal (cf. P. Kraus, *Jābir ibn Ḥayyān*, ii, Cairo 1942, 4-18). In general, however, the working of the elixir is described as follows: the elixir is projected onto the inert or molten substance (ἐπιβολή, *ṭarḥ*, *ilḳā'*), which it penetrates like yeast (ζύμη, *khamīra*) through dough, or like poison through the body. It is, therefore, also called "Poison of the Poisons" (Djābir, *Textes choisis*, ed. P. Kraus, Paris-Cairo 1935, 71; cf. also Pseudo-Madjrīṭī, *Ghāya*, ed. Ritter, 7). After it has reduced the metal into the original substance (*al-sawād*), it produces at the right moment, which can also be established astrologically, the change of metals (μεταβολή, *ḳalb*, *taḳlīb*, *naḳl*) and produces a type of gold which is more precious than the natural one (*ashraf min al-maʿdinī*). One dirham of the perfect elixir can trans-

form 100, 1,000, or even 40,000 dirhams of base metal into gold. Al-Akfānī (*Kitāb Irshād al-ḳāṣid*, ed. A. Sprenger, Calcutta 1849, 76 ff.) gives an interesting systematization of the elixirs into the esoteric (*djawwānī*) and the exoteric (*barrānī*). Eventually the elixir served the mystics as a symbol of the divine truth which changed an unbeliever into a believer (*Kleinere Schriften des Ibn al-ʿArabī*, ed. H. S. Nyberg, Leiden 1919, 219, 3 ff.).

With the translation of the Arabic alchemistic writings into Latin, the theories of the elixir spread to the West, and Albert the Great, d. 1280, speaks *de quodam elixyr alkymico quo metalla convertuntur* (*Liber de animalibus*, ed. H. Stadler, Munster 1921, ii, 1562). The notion of the elixir then returned from the field of alchemy to that of medicine: the elixir developed into the panacea, into the life prolonging agent, and eventually became more and more integrated into the pharmacopoeia (see P. Diepgen, *Das Elixier, die köstlichste der Arzneien*, Ingelheim 1951).

(M. Ullmann)

IḲṬĀʿ, term for a form of administrative grant, often (wrongly) translated by the European word "fief" (German Lehn). The nature of the *iḳṭāʿ* varied according to time and place, and a translation borrowed from other systems of institutions and conceptions has served only too often to mislead Western historians, and following them, even those of the East.

In the article ḌAYʿA it was seen how the Muslim state, in its early centuries, had distributed to its notables portions of its territory called *ḳaṭāʾiʿ* (pl. of *ḳaṭīʿa*). These portions were made over, in fact, in semi-ownership, subject to the tithe, as were all properties of Muslim origin (as distinct from properties of indigenous origin, which were subject to the more onerous *kharādj*). It was shown too in the article DJAYSH how the irrevocable nature, in practice, of such transfers of property made their multiplication impossible in the long run, and this just at the time when the increase in military responsibilities made the need for them more acute. A new form of concession then came into use called, from the abstract verbal noun of the same root as *ḳaṭīʿa*, *iḳṭāʿ*. Henceforth the effect was no longer to cede possession of land (subject to tithe) but to delegate the fiscal rights of the state over lands (subject to *kharādj*) remaining juridically in the hands of their former owners. (The *djizya* remained apart, since it was a tax on persons). In the early stages, the income thus made over to the grantee (*muḳṭaʿ*) was, like all Muslim income, subject to tithe; his benefice consisted of the difference between the *kharādj* he collected and the tithe he paid. But the grantees at this time were mainly professional army officers, from whom it was difficult, in practice, to obtain payment of any kind of tax. The Būyids [*q.v.*], therefore, distributed *iḳṭāʿ*s free of any financial obligation, and this custom gradually spread throughout Muslim Asia. Henceforth, in juridical terminology, the former type of concession was called *iḳṭāʿ* "of appropriation" (*tamlīk*), while the new type was termed *iḳṭāʿ* "of usufruct" (*istighlāl*). The *iḳṭāʿ* was calculated as an equivalent of pay on the basis of its cadastral fiscal value (*ʿibra*), and, although it was inevitably accompanied by the delegation of some administrative prerogatives, it was basically nothing but a wage collected at source, directly, without the mediation of the state treasury. There was nothing permanent about it: the area granted and the grantee were constantly changed; whenever possible wages were still paid without resort to *iḳṭāʿ*; and the officer, resident in town, had not yet any real connexion with his *iḳṭāʿ*. Thus, contemporaries complained that the system weakened government supervision and led to mere pillage rather than to private development of the lands granted. One interesting point is that since it was now the army who ruled, the Caliph, instead of being the distributor of *iḳṭāʿ*s, now received some of them, called by the same name, for his own personal needs.

Already before this there had developed another institution which, as a result of its common grammatical root, was later confused with the *iḳṭāʿ* but which was different—the *muḳāṭaʿa*, almost analogous to the *īghār* [*q.v.*]. These two terms denote districts, of any size, having a fiscal autonomy protecting them from intervention by the agents of the treasury, and paying to the state, out of the normal payment of the inhabitants, only a fixed contracted sum. This institution operated sometimes to the advantage of notables of various sorts, but above all, in the case of tribal groups—of Kurds, Bedouins, etc. and later Turcomans.

The Saldjūḳs and their vizier Niẓām al-Mulk have often been credited with the conception and organization of a new system of *iḳṭāʿ*, nearer to the European fief and constituting a specific contribution of the new Turkish rulers. This view, based on late and misinterpreted texts of ʿImād al-Dīn al-Iṣfahānī and al-Maḳrīzī, is contradicted by the evidence of contemporaries, chief among whom is Niẓām al-Mulk himself. Certainly the Saldjūḳs made a wider use of *iḳṭāʿ* in their empire than had been made previously, and probably introduced it in provinces (particularly eastern Iran) where it had scarcely ever been used; but it remained in conception a continuation of that of the Būyids—an equivalent of pay granted for a short time—and what has been taken for an original creation of the Saldjūḳ government is merely a later result of their decline. In the course of the internal struggles which marked the last years of the dynasty, the *iḳṭāʿ*s granted must have increased continually in size and number, while the period of tenure became longer, tending even to hereditary succession. Such *iḳṭāʿ*s now differed only in extent from provincial governorates, which themselves were changing at the same time from being revocable delegations of authority to becoming in effect hereditary principalities. The similarity was so great that the term *iḳṭāʿ* was extended finally without distinction to both. Then, we are told, the *muḳṭaʿ*s began to take some interest in developing their *iḳṭāʿ*. Some successors of the Saldjūḳs, particularly the Zangids, explicitly proclaimed the right of in-

heritance to *iḳṭāʿ*s in order to secure the loyalty of their troops in the struggle against the Crusaders. This development has been ascribed to the influence of the Latin Orient, where something like the western idea of the hereditary fief had been introduced. While no definite denial of any such influence can be made, it does seem that the same result might have been reached through a natural autonomous development, even without the presence of the Latin Orient. Then again, the permanence of the *iḳṭāʿ* and the relative strength of the *muḳṭaʿ* allowed the latter, by means of "protections" [see ḤIMĀYA], more or less forced purchases, or simple usurpations, to acquire veritable *mulk* properties on or around the territory granted him, and, in the case of an incumbent who was at the same time governor of the province in which his *iḳṭāʿ* and these *mulk*s were situated, to exercise all public and private power at the same time. Under such conditions, it can be seen that the *iḳṭāʿ* evolved through a confusion of various notions and practices to a status approaching that of a "lordship". The inhabitants, indeed, were reduced to serfdom by reason of the prohibition against their leaving the land when the taxes had not been paid, and of their extreme difficulty, which the *muḳṭaʿ* could increase at will, in paying him off completely and on time. Besides, the intervention of the Turcomans apparently necessitated the multiplication of lands of the *muḳāṭaʿa* type, which were gradually confused with the *iḳṭāʿ*s.

It has often been said that the Saldjūḳs introduced in Asia Minor, newly won by the Turks for the Islamic World, the Turco-Muslim system of *iḳṭāʿ* with which their cousins had experimented in the traditional Muslim lands. But ethnic or dynastic kinship was not enough to obliterate the originality of the conditions of the conquest or the difference of the pre-existing indigenous usages. It is certain that when the State of "Rūm" was organized, it was with a particularly extensive state domain; but it is wrong to say that there necessarily resulted a considerable distribution of *iḳṭāʿ*. On the contrary, a careful study of the documentation available gives the impression that *iḳṭāʿ* in Rūm before the Mongol invasion was less defined, less widely distributed and less elaborated than in the neighbouring Muslim countries. The disintegration of the régime, which followed the Mongol conquest, certainly increased the importance of the *iḳṭāʿ* at the expense of the State lands, but it also increased the importance of lands held in full ownership at the expense of the old *iḳṭāʿ*s. The subsequent Ottoman régime was to give great importance to a related institution, that of the *tīmār* [*q.v.*], but in the present state of our knowledge we do not know how the transition from the old *iḳṭāʿ* to the new *tīmār* was made. The name *tīmār*, etymologically Persian, but used here with a meaning corresponding to the Greek institution of the *pronoia*, suggests different antecedents.

In Iran itself, the periodic repetition of conquests and invasions uprooted the developing military aristocracies while they were still in process of formation; the Mongol conquest did still more, in that it partially overturned the institutional system of the conquered country. Nevertheless, once the new régime was established, the Īl-khāns, facing an economic situation broadly comparable with that of their predecessors and confronted in addition by agricultural decay, were forced in about the year 700/1300 to develop, little by little, analogous institutions. Originally their army had supported itself, in addition to treasures inherited from the states destroyed, on public estates, war booty, the pasture lands which they took for themselves in the conquered lands, and on forced levies. This could not continue when the frontiers and institutions became fixed. In the time of Ghāzān (1296-1304) it was seen to be impossible that non-institutionalized payments from the Treasury and pastureland should suffice. Even the direct assignment of wages from the local treasuries proved insufficient. The Īl-khān and his vizier, the famous Rashīd al-Dīn, then decided to grant the actual districts to the soldiers who would have to manage them and fulfil their military obligations. Thus they approached the system of the Saldjūḳ régime. However, words and institutions became more difficult to differentiate. In Mongol, the institution is called *suyurghal* when it is hereditary, *tuyul* when it is temporary or tenable for life only. But the vassal principalities and the indigenous populations had retained the term *iḳṭāʿ*, which is also found in use in the administrative texts. Perhaps originally the Mongol words were used more exactly in the case of large grants for the benefit of Mongol notables, while *iḳṭāʿ* was used for the smaller grants made over indiscriminately to the military, sometimes to civilians of all kinds. But with the disorganization of the Īlkhānid régime, the terms became less and less distinct, the more so since the grants were made for the most part from the important state lands inherited at the time of conquests and added to by the disappearance of numerous indigenous owners. It was further increased because the new military aristocracy, accentuating the work of its predecessors, stripped of all meaning the "rights" of ownership of the existing small proprietors. There came to be no distinction made between what had been *iḳṭāʿ* and what had been *muḳāṭaʿa*, and the two words, thanks to the common root, were often used indiscriminately.

Egypt also posed special problems, and there has been all too often a tendency to regard what was done there as corresponding with the situation elsewhere. This was not so even when, for example, Syria was incorporated into the same state. In Egypt, the traditional, far-reaching control of the state over all aspects of rural life cancelled out, in practice, the significance of the distinction between *ʿushr* lands and *kharādj* lands, and, in consequence, the significance of the distinction to be made between the old-style *ḳaṭīʿa* and the new *iḳṭāʿ*, as even some contemporaries (Ibn Ḥawḳal, al-Muḳaddasī, Ibn Muyassar, etc.) clearly noted. In practice there, what was to be called *iḳṭāʿ* consisted of agricultural lands leased in return for a contractual payment, called here apparently *ḳabāla* [*q.v.*], but corresponding quite closely to the system more generally called *muḳāṭaʿa* (see above) in the Muslim world as a whole. Redistributions took place from time to time, to take account of the fluctuations of yields and expenses. These redistributions implied a certain stability of areas leased and leaseholders, and the vizier al-Afḍal, at the beginning of the 6th/12th century, made a specially important one. The arrival of the Turco-Kurdish army of Ṣalāḥ al-Dīn, accustomed to the institutions inherited from the Saldjūḳ régime, brought about a change in the Egyptian *iḳṭāʿ* system, but not so great a change as has been thought: the *iḳṭāʿ*s of the previous army were transferred to the new one, but henceforth free of all dues. They did not, however, completely escape the control of the administration, and, although certain *iḳṭāʿ*s might be granted on a long-term or even hereditary basis, cases of withdrawal and redistri-

bution seem to have been just as frequent, not to speak of such systematic revisions as the famous *rawk* [*q.v.*] of Muḥammad al-Nāṣir. With the exception, perhaps, of a certain relaxation of control at the end of the régime, the Ayyūbid and Mamlūk *iḳṭāʿ* is characterized by the maintenance of close administrative and financial control by the state over the *muḳṭaʿ*, who had no real independence and, in short, received a wage, the organization of which was not his concern. The income of the *iḳṭāʿ* was calculated on the basis of a complex unit of account called the *dīnār djaysh̲ī*, concerning which the administrative treatises give us precise information, and which combined money and kind. The division of land was highly developed in the sense that it was rare for a *muḳṭaʿ* to hold his *iḳṭāʿ* in a single block, and for a village to be dependent on a single *muḳṭaʿ*. The state maintained direct control of more than half of the land. The *iḳṭāʿ*s distributed to senior officers gave them the obligation and the means to maintain a small military force; thus the sources speak of an "*iḳṭāʿ* of twenty", "of a hundred" etc. This force, however, was smaller than that which they effectively commanded as military leaders in the ranks of the general army, which remained under the control of the Sultan. A very strict control was exercised over the fulfilment of military obligations although, in the case of a prolonged campaign, the state itself supported the soldiers beyond their obligations.

In the Muslim West, the development of the *iḳṭāʿ* was probably in a sense slower than in the East, but words and institutions were perhaps less clearly differentiated. In Umayyad Spain, apparently, the classic stage of *iḳṭāʿ*/*ḳaṭīʿa* had not been passed and in the pre-Almohad Mag̲h̲rib it was probably the same, save for a certain indistinctness concerning the status of certain lands and the terms designating them. In Ifrīḳiya the trend towards the fiscal *iḳṭāʿ* certainly appears more clearly, though with these same reservations, under the Almohads and particularly the later Ḥafṣids. We must await new studies before we can consider the situation in Marīnid Morocco or the Kingdom of Granada, for example.

The remarks often made about oriental "feudalism", on the basis of the institution of *iḳṭāʿ*, justify our concluding with some more general remarks. The verbal and conceptual confusion in which the development of the *iḳṭāʿ* culminates, gives the impression of a sort of hierarchy of rights comparable to that known in European feudal society: at the top the Sultan, below him the great *muḳṭaʿ*, the provincial governor, then the small military *muḳṭaʿ*, and finally, with or without the intermediary of local proprietors (who are such only in name), the peasants. In addition, the fact that the senior officers and their men, even those who reached the highest ranks, often had the legal status of slaves or otherwise were clients of various types as having taken some kind of oath of personal obedience, produced alongside the hierarchy of rights over things, a hierarchy of personal obedience, which at its highest level was expressed by the introduction of the name of the Sultan on coins and in the public Friday prayer. But it must be repeated that the full development of this system was relatively rare, and, for example, in Turkey as in Egypt, the connexion between the State and the *muḳṭaʿ* of the lowest rank was direct. Besides, no state ever alienated (far from it) all of its land (in Egypt about a half). With the solid intellectual and administrative traditions of the East, the distinction between public and private rights was never obscured as it was in the West. Whilst in Europe the rebuilding of a social system was attempted on the basis of personal relations, in the East, the notion that all personal power was a delegation of public power remained clear. Even though personal subordination was known in the East, the feudal contract of fealty was never even imagined. Economically, a *muḳṭaʿ* differed from the Western lord in that he lived in the town and did not have to organize his rural lands with the *réserve*, *corvées* etc. which would have been necessary had he lived there. He drew an income from the soil, and that is all. The fact that he was often a foreigner might, of course, be very important from various points of view, but this did not modify the structure of the *iḳṭāʿ*, nor, since he was permanently established in the country, the use made of this income. In this sense it is for example incorrect to speak, as has been done, of a "colonial" character of the Mamlūk state.

Even in places and times where the tendency to it was strongest, a number of factors limited the formation of a fully-developed military aristocracy. First of all, a system of law and custom which had been firmly established for generations and was linked in some degree to the Islamic religion itself could hardly be modified at the pleasure of the *muḳṭaʿ*. The Muslim law of succession, ignoring primogeniture, shared out the inheritance and consequently rapidly weakened the power of great families. Furthermore, the *iḳṭāʿ*, even when the right of inheritance to it was to some extent recognized, was still conditional on service. Otherwise it was replaced by a pension, and in fact quickly annulled. In any case, the resources drawn by rulers from the relative growth of the mercantile economy and from the retention of substantial domains almost always enabled them to buy new slaves with which to bring their former slaves back into line. Finally, no matter how external this factor was, it did happen in the East that the periodic recurrence of foreign invasions and conquests drove out or destroyed the aristocracies in the process of formation in favour of the newcomers, who in addition sometimes had different traditions.

From a very general point of view, the comparison of the development of different societies can still be justified. Nevertheless, it is much less instructive to make this comparison, as our "Europe-centred" education encourages us to do, between the Muslim countries and the very different society of Europe, than to make the comparison with the neighbouring Byzantine society, where the *pronoia* presents some obvious points of resemblance to the *iḳṭāʿ*. The development of the *pronoia* took place a little later. The *iḳṭāʿ*, therefore, owed nothing to the *pronoia*, and it is impossible to say whether the *pronoia* owed anything to the *iḳṭāʿ*. Both, however, bear witness to certain requirements of political and economico-social régimes which are, at least in part, comparable. As for the term "feudalism" as applied to the East, it is doubtless too late to attack an established custom, which (even for Europe) is sometimes dangerous. It is necessary only to underline the facts that there are as many differences as there are similarities between European feudalism and the "feudalism" of the East; that it is doubtful *a priori* whether one may apply to one society concepts drawn from another, and that such

a transfer cannot be justified by an equivalence between *iḳṭāʿ* and fief—an equivalence which arises only through the confusion of ideas of ill-informed translators.

Bibliography: It is obviously impossible to list here all the sources which might be relevant to the history of the *iḳṭāʿ*. Alongside the documents, papyri, inscriptions, etc., they would include almost the whole of the historiographical literature (particularly that of the 4th/10th century, Miskawayh, Ṣābiʾ etc.), the geographical literature, etc. References here then are restricted to the administrative treatises, such as the *Kitāb al-Kharādj* of Ḳudāma and *al-Aḥkām al-Sulṭāniyya* of Māwardī for the ʿAbbāsid-Būyid period, the *Minhādj fī ʿilm al-kharādj* of Makhzūmī (see Cl. Cahen, in *JESHO*, 1963), the *Ḳawānīn al-dawāwīn* of Ibn Mammātī and the *Description du Fayyum* of Nābulusī for Fāṭimid and Ayyūbid Egypt, the *Khiṭaṭ* of Maḳrīzī and the chancery treatises of Nuwayrī (in the *Nihāya*, viii), ʿUmarī, Ḳalḳashandī, etc. for the Mamlūk state, and finally the *Dastūr al-Kātib* of Hindūshāh Nakhdjavānī (ed. Ali Zade, i, Baku 1964) for the Mongol régimes of Iran.

Modern Works: It is still useful to consult the studies of a few 19th-century pioneers, though we should no longer be guided by them:—Sylvestre de Sacy, *Nature et révolution du Droit de propriété en Egypte*, 1828, the studies of Worms and Belin, in *JA*, 1842, 1862, 1870, Tischendorf, *Das Lehnwesen in moslem. Staaten*, 1872, the latter including also the Ottoman Empire, Max Van Berchem, *La propriété territoriale et l'impôt foncier sous les premiers Califes*, 1886. A new phase of study begins with C. H. Becker, *Steuerpacht und Lehnwesen*, in *Isl.*, 1914 (reprinted in his *Islamstudien*, i, 1924), the first to have made use of the Egyptian papyri, but his conclusions should not be extended to other countries, or always regarded as final even for Egypt. A good résumé of the state of the questions by about 1925 is given in the article *iḳṭāʿ* by Sobernheim in *EI*¹, dealing extensively with the stipulations of the jurists. Further useful information may be found in Poliak, *Classification of lands in the Islamic Law*, in *Amer. J. of Sem. Languages*, 1940, and Fr. Løkkegaard, *Islamic taxation in the Classical period*, Copenhagen 1950. The conclusions of Turkish scholars are presented by M. F. Köprülü, *Le féodalisme turc musulman au Moyen Âge*, Communication au Congrès Intern. d'histoire, Zurich 1938 (= *Belleten*, 1941), and Osman Turan, *Le régime terrien sous les Seldjoucides de Rum*, in *REI*, 1947. Cl. Cahen has tried to give a more evolutionary historical interpretation of the whole question up to the 13th century in his article *L'évolution de l'iqtaʿ*, in *Annales ESC*, 1953, and has discussed the special case of Saldjūḳ Turkey in *Pre-Ottoman Turkey*, London 1968. A. K. S. Lambton, whose important work, *Landlord and Peasant in Persia* was published in 1953, took up the question again in a more synthesized form in her *Reflexions on the iqṭāʿ*, in *Arabic and Islamic Studies in honour of H. A. R. Gibb*, 1965; for Iran and ʿIrāḳ in the 10th century, see also the important article by C. E. Bosworth, *Military organisation under the Buyids*, in *Oriens*, xviii-xix (1967); for the Mongol period, I. P. Petrushevsky, *Zemledelie i agrarnïye otnosheniya v Irane XIII-XIV vekov*, Moscow-Leningrad 1960 (Persian translation by Karīm Kishāvarz, *Kishāvarzī wa munāsabāt-i arḍī dar Īrān ʿahd-i Moghūl*, Tehran 1344 s.). For Egypt see amongst others, H. A. R. Gibb, *The armies of Saladin*, in *Cahiers d'Histoire égyptienne*, 1952, (reprinted with corrections in *Studies on the civilization of Islam*, London 1962, 74-90); al-ʿArīnī, *al-Iḳṭāʿ al-ḥarbī fī zamān Salāṭīn al-Mamālīk*, Cairo 1956; S. B. Pevzner, *Iḳṭāʿ v Egipte v kontse XIII-XIV vv.*, in *Pamyati Akademika I. Y. Kračkovskogo.*, Leningrad 1958, and H. M. Rabie, *The financial system of Egypt, 564-741/1169-1341*, (in the press). For the Muslim West, the classic works of Lévi-Provençal (*Espagne musulmane*, iii) and R. Brunschvig (*Hafsides*, ii), and H. R. Idris, *Zīrīdes*, ii, 1962.

(Cl. Cahen)

IḲTIBĀS means to take a *ḳabas*, a live coal or a light, from another's fire (Ḳurʾān XX, 10; XXVII, 7; LVII, 13); hence to seek knowledge (*ʿilm*) and, as a technical term in rhetoric, to quote specific words from the Ḳurʾān or from Traditions but without indicating these as quoted. Some scholars limit the term to the use of Ḳurʾānic phrases, while others extend it to the use of terminology from *fiḳh* and other sciences, but all agree that *iḳtibās* is found both in poetry and in prose. If the source is indicated and the quotation is put into verse the figure is called *ʿaḳd*, binding. A related figure is *talmīḥ*, allusion, which consists of alluding to famous passages in the Ḳurʾān or Traditions, or in profane literature. The practice of using Ḳurʾānic expressions is often mentioned in works on literary theory, but rules for it and the specific term *iḳtibās*, instead of the more general *taḍmīn* [*q.v.*], may not have existed earlier than the 6th/12th century. Suyūṭī mentions the existence of a legal controversy over *iḳtibās*, the Mālikis condemning it outright or allowing it only in prose and the Shāfiʿites on the whole allowing it (cf. however Zarkashī, *al-Burhān fī ʿulūm al-Ḳurʾān*, Cairo 1376/1957, i, 483-4 on the use of Ḳurʾānic passages as proverbs). Ṣafī al-Dīn al-Ḥillī and, following him, Ibn Ḥidjdja distinguish three categories: praiseworthy, permissible, and objectionable (*mardūd*) *iḳtibās*. The last category falls into two sub-categories: (a) the use of Ḳurʾānic passages in which Allāh refers to Himself and (b) the use of the Ḳurʾān in frivolous verse (the *ghazal* is not considered as such). Ḳazwīnī and those following him allow the borrowed phrases to be slightly changed or to be given a different application.

It should be noted that Rādūyānī in his *Tardjumān al-Balāgha* (ed. A. Ateş, 118-21, 125-7; cf. also 121-5) quotes verses with paraphrases in Persian, and that some writers suggest (though not in their chapters on *iḳtibās*) that the Ḳurʾān itself borrows from, or alludes to, not only the Old and New Testaments, but also pre-Islamic poetry and prose (see Usāma, *al-Badīʿ fī naḳd al-shiʿr*, Cairo 1380/1960, 284; Ibn al-Athīr, *al-Djāmiʿ al-kabīr*, Baghdād 1375/1956, 245-6; Ibn Abi 'l-Iṣbaʿ, *Badīʿ al-Ḳurʾān*, Cairo 1377/1957, 52-3; idem, *Taḥrīr al-Taḥbīr*, Cairo 1383/1963, 380).

Bibliography: Fakhr al-Dīn al-Rāzī, *Nihāyat al-īdjāz fī dirāyat al-iʿdjāz*, Cairo 1317/1899, 112; Ibn al-Athīr, *al-Washy al-marḳūm*, Beirut 1298/1880, 85-112; idem, *al-Mathal al-sāʾir*, Cairo 1358/1939, i, 76-141, ii, 341-2, 347; Ḳazwīnī, *al-Īḍāḥ fī ʿulūm al-balāgha*, Cairo 1369/1950, vi, 136-9, 142-3, 144-6; Ṣafī al-Dīn al-Ḥillī, *Sharḥ ḳaṣīdatih al-badīʿiyya*, Cairo 1317/1899, 70-1; Taftāzānī, *al-Muṭawwal*, Istanbul 1289/1872, 430-1, 433-4, 434-6; Ibn Ḥidjdja, *Khizānat al-adab*, Cairo 1304/1886, 184-9, 442-54, 459; Suyūṭī, *ʿUḳūd al-djumān*,

Cairo 1358/1939, 166-9, 170-2; idem, *al-Itḳān*, Calcutta 1857, 262-6; *Shurūḥ al-talkhīṣ*, Cairo 1937, iv, 509-14, 521-3, 524-9; Mehren, *Die Rhetorik der Araber*, Copenhagen/Vienna 1853, 136-8, 140-1, 141-2, 201-2.

(D. B. MACDONALD-[S. A. BONEBAKKER])

IḲTIḌĀB [see TADJNĪS; TAKHALLUṢ].

IKTISĀB [see KASB].

IḲWĀʾ [see ḲĀFIYA].

ĪL, Arabic orthography of the Turkish word IL, more correctly ÉL, which has undergone a wide semantic development (see Radloff, *Versuch* ..., i, 803-5, 1471).

(1) It is defined by V. Thomsen as signifying, in its numerous occurrences in the Orkhon inscriptions: "un peuple ou une réunion de peuples considerés comme formant un tout indépendant et organisé et ayant à sa tête un kagan" (*Inscriptions de l'Orkhon déchiffrées*, Helsingfors 1896, 135), and thus approximately "empire". In this sense it often appears in conjunction with the word *budun* (? read *boδun*), "confederation of tribes", or with *törü* [*q.v.*], "laws, customs" (occurrences collected and discussed by R. Giraud, *L'Empire des Turcs Célestes*, Paris 1960, 67-72). It is presumably in this sense that it appears as an element in such Turkish regnal titles as *él-térish*, *él-étmish*, *él-tutmïsh* (A. Caferoğlu, *Tukyu ve Uygurlarda han unvanları*, in *THITM*, i (1931), 105-19); and the first element of "Īlek Khān" [*q.v.*] is (perhaps) to be explained as *él-lig* "[ruler] holding an Empire" (O. Turan, *Ilig unvanı hakkında*, in *TM*, vii-viii/1 (1942), 192-9).

(2) At an early period the word acquired the notion of "district over which authority is exercised", so that Maḥmūd Kāshgharī gives the definition (ed. Kilisli Rifʿat, i, 49; cf. tr. B. Atalay, i, 48): *al-wilāya*: *yuḳāl minhu 'beg éli' ay wilāyat al-amīr*. Hence, in the sense "district, territory", it appears as the first element in the Turkish personal names Il-aldï, Il-begi, Il-ghāzī, etc.; and in Ottoman times very frequently as the second element of place-names, most notably in Rūm-éli ("Rumelia"), a calque of "Romania", "Byzantine territory [in Europe]" (see P. Wittek, *Le Sultan de Rûm*, in *Ann. de l'Inst. de Phil. et d'Hist. Or. et Slaves*, vi (1938), 361-90, esp. 377 f.), and also commonly for smaller territories, *e.g.*, Ič-il [*q.v.*]. In such cases the first element is usually a personal name, so that the toponym signifies sometimes "territory conquered by so-and-so" (thus Ḳodja-éli [*q.v.*] is the region conquered by the *ghāzī* hero Aḳče Ḳodja (F. Giese, ed., *Die altosmanischen anonymen Chroniken*, i (Text), Breslau 1922, p. 13, lines 24-5); and the current names Aydïn, Menteshe, etc. for the 8th/14th century Anatolian emirates stand for Aydïn-ili, Menteshe-ili, etc., the "territories" of the eponymous founders of the local dynasties); sometimes the implication is "territory" [formerly] ruled by" (thus Ḳarlï-ili [*q.v.*] is named for the despot Carlo Tocco, Hersek-ili (Herzegovina) for the *herceg* of St. Sava (other examples in H. İnalcık, *Fatih devri*..., i, 1954, 159 n.); an older name of the Aydïn district was Leshkerī-ili, the "land of the Lascarids"). With the same connotation of "district" it is found in the name of the Ottoman fortress-town Elbasan [*q.v.*] in Albania, and in such expressions as: *il-yazïdjïsï*, one of the terms for the *emīn* [*q.v.*] carrying out the *taḥrīr* [*q.v.*] (*wilāyet taḥrīri* = *il yaz-*); *il dili*, "the local language" (see, *e.g.*, Kemālpashazāde, book vii (facsimile), Ankara 1954, 438, 519, etc.); *ič-il*, "the interior", as opposed to the frontier regions, *udj* [*q.v.*] (see, *e.g.*, Kemālpashazāde, *op. cit.*, 141, 162, 204, 205, etc.; cf. Evliyā Čelebi, *Seyāḥat-nāme*, viii, 713) (but the phrase *ič il müderrisleri* refers to holders of teaching posts in the three "capital cities" of Bursa, Edirne and Istanbul, see I. H. Uzunçarşılı, *Osmanlı devletinin ilmiye teşkilâtı*, Ankara 1965, 57); *il-eri*, "local people [levied for an emergency]" (see, *e.g.*, *TM*, iii (1926-33), p. 290, no. 47, a firman of 978/1571). In a *ḳānūnnāme* of Meḥemmed II (*MOG*, i (1921-2), pp. 24 and 38, § 5), *il* seems to mean "open country" (as opposed to towns).

In the Republican period, under the influence of the "language reform" movement, the word *il* was introduced to replace *vilâyet* "province", and the diminutive *ilçe* was coined to replace *kaza* (so *ilbay* for *vali*, and *ilçebay* for *kaymakam*).

(3) The word acquired also the sense of "people", at first (apparently) in a hendiadys with the (?)synonym *kün* = "folk". The hendiadys is a common expression in old Ottoman, in the form *él gün*, also *él u gün* (see *TTS*, i, ii, iv, s.v. *il gün*), and survives in some fixed locutions (see the discussion by F. Rundgren, in *Orientalia Suecana*, xvi (1967), 100-2). In modern Turkish *el* alone signifies rather "*other* people", *i.e.*, "strangers" (*Türkçe Sözlük*, s.v. *el* (II), with examples; cf. *elâlem*, in which the first element is not the Arabic definite article but T. *él* + A. *ʿālam*).

In Persia the word was used of "tribesfolk" (synonym: *ulus* [*q.v.*]), having a quasi-Arabic plural *īlāt* [*q.v.*].

(4) At an early period the word meant also "peace" (G. Doerfer considers this to be the original meaning), cf. Maḥmūd Ḳāshgharī, i, 50 = tr. B. Atalay, i, 49 (*al-ṣulḥ bayn al-malikayn*); from this derives perhaps *elči* [*q.v.*], "ambassador" (*i.e.*, "negotiator of peace"; see O. Turan, in *TM*, vii-viii (1942), 197; and cf. Abū Ḥayyān, *K. al-Idrāk*, ed. A. Caferoğlu, Istanbul 1931, 20: *al-rasūl alladhī yaṭlub al-ṣulḥ*), and the Ottoman term *éllik*, which may be both adjectival, "who has accepted peace", *i.e.*, (?) belonging to the *Dār al-Ṣulḥ* [*q.v.*] (cf. E. Zachariadou, in Συμμεικτα, i (Athens 1966), at 211-2, where *éllik kāfirler*, in a document of 870/1465, refers to the inhabitants of Patmos), and also quasi-nominal, "territory acknowledging [Ottoman] suzerainty" (cf. Meḥmed ʿĀrif's introduction, page *dāl*, to the so-called "*Ḳānūnnāme* of Süleymān I", *ʿilāve* to *TOEM*, Istanbul 1329; the converse is *yaghïlïḳ*, see text p. 24).

(5) By the 7th/13th century the word had become current in Persian, with the meaning "submissive, obedient" (Rashīd al-Dīn uses the expressions *īl kardan*, "to bring into obedience", and *īl shudan*, "to submit"); from this usage arose the title Īl-khān for the Mongol rulers of Persia as being subordinate to the Great Khan [see HÜLÄGÜ]; and from the adjective was formed the Persian abstract noun *īlī*, "submission". In Ottoman Turkish usage too *él* may be adjectival, both as a "Persian" loanword (*e.g.*, Tursun, p. 187, l. 3: *il u munḳād*) and as a "Turkish" word meaning "at peace", "friendly" (as opposed to *yaghï*), cf. *TTS*, i and ii, s.v. *il*, definition 3, and iv, s.v. *il olmak*), whence *éllik* (nominal), "peace, submission" (*TTS*, i-iii, s.v. *illik*) and *éllesh-*, "to make peace" (*TTS*, ii, iii, s.v. *illeşmek*). For the expression *él-djān*, apparently implying *amān* [*q.v.*], see V. L. Ménage, in S. M. Stern (ed.), *Documents from Islamic chancelleries*, Oxford 1965, 96-8.

Bibliography: besides the references in the article, see G. Doerfer, *Türkische und Mongolische Elemente im Neupersischen*, ii, Wiesbaden 1956, nos. 653 (*él*), 656, 657, 661, with full references to the literature, and H. H. Zarinezade, *Fars dilinde Azerbayjan sözleri*, Baku 1962, 169 ff.

(ED.)

ĪLĀʾ [see ṬALĀḲ].

ĪLĀF, Ḳurʾānic term (CVI, 1-2) which probably refers to economic relations entered into by the Ḳurayshīs well before the advent of Islam, but which presents problems of reading and interpretation which are not easily solved.

In the first place, this Sūra CVI, which is very short and certainly very early (no. 3 in the classification by R. Blachère), begins abruptly, after the *basmala*, with the words *li-īlāfi Ḳurayshin īlāfihim riḥlata 'l-shitāʾi wa 'l-ṣayfi*, which may be translated as: "because of the *īlāf* of the Ḳurayshīs, [of] their *īlāf* of the journey of winter and of summer (let them worship the Lord of this Temple who has protected them against hunger and sheltered them from a fear)". But in the *corpus* of Ubayy, this Sūra was not separated from the preceding one, which deals with the fate inflicted by God on the *Aṣḥāb al-Fīl* and appeared as a logical continuation of it: "Hast thou not seen how thy Lord has treated the men of the Elephant ... because of the *īlāf* of the Ḳurayshīs ... (Let them worship ...)". However, the preposition *li-* may also have the force of a final conjunction "in order that the *īlāf* [may be possible] ...". Finally the "readers" of the Ḳurʾān hesitate between *īlāf*, *ilāf*, and *ilf*, which indicates that these verses did not seem very clear to the redactors of the Ḳurʾān, just as they later proved confusing to exegetists and translators (R. Blachère suggests three possible translations, but always translated *īlāf* as "entente"; M. Hamidullah: "pacte"; A. J. Arberry: "composing").

It is not certain that the word *īlāf* has the same meaning in each of the two verses; in fact it really seems to have the force of a noun in the first and of a verb in the second, so that *īlāf Ḳuraysh* can be regarded as a set expression and *īlāfihim riḥlata* ... as an equivalent to *tadjhīr*: "their organization of a caravan ...".

Nevertheless, *īlāf* had acquired a very precise connotation, and the lexicographers give this term the meaning of *ʿahd*, *dhimām*, *amān*, that is "pact guaranteeing safety, safe-conduct, undertaking to protect"; the customary expression is *akhadha 'l-īlāf*, "to conclude an *īlāf*".

Tradition relates that the Ḳurayshīs had concluded with foreign peoples pacts which guaranteed them freedom of trade, and it is Hāshim b. ʿAbd Manāf [*q.v.*] who is credited with having obtained from the emperor of Byzantium authorization to send a caravan regularly into Syria and the assurance that it would come to no harm. His brothers, ʿAbd Shams, al-Muṭṭalib and Nawfal, had concluded similar pacts with the Negus, the Ḥimyarī rulers of the Yemen, and the king of Persia respectively; these four brothers were referred to as *aṣḥāb al-īlāf*. The winter caravan set off towards the south and the summer caravan towards the north (*īlāfihim riḥlata 'l-shitāʾ wa 'l-ṣayf* could mean more precisely: the successive and uninterrupted organization of the winter and summer caravans; see *LA*, s.v. *ʾlf*). It is not unreasonable to think that Sūra CVI is an allusion to a famine which occurred at a time unknown and was averted by means of supplies from other countries, thanks to the agreements thus concluded.

M. Hamidullah (see *Bibl.*) has attempted to establish the date when these pacts were concluded and has placed it at 467 A.D., on the grounds that ʿAbd al-Muṭṭalib b. Hāshim, who was born one year after his father Hāshim had concluded the first agreement with Byzantium, died in 578 at the age of 110. However, while it may be admitted that the tradition is based on fact, the date suggested should perhaps be advanced by some decades, since ʿAbd al-Muṭṭalib's age seems to be greatly exaggerated.

Pellat, §971); the commentaries on CVI; M. Hamidullah, *Al-Īlāf, ou les rapports économico-diplomatiques de la Mecque pré-islamique*, in *Mélanges Massignon*, ii, 293-391 (with unpublished text of the *Munammaḳ* of Ibn Ḥabīb). (Ed.)

ILĀH (A.), pl. *āliha*, "deity", appears in pre-Islamic poetry (see, *e.g.*, F. Bustānī, *al-Madjānī al-ḥadītha*, i, index) as an impersonal divine name, although preceded by the article; for the Christians and (so far as the poetry ascribed to them is authentic) the monotheists, *al-ilāh* evidently means God; for the other poets it means merely "the one who is worshipped", so that *al-ilāh* indicates: "the god already mentioned" (the article being used *li 'l-ʿahd*) or "the god of whom the poet is thinking", and this use has survived to the present day (ʿAbd al-Ilāh); but *ilāh* without the article seems to have been used only in the Islamic period to indicate a specific deity. By frequency of usage, *al-ilāh* was contracted to Allāh, frequently attested in pre-Islamic poetry (where this name cannot in every case have been substituted for another), and then became a proper name (*ism ʿalam*). But whilst the form *al-ilāh* is not found in the Ḳurʾān, *allāh* seems in some cases to have preserved the same meaning: thus (VI, 3) *wa-huwa 'l-lāhu fī 'l-samawāti* "and he is the deity in the heavens" (cf. Zamakhsharī, *Kashshāf*, ed. Lees, 394), and in XXVIII, 70, *huwa 'l-lāhu 'l-ladhī lā ilāha illā huwa*, "he is the deity other than whom there is no deity" (cf. *Kashshāf*, 1064), in which the juxtaposition of *allāh*/*ilāh* is noteworthy.

Ilāh is certainly identical with אֱלוֹהַּ and represents an expanded form of an element *-l-* (*il*, *el*) common to the Semitic languages (see *Enc. Biblica*, iii, col. 3323 ff.; Brown-Driver-Briggs, *Hebr. Lex.*, 42 f.; Genesius-Buhl, *Hebr. und aram. Wörterbuch*, s.v.; Fleischer, *Kleinere Schriften*, i, 15 ff.; T. Fahd, *Le Panthéon de l'Arabie centrale*, Paris 1968, 41, and bibliography there given). The Arab philologists discussed at great length the etymology of the words *ilāh* and *allāh* (see al-Rāzī, *Mafātīḥ al-ghayb*, Cairo 1307, i, 83 f.; Sprenger, *Das Leben*, i, ch. 3, app. c). The Baṣrans established no direct connexion between *ilāh* and *allāh*, regarding the latter either as formed spontaneously (*murtadjal*) or as *lāh* (from the root *lyh*) preceded by the article. Some held that *allāh* was a loan from Syriac or Hebrew, but most regarded the proper name Allāh as a derivative (*mushtaḳḳ*, *manḳūl*), a contraction of *al-ilāh*, and endeavoured to attach *ilāh* to a triliteral root; to explain it (see also al-Bayḍāwī, ed. Fleischer, i, 4), some ten derivations were suggested, from the following "roots": (1) *ʾlh* "to adore", but as al-Zamakhsharī pointed out (*Kashshāf*, 8), the verb *alaha* is derived from the noun; *aliha*, "to be perplexed, confounded", for the mind is confounded in the experience of knowing Allāh (*waliha* has the same meaning); *aliha ilā*, "to turn to for protection, or to seek peace, or in longing" (*waliha* has a similar meaning); (2) *lyh*, whence *lāha* "to be lofty" and "to be hidden" (opinion of the Baṣrans); (3) *lwh*, whence *lāha*, "to create"; (4) *ʾwl* and *ʾyl*, roots conveying the idea of "priority"; (5) Abū 'l-Baḳāʾ al-Kaffawī, *Kulliyyāt al-ʿulūm*, Būlāḳ 1953, 69, regards the word Allāh as formed from

hā', the "noun of majority" and pronoun of the 3rd person, and the *lām* of possession.

On the other hand, lexicographers have pointed out that the termination *-īl* in some South Arabian proper names indicates the deity; on this question, see G. Ryckmans, *Les noms propres sud-sémitiques*, Louvain 1934-5, *passim*; for *'il* in the South Arabian inscriptions, see A. Jamme, *Le Panthéon sud-arabe préislamique d'après les sources épigraphiques*, in *Le Muséon*, lx (1947), 57-147.

Bibliography: In the article.

(D. B. Macdonald*)

ILĀHĀBĀD [see allāhābād].

ILĀHĪ, term used in Turkey of a genre of popular poetry of religious inspiration, consisting of poems sung—without instrumental accompaniment—in chorus or solo during certain ceremonies; the *ilāhī* is thus distinguished from all other types of popular religious poetry by its melody and its use in ritual. Many texts not originally intended as *ilāhīs* may have become so later through the addition of an appropriate melody and been introduced in ceremonies which require the chanting of *ilāhīs*.

Ilāhīs were sung mainly at sessions of *dhikr* in the convents (*tekke*) of the mystic orders; as much by their rhythm as by their words, they encouraged the participants to reach a state of exaltation. But in more or less secular milieus and circumstances, *ilāhīs* are used as poetic and musical elements in various popular ceremonies. They are sung on the following occasions: as interludes during the relation of the story of the birth of the Prophet Muḥammad, the *Mevlid* (*Mawlid* [*q.v.*]); on commemorative occasions; as a choral chant by pupils escorting a new pupil to his first lesson in a Ḳur'ānic school; by the procession accompanying the bridegroom, on the last evening of the wedding celebrations, from the mosque to the nuptial chamber; during the ceremonies which take place on the departure of pilgrims to Mecca (and on their return).

Versions which have descended into children's folklore are also used to accompany the begging which takes place at the time of certain feasts: in the region of Çankırı these childish parodies of *ilāhīs* are known as *menecim* (< *münādjat*); at Mudurnu (in the province of Bolu) these children's *ilāhīs* have lost all their serious meaning and have acquired humorous and farcical elements. Not only in these much debased forms, but also in the versions which still preserve their original function, *ilāhīs* have always been subject to a process of "folklorization", the cause of this being oral transmission and the extensive additions to the texts to which even the written versions are subject. Many *ilāhīs* which were initially the works of known poets have with time become anonymous; progressive deterioration has taken place and the texts of various different authors amalgamated with one another, with the result that new "folklore" versions have been created.

The earliest surviving *ilāhīs* are by Yūnus Emre [*q.v.*] (d. circa 720/1320). During the following centuries, the repertory of *ilāhīs* was enlarged by the works of many popular poets of religious and mystic inspiration; the most famous are: a poet (or more than one poet?) with the name of Yūnus (9th/15th or 10th/16th century) whose *ilāhīs* are often confused with those of the early Yūnus; Ḥādjdjī Bayram (d. 833/1429-30), Eshrefoghlu Rūmī (d. 874/1469-70), Ibrāhīm Gülshenī (d. 940/1533-4), Üftāde (d. 988/1580-1), Seyfullāh Niẓāmoghlu (d. 1010/1601-2), Muḥyī (d. 1020/1611), Hüdāyī (d. 1034/1624-5), Himmet (d. 1095/1683-4), Niyāzī-i Mıṣrī (d. 1105/1694). These poets were all dervishes or *shaykhs* belonging to mystic orders. The *ilāhīs* became part of the ritual of the orders of Sunnī tendency. In the ritual of the Mevlevīs as well as in that of the orders and sects of Shī'i-'Alawī tendency, the chants performing the same functions as the *ilāhīs* are more differentiated and are referred to by special terms.

Manuscript collections of *ilāhīs* have survived with an indication of only the mode and the rhythm of the melodies. Similarly, at the beginning of this century there existed lithographed copies of these collections, for the use of school-children. It is impossible to date the composition of the music of the earliest *ilāhīs*. It is known that, like popular poetry on secular subjects, the religious popular poetry was composed at the same time as the melody which was to accompany it; a certain number of melodies which have survived may be of the same age as their texts, and perhaps also by the same author. The names of some composers (of the melody only) of *ilāhīs* from the beginning of the 18th century are known; Čālākzāde (d. 1130/1718), Tosunzāde (d. 1127/1715), Hamāmīzāde Ismā'īl Dede (d. 1262/1846). The musical notation of the *ilāhīs* began to be used only in the first quarter of this century; a fair number of melodies have been transcribed by Seyyid 'Abdülḳādir and Ra'ūf Yektā (d. 1935).

A modern Turkish composer, Adnan Saygun, has written an oratorio inspired by *ilāhīs* (*Yūnus Emre, oratorio en trois parties*, op. 26; Fr. tr. of texts of the poems published in Paris, 1947); of 13 poems sung in this work, several of which are very popular *ilāhīs*, 5 are by Yūnus Emre (and thus of the 7th/13th century) and 8 are texts attributed to him.

(P. N. Boratav)

ILĀHĪ BAKHSH "MAʿRŪF", Urdu poet, born *c.* 1156/1743, was the youngest son of Mīrzā ʿĀrif Djān, the younger brother of Sharaf al-Dawla Ḳāsim Djān, a grandee of the empire during the vizierate of Dhu 'l-Faḳār al-Dawla Nadjaf Khān (a street in old Delhi, Galī Ḳāsim Djān, is still named after Sharaf al-Dawla; in it once resided many famous men, such as the Urdu-Persian poet Ghālib [*q.v.*], Shaykh Fakhr al-Dīn, the spiritual guide of the last Mughal emperor Bahādur Shāh "Zafar" [*q.v.*], and the physician Raʾīs al-Aṭibbāʾ Muḥammad Sharīf Khān, great-grandfather of Shifāʾ al-Mulk Ḥakīm Adjmal Khān, d. 1927). He claimed descent from Aḥmad Yasawī [*q.v.*]. His grandfather, Khwādja ʿAbd al-Raḥmān al-Yasawī, had migrated to Balkh from Bukhāra. Finding Balkh too small a place for their adventures, his sons came to India during the reign of the Mughal emperor Muḥammad Shāh [*q.v.*] to try their fortunes. They took service with Mīr Munnū, the governor of the Pandjāb, and on his death moved to the royal court at Delhi, where they soon made their mark. As a reward for their military services, rendered first to Shāh ʿĀlam II [*q.v.*] against the unruly Sikhs and later to the British Governor-General Lord Lake, the family received Fīrūzpur-Djhirka (near Delhi) as *djāgīr* [*q.v.*], a part of which later came to be known as the Lohārū State, headed by Ilāhī Bakhsh's elder brother Nawwāb Aḥmad Bakhsh Khān. A soldier by profession, but well-educated and cultured, Ilāhī Bakhsh Khān developed a taste for poetry early in life and had Shāh Naṣīr, the teacher in poetry of Dhawḳ [*q.v.*], and also Sayyid ʿAlī "Ghamgīn" (for whom see *Gulshan-i Bīkhār*, s.v.) as his guides. Though his senior by many years he was honest enough to show his compositions also to Dhawḳ, asking him to revise them. This statement, made by Muḥammad Ḥusayn Āzād [*q.v.*] in his *Āb-i ḥayāt* (*loc. cit.*) and supported by fairly good arguments, has been contested by the descendants of Ilāhī Bakhsh on the ground that in those days Dhawḳ was too young a poet to earn this honour (cf. *Dīwān-i Maʿrūf*, 221-40 and *Gul-i raʿnā*, 285). However, since Dhawḳ was born in 1204/1789 and Ilāhī Bakhsh died in 1242/1826, at the time of the latter's death Dhawḳ was 38 years of age, so that Maʿrūf might well have consulted him after 1224/1809, when Dhawḳ was 20 years of age and already a mature poet (cf. *ʿUmda-i Muntakhaba*, s.v. Dhawḳ). He visited Lucknow between 1205-9/1790-4, when Muṣḥafī [*q.v.*] was at the height of his fame there and stayed for two months. There is, however, no indication that he benefited directly or indirectly from any of the great figures of Urdu poetry who then adorned the court of Prince Sulaymān Shukūh, a son of Shāh ʿĀlam II and then resident in Lucknow. Although leading a life of affluence, Maʿrūf was disenchanted with the lures of this world and, being influenced by dervishes who frequented him, took to a life of renunciation and solitude in his old age. Ultimately he became a *khalīfa* of Khwādja Ḍiyāʾ al-Dīn Čishtī Fakhrī of Djaypūr [*q.v.*], which place he frequently visited. A handsome man in his youth, highly cultured and possessing an imposing personality, he was popularly known as "the prince with a rosy complexion". He took as examples to follow many master poets such as Djurʾat, Sawdā and Mīr Taḳī Mīr [*qq.v.*] but in the end adopted the style of Dard [*q.v.*]. His *dīwān* was published in 1935 (it contains a chronogrammatic poem by Dhawḳ, another proof of the latter's having close friendly relations with Ilāhī Bakhsh). His compositions are neither stylish nor marked by any originality or depth of thought. He is the author of a longer poem entitled *Tasbīḥ-i zumurrud*, of 111 verses, each containing the word "green", its derivatives, idiomatic or metaphoric uses. He died in 1242/1826 at a fairly advanced age (cf. *Gul-i raʿnā, loc. cit.*), although Ḳudrat Allāh Ḳāsim writing in 1221/1806 describes him as "a good-natured young man" (cf. *Madjmūʿa-i naghz*, ii, 202).

He had a son named ʿAlī Bakhsh "Randjūr", whose descendants were still living in Hyderabad State just before the partition of the subcontinent in 1947, and two daughters: (1) Bunyādī Bēgum, married to Ghulām Ḥusayn Khān "Masrūr", was the mother of Nawwāb Zayn al-ʿĀbidīn Khān "ʿĀrif", on whose untimely death Ghālib composed his well-known elegiac poem, and (2) Umrāʾō Bēgum (b. 1214/1799), was the wife of Mīrzā Ghālib, whom she jokingly described as "the old fool" whenever the poet refused to humour the children of her relatives with gifts or pocket money. She outlived her husband by two years and died childless in 1287/1870 (for her see *Aḥwāl-i Ghālib*, art. Umrāʾō Bēgum).

ILĀHIYYĀT [see maʿārif].

ĪLĀT. The term *īlāt* (pl. of *īl*), first used in Persian in Ilkhānid times, denotes nomadic or semi-nomadic tribes. *ʿAshāʾir, ḳabāʾil* and *tawāʾif*

are also used in this sense, and for tribes generally, whether strictly speaking nomadic or not. The combination *īlāt wa ʿas̲h̲āʾir* is a phrase frequently encountered in both medieval and modern times, and suggests that the two terms are broadly synonymous. In medieval times *īlāt* also occurs in conjunction with *ulūs*, i.e. tribal followers, and *oymaḳ*.

From early times the population of many parts of Persia has derived its living from pastoral agriculture, and was accustomed to take its flocks in summer to nearby pastures. Such groups, although they lived in summer in tents, were not properly speaking nomadic, though they were sometimes tribal. Both the keeping of flocks and a tribal structure of society were among the characteristics of nomadic groups, but neither was confined to them. What distinguished them from, and placed them over against, the settled population was the absence of settled villages and their seasonal migration whether for short or long distances. There were however also semi-nomadic groups, whose leaders lived part of the year in settled villages or towns, and who left a few of their number either in their summer or winter quarters, or both. In some parts of the country, by the adoption of pastoral nomadism a larger population was able to adapt itself to climatic conditions than would otherwise have been the case. But it is not clear how early such practices became important on the Persian plateau as distinct from Transoxania and Central Asia. From Sald̲j̲ūḳ times onwards, and more particularly after the Mongol invasion, the balance between the settled and the semi-settled elements of the population was a delicate one. Apart from a constant seepage of population from the nomad areas into the settled, drought and local over-population within Persia and beyond its frontiers in Central Asia led to major and minor movements into the settled areas by nomads. Whenever the nomad population and its flocks rose above the level which could be maintained by the available pasture, either because of natural increase or lack of rainfall, there would be a movement, violent or otherwise, into the settled areas.

We know little of the nomadic tribes of pre-Islamic Persia, but pastoral life was almost certainly important. The capitals of the Achaemenids, Parthians, Arsacids, and Sasanians were seasonal, and it is probable that when they moved they were accompanied by flocks and that round their capitals there were large tented encampments. They had presumably in their armies some nomadic tribal contingents, but it is unlikely that they depended to the same extent as the Sald̲j̲ūḳs and later Turkish dynasties on nomadic or semi-nomadic tribal support. From about A.D. 300 the Sasanians attempted to defend themselves from predatory incursions by the nomads from the Arabian steppe by an alliance with the semi-nomadic Lak̲h̲mid rulers of al-Ḥīra (see BADW, iii: Pre-Islamic Arabia).

Although we have more information on nomadic and semi-nomadic tribes in Persia in Islamic times, it is nevertheless often difficult to trace their history and movements in detail. Their numbers were constantly changing: some prospered while others dwindled or became settled. Many of the tribes have eponymous ancestors, but their inter-relationship is complicated by alliances and intermarriages among their leaders, sometimes in settlement of blood feuds. Strong tribes attracted to themselves others, which they absorbed or with which they formed a federation, the various tribes of which might later break up and become regrouped in new federations. There was also deliberate fragmentation and settlement of tribes by different rulers in outlying parts of the empire, while the grant of land to their leaders in return for military or other services led to their dispersal throughout the country.

Leaving aside ethnological, anthropological, and sociological criteria, it will be convenient to divide the nomadic and semi-nomadic tribes in Islamic times into three broad groups: Arab; Turkomān and Turkish; and those which are neither Arab nor Turkish and were already settled in Persia at the time of the conquest. Of these three the last two are the most important in terms of numbers and continuing influence. The last includes the Kurds [*q.v.*], Lurs [*q.v.*], Baluč [*q.v.*], D̲j̲il, who were, however, cultivators and shepherds rather than nomads (cf. Ibn Ḥawḳal, ii, 376), and others. The Kurds were the most numerous. They were tribal, partly living in villages and partly semi-nomadic. The Lurs appear to have been mainly settled until Timurid times. Neither were confined to Persia. The Kurds spread north-westwards into Syria, and in modern times are found in Persia, Turkey, ʿIrāḳ, and Syria. S̲h̲ihāb al-Dīn ʿUmarī mentions Lurs in Egypt and Syria in the 8th/14th century.

The early Islamic geographers in their descriptions of Persia give, on the whole, a picture of a settled and prosperous agricultural community, practising pastoral and arable farming, with well-developed handicrafts. They mention much pasture land. Ibn Ḥawḳal, for example, states that the most widespread occupation in the D̲j̲ibāl was the raising of sheep (*al-ag̲h̲nām*, ii, 372-3). Little mention, however, is to be found in their pages of specifically nomadic groups, apart from those in Central Asia, either because these were outside their experience, or because, as seems more probable, they were less important and numerous than was to be the case later. It seems, indeed, fairly clear that the decline in settlement which occurred in Persia was brought about, not by the Arabs or the Sald̲j̲ūḳs, but by the Mongols. The early geographers and historians refer to nomadic and semi-nomadic groups by the generic term *al-akrād*, by which they mean not necessarily people of Kurdish race but non-Arab and non-Turkish tent dwellers and herdsmen. Thus, Ṭabarī, under the years 23 and 29, calls the tribes of the Zagros *akrād*. Ibn Ḥawḳal states that the cities and villages of Ḳuhistān (in East Persia) were separated by deserts inhabited by Kurds and the owners of herds of camels and sheep (ii, 446); and Ḥasan b. Muḥammad al-Ḳummī speaks of the *akrād* of Ṭabaristān, "who are a group (*gurūh*) of Daylamites" (*Taʾrīk̲h̲-i Ḳumm*, (ed. Sayyid D̲j̲alāl al-Dīn Tehrānī, Tehran 1934, p. 261).

The main concentration of nomadic or semi-nomadic tribes in Persia in the early centuries seems to have been in the area between K̲h̲ūzistān and Iṣfahān and Fārs. Iṣṭak̲h̲rī (followed by Ibn Ḥawḳal and others) mentions five tribal districts in Fārs, which he calls *rumūm* (sing. *ramm*). Yāḳūt defines these as districts and quarters inhabited by Kurds (*maḥāll al-akrād wa manāziluhum*, see Barbier de Meynard, *Géographie de la Perse*, p. 263). The largest of these was the D̲j̲ilūya (Kūhgīlūya), also called the *ramm al-ramīd̲j̲ān*, which extended from K̲h̲ūzistān to Iṣfahān, and was bounded by Iṣṭak̲h̲r, S̲h̲āpur, Arrad̲j̲ān, and Bayḍā. All the towns and villages in it came under the tax administration of Iṣfahān. The other districts were the *ramm* of Aḥmad b. Layt̲h̲ (also called the *ramm* al-Lawālid̲j̲ān), which was situated in the *kūra* of Ardas̲h̲īr K̲h̲ura,

the *ramm* of Ḥusayn b. Ṣāliḥ (also called the *ramm al-dīwān*), which was in the *kūra* of Shāpūr, the *ramm* of Shahriyār (also called the *ramm al-Bāzindjān*), which was outside the tax administration of Fārs, and lastly the *ramm* of Aḥmad b. al-Ḥasan (also called the *ramm al-Kāriyān*), which was bordered by Sīf of the Banū al-Ṣaffār, the *ramm al-Bāzindjān*, Kirmān, and Ardashīr Khura. According to Iṣṭakhrī, the inhabitants of these districts wandered in search of pastures in winter and summer "in the fashion of the Arabs" except for a few who remained in the *sardsīr* (*ṣurūd*) and the *garmsīr* (*djurūm*). They numbered 500,000 tents, each of which could provide from one to ten men, counting herdsmen, hired men, and followers. Iṣṭakhrī adds a rider, hower, to the effect that an accurate assessment of their numbers could only be obtained from the *ṣadaḳa* registers. It was said that they comprised more than a hundred tribes, but Iṣṭakhrī himself knew of only thirty. They were numerous, brave, and strong in men, beasts, and horses. The government found it difficult if it wanted to reduce them or to assert itself against them. They owned sheep and mares but few camels. Their cattle were excellent but only those from Bāzindjān had good horses. Their method of herding was like that of the Arab and Turkish tribes. It was claimed that they were originally Arabs. Within each of these *rumūm* there were towns and villages. The *kharādj* was farmed by the leader of each *ramm*, who was responsible for the safety of caravans, guarded the roads and carried on the affairs of the temporal government (pp. 97-9, 113). Idrīsī, writing in the 6th/12th century, has a broadly similar, but rather briefer, account. He mentions only four *rumūm*, omitting that of al-Kāriyān. He adds that the Kurdish tribes which frequented the country, the Khuwa (?) and the Yazīd, numbered 500 families and that each tribe could put about 1,000 horse in the field. Quoting Ibn Durayd, he states that they were descended from the Banū Marrat, Banū ʿUmar, and Banū ʿĀmir (i, 406-7).

The leaders of the tribes, and perhaps the tribesmen also, apparently owned landed estates. Iṣṭakhrī states that the estates (*al-ḍiyāʿ*) held by the tribal people (*ahl al-rumūm*) paid tax by *muḳāsama*, according to charters (*ʿuhūd*) which they held from ʿAlī b. Abī Ṭālib, ʿUmar b. al-Khaṭṭāb, or others of the caliphs, paying one-tenth, one-third, one-quarter, and so on (p. 158). Ibn Ḥawḳal gives a slightly different account. He says that the tribal districts (*rumūm*) were assessed by contract (*muḳāṭaʿa*), estimation *ʿibra*), or by a share of the crop (*muḳāsama*). In the last case, the tax was levied in one of two ways: if the estate was in the hands of tribesmen (*ḳawm min ahl al-rumūm*) or others who had a charter from ʿAlī, ʿUmar, or a governor appointed by the caliph, they paid one-tenth to one-third. If the villages had been taken possession of by the treasury because of disorders committed by the owners, or for some other reason, the cultivators paid one-fifth according to agreements concluded with them (ii, 302-3).

Ibn Balkhī, the author of the *Fārs-nāma*, alleges that the nomads (*kurdān*) of Fārs, who had formed the flower of the Sasanian army, had all been killed during the Islamic invasion. The nomads who inhabited Fārs in his day were descended from a group whom the Būyid ʿAḍud al-Dawla (d. 372/982) had brought to Fārs from Iṣfahān. Ibn Balkhī knows these nomadic groups by the name of Shabānkāra. They presumably replaced or absorbed the earlier *rumūm*. In Ibn Balkhī's time (he dedicated the *Fārs-nāma* to Muḥammad b. Malikshāh, d. 511/1117) Fārs suffered much from disorders and raids at the hands of the tribes, until the Atabeg Čawlī, to whom Muḥammad b. Malikshāh assigned Fārs, brought order to the province after several engagements with the rebels. According to Ibn Balkhī's account, the Shabānkāra, who comprised five tribes or groups, had originally been herdsmen and wood-cutters in Fārs. On the disintegration of Būyid rule, their power had increased, until finally Faẓlūya, the leader of the Rāmānī, the most powerful of the five tribes, made himself master of much of Fārs, and received from the Būyids an allowance. Subsequently Kāwurd was sent by Alp Arslān to reduce Fārs to order. Faḍlūya was unable to resist and went back to Alp Arslān's court. He was sent back to Fārs with a contract to farm the revenue of the province. He rebelled again and was besieged by a Saldjūḳ army under Niẓām al-Mulk and captured. He escaped and renewed his rebellion, to be eventually hunted down and caught (*Fārs-nāma*, ed. G. Le Strange and R. A. Nicholson, G.M.S., 1962, pp. 164, 166; Aḥmad b. Zarkūb, *Shīrāz-nāmā*, ed. Bahman Karīmī, Tehran, 1931-2, pp. 38-9).

Of the five groups, Ibn Balkhī states that the Ismāʿīlī, who had settled in Dasht-i Urd after the Islamic conquest, were the noblest. Tāsh Farrāsh, Masʿūd b. Maḥmūd's general, expelled them from the region of Iṣfahān; they first wandered southwards, and then, under pressure from the Būyids, westwards, and settled near Dārābdjird. Internecine strife weakened them, enabling Faḍlūya to interfere in their affairs (*Fārs-nāma*, 164-5; *Shīrāz-nāma*, 37-8). The Karzūbī were also shepherds. At the end of the Būyid period they obtained possession of Kāzirūn and the neighbourhood until Čawlī dispossessed them. The Masʿūdī were an obscure group whom Faḍlūya raised up. Rukn al-Dīn Khumārtegīn, the Saldjūḳ governor of Fārs, gave them *iḳṭāʿ*s. They subsequently obtained possession of Fīrūzābād and most of Shāpūr Khura. Finally they were subdued by Čawlī (*Fārs-nāma*, 167). The fifth group, the Shakānī, were mountain dwellers, living in the mountains of the *garmsīr*. They were alleged to be an evil people, committing highway robbery. Čawlī reduced them also (*Fārs-nāma*, 167). In later times little is heard of the Shabānkāra. Either they became settled, or they failed to recover from the losses inflicted on them by Čawlī and ceased to have an independent existence. It may well be that they were absorbed by the Lurs, who increased in importance during the 6th/12th century.

The eponymous founder of the Lur-i Buzurg [*q.v.*], was Abū'l-Ḥasan Faḍlūya, a Kurd living in Djabal Sumāḳ in Syria. Some of his descendants migrated through Mayāfāriḳayn and Ādharbāydjān to north of Ushturān Kūh, where they arrived about 500/1006. Their chief, Abū Ṭāhir b. ʿAlī b. Muḥammad, distinguished himself in the service of the Salghurid Sunḳur (543-56) in an expedition against the Shabānkāra, and was given as a reward the Kūhgīlūya and sent to conquer Luristān. He later quarrelled with Sunḳur and made himself independent. At the beginning of the 7th/13th century more tribes from Syria joined his son, Hazārasp. These included two Arab tribes, the ʿUḳaylī (ʿAḳīlī) and Ḥāshimī, and twenty-eight others, among whom were the Bakhtiyārīs, Djawānikī, Gotwand, Līrāwī, and Mamāsānī (?Mamassanī, see Bidlīsī, *Sharaf-nāma*, Cairo n.d., pp. 44 ff., and LUR). In consequence of these movements, the Shūls were displaced and moved to Fārs (*Taʾrīkh-i Guzīda*, pp. 537-9, and see LUR-I BUZURG).

Mention is also made by the early geographers of tribal groups in Kirmān, which appear to have been semi-nomadic, namely the Ḳufṣ (Kūč) and Balūṣ (Balūẓ, Balūč). The *Ḥudūd al-ʿālam* describes the latter as a people established in the open country between Dj̲iruft and Bāft on the one hand and the Kūfidj̲ mountains on the other. They were herdsmen and professional highway robbers, intrepid and bloodthirsty. Their numbers were reduced by the Būyid Fanā Kh̲usraw by various strategems (p. 124). Muḳaddasī mentions that ʿAḍud al-Dawla also harried them (p. 471). Ibn Ḥawḳal states that they lived on the frontiers of Manūdj̲ān and Hurmuz and that they were a branch (*ṣinf*) of the Kurds (*i.e.* semi-nomadic or nomadic tent-dwellers) and that they themselves claimed to be of Arab origin and to number some 10,000 men. The temporal government gave them allowances to keep them quiet. In spite of this they committed highway robbery and were a perpetual menace to communication between Kirmān and the desert of Sīstān and the frontiers of Fārs. Their power was destroyed by the Būyid *malik* and they were dispersed (ii, 309-10). According to Iṣṭakh̲rī they were Sh̲īʿī (p. 167). The *Ḥudūd al-ʿālam* states that the inhabitants of the Kūfidj̲ mountains were divided into seven tribes, each under its own chief, and that the government tax-collectors did not go into these mountains, the chiefs paying an annual sum by *muḳāṭaʿa* (p. 124). Iṣṭakh̲rī and Ibn Ḥawḳal make similar statements, but add that the Ḳufṣ had flocks and black tents like bedouins, and were pacific and did not molest travellers (Iṣṭakh̲rī, 164; Ibn Ḥawḳal ii, 310); and that they were Sh̲īʿīs (167, ii, 312). Ibn Ḥawḳal also mentions camel owning nomads or herdsmen in the neighbourhood of Kh̲wāsh (ii, 313). In Saldj̲ūḳ times Kāwurd succeeded in establishing some measure of control over the Ḳufṣ and Balūč, confining the former to the mountain districts between Bam and Dj̲iruft (see Afḍal al-Dīn, *ʿIḳd al-ūlā*, ed. ʿAlī Muḥammad ʿĀmirī Nāʾīnī, Tehran 1932-3, p. 66). With the influx into Kirmān of more Gh̲uzz after the death of Sandj̲ar, the Balūč appear to some extent to have been displaced and pushed further to the east.

As for the Arab tribes in Kh̲ūzistān and along the Persian Gulf littoral, the majority came with the Islamic conquest, although the settlement of some of them pre-dates that event. By the time the Muslim Arabs reached Persia, they were already separated from their nomadic background. Many of them came from the garrison cities and were settled in the towns. Yaʿḳūbī mentions the mixed population of Ḳazwīn (p. 70), Nihāvand (p. 73), Dīnavar (p. 69) Ṣaymara (269-70), Ṭūs (p. 83), and Naysh̲āpūr (p. 85), and the Arabs of the Banū ʿAzd, Banū Tamīm and others in Marv (p. 87). He also states that the inhabitants of Bust claimed descent from Yamanī immigrés of the Himyarite tribe (p. 89). Similarly many Arabs also lived in Harāt (p. 88, *Ḥudūd al-ʿālam*, 104). Ibn Ḥawḳal states that the majority of the population of Ḳumm were Arab although they spoke Persian (ii, 370; see also *Taʾrīkh̲-i Ḳumm*, 240 ff.) Quoting Hamza's lost history of Iṣfahān, Muḥammad b. Muḥammad Ḳummī describes the settlement of Arabs in Iṣfahān and the neighbourhood in the time of Ḥadj̲dj̲ādj̲ (*Taʾrīkh̲-i Ḳumm*, 264). Yāḳūt mentions descendants of the Banū ʿAzd and the Banū Muhallab in Dj̲iruft (Barbier de Meynard, 185). There appears also to have been some settlement by the Banū Tamīm and Banū Tāziyān in Yazd (*Dj̲āmiʿ-i Mufīdī*, ed. Iradj̲ Afsh̲ār, Tehran 1342/1964-5 i, 36). Most of these various groups became assimilated to the local population. There were also some nomadic groups, which came mainly into South Persia, Kirmān, Sīstān, and more particularly Kh̲urāsān [see AL-ʿARAB (iii)]. The *Ḥudūd al-ʿālam* mentions some 20,000 Arabs in the steppe of Gūzgānān. They possessed numerous sheep and camels and were richer than all the Arabs scattered throughout Kh̲urāsān. Their *amīr* was nominated by the *malik* of Gūzgānān, to whom they paid *ṣadaḳa* (p. 108).

The third group of tribes, the Turkomān and Turkish, came mainly with the Saldj̲ūḳ, Mongol, and Timurid invasions, and included tribes which, having passed through Persia into Asia Minor and Syria, came back to the east with the Aḳ Ḳoyunlū, Ḳarā Ḳoyunlū, and Ṣafavid dynasties. This group is differentiated from the other two in that the movement of the Turkomān and Turkish tribes led to the establishment of empires based, originally at least, on tribal support. Other tribal groups, notably the Kurds in western and north-western Persia and the Arabs in ʿIrāḳ and the Dj̲azīra, also set up independent kingdoms, but they did not succeed, as did the Turkomāns and Turks, in extending their power over virtually the whole of the country.

Towards the end of the 4th/10th century the Og̲h̲uz/Gh̲uzz tribes began to move westwards from Central Asia. The first group went to Mangish̲lāḳ. The second, in the fourth decade of the 5th/11th century, went to Persia. The main body, which had been preceded by a number of independent bands of Gh̲uzz [*q.v.*], was under the leadership of the Saldj̲ūḳ family, who were to establish the first of these Turkomān or Turkish empires. The third group went in the 5th/11th century to the Balkans via the Black Sea, while a fourth and larger group, partly settled, remained in the region of the Sīr Daryā (Faruk Sümer, *Oğuzlar (Türkmenler)*, Ankara 1967). Legend represents the Og̲h̲uz as being divided into twenty-four tribes. Twenty-two, with their *tamgh̲ās*, were known to Maḥmūd Kāsh̲gh̲arī, but only the Kïnïk (to whom the Saldj̲ūḳs belonged), Iva, Döger, Yag̲h̲ma, Salg̲h̲ur, and Avsh̲ār (Afsh̲ār) appear before the Mongol period. Rash̲īd al-Dīn mentions twenty-four tribes, but his list is not identical with that of Maḥmūd Kāsh̲gh̲arī (C. Cahen, *Pre-Ottoman Turkey*, London 1968, 19 ff.).

The Saldj̲ūḳs, although they became the leaders of a nomadic tribal migration, were nevertheless familiar with urban life and Islamic civilization. From the beginning they had settled capitals and do not appear to have lived in tented encampments apart from the local population as did the Mongol Īlkhāns—at least not to the same extent. Most of the independent or semi-independent Gh̲uzz bands who came to Persia were undisciplined and their activities unco-ordinated. The difference between their leaders and the Saldj̲ūḳs was that the latter, on the whole, exercised control over their followers. Tug̲h̲ril Beg [*q.v.*] and Alp Arslān [*q.v.*] showed themselves to be competent commanders and rulers. Adopting the pattern of government existing in the lands of the Eastern Caliphate, they brought to it new interpretations from their tribal background (see further A. K. S. Lambton, 'The internal structure of the Saljuq empire' in *The Cambridge History of Iran*, v, Cambridge 1968, 203-82). On the whole, the Saldj̲ūḳ invasion brought remarkably little dislocation, and not more than that caused by the movement of government troops in the late Gh̲aznavid period. The numbers involved were not large—perhaps no more than tens of thousands. The coming

of the Saldjūḳs with their flocks may, in fact, have been beneficial to the country, so far as these provided meat and milk products to provision the towns, wool and skins for industry, and fertilized the stubble fields they grazed. Their herds of camels may also have been useful in providing additional transport for merchandise.

There is little evidence to show that the Ghuzz tribes came into conflict with other tribal and nomadic groups, except the Kurds and the bedouins in Western Ādharbāydjān and Upper Mesopotamia. There, the early bands of Ghuzz invaders were opposed. Settlement probably took place at first only on the lower slopes of the Kurdish mountains. At a later period there were conflicts between the Saldjūḳs on the one hand and the Shabānkāra and the Ḳufṣ on the other, as stated above, but these arose from the attempt of the Saldjūḳs, who by this time had become the rulers of an empire, to assert the authority of the central government. They were not conflicts between rival nomadic groups over the possession of pastures. In general, the Ghuzz tribes do not appear to have established themselves—at least to any large extent—in areas such as Fārs, Luristān, the Ḳufṣ mountains, Ṭabaristān, or Kurdistān where there was already a tribal and semi-nomadic population. This raises the problem, which cannot be answered in our present state of knowledge, of whether their intrusion elsewhere brought about a contraction of the area under arable farming or whether they mainly utilized land which was not being fully exploited by the existing population for either arable or pastoral farming.

Once the Saldjūḳs had become the masters of an empire, they were forced to find a more stable basis of power than that provided by the Ghuzz tribes. Increasingly they depended for their military forces and for provincial governors on Turkish slaves and freedmen who had become separated from their nomadic tribal background. Considerable bodies of Ghuzz (or "Turkomāns" as the Muslim Ghuzz who had entered the *dār al-islām* are usually called in the Arabic and Persian sources) were, however, still to be found in the country, although the general tendency was for them to move in a westerly direction towards Syria and Asia Minor. Apart from these, the main concentrations of Turkomāns were in Upper Mesopotamia, Gurgān, Marv, and Ādharbāydjān, with some minor settlements in Khūzistān, Fārs, and elsewhere. The fact that many of their leaders were officers of the sultan enabled them, when the central government weakened, to transform themselves rapidly into local rulers. One of the most notable cases is that of the Artuḳids [*q.v.*].

Under Sandjar, the Turkomāns in Gurgān, Dihistān, and Marv were administered by a *shiḥna* [*q.v.*] appointed by the sultan, who allotted to their leaders pasture and water according to the number of their tents, and through whom they referred to the government. They paid pasture dues and a due for the office of *shiḥna* (*ʿAtabat al-kataba*, ed. Muḥammad Ḳazwīnī and ʿAbbās Iḳbāl, Tehran 1950, 8-12, 84-5). The grant of special allowances (*nānpāra*) to the Turkomāns is frequently mentioned. Niẓām al-Mulk seems to have assumed that they would receive such, and recommended that numbers of them should be kept at court, some for military service and some as hostages for the good behaviour of their fellows. By the end of the reign of Sandjar the grant of allowances to the Turkomāns in Khurāsān was probably primarily to assure their good behaviour rather than to reward them for military or other services—though it is clear that the Saldjūḳs, like other dynasties, employed the nomadic tribes, Turkomans and others, in their armies as auxiliaries.

By the middle of the 6th/12th century the Khitāy conquest of Transoxania was causing unrest among the Ghuzz who had remained in Central Asia, and it became increasingly difficult for the Saldjūḳ government to control those who were living on its borders. Their relations with Sandjar illustrate both the difficulty experienced by a settled government in subjecting the nomads to control, and also the lack of understanding which characterized the relations between the settled population and the nomadic or semi-nomadic tribes. Disputes over the annual tribute in sheep due from the Ghuzz to the sultan's treasury and malpractices over its collection eventually led to a collision between Sandjar's forces and the Ghuzz. An engagement took place in 548/1153. Sandjar was captured and Khurāsān pillaged (see further A. K. S. Lambton, *Landlord and peasant in Persia*, 58-9). In due course Sandjar escaped captivity but was unable to restore control. After his death in 552/1156 more Ghuzz came into Khurāsān. Some, under Malik Dīnār, took possession of Kirmān. These Ghuzz did not succeed in establishing an empire, as had the Saldjūḳs, and in contra-distinction to them brought about much devastation and dislocation (see further Muḥammad Ibrāhīm, *Taʾrīkh-i Saldjūḳiyān-i Kirmān*, ed. M. T. Houtsma, Leiden 1886, 106 ff.). There was also a resurgence of nomadism in Fārs on the break-up of the Saldjūḳ empire when the Salghurids, basing their power on semi-nomadic tribes living in the region of Gundamān, began to extend their rule (Aḥmad b. Zarkūb, *Shīrāz-nāma*, 48-9). The later Salghurids, however, conformed to the usual pattern of "settled" rulers..

The Mongol invasion was accompanied by a new influx of Turkish tribes on a large scale. Carried out by tribes organized for war, it was of a different order from the Saldjūḳ invasion. Political rule remained in the hands of the tribal leaders, who formed a kind of military aristocracy. They were hostile to settled life and exploited the peasants and the townspeople. The invasion was accompanied by widespread destruction and massacres. Much land fell out of cultivation because of the flight or death of its occupiers and because of the dislocation caused by the tribal following of the Mongols and their need for pastures for their flocks and herds (cf. Rashīd al-Dīn, *Taʾrīkh-i mubārak-i Ghāzānī*, ed. Jahn, GMS, n.s. xiv, London 1940, 349 ff.). The tribal leaders were allocated, or took possession of, pastures. Many of them also received land grants, which they sometimes converted into private property, and were given control over the population living on the land. Various new taxes were introduced including *ḳubčur* [*q.v.*], which was probably originally a pasture tax paid by nomads (though it was later to designate a tax on the settled population also). During the reign of Ghāzān Khān (694/1295-703/1304) there was a modification in the policy of the Īlkhāns designed to bring about a revival of agriculture and a reduction in the power of the nomad military aristocracy. This was only partially successful (see further I.P. Petrushevsky, "The socio-economic condition of Iran under the Īl-Khāns" in *The Cambridge History of Iran*, v, 483-537, and A. K. S. Lambton, *Landlord and peasant in Persia*, 77-104).

The centre of the Īlkhān kingdom was Ādharbāydjān, and it was there and in Arrān, and to a lesser extent in Asia Minor, that the tribes which

had come with the Īlkhāns were mainly concentrated. Many of them had close affinities with some of the Turkish tribes already in Persia. Among the tribes which came with or joined Hulāgū were the Afshār (some groups of whom had apparently migrated with the Saldjūḳs, see AFSHĀR). They settled mainly in Ādharbāydjān, and gradually increased in numbers and power.

Ḥamd Allāh Mustawfī mentions districts to the south of Sulṭāniyya containing some hundred villages with good pastures, which were settled by Mongols (*Nuzhat al-ḳulūb*, ed. G. Le Strange, G.M.S., 1919, 64-5), and Mongol winter quarters in the Mughān steppe (p. 83). Sawdj Bulāgh, near Ray, was according to him mostly inhabited by nomads (*ṣaḥrā-nishīn*, p. 63). Among these were probably the Ḳarā Evlī. They were not numerous and eventually joined the Afshār, though some of them were absorbed into other Turkomān tribes (Ḳā'im Maḳām, *Munsha'āt*, ed. Djahāngīr Ḳā'im Maḳāmī, Tehran 1959-60, 363). There were also according to Ḥamd Allāh many nomadic Kurdish tribes (*khayl-i akrād-i ṣaḥrā-nishīn*) in the Nihāvand-Malāyir district, though by *akrād* he may simply have meant tribes which were neither Turkish nor Arab. They paid an annual tribute of 7,000 sheep (*gūsfand*, p. 74). There appears also to have been an extension of nomadism in Luristān at this time. Mu'īn al-Dīn Naṭanzī states that the Atabeg Shams al-Dīn Alp Arghūn, who was made governor of Luristān by Hulāgū, found the province in a state of ruin and its peasants dispersed. He remitted taxation for a year, and by good administration restored agricultural prosperity. "One reason for the prosperity of the province was that the Atabeg adopted, after the fashion of the Mongols, the practice of moving from summer to winter quarters. He spent the winter in Īdadj and Shūsh and the summer in the Zardak mountain, in which the Zindarūd rises, so that the cattle of the soldiers had no need of barley and the peasants (*ra'iyyat*) were not subjected to tyranny by all kinds of people" (*Muntakhab al-tawārīkh-i Mu'īnī*, ed. J. Aubin, Tehran 1957, 43-4). Among other Ghuzz tribes which apparently came to Persia with the Mongols, passed through the country and came back later with the Ṣafavids, were the Begdillū. They had originally been with the Naimāns and then come to Persia with Djurmaghūn. Some of them went on to Syria, where they became known as the Shāmlū. They returned to Persia with the Ṣafavids, and were powerful under them and the Afshārids. In Ḳādjār times their centres were in Mazdaḳān near Tehran, and Marāgha (Ḳā'im Maḳām, *op. cit.*, 368). Some small groups of Begdillū were to be found near Tehran in the 19th century. According to tradition the Ḳādjārs also entered Persia with the Mongols, passed on to Syria and came back to Persia with Tīmūr.

By the end of the Mongol period, federations of tribes under new names were beginning to appear, notably that of the Āḳ Ḳoyunlū [*q.v.*] (see C. Cahen, *op. cit.*, 314 ff.; see also J. Aubin, *Un soyurghal Qara-Qoyunlu concernant le Bulūk de Bawānāt-Harāt-Marwast*, in *Documents from Islamic chanceries*, ed. S. M. Stern, Oxford 1965, for the distribution of Turkomān and Arab tribes in that region at the end of the 8th/14th century). From about 747/1346 there was a resurgence of nomadism in Khurāsān also (cf. Mu'īn al-Dīn Naṭanzī, *op. cit.*, 197 ff.).

Meanwhile in Eastern Turkistan on the break-up of the Mongol empire the nomads under the Čagatāy Khān of Mughūlistān began to press into Western Turkistān. This provoked a counterattack and eventually Tīmūr, having united the nomads of Western Turkistān, emerged as the defender of the Islamic borderlands against the nomads of Central Asia, thus giving to the settled population a measure of security in which to pursue their commercial activities and to continue their religious life (see further Mu'īn al-Dīn Naṭanzī, *op cit.* and H. Hookham, *Tamerlane the conqueror*, London 1962). After crushing the nomads of the Čagatāy appanage and the Ḳīpčaḳ hordes, Tīmūr then carried out a series of expeditions into Persia and the neighbouring countries, as a consequence of which new tribal movements took place. Tīmūr's military organization was similar to that of the Mongols. The basis of his power was a military tribal aristocracy, who with their followers and flocks migrated from pasture to pasture. Clavijo describing Tīmūr's horde writes, "When Timur calls his people to war all assemble and march with him, surrounded by their flocks and herds, thus carrying along their possessions with them, in company with their wives and children. These last follow the host, and in the lands which they invade their flocks, namely and particularly the sheep, camels and horses, serve to ration the horde" (*Clavijo's embassy to Tamerlane* 1403-1406, tr. from the Spanish by G. Le Strange, London 1928, 191). He also mentions the numbering of the flocks of the nomads for taxation purposes (p. 187). Certain of the Čagatāys, however, were exempted in return for military service (pp. 195-7). There appear to have been also nomadic Kurds (?) in Khurāsān near Nayshāpūr. Clavijo, describing them, states "they own no other habitations but their tents, for they never take up their abode in any city or village, but live in the open country-side, both summer and winter, pasturing their flocks. These consist of droves of rams, ewes and cows, and the people of this particular tribe possess some twenty thousand camels. They wander over the length and breadth of all this province living under the jurisdiction of Timur, and they give him yearly as his due in tribute three thousand camels, also some fifteen thousand sheep" (p. 181).

The death of Tīmūr was followed by a period of internecine strife. In the west the Turkomāns of the Ḳarā Ḳoyunlū, whose leader, Bayrām Khwādja of the Bahārlū tribe (d. 782/1380), had originally entered the service of Sultan Uways, the Djalā'ir, invaded Ādharbāydjān in 812/1408 from Armenia, where they had been driven by Tīmūr. By 814/1410 they had taken Baghdād from the Djalā'irs. They were subsequently superseded by the Āḳ Ḳoyunlū, whose main centre was at Diyār Bakr and whose leaders belonged to the Bayīndīr clan [*q.v.*]. In the east also there were further tribal movements. In 870/1465-6, 15,000 tents of nomads from 'Irāḳ set out for Khurāsān "because they had been reduced to straits by the tyranny and oppression of the Turkomans", and were given *yurt*s in that province by the Timurid, Abū Sa'īd ('Abd al-Razzāḳ, *Maṭla' al-sa'dayn*, ed. Muḥammad Shafī', Lahore 1949, ii, 1296). About the same time, the Hazāras (who according to tradition came to Persia with the Mongols) appear to have been increasing in the neighbourhood of Harāt, and difficulties between them and the government over their refusal to pay taxes are mentioned (*ibid.*, 1296 ff.).

The period of the Turkomān dynasties of the Ḳarā Ḳoyunlū and the Āḳ Ḳoyunlū, who emerged successively as the most powerful group in Western and North-western Persia and finally in Central

and Southern Persia also, represents a reassertion of the rule of the Turkomān nomads and was accompanied by a movement of the Turkomāns eastwards into Persia. Unlike the Saldjuḳs, whom they resembled rather than the Mongols and Timurids, they never succeeded in imposing their rule over the whole of Persia and succeeded only to a limited extent in uniting the various Turkomān tribes, who by this time had been familiar with Islam for generations, and some of whom had been won over to the more extreme forms of Shīʿism. Their leaders, the most celebrated of whom was Uzun Ḥasan (d. 882/1477-8), were in many cases men of ability; their administration was well organized and their courts, in spite of their nomadic background and habits, were centres of Persian culture and Turkomān poetry. (See further V. Minorsky, *Persia in A.D. 1478-1490*, London 1957, and also *Travels to Tana and Persia by Barbaro and Contarini*, Hakluyt ed., 1873). The death of Uzun Ḥasan was followed by a renewal of tribal forays with the main Āḳ Ḳoyunlū centres in Ādharbāydjān and Shīrāz, until finally the Ṣafavids, having united the Turkomān tribes and given to them a cohesion which the Ḳarā Ḳoyunlū and Āḳ Ḳoyunlū had failed to do, established themselves as the rulers of Persia.

The great majority of Ismāʿīl's supporters belonged to tribes from Asia Minor, Syria, and Armenia, together with tribes detached from the Ḳarā Ḳoyunlū and the Āḳ Ḳoyunlū. The core of his force, the Ḳizilbāsh, was formed by the Ustādjlū, Shāmlū, Tekkelū, Rūmlū, Bahārlū, Dhu'l-Ḳadr, Turkmān, Khinislū, Ḳādjār, and Afshār tribes (see further V. Minorsky, *Tadhkirat al-mulūk*, G.M.S., 1943, 189 ff.). From the two last-named came dynasties which were to rule Persia at a later date. Ismāʿīl was the head of the Ṣafavid order founded by his forefather Ṣafī al-Dīn, who was born near Ardabīl in 650/1252. Under Djunayd, who became its leader in 851/1447, the order became militant (see further W. Hinz, *Irans Aufstieg zum Nationalstaat*, Berlin 1936). Ismāʿīl was regarded by his extreme followers among the Turkomān tribesmen as the hereditary and living emanation of the godhead. In the early days of his rise to power the connexion between his tribal followers and the order was close. Each group had a *khalīfa*, with whom Ismāʿīl, as the *murshid-i kāmil*, kept in touch through the *khalīfat al-khulafā'* (see *Tadhkirat al-mulūk*, 125-6).

In the disorders at the end of the Āḳ Ḳoyunlū period a number of Turkomān leaders and others set up independent governments. Ḥasan Rūmlū gives a list of these under the year 907/1501-2 when Ismāʿīl entered Tabrīz (*Aḥsan al-tawārīkh*, ed. C. N. Seddon, Baroda 1931-4, i, 62). Gradually Ismāʿīl overthrew or reduced the majority of them. Others were defeated by Muḥammad Shaybānī Khān, the Özbek ruler, with whom Ismāʿīl eventually came into conflict. The control of the tribes on the eastern frontiers of Khurāsān was for the Ṣafavids, as it had been for earlier dynasties and was to be for the Ḳādjārs, a major problem.

Already before the death of Ismāʿīl (939/1534) friction between the Turkomān tribes, upon whose support he had depended for his rise to power, and the Persian elements in the state had arisen. Under Ṭahmāsp other tribal groups, the Čagatāys, Kurds, Lurs, Faylis and others were added to his military forces. The first-named were found mainly in Khurāsān. Among them were the Ḳarā Bayāt, whose leader, Muḥammad Sulṭān, governor of Nayshāpūr, joined Ṭahmāsp's service. Because of the sacrifices of the tribe in the wars against the Özbeks they were exempted from the payment of divan dues (*ʿAlam Ārā*, p. 585-6). The Bayāt were ranked by some writers not as an independent tribe but among the Afshār (see below). In the early Ṣafavid period, before the reorganization carried out by Shāh ʿAbbās, the tribal leaders lived with their tribal followers in their *ulkās*, which they held by direct grant or conquest. Many of them were also appointed to governorships. There was no clear dividing line between tribal leader, military commander and provincial governor. In the early period the chief military office, that of *amīr al-umarā'*, was regarded by the Ḳizilbāsh as their prerogative. Under Ṭahmāsp the provincial governments were still mainly in the hands of the tribal leaders. They were moved from province to province, no tribe having a special claim to the government of a specific area; but under Shāh ʿAbbās there were several cases of hereditary succession, and by 1034/1624 it had become common (see further Ḳāḍī Aḥmad Ḳummī, *Khulāṣat al-tawārīkh*, ed. H. Muller, Wiesbaden 1964). Ṭahmāsp was unable to control the tribal leaders and the jealousies between Turk and non-Turk and inter-tribal feuds, especially between the Ustādjlū and the Rūmlū, threatened the existence of the state. The problem was broadly the same as that which had faced the Saldjūḳs: how to integrate the tribes, upon whose support the ruling dynasty had come to power, into the life of the empire. The circumstances of the time, however, were different: in particular, there was no longer the possibility of settlement to the west, on or beyond the frontiers of the empire.

Ṭahmāsp's death was followed by struggles between the tribal leaders. Shāh ʿAbbās (995-1037/1587-1629) eventually reimposed control over the Ḳizilbāsh, and reduced the importance of the tribal forces by instituting a special cavalry corps recruited from the descendants of Georgian and Armenian captives, converts to Islam, paid direct from the treasury. As a result the tribal and military leaders and also the tribes and the standing army to some extent became differentiated, although the tribes were still required to furnish contingents when called upon so to do. For example, in 1013/1604 Shāh ʿAbbās ordered the *rishsafīdān* of the tribes in Ādharbāydjān and ʿIrāḳ to prepare lists of their numbers so that quotas could be provided by each according to its ability (*ʿĀlam Ārā-yi ʿAbbāsī*, p. 466, quoted by Minorsky, *op. cit.*, pp. 34-5). The *Tadhkirat al-mulūk* gives lists of the enrolments of the *amīrs* resident on the frontiers and the contingents fixed for each province, many of which were provided by the tribes (pp. 100 ff.). With the increase in the size of the 'standing army' and its payment from *khāṣṣa* (crown) lands, there was less land available for the tribal leaders, which fact further reduced their power and influence (See *Tadhkirat al-mulūk* for an analysis of the tribal affiliation of the leading *amīrs* in the Ṣafavid empire, pp. 14 ff.). Moreover, the fact that the Turkish frontier region was repeatedly fought over and deliberately reduced to a state of desolation adversely affected the tribes formerly occupying it. Shāh ʿAbbās further weakened the power of the tribal leaders by allotting provincial governments to *amīrs* from the court, whether slave or free, rather than to the tribal leaders. A number of tribes were moved by Shāh ʿAbbās, some in order to contribute to the defence of the empire. Thus, the Ḳādjār tribe was divided into three branches: the first stationed at Gandja to check the incursions of the Lesgis, the second at Marv to contribute to the

defence of Khurāsān against the Özbeks, and the third at Astarābād on the borders of the Turkomān country to the east of the Caspian Sea. At an earlier period the tribe had been divided into two sections, the Yuḳḳārī-bāsh and the Ashāḳī-bāsh. Families of both went to Astarābād. Shāh ʿAbbās also moved some tribes from frontier districts because of doubts as to their loyalty. For example, the Kazuklar tribe was moved from Ḳaradja Dāgh to Dārābdjird in Fārs about 1024/1615 (*ʿĀlam Ārā*, p. 623). Somewhat earlier (about 1000/1591-2) a group of Afshār came to Kāzirūn, and their leader Khwādja Pīr Budāḳ was given the governorship of the district by Shah ʿAbbās. The family continued to hold this government for some 250 years (Fasāʾī, *Fārs-nāma-i Nāṣirī*, Tehran, lith., 1894-6, ii, 250-2). Shāh ʿAbbās also constituted a number of his supporters into a new tribe known as the Shahsivān, which was later to become important in Ādharbāydjān.

According to the *Dastūr al-mulūk* (written for Shāh Sulṭān Ḥusayn), the five main provincial governments were Georgia, ʿArabistān, Luristān, Kurdistān and the Bakhtiyārī. The last four all had a large non-Turkish tribal and semi-nomadic population. Whereas the influence of the Turkomān tribes had to some extent been reduced by Shāh ʿAbbās, the importance of the non-Turkish tribes began to increase. Some of the lesser governments also, such as Ḳarābāgh, and the Kūhgīlūya, were predominantly tribal areas, and others, such as Hamadān, had a considerable tribal population. The *wālī* of ʿArabistān was the most important of the five governors because of the numbers of the tribes (*īl wa ʿashāʾir*) under his jurisdiction. Luristān was the next in importance. (Muḥammad Taḳī Dānizhpashūh, *Dastur al-mulūk*, in *Review of the Faculty of Letters, University of Tehran*, July 1968, pp. 473-508, and November 1968, pp. 62-93). Chardin writing of this province states: "The people that inhabit it never mind the building of cities, nor have any settled abodes, but live in tents, for the most part feeding their flocks and their herds, of which they have an infinite number. They are governed by a kaan who is set over them by the king of Persia but chosen from among themselves; and for the most part all of the same race, the father succeeding the son . . . they pay both tribute and tenths. This province furnishes Isfahan and the neighbouring parts with cattel; which is the reason that the governor of this province is greatly respected in those parts" ('The coronation of Solyman III', p. 147, app. to *The travels of Sir John Chardin*, London 1691). The terms on which each of these four governors held their appointments and the number of troops (presumably mainly tribal levies) which they were expected to provide for the royal army varied. Most of them were required to send sons or brothers, or both, to the court as hostages. The *Ḳurčībāshī*, one of the four chief officers of the state, was the chief (*rīsh safīd*) of all the tribes (*īlāt wa oymāḳāt*) of the kingdom. What precisely his functions were with regard to the tribes is not clear. Perhaps the register of the tribes and matters to do with the provision of tribal levies were under him. Kārzīn in Fārs was his *tuyūl*. That this was a tribal area probably had no special significance. Tabrīz, Mughān, and certain other places in Ādharbāydjān, still one of the main areas of settlement by Turkish tribes, were entrusted to the *sipahsālār*, the most important military officer after the *ḳurčībāshī* (see *Dastūr al-mulūk, loc. cit.*). The *Tadhkirat al-mulūk* also gives lists of the enrolments of the *amīr*s resident on the frontiers and the contingents fixed for each province, some of which were provided by tribes (pp. 100 ff.).

After the death of Shāh ʿAbbās the control of the central government weakened and was only temporarily arrested under Shāh ʿAbbās II. With this the tribes, notably the Ghalzāy and Abdālī Afghāns in the east, began to reassert themselves. The Balūč also raided up to Bam and Kirmān; while the Kurds revolted, captured Hamadān and raided up to Iṣfahān in 1719 (see L. Lockhart, *The fall of the Safavi Dynasty*, Cambridge 1958, 110 ff.). There was also constant raiding by Lurs and Bakhtiyārīs in the Iṣfahān district in the middle of the century (*A chronicle of the Carmelites in Persia*, London 1939, i, 660).

In a manuscript which professes to be taken from the state papers of Shāh Sulṭān Ḥusayn details are given of the location and numbers of the tribes. Although these figures appear to be grossly exaggerated, they probably indicate the general distribution of the tribes at the beginning of the 18th century. It may also be that the tribal population at that time was again on the increase. The writer divides the tribes into those of Persian and non-Persian origin. The former consisted of (i) the Lurs, comprising four great tribes, the Faylī (centred on Khurramābād, with winter quarters near Hawīza), Laks and Zands (who for a brief period under Karīm Khān Zand provided the ruling dynasty, centred on Kazzāz), Bakhtiyārīs, and Mamassanīs. The Bakhtiyārīs ranged from the Kūhgīlūya to Iṣfahān and from Shūstar to Bihbahān. They paid revenue to the *beglarbegī* of Iṣfahān. The sum due, though more than that paid by the Laks and Zands, was small. Two or three of their chiefs were always in attendance on the king and they sometimes furnished 10,000 horse and foot without pay. The Mamassanīs were much less numerous than the Bakhtiyārīs or the Faylīs. Their revenue was included in that of Fārs and was paid to the *beglarbegī* of that province. The Lurs were all Shīʿīs. (ii) There were the Garrūs, Kalkhur and Mukrī inhabiting the country between Hamadān and the borders of Marāgha. About one fourth of them were Shīʿī. (iii) There were the Kurdish nomadic tribes in Khurāsān, of which the four main tribes were the Zaʿfarānlū, centred in Akhlamad, the Saʿdānlū centred on Khābūshān, the Kavānlū in Rādkān, and the Davānlū near Djādjarm. They paid no revenue to the government. There were (iv) the Djalāʾir also in Khurāsān, ranging up to Marv-i Shāh Djahān, (v) the Ḳarāʾī, centred on Turbat-i Djām, and (vi) the Djalāʾī.

The non-Persian nomadic tribes consisted of Arabs and Turks. The latter, according to the author of the manuscript, included the Afshār, the Ḳādjār, the Shaḳāḳī (who were in fact Kurds) ranging from Ādharbāydjān to Gīlān, the Zangana (also Kurds) in the neighbourhood of Kirmānshāh, the Ḳaraguzlū in the neighbourhood of Hamadān, Burūdjird and Nihāvand, and the Shāhsivan, some of whom were in Fārs and others in Ādharbāydjān and Gīlān. The Afshār appear by this time to have attracted some new tribes to themselves and lost others. They included the Shāmlū, Ḳirklū, and Shirvānlū. They held Ṭus in Khurāsān and Urūmiyya in Ādharbāydjān. The Bayāt and Dunbulī who held Nayshāpūr, Khwuy, and Salmās, on the other hand, were no longer counted with the Afshārs.

The Arab tribes consisted of the Čaʿb (Kaʿb), the Mullāʾī of Hawīza, who with various other Arab tribes ranged from that district up to Baghdād. In

Fārs there was the Īl-i ʿArab, then numerous, ranging between Shīrāz, Iṣfahān, and Yazd. The Mishmast in Khurāsān held villages in Turshīz and Ḳāʾin. There were also Arabs in some other centres, including the Banū Shaybān in Ṭabas (see Ms. Dr. Caro Owen Minasian Collection, Isfahan, OR Ms. Provisional No. 1134 (s & b)). A copy of this ms. appears to have been seen by Sir John Malcolm (see *History of Persia*, London 1829, ii, 372). In the 19th century there were groups of Mishmast Arabs following a nomadic existence between Kāshān, Lār, and Lavāsān (Mirzā ʿAbd al-Raḥmān b. Muḥammad Ibrāhīm al-Kāsānī, *Mirʾāt al-Kāsān*, British Museum, MS Or. 3603, f. 61b).

The Ṣafavids were succeeded by three dynasties whose founders were tribal leaders, Nādir Shāh, who belonged to the Ḳirḳlū tribe of the Afshār, Karīm Khān Zand and Āḳā Muḥammad Khān Ḳādjār. Nādir Shāh, who favoured the Sunnī tribes, namely the Afghāns and Turkomāns, resettled a number of tribal groups to lessen the likelihood of rebellion. In 1142-3/1730 50-60,000 families of tribespeople were transferred from Ādharbāydjān, Persian ʿIrāḳ, and Fārs to Khurāsān. Two years later 60,000 Abdālīs were moved from Harāt to Mashhad, Nayshāpur and Dāmghān, and 3,000 families of the Haft Lang of the Bakhtiyārī were sent to Khurāsān. A second group of Bakhtiyārī, consisting of Haft Lang and Čahār Lang, amounting to 10,000 families were sent to Djām in Khurāsān after a Bakhtiyārī rebellion was crushed in 1149/1736 (L. Lockhart, *Nādir Shāh*, London 1938, 51-2, 54, 65, 110; see also M. Otter, *Voyage en Turquie et en Perse*, 1748, ii, 187). The widespread dispersion of the Afshār tribe in Persia in the 19th century presumably dates in part from the reign of Nādir Shāh (cf. Macdonald Kinneir, *A geographical memoir of Persia*, London 1813, 46).

The murder of Nādir Shāh was followed by disorders. Muḥammad Ḥusayn Khān Ḳādjār, having established himself in Astarābād, where a branch of the Ḳādjār tribe, as stated above, was settled by Shāh ʿAbbās, extended his power over Māzandarān. A Bakhtiyārī chief, ʿAlī Mardān Khān, took possession of Iṣfahān and was joined by Karīm Khān Zand. The two subsequently fell out. ʿAlī Mardān Khān was murdered, and Karīm Khān, after an initial defeat by Āzād Khān, the Afghān ruler of Ādharbāydjān, regrouped his forces, defeated Āzād Khān near Khisht and took Shīrāz. A struggle then ensued between Muḥammad Ḥusayn Khān Ḳādjār and Karīm Khān, in which the latter proved victorious. Karīm Khān's court, like that of many other tribal rulers, was the resort of men of learning and culture (cf. Malcolm, *op. cit.*, ii, 86). His rule was on the whole peaceful. In Ādharbāydjān there appears to have been an attempt to settle the tribes. A *farmān* dated 1177/1764 instructs the *beglarbegī* of Tabrīz to treat the Shaḳāḳī and other tribes in the province well, to settle them in their original dwelling places, and cause them to engage in agriculture and government service (see *Landlord and peasant*, 133).

The death of Karīm Khān was followed by anarchy and internecine strife among the Zands, in which they appear to have been decimated. Finally Āḳā Muḥammad Khān Ḳādjār, who had escaped from Shīrāz where he had been held in captivity by Karīm Khān, united the Ḳādjār tribe and made himself master of most of Persia, reducing the various tribal leaders who had established themselves in different parts of the country. Although Āḳā Muḥammad Khān transferred the seat of his government to Tehran, Māzandarān and Gurgān remained the centre of the Ḳādjār tribe, with whom the ruling dynasty maintained its links. Abbott writing in 1844 put the Ḳādjārs in Astarābād at only 4-500 families. They were exempt from taxation (London, P.R.O., F.O. 60:108. Account of Abbott's journey along the shores of the Caspian, incl. in Abbott to Aberdeen, No. 8, Encampt. near Tehran, 29 June 1844). Sir Justin Sheil, writing rather later, puts the Ḳādjārs in Māzandarān at 2,000 houses (Lady Sheil, *Glimpses of life and manners in Persia*, London 1856, 396). The ruling dynasty never entirely lost its nomadic background. William Ousely records that Fatḥ ʿAlī Shāh, like most other members of the Ḳādjār family, preferred "an erratick to a settled life; a village to a city, and a tent to a palace" (*Travels*, London 1819, iii, 151). Lady Sheil also remarks on the nomadic habits "so prevalent throughout the nation" (*op. cit.*, 214). Even Nāṣir al-Dīn Shāh was, according to his French physician, Dr. Feuvrier, still a nomad at heart (*Trois ans à la cour de Perse*, Paris 1906, 189). Many of the provincial governors came from the ruling family, which, however, became increasingly separated from the main body of the tribe.

Tribal contingents, as in the case of earlier dynasties, together with a standing army and the forces of the provincial governors, also containing tribal levies, composed the military forces of the Ḳādjārs (see *Landlord and peasant*, 137 ff.). Morier states that Fatḥ ʿAlī's standing army consisted of 12,000 men, drawn indiscriminately from the tribes or the population of the cities but principally from the Ḳādjār tribe of Māzandarān. The soldiers had their families and homes in Tehran and the neighbouring villages and were ready at call (*A journey through Persia, Armenia, and Asia Minor to Constantinople, in the years 1808 and 1809*, London 1812, 243-3). A register of the tribal levies was kept. Each tribe formed its own division in the army. These would attend at the Nawrūz at the royal camp. If their services were not required that year they would be dismissed. Whether retained at the royal camp or dismissed they received a stated pay. Jaubert describes the mixed population to be found at the royal camp (*Voyage en Arménie et en Perse, fait dans les annéés 1805 et 1806*, Paris 1821, 258-9). ʿAbbās Mīrzā was able to raise from the different tribes in Ādharbāydjān 50,000 horse and foot, and the governor of Khurāsān from the tribes in that province 20,000. The Arabs and Faylīs were exempt from the provision of military contingents (Morier, *op. cit.*, 240-1).

Morier speaks highly of the military potential of the tribesmen. "As raw materials for soldiers," he wrote, "nothing could be better than the Eelauts. Accustomed from their infancy to a camp life, habituated to all sorts of hardships and to the vicissitudes of weather, they are soldiers by nature. They have undertaken incredible marches without scarcely any food and without a murmur" (*A second journey through Persia, Armenia, and Asia Minor to Constantinople, 1810-16*, London 1818, 215). Sheil also speaks highly of the Persian soldiers, though he did not agree that the *īlāt*s were necessarily the best (Lady Sheil, *op. cit.*, 382). With the modernization of the army and the increasing dependence on artillery as the century proceeded, the importance of the tribal forces decreased, though it was not till after the first world war that they finally disappeared as a part of the military forces of the state.

In general the Ḳād̲j̲ārs were forced to administer the tribal areas through their own chiefs. The writ of the government seldom ran in the remoter districts. An *īlk̲h̲ānī* and *īlbegī* were appointed over the larger tribes. The nomination of these was confined to the leading tribal families. The shah might alter the succession by placing an uncle in the place of a nephew or younger brother in the condition of an elder, but normally he had no choice but to appoint as the leader of the tribe a man belonging to the family of the chief. The *īlk̲h̲ānī*s and *īlbegī*s collected the government taxes and were generally responsible for tribal affairs and administered customary law (see also *Landlord and peasant*, 158 ff.) The *īlk̲h̲ānī* of the Ḳād̲j̲ār tribe (who was not the reigning shah) presided over the tribal council of elders and enjoyed considerable influence (cf. Malcolm, *op. cit.*, ii, 327). The *īlk̲h̲ānī*, ʿAḍud al-Mulk, became regent in 1909 after the deposition of Muḥammad ʿAlī S̲h̲āh.

Āḳā Muḥammad K̲h̲ān, like many preceding rulers, resettled various tribes. The ʿAbd al-Malikī, or a section of them, were transplanted from Fārs to Kalāristāk and Kud̲j̲ūr, as also were the Ḥād̲j̲d̲j̲ī-vands. In 1844 the former numbered some 3,000 families and the latter 4-5,000. Both were settled, but the former had summer and winter quarters. They contributed 1,500 horse to the government when so required (Account of Abbott's journey, *op. cit.*). He also transferred the ʿAmala from Luristān-i Kūčik to Fārs. After his death many of them returned to their original encampments (C. A. de Bode, *Travels in Luristan and Arabistan*, London 1845, 118-19). Later rulers also transported various tribes (see *Landlord and peasant*, 158 ff.).

Realizing that the existence of large bodies of tribes, separated from the settled population, under leaders whose commands, whether to commit aggression against their neighbours, highway robbery, or resistance to the law, was unfavourable to internal tranquillity, Fatḥ ʿAlī S̲h̲āh devoted much of his energy to overthrowing the tribes. Many of the chiefs were put to death, others brought to court. Some tribes were broken up and others transplanted. The result was that by the middle of the century few of the tribal chiefs, except the *īlk̲h̲ānī*s of the Ḳas̲h̲ḳāʾī in Fārs and the Zaʿfarānlū in K̲h̲urāsān were able to exercise a preponderating influence on the affairs of the country (Lady Sheil, *op. cit.*, 395). Macdonald Kinneir writing of the tribal chiefs states that they were "both from birth and influence, the first men in the empire; they are always mutually jealous and hostile; and the king by fomenting their quarrels, and thus nicely balancing the power of the one against the other, insures his own safety and the peace of his dominions. It is the custom to detain at court, either the chief himself or some part of his family, as hostages for the fidelity of the tribe" (*op. cit.*, 45).

The traditional policy of the government in the tribal regions from this time onwards consisted of *divide et impera*—in setting one tribe against another, fomenting family feuds and jealousies, and bribing the chiefs with gifts or promises of support in their struggles, one with another for the headship of the clan or tribe (cf. Layard, *Early adventures in Persia, Susiana, and Babylonia*, London 1887, i, 453-4; 'Report of a journey from Tehran to the Karun and Mohamerah ... by Maj. Gen. T. E. Gordon', 9 January 1891, Conf. 9233, printed for the use of the Cabinet, 30 May 1892; Mrs. Bishop, *Journeys in Persia and Kurdistan*, London 1891, i, 328, ii, 56; and Curzon, *Persia*, London 1891, ii, 272). The old practice of taking hostages from the tribes was continued (cf. Malcolm, *op. cit.*, ii, 332). This policy, although it enabled the government, in spite of its weakness, to maintain its power, shook the confidence of the tribes in the trustworthiness of the government, and contributed to the anarchy which frequently prevailed in the tribal districts. The government would invite tribal chiefs to parleys under flags of truce and after sending them as safe-conducts Ḳurʾāns on which they had sworn to keep faith with them, would arrest them as soon as they had got them in their power or had them "accidentally shot" as they were leaving at the close of the interview. The tribal leaders often had their own agents at court to keep them informed of matters which might be of interest to them and especially to give them forewarning of steps which might be contemplated against them. Another way in which the government attempted to control the tribal leaders was through marriage alliances.

During the reign of Muḥammad S̲h̲āh, and more particularly Nāṣir al-Dīn S̲h̲āh, the power of the tribes was further reduced and the authority of the central government asserted. In 1896 there was a proposal for the establishment of a special ministry or high council to have charge of tribal affairs, but little came of this.

Taxes were assessed on flocks and sometimes a poll tax or family tax was also paid. Many of the tribal leaders owned land in the districts occupied by the tribe or outside it, and so far as they or their followers held land they were subject to land taxes. The system of land tenure in the tribal areas was often complicated. *Pīs̲h̲kas̲h̲* and special levies were also paid by the tribal leaders to the ruler or local governor at the new year. These were collected by the tribal leaders from their followers and often constituted a heavy imposition (see *Landlord and peasant*, 142-3, 158). Jaubert alleges that Fatḥ ʿAlī S̲h̲āh insisted that at least one fifth of the taxes due from the tribal leaders should be paid in cash (*op. cit.*, 270). Some of the tribal leaders, especially in the frontier districts, held land free in return for the provision of military contingents. This was the case in Bud̲j̲nurd, Dara Gaz, and As̲h̲raf in the second half of the 19th century (see *Landlord and peasant*, 163-4). There were also cases of tribes being exempted from taxation for some particular reason. The Ḳarā Papak̲h̲s, who were settled in Sulduz by ʿAbbās Mīrzā after the Treaty of Turkomānčāy, were not required to provide soldiers or pay taxes (E. Aubin, *La Perse d'aujourd'hui*, Paris 1908, 78-9). Disputes between the government and the tribal leaders over arrears of taxation were frequent. If the government felt strong enough, it would collect these by a military expedition, if not bills (*barāt*s) would be drawn on the defaulters and sold at a large discount. The *barātdār*s were often to be found quartered on the recalcitrant taxpayers and might remain months or years until the sum, or a part of it, was paid (cf. Layard, *op. cit.*, i, 499 ff.).

The numbers and condition of the tribes fluctuated. On the whole their life was one of hardship and uncertainty. Some among the Kurdish and Turkomān tribes were wealthy, but the smaller tribes were often extremely poor (cf. Lady Sheil, *op. cit.*, 107-8). Jaubert states that the nomads were attached to their nomadic life because of the independence which it gave them and which was for them the supreme happiness (*op. cit.*, 252). Malcolm, writing of the Kurds, states that they preferred the freedom they enjoyed in their rugged mountains and felt a pride

in the privations and hardships to which they were exposed, when they regarded them as associated with their independence (*op. cit.*, ii, 333). There is no doubt some truth in these statements, and on the whole the nomads, until recent times, have resisted settlement, fearing a loss of independence.

Baron de Bode, who travelled in south Persia in 1841, describing the character of the migrating tribes, states that he found this marked by much frankness, mixed with a great deal of cunning. He accounted for this apparent paradox partly by the simple and patriarchal life which the chiefs led and partly by the necessity they were under of being constantly on their guard, in order to defeat the machinations of their adversaries or from their own inclination to encroach upon their neighbours' property (*op. cit.*, i, 253). In general, the tribes were distinguished from the settled population by the greater freedom enjoyed by their women. Occasionally during the minority of a chief the tribe might be governed by his mother (cf. de Bode, *op. cit.*, ii, 134 ff.).

Large areas of the Ḳād̲j̲ār kingdom were tribal districts. In some the tribes migrated long distances, as the Bak̲h̲tiyārī and the Ḳas̲h̲ḳāʾī; in others the migrations were more limited, and in some the movement was no more than into tents on the village outskirts. There was no clear demarcation between tribal and non-tribal land, any more than there had been in earlier times. The tribes on their migrations passed through the land of the settled population or along its borders. They were often contumacious and lawless and sometimes did extreme damage to crops and gardens (cf. *Landlord and peasant*, 157-8).

Macdonald Kinneir thought that the numbers of the *īlāt*s, or wandering tribes, probably exceeded the town population (*op. cit.*, 44). Sheil, who had a long experience of Persia in the reigns of Fatḥ ʿAlī S̲h̲āh and Muḥammad S̲h̲āh, put the semi-nomadic and settled tribes together at possibly half the total population (Lady Sheil, *op. cit.*, 393). In 1891 Mrs. Bishop recorded that the *īlāt*s "are supposed to constitute a fifth of the rural population" (*op. cit.*, 84). The decrease in the figures given by Mrs. Bishop is perhaps partly to be explained by the fact that tribesmen living in villages all or part of the year were presumably excluded from the figures given to Mrs. Bishop. Sir A. Houtum-Schindler put the tribal population at 2,200,000 out of a total population of 9,000,000 in 1900. These figures were broken down as follows: 850,000 Turks, 800,000 Kurds and Laks, 300,000 Arabs, 230,000 Lurs, and 20,000 Balūč and gypsies. (Report on Persian Army by Lt. Col. H. P. Picot, Jan. 1900; see also Curzon, *op. cit.*, ii, 493, who quotes figures drawn up by Houtum-Schindler in 1884, which differ slightly from the above). He notes that by this time very few of the Ustād̲j̲lū and D̲h̲u'l-Ḳadr remained. They resided in Ād̲h̲arbāyd̲j̲ān. The Tekkelū had ceased to exist (*Eastern Persian Irak*, London 1898, 48-50).

One of the most important tribal areas in the 19th century was the Bak̲h̲tiyārī, with whom the government had repeated conflicts, and who in the 20th century played a major role in the restoration of constitutional government in 1909 (see A.K.S. Lambton, *Persian political societies*, in *St. Antony's Papers No. 16, Middle East Affairs No. 3*, London 1963). They were divided into two main groups, the Haft Lang and the Čahār Lang, the former having summer pastures in Čahār Maḥāll and the latter in Firaydan; both had winter pastures in K̲h̲ūzistān. Morier put their numbers in 1809 at 100,000 families (*Journey*, 242). Malcolm states that they continued to be ruled by their own customs and admitted hardly any interference by the officers of the government in their internal jurisdiction. They furnished troops and paid a small tribute. They were encouraged to settle in the plains with a view to rendering them more tangible to the laws of the country and, by giving them an interest in the general peace of the country, it was hoped to prevent the predatory attacks they were in the habit of making on their neighbours (*op. cit.*, ii, 331). De Bode states that many of the Haft Lang had been settled (*op. cit.*, ii, 86). Fatḥ ʿAlī S̲h̲āh kept hostages from the Bak̲h̲tiyārī at Tehran, where a separate quarter was allotted to them (de Bode, *op. cit.*, ii, 75). Later rulers continued the practice of taking hostages. This did not, however, prevent rebellion by the tribe or secure the safety of the roads. Morier, when passing through Iṣfahān in 1811, mentions that the town was in a continual state of alarm lest Asad K̲h̲ān of the Haft Lang should seize the city (*Second journey*, 156).

Rawlinson put the Bak̲h̲tiyārī (the Čahār Lang and Haft Lang together with the Dinārūnīs) at 28,000 families about the year 1836. Their assessment was fixed at 100 *ḳāṭir*s, which term he states was used to denote a sum of money, which was increased or diminished according to the prosperity or otherwise of the tribes and the power of the government to exercise authority over them. Under the Atabegs a *ḳāṭir* had apparently been the equivalent of 1,000 *tūmān*s, but when Rawlinson was writing it was 100 *tūmān*s; but the government was unable to realize this amount. Muḥammad Taḳī K̲h̲ān of the D̲j̲ānikī tribe of the Čahār Lang was *īlk̲h̲ānī* at that time. Rawlinson states that he could put 10-12,000 well-armed men in the field. He speaks highly of Muḥammad Taḳī K̲h̲ān's justice and states that he had attempted to break the tribes of their nomadic habits and to some extent succeeded. He had bought land in Firaydan and founded villages and also settled tribesmen in the Rām Hurmuz plain, which he farmed from the government for 3,000 *tūmān*s a year. The Bak̲h̲tiyārī supplied K̲h̲ūzistān with tobacco and exported a small quantity of grain and supplied the Iṣfahān market with mutton. Each tribe of the Bak̲h̲tiyārī had its acknowledged hereditary chief or *k̲h̲ān* who ruled his subjects with despotic sway (*Notes on a march from Zohab, at the foot of the Zagros, along the mountain roads to Khuzistan (Susiana) and from thence through the province of Luristan to Kirmanshah, in the year 1836*, in *JRGS*, 1839, ix, 26-116). Layard also speaks highly of Muḥammad Taḳī K̲h̲ān and of his wish to open up the Bak̲h̲tiyārī to commerce. In 1841 the governor of Iṣfahān, Muʿtamid al-Dawla, marched from Iṣfahān to Mālamīr to demand payment of arrears of taxation from Muḥammad Taḳī K̲h̲ān, who was declared a rebel. Wishing to avoid conflict, he temporized, but was unable to reach a settlement. He then took refuge with the Čaʿb at Fallāḥiyya, but was persuaded to come to Muʿtamid al-Dawla in S̲h̲ūs̲h̲tar. The latter seized him and took him a prisoner to Iṣfahān, where he died in captivity in 1851 (see Layard, *op. cit.*, i, 373 ff.).

De Bode states that the Čahār Lang were taxed at 15,000 *tūmān*s but that the tax was not regularly collected since they could only be compelled to pay it by force (*op. cit.*, ii, 82). Some 195 villages settled by Haft Lang paid 7,873 *tūmān*s in cash and 530 *k̲h̲arvār*s of grain, while those of the tribe who still

migrated and were more numerous only paid 3,000 *tūmāns*. Some of the Haft Lang chiefs farmed whole districts (*op. cit.*, ii, 86). Mrs Bishop states that the Čahār Maḥāll was farmed by the *īlkhānī* for about 20,000 *tūmāns* (£ 6,000) p.a. (*op. cit.*, i, 309). She put the numbers of the Bakhtiyārī at 29,100 families, and states that they had increased in the last half-century. Taxation was paid to the governor of Iṣfahān except for three tribes which were under Burūdjird (*op. cit.*, i, 295-6). She contrasts the poverty which she saw among the Bakhtiyārī with the wealth of the tribes when they were visited by Layard and de Bode (*op. cit.*, ii, 54). She also describes the insecurity prevailing in the Bakhtiyārī and the shadowy nature of the authority of the *īlkhānī* in the remoter areas (*op. cit.*, ii, 92-3). She states that the Bakhtiyārī exported mules and horses (*op. cit.*, ii, 117). By the time Curzon wrote, this was no longer the case (*op. cit.*, ii, 299). Curzon states that in addition to the office of *īlkhānī* and *īlbegī*, both of which were salaried by and in the gift of the shah, a third office, that of governor (*ḥākim*) of Čahār Maḥāll, was also closely bound up with tribal politics, since the tribal chiefs held landed property in Čahār Maḥāll (*op. cit.*, ii, 295).

Luristān-i Kūčik was divided into Pīshkūh and Pusht-i Kūh. The principal tribes of the former were the Silāsilī and Dilfūn, numbering according to de Bode about 30,000 families, the ʿAmala (2-3,000 families or more), and the Bālā Girīwa (4,000 families) (*op. cit.*, ii, 286 ff.). The Pusht-i Kūh tribes, the Faylīs, were less numerous. Rawlinson gives a detailed list of the tribes of Pīshkūh and Pusht-i Kūh, putting the former at 38,000 and the latter at 12,000 (*op. cit.*). The Lurs supplied mutton and milk products and charcoal to the bazaars of Burūdjird, Nihāwand, Hamadān, and Kirmānshāh. They also made carpets and a coarse tenting made of goats' hair, which was used for saddle-bags by muleteers (de Bode, *op. cit.*, ii, 292). The tribal organization of the Lur-i Kūčik differed from that of the Bakhtiyārī (the Lur-i Buzurg). Each sub-division had its own leader or *tūshmāl*, and they met as equals on occasion to discuss their common interests. The assessment of the tribes of Pīshkūh was fixed at 120 *ḳātirs* (see above for the meaning of this term). This sum would be distributed among the tribes and their subdivisions at a general council, each subdivision determining the amount to be paid by the different camps and the *rīsh safīd* of each camp collecting it from the families under his rule. In the time of the *wazīr* Mīrzā Buzurg the value of the *ḳātir* was raised to 200 old *tūmāns* or 40,000 (currency) *tūmāns* but the amount realized fell short of this sum (Rawlinson, *op. cit.*; see also Curzon, *op. cit.*, ii, 274 ff., and ʿAlī Muḥammad Sākī, *Djughrāfiyā wa Taʾrīkh-i Luristān*, Tehrān 1964).

In Fārs the two main tribal groups in the 19th century were the Khamsa and the Turkī-speaking Ḳashḳāʾī. The former was composed, as their name suggests, of five tribes, three Turkish (the Aynalū, Bahārlū, and Nafar), one Persian (the Bāsirī), and one Arab (the Īl-i ʿArab) (see Fasāʾī, *op. cit.*, ii, 309 ff. and *Landlord and peasant*, 159). They were originally placed under the control of Muḥammad ʿAlī Khān Ḳawām al-Mulk, the grandson of Ḥādjdjī Ibrāhīm, in 1278/1861-2 to form a counter-weight to the Ḳashḳāʾī, Ḳawām al-Mulk undertaking to pay the revenue of Dārāb and the *īlāt-i khamsa* on a *muḳāṭaʿa* contract for a period of ten years (Fasāʾī, *op. cit.*, ii, 51). The rivalry between the Ḳashḳāʾī and the family of Ḥādjdjī Ibrāhīm went back some years beyond this. De Bode, who was in Shīrāz in 1841, states that he found the town divided into rival camps, the *īlbegī* at the head of one and the *kalāntar*, Ḥādjdjī Mīrzā ʿAlī Akbar, the son of Ḥādjdjī Ibrāhīm, at the head of the other (*op. cit.*, i, 180-1). (For a detailed description of the Bāsirī tribe of the Khamsa confederacy in 1958 see F. Barth, *Nomads of South Persia*, Oslo 1961).

The Ḳashḳāʾī increased in importance in the 19th century. The different sections of the tribe (*tīra*) were each under a *kalāntar*, and were further subdivided into groups each under a *kadkhudā*. The government of the tribe as a whole was in the hands of an *īlkhānī* and his deputy, the *īlbegī*, both of whom were appointed by the government but were chosen from among the tribal leaders (Fasāʾī, *op. cit.*, ii, 313). Sheil put their numbers at 30-40,000 tents. The principal branch were the ʿAmala, consisting of 3,300 tents presided over by the *īlkhānī*. The summer quarters of the tribe were near Iṣfahān at Gandumān and their winter quarters near the coast. Several groups dwelt among the Bakhtiyārī near the Djānikī mountains and Mt. Dīnā. They were rich in flocks and herds and did great harm in their movements (Lady Sheil, *op. cit.*, 398-9). Ḥusayn ʿAlī Mīrzā, when governor of Fārs, arrested the *īlkhānī*, Muḥammad ʿAlī Khān, in 1249/1833-4 but was nevertheless forced to reappoint him over the tribe when he released him shortly afterwards (Fasāʾī, *op. cit.*, ii, 285). Later he was held in Tehran as a hostage for the good behaviour of the tribe for some ten years until he was released in 1848 (F.O. 60:137. Farrant to Palmerston, No. 103, Tehran, 24 November 1848). Curzon states that the *īlkhānī* was governor of Fīrūzābād and Farrāshband, but that the *īlkhānī* of the day, Sulṭān Muḥammad Khān, had been deprived of his tribal power by the government, and the headship of the tribe was vested in the *īlbegī*, Dārāb Khān, who paid to the provincial governor a poll-tax on the flocks and herds, which he collected from his followers. The numbers of the Ḳashḳāʾī were reduced by the famine of 1871-2 and were decreased by settlement. Curzon thought that the tribe did not number more than 10-12,000 tents (*op. cit.*, ii, 112-14). (For a detailed description of the customs of the Ḳashḳāʾī in modern times see Muḥammad Bahman Begī, *ʿUrf wa ʿādat-i ʿashāʾir-i Fārs*, Tehran 1945).

In addition to the Ḳashḳāʾī and the Turkish tribes of the Khamsa, there were a number of other Turkish tribes in Fārs, such as the Khaladj in Ḳunḳārī, whose leader Mīrzā Ḳāsim Khān married the daughter of Djānī Khān, the *īlkhānī* of the Ḳashḳāʾī in the early part of the 19th century (Fasāʾī, *op. cit.*, ii, 244). There were also small groups of Khaladj in Kirmān and Ādharbāydjān (Houtum Schindler, *Eastern Persian Irak*, 50).

The Mamassanī, living on the borders of Fārs and Khūzistān, consisted of four main divisions, the Rustamī, Baḳish, Djoī, and Dushmanziyārī. The first two were the strongest and jealousy existed between them. The chief of the Dushmanziyārī, Muḥammad Riḍā Khān, was executed in 1840 on the orders of Firaydūn Mīrzā, governor of Fārs, and the tribe was greatly weakened. The total number of the Mamassanī about that time was said to exceed 4,000 families. The tax levied on them by the governor of Fārs amounted to 7,000 *tūmāns* (c. £ 2,800). They committed much robbery during the latter years of Fatḥ ʿAlī Shāh, when Fārs was administered by Ḥusayn ʿAlī Mīrzā. Walī Khān, the Baḳish chief, was the main ringleader. He and his son Bāḳir

Khān were eventually captured and imprisoned in Tabrīz and the power of the Mamassanī was somewhat reduced (de Bode, *op. cit.*, i, 270 ff.) De Bode puts the Bāvī, who occupied Bāsht, at upwards of 4,000 families. Their chief, Sharīf Khān, was blinded by Ḥusayn ʿAlī Mīrzā. Originally the Bāvī came to Bāsht from the Čaʿb country. They were then moved by Nādir Shāh to Khurāsān but returned to Fārs after his death. The Buwayr Aḥmadī numbered 3,000 families and occupied Ārū and the country to the north of Dū Gunbadān. The Nūī consisted of about 2,000 families and lived north-east of Bihbahān. The Ṭayyibī numbered some 3,000 families and the Bahmaʾī, inhabiting the mountains north-west of Bihbahān, "the wildest and most unruly tribe among the mountaineers of Fārs", were, de Bode thought, somewhat underrated at 2,000 families. At the time he was writing they had gone over to the Bakhtiyārī leader, Muḥammad Taḳī Khān. They were much split by blood feuds. There were also a number of small tribes, Arab and Turkish, occupying the plain of Bihbahān, some settled in villages and others living in tents (de Bode, *op. cit.*, i, 275 ff.). The figures given for the tribes by Sheil were on the whole smaller than those given by de Bode. The power of the Mamassanī had by the middle of the century been considerably reduced. Sheil puts their numbers at 8,000 tents and houses (Lady Sheil, *op. cit.*, 399; see also Curzon, *op. cit.*, ii, 318). According to Sheil's estimates of the tribes of Bihbahān and the Kūhgīlūya the largest was the Bahma'ī (2,500 tents) followed by the Buwayr Aḥmadī (2,000 tents), Bāvī (1,200 tents), Čirāmī (1,000 tents), Ṭayyibī (1,000 tents), and numerous smaller tribes. Many of them were poor, though the Ṭayyibī were said to be rich (Lady Sheil, *op. cit.*, 399). Farhād Mīrzā reduced the Kūhgīlūya in 1882 (Curzon, *op. cit.*, ii, 318). (See also Maḥmūd Bāwar, *Kūhgīlūya wa īlāt-i ān*, Tehran (?) 1945, and Manūčihr Zarrābī, *Ṭawāʾif-i Kūhgīlūya* in *Farhang-i Īrān Zamīn*, ix, fas. 1-4, 278-352. See also F.O. 371:1728 for a genealogical tree of the *khān*s of the Buwayr Aḥmadī tribe and their numbers in 1913).

The Čaʿb in ʿArabistān increased in importance in the 19th century until the death of Shaykh Thāmir, after which they declined. Between 1740 and 1750 they apparently dispossessed the Afshārs who had held Djarrāḥī and the neighbourhood. Prior to that they had made certain annual payments to the Afshār chief for pasturage. During the reign of Āḳā Muḥammad Khān they had paid *pīshkash* irregularly to the governor of Fārs. Macdonald Kinneir wrote that the *shaykh* of Čaʿb could field 5,000 horse and 20,000 foot, formed by the contingents provided by the *shaykh*s subordinate to him (*op. cit.*, 91). In 1818 Muḥammad ʿAlī Mīrzā marched on Fallāḥiyya to demand arrears of taxation from Shaykh Thāmir. Under Muḥammad Shāh hostages were taken from the Čaʿb and the revenue assessment was raised from about 4,000 *tūmān*s to 20,000 (F.O. 60:103. Memo. by Rawlinson on Cha'ab, incl. in Sheil to Aberdeen, No. 15, Tehran, 3 February, 1844. See also de Bode, *op. cit.*, ii, 110 ff., and F.O. 60:222. Report on the Cha'b for Outram compiled by George Percy Badger, Arabic interpreter, Camp before Bushire, 21 February 1857). Pelly in 1863 put the principal Čaʿb tribes at 68,000 fighting men, adding the rider that the figure was probably overstated (*Report on the Tribes etc., and the shores of the Persian Gulf*, Calcutta 1874). Curzon put the Čaʿb at 62,000 (*op. cit.*, ii, 321 ff.).

With the decline of the Čaʿb, the Muḥasayn of Muḥammara increased in influence (Curzon, *op. cit.*, ii, 325 ff.). Among other Arab tribes in the south were the Muntafiḳ at Hawīza, who came to the district from the Turkish empire in 1812 (Curzon, *op. cit.*, ii, 325 ff.), the Banī Ṭuruf in Dasht-i Mīshān, and the Banī Lām, who lived mainly in Turkish territory. (See also Manūčihr Ẓarrābī, *Ṭawāʾif-i Miyān Āb*, in *Farhang-i Īrān Zamīn*, x, fas. 1-4, 394-407).

In Eastern Persia the tribes were many and varied. In Kirmān there were the Afshār and ʿAṭā Ilāhīs, put in the middle of the century at 15,000 and 3,000 tents and houses respectively (Lady Sheil, *op. cit.*, 398). The most important group in the south-east was the Balūč mainly in Balūčistan and Sīstān (see J. P. Ferrier, *Caravan journeys and wanderings in Persia, Afghanistan, Turkistan and Beloochistan*, tr. by Capt. W. Jesse, London 1856) but with small concentrations in Ḳāʾināt and Khurāsān also. In the early period of Ḳādjār rule, the Balūč of Sīstān and Balūčistān were not under the control of the central government. They did not pay a regular tribute, but occiasonally brought a trifling *pīshkash* to the governor of Kirmān (ʿAbd al-Razzāḳ b. Nadjaf Ḳulī, *Dynasty of the Kajars*, trans., London 1833, 447). Morier, writing in 1808, states that the Balūč, although once subject to Persia, had resumed their independence (*Journey*, 49-50). During the reign of Nāṣir al-Dīn Shāh some progress was made in bringing the Balūč under the control of the central government (see Fīrūz Mīrzā Farmān Farmā, *Safar-nāma-i Kirmān wa Balūčistān*, ed. Manṣūra Niẓām Māfī, Tehran 1963). Ferrier, who travelled in Persia in 1845, states that there were some 8,000 Balūč tents with very large flocks in Turshīz (*op. cit.*, 137). Sheil puts their number rather lower at 2,000 tents and horses (Lady Sheil, *op. cit.*, 400). There were also Balūč at Ḳāʾin (Ferrier, *op. cit.*, 441) and some 2,000 tents and houses at Turbat-i Ḥaydarī (Lady Sheil, *op. cit.*, 400). The most important group in Turbat-i Ḥaydarī were the Ḳarāʾī, numbering 5,000 tents and houses. There were also various miscellaneous groups amounting to some 3,000 tents and houses (Lady Sheil, *op. cit.*, 400). In the reign of Fatḥ ʿAlī Shāh, the Ḳarāʾī leader, Isḥāḳ Khān, achieved a position of great influence. He was eventually seized with his son and killed by Muḥammad Walī Mīrzā, governor of Khurāsān (Watson, *A history of Persia*, London 1866, 175 ff.). Colonel Yate, who travelled in Khurāsān in 1893, put the Ḳarāʾī at 3,000 families. They provided one regiment of infantry (*Khurāsān and Sīstān*, London 1900, 53). In Turshīz there were 4,000 Arab tents and houses, 7,000 in Tūn and Ṭabas, and 12,000 in Ḳāʾin (Lady Sheil, *op. cit.*, 400).

In Eastern Khurāsān, the Hazāras, Taymūrīs, Maymanīs, Fīrūzkūhīs, Djamshīdīs, and Zangīs, all Turkish tribes, were in the early Ḳādjār period barely under government control, and on the death of Fatḥ ʿAlī Shāh and Muḥammad Shāh they committed disturbances. Ferrier mentions that when he visited Khurāsān 2,000 families of Hazāras had recently emigrated from Harāt to Shahr-i Naw near Maḥmūdābād. They bred considerable numbers of horses, in which they paid their tribute to the government. They were also obliged to provide, when called upon to do so, a contingent of 1,000 cavalry (*op. cit.*, 137). By 1893, the number of Hazāras in Persia had apparently fallen. Yate estimates them at only 1,200 families (*op. cit.*, 132). Sheil puts the Taymūrīs living in Khwāf at 4,000 tents and houses; a second group of 2,000 lived near Mashhad. There were a

number of miscellaneous Turkish and Persian tribes, amounting to some 11,000 tents and houses, round Mas͟hhad. In Nays͟hāpūr there were 10,000 Bayāt and Kurs͟hāhī, who were settled. There were also Bayāt in Burūd͟jird, K͟hurramābād, and Fārs, apart from those who had joined the Ḳād͟jār tribe, forming the sub-division known as the S͟hāmbayātlū (Houtum-Schindler, *Eastern Persian Irak*, 48-50). The Kurdish tribes in K͟hurāsān consisted of 14,000 houses and tents of Zaʿfarānlū at Ḳūčān, 2,000 Kayvānlū at Rādkān, and 3,000 S͟hādillū at Bud͟jnurd, and various other groups at Sabzawār, D͟jūwayn, and elsewhere (Lady Sheil, *op. cit.*, 400). The Zaʿfarānlū had originally been settled in Akhal by S͟hāh ʿAbbās to repel the Özbeks, but they were driven out in the reign of S͟hāh Sulṭān Ḥusayn, and retired to Ḳūčān, S͟hīrwān, and Bud͟jnurd (Yate, *op. cit.*, 180 ff.; see also Curzon, *op. cit.*, i, 97 ff., and 191-2).

The Central Asian frontier of Persia and control of the tribes living in the Turkomān steppe proved a difficult problem for the Ḳād͟jārs, as it had for earlier dynasties. They were unable to prevent widespread raiding by the Özbeks and Turkomāns, who plundered and, in the early part of the century, carried off many Persian subjects into slavery. The two most important Turkomān tribes on the Persian side of the frontier were the Guklān and the Yamūt, both Sunnī. The former were not nomadic. The latter, who were found on both sides of the ill-defined frontier, were divided into two sections, *čumūr*s, who were cultivators, and *čarwā*s, who were nomads. The relations between the Yamūt and the Atak villagers were hostile and raiding by the former was frequent. There was, however, often provocation by the latter and much oppression of them by government officials. The Guklān, who occupied the area to the south-east of the Caspian Sea, lived in constant dread of the Yamūt and were also on bad terms with the Kurds of Bud͟jnurd and the Ḥād͟jd͟jīlar tribe of Kabūdd͟jāma. Raids and counter raids were of common occurrence (cf. Yate, *op. cit.*, 245-7, for an account of a raid). Each section of the Guklān and Yamūt consisted of several *awba*s, each of which had its leader (*āḳ saḳal*), who held a hereditary *yurt*. There was no leader of the whole tribe. When necessary, the elders of the *awba*s and the *s͟hayk͟h*s would assemble to decide on some course of action. Inter-tribal feuds were common. Tribute was paid to the government through agents (*sarkarda*s) appointed by the government, who were also responsible for the quota of horsemen the tribes were supposed to furnish when called upon to do so (see *Landlord and peasant*, 160-2).

Morier, travelling between 1810 and 1816, put the Yamūt and Guklān together at about 8-10,000 families. He states that their submission to the government was nominal, amounting to little more than the present of a few horses annually to the Shah, "who is so careful not to give them cause of disgust that he generally returns them more than he receives". Their frontier was about eight *farsak͟h*s from Astarābād. Beyond them were the Tekke, who were generally at variance with the Yamūt and the Guklān (*Second journey*, 377-8). J. B. Fraser describes a visit to a group of Guklān in the year 1883 (*A winter's journey*, ii, 331 ff.). He states that the Yamūt at this time were in a state of rebellion (*ibid.*, 382). Abbott put the Yamūt at 59,500 tents or families on the basis of figures collected by a Persian official in 1838 (F.O. 60:92. Abbott to Aberdeen, Tabriz, 10 May 1842). These figures were probably exaggerated. Taylour Thomson, who visited the area in 1846, put the Guklān at some 5-6,000 families and the Yamūt at 20,000 (F.O. 60:122. Taylour Thomson to Sheil, Tehran, 15 April 1846, incl. in Sheil to Aberdeen, No. 50, Tehran, 4 May 1846). Abbott writing again in 1844 states that the Guklān occupying the area between Gunbad-i Kābūs and the Atrek and Bud͟jnurd numbered 3-4,000 families. They were formerly more numerous—about 12,000 families, but half of them had removed to K͟hiva some years previously when Fatḥ ʿAlī S͟hāh had threatened to punish them for plundering. Cholera had also wrought great ravages among them; and the troops of Muḥammad S͟hāh, when marching against the Yamūt in 1836, had committed great excesses against them. The Yamūt at this time lived mainly outside Persia. Their numbers were large and they moved from Persia to K͟hiva according to caprice. The *čarwā*s made a seasonal migration to the Balk͟hān mts. They paid no obedience or taxes to the governor of Astarābād but the *čumūr*s were less fortunate. When the *čarwā*s migrated and the *cumūr*s were left without their protection, the governor of Astarābād would levy a small poll-tax and *pis͟hkas͟h* from them. The Persian government, unable to coerce the Turkomāns, as far as possible conciliated them (Account of Abbott's Journey, *op. cit.*). In the reign of Nāṣir al-Dīn S͟hāh, the Guklān were compelled to furnish forty or fifty families as hostages, but this did not prevent their carrying on foraging excursions into Persia (Lady Sheil, *op. cit.*, 207 ff.). Yate in 1893 states that some of the Guklān were wealthy. The Persian government numbered the Guklān settled in the Gurgān district at 900-1,000 families; but others put them at 1,700-2,000. They lived in constant dread of the Yamūt (*op. cit.*, 217 ff.). The Yamūts were variously estimated at 7,000 to 15,000 tents. Yate thought the lower estimate the most nearly correct. Of them, 4,600 were said to be *čumūr*s and 2,400 *čarwā*s (*op. cit.*, 279-80). (See also Curzon, *op. cit.*, i, 189 ff.; and various reports from Karelin, the chief of the expedition sent to the Eastern shores of the Caspian in 1836, to the Russian Minister of Finance, translations of which are in F.O. 65:226, incl. in Durham to Palmerston, St. Petersburgh, 19 December 1836; F.O. 65:233. incl. in Durham to Palmerston, No. 28, marked secret and confidential, St. Petersburgh, 13 February 1837, and F.O. 65:234. Incl. in Durham to Palmerston, no. 63, St. Petersburgh, 8 April 1837).

In the Tehran region there were a miscellaneous collection of tribes, of whom the S͟hāhsivan were the most numerous—9,000 tents—in the middle of the nineteenth century. They were dispersed according to the season between Ḳumm, Tehran, Ḳazwīn, and Zand͟jān. The remainder consisted of various small groups, most of whom were extremely poor (Lady Sheil, *op. cit.*, 397). There were also K͟halad͟j near Ḳumm and Sāva (de Bode, *op. cit.*, ii, 318). Houtum-Schindler mentions some 1,000 Pāzūkī families in Varāmīn and K͟hwār towards the end of the century. Some spoke Kurdish and some Turkish. He also mentions various other minor tribes in Eastern Persian ʿIrāḳ (*op. cit.* 50).

The K͟hamsa district of Zand͟jān was inhabited by a number of Turkish tribes. They lived in summer in tents, but did not move far. In winter they lived in houses, because of the severe cold. The two largest tribes were the Garrūs, numbering 4-5,000 houses, and the S͟hāhsivan-i Afs͟hār, numbering 2,500 tents (Lady Sheil, *op. cit.*, 397). By the beginning of the 20th century they had apparently all become settled,

except for a few Shāhsivan and one Ṭālish tribe, originally from Gīlān (E. Aubin, *La Perse d'aujourd'hui*, Paris 1908, 14).

The most important tribe in the Hamadān-Malāyir-Tūysirkān-Farahān region was the Turkish tribe, the Ḳarāguzlū. Macdonald Kinneir states that they could put 7,000 men in the field (*op. cit.*, 127). The district between Kangavār and Hamadān was in the hands of the Afshār, centred on Asadābād (*op. cit.*, 129). Sheil numbered the Ḳarāguzlū at 4,000 houses. By his time they were all settled. There were also various Lak tribes, reckoned at 1,500 tents and houses, in the Hamadān-Malāyir-Tūysirkān-Farahān area (Lady Sheil, *op. cit.*, 398).

The Kurds, apart from the settlements in Khurāsān and elsewhere mentioned above, were to be found in Kirmānshāh, Ardalān, and western Ādharbāydjān. They lived on the frontiers of the Persian and Ottoman empires and in some cases migrated across these. This greatly aggravated the difficulty of controlling them. Sheil gives a list of the Kurdish tribes of Kirmānshāh, but states that the figures must be treated with reserve. According to this list the most numerous were the Kalkhūr, put at 11,500 tents and houses, the Zangana (including the Sandjābī) at 10,000 houses and tents, and the Gūrān at 3,300 tents and houses (Lady Sheil, *op. cit.*, 401). Curzon, towards the end of the century, puts the Kurds of Kirmānshāh at some 24,300 tents and families, of which the Kalkhur and Gūrān accounted for 5,000 each, and the Sandjābī 1,500 (*op. cit.*, i, 557). Curzon's figures presumably include many Kurds who were settled in towns. The Kurds of Ardalān were mainly sedentary, and until towards the end of the reign of Nāṣir al-Dīn Shāh were virtually independent under the *wālī* of Ardalān. In the Kurdish districts of Ādharbāydjān also, even though the inhabitants professed allegiance to the shah, they were in fact independent of the interference of the central government because of the inaccessible nature of the country. Among them were the Hakkārī, living west of Urūmiyya near Salmās and on both sides of the Ottoman-Persian frontier (see Malcolm, *op. cit.*, ii, 334-5). Gaspard Drouville, who was in Persia in 1812-13, states that they were under the protection of ʿAbbās Mīrzā and that they came annually with immense flocks to use the pastures in Persia. In time of war their *begs* provided ʿAbbās Mīrzā with horse and foot soldiers. As soon as they entered Persia, they were supplied and provided for by the shah. Drouville also states that the Kurds of Ādharbāydjān who provided ʿAbbās Mīrzā with military contingents were exempt from taxation (*Voyage en Perse*, Paris 1825, ii, 7). The Shaḳāḳī under Ṣādiḳ Khān, to whom Miyāna and the surrounding districts belonged, were said to be able to number 10,000 horse. On the death of Āḳā Muḥammad Khān, Ṣādiḳ Khān made an abortive attempt to establish his independence. He rebelled again later and lost his life. The tribe was subsequently dispersed (Macdonald Kinneir, *op. cit.*, 152). According to Sheil, the Shaḳāḳī and Mukrī both consisted of 15,000 tents and houses. The latter lived round Sawdj Bulāgh (Lady Sheil, *op. cit.*, 396). The figures given by Curzon are lower (*op. cit.*, i, 555). The Baban in Sulduz according to Sheil numbered 1500 houses (Lady Sheil, *op. cit.*, p. 401). (See also Shaykh Muḥammad Mardūkh, *Taʾrīkh-i Mardūkh*, n.d., 2 vols., and Muḥammad Mukrī, *ʿAshāʾir-i Kurd. Īl-i Sandjābī*, vol. i, pt. 1, Tehran 1954).

Of the Turkish tribes in Ādharbāydjān the Shāhsivan were the most numerous. Abbott, writing in 1844, states that they were usually estimated at 11-12,000 families, about 6-7,000 inhabiting Mishkīn and about 5,000 Ardabīl. Both wintered in Mughān. In the Arbabīl district they inhabited several villages, of which the population was partly made up of peasants and partly tribal. In these the government's demand on the tribe was 1,000 *tūmāns* p.a. The tented families, on the other hand, paid 5,500 *tūmāns*, of which the Mishkīn division paid 4,000 *tūmāns*. These sums were paid by the heads of the tribe, who collected them from their followers ('Account of Abbott's Journey', *op. cit.*). According to Sheil, the Shāhsivan numbered 10,000 tents (Lady Sheil, *op. cit.*, 396). Houtum-Schindler states that the Inānlū were the most important branch of the Shāhsivan. The Shāmlū by this time existed partly as a branch of the Shāhsivan and partly as a separate tribe called the Bahārlū, numbering some 2,500 families, half residing in Fārs, where they formed part of the Khamsa, and half in Ādharbāydjān (*Eastern Persian Irak*, 48-50). By the 20th century many of the Shāhsivan had become settled. Aubin puts them at 19,700 families, divided into sixty groups or *udjāḳs*, each under a *kadkhudā* (*op. cit.*, 106-7). The Muḳaddam in the middle of the century numbered 5,000 houses and the Maḥmūdlū 2,500; both were in Marāgha. The Bahārlū and the Afshār, both in Urūmiyya, were reckoned at 2,000 and 7,000 houses respectively, the Dunbulī at 2,000 houses, the Ḳarā Papakh at 1,500 houses. There were a few minor tribes also (Lady Sheil, *op. cit.*, 396). In the early 20th century they numbered 5,000 families (Aubin, *op. cit.*, 78-9). Houtum-Schindler puts the Afshārs in Ādharbāydjān at the end of the 19th century at 12,000 families (*Eastern Persian Irak*, 48-50).

The tribes of Ḳaradja Dāgh, Ḳarā Dāgh and Tālish proved, like most of the frontier tribes, difficult to control, migrating from one side to the other. In the early Ḳādjār period they played a restless part in the Perso-Russian wars, their allegiance vacillating. Sheil put the numbers of the Čilibiyānlū in Arasbārān at 1,500 tents and houses, the Ḳaračurlū at 2,500, the Ḥādjdjī ʿAlīlū at 800, the Begdillū at 200 and various minor groups at 550 tents and houses (Lady Sheil, *op. cit.*, 396). (See further Bāyburdī, *Taʾrīkh-i Arasbārān*, Tehran 1962, 121 ff. and Aubin, *op. cit.*, 255). The Ḳarāčurlū were among the first of the tribes in Arasbārān to become settled (Bāyburdī, *op. cit.*, 110 ff.).

By the beginning of the 20th century the position of the tribes had changed considerably. Many of the tribal leaders were familiar with urban life, either through government service or because of their detention in the capital by the government as hostages. A few had travelled abroad. Settlement both of the leaders and the tribesmen was growing, and, apart from the outlying areas, the tribes were becoming assimilated to the rest of the population (cf. Aubin, *op. cit.*, 177-8).

With the Constitutional revolution a new period began in Persia, which affected the position of the tribes as well as that of other sections of the population. Tribal forces were found on both sides in the struggle for the constitution. Under the electoral law of 9 September 1906, dividing electors and elected into six categories, the tribes, apart from the Ḳādjārs, were not reckoned as a special category, but were counted among the inhabitants of each province and as such had the right to vote subject to the conditions laid down (Art. 1, note 1). Under the electoral law of 1 July 1909, however, provision

was made for the Shāhsivan, Ḳashḳā'ī, Khamsa (of Fārs), Turkomāns, and Bakhtiyārī each to send one representative to the assembly (Art. 63). In the later electoral laws no special provision was made for tribal representation. In the early years of constitutional government and during the anarchy prevailing after the suspension of the constitution in 1911 the government was unable to control the tribal areas. Because of this, with the discovery of oil in south-west Persia, special agreements were made between the Anglo-Persian Oil Company on the one hand and the Shaykh of Muḥammara and the Bakhtiyārī respectively on the other. The latter supplied labour to the engineers and provided guards for the protection of the oil-fields. During the first World War there was much unrest, rebellion and disorder in the tribal areas (see further Sir Percy Sykes, *A history of Persia*, ii). After the war Riḍā Khān, later Riḍā Shāh Pahlawī, reimposed the authority of the central government throughout the country. The Kurds of Ādharbāydjān were subjugated and disarmed. In 1925 the Bakhtiyārīs and Ḳashḳā'īs were partially disarmed and the Turkomāns to some extent reduced. Subsequently, attempts were made to settle the tribes (see Hassan Arfa, *Under five Shahs*, London 1964, and *Landlord and peasant*, 181, 283 ff.). During and after the second World War there were also disturbances in the tribal areas, especially a separatist movement in the Kurdish districts of Ādharbāydjān and a serious tribal revolt in the south in 1946.

ILBĪRA, Sp. Elvira, town and the associated province, near or identical with Granada. The Iliberri/Ilbīra/Granada question has been much discussed and may be summarized as follows: The Roman town of Iliberri occupied part of the present site of Granada. The Arab governors of the region at first resided there, Arabicizing the name into Ilbīra, but about 130/747 founded, 12 km north-west of modern Granada, a new capital which was called Ḳasṭalla, Ḳasṭīla, or Ḳasṭīliya. This however soon became known by the name of its predecessor, Elvira. The original Elvira continued to be populated, largely by Jews and Christians, but in time came to be known as Granata/Gharnāṭa. In 401/1010, during the Berber insurrection, new Elvira was sacked by the Ṣanhādja troops of Zāwī b. Zīrī and the inhabitants emigrated to Granada. In 403/1012 Zāwī declared his independence and made Granada his capital. Henceforward Elvira declined though there was still a fortress there as late as 891/1486. The ruins are still visible and the name survives in the Sierra de Elvira and the Puerta de Elvira at Granada.

The name Ilbīra as that of the region of which the capital was Granada continued in use long after the decline of Elvira town. See further gharnāṭa.

AL-ILBĪRĪ [see abū isḥāḳ al-ilbīrī].

ILČI [see elči].

ILDEÑIZ, Shams al-Dīn (d. ? 571/1175-6), Atabeg of Ādharbāydjān and founder of the short-lived dynasty of the Ildeñizids (see next article).

By birth a Ḳïpčaḳ Turk, Ildeñiz began his career as a slave of the Saldjūḳ sultan Maḥmūd's vizier Kamāl al-Dīn al-Simīrūmī (assassinated 515 or 516/1121 or 1122); he then passed into the service of Sultan Mas'ūd (529/1134-547/1152), who appointed him governor of Arrān. In this remote province, where incursions from Georgia made essential the maintenance of a strong army, Ildeñiz became one of the most powerful *amīrs* of the Saldjūḳs, and by about 540/1146 had made himself the virtually independent ruler of Ādharbāydjān. Sultan Mas'ūd gave him in marriage Mu'mina Khatun, the widow of his brother and predecessor Toghrïl, and this marriage led him to intervene, in the quarrels over the succession to the sultanate after Mas'ūd's death (547/1152), on behalf of his stepson Arslān b. Toghrïl. In 556/1161 he marched from Hamadān, deposed Sulaymān Shāh, and installed Arslān as sultan. The grateful Arslān accorded the rank of Atābak-i a'ẓam to Ildeñiz, who now turned to securing the position of his protégé. The *amīr* of Rayy, Inanč, was temporarily won over by the marriage of his daughter to Ildeñiz's son (and successor) Pahlawān, but later attempted, in alliance with the *amīrs* of Fārs and Ḳazwīn, to depose Arslān in favour of his brother Muḥammad. The dissidents were defeated by Ildeñiz, but Inanč made his escape to Rayy; he gained the support of the Khwārazmshāh Il-arslan, but in 564/1169 was forced to flee upon the approach of Ildeñiz, who, with the help of Inanč's vizier Sa'd al-Dīn al-Ashall, procured his assassination. Ildeñiz then accompanied the Sultan to Iṣfahān and obtained the submission of the atabeg of Fārs, Zangī. He was obliged to return to Ādharbāydjān by the news that the Georgians had sacked Dwin [*q.v.*] (557/1162), whereupon a coalition of Muslim rulers, led by Ildeñiz, invaded Georgia and defeated King Giorgi [see kurdj]. Back at Hamadān, he received word that the Khwārazmshāh was planning to invade Khurāsān; in spite of a warning from Ildeñiz that these territories belonged to the Saldjūḳ sultan, Il-arslan marched against Nīshāpūr; Ildeñiz confronted him at Bisṭām, but no open hostilities occurred and Il-arslan withdrew. The death of Il-arslan in 568/1172 removed the threat from that quarter; so that by his death, probably in 571/1175-6, Ildeñiz was the undisputed *de facto* master of the 'Irāḳī territories of the Saldjūḳid empire. He was buried at Hamadān, beside a *madrasa* which he had founded.

The above is an abridgement of the article Ildeñiz in *IA*, fasc. 50, 961-4. (Mirza Bala)

ILDEÑIZIDS or **ELDIGÜZIDS,** a line of Atabegs or Turkish slave commanders who governed most of northwestern Persia, including Arrān, most of Ādharbāydjān, and Djibāl, during the second half of the 6th/12th century and

the early decades of the 7th/13th. Down to the death in battle in 590/1194 of Ṭoghrïl b. Arslan, last of the Great Saldjūḳs of Iraq and Persia, the Ildeñizids ruled as theoretical subordinates of the Sultans, acknowledging this dependence on their coins almost down to the end of the Saldjūḳs. Thereafter, they were in effect an independent dynasty, until the westward expansion of the Mongols and the Khwārazm-Shāhs weakened and then brought the line to its close. All the Ildeñizid Atabegs issued coins of their own.

GENEALOGICAL TABLE OF THE ILDEÑIZIDS

1. Shams al-Dīn Ildeñiz
- 2. Nuṣrat al-Dīn Djahān-Pahlawān Muḥammad
  - 4. Ḳutlugh Ïnanč
  - 5. Nuṣrat al-Dīn Abū Bakr
    - Pīshkīn
  - 6. Muẓaffar al-Dīn Özbeg
    - Ḳïzïl Arslan Khāmūsh
  - 7. Amīr-i Amīrān ʿUmar
- 3. Muẓaffar al-Dīn Ḳïzïl Arslan ʿUthmān

1. Political history. The career of Shams al-Dīn Ildeñiz himself is discussed above, s.v. Ildeñiz. His name, most frequently spelled in the sources *ʾyldkz*, has been traditionally rendered "Ildegiz" or "Ildeniz", but V. Minorsky (*Studies in Caucasian history*, 92, n. 2) regarded a derivation from Turkish *él/il* + *deniz* as "modernizing and impossible" and suggested, on the basis of the transcription of the name in Georgian and Armenian sources, the form Eldigüz. The links which he had forged with the Saldjūḳ royal family—his marriage with Sultan Ṭoghrïl b. Muḥammad b. Malik-Shāh's widow Muʾmina Khātūn and his support for the succession of Arslan b. Ṭoghrïl—gave his offspring a commanding position in northwestern Persia, which they were for a considerable time able to maintain against rival powers.

Ildeñiz's eldest son the Atabeg Nuṣrat al-Dīn Djahān-Pahlawān Muḥammad (571-82/1175-87) was Sultan Arslan's half-brother and succeeded not only to his father's lands of Arrān and those parts of Ādharbaydjān not held by the Aḥmadīlīs [*q.v.*] of Marāgha, but also to Djibāl, including Hamadhān, Iṣfahān and Ray; his brother Ḳïzïl Arslan ʿUthmān was established in Tabrīz as subordinate ruler. Pahlawān Muḥammad continued his father's policy of holding the Sultan in tutelage, and ʿImād al-Dīn plausibly asserts that Pahlawān Muḥammad poisoned Arslan in 571/1176 when he attempted to break free from the Atabeg's control; the latter now simply set up Arslan's young son Ṭoghrïl as Sultan and thereby maintained his grip on real power in the state. A feature of Pahlawān Muḥammad's Atabegate, particularly stressed by Rāwandī and Ibn Isfandiyār, is that he raised to positions of great power in his territories a body of his personal slave commanders, the *Pahlawāniyya*, as Ibn al-Athīr calls them. They were seemingly meant as a basis of support for Pahlawān Muḥammad's children after he was dead, but they seem in practice to have been more a divisive than a cohesive factor, contributing much to the confusion of western Persia during the last years of Sultan Ṭoghrïl's reign and the ensuing period (see Luther, *Rāwandī's report on the administrative changes of Muḥammad Jahān Pahlavān*).

When Pahlawān Muḥammad died in 582/1187, he was followed in the Atabegate by his childless brother Muẓaffar al-Dīn Ḳïzïl Arslan ʿUthmān (582-7/1187-91), in accordance with the Turkish practice of the seniorate. However, Pahlawān Muḥammad also divided out his personal territories amongst his four sons, who were to be subordinate rulers under Ḳïzïl Arslan's general supervision. This arrangement proved to be an unhappy one. The *ghulāms* whom Pahlawān Muḥammad had appointed to influential positions were inevitably reluctant to relinquish power. Pahlawān Muḥammad's widow Ïnanč Khātūn, daughter of the governor of Ray Ïnanč Sonḳor, was equally ambitious, and supported the claims of her own two sons, Ḳutlugh Ïnanč and Amīr-i Amīrān ʿUmar, against the other two offspring of Pahlawān Muḥammad by slave mothers. Sultan Ṭoghrïl's relations with the adroit and statesmanlike Pahlawān Muḥammad had been reasonably amicable, but Ḳïzïl Arslan's attitude was much less sympathetic, and he began to treat the Sultan with indignity. Squeezed between the Ildeñizid and the forces of the revived ʿAbbāsid Caliphate (Ḳïzïl Arslan had summoned the aid of troops under al-Nāṣir's vizier ʿUbayd Allāh b. Yūnus), Ṭoghrïl's attempt to assert his freedom of action eventually failed after some initial successes, and in 586/1190 he was captured at Hamadhān and imprisoned by Ḳïzïl Arslan in Ādharbaydjān. When Ṭoghrïl had first marched against him, Ḳïzïl Arslan had set up a minor Saldjūḳ prince, Sandjar b. Sulaymān Shāh, as rival Sultan. Now, with Caliphal approval, he passed to claiming the Sultanate of ʿIrāḳ and Persia for himself; from this point onwards, his coins acknowledge only the Caliph, and not the Sultan (see E. von Bergmann, *Zur muhammedanische Münzkunde*, in *ZDMG*, xxiii (1869), 251-6). He was however, murdered a year later, possibly by Ïnanč Khātūn, whom he had married on his brother's death according to the custom of the levirate (see Houtsma, *Some remarks on the history of the Saljuks*, 142-4).

Ïnanč Khātūn's son Ḳutlugh Ïnanč (587-91/1191-5) had to defend his inheritance against his half-brother Abū Bakr, who attacked southwards from Arrān, and against Sultan Ṭoghrïl, now released from captivity and eager for revenge. By invoking the Khwārazm-Shāh Tekish's help, Ḳutlugh Ïnanč introduced a new and dangerous power into northwestern Persia, one which was to be ultimately fatal for his own family (see below). After the final collapse of the Saldjūḳ Sultanate in 590/1194, Tekish made Ḳutlugh Ïnanč his governor over Djibāl.

Nuṣrat al-Dīn Abū Bakr b. Pahlawān Muḥammad (591-607/1195-1210) had maintained his position in

the old Ildeñizid heartland of Ādharbāydjān during Kutlugh Inanč's Atabegate, and he now continued to rule there unchallenged. His authority in Djibāl, on the other hand, was only nominal, real power being in the hands of the *ghulām* commanders of the *Pahlawāniyya*, whilst the Caliph al-Nāṣir controlled such towns as Iṣfahān, Kazwīn and Hamadhān. Much of Abū Bakr's energy had to be concentrated on his family's old rivals, the Aḥmadīlīs of Marāgha. ʿAlāʾ al-Dīn Kara Sonkor, patron of the poet Niẓāmī, in 602/1205-6 attempted to overthrow Abū Bakr, but Abū Bakr managed to repel the Aḥmadīlī attack and actually take their capital; three years later, almost all the Aḥmadīlī territories passed under Eldigüzid control.

Muẓaffar al-Dīn Özbek b. Pahlawān Muḥammad (607-22/1210-25) ruled sporadically in northern Djibāl after 600/1203-4, though the Ildeñizid *ghulāms* exercised power there for much of the time, and in 614/1217 Özbek finally lost Iṣfahān. He succeeded in Ādharbāydjān on Abū Bakr's death in 607/1210. When the Mongols appeared before Tabrīz in 617/1220, Özbek paid them an indemnity. Endeavours to ally with the Georgians and the Ayyūbid ruler of Khilāṭ were without result, and in the next year he had to pay a further indemnity to the Mongols. In the last years of his reign, Özbek faced a Georgian invasion, threatening movements from the Khwārazmians and the possibility of further Mongol raids. Finally, it was the Khwārazm-Shāh Djalāl al-Dīn Mingburnu who gave the *coup de grâce* to the Eldigüzid dynasty; in 622/1225 Tabrīz was taken and Özbek deposed and imprisoned. The only remaining Eldigüzid of historical significance is Özbek's deaf-mute son Kïzïl Arslan Khāmūsh ("the silent"), who was married to an Aḥmadīlī princess and who eventually rallied to the Shāh Djalāl al-Dīn's side.

2. Culture. The Turkish Ildeñizids shared to the full in the Perso-Islamic civilization of their period. At this time, the courts of northern Persia, including those of Sharwān, Arrān and Ādharbāydjān, were particularly attractive to poets and literary men. Ildeñiz was famed for his piety and patronage of scholars; he built and endowed with *awkāf* the great *madrasa* in Hamadhān where he was ultimately buried. Even the notorious drunkard Abū Bakr was known for his attention to the *ʿulamāʾ* and his zeal for building mosques and *madrasas*. Dawlatshāh stresses the great number of poets in the Ildeñizid court circle, and mentions specifically Athīr al-Dīn Akhsīkatī, Mudjīr al-Dīn Baylakānī, Ẓahīr al-Dīn Fāryābī, Niẓāmī, Kiwāmī, Muṭarrizī and Yūsuf Fuḍūlī; to these, ʿAwfī adds ʿImād ad-Dīn Ghaznawī and Shafrūh Iṣfahānī, the eulogists of Pahlawān Muḥammad. Of these poets, the rôles of Mudjīr al-Dīn, the pupil of Khākānī, at Kïzïl Arslan's court, and of Ẓahīr al-Dīn at the courts of Kïzïl Arslan and Abū Bakr, are especially noteworthy. Niẓāmī made one of his rare journeys outside his native Gandja to converse with Kïzïl Arslan, and no fewer than four of the *Khamsa* are connected with the Ildeñizids: the *Makhzan al-asrār* was dedicated to Ildeñiz; *Khusraw u Shīrīn* to Sultan Ṭoghrïl b. Arslan, Pahlawān Muḥammad and Kïzïl Arslan (from the last of whom the poet received the grant of four villages as a reward); and the first version of the *Iskandar-nāma* and the *Haft paykar* were dedicated to Abū Bakr (on the problems connected with the dedication of the two parts of the *Iskandar-nāma*, see Minorsky, *Caucasica II*, 872-3).

3. Conclusion. The historical significance of the dynasty is twofold. Firstly, the decay of the Saldjūks enabled the Ildeñizids to convert the governorship of northwestern Persia, which was theoretically a reward for exercising the position of Atabeg over a Saldjūk prince, into hereditary rule. Whilst such strong personalities as Ildeñiz and Pahlawān Muḥammad directed the family's fortunes, they enjoyed *de facto* independence, at the same time deriving such prestige as remained from the position of Atabegs to the Saldjūk family. But their weaker successors found themselves only one element amongst many struggling for hegemony in northern and western Persia—rival Turkish amirs, the ʿAbbāsid Caliphs, the Khwārazm-Shāhs, and on the western fringes, the Ayyūbids, with whom Pahlawān Muḥammad had diplomatic brushes over the heritage of the Shāh-Armanids of Khilāṭ (see for Ayyūbid policy on the borders of Armenia and Ādharbaydjān, V. Minorsky, *Studies in Caucasian history*, 150 ff., and F. Sümer, *İA*, art. *Pehlivan*)—and outside Ādharbaydjān their authority was frequently disputed.

Secondly, the consolidation of Ildeñizid power coincided with a resurgence of military expansionism by the Georgian Christians, whose territories marched with Muslim Sharwān and Arrān. The defence of the Caucasian frontiers had been one of Ildeñiz's special concerns, and the efforts of the Atabeg and other local rulers like the Sharwān-Shāhs and the Shāh-Armanids had slowed down the dynamic of the Bagratid King Giorgi III (1156-84). However, the Georgians became again active during the reign of Queen Tamara (1184-1212). In her time, they interfered frequently in the affairs of the Ildeñizids and Sharwān-Shāhs, aiding rival Ildeñizid princes in the period after Pahlawān Muḥammad's death, until Abū Bakr in 602/1205-6 endeavoured to safeguard his position by marrying a Georgian princess. The Ildeñizids were only barely able to contain the Georgians, and not until the appearance of the Mongols in the Caucasus were Georgian energies quelled.

ILDJĀʾ or Taldjiʾa, a method of protection by a superior of his inferiors, on which see the articles ḍayʿa and ḥimāya, adding to the bibliography Y. Linant de Bellefonds, *Volonté interne et volonté déclarée en droit musulman*, in *Revue Intern. de Droit Comparé*, x (1958), 513 (*taldjiʾa* occurring in law as a fictitious sale with the object of gaining protection against confiscation, taxes, etc.; but the question arises of how the property is to be regained once the danger is over).

(Cl. Cahen)

ILEK-KHĀNS or **ĶARAKHĀNIDS**, a Turkish dynasty which ruled in the lands of Central Asia straddling the T'ien-shan Mountains, *scil.* in both Western Turkestan (Transoxania or Mā warāʾ al-Nahr) and in Eastern Turkestan (Kāshgharia or Sin-kiang), from the 4th/10th to the early 7th/13th centuries.

1. Introductory. The name "Ilek-Khāns" or "Ilig-Khāns" stems from 19th century European numismatists. The element *Ilek/Ilig* (known in Hunnish, Magyar and Uyghur Turkish onomastic) is commonly found on the dynasty's coins, but is by no means general. The complete phrase *Ilek-Khān/Ilig-Khān* is an erroneous conflation: *Ilek/Ilig* and *Khān/Khāķān/Ķaghan* denoted two distinct ranks in the ruling hierarchy of the dynasty, the former being subordinate to the latter (cf. O. Turan, *Ilig unvani hakkında*, in *TM*, vii-viii (1940-2), 192-9). The name "Ķarakhānids" again stems from 19th century orientalists and numismatists. *Ķara* (literally "black", but also used in early Turkish to designate the prime compass point of the north, hence acquiring the meaning "principal", "chief", cf. O. Pritsak, *Qara, Studie zur türkischen Rechtssymbolik*, in *Zeki Velidi Togan'a armağan*, Istanbul 1950-5, 239-63) occurs in the titulature of the Great Khāns of the dynasty. Contemporary Islamic sources often simply refer to the dynasty as "the Khāns" (*al-Khāķāniyya, al-Khāniyya*); sometimes the phrase *Āl-i Afrāsiyāb* "House of Afrāsiyāb" is used, connecting the dynasty with the king of the Turanians in the Iranian national epic (= the Alp Er Tonga of Turkish lore, cf. Barthold, *Zwölf Vorlesungen* . . ., repr. 1962, 86-7, Fr. tr., *Histoire des Turcs d'Asie Centrale*, Paris 1945, 69-70).

In his *EI*[1] article, Barthold wrote that the historical references to the dynasty were very scanty, and Zambaur in his *Manuel*, 206, confessed that his section on the Ķarakhānids, "la seule grande dynastie musulmane dont la généalogie est restée obscure", was in large measure conjectural. The sources are not perhaps quite so scanty as Barthold supposed, and much light has now been thrown on the Ķarakhānids by O. Pritsak, who has given the first connected account of the dynasty; the historical section which follows here owes much to his work.

2. Historical. The Turkish tribal origins of the Ķarakhānids still remain obscure. Pritsak is probably correct in attaching them to the great tribal group of the Ķarluķ [*q.v.*], who formed part of the confederation of the Orkhon Turks or T'u-chüeh, and then after 742 A.D., part of the tripartite confederation of the Ķarluķ, Uyghur and Basmīl which succeeded to the T'u-chüeh in Mongolia (*Von den Karluk zu den Karachaniden*, 270 ff.). In the 3rd/9th century the Ķarluķ began to clash with the Sāmānids on the northern fringes of Transoxania, and the Bilge Kül Ķadīr Khān who fought Nūḥ b. Asad is seemingly the first Ķarluķ and Ķarakhānid ruler whose name is definitely known. The political and social structure which was to be characteristic of the confederation gradually becomes discernible. As amongst certain other Altaic peoples, there was a system of double kingship. The Great Khān ruled directly over the eastern part of the confederation, with his court at the encampment of Balāsāghūn or Ķara Ordu in the Ču valley of Semirečye. The Associate Khān was under the supreme authority of the Great Khān, and also ruled directly over the western lands, with his encampment at Talas or Kāshghar. Beneath these two Khāns was a complicated hierarchy of subordinate Khāns and regional governors of the Ķarakhānid family. These rulers all bore Turkish regnal names and titles, including a totemistic one (*onghun*), and after their conversion to Islam they acquired Muslim names and patronymics also. The Turkish titles changed as members of the family moved up in the hierarchy. The disentangling of the genealogy and chronology of the dynasty, on the bases both of literary sources and of coins, is accordingly very difficult.

Military activity along the Sāmānid-Ķarakhānid borders, and commercial intercourse, led to the conversion of the Ķarakhānids in the course of the 4th/10th century. Much of this proselytizing work was doubtless done by dervishes and other Muslim enthusiasts; the name of one of these, Abu 'l-Ḥasan Muḥammad Kalimātī of Nīshāpūr, is known (cf. Samʿānī, *Ansāb*, f. 486a). The head of the western Khānate, Satuķ Bughra Khān (d. 344/955), became a Muslim and assumed the name of ʿAbd al-Karīm, but the eastern Khānate was not Islamized till some time later, when Khotan and other towns of eastern Turkestan received the new faith. Ibn al-Athīr's report (viii, 396) that in 349/960 200,000 tents of Turkish tribesmen became Muslim is doubtless connected with this process. Ķarakhānid pressure southwards on the fertile and attractive lands of the Syr Darya basin was an important factor in the downfall of the Sāmānids at the end of the 4th/10th century. Hārūn or Ḥasan Bughra Khān in 382/992 occupied for a while the Sāmānid capital of Bukhārā. The Ilig Naṣr b. ʿAlī of Özkend definitively took over Bukhārā in 389/999, and divided the Sāmānid dominions with Maḥmūd of Ghazna. However, the Ilig did not for some time to come accept the Oxus as the boundary between the two Turkish empires. Whilst Maḥmūd was pre-occupied by an expedition against Multān in India, he invaded Khurāsān in 396/1006, and the situation was only restored by Maḥmūd's hasty return. It was during these years that the western Ķarakhānids recognized fully the authority of the ʿAbbāsid Caliphs; this can be seen in the legends on their coins, where we often find the phrase *Mawlā Amīr al-Muʾminīn* after the Khāns' names. The early Khāns were further noted for their strict piety, expressed, for instance, in their avoidance of wine-drinking. The Ķarakhānids thus followed the generality of Turkish dynasties in accepting the orthodox Sunnī form of Islam, together with the Ḥanafī law-school.

What has been said above about the internal structure of the Ķarakhānid confederation shows how these dominions were never ruled as a unitary state,

but instead as a loose, tribal grouping. In the early 5th/11th century, two distinct lines emerged within the dynasty. The first was that of the descendants of Satuḳ Bughra Khān's grandson ʿAlī (the "ʿAlids" in Pritsak's nomenclature); these supplied the Great Khāns of the western Khānate after the split within the dynasty described below. The second line was that of the descendants of Satuḳ Bughra Khān's other grandson Hārūn or Ḥasan Bughra Khān (the "Ḥasanids"); these supplied the Great Khāns for the eastern Khānate.

The system whereby various members of the family ruled simultaneously in different parts of the Ḳarakhānid dominions inevitably led to disputes and rivalries. The Ghaznavid historian Bayhaḳī already speaks of warfare amongst "the Khāns and the Ilig" in the middle years of Maḥmūd of Ghazna's reign, and the Sultan encouraged these divisions in the hope of weakening the solidarity of the Ḳarakhānids. In particular, he allied in 416/1025 with Yūsuf Ḳadïr Khān b. Hārūn Bughra Khān of Khotan and Kāshghar (and after 417/1026, of the capital Özkend) against their mutual enemy, Yūsuf's brother ʿAlī, known as ʿAlī Tigin (see on the latter, O. Pritsak, *Karachanidische Streitfragen.* 3. *Wer war ʿAli Tigin?*, 216-24). ʿAlī Tigin plays a central part in the history of Transoxania at this time; his power had a secure base in the rich cities of Bukhārā and Samarḳand, and in alliance with the Saldjūḳ bands of Arslan Isrāʾīl, Ṭoghrïl and Čaghrï, he was the Ghaznavids' implacable foe until his death in 425/1034. ʿAlī Tigin's sons, representing the Ḥasanid line, were not long able to retain their father's principality in Transoxania once he was dead. The whole region was gradually conquered by two brothers of the ʿAlid line, Muḥammad ʿAyn al-Dawla and Böri Tigin, sons of the Ilig Naṣr. Muḥammad proclaimed himself Great Khān, and Böri Tigin became his Associate Khān (433/1041-2).

From this date onwards, there were two distinct Ḳarakhānid Khānates (cf. O. Pritsak, *Karachanidische Streitfragen.* 4. *Zwei Karachanidische Kaganate*, 227-8). The eastern one comprised the original Ḳarakhānid territories of Semirečye, eastern Farghāna and Kāshgharia, with Balāsāghūn or Ḳara Ordu as its capital and with Kāshghar as an important religious and cultural centre. The western one comprised Transoxania and western Farghāna as far as Khudjanda, with first Özkend and then Samarḳand as its capital. The intermediate zone of the middle Syr Darya was frequently a subject of contention between the two branches.

The eastern branch of the Ḳarakhānids, the Ḥasanids, soon conquered the whole of Farghāna. Their resources in manpower were augmented by the conversion to Islam of large numbers of pagan Turks from the outer steppes; thus in 435/1043-4 10,000 tents of Turks who nomadized "between Bulghār and Balāsāghūn" became Muslims. The Great Khān Muḥammad b. Yūsuf Ḳadïr Khān was probably the grandfather of the pioneer Turkish lexicographer Maḥmūd Kāshgharī [*q.v.*]; Maḥmūd's father was Amīr of the district of Barskhān in Semirečye (cf. O. Pritsak, *Mahmud Kâşgari kimdir?*, in *TM*, x (1951-3), 243-6). During these years, Kāshghar grew as a centre for cultural and religious life, and it was there that Yūsuf Khāṣṣ Ḥādjib [*q.v.*] wrote his *Ḳutadghu bilig*, dedicating it to the Khān Ḥasan b. Sulaymān (467-96/1074-5 to 1102-3). In particular, Kāshghar speedily became the chief starting-point for the spread of Muslim faith and culture over the Tarim basin and towards the frontiers of Mongolia and China.

Ḥasan Khān's son and successor Aḥmad held in check the Western Liao or Ḳara Khitāy [*q.v.*], a people who were probably of Mongol origin and who were at this time being forced to migrate westwards after the downfall of their two centuries' dominion in northern China. But after Aḥmad's death, the eastern Ḳarakhānids were no longer able to stem the Ḳara Khitāy advance. Balāsāghūn fell under Ḳara Khitāy control and became their capital. Little is known of the eastern Ḳarakhānid Khāns of the later 6th/12th century; they were willy-nilly vassals of the Ḳara Khitāy Gür-Khāns and now had their capital in Kāshghar. When the Nayman Mongol adventurer Küčlüg overthrew the Gür-Khān and established his ephemeral empire in Semirečye, he released the Ḳarakhānid Muḥammad II from his previous detention at the Ḳara Khitāy court, and restored him to Kāshghar. Unfortunately, an internal revolt brought about the death of this last eastern Ḳarakhānid before he could re-assume the throne (607/1210-11). Kāshghar passed into Küčlüg's hands and the eastern branch of the dynasty was finished.

The history of the western Khānate is better known that that of its eastern counterpart, for the Islamic historical sources deal more fully with Transoxanian events, these being frequently intertwined with happenings in Khurāsān. Ibrāhīm Tamghač Khān, the former Böri Tigin (*ca.* 444-60/*ca.* 1052-68), secured a leading place in the "Mirrors for Princes" and *adab* literature as the exemplar of a just and pious ruler, although the historical sources show that Ibrāhīm was at the same time involved in many clashes with the over-powerful and ambitious class of *ʿulamāʾ* in Transoxania. A serious external threat to these Ḳarakhānids arose from the rise of the Great Saldjūḳ empire, which in the second half of the 5th/11th century was at its apogee under Alp Arslan and Malik Shāh [*qq.v.*]. Ibrāhīm had already found it impossible to retain in face of Saldjūḳ pressure the upper Oxus provinces of Khuttal and Čaghāniyān, which he had earlier conquered from the Ghaznavids. His son Shams al-Mulk Naṣr (460-72/1068-80), famous for the splendour of his court and his patronage of scholars, had to endure a Saldjūḳ invasion in 465/1072-3; in the following year, he had to sue for peace at Samarḳand with Malik Shāh, and to acknowledge Saldjūḳ suzerainty over Transoxania. Tension between the throne and the *ʿulamāʾ* was now a permanent feature of the western Khānate. In 482/1089 the religious classes called in Malik Shāh against Aḥmad Khān b. Khiḍr, and the Sultan penetrated as far as Özkend; soon afterwards, the *ʿulamāʾ* secured Aḥmad's deposition and execution on a charge of sympathy for the Ismāʿīlīs. The next Khāns seem to have been nominated by the Saldjūḳs. Muḥammad II b. Sulaymān (497-524/1102-30) was Sultan Sandjar's nephew and son-in-law, but his reign was much troubled by the activities of rival Ḳarakhānid claimants.

Muḥammad's son Maḥmūd II was also Sandjar's nephew and was Great Khān from 526/1132 to 536/1141. It was he who came up against the Ḳara Khitāy. After reducing the eastern Ḳarakhānids to submission, the Ḳara Khitāy marched westwards. In the great battle of the Ḳatwān Steppe in 536/1141, Sandjar and his Ḳarakhānid protégé were disastrously defeated. Maḥmūd fled to Khurāsān, leaving the Gür-Khān to take over Transoxania. The Gür-Khān then set up various Ḳarakhānid princes as his

puppets, although the real power in Bukhārā now lay with the Sunnī religious leaders or *Ṣudūr* of the Burhān family (see on these O. Pritsak, *Āl-i Burhān*, in *Isl.*, xxx (1952), 81-96), who collaborated closely with the pagan but tolerant Ḳara Khitāy. Maḥmūd II Khān remained in Khurāsān till his death in 559/1164; after Sandjar's capture by the Ghuzz he was acclaimed as Amīr of Khurāsān by the leaderless Saldjūḳ army there (the famous poem, "The tears of Khurāsān", which lamented the ravages of the Ghuzz, was addressed by the Saldjūḳ poet Anwarī to Maḥmūd at this time), and he re-assumed this position after Sandjar's death in 552/1157.

With the deaths of Maḥmūd and his sons, the ʿAlid branch of the Ḳarakhānids came to an end, and rule over the western Khānate passed to the Ḥasanids or descendants of ʿAlī Tigin. These Ḥasanid Khāns were, like their predecessors, much troubled internally by the turbulence of their Ḳarluḳ soldiery and tribesmen. Externally, they came to be overshadowed by the dynamic and ambitious Khʷārazm-Shāhs of the line of Atsïz. The last Ḳarakhānid to rule over an exiguous principality around Bukhārā and Samarḳand was ʿUthmān Khān b. Ibrāhīm. Squeezed between powerful neighbours, he vacillated between support for the Khʷārazm-Shāh ʿAlāʾ al-Dīn Muḥammad and the Ḳara Khitāy Gür-Khān, marrying princesses from both houses; but after the anti-Khʷārazmian rising in Samarḳand of 607/1210-11, the Shāh conquered the city and executed ʿUthmān, thus ending Ḳarakhānid rule in Transoxania.

In Farghāna, Ḳarakhānid princes lingered on for a few more years. It seems that a separate line had arisen here, centred on Özkend, after the Ḳara Khitāy invasion of 536/1141. One of these Khāns, Arslan, in 608/1211-12 threw off Ḳara Khitāy control and recognized the rising power of Čingiz-Khān. The line apparently persisted as governors of Farghāna under the first Mongol Khāns, but virtually nothing is known of them.

3. Cultural. Like the Saldjūḳ Sultans, the Ḳarakhānid Khāns gradually assimilated themselves to the Perso-Islamic cultural and governmental traditions. The Khān's red ceremonial parasol or *čatr* is mentioned in the *Ḳutadghu bilig*. Such pious and just rulers as Ibrāhīm Tamghač Khān and Shams al-Mulk Naṣr conformed to the ideal of a Muslim ruler as laid down in the "Mirrors for Princes". Shams al-Mulk expended much effort on public buildings; he built two famous caravanserais (each called, after the royal builder, *Ribāṭ-i Malik*), reconstructed the Friday mosque of Bukhārā and laid out the palace of Shamsābād near that city. Muḥammad II b. Sulaymān was also a great builder, and restored the citadel of Bukhārā. Such traditional duties as the defence of the frontiers of the *Dār al-Islām* were undertaken by the Khāns, and we hear of Muḥammad II leading expeditions against the "infidels" of the steppes, probably the Ḳïpčaḳ. Together with this extension of the faith by arms, the 6th/12th century was important for the spread of Islam within the Ḳïpčaḳ steppe by peaceful means. The Ṣūfī Shaykh Aḥmad Yasawī [*q.v.*] of Sayram, and the order of the Yasawiyya which he founded, had a great influence in both eastern and western Turkestan and in the adjacent steppes; this may have been partly because the order in many ways adapted itself to and incorporated in itself certain pre-Islamic religious practices (cf. Köprülüzade Mehmed Fuad, *Türk edebiyatïnda ilk mutaṣavvïflar*, abridged Fr. tr. by L. Bouvat in *RMM*, xliii (1921), 239 ff., and idem, *Influence du chamanisme turco-mongol sur les ordres mystiques musulmans*, Istanbul 1929).

It has been noted above that the Ḳarakhānids adopted enthusiastically the Ḥanafī law-school, and Transoxania was to become a stronghold of the Ḥanafī *madhhab* and the Māturīdī *kalām*, as the sheer volume of legal and theological literature emanating from the region attests. How great a part direct encouragement by the Khāns played here is uncertain, but the stimulus from them may well have been significant. In the *waḳfiyya* for a *madrasa* (which was to include a mosque and tomb for the Khān himself) in the Bāb al-Djadīd quarter of Samarḳand, the founder Ibrāhīm Tamghač Khān stipulated that the *faḳīh* who was to teach there and all the students were to be of the school of Abū Ḥanīfa; the date of the foundation, 458/1066, is further interesting in suggesting that the wave of *madrasa*-building associated with Niẓām al-Mulk and other Saldjūḳ dignitaries may have had a counterpart in the Ḳarakhānid dominions. Ibrāhīm's orthodox zeal is further shown in his suppression of an outbreak of Ismāʿīlī activity in his Khānate in 436/1044-5, when Fāṭimid missionaries persuaded many of the local people to give allegiance to their Caliph in Cairo, al-Mustanṣir. But the accusations of Ismāʿīlī sympathies brought against Aḥmad b. Khiḍr Khān in 488/1095 seem to have been purely a pretext raised by the Khān's unscrupulous opponents, and they do not reflect any general penetration of Transoxania by the Ismāʿīlīs of Persia.

The Khāns encouraged circles of scholars and literary men at their courts, and the judgement of Grenard, "une dynastie de barbares grossiers et ignorants", is far too sweeping. Niẓāmī ʿArūḍī Samarḳandī (*Čahār maḳāla*, ed. Browne, 28, 46, revised tr. 30, 52; cf. Browne, ii, 335-6) cites thirteen poets who glorified the Āl-i Khāḳān, as he calls them; he particularly praises Khiḍr Khān b. Ibrāhīm (472-3/1080-1) as a munificent patron, in whose reign ʿAmʿaḳ of Bukhārā was laureate or *Amīr al-Shuʿarāʾ* and Rashīdī of Samarḳand "Prince of poets" or *Sayyid al-Shuʿarāʾ* (see further ʿAwfī's section on the poets of Transoxania in *Lubāb al-albāb*, ed. S. Nafīsī, Tehrān 1335/1956, 375-98, and Dawlatshāh in *Tadhkirat al-shuʿarāʾ*, ed. M. ʿAbbāsī, Tehrān 1337/1958, 73-6, on ʿAmʿaḳ).

With all this, the Ḳarakhānids retained their strong Turkishness, and their age is of prime importance for the creation of a Turkish cultural consciousness and, in particular, for the creation of the first Turkish Islamic literature. Here the regions of Semirečye and Kāshgharia, now becoming strongly Turkicized, were prominent, rather than Transoxania, where Persian culture still retained pride of place. Cultural influences from the Uyghurs and even, to some extent, from distant China, were strong in these eastern Ḳarakhānid provinces. The region of the Tarim basin, which included Kāshghar and Khotan, was often attributed by Muslim geographers to the marches of China, and indeed it had often been included within the Chinese empire. Hence we find that Yūsuf Ḳadïr Khān, after he had occupied and islamized Khotan, called himself *Malik al-Mashriḳ wa'l-Ṣīn* "King of the East and China". This title is further found on coins minted by his distant kinsman Ibrāhīm Tamghač Khān and dating from after 451/1059, and in the *ʿalāma* or *validatio* of a *waḳfiyya* for a hospital founded by the Khān in 458/1066 (see M. Khadr in *JA* (1967), 320, 324, and

also the anecdote concerning the titles of the Ḳarakhānids and Maḥmūd of Ghazna's jealousy over them, given in Niẓām al-Mulk's *Siyāsat-nāma*, ch. xl. and discussed by Bosworth in *Oriens*, xv (1962), 225-6). The legends of Ḳarakhānid coins also show that the Uyghur script was used side-by-side with the Arabic. The *Ḳutadghu bilig* of Yūsuf Khāṣṣ Ḥādjib [*q.v.*] was completed at Kāshghar in 462/1069-70 and dedicated to the then ruling Khān. Four years later, Maḥmūd Kāshgharī [*q.v.*] completed his *Dīwān lughāt al-Turk*, with the express aim of demonstrating that the Turkish language was comparable to Arabic in its richness. The didactic nature of early Turkish poetry was continued at the end of the Ḳarakhānid period in the *ʿAtabat al-ḥaḳāʾiḳ* of Aḥmad b. Maḥmūd; the existence of this work shows that the *Ḳutadghu bilig* was by no means an isolated phenomenon. Shaykh Aḥmad Yasawī (d. 562/1166) left behind a collection of vernacular Turkish verse, the *Dīwān-i ḥikmet*, although this is now regarded as of doubtful authenticity.

4. General conclusions. The limitations of source material make it difficult to assess the general historical significance of the Ḳarakhānids and difficult to evaluate the changes which their rule brought to Transoxania and the adjacent lands. As with the Saldjūḳs, we have the establishment of a Muslim Turkish power, not by Turkish slave commanders (as in the case of the Ghaznavids) but by tribal leaders and their hordes. Compared with the preceeding régime of the Sāmānids, the Ḳarakhānids brought about a decentralization of administration and a fragmentation of authority in Transoxania. One of the continuators of the historian of Bukhārā, Narshakhī, says that taxes were everywhere lightened when the Ḳarakhānids supplanted the Sāmānids, and it is further probable that indigenous landed classes there, the *dihḳāns*, enjoyed a resurgence of local power. The Khāns remained close to their Ḳarluḳ followers, who comprised such tribes as the Čigil and Yaghmā; certainly, in the time of Shams al-Mulk Naṣr the Khāns were nomadic during the summer months, residing in their capitals only during the harsh steppe winters. Unfortunately, we know little about changes in land utilization and tenure, although it seems likely that the influx of pastoral nomads did cause some changes. The mention during Shams al-Mulk Naṣr's reign of *ghuruḳs* or tracts of hunting ground established as crown preserves (Continuator of Narshakhī, tr. R. Frye, *The history of Bukhara*, Cambridge, Mass. 1954, 29, 125) may indicate a certain extension of pastoralization.

The Ḳarakhānid territories shared in the general economic trend, whose causes remain obscure, whereby silver coinage tended to be replaced by gold. Nevertheless, the dirham remained the standard coin circulating in Transoxania, and both dirhams *muʾayyadiyya ʿadliyya* and the slightly baser *ghiṭrīfiyya* ones circulated in the later 5th/11th century and the early 6th/12th century. These dirhams were, however, considerably debased in relation to the legal dīnār, and the currency was obviously somewhat unstable at this time; the testimony of the *waḳfiyya* for Ibrāhīm Tamghač Khān's *madrasa*, mentioned above, suggests a figure of 47 dirhams *muʾayyadiyya ʿadliyya* to the dīnār instead of the legally desirable figure of $14^{2}/_{3}$ (cf. Cahen, in *JA* (1967), 309-10, and Continuator of Narshakhī, tr. Frye, 36).

Yet despite the Khāns' identification with their tribal contingents, their positions as Muslim sovereigns over such rich and fertile regions as Transoxania and Farghānā inevitably tended to raise them above the general tribal level. As happened within the Great Saldjūḳ Sultanate, social and political tensions were generated. During the 6th/12th century, the Khāns were continually at odds with their military supporters, the Ḳarluḳ tribesmen, often with dangerous consequences; it was Maḥmūd II's appeal to Sandjar in 536/1141 for help against the Ḳarluḳ that determined the latter to call in the Ḳara Khitāy as a counterweight. It is not clear exactly how the Khāns fell foul of the religious classes in Bukhārā and Samarḳand, orthodox *ʿulamāʾ* and ʿAlids alike, but this too caused tensions which led at times to bloodshed and executions. The explanation is probably that the religious institution resented any extension of the central government's power, and were ready to join with the military against the throne. The situation here parallels that obtaining in the Sāmānid period, and is an instance of the essential continuity of the structure of power and society in Transoxania. Because of these tensions, and because of the fragmentation of power within the ruling dynasty itself, the Ḳarakhānids were ill-prepared to withstand such resolute opponents as the Ḳara Khitāy and the Khwārazm-Shāhs.

Bibliography: A detailed bibliography is given by O. Pritsak at the end of his article *Die Karachaniden* (see below), 63-8. The pre-Muslim history of the Ḳarluḳ can be pieced together from the diverse sources which bear on the history of Central Asia: Chinese, Uyghur, Orkhon Turkish, Byzantine, etc. For Muslim historians, the Ḳarakhānids inhabited only the periphery of the Islamic world, and they tend to mention the Khāns only so far as they impinge on the wider eastern Islamic world. There are, however, important notices in such authors as ʿUtbī, Gardīzī, Bayhaḳī, continuators of Narshakhī, Niẓām al-Mulk, Djamāl Ḳarshī, Nasawī, Djuwaynī and Ibn al-Athīr. Light is thrown on the culture of the Ḳarakhānid period by the works of such authors as Yūsuf Khāṣṣ Ḥādjib, Maḥmūd Kāshgharī, al-Kātib al-Samarḳandī, etc., and by the anecdotes given by Niẓāmī ʿArūḍī and ʿAwfī. Amongst secondary literature, the following should be noted: E. Sachau, *Zur Geschichte und Chronologie von Khwârazm*, in *SBAk. Wien*, lxxiv (1873), 319-30; Sir H. Howorth, *The northern frontagers of China. IX. The Muhammadan Turks of Turkestan from the tenth to the thirteenth century*, in *JRAS* (1898), 467-502; F. Grenard, *La légende de Satok Boghra Khan et l'histoire*, in *JA*, Ser. 9, xv (1900), 5-79; Barthold, *Turkestan*; idem, *Zwölf Vorlesungen über die Geschichte der Türken Mittelasiens*, repr. Hildesheim 1962, Fr. tr., *Histoire des Turcs d'Asie Centrale*, Paris 1945; idem, *A short history of Turkestan* and *History of the Semirechyé*, in *Four studies on the history of Central Asia*, i, Leiden 1956; R. Vasmer, *Zur Münzkunde der Qarāḫāniden*, in *MSOS As.*, xxxiii (1930), 83-104; O. Pritsak, *Karachanidische Streitfragen* 1-4. in *Oriens*, iii (1950), 209-28; idem, *Von den Karluk zu den Karachaniden*, in *ZDMG*, ci (1951), 270-300; idem, *Die Karachaniden*, in *Isl.*, xxxi (1953-4), 17-68 (Turkish version in *İA* Art. "*Karahanlılar*"); A. Z. V. Togan, *Zentral-asiatische Türkische Literaturen. II. Die Islamische Zeit*, in *Handbuch der Orientalistik*, Abt. I, Bd. 5/i *Turkologie*, Leiden 1963, 229-33; A. Caferoğlu, *La littérature turque de l'époque des Karakhanides*, in *Funda-*

(C. E. Bosworth)

ILERI, DJELĀL NŪRĪ, in modern Turkish Celal Nuri İleri, Turkish modernist, writer, publicist and journalist, 1877-1938. He was born at Gallipoli. His father, Ḥelvādjīzade Muṣṭafā Nūri, from Crete, served as governor in various provinces and became a senator in 1908. His mother was the daughter of ʿĀbidīn Pasha (surnamed Dino, 1843-1908) from Prizrin, a governor and vizier under ʿAbd al-Ḥamīd II and the author of a well-known commentary on the *Mathnawī*. One of his brothers, Ṣubḥī Nūrī İleri was a socialist writer and journalist and the other, Sedād Nūrī, a painter and cartoonist.

Educated at Galatasaray lycée and Istanbul University, where he studied law, Djelāl Nūrī perfected his French to the point of publishing a few books in that language, including a novel, *Cauchemar*, about life in Istanbul under ʿAbd al-Ḥamīd. He also learnt English. His education owes much to his family circle, which included his paternal uncle Sirrī Pasha and his wife, Leylā Saz (1850-1936), the poetess and composer, and author of valuable memoirs of 19th century *ḥarem* life.

Djelāl Nūrī visited Europe several times and published some of his impressions in two books: *Ḳuṭub muṣāḥabeleri* and *Shimāl khāṭiralarī* (see below). He soon abandoned the legal profession to become a journalist and free-lance writer. He contributed to many newspapers and periodicals (some of which he founded), particularly *Iḳdām*, *Ātī*, *Ileri*, *Idjtihād*, *Edebiyyāt-i ʿUmūmiyye Medjmūʿasī*, *Therwet-i Fünūn*, *Türk Yurdu*, *Le Courrier d'Orient* and *Le Jeune Turc*. He wrote more than fifteen hundred articles in the last-named French language newspapers, many of great documentary value for the period following the mutiny of 13 April 1909 ("*31 Mart waḳʿasī*").

Djelāl Nūrī represented Gelibolu in the last Ottoman Parliament, and was elected four times to the Grand National Assembly. His wide legal knowledge and his familiarity with both Eastern and Western culture made him one of the most sought-after advisers of the new Nationalist Government in Ankara. He was an honest, straightforward writer, always consistent in his principles and in his advocacy of liberalism and honest government. His strong criticism, in his Istanbul daily *Ileri*, of authoritarian rule and its abuses, and his contention that the single-party system was incompatible with democracy, resulted in violent polemics in the press. Several extremist supporters of the Government, particularly Aghaoghlu Aḥmed and Yūnus Nādi, violently attacked him in Government organs. A member of Parliament, Ḳīlīdj ʿAlī, whose name was published in a list of deputies and officials accused of having misused their influence, went to Djelāl Nūrī's office and attacked him (for details of this polemic and the subsequent incident, see the newspapers *İleri*, *Ḥākimiyyet-i Milliyye*, *Djumhūriyyet* and *Ṣon Telghrāf* for June to August 1340 (fiscal)/1924. Djelāl Nūrī's journalist brother Ṣubḥī Nūrī published a strong article of protest the following day in *İleri* (31 July 1924). But Djelāl Nūrī himself henceforward wrote only occasionally in the same paper, and avoided polemics. He died in Istanbul on 2 November 1938.

Djelāl Nūrī is the author of some thirty books and thousands of articles, a few of which have been collected in book form. Without fully adhering to any of the three main groups of the post-1908 period, *i.e.*, "Turkists", Islamists, and Westernizers, he made his own compromise between the last two. He conducted long polemics on social, political, religious, juridical and linguistic issues with leading writers of the period, and opposed equally the extremist Nationalists, the radical Westernizers and the uncompromising Islamists [see gökalp, djewdet, meḥmed ʿākif, panislamism, turan].

He himself was a moderate reformist. But he was no systematic thinker, so that his ideas and suggestions on various problems crop up in most of his writings no matter the subject title. The following are his most outstanding themes on controversial issues of the period 1908-23.

The legal system. The need for a radical reform in this field is one of his main themes. The legal system of a country must take into consideration the historical development, the character, peculiarities, conditions of life of the nation and the requirements of the contemporary age. Midḥat Pasha's Constitution, Djewdet Pasha's *Medjelle* and many laws dealing with administration, jurisprudence, property, the civil service etc., are, since they ignore these conditions, inadequate. Laws are not unalterable; on the contrary they should at times be reviewed and modified according to the changing circumstances of the times.

The emancipation of women. Many social evils in Ottoman society have as their primary cause the humiliating position of women. Polygamy should be prohibited and women should not be treated as property. Laws concerning marriage, divorce and children should be modernized. This too is in keeping with the spirit of Islam; whose rules on women and marriage have been misinterpreted for centuries. Djelāl Nūrī's ideas on this subject were by many found to be "too progressive".

The causes of Ottoman decline. The main causes for the backwardness of the Ottomans are that they had no part in the maritime discoveries, the Renaissance, and the exploitation of printing.

Alphabet and language reform. The Arabic alphabet not being suitable for Turkish, a reformed alphabet based on the Roman script is necessary. As far as the language itself is concerned, however, Djelāl Nūrī's approach is conservative. He saw the Persian-Arabic elements as being as natural and necessary to Turkish as Latin and French words are to English. Yet his campaign against the supporters of "simplification" mellowed later in the republican period.

Reform in Islam. Islam *per se* has never been an obstacle to progress. But it has been constantly misinterpreted and exploited by bigots and opportunists. A reform in Islam, particularly in Muslim law, is necessary. The unity of the Muslim world should be the ideal, and should replace the nationalistic ideologies of individual Muslim nations. Yet the ideal of a theocratic state is an anachronism. To ignore Western civilization leads nowhere. But there are two civilizations: the technological and the real civilization. The Turks, like the Japanese, should adopt the first, but preserve their own Muslim-

Turkish civilization, improving it as necessary, by reforms. (This anticipates Gökalp's later differentiation between "civilization" and "culture").

A resumé of most of Djelāl Nūrī's ideas is to be found in his memorandum submitted to the 1911 Salonika conference of the Committee of Union and Progress (which also includes his views on Turkish foreign policy) and in his History of Ottoman Decline (see below).

His main works are: (1) *1327 senesinde Selānikde mün'aḳid Ittiḥād ve Teraḳḳi Ḳongresine taḳdīm olunan mukhṭiradir*, Istanbul 1327/1911; (2) *Kendi noḳṭa-i naẓarimdan ḥuḳūḳ-i düvel*, 1327/1911; (3) *Muḳadderāt-ı ta'rīkhiyye*, Istanbul 1330/1914; (4) *Shimāl khāṭiralari*, Istanbul 1330/1914; (5) *Ta'rīkh tedenniyāt-ı 'Othmāniyye*, Istanbul 1330/1914; (6) *Ḥavāyidj-i ḳānūniyyemiz*, Istanbul 1331/1915; (7) *Ittiḥād-ı Islām*, Istanbul 1331/1915; (8) *Ḳadinlarimız*, Istanbul 1331/1915; (9) *Ḳuṭub muṣāḥabeleri*, Istanbul 1331/1915; (10) *Ta'rikh-i istiḳbāl*, Istanbul 1331-2/1915-6, 3 vols.; (11) *Ta'rikh-i tedenniyāt-ı 'Othmāniyye*[2], Istanbul 1331/1915; (12) *Khātem al-enbiyā'*, Istanbul 1332/1916; (13) *'Ilel-i akhlāḳiyyemiz*, Istanbul 1332/1916; (14) *Müslümanlara, Türklere ḥakāret, düshmānlara ri'āyet*, Istanbul 1332/1916; (15) *Ittihād-i Islām ve Almanya*, 1333/1917; (16) *Ḳara tehlike*, Istanbul 1334/1918; (17) *Ḥarbden ṣoñra Türkleri yükseltelim*, Istanbul 1917; (18) *Ishtirāk etmediğimiz ḥarekāt*, Istanbul 1917; (19) *Rūm ve Bizans*, Istanbul 1917; (20) *Türkčemiz*, Istanbul 1917; (21) *Djoghrāfyā-yi ta'rīkhī, mülk-i Rūm*, Istanbul 1918; (22) *Tādj giyen millet*, Istanbul 1339/1923; (23) *Türk inḳilābi*, Istanbul 1926.

ILETMISH [see iltutmish].

ILGHĀZ [see mu'ammā].

ĪLGHĀZĪ (i.e., "champion of the people") is the name of two local Saldjūḳ rulers of the Artuḳid dynasty who attained power in northern Mesopotamia.

1. Nadjm al-Dīn Īlghāzī I b. Artuḳ. He was first of all a supporter of his brother-in-law Tutush in his eventful struggle for the throne of the Saldjūḳ empire of Persia. After Tutush's defeat and death (488/1095) he withdrew to Jerusalem, which he had received as a fief from Tutush jointly with his brother Suḳmān. The two brothers had, however, after a 40 days' siege to surrender Jerusalem to the Egyptians (Sha'bān 489/July-August 1096). At a later date (from 493/1100), Īlghāzī joined the new pretender Sultan Muḥammad, who appointed him governor of Baghdād in 494/1100-1. He held this important office for four years, ultimately in the service of Sultan Barkyārūḳ and his son Sultan Malikshāh.

When Sultan Muḥammad dismissed him from the governorship of Baghdād in 498/1105, he fell out with this ruler. Between 498 and 501/1105-8 Īlghāzī captured the hitherto impregnable fortress of Mārdīn, one of the most important in the whole of the nearer east, and in 501 we find him also lord of Naṣībīn. In 504, 505, 506-7 and 508/1111-5 he refused to partake in the war which the Muslim *amīrs* of the west were conducting against the Crusaders in Mesopotamia and Syria upon Sultan Muḥammad's orders. During the last of these campaigns he, with two of his nephews, even attacked the commander-in-chief of the Muslim armies Aḳ Sunḳur al-Bursuḳī [*q.v.*] and defeated him (May 1115). The Sultan sent a threatening message to Īlghāzī, who fled to Damascus. Tughtakīn, also on bad terms with the Sultan because of charges of complicity in the murder of Mawdūd, welcomed him, and the two decided on resistance to the Sultan and alliance with the Franks, with whom terms were agreed in a meeting at Lake Ḳadas. Īlghāzī left for Diyār Bakr to assemble a force of Turcomans, but was captured at al-Rastan (between Ḥimṣ and Ḥamāt) by Khīrkhān, the governor of Ḥimṣ. Khīrkhān appealed to the Sultan for troops to help defend Ḥimṣ against Tughtakīn, whom meanwhile he held off by threatening to kill Īlghāzī. The troops being delayed, he released Īlghāzī in return for a hostage and a promise of Īlghāzī's protection against Tughtakīn. Released, Īlghāzī went to Aleppo, collected his Turcomans, and returned to lay siege to Ḥimṣ. He was interrupted by the arrival of the Sultan's army commanded by Bursuḳ b. Bursuḳ. According to Walter the Chancellor, Tughtakīn and Īlghāzī occupied Aleppo with the intention of offering it to the Sultan, as reparation for the murder of Mawdūd. Their Frankish ally Roger, Prince of Antioch, hastened to dissuade them. After some inconclusive operations and a defeat by the Franks, Bursuḳ returned to the East, where he died while preparing a new expedition. Īlghāzī established good relations with the Saldjūḳ government after the death of Muḥammad and the accession of his son Maḥmūd.

Lu'lu', the governor of Aleppo, was murdered towards the end of 510/1117. Owing to internal disputes the town and district of Aleppo were exposed to the inroads and depredations of the Franks. After Īlghāzī had temporarily occupied Aleppo in 511/1117, but had withdrawn after encountering difficulties, he was appealed to in the following year by its inhabitants as their last hope and recognized as prince of Aleppo. In the second half of 512/1118 Īlghāzī succeeded in definitively gaining possession of Aleppo and thus became a neighbour of the Franks, against whom he at once made energetic preparations. The numerically weaker Franks were outflanked on 17 Rabī' I 513/28 June 1119 by his army of 20,000 men in the valley of Tell 'Afrīn, taken by surprise and for the most part cut to pieces or taken prisoner. Among those who fell was Roger of Antioch. It was one of the greatest battles which the Muslims had so far won against the Crusaders (the village of Balāṭ, after which the battle is often called, appears in Ibn al-'Adīm as Roger's camp on the night of 20 June 1119, eight days before the decisive battle). Antioch now lay defenceless at Īlghāzī's feet; but he neglected to take the city.

The reputation of Īlghāzī's military ability now spread far and wide and he received the chief command over the Muslims in the war which Sultan Maḥmūd was waging in person against the Christian Georgians. Īlghāzī suffered a very severe reverse (Ibn al-'Adīm, *Ta'rīkh Ḥalab*, 515/1121; Ibn al-Athīr, *al-Kāmil*, 514/1120), which resulted in the loss of Tiflis to the Georgians. In 516/1122 he was granted Mayyāfāriḳīn by the Sultan in addition to his other lands.

Soon afterwards, on 1 Ramaḍān 516/3 November 1122 (Ibn al-Ḳalānisī: 6 Ramaḍān, al-Fāriḳī: 17

Ramaḍān) Īlghāzī died at the age probably of barely 60 at Mayyāfāriḳīn (Ibn al-Athīr and Abu 'l-Faradj; at ʿAdjūlayn on the road from Mārdīn to Mayyāfāriḳīn, according to Ibn al-ʿAdīm, *Taʾrīkh Ḥalab*, ed. S. Dahan, ii, Damascus 1954, 206; at al-Fuḥūl, according to Ibn al-Ḳalānisī; on the way from Aleppo to Mayyāfāriḳīn according to Michael the Syrian). At his death he was in possession of Mayyāfāriḳīn, Mārdīn, Aleppo and apparently also of Naṣībīn. He was buried at Mayyāfāriḳīn (for further details see the historian of this town, quoted in Amedroz's footnotes to al-Ḳalānisī). Īlghāzī possessed an influence unequalled at that time over the Turkomans of Mesopotamia. He was a bold and ambitious personality, who claimed a leading position wherever he appeared. He was not a general of great genius; it is said that his drinking habits affected his military decisions. He struck no coins so far as is known (I. Ghālib Edhem, *Catalogue des monnaies turcomanes*, Istanbul, 1894, 82). He married a daughter of Tughtakīn, Il-Khātūn, and later during his rule over Aleppo also Farkhundā Khātūn, a daughter of the former Saldjūḳ ruler there, Riḍwān. We know the names of several of his children: the daughters Gūhar (al-Fāriḳī: Kumār) Khātūn, who married the Arab chief Dubays b. Ṣadaḳa in 513/1119-20; Yumnā Khātūn, the wife of the Īnālid Īl-Aldī, lord of Āmid, who died in 536/1141-2; Āyāz, died 508/1114-5, Sulaymān, Tīmūrtāsh and Shihāb al-Dīn Maḥmūd (?); another daughter whose name is not known married in 495/1101-2 an unnamed son of Tekish, a brother of the great Sultan Malikshāh. Īlghāzī was one of those *amīrs* who were the first to check the advance of the Crusaders to north and east before the time of Zangī and Saladin. Īlghāzī I was the founder of the Artuḳid dynasty of Mārdīn, which survived till 811/1408.

2. Ḳuṭb al-Dīn Īlghāzī II, the son of Nadjm al-Dīn Alpī (probably another form of Alp-Bey) and a sister of the Turkish ruler of Armenia, Suḳmān II, succeeded his father in 572/1176-7 (Michael the Syrian: 20 July 1176) as ruler over Mārdīn, Mayyāfāriḳīn, and Raʾs al-ʿAyn (in Ibn al-Athīr, xi, 268, however, he appears as early as 569 in possession of Raʾs al-ʿAyn). We have only scanty information about his reign. He first of all oppressed his two paternal (according to another tradition, maternal) uncles, the rulers of Hānī (also written Hana, the modern Hene, north of Āmid) and Dārā, till they recognized his suzerainty, as they had done that of his father: the two uncles appeared at Mārdīn and paid homage to Īlghāzī II. Soon afterwards the latter fell ill. On his recovery he subdued the Arabs who had become turbulent and is said—according to a statement which is probably exaggerated—to have killed several thousands of them and to have taken 12,000 camels from them. He proceeded to extend his sway towards the Euphrates in the district of Bīra (the modern Birecik). His uncle Suḳmān II seems to have had great influence over him. Īlghāzī for example joined the alliance which was concluded towards the end of 578/beginning of spring 1183 by Suḳmān II and ʿIzz al-Dīn Masʿūd I of al-Mawṣil (a cousin of Ḳuṭb al-Dīn Īlghāzī) with the intention of checking Saladin's advance into Mesopotamia. The allies, however, found themselves helpless in face of Saladin's successes and, after the death of Suḳmān II, we find Īlghāzī's troops in the army of Saladin in Syria (Ṣafar 580/May-June 1184). Īlghāzī II died soon after, at the beginning of Djumādā II 580/9 September 1184. His principality included, in addition to the areas mentioned, also Dunaysir. His name is mentioned in an inscription on the minaret of a mosque at Mārdīn dated in the year of his accession, but the credit of building it probably belongs to his father Alpī. On the coins struck by Īlghāzī (bronze only, which are called *dirhams*, are known) he calls himself "King of the Amirs" (Malik al-umarāʾ) and, like other Artuḳid rulers of Mārdīn before and after him, Shāh Diyār Bakr, although he did not rule in Āmid, the metropolis of this district. Īlghāzī II left two sons, Ḥusām al-Dīn Yulūḳ Arslān, and al-Malik al-Manṣūr Nāṣir al-Dīn Artuḳ Arslān, who succeeded their father in turn. Niẓām al-Dīn Alpḳush, one of Īlghāzī's slaves, married his widow, while one of his daughters was married to Saladin's son, al-Malik al-Muʿizz, at about the end of Djumādā I 578/September-October 1182 or a little later.

For a general survey of the period and the bibliography, see artuḳids, adding to the sources there given for Īlghāzī I: Walter the Chancellor, *De bello Antiocheno*, ed. Hagermeyer, 1896, important for his relations with the Franks and even with the Georgians; see also the bibliography to crusades.

(K. Süssheim*)

ILḤĀD [see mulḥid].

ILHĀM (a.) means literally "to cause to swallow or gulp down" (*Lisān*, xvi, 29, especially last two lines). In the Ḳurʾān it appears only in XCI, 8—a celebrated but difficult passage—*fa-alhamahā fudjūrahā wa-taḳwāhā*, "then He (Allāh) made her (a *nafs*) swallow down her sins and her godly fear" (Arberry: "and inspired it to lewdness and godfearing"; Blachère: "et lui a inspiré son libertinage et sa piété"; Paret: "und ihm (je nachdem) die ihm eigene Sündhaftigkeit oder Gottesfurcht eingegeben hat"). The oldest exegetical tradition (Ṭabarī, *Tafsīr*, xxx, 115 f.) gives two explanations: (i) Allāh explained these to the *nafs*; (ii) Allāh created these in the *nafs*. The Muʿtazilīs chose the first (Zamakhsharī, *Kashshāf*, ed. Lees, 1612) but orthodox Islam generally chose the second, the almost certainly correct view; thus al-Rāzī (*Mafātīḥ*, Cairo 1308, viii, 438) and al-Nīsābūrī (margin of Ṭabarī, 100). But al-Bayḍāwī (ed. Fleischer, ii, 405) follows al-Zamakhsharī and Abu 'l-Suʿūd (margin of al-Rāzī, 273) follows al-Bayḍāwī; cf. Brockelmann, II, 439. But by far the most important use of *ilhām* is in connexion with the doctrine of saints. Allāh reveals himself in two ways: to men individually by knowledge cast into their minds, and to men generally by messages sent through the Prophets. The first, individual, revelation is *ilhām*; the second, and general, is *waḥy* [*q.v.*]. Saints, especially, are the recipients of this *ilhām*, because their hearts are purified and prepared for it. It differs from intellectual knowledge (*ʿilm ʿaḳlī*) in that it cannot be gained by meditation and deduction; but is suddenly communicated while the recipient cannot tell how, whence or why. It is a pure gift from the generosity (*fayḍ*) of Allāh. It differs from *waḥy* only in that the angel messenger who brings *waḥy* may be seen by the Prophet and that *waḥy* brings a message to be communicated to mankind, while *ilhām* is for the instruction of the recipient. From *waswās*, or satanic whispering in the heart, it differs in respect of the causer—an angel as opposed to a devil; and in the things to which it incites—good as opposed to evil (al-Ghazālī, *Iḥyāʾ*, ed. with comm. of Sayyid Murtaḍā, vii, 244 ff., 264 ff.; D. B. Macdonald, *Religious attitude and life in Islam*, 252 ff., 275 ff.). But while the fact of *ilhām* was universally admitted,

even Ṣūfīs raised the question of the certainty of the knowledge given by it. So al-Hudjwīrī (*Kashf al-maḥdjūb*, transl. Nicholson, 271) contends that *ilhām* cannot give assured knowledge (*maʿrifa*) of Allāh; but al-Ghazālī would probably have said that al-Hudjwīrī was using *ilhām* in the sense of an idea which one found in his mind, and not of the flashing out of the divine light on the soul which, once experienced, can never be mistaken. Others taught that, while it was sufficient for the recipient, it could not be used to convince others or reckoned as a source of knowledge for men in general. This appears to have been al-Nasafī's position; see his *ʿAḳāʾid* with commentaries of al-Taftāzānī and others, Cairo ed. 1321, 40 f. A very curious use is by Ibn Khaldūn in the sense of "instinct" (*Muḳaddima*, ed. Quatremère, ii, 331, transl. de Slane, ii, 384; tr. Rosenthal, ii, 370) but this, though a natural development, does not seem to have been taken up by others. Yet Ibn Ḥazm speaks of *ilhām* as a *ṭabīʿa* and refers as an illustration to Ḳurʾān, XVI, 70, on the instinct of bees (*Milal*, v, 17).

Bibliography: Add to references above: *Dict. of technical terms*, 1308; al-Djurdjānī, *Taʿrīfāt*, Cairo 1321, 22 foot; Rāghib al-Iṣfahānī, *Mufradāt*, 471; L. Massignon, *Ṭawāsīn*, 125-8.

(D. B. MACDONALD*)

ILI, a large river in Central Asia. It is formed by the two rivers Tekes and Kunges, which rise on the northern slopes of the T'ien-Shan Mts.; the united stream of the Ili then flows for some 950 kms. across the northern part of the region known in mediaeval times as "the land of the seven rivers", Yeti-su or Semirečye, into Lake Balkhash. The lower course of the Ili falls within the Soviet Kazakhstan Republic, whilst the eastern part of the Ili river system belongs to the Chinese Sinkiang-Uyghur Autonomous Region.

The Ili is first mentioned in the history of the Chinese T'ang dynasty, when one of the main roads from China to Turkestan passed through its valley (Chavannes, *Documents sur les Toukioue (Turcs) occidentaux*, 11 ff.). The oldest Muslim source to mention it is the *Ḥudud al-ʿālam* (372/982-3), which says that the Ilā runs into the Īslḳ-Köl (the existence of Lake Balkhash was not known to early Islamic geographers). Kāshgharī calls the Ilā or Īlā "the Djayḥūn of the Turkish country", and he places the Turkish tribe of the Tukhsī in the Ili valley, together with the Yaghmā and part of the Čigil (tr. Atalay, i, 30, 81, 92, 408). The *Ḥudūd* mentions a town in this region, probably to be identified with Kāshgharī's frontier town Iki-ögüz "[situated] between the two rivers", *i.e.*, the Ili and Yafindj, cf. *Ḥudūd*, 71, 208, 276-7, 300-1.

It is not known when Islam first came to the Ili valley, but in the 7th/13th century it was regarded as marking the farthest boundary of the *Dār al-Islām*, and the lands to the east were only converted in the post-Mongol period. Immediately before the Mongol period, northern Semirečye, including the town of Ḳayalīgh (see below), was ruled by the Ḳarluḳ Arslan Khān. He threw off Ḳara Khiṭay suzerainty and negotiated with Čingiz; consequently, the region did not suffer from the Mongol devastations so badly as Transoxania and Khurāsān. The upper parts of the Ili basin contained good pasture for the nomads, and Čaghatay had his *ordu* on the Ili after Čingiz's death. The reports of such travellers as Rubruck (651/1253) and the Chinese envoy to Hülegü's court Chang-tê (657/1259) show that the Ili region was still reasonably flourishing, but that there was a trend towards pastoralization. Rubruck mentions that after crossing the Ili, he came to the town of Equius (*sc.* Ilibalīḳ "town on the Ili"), whose population was Tādjīk, and the Armenian King Haiton (Hetʿum) also visited it. The nearby town of Cailac (*sc.* Ḳayalīgh) is also described as having many merchants (cf. E. Bretschneider, *Mediaeval researches from eastern Asiatic sources*, i, 169), and the trading centre of Almalīgh [*q.v.*], to the north of the Ili, was at this time the capital of a small Muslim principality. By the 9th/15th century, however, urban life seems to have disappeared from the region.

From the later 17th century until the destruction of Kalmuck power in Turkestan in 1758, Semirečye and the Ili valley were occupied by the Buddhist Kalmucks or Oyrat. During the time of the great Khān Ghaldan (d. 1108/1697), the Ili valley became regarded as the Khān's personal domain. In the 19th century, it was part of the lands of the Ḳazaḳs, but during the reign of Tsar Nicholas I was annexed by Russia. The upper Ili valley, and especially the town of Ḳuldja [*q.v.*], suffered considerably during the Muslim rebellion in Chinese Turkestan led by Yaʿḳūb Beg. Because of Russian fears that the outbreak might spread, the district of Ḳuldja was in 1871 annexed by Russia, but given back to China in 1883.

During the present century, the main centres of population have been Ḳuldja and the small town of Ili, situated at the junction of the river and the Turkestan-Siberia railway. Navigation is possible during the ice-free months on the Soviet part of the river down to a point near the delta; the waters of the Ili's tributaries are extensively used for irrigation, and the upper reaches are an important source of hydro-electric power (see *BSE*², xvii, 530-1, with a map).

(C. E. BOSWORTH)

ILIČPUR [see Supplement].

ĪLĪDJA (T.) "hot spring", and a bath served by a hot spring (whereas in principle, in Ottoman usage, a *ḥammām* [*q.v.*] is a bath whose water is artificially heated), a characteristically Western Turkish word, the diminutive(?) of *ilī* "hot" (< *ilīg*, cited by Maḥmūd Kāshgharī, Ar. text, i, 31 = tr. B. Atalay, i, 31, in contrast to "Turkish" *yilīg*, as an example of the Oghuz tendency to drop initial *y*-).

According to ʿĀṣim (T. translation of al-Fīrūzābādī's *Muḥīṭ*, s.v. *al-ḥimma*, = ed. of 1268-72, iii, 435; cited in *TTS*, i, 349), a thermal and curative spring is called "*ilīdja* in Turkish, *ḳapludja* in Bursa, and *bāna* [cf. Serbo-Croat *banja*] in Rumeli"; Redhouse distinguishes *ḳapludja* as "a hot spring roofed in [*ḳaplu*] as a bath; especially any one of the hot-baths of Brousa". These distinctions are perhaps etymological rather than real: *ḳaplīdja* [*q.v.*] is admittedly used primarily of the baths, served by thermal springs, in the Čekirge suburb of Bursa; and Evliyā Čelebi says of Sofia (iii, 399) "in these regions an *ilīdja* is called *bānā*"; yet he himself uses the word *ilīdja* for the baths of Sofia and Buda (vi, 242 ff.), and so too Ferīdūn (i², 599) uses the terms *bāna* and *ilīdja* without apparent distinction in a "Rumelian" context.

Ilīdja is a common toponym in Anatolia (over thirty attestations in *Türkiye'de meskûn yerler kılavuzu*, Ankara 1946-50). (ED.)

Persia in the 7th/13th and 8th/14th centuries. The first Mongol advance towards the Middle East (1218-21) had touched only the north of the Iranian area and only Khurāsān [q.v.] had, to a certain extent, been subjected to Mongol control. Therefore, when the territories were being divided up under the Great Khan Möngke (1251-9), who himself was fighting in China with his brother Ḳubilay, the task of extending control over Persia, Mesopotamia and, if possible, Syria and Egypt as well, was entrusted to their brother Hülegü [q.v.]. According to Barthold, about 129,000 men were levied for this purpose from the armies in different parts of the empire, and in about 1253-5 Hülegü advanced. He took the Assassin fortress of Alamūt [q.v.], but left the eastern and southern Iranian principalities (Herāt, Fārs, etc.) undisturbed for the time being in order to push forward his advance on Baghdād after negotiations with the Caliph had collapsed. Baghdād fell on 10 February 1258. Hülegü now held southern Mesopotamia and the north of the country fell to him in the following year; only Mayyāfāriḳīn [q.v.] continued to hold out against him.

While Hülegü was absent from the army following the death of Möngke (1259), the advance was to be continued through Syria against the Mamlūks. The conquest of Damascus and other towns was successful; but at ʿAyn Djālūt [q.v.], Ḳotuz [q.v.], with the Mamlūk army which was especially trained for cavalry engagements, obliged the Mongols to halt (3 September 1260) and the new Sultan Baybars I [q.v.], who assumed the sultanate immediately after the victory, proved himself an opponent equal to the Mongols.

This decisive military encounter set upon the empire of the Mongols of Persia its final boundaries: Syria and Palestine remained in the hands of the Mamlūks, with the western edge of the Euphrates valley forming the frontier. To the north of this area it embraced as dependent states Lesser Armenia and Saldjūḳ Asia Minor, which threw off the suzerainty of the Golden Horde, along with the Caucasus region, which had hitherto been subjected, albeit loosely, to this same suzerainty. Various attacks from the north in the following decades failed to loosen the bond between the Caucasus and the Īlkhāns, even when the Georgians engaged in repeated insurrections. The course of the Oxus formed the frontier against Čaghatay's territories in Central Asia. In the east the principality of the Kart [q.v.] dynasty of Herāt remained more or less independent of the Mongol power; also in Makrān [q.v.] there existed for a time a frontier zone of uncertain ownership against the principalities in Balūčistān and the Pandjāb. Likewise the island state of Hurmuz [q.v.] with its possessions and the minor principalities in Luristān as well as in Gīlān and Māzandarān [qq.v.] were able to remain largely independent; only in 1284, through the marriage of a Mongol prince, did Fārs [q.v.] come into the possession of the Īlkhāns.

The rulers of Persia bore this name to indicate that they were dependent on the Great Khān (in Peking). So it remained until the death of Ḳubilay in 1294, the final adoption of Islam by the Persian rulers (1295) severing the close relationship. From that time the name of the Great Khān disappeared from the Persian coinage and in place of the title "Īlkhān", there appeared the designation "Khān". It is customary, however, for historians to designate the rule of the Mongols in Persia until its end in 756/1355 as the "Īlkhānid" period.

The territory of the Īlkhāns was, therefore, essentially a Persian state with the inclusion of Mesopotamia, and hence rather similar in extent to the Sassanian Empire.

For this reason, their policy towards Central Asia, the Golden Horde and Egypt had to be that of a government of Persia, and in internal affairs too the adoption of Persian culture and tradition was as swift as the corresponding process was in China. Indeed, these two Mongol states formed something of a community of interest against the nomadic states (of Čaghatay and the Golden Horde) which, in a certain sense, lasted beyond the year 1295 mentioned above. The cultural assimilation to Persia and the linguistic acceptance of Turkish were certainly delayed so long as the religious differences persisted. Some of the Mongols who had invaded Persia had been Nestorian Christians, but the majority had been Shamanists; in the royal house and among the ruling class there soon became apparent (even under Hülegü) a tendency towards Buddhism, which perhaps is connected with the fairly close relations with China, and perhaps goes back to the missionary activity of Buddhist priests, *bhikshus* (details on whose origin remain doubtful, just as all our sources—all non-Buddhist

—give scarcely more precise information about the spread of the Buddha's teaching). In any case, it found a fertile ground among the rulers and strengthened them in their hostile attitude towards Sunnī Islam, an attitude apparently dictated also for reasons of state during the decades of rivalry with Egypt (while conversely Islam formed the link for political and economic relations between Egypt and the Golden Horde, which led to an equally enduring coalition against the Īlkhāns). The enmity against Sunnī Islam resulted in a tolerance of the Shīʿa, as for example was achieved after the capture of Baghdād under the leadership of the mathematician and astronomer Naṣīr al-Dīn Ṭūsī [*q.v.*]; this had very favourable effects for their social position and their admittance to the administration. Preference was shown also to the Christians, especially the Nestorians, to whom Hülegü's favourite wife Doḳūz Khātūn (d. 1265) belonged; she was also of assistance to the Jacobites and helped to win over the Christians in Syria to the Īlkhān cause.
